Neptune Regional Transmission System Long Island Power Authority v. PJM Interconnection, L.L.C.; Notice Establishing Paper Hearing Procedures

On December 31, 2020, Neptune Regional Transmission System, LLC (Neptune) and Long Island Power Authority (LIPA) (together, Neptune/LIPA), pursuant to sections 206 and 306 of the Federal Power Act (FPA),¹ filed a complaint alleging the assignment of costs pursuant to the provisions of the regional cost allocation method included in the PJM Interconnection, L.L.C. Abstract: EPA's Significant New Alternatives Policy (SNAP) program implements Section 612 of the 1990 Clean Air Act (CAA) Amendments which authorizes the Agency to establish regulatory requirements to ensure that ozone-depleting substances (ODS) are replaced by alternatives that reduce overall risks to human health

and the environment, and to promote an expedited transition to safe substitutes. To promote this transition, the CAA specified that EPA establish an information clearinghouse of available alternatives, and coordinate with other Federal agencies and the public on research, procurement practices, and information and technology transfers.

Since the program's inception in 1994, SNAP has reviewed close to 500 new chemicals and alternative manufacturing processes for a wide range of consumer, industrial, space exploration, and national security applications. Roughly 90% of alternatives submitted to EPA for review have been listed as acceptable for a specific use, typically with some condition or limit to minimize risks to human health and the environment.

Regulations promulgated under SNAP require that Motor Vehicle Air Conditioners (MVACs) retrofitted to use a SNAP substitute refrigerant include basic information on a label to be affixed to the air conditioner. The label includes the name of the substitute refrigerant, when and by whom the retrofit was performed, environmental and safety information about the substitute refrigerant, and other information. This information is needed so that subsequent technicians working on the MVAC system will be able to service the equipment properly, decreasing the likelihood of significant refrigerant cross-contamination and potential failure of air conditioning systems and recovery/recycling equipment.
