* The Standards Council of Canada (SCC) voted to end its Laboratory Accreditation Program for Substance Abuse (LAPSA) effective May 12, 1998. Laboratories certified through that program were accredited to conduct forensic urine drug testing as required by U.S. Department of Transportation (DOT) regulations. As of that date, the certification of those accredited Canadian laboratories will continue under DOT authority. The responsibility for conducting quarterly performance testing plus periodic on-site inspections of those LAPSA-accredited laboratories was transferred to the U.S. HHS, with the HHS' NLCP contractor continuing to have an active role in the performance testing and laboratory inspection processes. Other Canadian laboratories wishing to be considered for the NLCP may apply directly to the NLCP contractor just as U.S. laboratories do.

Upon finding a Canadian laboratory to be qualified, HHS will recommend that DOT certify the laboratory (**Federal**

Register, July 16, 1996) as meeting the minimum standards of the Mandatory Guidelines published in the **Federal Register** on January 23, 2017 (82 FR 7920). After receiving DOT certification, the laboratory will be included in the monthly list of HHS-certified laboratories and participate in the NLCP certification maintenance program.

Agency Information Collection Activities: Proposed Collection; Comment Request

In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 concerning opportunity for public comment on proposed collections of information, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the information collection plans, call the SAMHSA Reports Clearance Officer at (240) 276-0361.

Comments are invited on: (a) Whether the proposed collections of information are necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project: Government Performance and Results Act (GPRA) Client/Participant Outcomes Measure—(OMB No. 0930-0208)—Revision

SAMHSA is requesting approval to modify its existing CSAT Client-level GPRA instrument by removing 40 questions and adding 41 questions to its existing CSAT Client-level GPRA instrument resulting in a net addition of 1 question. Currently, the information collected from this instrument is

entered and stored in SAMSHA’s Performance Accountability and Reporting System, which is a real-time, performance management system that captures information on the substance abuse treatment and mental health services delivered in the United States. Continued approval of this information collection will allow SAMSHA to continue to meet Government Performance and Results Modernization Act of 2010 reporting requirements that quantify the effects and accomplishments of its discretionary grant programs, which are consistent with OMB guidance.

SAMSHA will use the data for annual reporting required by GPRA and comparing baseline with discharge and follow-up data. GPRA requires that SAMSHA’s fiscal year report include actual results of performance monitoring for the three preceding fiscal years. The additional information collected through this process will allow SAMSHA to: (1) Report results of these performance outcomes; (2) maintain consistency with SAMSHA-specific performance domains, and (3) assess the accountability and performance of its discretionary grant programs including a focus on health equity.

In revising the CSAT–GPRA tool, CSAT sought to improve functionality while also eliciting programmatic information that demonstrates impact at the client level. In this way, data from the revised GPRA tool can be used to assess resource allocation and to delineate who we serve, how we serve them, and how the program impacts clients from entry to discharge. The tool reflects CSAT’s desire to elicit pertinent client and program level data that can be used to not only guide future programs and practice, but to also respond to stakeholder, congressional and agency enquiries.
