The National Marine Fisheries Service (NMFS) operates the fee-for-service Seafood Inspection Program (SIP) under the authorities of the Agricultural Marketing Act of 1946, as amended, the Fish and Wildlife Act of 1956, and the Reorganization Plan No. 4 of 1970. The

regulations for the SIP are contained in 50 CFR part 260. The SIP offers inspection, grading and certification services, including the use of official grade marks and statements which indicate that specific products have been federally inspected. The SIP is the only Federal entity which establishes quality grade standards for seafood marketed in the United States, and is the competent authority for the United States for issuing export health and catch certificates for seafood and certain other marine ingredients. Qualified participants are permitted to use SIP's official grade marks and statements on their products to facilitate the domestic and global trade of fishery products and other marine ingredients. Participation in the SIP is open to all segments of the seafood industry, from harvesters and growers to retailers. When inspection service is desired, participants are required to submit specific information pertaining to the type of service needed (§ 260.15). This includes the type of products to be inspected, the quantity, the location of the product, and the date when the inspection is needed. Customers complete the NOAA Form 89-814 Request for Inspection Services and submit it to their local inspection office via email or over the phone. There are also application requirements (*i.e.*, a letter from the participant) if there is an appeal on previous service results (§ 260.36). Participants requesting regular inspection services on a contractual basis submit a contract using the NOAA Form 89-800 (§ 260.96). Any changes to the contract require a contract amendment, using the same form. When export or certain other forms of certification is desired, applicants are required to submit specific information regarding the consignment and the type of documents required, including details about the product, the shipper and the destination of the consignment, through an online portal system.

In July 1992, NMFS announced new inspection services, which were fully based on guidelines recommended by the National Academy of Sciences, known as Hazard Analysis Critical Control Point (HACCP). The information collection requirements fall under § 260.15 of the regulations. These guidelines require that a facility's quality control system have a written plan of the operation, identification of control points with acceptance criteria and a corrective action plan, as well as personnel identified with responsibility for oversight of the system.

Affected Public: Business or other for-profit organizations; Not-for-profit

institutions; State, Local, or Tribal government.

Frequency: On occasion.

Respondent's Obligation: Required to obtain or maintain benefits.

Legal Authority: 7 U.S.C. 1621 *et seq.*
