

have reported significant challenges due to an inadequate number of qualified drivers with the necessary endorsements and experience to transport and offload liquified oxygen, as well as a limited fleet of cryogenic trucks that are necessary to transport liquid oxygen. EPA continues to work with our federal partners and suppliers to identify actions that can be taken to increase the availability of liquid oxygen to all critical customers.

Pinellas County indicated that if they do not receive a sufficient and reliable supply of the required treatment chemicals used at their drinking water treatment facility, they would not be able to ensure safe drinking water to the communities they serve and may need to shut down their water treatment plant. Under normal circumstances, they could rely on other sources of water from Tampa Bay Water, such as Tampa Bay Water's wellfield. However, Tampa Bay Water is currently in the process of assessing and potentially utilizing their backup sources, which, in turn, would make them unavailable to Pinellas County Utilities. Pinellas County also indicated that if they did not receive a sufficient and reliable supply of the required treatment chemicals to their reclamation facility, they would not have the ability to disinfect the effluent. Pinellas County asserts that this scenario would force the facility to discontinue reclaimed uses of the effluent for irrigation and to discharge water that has not been properly disinfected, leading to a violation of their discharge permit. Additionally, the lack of available irrigation water would put additional burden on the drinking water supply for irrigation purposes. According to Penallas County, exhausting its supplies of sulfur dioxide, specifically, would render the facility unable to dechlorinate plant effluent. In order to discharge plant effluent to local waterbodies, effluent must be properly dechlorinated or the facility will be in violation of their discharge permit. This scenario is of concern particularly during the rainy season and at times with heavy influent. Further, if Pinellas County were to exhaust its supplies of Clarifloc SE-1482 and Clarifloc SE-1371, the facility asserts that it would not have the proper polymers needed for effective sludge thickening and dewatering, causing a backup of solids and treatment and potentially leading to septic conditions with subsequent sludge storage overflow, which could harm the surrounding environment.

At the time of application, Pinellas County had not received a force majeure notice or been placed on reduced

allocation. However, given the shortage of related treatment chemicals in the region and the vulnerability in the system's backup supplies, Pinellas County is concerned that there is a risk that they could face a shortage of one or more of the listed chemicals.
