Needs and Uses: The U.S. Army Corps of Engineers, through its Regulatory Program, regulates certain activities in waters of the United States. Waters of the United States are defined under 33 CFR part 328. In order for the Corps to determine the amount and extent of waters of the United States at a site, aquatic resources must be geographically delineated in accordance with established Regulatory regulations, policy, and guidance. Non-tidal, non-wetland waters of the United States must be delineated to the extent of the ordinary high water mark (OHWM), which is defined at 33 CFR 328.3(7). The OHWM defines the lateral extent of non-tidal aquatic features in the absence of adjacent wetlands in the United

States. The U.S. Army Corps of Engineers Engineer Research and Development Center (ERDC) has drafted the first national manual that provides and describes indicators and a methodology which will help improve consistency in the identification and delineation of the OHWM by (1) providing consistent definitions of OHWM indicators; (2) outlining a clear, step-by-step process for identifying the OHWM using a Weight-of-Evidence approach; and (3) providing a datasheet for logging information at a site. Information collected on OHWM datasheets help inform the lateral limits of the Corps’ jurisdiction in non-tidal, non-wetland aquatic resources (e.g., streams or rivers). This information can then be used to inform jurisdictional determinations or permit evaluations. Applicants for Corps permits are generally required to submit delineations of aquatic resources as part of their permit application or in support of the permit evaluation process. The OHWM form will provide applicants with a tool to easily document and submit this information in a consistent format.
