**Abstract:** The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Primary Copper Smelters (40 CFR part 63, subpart QQQ) were proposed on April 20, 1998; promulgated on June 6, 2002; and most-recently amended on November 19, 2020. These regulations apply to each existing and new copper concentrate dryer, smelting furnace, slag cleaning vessel, copper converter department, and the entire group of fugitive emission sources located at a primary copper smelter facility that is a major source of hazardous air pollutant (HAP) emissions. Major sources of HAP emissions are sites that emit, or have the potential to emit, any single HAP at a rate of 9.07 megagrams (10 tons) or more per year or any combination of HAPs at a rate of 22.68 megagrams (25 tons) or more per year. New facilities include

those that commenced either construction or reconstruction after the date of proposal. This information is being collected to assure compliance with 40 CFR part 63, subpart QQQ.

**Form Numbers:** None.

**Respondents/affected entities:** Primary copper smelters.

**Respondent's obligation to respond:** Mandatory (40 CFR part 63, subpart QQQ).

**Estimated number of respondents:** 2 (total).

**Frequency of response:** Semiannually.

**Total estimated burden:** 6,380 hours (per year). Burden is defined at 5 CFR 1320.3(b).

**Total estimated cost:** \$761,000 (per year), which includes \$5,480 in annualized capital/startup and/or operation & maintenance costs.

**Changes in the Estimates:** There is an overall decrease in burden from the most-recently approved ICR. This increase is not due to any program changes, but is due to a decrease in the estimated number of sources subject to the NESHAP. The Agency has identified, through recent rulemaking efforts, that one of three primary copper smelters located in the United States is no longer a major source of HAP. Therefore, approximately two respondents will be subject to these standards over the three-year period covered by this ICR.
