

States, Hawaii, and the U.S. territories, as well as interferometric synthetic aperture radar (IFSAR) data for Alaska. The primary goal of the 3DHP is to leverage 3DEP data to create a high-precision, z-enabled representation of the surface waters of the United States and its territories. The implementation model for 3DEP is based on multi-agency partnership funding for topographic data acquisition, with the USGS leading management of the program to facilitate planning and acquisition, using government contracts and partnership agreements, for the broader community. The USGS issues cooperative agreements with partners to collect topographic data through an annual Broad Agency Announcement (BAA), which is a competitive solicitation issued to facilitate the cooperative collection of lidar and derived elevation data for 3DEP. It has been included in the annual Catalog of Federal Domestic Assistance under USGS 15.8 17. Federal agencies, state and local governments, tribes, academic institutions, and the private sector are eligible to submit proposals. The USGS collects information from applicants about their proposed topographic data collection and cost sharing options? offers? and then uses that information to determine grant awards. Implementation of 3DHP will follow the 3DEP model over time as funding permits. This ICR expands the scope of the collection to include proposals for both the 3DEP and 3DHP BAA activities.
