

and EAP partners identified by BOEM staff. Following a brief email introduction, each survey respondent will receive a unique weblink to complete the online survey. The survey questions will ask respondents: (1) From whom they receive and with whom they share BOEM environmental studies and analyses information, and (2) how they use that environmental information for their organization's work. The survey will include fewer than 20 mostly discrete-choice questions and will take up to 20 minutes to complete. Descriptive statistics will be calculated at the organizational level, and results will be presented in a tabular format and network graphs.

All agencies, organizations, and institutions that BOEM identifies as important for understanding the feedback loop will be contacted for an interview. Interviews will be semi-structured. Respondents will be asked questions tailored to their type of organization. Interviewers will ask respondents to provide insight into how and why linkages between BOEM and respondents are (or are not) present, and how and why respondents are (or are not) using environmental studies and analyses information from BOEM. As a semi-structured interview, the interviewer will have the opportunity to ask follow-up questions based on initial responses. The interviewers will ask about the respondents' roles or positions within their organizations, how they use BOEM's environmental studies and analyses information in their organizations' work, and how their organizations contribute to BOEM's environmental studies and analyses. Additionally, the interviewers will request recommendations on ways to strengthen linkages moving forward. The responses will be analyzed using qualitative coding analysis.

This information is not otherwise available and will help inform BOEM's efforts to improve the feedback loop and to ultimately better inform its decisions.
