SUPPLEMENTARY INFORMATION:

I. Background

The Sigma-Aldrich Company's (Sigma's) Fort Mims Site is located at 11542 Fort Mims Drive, Maryland Heights, Missouri in a commercial/ industrial park. The site consists of a 3-acre parcel of land previously used for the radiolabeling of chemicals with carbon-14 and tritium.

II. Discussion

By email dated August 22, 2019, the NRC received an application to amend Sigma's decommissioning plan. That application was supplemented by letter dated April 27, 2020, requesting a license amendment for the termination of NRC Materials License No. 24-16273-01, and by letter dated October 19, 2020, providing the NRC Form 313 "Application for Materials License" for this action. By email dated July 31, 2020, the NRC staff accepted for detailed technical review Sigma's license amendment request to amend

the decommissioning plan and terminate the license.

The NRC staff reviewed the revised decommissioning plan with the site-specific dose model and license termination request. Based on Sigma's dose analysis and the NRC's independent and confirmatory surveys and analyses, the NRC staff concluded in a safety evaluation report dated November 16, 2021, that the Fort Mims Site met the dose criteria for unrestricted use and that the residual radioactivity is as low as reasonably achievable, consistent with section 20.1402 of title 10 of the *Code of Federal Regulations*, "Radiological criteria for unrestricted use." Based on an environmental assessment dated November 12, 2021, NRC staff concluded that there would be no significant environmental impacts. Accordingly, NRC Materials License No. 24-16273-01 for the Fort Mims Site was terminated.
