Operational Risk Assessments for Waterfront Facilities Handling Liquefied Natural Gas as Fuel, and Updates to Industry Standards

AGENCY: Coast Guard, DHS.

ACTION: Final rule.

SUMMARY: The Coast Guard issues this final rule amending its regulations concerning waterfront facilities handling liquefied natural gas (LNG) and liquefied hazardous gas (LHG). The final rule makes the following three changes. First, the final rule revises the Coast Guard’s existing regulations to allow waterfront facilities handling LNG as fuel to conduct an operational risk assessment instead of a waterway suitability assessment (WSA) without first obtaining Captain of the Port (COTP) approval. Second, the final rule revises existing regulations to update incorporated technical standards to reflect the most recent published editions. These updated industry standards only apply to waterfront facilities handling LNG and LHG that are constructed, expanded, or modified under a contract awarded after the implementation date of the final rule. Third, for waterfront facilities handling LNG that must comply with the WSA requirements, the final rule requires these facilities to provide information to the Coast Guard regarding the nation of registry for vessels transporting natural gas that are reasonably anticipated to be servicing the facilities, and the nationality or citizenship of officers and crew serving on board those vessels.

DATES: This final rule is effective March 4, 2022. The incorporation by reference of certain publications listed in the rule is approved by the Director of the Federal Register on March 4, 2022.
