Abstract: The 2015 update to the federal law governing K-12 schooling gave state (SEAs) and local education agencies (LEAs) increased responsibilities, and, therefore, extra demands on their time and capabilities. The Comprehensive Centers program, funded by the U.S. Department of Education at over \$50 million per year, provides training, tools, and other supports to help these agencies carry out their education plans and take steps to close achievement gaps. The Centers' services aim to build individual and organizational capacity to help identify and solve key problems. This evaluation will examine the delivery and usefulness of the Centers' technical assistance, given potential new stakeholder needs and changes in the Center program that took effect with the 20 new grants awarded in in 2019.

Congress requires a periodic evaluation of the Comprehensive Centers program, with the results intended to inform ongoing program improvements.

Dated: February 1, 2022.

Juliana Pearson,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

l. The existing Watson Dam Project (Figure 2) consists of: (1) A 292.5-foot-long, 12-foot-high concrete gravity dam that includes the following sections: (a) A 54-foot-long right abutment; (b) a 111-foot-long right spillway section with 24-inch-high flashboards and a crest elevation of 110.1 North American Vertical Datum of 1988 (NAVD 88) at the top of the flashboards; (c) a 12-foot-long, 11.5-foot-wide concrete spillway center pier; (d) an 80-foot-long left spillway section with 24-inch-high flashboards and a crest elevation of 110.2 feet NAVD 88 at the top of the flashboards; and (e) a 24-foot-long left abutment; (2) an impoundment with a surface area of 54 acres and a storage capacity of 300 acre-feet at an elevation of 110.1 feet NAVD 88; (3) a 26-foot-long, 24-foot-wide intake structure in the left abutment that is equipped with an 8.5-foot-diameter headgate and trashrack with 2-inch clear bar spacing; (4) a 26.5-foot-long, 34-foot-wide wood and steel powerhouse containing one 265-kilowatt vertical Flygt submersible turbine-generator unit; (5) a 250-foot-long, 20-foot-wide tailrace that discharges into the Cocheco River; (6) a 0.48/12.47-kilovolt (kV) step-up transformer and an 80-foot-long, 12.47 kV transmission line that connect the project to the local utility distribution system; and (7) appurtenant facilities. The project creates an approximately 250-foot-long and a 400-foot-long bifurcated bypassed reaches of the Cocheco River.

Watson Associates voluntarily operates the project in a run-of-river mode using an automatic pond level control system to regulate turbine operation, such that outflow from the project approximates inflow. Downstream fish passage is provided by a bypass facility located next to the project's intake on the left side of the dam. There is no upstream fish passage facility at the project.

Article 26 of the current license requires a minimum flow of 83 cfs or inflow to the impoundment, whichever is less, from the project, to protect and enhance aquatic resources in the Cocheco River. Watson Associates is required to operate the downstream fish passage facility from October 1 through November 15 of each year.

The average annual energy production of the project is approximately 1,100 MWh.

Watson Associates proposes to: (1) Continue to operate the project in a run-of-river mode; (2) continue to provide downstream fish passage through the bypass facility; and (3) consult with the New Hampshire State Historic Preservation Officer before beginning any land-disturbing activities or alterations to known historic structures within the project boundary.
