SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 *et seq.*), the regulations governing the taking and importing of marine mammals (50 CFR part 216), the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222–226), and the Fur Seal Act of 1966, as amended (16 U.S.C. 1151 *et seq.*).

The proposed permit would authorize vessel surveys for continuing a long-term assessment of the health and ecology of cetaceans, with particular focus on the ESA-listed Southern Resident killer whales, and sympatric ecotypes of killer whales (*Orcinus orca*), with the primary goal of obtaining health information pertinent to their management and conservation. The core study area is the Salish Sea, covering the eastern inlet of the Strait of Juan de Fuca, Puget Sound to the south, the U.S. boundary to the north, and the mainland to the east, but includes the outer coast from Washington State to Monterey California. Research methods primarily involve fecal sampling, photographic identification, and behavioral observations, but depending on the conditions and behavior of the whales we may also use other non-invasive or benign techniques such as prey and skin sampling in the trail of whales, unmanned aircraft remote observations of fecal patches and whales, and eDNA water sampling. Parts from unidentified ESA-listed fish (e.g., salmonid) species may also be collected during predation events. Secondary target species that may be
