Abstract: This information is being collected for the purposes of understanding (1) the continued feasibility of implementation of ShakeAlert-powered alerts through the Wireless Emergency Alerts via the Integrated Public Alerts and Warning System (IPAWS) managed by the Federal Emergency Management Agency, and (2) the latency of transmissions in California, Oregon, and Washington. This collection is critical to determine technological latencies of the Integrated Public Alerts and Warning System, managed by FEMA and used by the U.S. Geological Survey to send ShakeAlert-powered alerts. Better understanding is required to know how much time people will have to take protective actions once they receive an alert. Further, knowledge of where the latencies exist and why can help us improve and streamline our systems. This involves live testing of the system with a population reporting back to us.
