criteria in the combined license for Vogtle Electric Generating Plant (VEGP), Unit 3 are met. Because of this action, operation of the facility is allowed in accordance with the terms and conditions of the license.

SUPPLEMENTARY INFORMATION: Under Section 2.106 of title 10 of the *Code of Federal Regulations* (10 CFR), “Notice of issuance,” the NRC is providing notice that it has found that the acceptance criteria in the combined license for VEGP, Unit 3 are met. Section 185b. (42 U.S.C. 2235(b)) of the Atomic Energy Act of 1954, as amended (AEA), and 10 CFR 52.97(b) require that the Commission identify within the combined license the inspections, tests, and analyses, including those applicable to emergency planning, that the licensee shall perform, and the acceptance criteria that, if met, are necessary and sufficient to provide reasonable assurance that the facility has been constructed and will be operated in conformity with the license, the provisions of the AEA, and the Commission’s rules and regulations. In compliance with these requirements, the Commission included inspections, tests, analyses, and acceptance criteria (ITAAC) in Appendix C to VEGP, Unit 3 combined license No. NPF–91.

Section 185b. of the AEA also requires, in part, that following issuance

of the combined license, the Commission shall ensure that the prescribed inspections, tests, and analyses are performed, and before operation of the facility, find that the prescribed acceptance criteria are met. The NRC codified the requirement to ensure completion of the inspections, tests, and analyses in 10 CFR 52.99(e) and codified the requirement regarding the finding that the acceptance criteria are met in 10 CFR 52.103(g).

The NRC staff has determined that the inspections, tests, and analyses have been successfully completed and found that all specified acceptance criteria in the VEGP, Unit 3 combined license No. NPF–91 are met. This finding was made on August 3, 2022, and was effective on August 3, 2022. The principal basis for the staff’s 10 CFR 52.103(g) finding was the staff’s review of the licensee’s ITAAC notifications under 10 CFR 52.99(c) and the staff’s inspection of ITAAC-related activities conducted by the licensee. The staff explained the basis for its finding in the document titled “10 CFR 52.103(g) Basis Document Vogtle Electric Generating Plant, Unit 3.” Because of the NRC’s finding that the acceptance criteria are met, operation of the facility is allowed in accordance with the terms and conditions of the license.

ACTION: Regulatory guide; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing Revision 5 of Regulatory Guide (RG) 1.82, “Water Sources for Long-Term Cooling
