

calculations. Future renewals of the part 58 ICR will continue to cover any collections of ongoing ambient air monitoring data that were initiated under Subpart BB of Part 51, so long as any of those monitors continues to operate.

In accordance with the requirements of the DRR, where an air agency finds in the annual emissions report for a source subject to the DRR that emissions have increased in an area, the state or the EPA may determine that the state must submit updated air quality modeling data for the area to determine whether or not the area is meeting the 2010 1-Hour SO₂ Primary NAAQS.

The information requirements included within this ICR are necessary to provide EPA with ambient air quality data, which includes emissions data and/or modeling data, to determine the air quality status of specific areas around the country, to make attainment decisions for those areas with respect to the NAAQS, to assist in developing necessary control strategies in order to ensure attainment of the NAAQS in those areas, to assess national trends in air pollution, to inform the public of air quality, and to determine the population's exposure to various ambient air pollutants. EPA's ability to achieve its goal of attaining the 2010 SO₂ 1-hour NAAQS in all areas of the United States is directly dependent upon the availability of ambient air quality data (emissions and/or modeling data) requested in this information collection. Additionally, EPA, state and local air quality management agencies, environmental groups, industrial groups, and academic organizations use these data to study atmospheric chemistry, e.g., the formation and fate of SO₂ to determine the most appropriate

and effective control strategies necessary to reduce air pollution.

The principal legal authority for this information collection is the Clean Air Act (CAA), 42 U.S.C. 7403, 7410, 7414(a), and 7511a, from which the 40 CFR part 51 regulations were promulgated. Under section 7403(c), the Administrator is required to conduct a program of research, testing, and development of methods for sampling, measurement, monitoring, analysis, and modeling of air pollutants, specifically including a requirement to establish a national network to monitor, collect, and compile data with quantification of certainty in the status and trends of air emissions and air quality.

CAA sections 110(a) and (k) (42 U.S.C. 7410(a) and (k)) contain the state implementation plan (SIP) requirements, which include a requirement that each State submit a SIP that: (1) provides for the establishment and operation of appropriate devices, methods, systems, and procedures necessary to monitor, compile, analyze, and make available to the Administrator data on ambient air quality and (2) provides for the performance of such air quality modeling as the Administrator may prescribe for the purpose of predicting the effect on ambient air quality of any emissions of any air pollutant for which the Administrator has established a NAAQS, and the submission, upon request, of data related to such air quality modeling to the designee as stipulated in the rule.

Form Numbers: None.

Respondents/affected entities: State, local and tribal air pollution management control agencies.

Respondents' obligation to respond: mandatory (see CAA 42 U.S.C. 7403, 7410, and 7511a, from which the 40 CFR part 51 regulations were promulgated).

Estimated number of respondents: 36 states, providing emissions and in some cases air quality modeling for 137 sources.

Frequency of response: Annually for ongoing modeling annual report.

Total estimated burden: On the high end, the modeling burden per source is estimated to be \$22,000 annually. On the low end, labor costs are estimated to be 5% of the overall turnkey estimate, or \$1,100 per report annually. Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: Range of \$150,700 to \$3,014,000 (per year).

Changes in Estimates: The prior renewal of this ICR estimated a maximum possible burden of \$5,100,000 annually for modeling sources. This ICR renewal, estimating a range of \$150,700 to \$3,014,000 annually, reflects a decrease in the maximum possible burden of \$2,086,000 annually for modeling sources. This decrease is due to the reduced number of listed sources for which states chose air quality modeling to meet their DRR requirements.

Director, Air Quality Policy Division.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Registration and Product Listing for Owners and Operators of Domestic Tobacco Product Establishments and Listing of Ingredients in Tobacco Products

OMB Control Number 0910-0650—Extension

On June 22, 2009, the Family Smoking Prevention and Tobacco Control Act (Tobacco Control Act) (Pub. L. 111-31) was signed into law. The Tobacco Control Act amended the Federal Food, Drug, and Cosmetic Act (FD&C Act) by adding, among other things, a chapter granting FDA important authority to regulate the manufacture, marketing, and distribution of tobacco products to protect the public health generally and to reduce tobacco use by minors. The Tobacco Control Act created new requirements for the tobacco industry. Section 101 of the Tobacco Control Act amended the FD&C Act by adding, among others, sections 905 and 904 (21 U.S.C. 387e and 387d).

Section 905 of the FD&C Act requires the annual registration of any "establishment in any State engaged in the manufacture, preparation, compounding, or processing of a tobacco product or tobacco products." Section 905 of the FD&C Act requires this registration be completed by December 31 of each year. The Secretary of Health and Human Services (Secretary) has delegated to the Commissioner of Food and Drugs the responsibility for administering the FD&C Act, including section 905. Section 905 of the FD&C Act requires owners or operators of each establishment to register: (1) their name; (2) places of business; (3) a list of all tobacco products which are
