

data set of pipelines and facilities; and provide better support to PHMSA's inspectors by providing more accurate pipeline locations and additional pipeline-related geospatial data that can be linked to tabular data in PHMSA's inspection database.

This revision will require operators to submit geospatial data for moderate consequence areas (MCAs), as defined in 49 CFR part 192, and data based on the applicability of 49 CFR 192.710 assessments outside of high consequence areas. This revision would also require operators to submit the data element "specified minimum yield strength" in pounds per square inch gauge in place of submitting data on pipe grade. PHMSA does not expect operators to incur additional burden due to the inclusion of these two new elements. PHMSA believes that the annual burden allotted for this information collection is sufficient for operators to include the newly requested data elements. A detailed breakdown of the estimated burden for this information collection can be found at www.regulations.gov.

Respondents: Operators of gas transmission, hazardous liquid, or liquefied natural gas pipeline facilities.

Annual Reporting and Recordkeeping Burden:

Estimated Number of Responses: 1,346 responses.

Estimated Total Annual Burden: 162,208 hours.

Frequency of Collection: Annually. Comments are invited on:

(a) The need for the renewal and revision of this collection of information for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(b) The accuracy of the Agency's estimate of the burden of the proposed collection of information,

(c) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(d) Ways to minimize the burden of the collection of information on those who are required to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques.
