SUPPLEMENTARY INFORMATION: Section 101(c) of the Federal Mine Safety and Health Act of 1977 and Title 30 of the Code of Federal Regulations (CFR) part 44 govern the application, processing, and disposition of petitions for modification.

I. Background

Section 101(c) of the Federal Mine Safety and Health Act of 1977 (Mine Act) allows the mine operator or representative of miners to file a petition to modify the application of any mandatory safety standard to a coal or other mine if the Secretary of Labor determines that:

1. An alternative method of achieving the result of such standard exists which will at all times guarantee no less than the same measure of protection afforded the miners of such mine by such standard; or

2. The application of such standard to such mine will result in a diminution of safety to the miners in such mine.

In addition, sections 44.10 and 44.11 of 30 CFR establish the requirements for filing petitions for modification.

II. Petition for Modification

Docket Number: M-2022-012-C. Petitioner: UC Mining, LLC, 835 State Route 1179, Waverly, Kentucky 42462.

Mine: UC Mining, LLC Mine, MSHA ID No. 15–02709, located in Union County, Kentucky.

Regulation Affected: 30 CFR 75.1700, Oil and gas wells.

Modification Request: The petitioner requests a modification of 30 CFR 75.1700 to permit an alternate method as it pertains to leaving barrier pillars around coal and gas wells in order to mine through oil and gas wells in all mineable coalbeds.

The petitioner states that:

(a) The area consists of approximately 10,000 acres located in Henderson and Union Counties, Kentucky. The area is situated east of the town of Corydon.

(b) The coal mining method will be continuous mining machine, room and pillar. No secondary mining or pillar extraction will be conducted.

(c) The mineable coal seams in the reserve area are #11 with an average thickness of 4.5 feet and an average depth of 280 feet and #9 with an average thickness of 5 feet and an average depth of 400 feet.

(d) A worked-out #9 seam mine was previously mined directly adjacent (west) to the current area. These old works are assumed to be flooded; however, the inundation potential is zero as sufficient barrier pillars will be utilized. The worked-out #9 seam mine was mined around and mined through plugged wells under Petition for Modification (PFM) Docket No. M– 1992–101–C, granted on February 2, 1993. The PFM was revoked on March 2, 2016, because the mine workings had been abandoned and the surface opening(s) to the mine sealed.

(e) There are approximately 300 documented wells within the proposed mining area. The wells date from the early 1940's through the present. The average depth of the wells is 2,540 feet.

(f) There are six main oil producing fields in the mining area, with principal
