SUPPLEMENTARY INFORMATION:

I. Background

Section 103(h) of the Federal Mine Safety and Health Act of 1977 (Mine Act), 30 U.S.C. 813(h), authorizes MSHA to collect information necessary to carry out its duty in protecting the safety and health of miners. Further, section 101(a) of the Mine Act, 30 U.S.C. 811, authorizes the Secretary of Labor (Secretary) to develop, promulgate, and revise as may be appropriate, improved mandatory health or safety standards for the protection of life and prevention of injuries in coal and metal and nonmetal mines.

A program for regular cleanup and removal of accumulations of coal and float coal dusts, loose coal, and other combustibles is essential to protect miners from explosions. Effective and frequent rock dust application is necessary to protect miners from the potential of a float coal dust explosion or, if one occurs, to reduce its propagation. 30 CFR 75.400-2 requires that mine operators establish and maintain a "program for regular cleanup and removal of accumulations of coal and float coal dusts, loose coal, and other combustibles." In addition, the cleanup program must be available to the Secretary or authorized representative.

II. Desired Focus of Comments

MSHA is soliciting comments concerning the proposed information collection related to Cleanup Program for Accumulations of Coal and Float Coal Dusts, Loose Coal, and Other Combustibles. MSHA is particularly interested in comments that:
