POSTAL SERVICE

Privacy Act of 1974; System of Records

AGENCY: Postal Service®.

ACTION: Notice of a modified system of records.

SUMMARY: The United States Postal Service® (USPS®) is proposing to modify one General Privacy Act System of Records (SOR) to support a resilient, modern, and flexible Fleet Management Information System (FMIS) for the USPS fleet. An Integrated Fleet Management (IFM) solution, that includes both Telematics system technology and a Commercial Off-The-Shelf (COTS) FMIS, will improve the effectiveness and efficiency of USPS Fleet Management capabilities to better meet future challenges and needs, by providing real time vehicle maintenance and operational data to fleet managers. Telematics uses onboard vehicle technologies, including instruments and sensors, to track and combine maintenance and operational data, that is subsequently transmitted to a central database for fleet management purposes.

DATES: These revisions will become effective without further notice on November 18, 2022, unless responses to comments received on or before that date, result in a contrary determination.

ADDRESSES: Comments may be submitted via email to the Privacy and Records Management Office, United States Postal Service Headquarters (privacy@usps.gov). To facilitate public inspection, arrangements to view copies of any written comments received will be made upon request.

FOR FURTHER INFORMATION CONTACT: Janine Castorina, Chief Privacy and Records Management Officer, Privacy and Records Management Office, 202–268–3069 or privacy@usps.gov.

SUPPLEMENTARY INFORMATION: This notice is in accordance with the Privacy Act requirement that agencies publish their systems of records in the **Federal Register** when there is a revision, change, or addition, or when the agency establishes a new system of records. The Postal Service is proposing revisions to an existing system of records (SOR) to support the implementation of the Integrated Fleet Management (IFM) solution within the Fleet Management Information System (FMIS).

Telematics devices will be installed on Postal owned vehicles to monitor vehicle health, calculate vehicle utilization and report vehicle location. Additionally, data gathered from Telematics will inform drivers of safety warnings and provide fuel savings through improved safety measures by highlighting vehicle operational efficiencies through improved vehicle operational performance and usage.

Vehicle health data will be provided to the Fleet Management group, so that they can proactively maintain vehicles. A Telematics device plugs into a vehicle's data port (OBDII and OBDI) and provides near real-time information on the operating condition of the vehicle. Examples include mileage, location, acceleration/deceleration, battery condition, fluid levels and tire pressure monitoring if applicable. These devices can replace the need for manually reported information and allow Vehicle Maintenance Facility (VMF) employees to monitor the condition of vehicles in near real-time. This will enable the Postal Service to move from planned/reactive maintenance to predictive/proactive maintenance.

Telematics has been identified as a solution for a variety of current and future opportunities within the vehicle fleet, with functionality that includes utilization reporting, along with tracking of vehicle maintenance, repair, safety and security. The FMIS will provide multiple indicators about key fleet needs and systems under one central program including maintenance and work-order management, vehicle accident history, invoice payment and tracking, vehicle assignment and location information, and many other features working in tandem with the Telematics vehicle data.

I. Background

The Postal Service is proposing modifications to SOR 500.100 Carrier and Vehicle Operator Records, to support the implementation of the new Integrated Fleet Management (IFM) solution within the Fleet Management Information System (FMIS). The Postal

Service is seeking to optimize the maintenance, utilization, and tracking of vehicle assets throughout their lifecycle, and reduce operational costs for its fleet. The installation and operation of approximately 287,000 Telematics devices, as well as the acquisition and implementation of a dedicated FMIS aligns with the USPS Delivering for America 10-year plan.

Telematics devices will be placed on all Postal-owned vehicles and trailers over a ten-year period. The FMIS will include all Postal-owned vehicles and trailers and can also be used to improve tracking capabilities for leased vehicles and trailers. Telematic devices will not be installed onto leased, rented or personally owned vehicles (POV). However, when the use of leased, rented, or personally owned vehicles (POV) are replaced by the use of Postal owned fleet vehicles, these USPS vehicles will receive Telematics devices and be managed via the new FMIS.

The acquisition of the FMIS solution addresses an immediate need to implement new vehicle technologies for our current fleet of all Delivery, and Non-Mail Hauling vehicles. In addition, the acquisition of Next Generation Delivery Vehicles (NGDV) will include the installation of telematics units prior to delivery to the USPS.
