SUPPLEMENTARY INFORMATION: The subject modification to Permit No. 22671-02, issued on January 31, 2020 (85 FR 7978, February 12, 2020), is requested under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222-226).

Permit 22671-02 authorizes the permit holder to study the presence, life history, population size, migration, physiology, and passage of wild shortnose sturgeon (*Acipenser brevirostrum*) in the Connecticut River. The permit also authorizes use of captive (non-releasable) shortnose sturgeon for research and enhancement objectives. In research conducted on wild fish, researchers may use gill nets and trawls to capture juvenile and adult/sub-adult shortnose sturgeon to measure, weigh, passive integrated transponder tag (PIT), borescope, genetic tissue and blood sample, and photograph prior to release. A subset of animals may also be anesthetized and receive internal acoustic transmitters. Early life stages (ELS) may be lethally sampled with D-nets and egg mats to document spawning incidence. Up to two juvenile and one adult or sub-adult sturgeon may unintentionally die annually during research activities. The permit holder requests new authorization between the Holyoke Dam to Agawam, Massachusetts to add new objectives and take, including (1) determining the range, ecology, habitat, and recruitment of juvenile shortnose sturgeon life stages; (2) using egg mat and D-net samplers to collect 150 ELS below the Holyoke Dam; (3) capturing up to 200 young-of-year and older juvenile shortnose sturgeon annually using gillnets, mini-trawl, beach seine, and cast-net sampling gear. Up to 175 of these would be PIT tagged, measured, photographed, fin clipped, and weighed, and up to 25 would be anesthetized and internally tagged before being released; (4) capturing up to 50 adult/sub-adult shortnose sturgeon annually, adding procedures, including borescope; PIT tag; measure; photo/video; fin clip (genetic) and weigh. Additionally, up to five of these fish, having expired acoustic transmitters, may also have them surgically

reimplanted under anesthesia; and (5) anesthetizing and implanting acoustic tags in up to 20 adult/sub-adult shortnose sturgeon approaching the Holyoke Dam aggregation; and (6) performing additional procedures, including measure, weigh, PIT tag, photo, genetic tissue sample, and borescope, on up to 20 adult/sub-adult shortnose sturgeon collected under another authority in the Holyoke Dam fish lift. The permit is valid through March 31, 2029.

Dated: November 9, 2022.
