Abstract: The USGS is required to collect, evaluate, publish, and distribute information concerning earthquakes. Respondents have an opportunity to voluntarily supply information concerning the effects of shaking from an earthquake—on themselves, buildings, other man-made structures—as well as on ground effects such as faulting or landslides. Respondents' observations are interpreted in terms of numbers that measure the strength of shaking, and the resulting numbers are displayed on maps that are viewable from USGS earthquake websites. Observations are submitted via the Felt Report questionnaire accessed from the USGS "Did You Feel It?" (DYFI) earthquake web pages and may be submitted via computer or mobile phone. Respondents are asked to provide information on the location to which the report pertains. The locations may, at the respondent's option, be given imprecisely (city-name or postal Zip Code) or precisely (street address, geographic coordinates, or current location determined by the user's mobile phone). Low resolution maps of shaking based on both precise and imprecise observations are published for all earthquakes for which observations are submitted. For earthquakes felt by many respondents, the observations that are associated with more precise locations are used in the preparation of higher resolution maps of earthquake shaking.

Additional questions will be added to the DYFI survey, specifically for people who received an alert via the ShakeAlert System (the earthquake early-warning

system for the West Coast of the U.S., managed by the USGS) or any earthquake early warning system globally so they can report their experiences to us quickly, in combination with their experiences of the earthquake itself from the DYFI form. This combined data set can tell us much about how the ShakeAlert system operates, when people receive alerts, how they receive them, and what they did once they received them. This is critical information for us to learn about the efficacy of earthquake early-warning systems and make improvements to the ShakeAlert system. Note that only people who receive alerts and indicate that they have will be able to answer the earthquake early-warning questions.
