NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–498 and 50–499; NRC–2022–0206]

STP Nuclear Operating Company; South Texas Project, Units 1 and 2

AGENCY: Nuclear Regulatory Commission.

ACTION: Environmental assessment and finding of no significant impact; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing an environmental assessment (EA) and finding of no significant impact (FONSI) under the National Environmental Policy Act of 1969 (NEPA) and NRC's regulations. This EA summarizes the results of the NRC staff's environmental review, which evaluates the potential environmental impacts of approving an alternate disposal request in response to a request from STP Nuclear Operating Company (STPNOC) for Renewed Facility Operating Licenses NPF–76 and NPF–80 for South Texas Project, Units 1 and 2 (STP). Specifically, the alternate disposal request, if approved, would allow the licensee to dispose of very-low-level waste (VLLW) generated during day-to-day operations at the STP reactor site at Texas Class 1 or Class 2 industrial landfills.

DATES: The EA and FONSI referenced in this document are available on December 5, 2022.

ADDRESSES: Please refer to Docket ID NRC–2022–0206 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

SUPPLEMENTARY INFORMATION:**I. Introduction**

The NRC is considering the approval of an alternate disposal request, dated November 4, 2021, as supplemented by letters dated December 3, 2021, August 19, 2022, and November 22, 2022, from STPNOC for waste material containing VLLW generated during day-to-day operations at the STP reactor site, located in Matagorda County, Texas, for ultimate disposal at Texas Class 1 or Class 2 industrial landfills.¹ The August 19, 2022, STPNOC letter was in response to the NRC request for information, dated July 20, 2022. The term "VLLW" is generally understood as material created during the conduct of NRC- or Agreement State-licensed activities that contains some residual

radioactivity, including naturally occurring radionuclides, that may be safely disposed in hazardous or municipal solid waste landfills. VLLW represents a small fraction of the hazard of waste at the Class A limits in Part 61 of title 10 of the *Code of Federal Regulations* (10 CFR), "Licensing Requirements for Land Disposal of Radioactive Waste."

NUREG–1437, "Generic Environmental Impact Statement for License Renewal of Nuclear Plants" dated June 2013 (hereafter, the Generic Environmental Impact Statement or GEIS), Section 3.1.4.3, "Solid Radioactive Waste," addresses solid low-level waste (LLW) as follows:

Solid [LLW] from nuclear power plants is generated from the removal of radionuclides from liquid waste streams, filtration of airborne gaseous emissions, and removal of contaminated material from various reactor areas. Liquid contaminated with radionuclides comes from primary and secondary coolant systems, spent fuel pools, decontaminated wastewater, and laboratory operations.

Solid waste is packaged in containers to meet the applicable requirements of [Department of Transportation's regulations at] 49 CFR parts 171 through 177. Disposal and transportation are performed in accordance with the NRC's applicable requirements of 10 CFR part 61 and 10 CFR part 71, respectively.

Solid radioactive waste generated during operations is shipped to a LLW processor or directly to a [10 CFR part 61] LLW disposal site.

As noted in Supplement 48 to NUREG–1437, "Generic Environmental Impact State for License Renewal, Supplement 48: Regarding South Texas Project, Units 1 and 2" dated November 2013 (hereafter, the Supplemental Environmental Impact Statement or SEIS), the SEIS generated as part of the STP license renewal process,² a solid waste processing system is maintained onsite at STP designed to process, package, and store solid radioactive wastes generated by plant operations until they are shipped offsite to a vendor for further processing or for permanent disposal at a 10 CFR part 61 LLW disposal facility.

The waste being considered in the licensee's alternate disposal request includes dewatered sewage sludge, ion exchange media, desiccant, ventilation filtration media, and soil that originated from the secondary side of plant operations. Rather than disposal at a 10 CFR part 61 LLW disposal site, the licensee is requesting approval to dispose of the waste at Texas Class 1 or

² The license was renewed on September 28, 2017.
