

language and content to support MLLs in proportional reasoning. Proportional reasoning content is a major emphasis in grade 7 math content standards in most U.S. states, and is fundamental to success in subsequent mathematics coursework. Prior research has demonstrated positive impacts of the Visual Access to Mathematics Professional Development (VAM PD) on teacher outcomes (DePiper, et al., 2021b, Louie et al., 2022, DePiper et al., 2019 & DePiper, et al., 2021a). This study will fill the gap in information about how VAM PD impacts student outcomes. In the current study, we will collect pre- and post-data from both teachers and students to examine what impact the VAM PD has on student learning. Teachers in participating schools will be assigned randomly to either a treatment or control group. Both groups will complete (1) a measure of mathematical content knowledge, (2) a measure of teacher ability to analyze student work, and (3) a brief survey/questionnaire about instructional practices in fall 2023 and again in spring 2024. Students taught by teachers in both conditions will complete (1) a measure of mathematical content knowledge, (2) three items related to VRs, and (3) a survey regarding attitudes toward mathematics. Data collected will be summarized and analyzed using multilevel modeling to understand the efficacy of the VAM PD on both teacher and student level outcomes.
