*General Description of Collection:*  
Respondents must prepare and provide certain disclosures to consumers (e.g., that insurance products and annuities are not FDIC-insured) and obtain consumer acknowledgments, at two different times: (1) Before the completion of the initial sale of an insurance product or annuity to a consumer; and (2) at the time of application for the extension of credit (if insurance products or annuities are sold, solicited, advertised, or offered in connection with an extension of credit). There is no change in the substance or methodology of this information collection. The decrease in burden is due solely to a decrease in the estimated number of respondents.

The disclosure requirements in this information collection apply to all FDIC-supervised IDIs that sell insurance products. According to recent Reports of

Condition and Income (Call Report), there are currently 3,068 FDIC-supervised IDIs.<sup>1</sup> To estimate the number of IDIs that would be directly affected by this ICR, FDIC restricts the count to those IDIs that report income from the sale of insurance on their Call Reports. IDIs report income from insurance activities differently depending on which Call Report form they file. IDIs file Call Report form 051 if they have less than \$1 billion in total assets and do not have any foreign offices, and they file forms 031 or 041 otherwise. IDIs that file form 051 report income from insurance activities on Call Report schedule RI line 5(d) 2, while IDIs that file forms 031 or 041 report income from annuity sales, underwriting income from insurance and reinsurance activities, and other income from insurance activities on Call Report schedule RI lines 5(d) 3-5.

As of September 30, 2022, 321 FDIC-supervised IDIs reported non-zero values of income from annuity sales, underwriting income from insurance and reinsurance activities, or income from other insurance activities on Call Report forms 031 or 041. Another 780 FDIC-supervised IDIs reported non-zero values of income from insurance activities on Call Report form 051.<sup>2</sup> Accordingly, the estimated number of respondents for this information collection is 1,101.<sup>3</sup>

*General Description of Collection:*  
This Guidance helps promote that incentive compensation policies at

insured state non-member banks do not encourage excessive risk-taking and are consistent with the safety and

soundness of the organization. Under this Guidance, banks are encouraged to: (i) Have policies and procedures that

<sup>3</sup> 321 + 780 = 1,101.

identify and describe the role(s) of the personnel and units authorized to be involved in incentive compensation arrangements, identify the source of significant risk-related inputs, establish appropriate controls governing these inputs to help ensure their integrity, and identify the individual(s) and unit(s) whose approval is necessary for the establishment or modification of incentive compensation arrangements; (ii) create and maintain sufficient documentation to permit an audit of the organization's processes for incentive compensation arrangements; (iii) have any material exceptions or adjustments to the incentive compensation arrangements established for senior executives approved and documented by its board of directors; and (iv) have its board of directors receive and review, on an annual or more frequent basis, an assessment by management of the effectiveness of the design and operation of the organization's incentive compensation system in providing risk taking incentives that are consistent with the organization's safety and soundness. There is no change in the substance or methodology of this information collection. The change in burden is due to a decrease in the estimated number of respondents. The burden hours decreased by 358 from 4,368 to 4,010.

#### SUPPLEMENTARY INFORMATION:

##### Proposed Project

#### The AHRQ Safety Program for Telemedicine: Improving the Diagnostic Process and Improving Antibiotic Use

Telemedicine visits have increased dramatically in response to the COVID-19 pandemic and resulting changes in third-party payer reimbursement policies. Telemedicine visits increased from 0.3 percent of all ambulatory visits in 2019 to 23.6 percent by Spring 2020. Given this rapid growth, the need to ensure safe and appropriate patient care in this setting is urgent. Telemedicine

has many benefits, such as facilitating continuity of care; improving access beyond normal hours; reducing patients' travel burden; overcoming health care provider (HCP) shortages; and providing support for patients managing chronic health conditions. However, transferring clinical practices from an in-person to a virtual environment poses potential risks. Many HCPs have never received formal training in using telemedicine effectively to diagnose and treat patients virtually. Additionally, inadequate internet access, which disproportionately impacts rural and minority populations, and struggles accessing telemedicine platforms may force video-based telemedicine visits to transition to audio-only or be skipped.

This program aims to improve two at-risk areas among telemedicine practices by implementing the AHRQ- and Johns Hopkins Armstrong Institute for Patient Safety and Quality (JHAI)-developed Comprehensive Unit-based Safety Program (CUSP) approach: (1) the diagnostic process for breast, colorectal, and lung cancer; and (2) antibiotic stewardship (AS). The CUSP approach improves safety culture at the practice level, enables harm prevention, and engages providers who are on the front lines while integrating technical and adaptive/cultural approaches to making sustainable change.

This program constitutes the first large-scale implementation of a quality improvement effort for the cancer diagnostic process and AS in telemedicine. These areas were chosen given the need for clearer guidance and evidence-based telemedicine practices for clinicians and potential for positive impact on outcomes. This program will incorporate CUSP strategies to improve the diagnostic process for breast, colorectal, and lung cancer and to improve antibiotic prescribing in telemedicine. The program goals are to:

- Identify best practices in implementing interventions to improve the cancer diagnostic process and AS in telemedicine.
- Determine how best to adapt CUSP to enhance the cancer diagnostic process and AS in telemedicine.

This study is being conducted by AHRQ through its contractor, contractor, NORC at the University of Chicago (NORC) and NORC's subcontractors, the Johns Hopkins Armstrong Institute of Patient Safety and Quality (JHAI) and Baylor College of Medicine (Baylor), pursuant to AHRQ's statutory authority to conduct and support research on health care and on systems for the delivery of such care, including activities with respect to the quality, effectiveness, efficiency,
