**ENVIRONMENTAL PROTECTION AGENCY**

**[FRL-10499-01-OMS]**

**Privacy Act of 1974; System of Records**

**AGENCY:** Office of Mission Support, Environmental Protection Agency (EPA).

**ACTION:** Notice of a modified system of records.

**SUMMARY:** The U.S. Environmental Protection Agency (EPA) is giving notice that it proposes to modify a system of records pursuant to the provisions of the Privacy Act of 1974. The Mass Alert Notification System (MANS) is being modified to update the system location, contact information, and record source categories, and to add one additional General Routine Use. The purpose of the

system is to manage communications to agency personnel during critical events. EPA uses MANS for operational response to critical events to keep individuals safe and ensure continuity of business operations. During public safety threats such as active shooter situations, terrorist attacks, or severe weather conditions, as well as critical business events such as IT outages, cyber-attacks, or other incidents such as product recalls or supply-chain interruptions, customers rely on MANS to quickly and reliably aggregate and assess threat data, locate people at risk and responders able to assist, automate the execution of pre-defined communications processes, and track progress on executing incident response plans.

**DATES:** Persons wishing to comment on this system of records notice must do so by April 6, 2023. Routine uses for this modified system of records will be effective April 6, 2023.

2. *Technical Safeguards:* MANS is a cloud-based Software-as-a-Service platform that is designed to be accessed over the internet. All remote communication must be encrypted, and all users are required to be authorized. Access control policy does not permit shared account credentials within the cloud environment. Each user is assigned unique credentials and can only access the cloud environment using their assigned unique credentials. Group accounts are explicitly disabled. MANS customers and personnel are prohibited from sharing accounts. MANS also implements session timeout period after 15 minutes of user inactivity. Non-privileged users do not have the capability to perform privileged functions. System administrators have full access to the tool suite, including the ability to perform administrative functions. Other users have limited access particularized to the specific functions and data they need to perform. This access is controlled by a series of permissions within dedicated workspaces/databases for each specific request. Authorized users include federal and contract staff located throughout the country.
