E–276–2011 and E–104–2018 patent families are primarily directed to novel compositions, methods and formulations, which are selective against metastasis across different preclinical cancer histologies and without appreciable toxicity. Among others, the subject patent families disclose or claim the use of the small molecule metarrestin for the treatment of several types of metastatic cancers by disrupting a subcellular structure called the perinucleolar compartment (PNC) which is frequently found in metastatic tumors and cancer stem cells.

This Notice is made in accordance with 35 U.S.C. 209 and 37 CFR part 404. The prospective exclusive license will be royalty bearing, and the prospective exclusive license may be granted unless within fifteen (15) days from the date of this published Notice, the National Center for Advancing Translational Sciences receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.
