SUPPLEMENTARY INFORMATION: As required by 40 CFR part 148, Lyondell has adequately demonstrated to the satisfaction of the EPA by the petition reissuance application and supporting documentation that, to a reasonable degree of certainty, there will be no migration of hazardous constituents from the injection zone for as long as the waste remains hazardous. This final decision allows the underground injection by the Lyondell Channelview Plant, of the specific restricted hazardous wastes identified in this exemption reissuance, into Class I hazardous waste injection Wells WDW-148, WDW-162, and WDW-438 when it is drilled in the future, until December 31, 2050, unless EPA moves to terminate this exemption under provisions of 40 CFR 148.24. Additional conditions included in this final decision may be reviewed by contacting the Region 6 Ground Water/UIC Section. As required by 40 CFR 148.22(b) and 124.10, a public notice was issued September 13, 2022. The public comment period closed on October 28, 2022. No comments were received. This decision constitutes final Agency action, and there is no Administrative appeal.

Dated: April 17, 2023.

Abstract: As mentioned in Effluent Guidelines Program Plan 15, published in January 2023, EPA plans to conduct a rulemaking to address Per- and Polyfluoroalkyl Substances (PFAS) discharges from a subset of facilities in the Metal Finishing and Electroplating point source categories. Specifically, facilities performing certain chromium operations that employ hexavalent chromium (hereafter referred to as "chrome finishing facilities"), including chromium plating, chromium anodizing, chromic acid etching, and chromate conversion coating that use or have used PFAS to control hexavalent chromium emissions. These facilities are expected to be the predominant sources of PFAS discharges in the Metal Finishing and Electroplating point source categories. Publicly available data on such facilities, including whether they perform chrome finishing operations and use and discharge of PFAS at the national scale, are limited. EPA reviewed the 2017 National Emissions Inventory (NEI), Compliance and Emissions Data Reporting Interface (CEDRI), Environmental Compliance History Online (ECHO), and Integrated Compliance Information System (ICIS), as well as data collected by several state environmental agencies. However, none of these data sources provide a complete population of chromium finishing facilities in the United States nor do they provide the detailed information on specific facility operations (including use of hexavalent chromium or PFAS), generation and management of wastewater, or wastewater characteristics necessary for the complex technical and economic analyses required for the review and development of ELGs. Therefore, this questionnaire and wastewater sampling program are necessary for EPA to determine if the current regulations remain appropriate and to develop new regulations if they are deemed to be warranted. EPA has identified and compiled mailing addresses for approximately 2,035 potential chromium finishing facilities in the United States. All active metal finishing and electroplating facilities that conduct or have conducted one or more of the specified chromium finishing operations will be required to complete the questionnaire.

Form numbers: 6100-079.

Respondents/affected entities: All chrome finishing facilities in the U.S. will receive the questionnaire and no

more than 20 facilities will be asked to conduct specific wastewater sampling.

Respondent's obligation to respond: Mandatory (Clean Water Act section 308).

Estimated number of respondents: 2,035 (total).

Frequency of response: One-time data collection.

Total estimated burden: 15,406 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: \$2,202,613 (per year), which includes \$4,805 annualized capital or operation & maintenance costs.

Changes in the estimates: This is a new data collection request.

Courtney Kerwin,

Director, Regulatory Support Division.
