

with substantive feedback. (AHAM, No. 89).

In response to the September 2021 Preliminary Analysis, the California investor-owned utilities (“CA IOUs”) stated that they were supportive of an equation-based metric that can account for the efficiency differences related to capacity. (CA IOUs, No. 43 at pp. 3–4). In the March 2023 NOPR, DOE did not propose equation-based standards, but noted that given the close relationship between efficiency and capacity, DOE continues to consider whether to specify an equation-based standard for the top-loading standard-size product class. 88 FR 13540.

DOE has reviewed the request and considered the benefit of allowing interested parties additional time to submit comments regarding the March 2023 NOPR, including feedback on an equation-based approach for energy conservation standards, for DOE’s consideration. Accordingly, DOE has determined that an extension of the public comment period is appropriate, and is hereby extending the comment period by 15 days, until May 17, 2023.
