Government-Owned Inventions; Availability for Licensing

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The invention listed below is owned by an agency of the U.S. Government and is available for licensing to achieve expeditious commercialization of results of federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing.

FOR FURTHER INFORMATION CONTACT: Licensing information may be obtained by communicating with the Technology Transfer and Intellectual Property Office, National Institute of Allergy and Infectious Diseases, 5601 Fishers Lane, Rockville, MD 20852 by contacting Dr. Benjamin Hurley at 240-669-5092 or benjamin.hurley@nih.gov. A signed Confidential Disclosure Agreement will be required to receive copies of unpublished information related to the invention.

SUPPLEMENTARY INFORMATION: Technology description follows:

Nanoparticle Vaccine Against Mpox

Description of Technology:

In 2022, the World Health Organization declared an atypical outbreak of monkeypox (Mpox), which has caused approximately 30,000 cases of Mpox infection within the United States as of April 2023. Mpox represents a current threat to public health, and there is an immediate need for an effective vaccine. To address this, NIAID has developed a vaccine approach comprising virus-like nanoparticles coated with modified Mpox proteins. NIAID investigations have demonstrated that immunization has elicited a robust immune response in mice and provided protection against a lethal infection of Vaccinia virus.

This technology is available for licensing for commercial development in accordance with 35 U.S.C. 209 and 37

CFR part 404, as well as for further development and evaluation under a research collaboration.

Potential Commercial Applications:

- *Immunization:* Mpox nanoparticle vaccines may be more effective than current MVA vaccination approaches in providing protection against Mpox infection.

- The methodology for manufacturing the Mpox nanoparticle vaccine could be readily adapted to generate vaccines for other poxviruses.

Competitive Advantages:

- A Mpox nanoparticle vaccine may have fewer side effects than available MVA based vaccines.

- The storage and transport requirements of a Mpox nanoparticle vaccine are better suited to low resource settings than MVA vaccines.
