[Project No. 15310-000]

Rye Development, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On May 5, 2023, Rye Development, LLC, on behalf of Neptune Pumped Storage 1, LLC (the Applicant), filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of the Elephant Rock Pumped Storage Project to be located in Curry County, Oregon, near the Sixes River, approximately 12.5 miles east-northeast of Port Orford, Oregon. The sole purpose of a preliminary permit is to grant the permit holder priority to file a license application during the permit

term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The project would require constructing new water storage, water conveyance, and generation facilities at off-channel locations where no such facilities exist. It would consist of the following: (1) an upper reservoir with a surface area of 51.5 acres and a storage volume of 3,605 acre-feet at a maximum water-surface elevation of 2,070 feet mean sea level (MSL); (2) an 820-foot-long, 24-foot diameter vertical shaft that connects the upper reservoir to a 4,200-foot-long horizontal power tunnel, having a horse-shoe-shaped cross section approximately 450 square-foot in area, leading to the powerhouse; (3) a 60-ft high, 40-foot-diameter steel surge tower connected to the power tunnel upstream of the powerhouse; (4) a 100-foot-wide, 500-foot-long, 100-foot-high reinforced-concrete powerhouse with four 79.5 megawatt (MW) Francis pump-turbine units, with a combined installed capacity of 318 MW, that discharge into the lower reservoir; (5) a lower reservoir, located adjacent to the powerhouse, with a surface area of 51.5 acres and a storage volume of 3,605 acre-feet at a maximum water-surface elevation of 1,150 feet MSL; (6) and a 15-mile-long, 230 kV overhead transmission line extending from the powerhouse to the existing substation on Elk River Road, approximately 3 miles northeast of Port Orford. Both the upper and lower reservoirs would be created by zoned rockfill embankment dikes approximately 70 feet high and 7,200 feet in circumference. The project would have an annual generation capacity of 929,000 megawatt-hours.
