k. This application has been accepted, but is not ready for environmental analysis at this time.

l. *The Lake Lynn Project consists of:* (1) a 13 mile-long, 1,729-acre impoundment (Cheat Lake; originally named Lake Lynn) with a maximum storage capacity of 72,300 acre-feet at a normal water surface elevation of 870 feet National Geodetic Vertical Datum of 1929 (NGVD 29) and a normal minimum storage capacity of 51,100 acre-feet at 857 feet NGVD 29; (2) a 1,000-foot-long, 125-foot-high, concrete gravity dam with a 624-foot-long spillway section controlled by 26, 21-foot-wide by 17-foot-high, Tainter gates; (3) a concrete intake structure equipped with a log boom and eight trash racks with 4-inch clear bar spacing; (4) eight 12-foot-wide by 18-foot-deep gated reinforced concrete penstocks; (5) a 160-foot-long by 94.5-foot-wide powerhouse containing four Francis generating units with a combined capacity of 51.2 megawatts; and (6) two 800-foot-long transmission lines that run from the powerhouse to a substation within the project boundary.

The Lake Lynn Project is currently operated as a peaking facility with storage. Peaking hours and operations are dictated by market value. Seasonal peaking during winter typically occurs in the morning for 5 hours and in the afternoon for 5 hours to meet demand. During the summer, peaking occurs between 6:00 p.m.–11:00 p.m. in the evening. The maximum drawdown rate to meet peak demand is one-half a foot/hour. Typical drawdown is 0.2–0.4 feet/day, which can vary depending on environmental and economic considerations. The current license requires Lake Lynn Generation to maintain Cheat Lake between 868 feet and 870 feet NGVD 29 from May 1 through October 31, 857 feet and 870 feet NGVD 29 from November 1 through March 31, and 863 feet and 870 feet NGVD 29 from April 1 through April 30 each year. The current license also requires Lake Lynn Generation to release a downstream minimum flow of 212 cubic-feet-per-second (cfs), or inflow, from the dam when not generating, with an absolute minimum flow of 100 cfs regardless of inflow, when not generating. The project generates about 144,741 megawatt-hours annually.

Lake Lynn Generation proposes to continue operating the project as a peaking facility with storage, and does not propose any new development at the project.
