

the system. All interactions by users of the system are recorded. Users of the EDMAPS system do not see personally identifiable information (PII), even when looking at individual records. EDMAPS tokenizes PII, meaning that PII is swapped out for non-sensitive random values. This does not prevent users of EDMAPS from joining tables containing the same PII data element, because tokenization ensures that the same non-sensitive value is swapped out in every table that has that particular data element, for example SSN or date of birth.

In accordance with the Federal Information Security Management Act of 2002 (FISMA), as amended by the Federal Information Security Modernization Act of 2014, every Department system must receive a signed Authorization to Operate (ATO) from a designated Department official. The ATO process includes a rigorous assessment of security and privacy controls, a plan of actions and milestones to remediate any identified deficiencies, and a continuous monitoring program.

FISMA controls implemented are comprised of a combination of management, operational, and technical controls, and include the following control families: access control, awareness and training, audit and accountability, security assessment and authorization, configuration management, contingency planning, identification and authentication, incident response, maintenance, media protection, physical and environmental protection, planning, personnel security, privacy, risk assessment, system and services acquisition, system and communications protection, system and information integrity, and program management.
