The AN/ALE-47 uses threat data received over the aircraft interfaces to assess the threat situation and to determine a response. Expendable routines tailored to the immediate aircraft and threat environment may be dispensed using one of four operational modes.

8. The AN/ALR-56 Radar Warning Receiver (RWR) continuously detects and intercepts RF signals in certain frequency ranges and analyzes and separates threat signals from non-threat signals. It contributes to full-dimensional protection by providing individual aircraft probability of survival through improved aircrew situational awareness of the radar guided threat environment. The ALR56M is designed to provide improved performance in a dense signal environment and improved detection of modern threats signals.

9. The AN/AAQ-22 (STAR SAFIRE 380) is a gyro-stabilized, multi-spectral Electro-Optical/Infrared (E.O./IR) system configured to operate simultaneously in multiple bands including the visible, near-IR and mid-wave IR bands. The system consists of an externally-mounted turret sensor unit and internally-mounted central electronics unit and system control unit. Images will be displayed in the aircraft real-time and recorded for subsequent ground analysis.

11. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures that might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.

12. A determination has been made that Egypt can provide substantially the same degree of protection for the sensitive technology being released as the U.S. Government. This sale is necessary in furtherance of the U.S. foreign policy and national security objectives outlined in the Policy Justification.
