**SUPPLEMENTARY INFORMATION:** This is a proposed extension of the ICR, which is currently approved through July 22, 2023. An agency may neither conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

**Abstract:** The New Source Performance Standards (NSPS) for Equipment Leaks of VOC in Petroleum Refineries (40 CFR part 60, subpart GGG) apply to compressors, valves, pumps, pressure relief devices, sampling connection systems, open-ended valves or lines, and flanges or other connectors in VOC service at petroleum refineries that commenced construction, reconstruction, or modification after January 4, 1983, and on or before November 7, 2006. The NSPS for Equipment Leaks of VOC in Petroleum Refineries (40 CFR part 60, subpart GGGa) apply to compressors, valves, pumps, pressure relief devices, sampling connection systems, open-ended valves or lines, and flanges or other connectors in VOC service at petroleum refineries that commence either construction, or reconstruction, or modification after November 7, 2006. In general, all NSPS standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NSPS.

**Form Numbers:** None.

**Respondents/affected entities:** Owners and operators of petroleum refineries.

**Respondent's obligation to respond:** Mandatory (40 CFR part 60, subparts GGG and GGGa).

**Estimated number of respondents:** 116 (total).

**Frequency of response:** Semiannually.

**Total estimated burden:** 184,000 hours (per year). Burden is defined at 5 CFR 1320.3(b).

**Total estimated cost:** \$22,000,000 (per year), includes \$0 for annualized capital/startup and/or operation & maintenance costs.

**Changes in the Estimates:** There is no change in burden from the most recently approved ICR as currently identified in the OMB Inventory of Approved Burdens. This is due to two considerations: (1) the regulations have not changed over the past three years and are not anticipated to change over the next three years; and (2) the growth rate for this industry is very low or non-existent, so there is no significant change in the overall burden. Since there are no changes in the regulatory requirements and there is no significant industry growth, there are also no changes in the capital/startup and/or operation and maintenance (O&M) costs. There is a slight increase in costs, which is wholly due to the use of updated labor rates. This ICR uses labor rates from the most recent Bureau of Labor Statistics report (September 2021) to calculate respondent burden costs.

**Abstract:** The New Source Performance Standards (NSPS) for Nitric Acid Plants (40 CFR part 60, subpart G) were proposed on August 17, 1971; promulgated on June 14, 1974; and amended on August 14, 2012. The NSPS for Nitric Acid Plants (40 CFR part 60, subpart Ga) were proposed on October 14, 2011; promulgated on August 14, 2012; and were amended on May 6, 2014 in order to correct a minor error. Subpart G applies to nitric acid production units, producing weak (30 to 70 percent) nitric acid, which commenced construction, modification or reconstruction either on or after August 17, 1971, and prior to October 14, 2011. Subpart G limits the emissions of nitrogen oxides, expressed as nitrogen dioxide (NO<sub>2</sub>), to 1.5 kilograms per metric ton of acid produced (3.0 lb. per ton), and limits opacity to 10 percent. Subpart Ga applies to nitric acid production units, producing weak (30 to 70 percent) nitric acid, for which construction, reconstruction, or modification commenced after October 14, 2011, and limits nitrogen oxides (expressed as NO<sub>2</sub>) to 0.50 lb per ton of 100 percent nitric acid produced. This information is being collected to assure compliance with 40 CFR part 60, subparts G and Ga.

**Form Numbers:** None.

**Respondents/affected entities:** Nitric acid plants.

**Respondent's obligation to respond:** Mandatory (40 CFR part 60, subparts G and Ga).

**Estimated number of respondents:** 35 (total).

**Frequency of response:** Initially, occasionally, and semiannually.

**Total estimated burden:** 2,840 hours (per year). Burden is defined at 5 CFR 1320.3(b).

**Total estimated cost:** \$4,690,000 (per year), which includes \$4,330,000 in annualized capital/startup and/or operation & maintenance costs.

**Changes in the Estimates:** The increase in burden from the most-recently approved ICR is due to an adjustment(s). The adjustment increase in burden from the most-recently approved ICR is not due to any program changes, but due to an increase in the number of new sources. Capital/startup and operation and maintenance costs have also increased due to the increase in the number of new or modified sources and an adjustment to update

costs to 2022 \$ using the CEPCI Equipment Cost Index.
