

impact on the affected marine mammal species or stocks; (3) the authorized takes represent small numbers of marine mammals relative to the affected stock abundances; (4) ONR's activities will not have an unmitigable adverse impact on taking for subsistence purposes as no relevant subsistence uses of marine mammals are implicated by this action, and; (5) appropriate monitoring and reporting requirements are included.

National Environmental Policy Act (NEPA)

In August 2022, the U.S. Navy prepared an Overseas Environmental Assessment (OEA) analyzing the project. Prior to issuing the IHA for the project, we reviewed the 2022 OEA and the public comments received, determined that a separate NEPA analysis was not necessary, and subsequently adopted the document and issued our own Finding of No Significant Impact in support of the issuance of an IHA (87 FR 57458; September 20, 2022).

We have reviewed ONR's application for a renewed IHA for ongoing ARA from September 2023 to September 2024 and the 2022 IHA monitoring report. Based on that review, we have determined that the planned action is identical to that considered in the previous IHA. In addition, no significant new circumstances or information relevant to environmental concerns have been identified. Thus, we have determined that the preparation of a new or supplemental NEPA document is not necessary.

Endangered Species Act

Section 7(a)(2) of the Endangered Species Act of 1973 (ESA, 16 U.S.C. 1531 *et seq.*) requires that each Federal agency insure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. To ensure ESA compliance for the issuance of IHAs, NMFS consults internally whenever we propose to authorize take for endangered or threatened species, in this case with the Alaska Regional Office.

There is one marine mammal species (Arctic ringed seal) with confirmed occurrence in the study area that is listed as threatened under the ESA. The NMFS Alaska Regional OPR Division issued a Biological Opinion on September 13, 2022 under section 7 of the ESA, on the issuance of an IHA to ONR under section 101(a)(5)(D) of the MMPA by the NMFS Permits and Conservation Division. The Biological

Opinion concluded that the action is not likely to jeopardize the continued existence of Arctic ringed seals, and is not likely to destroy or adversely modify Arctic ringed seal critical habitat.

Renewal

NMFS has issued a Renewal IHA to ONR for the take of marine mammals incidental to conducting Arctic Research Activities in the Beaufort and Chukchi Seas through September 13, 2024.

Dated: September 20, 2023.

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for extension of a currently approved information collection.

On February 23, 2021, NMFS published in the **Federal Register** a final rule (86 FR 10857) allowing a Pacific whiting sector cooperative or group of vessels to develop a Salmon Mitigation Plan (SMP) to promote reduction in Chinook salmon bycatch. The SMP is a voluntary agreement by a Pacific whiting fishery Mothership (MS), Catcher/processor (C/P), or Pacific whiting individual fishing quota (IFQ) fishery group to manage Chinook salmon bycatch. The SMP would be approved by NMFS. Those groups with an approved SMP would be required to provide an annual postseason report to the Council and NMFS no later than March 31. The report would describe the group's use of Chinook salmon bycatch avoidance measures and an evaluation of the effectiveness of those measures. It would also describe any amendments to the terms of the SMP that were approved by NMFS during the

fishing year in which the SMP was approved and the reasons that the amendments to the SMP were made. The rule also established that vessels with a NMFS-approved SMP have access to the Chinook salmon bycatch reserve regardless of NMFS implementing other inseason measures to minimize salmon bycatch. Participation in an SMP is voluntary; however, any vessel that chooses not to participate in an SMP would be subject to additional salmon bycatch minimization measures prior to being allowed access to the reserve. The associated regulations are found at 50 CFR part 660. OMB approved the collection-of-information requirements contained in the final rule on March 10, 2021, under OMB Control Number 0648–0794 (Pacific Coast Groundfish Salmon Bycatch Minimization).

II. Method of Collection

The designated SMP representative will have the option of submitting a proposed SMP and/or postseason SMP report to NMFS electronically or by mail.
