

limited to 25 years or less over 200 years; or

(2) A near-circular disposal orbit that avoids for at least 100 years:

(i) Altitudes 20,182 +/- 300 kilometers;

(ii) The geosynchronous region; and  
(iii) Altitudes less than 2,000 kilometers.

(d) *Maneuver to disposal orbit above GEO.* The operator must place the upper stage and its components into an orbit with a perigee altitude above 36,100 kilometers for a period of at least 100 years after disposal.

(e) *Probability of Collision.* The operator must limit the probability of collisions with operational spacecraft and debris 10 cm and larger to less than 0.001 for 100 years after disposal.

(f) *Information requirements.* A launch or reentry operator must submit the following information in an Orbital Debris Assessment Plan—

(1) Verification through hardware and software testing or analysis that the system has at least a 90 percent probability of successfully executing the planned disposal option;

(2) A description of how the system will achieve and maintain the planned disposal orbit for the required time limit; and

(3) Statistical analysis demonstrating compliance with the probability of collision lifetime limit with operational spacecraft and debris.

#### **§ 453.20 Real-Time Reporting of Orbital Safety Hazards.**

(a) At the detection of any launch or reentry activity outside the 3-sigma trajectory provided for collision avoidance or any debris-creating event, or if requested by a cognizant Federal agency, an operator must immediately provide information to the FAA and, if appropriate, to the requesting agency pertinent to locating and categorizing any orbital objects.

(b) The operator shall provide the following information to the FAA and, if applicable, the requesting Federal agency:

(1) The size and mass of the affected objects,

(2) The last known orbital or trajectory information, and

(3) Other details as determined by the FAA necessary to locate and categorize orbital objects.
