[Project No. 15318–000]

Cabin Run Pumped Storage, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On July 12, 2023, Cabin Run Pumped Storage, LLC, filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of the Cabin Run Pumped Storage Project to be located near the Stony River and unincorporated community of Bismarck in Tucker and Grant Counties, West Virginia. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project would consist of the following: (1) a 8,700-foot-long, 80-foot-high rock-fill embankment dike creating an upper reservoir with a 60-acre surface area and a 4,800-acre-foot storage capacity at a normal maximum water surface elevation of 4,030 feet above mean sea level (msl); (2) a 7,200-foot-long, 80-foot-high rock-fill embankment dike enclosing a lower

reservoir with a 60-acre surface area and a 4,800-acre-foot storage capacity at a normal maximum water surface elevation of 3,530 feet msl; (3) a 400-foot-long, 24-foot-diameter vertical power tunnel/shaft connecting a 4,650-foot-long, 24-foot-diameter horizontal power tunnel to the powerhouse; (4) a 550-foot-long, 120-foot-wide, 100-foot-high powerhouse housing four 57.5-megawatt (MW) reversible Francis pumping-generating units with a total installed capacity of 230 MW; (5) a 4.5-mile-long, 230-kilovolt transmission line from a proposed substation near the powerhouse to an interconnection point; (6) a substation including two 120 megavolt amperes generator step-up units; (7) a 20-foot-long, 20-foot-wide, 15-foot-high concrete pump station on the south bank of the Stony River (upper end of Mount Storm Lake), capable of conveying water at 50 cubic feet per second through a 3,400-foot-long, 2-foot-diameter steel conduit to the lower reservoir for fill or refill purposes; and (8) appurtenant facilities. The proposed project would have an annual generation of 671,000 megawatt-hours.
