Abstract: Authorized by 54 U.S. Code § 100702, Yellowstone National Park (YELL) established its strategic priorities in 2019 that help to guide short- and long-term decision-making. Specifically, Strategic Priority #2 focuses on taking the actions necessary to strengthen, preserve, and protect YELL's natural and cultural resources, including their associated processes, systems, and values in an unimpaired condition. Actions to fulfill this priority include conducting scientific research to inform resource-related decision-making, park planning, and education. The NPS proposes this new information collection request, Visitor Impacts and Experiences Related to Wildlife in Yellowstone National Park, to use scientific research about visitor impacts and experiences to inform park planning and management.

The Northern region of Yellowstone National Park (*e.g.*, Lamar Valley, Slough Creek) faces increased visitation as a result of wildlife viewing, which has led to issues of wildlife habituation. YELL wildlife managers, volunteers, and commercial use authorization (CUA) holders have substantial historical knowledge regarding human-wildlife conflicts in the park. This study seeks to expand that knowledge base by understanding visitors' perceptions and behaviors related to wildlife viewing and human-wildlife conflicts by employing on-site surveys with YELL visitors in the Lamar Valley during peak wolf-watching periods over the course of one winter, spring, and summer

(January–August). Results from this study will provide park managers with information about visitor perceptions and behaviors associated with wildlife viewing and adaptive management approaches for reducing human-wildlife conflicts.
