k. *Description of Request:* The co-licensees propose to upgrade the generating units at the Eel Weir Project by replacing two of the existing units (Units 1 and 2) with two new vertical double-regulated Kaplan units that would increase the authorized installed capacity from 1.80 megawatts (MW) to 1.99 MW, and decrease the total hydraulic capacity of the powerhouse from 822 to 796 cubic feet per second. Specifically, the co-licensees propose to remove the 3.5-mile-long, 11-kilovolt (kV) primary transmission line from Eel Weir Station to Dundee Station from the Eel Weir project boundary, and construct a new transformer at the Eel Weir Station and a new 12.5-kV primary transmission line using an existing 0.62-mile-long right-of-way along the power canal, to tie into the North Windham Substation on Route 35. At the Dundee Project, the co-licensees propose to remove the 10-mile-long, 11-kV North and South Feeder Lines from the Dundee Station to Westbrook from the project boundary, and instead transmit power from the Dundee Station to the new transformer at the Eel Weir Station using the existing 3.5-mile-long, 11-kV transmission line from Dundee to Eel Weir.
