

information about motions to intervene, refer to the FERC website at <https://www.ferc.gov/resources/guides/how-to-intervene.asp>.

All timely, unopposed motions to intervene are automatically granted by operation of Rule 214(c)(1). Motions to intervene that are filed after the intervention deadline are untimely and may be denied. Any late-filed motion to intervene must show good cause for being late and must explain why the time limitation should be waived and provide justification by reference to factors set forth in Rule 214(d) of the Commission's Rules and Regulations. A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies (paper or electronic) of all documents filed by the applicant and by all other parties.

#### Comments

Any person wishing to comment on the project may do so. The Commission considers all comments received about the project in determining the appropriate action to be taken. To ensure that your comments are timely and properly recorded, please submit your comments on or before February 16, 2024. The filing of a comment alone will not serve to make the filer a party to the proceeding. To become a party, you must intervene in the proceeding.

#### How To File Protests, Interventions, and Comments

New eFiling users must first create an account by clicking on "eRegister." You will be asked to select the type of filing you are making; first select "General" and then select "Protest", "Intervention", or "Comment on a Filing"; or<sup>6</sup>

l. *Description of Request:* Pursuant to a Commission dam safety directive and its approved Reservoir Drawdown and Operations Plan (Plan), the applicant has been operating Anderson Reservoir at its deadpool elevation, historically identified as a water surface elevation of 488 feet North American Vertical Datum of 1988 (NAVD88). In its current filings, the applicant states newer surveys indicate the deadpool water surface elevation is 490 feet NAVD88 and it wishes to revise the Plan to reflect the correct number. The applicant also proposes to operate the reservoir at an elevation 2 feet above deadpool, *i.e.*, 492 feet NAVD88, to have stored water available for prompt releases to protect downstream aquatic habitat in Coyote Creek when other water sources are unavailable. Furthermore, when drawing down the reservoir back to 492 feet NAVD88 after large rainstorms that cause it to rise, the applicant proposes to ramp down releases by approximately 25 to 50 percent every 12 hours as the reservoir surface declines from elevations 493.5 to 492 feet NAVD88 while consulting with the National Marine Fisheries Service to determine the precise downramping schedule.
