SUPPLEMENTARY INFORMATION:

Background

The ANSTF is an intergovernmental organization dedicated to preventing and controlling aquatic nuisance species (ANS) and coordinating governmental efforts of the United States with the private sector and other North American interests. The ANSTF was established by Congress with the passage of the Nonindigenous Aquatic Nuisance Prevention and Control Act of 1990 (NANPCA; Pub. L. 101–646, 104 Stat. 4761, 16 U.S.C. 4701–4741), and reauthorized with the passage of the National Invasive Species Act of 1996 (NISA; Pub. L. 104–332, 110 Stat. 4073).

Section 1201(d) of NANPCA designates the Undersecretary of Commerce for Oceans and Atmosphere and the Director of the U.S. Fish and Wildlife Service as the ANSTF co-chairpersons. The ANSTF is regulated by the Federal Advisory Committee Act of 1972 (5 U.S.C. Ch. 10), which provides the ANSTF with its core structure and ensures an open and public forum for its activities. Membership of the ANSTF consists of 13 Federal agency representatives and 13 representatives from ex-officio member organizations who work in conjunction with six regional panels and issue-specific subcommittees to meet the challenges of developing and implementing a coordinated and complementary Federal program for ANS activities.

The NANPCA (as amended by NISA, 1996) establishes that the ANSTF is responsible for coordination of national efforts to prevent the introduction and spread of ANS. These responsibilities include the development of species management and control plans for specific high-risk invasive species. These plans focus on tasks that are essential to prevent spread into additional habitats and minimize the impact to areas where the species have already invaded. The plans are developed through a cooperative process and undergo review by the ANSTF members and regional panels. Successful implementation of these plans requires the participation of States, regional and Tribal entities, Federal agencies, and other relevant parties.

History of the National European Green Crab Management and Control Plan

European green crab (EGC; *Carcinus maenas*) is one of the most pervasive invasive predators in coastal marine systems, having established populations on five continents. The ecological and economic damage caused by EGC is well documented on both coasts of North America. On the U.S. Atlantic coast, EGC has been an established invader for at least 200 years, although its geographic range continues to expand into Atlantic Canada. On the Pacific coast, EGC arrived in the late 1980s and, consequently, is still at an earlier stage of range expansion and population growth. EGC has been implicated in historic declines and current losses of commercial bivalves in the eastern United States and maritime Canada and
