RIN 0648–BM72

Magnuson-Stevens Act Provisions; Fisheries Off West Coast States; Pacific Coast Groundfish Fishery; 2023–2024 Biennial Specifications and Management Measures; Inseason Adjustments; Correction

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule; correction.

SUMMARY: NMFS published a final rule on November 29, 2023, to announce routine inseason adjustments to management measures in commercial and recreational groundfish fisheries for the 2024 fishing year. That rule is intended to allow commercial and recreational fishing vessels to access more abundant groundfish stocks while protecting overfished and depleted stocks. This action corrects the trip limits for the limited entry (LE) fixed gear and open access (OA) fleets for “Other Flatfish” (butter sole, curlfin sole, flathead sole, Pacific sanddab, rex sole, rock sole, and sand sole) south of latitude (lat.) 40°10’ North (N). This correction is necessary so that the implementing regulations are accurate and implement the action as intended by the Pacific Fishery Management Council (Council). This action also corrects a final rule published on December 1, 2023.

DATES: The corrections are effective on January 1, 2024.

SUPPLEMENTARY INFORMATION:

Background

NMFS published the final rule to implement harvest specifications and management measures for the 2023–2024 biennium for most species managed under The Pacific Coast Groundfish Fishery Management Plan (PCGFMP) on December 16, 2022 (87 FR 77007). The harvest specifications and mitigation measures developed for the 2023–2024 biennium used data through the 2021 fishing year to help various sectors of the fishery attain, but not exceed, the catch limits for each stock. Based on updated fisheries information
