Substance Abuse and Mental Health Services Administration

Notice of Meeting

Pursuant to Public Law 92-463, notice is hereby given that the Substance Abuse and Mental Health Services Administration's (SAMHSA) Center for Substance Abuse Prevention's (CSAP) Drug Testing Advisory Board (DTAB) will convene via web conference on March 5, 2024, from 10 a.m. EST to 12:45 p.m. EST.

The board will meet in open-session March 5, 2024, from 10 a.m. EST to 12:45 p.m. EST to hear presentations regarding proposed changes to the analyte table including fentanyl prevalence, fentanyl immunoassay updates, cost and benefits analysis and a summary of public comments received regarding the proposed changes to the HHS Drug Testing Panels.

Section 8105 of the Fighting Opioid Abuse in Transportation Act, included in the SUPPORT for Patients and Communities Act, required the Secretary to determine whether it is justified, based on the reliability and cost-effectiveness of testing, to revise the Mandatory Guidelines for Federal Workplace Drug Testing Programs to include fentanyl. Section 8105 additionally required the Secretary to consider whether to include any other drugs or other substances listed in Schedule I and II of Controlled Substances Act (CSA). Norfentanyl is a metabolite of fentanyl. Because it is also an immediate precursor used in the illicit manufacture of fentanyl, it is a Schedule II substance under the CSA.

Fentanyl is involved in a large proportion of overdose deaths in the United States and is therefore an important public safety concern. Furthermore, fentanyl is increasingly used as a stand-alone substance, not in conjunction with heroin and other substances. According to the National Forensic Laboratory Information System (NFLIS) 2022 report, fentanyl was the 3rd most frequently identified drug and accounted for 13.81% of all drugs reported by forensic laboratories.¹ Norfentanyl is an important component of identifying people who use fentanyl when urine is the specimen matrix. Fentanyl has been detected in oral fluid in patients receiving pain management
