MML proposes to conduct research to measure population status, vital rates, foraging ecology, habitat requirements, and effects of natural and anthropogenic factors impacting the eastern distinct population segment (eDPS) of Steller sea lion populations pursuant to fulfilling the NMFS legal requirements under the MMPA, and to test hypotheses of mechanisms underlying population trends. Proposed activities include surveys (aerial, vessel, and land) including use of unmanned aircraft systems (UAS), capture and handling, marking, hot branding, sampling (including but not limited to blood, blubber, swabs of all mucus membranes and lesions, skin samples, vibrissae, and hair), tagging, and unintentional disturbance. Animals may be disturbed by surveys, captured, sampled and released for vital rates, foraging ecology and/or health studies multiple times per year. MML requests four unintentional mortalities from the eDPS of Steller sea lions annually, not to exceed eight over the duration of the permit. Non-target species that may be disturbed unintentionally during these studies include northern elephant seals (*Mirounga angustirostris*), harbor seals (*Phoca vitulina*), and California sea
