DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2024–0331]

Cooperative Research and Development Agreement (CRADA)—“Shoreside and Shipboard Open-Source Software Defined Radio (SDR) Technology”

AGENCY: Coast Guard, Department of Homeland Security.

ACTION: Notice of intent; request for comments.

SUMMARY: The Coast Guard is announcing its intent to enter into a Cooperative Research and Development Agreement (CRADA) with General Dynamics Mission Systems (GDMS) to evaluate the suitability of implementing open-source-based SDR technologies on shore-side and shipboard environments. The effort would include evaluating the utility of a P25 Telecommunications Industry Association (TIA)-compliant interface for software defined radios (SDRs). This CRADA would leverage Coast Guard network infrastructure and shipboard IT communications systems to evaluate open-source SDR technologies and determine how they can be implemented to support multiple Coast Guard core mission areas for shore-side and shipboard use under a variety of scenarios. Technology researched, tested, and prototyped will adhere to all active Coast Guard, Federal Communications Commission (FCC), and National Telecommunications and Information Administration (NTIA) standards and regulations. While the Coast Guard is currently considering partnering with GDMS, we are soliciting public comment on the possible nature of and participation of other parties in the proposed CRADA. In addition, the Coast Guard invites other potential participants, who have interest and capability, to consider submitting proposals for consideration in similar CRADAs.

DATES: Your comments and related material must reach the Coast Guard on or before 30 days after the date of publication in the **Federal Register**.

ADDRESSES: You may submit comments identified by docket number USCG–

2024–0331 using the Federal portal at <http://www.regulations.gov>. See the “Public Participation and Request for Comments” portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notice of intent, or wish to submit proposals for future CRADAs, contact Mr. David Cote, GS–13 CIV, Project Official, IT and Network Branch, U.S. Coast Guard Research and Development Center, 1 Chelsea Street, New London, CT 06320, telephone 860–271–2693, david.e.cote@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Background and Purpose

The U.S. Coast Guard (USCG) is investigating technologies to facilitate transition from traditional radio systems, which are typically implemented using hardware-based solutions, to open-source, SDR technology. The USCG uses multiple radio frequencies (RF), within multiple frequency bands, operating over multiple radio hardware solutions. Current infrastructure creates challenges in flexibility, cost-efficiency, upgradability, adaptability, and interoperability of USCG field operators and command and control center personnel. The USCG has initiated a push of some RF systems into cloud-based environments, like Rescue-21 servers, and wish to continue examining how to move additional RF environments into open-source, cloud-based service platforms. The USCG strives to move to a multi-user, multi-mission RF environment to exploit the RF spectrum and make it more user-friendly.

The USCG desires to take advantage of evolving “open source” SDR technologies to enable enhancements to its communications operations within its eleven mission areas. This CRADA intends to examine technology that improves RF environment scalability, reduces maintenance costs, deploys agile SDR systems with open application programming interfaces (API), provides 24/7 remote operability and configurability, and supports simple technology updates and interoperability. Our desire is to identify non-federal partners that can successfully configure an open source SDR across multiple waveforms.

II. Public Participation and Request for Comments

We request public comments on this notice. Although we do not plan to
