[Docket Nos. 50–327, 50–328, and 72–034; NRC–2024–0115]

**Tennessee Valley Authority; Sequoyah Nuclear Plant, Units 1 and 2; Exemption****I. Background**

The Tennessee Valley Authority (TVA) is the holder of Renewed Facility

Operating License Nos. DPR–77 and DPR–79, and General License No. 72–034, for operation of the Sequoyah Nuclear Plant, Units 1 and 2, and an independent spent fuel storage installation (Sequoyah or Sequoyah site), respectively, located in Hamilton County, Tennessee. The renewed operating licenses are subject to all applicable provisions of the Atomic Energy Act, and to the rules, regulations, and orders of the U.S. Nuclear Regulatory Commission (NRC or Commission) now or hereafter in effect.

**II. Request/Action**

By letter dated September 28, 2023 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML23271A063), as supplemented on March 14, 2024 (ML24074A457), TVA requested an exemption from the requirement in Title 10 of the *Code of Federal Regulations* (10 CFR), part 37, paragraph 37.11(c)(2) to use a locked door or gate at the access control point to where radioactive waste that contains category 1 or category 2 quantities of radioactive material is stored.

The provisions of 10 CFR part 37 establish physical security requirements to prevent the theft or diversion of risk-significant radioactive materials (*i.e.*, category 1 and category 2 quantities of radioactive material). As stated in NUREG–2155, Rev. 2, "Implementation Guidance for 10 CFR part 37, "Physical Protection of Category 1 and Category 2 Quantities of Radioactive Material"" (ML22083A141), 10 CFR 37.11 exempts radioactive wastes that contain category 2 quantities or greater of radioactive material from the security requirements in subparts B, C, and D of 10 CFR part 37. Instead, the radioactive waste is subject to the requirements in 10 CFR 37.11(c)(1) through (c)(4). The regulation at 10 CFR 37.11(c)(2) requires that the licensee secure the radioactive waste by a locked door or gate with monitored alarm at the access control point.

The Sequoyah site includes old steam generator storage facilities (OSGSFs) that are used to store the contaminated old steam generators (OSGs). The OSGs exceed the threshold for a category 2 quantity of radioactivity, as defined in 10 CFR 37.5, but do not contain discrete radioactive sources, ion-exchange resins, or activated materials that weigh less than 2,000 kilograms (4,409 pounds), as described in 10 CFR 37.11(c). As such, the licensee is required by 10 CFR 37.11(c)(2) to have a monitored alarm at the access control
