(5) *Rebate reduction extensions.* If CMS determines that a Part B rebatable biosimilar biological product that received a reduction of the rebate amount under paragraph (b)(1) of this section continues to be affected by a severe supply chain disruption, CMS will grant a single extension of the reduction for 4 additional consecutive applicable calendar quarters and reduce the rebate amount owed in accordance with paragraph (b)(2) of this section.

(i) To receive consideration for a rebate reduction extension, a manufacturer must submit a request with updated or new information and supporting documentation on why the Part B rebatable biosimilar biological

product continues to be affected by the severe supply chain disruption during the fifth through eighth applicable calendar quarters.

(ii) A manufacturer must submit the rebate reduction extension request at least 60 calendar days before the start of the fifth applicable calendar quarter to receive consideration for a reduction in the rebate amount owed, if any, in accordance with paragraph (b)(2) of this section.

(6) *Decision to grant or deny a request.* CMS will review rebate reduction requests and rebate reduction extension requests within 60 calendar days of receipt of all documentation, if feasible, beginning with the applicable calendar quarter that begins on October 1, 2024.

(i) CMS will deny a rebate reduction request that does not meet the criteria in paragraph (c)(4) of this section or that is incomplete or untimely based on the requirements of this paragraph (c).

(ii) CMS will deny a rebate reduction extension request that does not meet the criteria in paragraph (c)(5) of this section, that is incomplete or untimely based on the requirements of paragraph (c)(5), or if a reduction under paragraph (b)(1) of this section was not provided for such biosimilar biological product.

(iii) CMS' decisions to deny a request are final and will not be subject to an appeals process.

(7) *Public disclosure of information.* CMS will keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. Information provided as part of a request for a rebate reduction that the submitter indicates is a trade secret or confidential commercial or financial information will be protected from disclosure if CMS determines the information meets the requirements set forth under Exemptions 3 and/or 4 in 5 U.S.C. 552.

Subpart F—Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments

§ 427.500 Definitions.

As used in this subpart, *date of receipt* is the calendar day following the day on which a report of a rebate amount (as set forth in §§ 427.501(b) through (d) and 427.502(c)) is made available to the manufacturer of a Part B rebatable drug by CMS.

§ 427.501 Rebate Reports and reconciliation.

(a) *General.* This section applies to Part B rebatable drugs for all applicable calendar quarters except as otherwise

set forth in § 427.502 regarding the applicable calendar quarters in calendar years 2023 and 2024.

(b) *Preliminary Rebate Report.* A Preliminary Rebate Report will be provided to each manufacturer of a Part B rebatable drug at least 1 month prior to the issuance of the Rebate Report as set forth in paragraph (c) of this section for an applicable calendar quarter.

(1) The Preliminary Rebate Report for each Part B rebatable drug will include the following information:

(i) The NDC(s) and billing and payment codes for the Part B rebatable drug as defined under § 427.20.

(ii) Total number of billing units as specified in § 427.303.

(iii) Payment amount in the payment amount benchmark quarter as specified in § 427.302(d).

(iv) Applicable calendar quarter specified amount as specified in § 427.302(b).

(v) Applicable benchmark period and rebate period CPI—Us as specified in § 427.302(e) and (f).

(vi) Inflation-adjusted payment amount as specified in § 427.302(g).

(vii) The amount, if any, by which the specified amount as described in § 427.302(b) exceeds the inflation-adjusted payment amount as described in § 427.302(g) for the Part B rebatable drug for the applicable calendar quarter as determined under § 427.302.

(viii) Any applied reductions as described in §§ 427.401 and 427.402.

(ix) Rebate amount due as specified in § 427.301(a).

(2) [Reserved]

(c) *Rebate Report.* A Rebate Report will be provided to each manufacturer of a Part B rebatable drug no later than 6 months after the end of each applicable calendar quarter.

(1) The Rebate Report will include the information specified in paragraph (b)(1) of this section, with the inclusion of any revisions to such information resulting from CMS' review of a Suggestion of Error as set forth in § 427.503, if applicable, and any CMS-determined recalculations from paragraph (d)(2) of this section.

(2) The Rebate Report is the invoice of a manufacturer's rebate amount due as calculated in § 427.301, if any, for a Part B rebatable drug for an applicable calendar quarter.

(d) *Reconciliation of the rebate amount.* CMS will perform reconciliation of a rebate amount provided in a Rebate Report specified in paragraph (c) of this section for an applicable calendar quarter in the following circumstances:

(1) *Regular reconciliation.* Except as otherwise described in § 427.502, CMS

will perform one regular reconciliation of the rebate amount within 12 months of the date of receipt of the Rebate Report specified in paragraph (c) of this section for each applicable calendar quarter in order to include revisions to the information used to calculate the rebate amount as specified in paragraph (b)(1) of this section.

(i) *Preliminary reconciliation.* At least 1 month prior to the issuance of a report with the reconciled rebate amount specified in paragraph (d)(1)(ii) of this section, CMS will conduct a preliminary reconciliation of a rebate amount for an applicable calendar quarter specified in paragraph (d)(3) of this section based on the information specified in this paragraph (b)(1)(i) and paragraphs (d)(1)(ii) through (ix) of this section and provide the information specified in this paragraph (b)(1)(i) and paragraphs (d)(1)(ii) through (ix) to the manufacturer of a Part B rebatable drug for the applicable calendar quarter, if applicable:

(A) Updated total number of rebatable units, as specified in § 427.303.

(B) Payment amount in the payment amount benchmark quarter, as specified in § 427.302(d) if any inputs are restated within the reconciliation run-out period.

(C) Applicable calendar quarter specified amount as specified in § 427.302(b), if any inputs are restated within the reconciliation run-out period.

(D) The excess amount by which the specified amount exceeds the inflation-adjusted payment amount as specified in § 427.302, if any inputs are restated within the reconciliation run-out period.

(E) Reconciled total rebate amount as specified in § 427.301(a).

(F) The difference between the total rebate amount due as specified on the Rebate Report set forth in paragraph (c) of this section and the reconciled rebate amount as set forth in this paragraph (d)(1)(i).

(ii) *Report with reconciled rebate amount.* With the inclusion of any additional revisions to such information resulting from CMS' review of a Suggestion of Error as set forth in § 427.503, if applicable, a report with the reconciled rebate amount will be provided to each manufacturer of a Part B rebatable drug within 12 months after the issuance of the Rebate Report described in paragraph (c) of this section.

(2) *CMS identification of error and manufacturer misreporting.* CMS may recalculate a rebate amount and provide the manufacturer of a Part B rebatable

drug a report with a reconciled rebate amount when:

(i) CMS identifies an agency error in the information specified in paragraphs (c) and (d)(1) of this section, including reporting system or coding errors, not later than 3 years from the date of receipt by a manufacturer of a reconciled rebate amount for the applicable calendar quarter; or

(ii) CMS determines at any time that the information used by CMS to calculate the rebate amount was inaccurate due to manufacturer misreporting.

(3) *Impact of reconciliation on rebate amount.* A reconciliation as set forth in this paragraph (d) could result in an increase, decrease, or no change to the rebate amount as calculated in § 427.301 owed by a manufacturer for the applicable calendar quarter for the Part B rebatable drug.

(i) A report with a reconciled rebate amount that is an increase to the rebate amount is the invoice for such additional amount due on the manufacturer's rebate amount as set forth in § 427.301 for a Part B rebatable drug for an applicable calendar quarter.

(ii) [Reserved]

(4) *Drugs included in a reconciliation.* A drug covered under Part B that does not meet the requirements of a rebatable drug specified in subpart B for an applicable period will not be included in a reconciliation under this paragraph (d).

§ 427.502 Rebate Reports for applicable calendar quarters in calendar years 2023 and 2024.

(a) *Transition rule for reporting.* Section 1847A(i)(1)(C) of the Act allows CMS to delay the timeframe for reporting the information and rebate amount described in § 427.501(c) for applicable calendar quarters in calendar years 2023 and 2024 until not later than September 30, 2025.

(b) *Rebate Report information for applicable calendar quarters in calendar years 2023 and 2024.* The Rebate Reports for applicable calendar quarters in calendar years 2023 and 2024 will include the information described in § 427.501(b)(1).

(c) *Rebate Report procedures for applicable calendar quarters in calendar years 2023 and 2024.* Rebate amounts for the applicable calendar quarters in calendar year 2023 and 2024 will be reported as follows:

(1) The four applicable calendar quarters in calendar year 2023 will be consolidated into a single report and manufacturers will receive a single Preliminary Rebate Report followed by a single Rebate Report.

(i) Discarded drug units for which a refund has been paid will be removed from the total number of billing units in the single Preliminary Rebate Report for the applicable calendar quarters in calendar year 2023.

(ii) For this single Preliminary Rebate Report for the applicable calendar quarters in calendar year 2023, the Suggestion of Error period as described in § 427.503 will be 30 calendar days.

(iii) No regular reconciliation of the rebate amount as described in § 427.501(d)(1) will be conducted for the rebate amount in the single Rebate Report for the applicable calendar quarters in calendar year 2023.

(2) The four applicable calendar quarters in calendar year 2024 will be consolidated into a single report and manufacturers will receive a single Preliminary Rebate Report followed by a single Rebate Report.

(i) For this single Preliminary Rebate Report for the applicable calendar quarters in calendar year 2024, the Suggestion of Error period as described in § 427.503 will be 30 calendar days.

(ii) Nine months after issuance of the single Rebate Report, CMS will perform one regular reconciliation for the applicable calendar quarters in calendar year 2024 in order to include revisions to the information used, specified in § 427.501(b)(1), to calculate the rebate amount. Such reconciliation will be as described in § 427.501(d) inclusive of a preliminary reconciliation and a report with the reconciled rebate amount.

(iii) The Suggestion of Error period for the preliminary reconciliation for the applicable calendar quarters in calendar year 2024 will be 10 calendar days.

§ 427.503 Suggestion of Error.

(a) *General.* The manufacturer of a Part B rebatable drug may submit a Suggestion of Error about the information in their Preliminary Rebate Report and the report detailing the preliminary reconciliation of the rebate amount to CMS, for its discretionary consideration, if the manufacturer believes that there is a mathematical error or errors to be corrected before the Rebate Report or a subsequent reconciliation of the rebate amount, as applicable, is finalized.

(1) Section 1847A(i)(8) of the Act precludes administrative or judicial review on the determination of units as set forth in § 427.303, the determination of whether a drug is a Part B rebatable drug as set forth in § 427.101, and the calculation of the rebate amount as set forth in § 427.301, inclusive of any reconciled rebate amount.

(2) [Reserved]

(b) *Process of submission.* Subject to the scope and timing requirements specified in paragraphs (a) and (c) of this section, manufacturers may submit the Suggestion of Error and provide supporting documentation (if applicable).

(c) *Timing.* Except as specified in § 427.502 for applicable calendar quarters in calendar year 2023 and 2024, a manufacturer must submit its Suggestion of Error for the applicable calendar quarter within 10 calendar days from the date of receipt of a Preliminary Rebate Report or a preliminary reconciliation of a rebate amount using the method and process established by CMS in paragraph (b) of this section.

(d) *Notice.* (1) CMS will include any revisions to the calculation of the rebate amount, if determined necessary by CMS based on the Suggestion of Error submitted under this section prior to issuance of the Rebate Report as set forth in § 427.501(c) or § 427.502(c) as well as any report of reconciled rebate amount as set forth in § 427.501(d) or § 427.502(c)(2)(ii).

(2) CMS will notify the manufacturer whether CMS revised its calculation of the rebate amount based on the Suggestion of Error.

§ 427.504 Manufacturer access to Rebate Reports.

(a) *General.* CMS will establish a method and process for a manufacturer of the Part B rebatable drug to:

(1) Access the manufacturer's Rebate Report as set forth in §§ 427.501 and 427.502, including any report of reconciled rebate amount as set forth in §§ 427.501(d) and 427.502(c)(2)(ii);

(2) Submit a Suggestion of Error as set forth in §§ 427.502(c)(1)(ii) and (c)(2)(i) and 427.503; and

(3) Pay a rebate amount as set forth in § 427.505.

(b) [Reserved]

§ 427.505 Deadline and process for payment of rebate amount.

(a) *Rebate amounts owed by a manufacturer.* For a rebate amount owed by a manufacturer, payment is due no later than 11:59 p.m. Pacific Time (PT) on the 30th calendar day after the date of receipt of information regarding the rebate amount on—

(1) A Rebate Report specified in § 427.501(c) or § 427.502(c)(1) or (2); or

(2) A report of a reconciled rebate amount specified in § 427.501(d) or § 427.502(c)(2)(ii).

(b) *Failure to pay a rebate amount.* Failure to pay a rebate amount due timely and in full may result in an enforcement action as described in subpart G of this part.

(c) *Refund to the manufacturer.* If a reconciled rebate amount for an applicable calendar quarter as specified in § 427.501(d) or § 427.502(c)(2)(ii) is less than what the manufacturer paid for that applicable calendar quarter, CMS will initiate the process to provide a refund equal to the excess amount paid within 60 days of the date of receipt of the report with such reconciled rebate amount.

Subpart G—Enforcement of Manufacturer Payment of Rebate Amounts

§ 427.600 Civil money penalty notice and appeals procedures.

(a) *General.* CMS may impose a civil money penalty on a manufacturer that fails to pay the rebate amount set forth in § 427.301(a) on a Part B rebatable drug identified at § 427.101, by the payment deadline as set forth in § 427.505(a) for such drug for such applicable calendar quarter.

(b) *Determination of the civil money penalty amount.* CMS may impose a civil money penalty for each failure by a manufacturer to provide an inflation rebate for an applicable calendar quarter equal to 125 percent of the rebate amount determined in § 427.301(a).

(1) The civil money penalty is in addition to the rebate amount due.

(2) If a reconciled rebate amount as set forth in § 427.501(d) or § 427.502(c)(2)(ii) results in an increase to the rebate amount due, a separate civil money penalty may be imposed for the failure by a manufacturer to provide an inflation rebate for the applicable quarter for the increase to the rebate amount due.

(c) *Notice of imposition of civil money penalties.* If CMS makes a determination to impose a civil money penalty described in paragraph (b) of this section, CMS will send a written notice of its decision to impose a civil money penalty to include the following:

(1) A description of the basis for the determination.

(2) The basis for the penalty.

(3) The amount of the penalty.

(4) The date the penalty is due.

(5) The manufacturer's right to a hearing as specified in paragraph (e)(3) of this section.

(6) Information about where to file the request for a hearing.

(d) *Collection.* (1) A manufacturer must pay the civil money penalty in full within 60 calendar days after the date of the notice of imposition of a civil money penalty from CMS under paragraph (c) of this section.

(2) In the event a manufacturer requests a hearing, pursuant to 42 CFR

part 423, subpart T, the manufacturer must pay the amount in full within 60 calendar days after the date of a final decision by the Departmental Appeal Board, to uphold, in whole or in part, the civil money penalty.

(3) If the 60th calendar day described in paragraphs (d)(1) and (2) of this section is a weekend or a Federal holiday, then the timeframe is extended until the end of the next business day.

(e) *Appeal procedures for civil money penalties.* Section 1128A(c)(2) of the Act provides that CMS may not collect a civil money penalty until the affected party has had notice and the opportunity for a hearing.

(1) Manufacturers may appeal the following determinations:

(i) A CMS determination that the rebate amount was not paid by the applicable payment deadline as described in § 427.505.

(ii) The calculation of the amount of the civil money penalty.

(2) The notice provided to a manufacturer if CMS decides to impose a civil money penalty is paragraph (c) of this section.

(3) A manufacturer has a right to a hearing following a decision by CMS to impose a civil money penalty following the administrative appeal process and procedures established in 42 CFR part 423, subpart T.

(f) *Other applicable provisions.* The provisions of section 1128A of the Act (except subsections (a) and (b) of section 1128A of the Act) apply to civil money penalties under this section to the same extent that they apply to a civil money penalty or procedures under section 1128A of the Act.

(g) *Bankruptcy.* In the event that a manufacturer declares bankruptcy, as described in title 11 of the United States Code, and as a result of the bankruptcy, fails to pay either the full rebate amount owed or the total sum of civil money penalties imposed, the Government reserves the right to file a proof of claim with the bankruptcy court to recover the unpaid amount of the rebates and civil money penalties owed by the manufacturer.

■ 81. Part 428 is added to read as follows:

PART 428—MEDICARE PART D DRUG INFLATION REBATE PROGRAM

Subpart A—General Provisions

Sec.

- 428.10 Basis and scope.
428.20 Definitions.

Subpart B—Determination of Part D Rebate Amounts

- 428.100 Definitions.

- 428.101 Identification of Part D rebatable drugs.

Subpart C—Determination of the Rebate Amount for Part D Rebate Amounts

- 428.200 Definitions.
428.201 Calculation of the total rebate amount to be paid by manufacturers.
428.202 Calculation of the per unit Part D drug rebate amount.
428.203 Determination of the total number of units dispensed under Part D.
428.204 Treatment of new formulations of Part D rebatable drugs.

Subpart D—Reducing the Rebate Amount for Part D Rebate Amounts in Shortage and When There is a Severe Supply Chain Disruption or Likely Shortage

- 428.300 Definitions.
428.301 Reducing the rebate amount for Part D rebatable drugs currently in shortage.
428.302 Reducing the rebate amount for certain Part D rebatable drugs when there is a severe supply chain disruption.
428.303 Reducing the rebate amount for generic Part D rebatable drugs likely to be in shortage.

Subpart E—Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments

- 428.400 Definitions.
428.401 Rebate Reports and reconciliation.
428.402 Rebate Reports for applicable periods beginning October 1, 2022, and October 1, 2023.
428.403 Suggestion of Error.
428.404 Manufacturer access to Rebate Reports.
428.405 Deadline and process for payment of rebate amount.

Subpart F—Enforcement of Manufacturer Payment of Rebate Amounts

- 428.500 Civil money penalty notice and appeals procedures.

Authority: 42 U.S.C. 1395w–114b, 1302, and 1395hh.

Subpart A—General Provisions

§ 428.10 Basis and scope.

(a) *Basis.* This part implements section 1860D–14B of the Social Security Act (“the Act”).

(b) *Scope.* This part sets forth the requirements of the Medicare Part D Drug Inflation Rebate Program, which requires, for each 12-month applicable period, manufacturers to pay rebates for certain drugs and biological products with prices that increase faster than the rate of inflation.

(c) *Severability.* Were any provision of this part to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions would be severable from this part and the invalidity or unenforceability would not affect the remainder thereof or any other part of this subchapter or the application of

such provision to other persons not similarly situated or to other, dissimilar circumstances.

§ 428.20 Definitions.

As used in this part, the following definitions apply:

Annual manufacturer price (AnMP) refers to the amount calculated in § 428.202(b).

Applicable period means a 12-month period beginning with October 1 of a year (beginning with October 1, 2022).

Applicable period Consumer Price Index for All Urban Consumers (CPI-U) means, with respect to an applicable period, the CPI-U for the first month of such applicable period (that is, October).

Applicable threshold means the amount calculated in accordance with § 428.101(b)(2).

Average manufacturer price (AMP) means the average price paid to the manufacturer for the drug by wholesalers for drugs distributed to retail community pharmacies and retail community pharmacies that purchase drugs directly from the manufacturer, calculated in accordance with § 447.504 of this chapter.

Benchmark period CPI-U means the CPI-U identified in § 428.202(e).

Benchmark period manufacturer price refers to the amount calculated in § 428.202(d).

Covered Part D Drug has the meaning set forth in section 1860D–2(e) of the Act and § 423.100 of this chapter.

CPI-U means the monthly Consumer Price Index for All Urban Consumers (United States city average) index level for all items from the Bureau of Labor Statistics.

First marketed date means the date that a manufacturer is required to report for a Part D rebatable drug as its “market date” under section 1927(b)(3)(A)(v) of the Act.

Inflation-adjusted payment amount means the amount calculated in § 428.202(f).

Manufacturer has the meaning set forth in section 1927(k)(5) of the Act.

National Drug Code (NDC) means the unique identifying prescription drug product number that is listed with FDA identifying the product and package size and type.

Part D rebatable drug means, subject to the exclusion described in § 428.101(b), a drug or biological that is a covered Part D drug that, as of the first day of the applicable period, is:

(1) A drug approved under a New Drug Application (NDA) under section 505(c) of the Federal Food, Drug, and Cosmetic (FD&C) Act;

(2) A generic drug approved under an Abbreviated New Drug Application

(ANDA) under section 505(j) of the FD&C Act (“section 505(j) ANDA”), in the case where:

(i) The reference listed drug approved under an NDA under section 505(c) of the FD&C Act, including any authorized generic drug as defined in section 505(t)(3) of the FD&C Act, is not being marketed, as identified in the Food and Drug Administration’s (FDA) NDC Directory;

(ii) There is no other drug approved under section 505(j) of the FD&C Act that is rated as therapeutically equivalent in FDA’s most recent publication of “Approved Drug Products with Therapeutic Equivalence Evaluations” (commonly known as the Orange Book), and that is being marketed, as identified in FDA’s NDC Directory;

(iii) The manufacturer is not a “first applicant” during the “180-day exclusivity period,” as those terms are defined in section 505(j)(5)(B)(iv) of the FD&C Act; and

(iv) The manufacturer is not a “first approved applicant” for a competitive generic therapy, as that term is defined in section 505(j)(5)(B)(v) of the FD&C Act; or

(3) A biological licensed under section 351 of the Public Health Service (PHS) Act, including a biosimilar.

Payment amount benchmark period means the period identified in § 428.202(c).

Subsequently approved drug means a Part D rebatable drug first approved or licensed by the FDA after October 1, 2021.

Unit means, with respect to a Part D rebatable drug, the lowest dispensable amount (such as a capsule or tablet, milligram of molecules, or grams) of the Part D rebatable drug, as reported under section 1927 of the Act.

Subpart B—Determination of Part D Rebatable Drugs

§ 428.100 Definitions.

As used in this subpart, the following definitions apply:

Individual who uses such a drug or biological means a unique Medicare Part D beneficiary who was dispensed the Part D drug or biological that was covered by their Part D plan sponsor during the applicable period, identified using Prescription Drug Event (PDE) data with dates of service during the applicable period and with gross covered prescription drug costs greater than zero.

Gross covered prescription drug costs has the meaning set forth in § 423.308 of this chapter.

§ 428.101 Identification of Part D rebatable drugs.

(a) *Determination of Part D rebatable drugs.* (1) For each applicable period, CMS will use PDE data to identify all covered Part D drugs.

(2) CMS will match the covered Part D drugs identified in the PDE data with application numbers using FDA sources to determine whether each covered Part D drug is a drug or biological approved under an NDA under section 505(c) of the FD&C Act, approved under an ANDA under section 505(j) of the FD&C Act, or licensed under a Biologics License Application (BLA) under section 351 of the PHS Act, as of the first day of the applicable period.

(3) For a covered Part D drug identified in the PDE that is approved under an ANDA under section 505(j) of the FD&C Act, CMS will determine whether such drug meets the criteria in section 1860D–14B(g)(1)(C)(ii) of the Act as of the first day of the applicable period as follows:

(i) To determine whether the reference listed drug or an authorized generic of the reference listed drug is being marketed, as required under section 1860D–14B(g)(1)(C)(ii)(I) of the Act, CMS will use FDA’s NDC Directory, including historical information from NDC Directory files such as discontinued, delisted, and expired listings, provided by the FDA or published on the FDA website.

(ii) To determine whether another drug has been approved under an ANDA that is therapeutically equivalent to the Part D rebatable drug identified in this paragraph (a)(3), CMS will use FDA’s Orange Book. To determine if this therapeutically equivalent drug is being marketed, as required under section 1860D–14B(g)(1)(C)(ii)(II) of the Act, CMS will use FDA’s NDC Directory, including historical information from NDC Directory files, such as discontinued, delisted, and expired listings, provided by the FDA or published on the FDA website.

(iii) To determine whether the manufacturer of the drug identified in this paragraph (a)(3) is a first applicant during the 180-day exclusivity period, or whether the manufacturer of this drug is a first approved applicant for a competitive generic drug therapy, CMS will refer to publicly available FDA sources such as the Orange Book and may consult with FDA for technical assistance as needed.

(b) *Drugs and biologicals with average annual total cost below the applicable threshold.* For each applicable period, CMS will identify drugs and biologicals with average annual total costs under Part D for such applicable period, per

individual who uses such drug or biological, that are below the applicable threshold in accordance with the steps described in this paragraph (b). Such drugs and biologicals are not considered Part D rebatable drugs and will be excluded from the identification of Part D rebatable drugs in paragraph (a) of this section.

(1) *Average annual total cost.* For each drug or biological that is identified in accordance with paragraph (a) of this section, CMS will calculate average annual total costs under Part D per individual who uses such drug or biological by dividing the gross covered prescription drug costs for the drug or biological by the number of individuals who use such drug or biological in the applicable period.

(2) *Applicable threshold.* CMS will calculate the applicable threshold for an applicable period as follows:

(i) For the applicable period beginning October 1, 2022, the applicable threshold is equal to \$100.

(ii) For the applicable period beginning October 1, 2023, the applicable threshold is equal to \$100 increased by the percentage increase in CPI–U for the 12-month period beginning October 1, 2023.

(iii) For subsequent applicable periods, the applicable threshold is equal to the applicable threshold for the prior applicable period increased by the percentage increase in the CPI–U for the 12-month period beginning with October of the previous period.

(iv) If the resulting amount under paragraph (b)(2)(ii) or (iii) of this section is not a multiple of \$10, CMS will round that amount to the nearest multiple of \$10.

Subpart C—Determination of the Rebate Amount for Part D Rebatable Drugs

§ 428.200 Definitions.

As used in this subpart, the following definitions apply:

340B Program is the program under section 340B of the PHS Act.

Line extension has the meaning set forth in § 447.502 of this chapter.

New formulation has the meaning set forth in § 447.502 of this chapter.

Oral solid dosage form has the meaning set forth in § 447.502 of this chapter.

§ 428.201 Calculation of the total rebate amount to be paid by manufacturers.

(a) *Total rebate.* (1) Subject to paragraph (b) of this section, the total rebate amount to be paid by a manufacturer for a Part D rebatable drug, as identified under § 428.101, for an applicable period is equal to:

(i) The product of the per unit Part D rebate amount of such drug, as determined under § 428.202(a), and the total number of units dispensed of such drug under Part D, as determined under § 428.203; or

(ii) In the case of a Part D rebatable drug that is a line extension of a Part D rebatable drug that is an oral solid dosage form, the amount specified in § 428.204.

(2) The rebate amount may be reduced in accordance with subpart D of this part or adjusted in accordance with subpart E of this part.

(b) *Drugs and biologicals excluded from Part D rebate calculations.* CMS will exclude from the Part D drug inflation rebate calculations described in this subpart—

(1) Drugs and biologicals that meet the definition of a Part D rebatable drug but whose manufacturers do not have an agreement in effect with the HHS Secretary under section 1927 of the Act at any point during the applicable period, as determined by CMS through consultation with Medicaid Drug Rebate Program staff and review of the Medicaid Drug Programs system.

(2) Drugs and biologicals that meet the definition of a Part D rebatable drug but, for the entire duration of the applicable period, are excluded from the definition of covered outpatient drugs as defined in section 1927(k)(2)–(4) of the Act and § 447.502 of this chapter, as determined by CMS through consultation with Medicaid Drug Rebate Program staff and review of the Medicaid Drug Programs system.

§ 428.202 Calculation of the per unit Part D drug rebate amount.

(a) *Formula for calculating the per unit Part D rebate amount.* CMS will calculate the per unit Part D drug inflation rebate amount for a Part D rebatable drug and applicable period by determining the amount by which the AnMP for the Part D rebatable drug, as calculated in accordance with paragraph (b) of this section, exceeds the inflation-adjusted payment amount, as calculated in accordance with paragraph (f) of this section.

(b) *Calculation of the AnMP for the applicable period.* Subject to paragraph (g) of this section, CMS will calculate the AnMP for a Part D rebatable drug using the AMP reported by a manufacturer under sections 1927(b)(3)(A)(i) and (ii) of the Act for each calendar quarter of the applicable period and units reported by a manufacturer under section 1927(b)(3)(A)(iv) of the Act for each month of the applicable period.

(1) CMS will calculate the AnMP for a Part D rebatable drug as the sum of the following:

(i) The product of—

(A) The AMP for the Part D rebatable drug reported for the calendar quarter beginning October of the applicable period; and

(B) The sum of the monthly units reported for the calendar quarter beginning October of the applicable period divided by the sum of the monthly units reported for the 4 calendar quarters in the applicable period.

(ii) The product of—

(A) The AMP for the Part D rebatable drug reported for the calendar quarter beginning January of the applicable period; and

(B) The sum of the monthly units reported for the calendar quarter beginning January of the applicable period divided by the sum of the monthly units reported for the 4 calendar quarters in the applicable period.

(iii) The product of—

(A) The AMP for the Part D rebatable drug reported for the calendar quarter beginning April of the applicable period; and

(B) The sum of the monthly units reported for the calendar quarter beginning April of the applicable period divided by the sum of the monthly units reported for the 4 calendar quarters in the applicable period.

(iv) The product of—

(A) The AMP for the Part D rebatable drug reported for the calendar quarter beginning July of the applicable period; and

(B) The sum of the monthly units reported for the calendar quarter beginning July of the applicable period divided by the sum of the monthly units reported for the 4 calendar quarters in the applicable period.

(2) The first applicable period for a Part D rebatable drug will be the earliest applicable period that follows the payment amount benchmark period identified in paragraphs (c)(1) through (4) of this section.

(c) *Identification of the payment amount benchmark period.* For each Part D rebatable drug, CMS will identify the payment amount benchmark period using the date of FDA approval or licensure or the first marketed date as set forth in paragraphs (c)(1) and (2) of this section, subject to paragraphs (c)(3) through (5) of this section:

(1) For a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, the payment amount benchmark period is the period

beginning on January 1, 2021, and ending on September 30, 2021;

(2) For a subsequently approved drug, the payment amount benchmark period is the first calendar year beginning after the drug's first marketed date;

(3) Notwithstanding paragraph (c)(2) of this section, for a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, for which there are no quarters during the period beginning on January 1, 2021, and ending on September 30, 2021, for which AMP has been reported under section 1927(b)(3) of the Act, the payment amount benchmark period is the first calendar year no earlier than calendar year 2021 in which such drug has at least 1 quarter of AMP reported;

(4) Notwithstanding paragraph (c)(3) of this section, for a subsequently approved drug for which there are no quarters during the first calendar year beginning after the drug's first marketed date for which AMP has been reported under section 1927(b)(3) of the Act, the payment amount benchmark period is the first calendar year in which such drug has at least 1 quarter of AMP reported; and

(5) Notwithstanding paragraph (c)(4) of this section, for a Part D rebatable drug that is a selected drug (as defined in section 1192(c) of the Act) with respect to a price applicability period (as defined in section 1191(b)(2) of the Act), in the case such Part D rebatable drug is no longer considered to be a selected drug, for each applicable period beginning after the price applicability period with respect to such drug, the payment amount benchmark period is the last calendar year of such price applicability period with respect to such selected drug.

(d) *Calculation of benchmark period manufacturer price.* Subject to paragraph (g) of this section, CMS will calculate the benchmark period manufacturer price for a Part D rebatable drug using the AMP reported by a manufacturer under sections 1927(b)(3)(A)(i) and (ii) of the Act for each calendar quarter of the payment amount benchmark period and the monthly units reported by a manufacturer under section 1927(b)(3)(A)(iv) of the Act during the payment amount benchmark period.

(1) For a Part D rebatable drug with a payment amount benchmark period identified under paragraph (c)(1) of this section, CMS will calculate the benchmark period manufacturer price as the sum of the following:

(i) The product of—

(A) The AMP reported for the calendar quarter beginning January 2021; and

(B) The sum of the monthly units reported for the calendar quarter beginning January 2021 divided by the sum of the monthly units reported for the 3 quarters of the payment amount benchmark period.

(ii) The product of—

(A) The AMP reported for the calendar quarter beginning April 2021; and

(B) The sum of the monthly units reported for the calendar quarter beginning April 2021 divided by the sum of the monthly units reported for the 3 quarters of the payment amount benchmark period.

(iii) The product of—

(A) The AMP reported for the calendar quarter beginning July 2021; and

(B) The sum of the monthly units reported for the calendar quarter beginning July 2021 divided by the sum of the units reported for the 3 quarters of the payment amount benchmark period.

(2) For a Part D rebatable drug with a payment amount benchmark period identified under paragraphs (c)(2) through (5) of this section, CMS will calculate the benchmark period manufacturer price as the sum of the following:

(i) The product of—

(A) The AMP reported for the calendar quarter beginning January of the payment amount benchmark period; and

(B) The sum of the monthly units reported for the calendar quarter beginning January of the payment amount benchmark period divided by the sum of the monthly units reported for the 4 quarters of the payment amount benchmark period.

(ii) The product of—

(A) The AMP reported for the calendar quarter beginning April of the payment amount benchmark period; and

(B) The sum of the monthly units reported for the calendar quarter beginning April of the payment amount benchmark period divided by the sum of the monthly units reported for the 4 quarters of the payment amount benchmark period.

(iii) The product of—

(A) The AMP reported for the calendar quarter beginning July of the payment amount benchmark period; and

(B) The sum of the monthly units reported for the calendar quarter beginning July of the payment amount benchmark period divided by the sum of the monthly units reported for the 4 quarters of the payment amount benchmark period.

(iv) The product of—

(A) The AMP reported for the calendar quarter beginning in October of the payment amount benchmark period; and

(B) The sum of the monthly units reported for the calendar quarter beginning October of the payment amount benchmark period divided by the sum of the monthly units reported for the 4 quarters of the payment amount benchmark period.

(e) *Identification of the benchmark period CPI-U.* For each Part D rebatable drug, CMS will identify the benchmark period CPI-U as set forth in paragraphs (e)(1) and (2) of this section, subject to paragraphs (e)(3) through (5) of this section:

(1) For a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, the benchmark period CPI-U is the CPI-U for January 2021.

(2) For a subsequently approved drug, the benchmark period CPI-U is the CPI-U for January of the first calendar year beginning after a drug's first marketed date.

(3) Notwithstanding paragraph (e)(2) of this section, for a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, for which there are no quarters during the period beginning on January 1, 2021, and ending on September 30, 2021, for which AMP has been reported under section 1927(b)(3) of the Act, the benchmark period CPI-U is the CPI-U for January of the payment amount benchmark period identified under paragraph (c)(3) of this section.

(4) Notwithstanding paragraph (e)(3) of this section, for a subsequently approved drug for which there are no quarters during the first calendar year beginning after the drug's first marketed date for which AMP has been reported under section 1927(b)(3) of the Act, the benchmark period CPI-U is the CPI-U for January of the payment amount benchmark period identified under paragraph (c)(4) of this section.

(5) Notwithstanding paragraph (e)(5) of this section, for a drug that is a selected drug (as defined in section 1192(c) of the Act) with respect to a price applicability period (as defined in section 1191(b)(2) of the Act), in the case such Part D rebatable drug is no longer considered to be a selected drug, the benchmark period CPI-U is the CPI-U for January of the last calendar year of such price applicability period.

(f) *Calculation of inflation-adjusted payment amount.* For an applicable period for each Part D rebatable drug, CMS will calculate the inflation-adjusted payment amount by dividing

the applicable period CPI-U by the benchmark period CPI-U and then multiplying the quotient by the benchmark period manufacturer price.

(g) *Situations in which manufacturers do not report units under section 1927(b)(3)(A)(iv) of the Act.* For the purpose of calculating the AnMP in accordance with paragraph (b) of this section and the benchmark period manufacturer price in accordance with paragraph (d) of this section—

(1) If there is 1 or more quarter(s) in the payment amount benchmark period or applicable period for which a manufacturer has not reported units under section 1927(b)(3)(A)(iv) of the Act but has reported AMP under sections 1927(b)(3)(A)(i) and (ii) of the Act, CMS will calculate the benchmark period manufacturer price or AnMP, as applicable, using data only from quarter(s) with units. Quarter(s) in the payment amount benchmark period or applicable period for which a manufacturer has not reported units under section 1927(b)(3)(A)(iv) of the Act will be excluded from the calculation.

(2) If there are no quarters of the payment amount benchmark period or applicable period for which a manufacturer has reported units under section 1927(b)(3)(A)(iv) of the Act, but the manufacturer but has reported AMP, under sections 1927(b)(3)(A)(i) and (ii) of the Act for at least 1 quarter of such period, CMS will use the average of the AMP over the calendar quarters of the payment amount benchmark period or applicable period for which AMP is reported to calculate the benchmark period manufacturer price or AnMP, respectively.

§ 428.203 Determination of the total number of units dispensed under Part D.

(a) *General.* For each Part D rebatable drug, CMS will determine the total number of units as follows:

(1) *Use of PDE data to determine total units dispensed.* To determine the total number of units of each Part D rebatable drug dispensed under Part D and covered by Part D plan sponsors during an applicable period, CMS will use the quantity dispensed reported on the PDE record for each Part D rebatable drug with gross covered prescription drug costs greater than zero.

(2) *Crosswalk to AMP units.* CMS will crosswalk the information from the PDE record to database(s) that includes the unit type (for example, each, capsule) for the Part D rebatable drug, matching on the NDC of the Part D rebatable drug. If the unit type obtained from such database does not match the AMP unit type reported by a manufacturer to the

Medicaid Drug Programs system, CMS will convert the total units reported on the PDE to the AMP units reported.

(b) *Removal of certain units.* CMS will exclude certain units from the total number of units dispensed of a Part D rebatable drug, with respect to an applicable period, as follows:

(1) *Removal of units when a generic drug is no longer a Part D rebatable drug.* To determine whether a generic drug that meets the definition of a Part D rebatable drug on the first day of an applicable period ceases to meet such definition later in the applicable period, CMS will—

(i) Review FDA's NDC Directory, including historical information from NDC Directory files such as discontinued, delisted, and expired listings provided by the FDA or published on the FDA website to determine whether the reference listed drug or an authorized generic of the reference listed drug is being marketed;

(ii) Review the most recent version of the downloadable FDA Orange Book to determine whether another drug has been approved under a section 505(j) ANDA that is therapeutically equivalent to such generic drug. If CMS determines that FDA has approved such a therapeutically equivalent drug under a section 505(j) ANDA, CMS will then: use the FDA's NDC Directory, including historical information from NDC Directory files such as discontinued, delisted, and expired listings provided by the FDA or published on the FDA website to determine the marketing status of such therapeutically equivalent drug and whether, during the applicable period, the therapeutically equivalent drug was marketed; and

(iii) Exclude from the total number of units determined under paragraph (a) of this section any units dispensed on or after the first day of the calendar month that a generic drug no longer meets the definition of a Part D rebatable drug.

(2) *Exclusion of units acquired through the 340B Program.* (i) For the applicable period beginning October 1, 2025, and subsequent applicable periods, CMS will exclude from the total number of units determined under paragraph (a) of this section units for which a manufacturer provided a discount under the 340B Program ("340B units") as follows:

(A) For the applicable period beginning October 1, 2025, 340B units will be excluded from the total number of units dispensed for claims with a date of service on or after January 1, 2026.

(B) For the applicable period beginning October 1, 2026, and applicable periods thereafter, 340B units

will be excluded from the total number of units dispensed.

(ii) To determine the total number of such units for which a manufacturer provided a discount under the 340B Program, CMS will use data reflecting the total number of units of a Part D rebatable drug for which a discount was provided under the 340B Program and that were dispensed during the applicable period.

§ 428.204 Treatment of new formulations of Part D rebatable drugs.

In the case of a Part D rebatable drug that is a line extension of a Part D rebatable drug that is an oral solid dosage form, the rebate amount for an applicable period is equal to the amount computed under § 428.201(a) for such new drug or, if greater, the alternative total rebate amount. CMS will determine the alternative total rebate amount for such new formulations according to the following:

(a) *Identification of the initial drug.* The initial drug that CMS will use to calculate the inflation rebate amount ratio is the initial drug identified in accordance with § 447.509(a)(4)(iii)(B) of this chapter for the last quarter of the applicable period or, if an initial drug was not identified in the last quarter, the initial drug identified for a quarter most recently in that applicable period.

(b) *Calculation of the inflation rebate amount ratio.* The inflation rebate amount ratio is equal to the per unit Part D drug inflation rebate amount for the initial drug, as calculated in § 428.202(a), divided by the AnMP for that initial drug for the applicable period.

(c) *Calculation of the alternative total rebate amount.* The alternative total rebate amount is equal to the product of all of the following:

(1) The AnMP for the applicable period, as calculated in § 428.202(b), of the Part D rebatable drug that is a line extension of a Part D rebatable drug that is an oral solid dosage form.

(2) The inflation rebate amount ratio as determined in paragraph (b) of this section.

(3) The total number of units dispensed under Part D identified in § 428.203.

Subpart D—Reducing the Rebate Amount for Part D Rebatable Drugs in Shortage and When There Is a Severe Supply Chain Disruption or Likely Shortage

§ 428.300 Definitions.

As used in this subpart, the following definitions apply:

Biosimilar has the meaning set forth in section 351(i) of the PHS Act.

Currently in shortage means that at least one NDC-10 of a Part D rebatable drug with the status "currently in shortage" is on a shortage list maintained by the FDA under section 506E of the FD&C Act.

Drug shortage or *shortage* means a period of time when the demand or projected demand for the drug within the United States exceeds the supply of the drug (see section 506C(h)(2) of the FD&C Act).

Generic Part D rebatable drug means a generic drug approved under an ANDA under section 505(j) of the FD&C Act that meets the sole source criteria specified in § 428.101(a)(3).

Likely to be in shortage means that a generic Part D rebatable drug is likely to be described as currently in shortage during a subsequent applicable period without such rebate reduction.

Natural disaster means any natural catastrophe, including, but not limited to any of the following: hurricane, tornado, storm, high water, wind-driven water, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, or drought, or regardless of cause, any fire, flood, or explosion.

Other unique or unexpected event means any exogenous, unpredictable event outside of a manufacturer's control, including, but not limited to, a geopolitical disruption, pandemic, or act of terror.

Plasma-derived product means a licensed biological product that is derived from human whole blood or plasma, as indicated on the approved product labeling.

Severe supply chain disruption means a change in production or distribution that is reasonably likely to lead to a significant reduction in the U.S. supply of a generic Part D rebatable drug or biosimilar by a manufacturer and significantly affects the ability of the manufacturer of the generic drug or biosimilar to fill orders or meet expected demand for its product in the United States for at least 90 days. This definition does not include interruptions in manufacturing due to matters such as routine maintenance, manufacturing quality issues, or insignificant changes made in the manufacturing process for the drug.

§ 428.301 Reducing the rebate amount for Part D rebatable drugs currently in shortage.

(a) *General.* As required under section 1860D-14B(b)(1)(C)(i) of the Act, CMS will reduce the total rebate amount calculated under § 428.201(a), if any is owed, for a Part D rebatable drug that is currently in shortage, as defined in

§ 428.300, at any point during the applicable period.

(b) *Calculation of the reduced rebate amount.* (1) For each applicable period beginning on or after October 1, 2022, the reduced rebate amount for a Part D rebatable drug currently in shortage will be calculated using the following formula:

Equation 1 to Paragraph (b)(1)

Reduced Total Rebate Amount = the total rebate amount *multiplied by* (1 *minus* applicable percent reduction) *multiplied by* (percentage of time drug was currently in shortage during the applicable period) *added to* the total rebate amount *multiplied by* (1 *minus* percentage of time drug was currently in shortage during the applicable period)

(2) For purposes of paragraph (b)(1) of this section, the applicable percent reduction is:

(i) For a Part D rebatable drug that is a generic drug or plasma-derived product:

(A) 75 percent for the first applicable period such drug is currently in shortage.

(B) 50 percent for the second applicable period such drug is currently in shortage.

(C) 25 percent for each subsequent period such drug is currently in shortage.

(ii) For a Part D rebatable drug that is not a generic drug or plasma-derived product:

(A) 25 percent for the first applicable period such drug is currently in shortage.

(B) 10 percent for the second applicable period such drug is currently in shortage.

(C) 2 percent for each subsequent applicable period such drug is currently in shortage.

(3) For purposes of paragraph (b)(1) of this section, the percentage of time the drug is currently in shortage during the applicable period is equal to the number of days such drug is currently in shortage in an applicable period, divided by the total number of days in the applicable period.

(c) *Application of reduction.* CMS will apply a reduction of the rebate amount as determined under paragraph (b) of this section to the Part D rebatable drug at the NDC-9 level.

§ 428.302 Reducing the rebate amount for certain Part D rebatable drugs when there is a severe supply chain disruption.

(a) *General.* As required under section 1860D-14B(b)(1)(C)(ii) of the Act, CMS will reduce the total rebate amount

calculated under § 428.201(a), if any is owed, for a generic Part D rebatable drug or biosimilar when CMS determines there is a severe supply chain disruption, as defined in § 428.300, during the applicable period such as that caused by a natural disaster or other unique or unexpected event.

(b) *Calculation of the reduced rebate amount—(1) Initial reduction.* If CMS determines the criteria described in paragraph (c)(4) of this section are met, then CMS will reduce the total rebate amount owed by the manufacturer for a generic Part D rebatable drug or biosimilar by 75 percent for an applicable period.

(2) *Extension of reduction.* If CMS determines a severe supply chain disruption continues into a second consecutive applicable period as described in paragraph (c)(5) of this section, then CMS will reduce the total rebate amount owed by the manufacturer for a generic Part D rebatable drug or biosimilar by 75 percent for that second applicable period.

(3) *Application of reduction.* If CMS determines there is a severe supply chain disruption for an NDC-11, CMS will apply any reduction of the rebate amount as described in paragraphs (b)(1) and (2) of this section to a Part D rebatable drug at the NDC-9 level.

(4) *Limitation on rebate reductions.* CMS will not apply multiple rebate reductions for the same Part D rebatable drug and applicable period.

(i) If a manufacturer believes there are multiple events causing severe supply chain disruptions during the same applicable period for the same generic Part D rebatable drug or biosimilar and submits multiple rebate reduction requests for the same drug or biosimilar, CMS will grant no more than 1 rebate reduction under paragraph (b)(1) or (2) of this section for that product for the applicable period.

(ii) If CMS grants a rebate reduction request under this section and the generic Part D rebatable drug or biosimilar subject to the reduction is currently in shortage during the same applicable period as the one for which the severe supply chain disruption reduction request was granted, CMS will reduce the rebate amount as described in paragraph (b)(1) of this section and will not grant a reduction under § 428.301 during that applicable period.

(iii) If a generic Part D rebatable drug or biosimilar that is currently in shortage experiences a severe supply chain disruption, CMS will reduce the rebate amount as described in paragraph (b)(1) of this section, and will not grant

a reduction under § 428.301 during that applicable period.

(c) *Eligibility for a rebate reduction—(1) Eligible drug.* Subject to paragraph (b)(3) of this section, eligibility for a rebate reduction under this section is limited to Part D rebatable drugs and biosimilars for which a manufacturer submits a rebate reduction request under this section.

(2) *Timing.* For a natural disaster or other unique or unexpected event occurring on or after August 2, 2024 that the manufacturer believes caused a severe supply chain disruption, the manufacturer must submit the rebate reduction request within 60 calendar days from the first day that the natural disaster or other unique or unexpected event occurred or began to receive consideration for a reduction in the rebate amount owed in accordance with paragraph (b)(1) of this section.

(3) *Required elements of a rebate reduction request.* To receive consideration for a reduction in the rebate amount owed in accordance with paragraph (b)(1) of this section, the manufacturer must submit to CMS information and supporting documentation to substantiate the evaluation criteria described in paragraph (c)(4) of this section. Such information and supporting documentation include the following:

(i) Evidence that the severe supply chain disruption directly affects the manufacturer itself, a supplier of an ingredient or packaging, a contract manufacturer, or a method of shipping or distribution that the manufacturer uses to make or distribute the generic Part D rebatable drug(s) or biosimilar(s), such as a change in the production or distribution of the generic Part D rebatable drug(s) or biosimilar(s) that is reasonably likely to lead to a significant reduction in the U.S. supply of product and significantly affects the manufacturer's ability to fill orders or meet expected demand for the generic Part D rebatable drug(s) or biosimilar(s) for at least 90 days;

(ii) Information about when the manufacturer expects supply of the generic Part D rebatable drug(s) or biosimilar(s) to meet expected demand;

(iii) Evidence that the natural disaster or other unique or unexpected event caused the severe supply chain disruption, including when the natural disaster or other unique or unexpected event occurred or began occurring, and the expected or actual duration of the severe supply chain disruption; and

(iv) Evidence of the manufacturer's physical presence related to manufacturing the generic Part D rebatable drug(s) or biosimilar(s) in a

geographic area where a natural disaster or other unique or unexpected event occurred. If the manufacturer is not physically present in a geographic area where a natural disaster or other unique or unexpected event occurred, but believes there is a severe supply chain disruption caused by a natural disaster or other unique or unexpected event that affects the manufacturer's generic Part D rebatable drug(s) or biosimilar(s), the information and supporting documentation may include evidence of the impact of the natural disaster or other unique or unexpected event on the supply chain of the generic Part D rebatable drug or biosimilar, on a supplier of an ingredient or packaging, or method of shipping or distribution that the manufacturer uses.

(4) *Evaluation criteria.* In accordance with paragraph (b)(1) of this section, CMS will grant a reduction in the rebate amount owed if a manufacturer submits to CMS a request in writing for an eligible drug, in accordance with the timing specified in paragraph (c)(2) of this section, demonstrating that:

(i) A severe supply chain disruption has occurred during the applicable period;

(ii) The severe supply chain disruption directly affects the manufacturer itself, a contract manufacturer, a supplier of an ingredient or packaging, or a method of shipping or distribution that the manufacturer uses in a significant capacity to make or distribute the generic Part D rebatable drug or biosimilar; and

(iii) The severe supply chain disruption was caused by a natural disaster or other unique or unexpected event.

(5) *Rebate reduction extensions.* If CMS determines that a generic Part D rebatable drug or biosimilar that received a reduction of the rebate amount under paragraph (b)(1) of this section continues to be affected by the severe supply chain disruption, CMS will grant a single extension of the reduction for 1 additional consecutive applicable period and reduce the rebate amount owed in accordance with paragraph (b)(2) of this section.

(i) To receive consideration for a rebate reduction extension, a manufacturer must submit a request with updated or new information and supporting documentation on why the generic Part D rebatable drug or biosimilar continues to be affected by the severe supply chain disruption during the second applicable period.

(ii) A manufacturer must submit the rebate reduction extension request at least 60 calendar days before the start of

the second consecutive applicable period to receive consideration for a reduction in the rebate amount owed, if any, in accordance with paragraph (b)(2) of this section, except for when the initial request is made less than 60 calendar days before the end of an applicable period such that the initial rebate reduction is applied to the next applicable period rather than the applicable period in which the event that caused the severe supply chain disruption occurred or began. In these cases, the rebate reduction extension request must be submitted at least 60 calendar days prior to the end of the applicable period in which the initial reduction under paragraph (b)(1) of this section is applied.

(6) *Decision to grant or deny a request.* CMS will review rebate reduction requests and rebate reduction extension requests within 60 calendar days of receipt of all documentation, if feasible, beginning with the applicable period that begins on October 1, 2024.

(i) CMS will deny a rebate reduction request that does not meet the criteria in paragraph (c)(4) of this section or that is incomplete or untimely based on the requirements of this paragraph (c).

(ii) CMS will deny a rebate reduction extension request that does not meet the criteria in paragraph (c)(5) of this section, that is incomplete or untimely based on the requirements of paragraph (c)(5) of this section, or if a reduction under paragraph (b)(1) of this section was not provided for such generic Part D rebatable drug or biosimilar.

(iii) CMS' decisions to deny a request are final and will not be subject to an appeals process.

(7) *Public disclosure of information.* CMS will keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. Information provided as part of a request for a rebate reduction request that the submitter indicates is a trade secret or confidential commercial or financial information will be protected from disclosure if CMS determines the information meets the requirements set forth under Exemption 3 or Exemption 4 in 5 U.S.C. 552.

§ 428.303 Reducing the rebate amount for generic Part D rebatable drugs likely to be in shortage.

(a) *General.* As required under section 1860D–14B(b)(1)(C)(iii) of the Act, CMS will reduce the total rebate amount calculated under § 428.201, if any is owed, for a generic Part D rebatable drug when CMS determines that the generic Part D rebatable drug is likely to be in shortage, as defined in § 428.300.

(b) *Calculation of the reduced rebate amount—(1) Initial reduction.* If CMS determines the criteria described in paragraph (c)(4) of this section are met, then CMS will reduce the total rebate amount owed by the manufacturer for a generic Part D rebatable drug by 75 percent for an applicable period.

(2) *Extension of reduction.* If CMS determines the generic Part D rebatable drug is likely to be in shortage in a second applicable period as described in paragraph (c)(5) of this section, then CMS will reduce the total rebate amount owed by the manufacturer for a generic Part D rebatable drug by 75 percent for a second consecutive applicable period.

(3) *Application of reduction.* If CMS determines that an NDC–11 is likely to be in shortage, CMS will apply any reduction of the rebate amount as described in paragraphs (b)(1) and (2) of this section to the generic Part D rebatable drug at the NDC–9 level.

(4) *Limitation on rebate reductions.* If CMS grants a rebate reduction request under this section, and the generic Part D rebatable drug subject to the reduction is currently in shortage during the same applicable period as the one for which the request was granted, CMS will reduce the rebate amount as described in paragraph (b)(1) of this section and will not grant a reduction under § 428.301 during that applicable period.

(c) *Eligibility for a rebate reduction—(1) Eligible drug.* Subject to paragraph (b)(3) of this section, eligibility for a rebate reduction under this section is limited to generic Part D rebatable drugs for which a manufacturer submits a rebate reduction request under this section.

(2) *Timing.* The manufacturer must submit the rebate reduction request before the start of the next applicable period in which the manufacturer believes the generic Part D rebatable drug is likely to be in shortage to receive consideration for a reduction in the rebate amount owed in accordance with paragraph (b)(1) of this section.

(3) *Required elements of a rebate reduction request.* To receive consideration for a reduction in the rebate amount owed in accordance with paragraph (b)(1) of this section, the manufacturer must submit to CMS information and supporting documentation to substantiate the evaluation criteria described in paragraph (c)(4) of this section. Such information and supporting documentation include the following:

(i) Evidence that demonstrates a generic Part D rebatable drug is likely to be in shortage, including anticipated cause(s) of the shortage and information about why the manufacturer believes

the generic Part D rebatable drug is likely to be in shortage; and

(ii) Evidence of the anticipated start date and duration of the potential drug shortage, the actions the manufacturer is taking to avoid the potential drug shortage, and how the reduction of the rebate amount would reduce the likelihood of the drug appearing on an FDA shortage list.

(4) *Evaluation criteria.* In accordance with paragraph (b)(1) of this section, CMS will grant a reduction in the rebate amount owed if a manufacturer submits to CMS a request in writing for an eligible drug, in accordance with the timing specified in paragraph (c)(2) of this section, demonstrating that:

(i) The generic Part D rebatable drug is likely to be in shortage;

(ii) The manufacturer is taking actions to avoid the potential drug shortage; and

(iii) The reduction of the rebate amount would reduce the likelihood of the drug appearing on an FDA shortage list.

(5) *Rebate reduction extensions.* If CMS determines that a generic Part D rebatable drug that received a reduction of the rebate amount under paragraph (b)(1) of this section continues to be affected by the potential drug shortage, CMS will grant a single extension of the reduction for 1 additional consecutive applicable period and reduce the rebate amount owed in accordance with paragraph (b)(2) of this section.

(i) To receive consideration for a rebate reduction extension, a manufacturer must submit a request with updated or new information and supporting documentation on why the generic Part D rebatable drug continues to be affected by the potential drug shortage during the second applicable period.

(ii) A manufacturer must submit the rebate reduction extension request at least 60 calendar days before the start of the second consecutive applicable period in which the manufacturer believes the generic Part D rebatable drug is likely to be in shortage to receive consideration for a reduction in the rebate amount owed, if any, in accordance with paragraph (b)(2) of this section.

(6) *Decision to grant or deny a request.* CMS will review rebate reduction requests and rebate reduction extension requests within 60 calendar days of receipt of all documentation, if feasible, beginning with the applicable period that begins on October 1, 2024.

(i) CMS will deny a rebate reduction request that does not meet the criteria in paragraph (c)(4) of this section or that is incomplete or untimely based on the requirements of this paragraph (c).

(ii) CMS will deny a rebate reduction extension request that does not meet the criteria in paragraph (c)(5) of this section, that is incomplete or untimely based on the requirements of paragraph (c)(5) of this section, or if a reduction under paragraph (b)(1) of this section was not provided for such generic Part D rebatable drug.

(iii) CMS' decisions to deny a request are final and will not be subject to an appeals process.

(7) *Public disclosure of information.* CMS will keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. Information provided as part of a request for a rebate reduction that the submitter indicates is a trade secret or confidential commercial or financial information will be protected from disclosure if CMS determines the information meets the requirements set forth under Exemption 3 or Exemption 4 in 5 U.S.C. 552.

Subpart E—Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments

§ 428.400 Definitions.

For the purposes of this subpart, *date of receipt* is the calendar day following the day in which a report of a rebate amount (as set forth in §§ 428.401(b), (c), and (d) and 428.402(b) and (c)) is made available to the manufacturer of a Part D rebatable drug by CMS.

§ 428.401 Rebate Reports and reconciliation.

(a) *General.* This section applies to Part D rebatable drugs for all applicable periods except as otherwise set forth in § 428.402 for the applicable periods beginning October 1, 2022, and October 1, 2023.

(b) *Preliminary Rebate Report.* A Preliminary Rebate Report will be provided to each manufacturer of a Part D rebatable drug at least 1 month prior to the issuance of the Rebate Report as set forth in paragraph (c) of this section for an applicable period.

(1) The Preliminary Rebate Report for each Part D rebatable drug will include the following information:

(i) The NDC(s) for the Part D rebatable drug as defined under § 428.20;

(ii) The total number of units dispensed under Part D for the Part D rebatable drug for the applicable period as determined under § 428.203;

(iii) The benchmark period manufacturer price as described in § 428.202(d).

(iv) The AnMP for the Part D rebatable drug for the applicable period as determined in § 428.202(b);

(v) The amount, if any, of the excess AnMP for the Part D rebatable drug for the applicable period as set forth under § 428.202(a);

(vi) The benchmark period and applicable period CPI-Us as set forth in §§ 428.202(e) and 428.20, respectively;

(vii) Inflation-adjusted payment amount as set forth in § 428.202(f);

(viii) Any applied reductions described in §§ 428.301, 428.302, and 428.303; and

(ix) Rebate amount due as set forth in § 428.201(a).

(2) If the Part D rebatable drug is a line extension, the Preliminary Rebate Report will also include the following information described in § 428.204:

(i) The NDC for the initial drug;

(ii) The inflation rebate amount ratio for the initial drug; and

(iii) The alternative total rebate amount.

(c) *Rebate Report.* A Rebate Report will be provided to each manufacturer of a Part D rebatable drug no later than 9 months after the end of each applicable period.

(1) The Rebate Report will include the information described in paragraphs (b)(1) and (2) of this section, if applicable, with the inclusion of any revisions to such information resulting from CMS' review of a Suggestion of Error as set forth in § 428.403, if applicable, and any CMS-determined recalculations from paragraph (d)(2) of this section.

(2) The Rebate Report is the invoice of a manufacturer's rebate amount due as calculated in § 428.201(a), if any, for a Part D rebatable drug for an applicable period.

(d) *Reconciliation of the rebate amount.* CMS will perform reconciliation of the rebate amount provided in a Rebate Report specified in paragraph (c) of this section for an applicable period in the following circumstances:

(1) *Regular reconciliation.* Except as otherwise described in § 428.402, CMS will perform a reconciliation of the rebate amount within 12 months of the date of receipt of the Rebate Report for an applicable period and a second reconciliation approximately 24 months thereafter to include revisions to the information used to calculate the rebate amount as specified in paragraph (c)(1) of this section.

(i) *Preliminary reconciliation.* At least 1 month prior to the issuance of a report with the reconciled rebate amount for an applicable period specified in paragraph (d)(1)(ii) of this section, CMS will conduct a preliminary reconciliation of the rebate amount for an applicable period based on the

information specified in paragraphs (d)(1)(i)(A) through (G) of this section, and CMS will provide the information specified in paragraphs (d)(1)(i)(A) through (G) to the manufacturer of a Part D rebatable drug for the applicable period, if applicable:

(A) Updated total number of rebatable units, including updates submitted by a prescription drug plan (PDP) or Medicare Advantage Prescription Drug (MA-PD) plan sponsor and updates to 340B units (as applicable to the dates of service and applicable periods specified in § 428.203(b)(2)(i)(A) and (B)), or units otherwise excluded as specified in § 428.203(b);

(B) Inflation-adjusted payment amount as specified in § 428.202(f) if any inputs are restated within the reconciliation run-out period;

(C) Updated benchmark period manufacturer price as specified in § 428.202(d);

(D) The excess amount by which the AnMP exceeds the inflation-adjusted payment amount for the applicable period as specified in § 428.202(a), using the most recent AMP (if any inputs are restated within the reconciliation run-out period);

(E) Updated data on line extension calculations, including the initial drug identified as set forth in § 447.509(a)(4)(iii)(B) of this chapter, the inflation rebate amount ratio, and the alternative total rebate amount as set forth in § 428.204 if any inputs are restated within the reconciliation run-out period;

(F) Reconciled rebate amount as specified in § 428.201(a); and

(G) The difference between the total rebate amount due as specified on the Rebate Report set forth in paragraph (c) of this section and the reconciled rebate amount as set forth in this paragraph (d)(1)(i).

(ii) *Report with a reconciled rebate amount.* With the inclusion of any additional revisions to such information resulting from CMS' review of a Suggestion of Error as set forth in § 428.403, if applicable, a report with the reconciled rebate amount will be provided to each manufacturer of a Part D rebatable drug within 12 months and 36 months after the issuance of the Rebate Report described in paragraph (c) of this section.

(2) *CMS identification of an error or manufacturer misreporting.* CMS may recalculate a rebate amount and provide the manufacturer of a Part D rebatable drug a report with a reconciled rebate amount when:

(i) CMS identifies an error in the information specified in paragraphs (c) and (d)(1) of this section, including

reporting system or coding errors, not later than 5 years from the date of receipt by a manufacturer of a reconciled rebate amount for the applicable period; or

(ii) CMS determines at any time that the information used by CMS to calculate the rebate amount was inaccurate due to manufacturer misreporting.

(3) *Impact of reconciliation on rebate amount.* A reconciliation as set forth in this paragraph (d) could result in an increase, decrease, or no change to the rebate amount as calculated under § 428.201(a) owed by a manufacturer for the applicable period for the Part D rebatable drug.

(i) A report with a reconciled rebate amount that is an increase to the rebate amount is the invoice for such additional amount due on the manufacturer's rebate amount as set forth in § 428.201 for a Part D rebatable drug for an applicable period.

(ii) [Reserved]

(4) *Drugs included in a reconciliation.* A drug covered under Part D that does not meet the requirements of a rebatable drug specified in § 428.101 for an applicable period will not be included in a reconciliation under this paragraph (d).

§ 428.402 Rebate Reports for applicable periods beginning October 1, 2022, and October 1, 2023.

(a) *Transition rule for reporting.* Section 1860D–14B(a)(3) of the Act allows CMS to delay the timeframe for reporting the information and rebate amount described in § 428.401 for the applicable periods beginning October 1, 2022, and October 1, 2023, until not later than December 31, 2025.

(b) *Rebate Report information for applicable periods beginning October 1, 2022, and October 1, 2023.* The Rebate Reports for the applicable periods beginning October 1, 2022, and October 1, 2023, will include the information described in § 428.401(b)(1).

(c) *Rebate Report procedures for applicable periods beginning October 1, 2022, and October 1, 2023.* Rebate amounts for the applicable periods beginning October 1, 2022, and October 1, 2023, will be reported as follows:

(1) The Rebate Report for the applicable period beginning October 1, 2022, will be issued no later than December 31, 2025. The Preliminary Rebate Report for such applicable period will be issued at least 1 month prior to the Rebate Report.

(i) For this single Preliminary Rebate Report for the applicable period, the Suggestion of Error period as described in § 428.403 will be 30 calendar days.

(ii) The rebate amount will be reconciled 21 months after the Rebate Report specified in paragraph (b)(1) of this section is issued to include the information specified in § 428.401(d)(1)(i)(A) through (G).

(iii) The Suggestion of Error period for the reconciliation described in paragraph (b)(1)(ii) of this section will be 10 calendar days.

(2) The Rebate Report for the applicable period beginning October 1, 2023, will be issued no later than December 31, 2025. The Preliminary Rebate Report for such applicable period will be issued at least 1 month prior to the Rebate Report.

(i) For this single Preliminary Rebate Report for the applicable period, the Suggestion of Error period as described in § 428.403 will be 30 calendar days.

(ii) The rebate amount will be reconciled 9 months after the Rebate Report and 33 months after the Rebate Report specified in paragraph (b)(2) of this section is issued to include the information specified in § 428.401(d)(1)(i)(A) through (G).

§ 428.403 Suggestion of Error.

(a) *General.* Manufacturers of Part D rebatable drugs may submit a Suggestion of Error about the information in their Preliminary Rebate Report and the report detailing the preliminary reconciliation of the rebate amount to CMS, for its discretionary consideration, if the manufacturer believes that there is a mathematical error or errors to be corrected before the Rebate Report or a subsequent reconciliation, as applicable, is finalized.

(1) Section 1860D–14B(f) of the Act precludes administrative or judicial review on the determination of units as set forth in § 428.203, the determination of whether a drug is a Part D rebatable drug as set forth in § 428.101, and the calculation of the rebate amount as set forth in § 428.201(a) inclusive of any reconciled rebate amount.

(2) [Reserved]

(b) *Process of submission.* Subject to the scope and timing requirements specified in paragraphs (a) and (c) of this section, manufacturers may submit the Suggestion of Error and provide supporting documentation (if applicable).

(c) *Timing.* Except as specified in § 428.402 for the applicable periods beginning on October 1, 2022, and October 1, 2023, a manufacturer must submit its Suggestion of Error for the applicable period within 10 calendar days from the date of receipt of a Preliminary Rebate Report or a preliminary reconciliation of a rebate

amount using the method and process established by CMS in paragraph (b) of this section.

(d) *Notice.* (1) CMS will include any revisions to the calculation of the rebate amount, if determined necessary by CMS based on the Suggestion of Error submitted under this section prior to issuance of the Rebate Report as set forth in § 428.401(c) or § 428.402(c) as well as any report of a reconciled rebate amount as set forth in § 428.401(d) or § 428.402(c)(1)(ii) and (c)(2)(ii).

(2) CMS will notify the manufacturer whether CMS revised its calculation of the rebate amount based on the Suggestion of Error.

§ 428.404 Manufacturer access to Rebate Reports.

(a) *General.* CMS will establish a method and process for a manufacturer of the Part D rebatable drug to:

(1) Access the Rebate Report as set forth in §§ 428.401 and 428.402, including any report of a reconciled rebate amount as set forth in §§ 428.401 and 428.402;

(2) Submit a Suggestion of Error as set forth in §§ 428.402(c) and 428.403; and

(3) Pay a rebate amount as set forth in § 428.405.

(b) [Reserved]

§ 428.405 Deadline and process for payment of rebate amount.

(a) *Rebate amounts owed by a manufacturer.* For payment of a rebate amount owed by a manufacturer:

(1) Upon receipt of a rebate amount, payment is due no later than 11:59 p.m. Pacific Time (PT) on the 30 calendar days after the date of receipt of information regarding the rebate amount on—

(i) A Rebate Report specified in § 428.401(c) or § 428.402; or

(ii) A report of a reconciled rebate amount specified in § 428.401(d) or § 428.402.

(2) Failure to pay a rebate amount due timely and in full may result in an enforcement action as described in subpart F of this part.

(b) *Refund to the manufacturer.* If a reconciled rebate amount for an applicable period as specified in § 428.401(d) or § 428.402 is less than what the manufacturer paid for that applicable period, CMS will initiate the process to provide a refund equal to the excess amount paid within 60 days of the date of receipt of the report with such reconciled rebate amount.

Subpart F—Enforcement of Manufacturer Payment of Rebate Amounts

§ 428.500 Civil money penalty notice and appeals procedures.

(a) *General.* CMS may impose a civil money penalty on a manufacturer that fails to pay the rebate amount set forth in § 428.201(a) on a Part D rebatable drug defined at § 428.20, by the payment deadline as set forth in section § 428.405(a) for such drug for such applicable period.

(b) *Determination of the civil money penalty amount.* CMS may impose a civil money penalty for each failure by a manufacturer to provide an applicable inflation rebate equal to 125 percent of the rebate amount determined in § 428.201(a).

(1) The civil money penalty is in addition to the rebate amount due.

(2) If a reconciled rebate amount as set forth in § 428.401(d) or § 428.402(c)(1)(ii) or (c)(2)(ii) results in an increase to the rebate amount due, a separate civil money penalty may be imposed for the failure by a manufacturer to provide an inflation rebate for the applicable period for the increase to the rebate amount due.

(c) *Notice of imposition of civil money penalties.* If CMS makes a determination to impose a civil money penalty described in paragraph (b) of this section, CMS will send a written notice of its decision to impose a civil money penalty to include the following:

(1) A description of the basis for the determination.

(2) The basis for the penalty.

(3) The amount of the penalty.

(4) The date the penalty is due.

(5) The manufacturer's right to a hearing as specified in paragraph (e) of this section.

(6) Information about where to file the request for a hearing.

(d) *Collection.* (1) A manufacturer must pay the civil money penalty in full within 60 calendar days after the date of the notice of imposition of a civil money penalty from CMS under paragraph (c) of this section.

(2) In the event a manufacturer requests a hearing, pursuant to 42 CFR part 423, subpart T, the manufacturer must pay the amount in full within 60 calendar days after the date of a final decision by the Departmental Appeal Board, to uphold, in whole or in part, the civil money penalty.

(3) If the 60th calendar day described in paragraphs (d)(1) and (2) of this section is a weekend or a Federal holiday, then the timeframe is extended until the end of the next business day.

(e) *Appeal procedures for civil money penalties.* Section 1128A(c)(2) of the Act

provides that CMS may not collect a civil money penalty until the affected party has had notice and the opportunity for a hearing.

(1) Manufacturers may appeal the following determinations:

(i) A CMS determination that the rebate amount was not paid by the applicable payment deadline as described in § 428.405.

(ii) The calculation of the amount of the civil money penalty.

(2) The notice provided to a manufacturer if CMS decides to impose a civil money penalty is described in paragraph (c) of this section.

(3) A manufacturer has a right to a hearing following a decision by CMS to impose a civil money penalty following the administrative appeal process and procedures established in 42 CFR part 423, subpart T.

(f) *Other applicable provisions.* The provisions of section 1128A of the Act (except subsections (a) and (b) of section 1128A of the Act) apply to civil money penalties under this section to the same extent that they apply to a civil money penalty or procedures under section 1128A of the Act.

(g) *Bankruptcy.* In the event that a manufacturer declares bankruptcy, as described in title 11 of the United States Code, and as a result of the bankruptcy, fails to pay either the full rebate amount owed or the total sum of civil money penalties imposed, the government reserves the right to file a proof of claim with the bankruptcy court to recover the unpaid amount of the rebates and civil money penalties owed by the manufacturer.

PART 491—CERTIFICATION OF CERTAIN HEALTH FACILITIES

■ 82. The authority citation for part 491 continues to read as follows:

Authority: 42 U.S.C. 263a and 1302.

■ 83. Section 491.9 by—

■ a. Adding paragraphs (a)(2)(i) and (ii);

■ b. Removing paragraph (c)(2)(ii);

■ c. Redesignating paragraphs (c)(2)(iii) through (vi) as paragraphs (c)(2)(ii) through (v), respectively; and

■ d. Revising newly designated paragraph (c)(2)(v).

The additions and revisions read as follows:

§ 491.9 Provision of services.

(a) * * *

(2) * * *

(i) The clinic or center must provide primary care services.

(ii) The clinic is not a rehabilitation agency or a facility primarily for the care and treatment of mental diseases.

* * * * *

- (c) * * *
- (2) * * *

(v) Collection of patient specimens for transmittal to a certified laboratory for culturing.

* * * * *

Xavier Becerra,

Secretary, Department of Health and Human Services.

Note: The following Appendices will not appear in the Code of Federal Regulations.

Appendix 1: MIPS Quality Measures

Note: Except as otherwise noted in this proposed rule, previously finalized measures and specialty measure sets will continue to apply for the CY 2025 performance period/2027 MIPS payment year and future years. Previously finalized measures and specialty measure sets are in the CY 2017 through CY 2024 PFS final rules: 81 FR 77558 through 77816, 82 FR 53966 through 54174, 83 FR 60097 through 60285, 84 FR 63205 through 63513, 85 FR 85045 through 85369, 86 FR 65687 through 65968, 87 FR 70250 through 70633, and 88 FR 79556 through 79964. In addition, electronic clinical quality measures (eCQMs) that are endorsed by a Consensus-Based Entity (CBE) are shown in Table A of

this Appendix as follows: CBE #/eCQM CBE #.

Table Group A: New MIPS Quality Measures Proposed for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years

Note: In the CY 2024 PFS final rule, measure Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level), was finalized with a 1-year delay to the CY 2025 performance period (88 FR 79556 through 79560) and does not have a new measure table in this proposed rule.

BILLING CODE P

A.1. Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy

| | |
|--|--|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | TBD |
| Description: | Percentage of patients, aged 18 years and older, with a diagnosis of metastatic non-small cell lung cancer (NSCLC) or squamous cell carcinoma of head and neck (HNSCC) on first-line immune checkpoint inhibitor (ICI) therapy, who had a positive PD-L1 biomarker expression test result prior to giving ICI therapy. |
| Measure Steward: | Society for Immunotherapy of Cancer (SITC) |
| Numerator: | Patients who had a positive PD-L1 biomarker expression test result prior to the initiation of first-line immune checkpoint inhibitor therapy. |
| Denominator: | Patients aged 18 years and older with a diagnosis of metastatic non-small cell lung cancer (NSCLC) or squamous cell carcinoma of head and neck (HNSCC) and on first-line immune checkpoint inhibitors without chemotherapy. |
| Exclusions: | Patients with NSCLC with epidermal growth factor receptor (EGFR) mutations, ALK genomic tumor aberrations, or other targetable genomic abnormalities with approved first-line targeted therapy, such as NSCLC with ROS1 rearrangement, BRAF V600E mutation, NTRK 1/2/3 gene fusion, MET ex14 skipping mutation, and RET rearrangement. |
| Measure Type: | Process |
| High Priority Measure: | Yes |
| Collection Type: | MIPS CQM Specifications |
| Measure-Specific Case Minimum/Performance Period: | N/A for this measure. |

| | |
|-------------------|---|
| Rationale: | <p>We are proposing this process measure because it addresses timely biomarker testing, which impacts treatment decisions for patients with a diagnosis of metastatic non-small cell lung cancer or squamous cell carcinoma of the head and neck. In addition, this measure aligns with CMS priorities of improving patient outcomes and safety, while promoting efficacy of timely treatment. Appropriate intervention and timeliness of PD-L1 biomarker expression testing prior to initiation of first-line treatment for metastatic non-small cell lung cancer or squamous cell carcinoma of the head and neck can lead to improvements in mortality and morbidity rates.¹ Untimely biomarker testing could lead to negative clinical implications or outcomes, including delayed care and treatment and/or ineffective or incorrect prescribed therapies leading to chemotherapy toxicity, decreased quality of life, and unnecessary healthcare costs.^{2,3}</p> <p>Immunotherapy remains a new realm for oncology and health care clinicians; therefore, opportunities exist to improve care provided to patients receiving immune checkpoint inhibitor therapy. In 2017, a survey conducted by the Association of Community Cancer Centers (ACCC) indicated only 24 percent of respondents reported they had a deep familiarity with checkpoint inhibitors, 32 percent with monoclonal antibody therapy, and only 17 percent with combination treatment regimens.⁴</p> <p>This measure is predicated on two evidence-based clinical guidelines that address the measure's quality actions of a positive PD-L1 biomarker expression test prior to giving first-line immune checkpoint inhibitor therapy in the metastatic non-small cell lung cancer or squamous cell carcinoma of the head and neck population.^{5,6} The measure would enhance compliance with the clinical guidelines by incentivizing clinicians to address timely biomarker testing, positively influencing treatment decisions and improving patient outcomes.</p> <p>The Pre-Rulemaking Measure Review (PRMR) Clinician Recommendation Committee conditionally supported this measure and requested additional testing examining measure performance and feasibility. This measure has been fully developed and tested at the clinician level with high reliability based upon signal-to-noise scores, and adequate face validity. As a part of the MERIT submission, the measure developer reported adequate reliability testing of the individual data elements via Cohen's kappa coefficient, which substantiates the feasibility for implementation in MIPS. Testing of measure performance indicated a large gap in care for conducting timely biomarker testing, with an average performance rate of 19.6 percent, which allows significant room for improvement among clinicians treating this patient population and conducting the biomarker testing for this measure. This measure is not currently CBE endorsed. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. This measure aligns with the National Comprehensive Cancer Network (NCCN) Clinical Practice Guidelines.^{7,8}</p> <p>We recognize that not all measures within MIPS are applicable or appropriate for all clinicians due to the nuances for each clinician specialization, scope of care, or regional location. However, this measure fills a gap in MIPS quality measures for treatment of patients with non-small cell lung cancer and squamous cell carcinoma of the head and neck. In addition, it would provide a specialty specific measure for the MIPS Oncology/Hematology specialty set under Table B.27a of this Appendix. Furthermore, this measure could be added to the Advancing Cancer Care MVP in the future and would fill a current quality measure inventory gap within the oncologic clinical topic.</p> <p>Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at https://p4qm.org/sites/default/files/2024-02/PRMR-Final-MUC-Recommendation-Spreadsheet%20%283%29.xlsx.</p> |

A.2. Appropriate Germline Testing for Ovarian Cancer Patients

| Category | Description |
|---|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | TBD |
| Description: | Percentage of patients aged 18 and older diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer who undergo germline testing within 6 months of diagnosis. |
| Measure Steward: | American Society of Clinical Oncology |
| Numerator: | Patients who receive germline genetic testing for BRCA1 and BRCA2 (ideally within the context of a multigene panel) or who have genetic counseling completed within 6 months of diagnosis. |
| Denominator: | All patients, aged 18 and older, with epithelial ovarian, fallopian tube, or primary peritoneal cancer newly diagnosed between July 1st of the previous calendar year through June 30th of the current performance period with two encounters during the performance period. |
| Exclusions: | Patients who have germline BRCA testing completed before diagnosis of epithelial ovarian, fallopian tube, or primary peritoneal cancer. |
| Measure Type: | Process |
| High Priority Measure: | No |
| Collection Type: | MIPS CQM Specifications |
| Measure-Specific Case Minimum/Performance Period: | N/A for this measure |

| Category | Description |
|-------------------|--|
| Rationale: | <p>We are proposing this process measure because it addresses patients diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer who undergo germline testing within 6 months of their diagnosis to guide the most appropriate treatment. In addition, this measure addresses the CMS priority of promoting more personalized diagnostic, predictive, prognostic, and therapeutic options for the patient. According to the American Cancer Society, estimates indicate that there will be about 19,680 new cases of ovarian cancer diagnosed and an estimated 12,740 women will die of the disease, in 2024 in the U.S.⁹ “Knowledge about underlying molecular alterations in ovarian cancer could allow for more personalized diagnostic, predictive, prognostic, and therapeutic strategies for the patient but also have clinical implications for her family members.”¹⁰ Despite current recommendations for all women diagnosed with ovarian cancer to receive genetic testing, only approximately 30 percent of those women undergo any genetic testing.¹¹</p> <p>Germline mutations in BRCA1 and BRCA2 have been identified in 13 to 15 percent of women diagnosed with ovarian cancer, with somatic mutations found in an additional 7 percent of women. The high incidence of these mutations, in conjunction with the advent of therapy targeting BRCA mutations, warrants testing in all individuals diagnosed with ovarian cancer.¹² This testing serves multiple purposes, including determination of appropriate and best treatment recommendations, risk of other cancers, and need for cascade testing of family members. “Testing for germline mutations should be performed at the time of initial diagnosis. Presence of a germline mutation in a woman with advanced cancer designates her as eligible for maintenance therapy with a poly (ADP-ribose) polymerase (PARP) inhibitor (Olaparib) after response to initial chemotherapy.”¹³</p> <p>Although the FDA recently approved frontline maintenance therapy for patients independent of mutation status following the publication of the ASCO evidence-based guidelines, emerging evidence is expected to indicate an overall survival benefit in ovarian cancer patients with germline mutations, based upon prognostic information from these patients. Germline mutations testing allows for more personalized therapeutic strategies, therefore, ovarian cancer patients with germline mutations are expected to derive greater benefit from therapy, thereby increasing the survival rate in this patient population.¹⁴ Additionally, germline testing informs potential clinical implications for the relatives of ovarian cancer patients with germline mutations who should be offered individualized genetic risk evaluation, counseling, and genetic testing as reflected in Recommendation 1.5 in the ASCO germline testing guidelines.¹⁵ Furthermore, NCCN evidence-based guidelines¹⁶ indicate all patients with histologically confirmed ovarian, fallopian tube, or primary peritoneal cancer should undergo genetic risk evaluation as well as germline and somatic testing if not previously performed due to germline and/or somatic BRCA1 and BRCA2 statuses delineating future options for maintenance therapy.</p> <p>This measure could be added to the Advancing Cancer Care MVP in the future and would fill a current quality measure inventory gap within the oncologic clinical topic. In addition, it would provide a specialty specific measure for the MIPS Oncology/Hematology specialty set under Table B.27a of this Appendix.</p> <p>The PRMR Clinician Recommendation Committee conditionally supported this measure for rulemaking pending endorsement of the measure by a CBE. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As mentioned above, this measure aligns with ASCO and NCCN evidence-based clinical guidelines.^{17 18}</p> <p>Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at https://p4qm.org/sites/default/files/2024-02/PRMR-Final-MUC-Recommendation-Spreadsheet%20%283%29.xlsx.</p> |

| Category | Description |
|--|--|
| CBE # / eCQM CBE #: | CBE 3718 / N/A |
| Quality #: | TBD |
| Description: | The PRO-PM will assess pain interference following chemotherapy administered with curative intent to adult female patients with breast cancer. |
| Measure Steward: | Purchaser Business Group on Health |
| Numerator: | The mean of the patient-level PROMIS Pain Interference scores at the follow-up survey. |
| Denominator: | Adult patients with stages I-III female breast cancer receiving an initial chemotherapy regimen. |
| Exclusions: | <ul style="list-style-type: none"> ● Patients on a therapeutic clinical trial ● Patients with recurrence/disease progression ● Patients who leave the practice during the follow-up period ● Patients who died during the follow-up period |
| Measure Type: | Patient-Reported Outcome-based Performance Measure (PRO-PM) |
| High Priority Measure: | Yes |
| Collection Type: | MIPS CQM Specifications |
| Measure-Specific Case Minimum/Performance Period: | N/A for this measure |

| Category | Description |
|-------------------|---|
| Rationale: | <p>We are proposing this measure because it addresses a CMS high priority as a PRO-PM and fills a gap in providing the patient's experience of care related to breakthrough pain after chemotherapy for breast cancer leading to performance improvement. Common persistent symptoms following chemotherapy include pain, fatigue, and detriments to health-related quality of life. Data from this measure would provide insight into the effectiveness of minimizing the persistent symptoms following treatment(s), thereby driving quality improvement leading to practice changes and better patient outcomes.</p> <p>This oncology PRO-PM's conceptual development is grounded in the evidence-based premise that medical oncologists who provide the highest quality care (including medical and non-medical support services) to patients receiving curative-intent cytotoxic therapy can reduce longer-term symptom burden, thus improving a patient's transition into the cancer survivorship period.^{19 20 21} Additionally, research suggests collecting and using patient-reported symptoms during cancer care can improve patient outcomes, such as increased survival, reduced symptom burden and improved patient experience.^{22 23} Using a standardized symptom assessment process would facilitate appropriate follow-up to ensure patient needs are addressed, while supporting and improving patient-provider communication.</p> <p>This measure could be added to the Advancing Cancer Care MVP in the future and would fill a current quality measure inventory gap within the oncologic clinical topic. In addition, it would provide a specialty specific measure for the MIPS Oncology/Hematology specialty set under Table B.27a of this Appendix. This would be the first outcome specialty specific oncology measure to address the patient experience of care. There is potential consideration for adding broader cancer diagnoses, such as colon and lung cancer, to this measure in the future.</p> <p>The PRMR Clinician Recommendation Committee conditionally supported this measure for rulemaking with the condition of implementation at the group level. This measure was endorsed by the CBE as CBE 3718. We are proposing this measure for implementation at the individual clinician level in addition to the group level. As part of the MERIT submission, testing was completed at the clinician level with a small sample size due to accessibility to data. However, the measure steward estimated that measure score reliability given an average sample size of 26 would yield a measure score reliability of 0.7. The measure was found during the MERIT submission to be feasible at the clinician level and data element testing was completed showing exact agreement values between 71.63 to 100 percent, with the lowest sensitivity variable being 'recurrence,' which would correlate to a small subset of the patient population. The requirements for quality measure scoring include a case minimum threshold; therefore, we are proposing to allow this measure for group and clinician level implementation as it is an important concept and meets all testing and development criteria for MIPS quality measures.</p> <p>Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at https://p4qm.org/sites/default/files/2024-02/PRMR-Final-MUC-Recommendation-Spreadsheet%20%283%29.xlsx.</p> |

A.4. Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer

| Category | Description |
|--|--|
| CBE # / eCQM CBE #: | CBE 3720 / N/A |
| Quality #: | TBD |
| Description: | The PRO-PM will assess fatigue following chemotherapy administered with curative intent to adult female patients with breast cancer. |
| Measure Steward: | Purchaser Business Group on Health |
| Numerator: | The mean of the patient-level PROMIS Fatigue scores at the follow-up survey. |
| Denominator: | Adult patients with stages I-III female breast cancer receiving an initial chemotherapy regimen. |
| Exclusions: | <ul style="list-style-type: none"> ● Patients on a therapeutic clinical trial ● Patients with recurrence/disease progression ● Patients who leave the practice during the follow-up period ● Patients who died during the follow-up period |
| Measure Type: | Patient-Reported Outcome-based Performance Measure (PRO-PM) |
| High Priority Measure: | Yes |
| Collection Type: | MIPS CQM Specifications |
| Measure-Specific Case Minimum/Performance Period: | N/A for this measure |

| Category | Description |
|-------------------|---|
| Rationale: | <p>We are proposing this measure because it addresses a CMS high priority as a PRO-PM and fills a gap in providing the patient reported symptom of fatigue experienced following chemotherapy for breast cancer, lending to performance improvement. This measure is an important addition to MIPS for those patients diagnosed with and receiving treatment for breast cancer. Based on a recent study, stakeholder generated recommendations for performance measures on how adults with cancer feel and function included depression/anxiety, pain, and fatigue as top priorities.²⁴</p> <p>This oncology PRO-PM’s conceptual development is grounded in the evidence-based premise that medical oncologists who provide the highest quality care (including medical and non-medical support services) to patients receiving curative-intent cytotoxic therapy can reduce longer-term symptom burden, thus improving a patient’s transition into the cancer survivorship period.^{25 26 27} Additionally, research suggests collecting and using patient-reported symptoms during cancer care can improve patient outcomes, such as increased survival, reduced symptom burden and improved patient experience.²⁸ Using a standardized symptom assessment process would facilitate appropriate follow-up to ensure patient needs are addressed, while supporting and improving patient-provider communication.</p> <p>Evidence from one study indicated 30 to 50 percent of breast cancer patients reported not discussing, nor receiving advice or desired help for three common symptoms including pain, fatigue, and emotional distress.²⁹ Fatigue was the most common symptom reported in the study (74 percent) with many patients reporting they discussed the symptom (78 percent).³⁰ However, patients who experienced fatigue were least likely to report receiving the desired help for it (40 percent).³¹ Appropriate use of patient-reported outcome measures (PROMs), which measure cancer symptoms and patients’ perceptions of their care, can improve the collection of clinically actionable data, supporting clinical improvement in the treatment of common symptoms and the overall care of patients with cancer, ultimately improving their quality of life.³²</p> <p>This measure could be added to the Advancing Cancer Care MVP in the future and would fill a current quality measure inventory gap within the oncologic clinical topic. In addition, it would provide a specialty specific measure for the MIPS Oncology/Hematology specialty set under Table B.27a of this Appendix. This measure would address the patient voice/experience of care for those with breast cancer with fatigue experienced following chemotherapy. There is potential consideration for adding broader cancer diagnoses, such as colon and lung cancer, to this measure in the future.</p> <p>The PRMR Clinician Recommendation Committee did not reach consensus for this measure. This measure was endorsed by the CBE as CBE 3720. While concerns were discussed regarding electronic health record implementation, patient survey fatigue and low response impact, this measure is an important clinical topic for oncology clinicians in conjunction with the pain PRO-PM. More specifically, the measure provides a means to capture the patient voice while driving quality of care and improving patient outcomes. We are proposing this measure for implementation at the individual clinician level in addition to the group level. Testing was completed at the clinician level with a small sample size due to accessibility to data. The measure was found during the MERIT submission process to be feasible at the clinician level and data element testing was completed showing exact agreement values between 71.63 to 100 percent, with the lowest sensitivity variable being ‘recurrence,’ which would correlate to a small subset of the patient population. The requirements for quality measure scoring include a case minimum threshold; therefore, we are proposing to allow this measure for group and clinician level implementation as it is an important concept and meets all testing and development criteria for MIPS quality measures.</p> <p>Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at https://p4qm.org/sites/default/files/2024-02/PRMR-Final-MUC-Recommendation-Spreadsheet%20%283%29.xlsx.</p> |

A.5. Adult COVID-19 Vaccination Status

| Category | Description |
|---|---|
| CBE # /
eCQM CBE #: | N/A / N/A |
| Quality #: | TBD |
| Description: | Percentage of patients aged 18 years and older seen for a visit during the performance period that are up-to-date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination. |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| Numerator: | Patients that are up to date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination as of the date of the encounter. |
| Denominator: | All patients aged 18 years and older seen for a visit during the performance period. |
| Exclusions: | Patient received hospice services any time during the performance period. |
| Measure Type: | Process |
| High Priority Measure: | No |
| Collection Type: | MIPS CQM Specifications |
| Measure-Specific Case
Minimum/Performance
Period: | N/A for this measure |

| | |
|--------------------------|--|
| <p>Rationale:</p> | <p>We are proposing this process measure because it represents an important clinical topic following the recently ended Public Health Emergency (PHE) for COVID-19. This process measure represents a CMS high priority clinical topic and fills a gap in MIPS by addressing COVID-19 vaccination status for all patients and ensuring clinician vaccination efforts at the point of care (for example, care for wellness and prevention against COVID-19). Widespread vaccination to prevent a severe COVID-19 infection is critically important to stemming the morbidity and mortality caused by this virus. The CDC reports millions of cases and deaths caused by COVID-19.³³ In 2020 and 2021, COVID-19 was the third leading cause of death in the U.S., exceeded only by cancer and heart disease.³⁴ The percent of the population reporting receipt of the updated 2023-24 COVID-19 vaccine is 13.1 percent (95 percent confidence interval: 12.5-13.7) for children and 22.5 percent (21.7-22.7) for adults 18 years and older, including 41.5 percent (40.2-42.9) among adults age 65 years and older.³⁵ This recent data suggests a considerable gap in care for patients in the measure population and allows clinicians the opportunity to positively affect vaccination rates. Additionally, during measure testing, the measure developer found even the 75th percentile of performance yielded only 58 percent of a clinician’s patient load being vaccinated with one booster.</p> <p>The measure was initially submitted to the CY 2022 Call for Quality Measures and included on the Measures under Consideration (MUC) list for review. During the 2022 cycle, the Measure Applications Partnership (MAP) recommended not to support the measure and requested the measure be revised before resubmitting for consideration to, among other things, include the most recent CDC recommendations for the numerator and use the current CDC definition of “up-to-date” for assessment of the quality action for each denominator eligible patient. These requests were addressed, and the measure was resubmitted to the CY 2023 Call for Quality Measures. We acknowledge the recommendations for boosters have continued to evolve; however, the quality action in this measure is aligned with current and potential future recommendations. Since December 2020, there have been 19 ACIP recommendations relating to COVID-19 vaccination. On September 12, 2023, ACIP recommended all persons aged 6 months and older receive an updated COVID-19 vaccine.³⁷ Updated COVID-19 vaccines are considered the 2023-2024 formula developed by the pharmaceutical and biotechnology companies Moderna, Pfizer-BioNTech, and Novavax. Because this measure uses the CDC’s definition of “up-to-date,” please refer to the CDC’s website³⁸ to confirm the current definition of “up-to-date.”</p> <p>Based on clinical recommendations and systemic reviews, there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.³⁹ While this measure does not meet the definition of a fully developed measure as outlined in the Measures Management System (MMS),⁴² MIPS currently includes several quality measures that assess for vaccine administration, which have been implemented for multiple years.⁴³</p> <p>We request interested parties consider whether the measure is “beyond the measure concept phase of development and [has] started testing, at a minimum, with strong encouragement and preference for measures that have completed or are near completion of reliability and validity testing” when submitting a quality measure for possible inclusion (83 FR 53636; 84 FR 62954). While we take under consideration whether a measure is fully tested, it is not the only relevant standard for MIPS. Nevertheless, we believe this consideration reinforces the importance of all clinicians actively addressing vaccination against the COVID-19 virus. According to the World Health Organization (WHO), getting vaccinated is one of the most important steps an individual can take to not only to protect oneself, but to help end the pandemic and stop the emergence of new variants.⁴⁴</p> <p>The PRMR Clinician Recommendation Committee did not reach consensus on this measure for rulemaking, expressing concerns about data collection for vaccines administered through off-site locations (for example, pharmacies), as well as vaccine hesitancy that may vary across geography, political affiliation, ethnicity, and income. The committee considered the measure’s importance to patients, with emphasis on those at higher risk for complications from COVID-19. ACIP recommendations support the measure, all of which are evidence-based.⁴⁵ This measure is not currently CBE endorsed. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. The CDC COVID-19 Immunization Schedule, based on ACIP recommendations, can be referenced at the following webpage: https://www.cdc.gov/vaccines/schedules/index.html. Clinical recommendations are in universal agreement that COVID-19 vaccines are safe, effective, and may prevent costly and harmful hospitalizations.</p> <p>The MIPS quality measure set includes several vaccine administration quality measures that have been implemented for several years; however, such measures do not include the COVID-19 vaccination.⁴⁶ This measure could also be considered for potential inclusion in the Primary Care MVP as it would fill a current quality measure inventory gap within the vaccination clinical topic for primary care settings. This measure, along with other activities, are a part of a larger Federal effort to promote and track vaccine uptake.⁴⁷ Since vaccine uptake is partially driven by patients requesting the vaccine followed by clinicians administering it to eligible patients, the patient/clinician relationship is a vital aspect for ensuring patients are vaccinated. This clinician-level measure would provide useful information regarding the success of vaccination efforts at the point of care, and, again, represents a priority topic to engage clinicians in quality improvements that drive positive health outcomes for their patients.</p> <p>We acknowledge this measure may not be selected by all clinicians, but this factor aligns with MIPS allowing for clinician choice in choosing quality measures that best represent their scope of care. Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination. As with all quality measures within MIPS, we continue to monitor all updates to the clinical recommendations and guidelines and address changes as needed utilizing the current annual revision cycle.</p> |

A.6. Melanoma: Tracking and Evaluation of Recurrence

| Category | Description |
|--|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | TBD |
| Description: | Percentage of patients who had an excisional surgery for melanoma or melanoma in situ with initial American Joint Committee on Cancer (AJCC) staging of 0, I, or II, in the past 5 years in which the operating clinician examines and/or diagnoses the patient for recurrence of melanoma. |
| Measure Steward: | American Academy of Dermatology |
| Numerator: | NUMERATOR CRITERIA 1: Documentation by the clinician who performed the surgery that an exam for recurrence of melanoma was performed on the patient within the performance period.
NUMERATOR CRITERIA 2: All patients that were diagnosed with a recurrent melanoma in the current performance period. |
| Denominator: | DENOMINATOR CRITERIA 1 & 2: All patients that the clinician has performed a type of excisional surgery for melanoma or melanoma in situ in the past 5 years with an initial AJCC staging of 0, I, or II. |
| Exclusions: | Patients who died during the performance period |
| Measure Type: | Process |
| High Priority Measure: | Yes |
| Collection Type: | MIPS CQM Specifications |
| Measure-Specific Case Minimum/Performance Period: | N/A for this measure |

| Category | Description |
|-------------------|---|
| Rationale: | <p>We are proposing this measure because it evaluates the frequency of recurrence for melanoma along with the type of recurrence after an excisional procedure, in addition to driving communication regarding the recurrence status of melanoma patients. The measure also addresses a CMS high priority process measure for care coordination on the clinical topic as miscommunication between the excising clinician and the clinician continuing care has been identified as a gap. This measure allows for and promotes the development of a system in which melanomas can be accurately tracked to increase the effectiveness of understanding melanoma recurrence and follow-up care.</p> <p>Melanoma recurrence requires precise evaluation. As indicated by one study, patients who have undergone treatment of primary melanoma, early detection of a local recurrence has important implications. An isolated local recurrence in a patient with favorable features can be treated with repeat wide local excision, with good oncologic outcomes. For these patients, long-term prognosis is not adversely affected by the local recurrence if it is detected and treated early, and 5-year survival continues to be a function of primary tumor thickness.^{48 49 50 51} Regular clinical examination offers the highest diagnostic yield in detecting melanoma recurrences.⁵²</p> <p>Common follow-up recommendations for all patients indicate the follow-up schedule is influenced by risk of recurrence, prior primary melanoma, and family history of melanoma. It also includes other factors such as atypical moles/dysplastic nevi.⁵³ For patients who present with stage I-II melanoma and are rendered free of disease after initial treatment, recurrence rates are distributed as follows: approximately 15 to 20 percent are local or in transit.⁵⁴ Data suggests the time between the risk of recurrence to reach its low plateau depends on the stage of disease at first presentation.⁵⁵ In a retrospective study of patients who initially presented with stage I melanoma (N = 1568), 80 percent of the 293 recurrences developed within the first 3 years, but some recurrences (<8 percent) were detected 5 to 10 years after the initial treatment.⁵⁶ A prospective study found that for patients with stage I or II at initial presentation, the risk of recurrence reached a low level by 4.4 years after initial diagnosis.⁵⁷ Therefore, we are proposing this measure to incentivize clinicians who treat patients with melanoma to perform these potentially lifesaving exams.</p> <p>The PRMR Clinician Recommendation Committee did not reach consensus in recommending the measure for inclusion in MIPS. The committee agreed with the importance of the measure's intent. There was significant concern raised about the burden of tracking and reporting, reliability of the measure and interpretation of testing results, and the impact of lower reliability on clinician compensation. However, the measure was fully tested at the clinician level and has been determined to be implementable in MIPS. The measure has been available for MIPS reporting as a QCDR measure since 2022, which attests to its feasibility as no implementation issues have been identified. This measure is not currently CBE endorsed. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. This measure aligns with NCCN guidelines.</p> <p>This measure fills a gap in MIPS within the dermatologic clinical topic, as there are no other dermatology measures related to the outcome of melanoma recurrence. There is potential to replace current structure measure Q137: Melanoma: Continuity of Care with this more robust outcome measure as indicated in Table C.2 of this Appendix. While the MIPS Dermatology specialty set includes 13 measures, only 6 are specialty specific. This measure is relevant to specialty clinicians and could provide a new measure option for a specialty area that currently encompasses many topped-out measures, while also potentially aiding in the development of a meaningful MVP.</p> <p>Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at https://p4qm.org/sites/default/files/2024-02/PRMR-Final-MUC-Recommendation-Spreadsheet%20%283%29.xlsx.</p> |

A.7. First Year Standardized Waitlist Ratio (FYSWR)

| Category | Description |
|--|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | TBD |
| Description: | The number of newly initiated patients on dialysis in a practitioner group who are under the age of 75 and were either listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant within the first year of initiating dialysis. The practitioner group is inclusive of physicians and advanced practice providers. The measure is the ratio-observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, which is adjusted for age, patient comorbidities, and other risk factors at the time of dialysis. |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| Numerator: | Numerator 1. Patients who initiated dialysis and had documentation of status at the end of the first year after initiating dialysis.
Numerator 2. The ratio of the observed number of waitlist events in a practitioner group to the model-based expected number of waitlist events. |
| Denominator: | Denominator 1. Patients aged 75 years of age or less who have initiated dialysis during January 1st – December 31st of the previous performance period.
Denominator 2. The denominator for the First Year Standardized Waitlist Ratio (FYSWR) is the total number of patients under the age of 75 in the practitioner group according to each patient's treatment history for patients within the first year following initiation of dialysis. |
| Exclusions: | Patients admitted to a skilled nursing facility (SNF).
Patients in hospice on their initiation of dialysis date or during the month of evaluation.
Patients that were on the kidney or kidney-pancreas waitlist prior to initiation of dialysis.
Patients who had a transplant prior to initiation of dialysis. |
| Measure Type: | Process |
| High Priority Measure: | No |
| Collection Type: | MIPS CQM Specifications |
| Measure-Specific Case Minimum/Performance Period: | If a dialysis practitioner group has fewer than 11 patients or 2 expected events, then the dialysis practitioner group is excluded from reporting outcomes. |

| Category | Description |
|-------------------|--|
| Rationale: | <p>This measure was originally proposed in the CY 2024 PFS proposed rule (88 FR 52771 through 52772) but was not finalized in the CY 2024 PFS final rule (88 FR 79565 through 88 FR 79566) due to implementation issues within MIPS regarding timing and application of the risk adjustment methodology. We are again proposing this measure because it addresses a CMS high priority clinical topic: patients with end-stage renal disease (ESRD). We indicated we would allow further refinement and streamlining of the measure analytic for future MIPS implementation. The measure and measure analytic have been revised to include two submission criteria, allowing for determination of data completeness and the full utilization of the risk-adjusted model in the second submission criterion to create a continuous variable analytic, assessing the ratio of observed to expected waitlist events.</p> <p>ESRD affects nearly 786,000 Americans, and dialysis for ESRD patients represents a significant portion of annual Medicare expenditures.⁵⁸ While dialysis is a treatment for ESRD, it is associated with increased mortality and lower quality of life for ESRD patients when compared to kidney transplant.⁵⁹ This measure assesses whether patients who are in their first year of dialysis, and are found to be an expected waitlist event based upon the Cox model, were placed on either the kidney or kidney-pancreas transplant waitlist or received a living donor kidney transplant. Data submitted by the measure developer indicates a performance gap for a process that can be directly linked to improved patient outcomes. This measure is separate from the other transplant waitlist measure, proposed under Table A.8 of this Appendix, as it is limited to assessing the first year after initiation of dialysis and the timely addition of those patients to the transplant waitlist—a crucial step in driving positive outcomes in the patient population.</p> <p>National and large regional studies provide strong empirical support for the association between processes within the clinical scope and control of dialysis practitioners followed by subsequent patient transplant wait listing. For example, the clinical assessments, provisions and/or referrals made by a dialysis practitioner are contributing factors for consideration in patient transplant wait listing. In one large regional study conducted on facilities in the state of Georgia, a standardized dialysis facility referral ratio was developed, adjusted for age, demographics, and comorbidities.⁶⁰ There was substantial variability across dialysis facilities in referral rates, and a Spearman correlation performed between ranking on the referral ratio and dialysis facility waitlist rates was highly significant ($r=0.35$, $p<0.001$).⁶¹ A national study using registry data (United States Renal Data System) from 2005-2007 examined the association between whether patients were informed about kidney transplantation based on reporting on the Medical Evidence Form 2728 (https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/Downloads/CMS2728.pdf) and subsequent access to kidney transplantation (wait listing or receipt of a live donor transplant).⁶² Approximately 30 percent of patients were uninformed about kidney transplantation, which was associated with half the rate of access to transplantation compared to patients who were informed.⁶³ In a related survey study of 388 hemodialysis patients, whether provision of information about transplantation by nephrologists or dialysis staff occurred was directly confirmed with patients.⁶⁴ The provision of such information was associated with a near threefold increase in likelihood of wait listing.⁶⁵</p> <p>The intent of this measure is to track the initial placement on the kidney or kidney-pancreas transplantation waitlist or receipt of a living donor transplant within the first year after dialysis initiation, with the intended objective of improving the overall health of patients on dialysis. Being waitlisted or receiving a living donor kidney transplant represents a desirable change in health status for patients on dialysis, indicating achievement of a health condition conducive to kidney transplantation. Waitlisting is a direct step in the process of transplantation which drives quality by progressing patients towards the goal of transplantation and better health outcomes. Being waitlisted for kidney transplantation is the culmination of a variety of preceding preparatory activities, which may include providing education to patients about the option(s) of transplantation, referral of patients to a transplant center for evaluation, completion of the evaluation process, and optimizing the health of the patient while on dialysis. These efforts depend heavily and, in many cases, primarily, on dialysis practitioner groups. Aspects that are not directly in the clinician/groups control can be influenced through coordination of care, strong communication with transplant centers, and advocacy for patients. All clinicians should be involved and actively work towards providing patients with high quality care including ensuring placement on the transplant list as quickly as possible.</p> <p>The PRMR (formerly the MAP), did not support this measure for rulemaking with the potential for mitigation to update the measure and address the concern from the Renal Standing Committee regarding the evidence base and specifications, and thus recommended this measure be resubmitted for endorsement by a CBE. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As discussed above, studies suggest a significant positive correlation between the clinician activities and the addition of patients to a transplant waitlist, which are necessary for patients to receive the improved outcomes associated with kidney transplant.</p> <p>Note: Refer to the 2022 MUC List-Final Recommendations to CMS and HHS at https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fmmshub.cms.gov%2Fsites%2Fdefault%2Ffiles%2F2022-MUC-List.xlsx&wdOrigin=BROWSELINK.</p> |

A.8. Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW)

| Category | Description |
|---|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | TBD |
| Description: | The measure tracks dialysis patients who are under the age of 75 in a practitioner group and on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status). This measure is a risk-adjusted percentage of waitlist events among dialysis patients. |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| Numerator: | Numerator 1: Percentage of Prevalent Patients Waitlisted (PPPW): Patients in the practitioner group's denominator with observed months on the waitlist for each month.
Numerator 2: Percentage of Prevalent Patients Waitlisted in Active (aPPPW): Patients in the practitioner group's denominator with observed months on the waitlist in active status for each month. |
| Denominator: | Denominator 1 and 2: All risk-adjusted patient-months for patients who are under the age of 75 in the reporting month and who are assigned to a dialysis practitioner or practitioner group practice according to each patient's treatment history on the last day of each reporting month during the performance year. |
| Exclusions: | Patients who were admitted to a skilled nursing facility (SNF) during the month of evaluation were excluded from that month.
Patients who were admitted to a skilled nursing facility (SNF) within one year of dialysis initiation according to the CMS-2728 form.
Patients determined to be in hospice were excluded from month of evaluation and the remainder of reporting period.
Patients with dementia at any time prior to or during the month. |
| Measure Type: | Process |
| High Priority Measure: | No |
| Collection Type: | MIPS CQM Specifications |
| Measure-Specific Case Minimum/Performance Period: | If a dialysis practitioner group has fewer than 11 patients during the performance year, the dialysis practitioner group is excluded from reporting outcomes. |

| Category | Description |
|-------------------|--|
| Rationale: | <p>This measure was originally proposed in the CY 2024 PFS proposed rule (88 FR 52773 through 52774) but was not finalized in the CY 2024 PFS final rule (88 FR 79567 through 79568) due to implementation issues within MIPS regarding timing and application of the risk adjustment methodology. We are again proposing this measure because it addresses a CMS high priority clinical topic: patients with ESRD. We indicated we would allow further refinement and streamlining of the measure analytic for future MIPS implementation. The measure, including component calculations, was revised to allow for a proportional analytic to be used for the purposes of determining measure performance, while still incorporating the risk-adjusted model to ensure the appropriate denominator eligible patient population for numerator assessment.</p> <p>ESRD affects nearly 786,000 Americans, and dialysis for ESRD patients represents a significant portion of annual Medicare expenditures.⁶⁶ While dialysis is a treatment for ESRD, it is associated with increased mortality and lower quality of life for ESRD patients when compared to kidney transplant.⁶⁷ This measure would capture the adjusted count of patient months on the kidney and kidney-pancreas transplant waitlists for all dialysis patients in a dialysis practitioner or group practice by assessing patient status on the last day of each month during the reporting year, and those on the transplant waitlist in active status as of the last day of the month during the reporting year. This process measure is directly linked to driving positive outcomes and measure data indicates a performance gap.</p> <p>Most ESRD patients have to wait for access to a deceased donor transplant, with the national median being roughly 4 years.⁶⁸ Maintenance of 'active status' on the transplant list requires ongoing collaboration between dialysis practitioners, transplant centers, and transplant networks, thereby ensuring sustained suitability for a transplant while optimizing the health of patients.⁶⁹ This maintenance process is associated with higher transplantation rates and lowered mortality rates while on the waitlist.⁷⁰ In addition, the maintenance of 'active status' is an important health equity issue. Research has found disparities in access to kidney transplant by race.⁷¹ Race-neutral efforts by clinicians to encourage maintenance of patients on the waitlist may reduce such disparities while improving their performance on this measure.⁷²</p> <p>This measure and the previously proposed measure under Table A.7, the First Year Standardized Waitlist Ratio measure, work in tandem to assess initial and on-going care. This measure would assess monthly wait listing in active status of patients. It also would evaluate and encourage maintenance of patients on the waitlist. This is an important area to which dialysis practitioners can contribute through ensuring patients remain healthy and complete any ongoing testing activities required to remain active on the waitlist. In contrast to this measure, the First Year Standardized Waitlist Ratio measure would focus solely on new wait listings and living donor kidney transplants to incentivize early action, rather than ongoing maintenance on the waitlist, which this measure assesses.</p> <p>The PRMR conditionally supported this measure for rulemaking pending an update of the measure's specifications to include only the PPPW (CBE 3695) rate that was recommended for endorsement by the CBE's Renal Standing Committee. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. The CBE recommended endorsement for the PPPW subset of this measure. It is important to include the aPPPW rate in this measure as well to capture patients in active waitlist status, and the full scope of the transplant list with movement of patients between active and inactive status. The studies cited above provide the evidentiary basis for the adoption of this measure. After review, it was determined that the testing provided by the measure steward demonstrated statistically sufficient results for the reliability and validity of each of the numerator actions, meeting requirements described within the CMS MMS Hub (https://mmshub.cms.gov/) regarding quality measure testing.</p> <p>Note: Refer to the 2022 MUC List-Final Recommendations to CMS and HHS at https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fmmshub.cms.gov%2Fsites%2Fdefault%2Ffiles%2F2022-MUC-List.xlsx&wdOrigin=BROWSELINK.</p> |

Table Group B: New Specialty Measure Sets Proposed for Addition and Modifications to Previously Finalized Specialty Measure Sets Proposed for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years

We are proposing to add one new specialty measure set: Optometry. In the CY 2023 PFS final rule, we finalized a combined Ophthalmology/Optometry specialty set (87 FR 70275 and 87 FR 70434 through 70439). Based on interested parties' request, we are proposing to revert this combined specialty set to "Ophthalmology" under Table B.28 of this Appendix with all measures retained as finalized under the CY 2024 PFS final rule (88 FR 79777 through 79784). We are simultaneously proposing to create a separate Optometry specialty set with a more limited number of quality measures based on differences in scope of practice to ophthalmology. The Optometry specialty set is proposed for comment under Table B.29 of this Appendix.

We are proposing to modify the below previously finalized specialty measure sets based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remain static, but the individual measures have proposed substantive changes in Table Group D of this Appendix. In the first column, existing measures with substantive changes described in Table Group D of this Appendix are noted with an asterisk (*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). The Indicator column includes a "high priority type" in parentheses after each high priority indicator (!) to represent the regulatory definition of high priority measures. In addition, eCQMs that are endorsed by a CBE are shown in Table Group B of this Appendix as follows: CBE # / eCQM CBE #.

Under § 414.1305, a high priority measure means an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, opioid, or health equity-related quality measure. Further details of these types of measures may be found in the CMS Measures Management System Hub (<https://mmshub.cms.gov/>).

Previously finalized measures that have no substantive changes are not open for comment under this proposed rule. We seek comment on proposed additions and proposed removals under applicable specialty sets in Table Group B of this Appendix.

The following specialty sets have no measures added, no measures removed, and no substantive changes proposed for the CY 2025 performance period/2027 MIPS payment year: Anesthesiology and Dentistry.

The following specialty sets have no measures added and no measures removed, but have substantive changes proposed as addressed under Table Group D: Audiology, Electrophysiology Cardiac Specialist, Certified Nurse Midwife, Chiropractic Medicine, Diagnostic Radiology, General Surgery, Hospitalists, Mental/Behavioral Health and Psychiatry, Neurology, Nutrition/Dietician, Ophthalmology, Orthopedic Surgery, Pathology, Pediatrics, Physical Medicine, Physical Therapy/Occupational Therapy, Plastic Surgery, Podiatry, and Thoracic Surgery.

Note: In the CY 2024 PFS final rule, new measure Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level) was finalized with a 1-year delay to the 2025 performance period (88 FR 79556 through 79560). As a result, measure Q436: Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques was finalized for removal with a 1-year delay to the 2025 performance period (88 FR 79896). These decisions are reflected within table B.10 Diagnostic Radiology specialty set of this Appendix.

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Allergy/Immunology specialty set.

 Percentage of patients aged 18 years and older seen for a visit during the performance period that are up-to-date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination.</p> | Centers for Medicare & Medicaid Services | <p>We are proposing to include this measure in the Allergy/Immunology specialty set as it would be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.⁷³ Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set would help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.⁷⁴ Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence</p> |

B.2. Anesthesiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Anesthesiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, as applicable. This specialty set has no proposed changes.

Measure | Gains in Patient Activation Measure (PAM®) Scores at 12 Months:
The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement. | Insignia Health,

| MEASURES PROPOSED FOR ADDITION TO THE CARDIOLOGY SPECIALTY SET | | | | | | | | |
|--|--------------------|-----------|-------------|-------------------------|--|--|---|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| ! (Outcome) | 3665 / N/A | 495 | N/A | MIPS CQM Specifications | Patient-Reported Outcome-Based Performance Measure | <p>Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:
The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.</p> | American Academy of Hospice and Palliative Medicine (AAHPM) | <p>We are proposing to include this measure in the Cardiology specialty set as it would be clinically relevant to this clinician type. This PRO-PM would help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with the clinician. This is an important patient-centered measure that helps patients feel heard and understood which can effectively improve the quality of care received and outcomes for patients in palliative care. Allowing patients to feel heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. As more patients are living longer with multiple comorbidities, especially true for the advanced heart disease patient population, early emergence of palliative care into the overall care of cardiac patients can notably improve their quality of life, patient satisfaction, and reduction in symptoms.⁷⁵ This measure is predicated on existing guidelines and conceptual models⁷⁶ and can facilitate and improve effective patient-clinician communication that engenders trust, acknowledgement, and a whole-person orientation to the care that is provided. Through the benefits of enhanced patient-provider communication, this measure would improve the quality of care received and outcomes for patients receiving palliative care. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule.</p> |

⁷⁵ Kilic, Y., Smer, A., & Goldstein, N. (2020). The Importance of Palliative Care in Cardiology: Differences Between Countries. *JACC. Case Reports*, 2(2), 326–329. <https://doi.org/10.1016/j.jaccas.2019.11.069>.

| MEASURES PROPOSED FOR ADDITION TO THE CARDIOLOGY SPECIALTY SET | | | | | | | | |
|--|--------------------|-----------|-------------|-------------------------|--------------|--|--|---|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | <p>Adult COVID-19 Vaccination Status:
 Percentage of patients aged 18 years and older seen for a visit during the performance period that are up-to-date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination.</p> | Centers for Medicare & Medicaid Services | <p>We are proposing to include this measure in the Cardiology specialty set as it would be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.⁷⁷ Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set would help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.⁷⁸ Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

⁷⁷ See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

⁷⁸ See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.4b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Electrophysiology Cardiac Specialist specialty set that have proposed substantive changes in Table Group D of this Appendix as indicated by an * in the Indicator column.

| *
! (Outcome) | 2483 / N/A | 503 | N/A | MIPS CQM Specifications | Patient-Reported Outcome-Based Performance Measure | Gains in Patient Activation Measure (PAM®) Scores at 12 Months:
The Patient Activation Measure® (PAM®) is a 10- or 13-item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement. | Insignia Health, LLC, a wholly owned subsidiary of Phreesia | We are proposing to include this measure in the Clinical Social Work specialty set as it would be clinically relevant to this clinician type. The addition of this measure to this specialty set would be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized in research within the U.S. and internationally and has also been shown to be valid and reliable in different clinical settings and under different payment models. ⁷⁹ The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |

⁷⁹ Phreesia. (2024). Patient Activation Measure (PAM). https://www.phreesia.com/patient-activation-measure/?utm_source=google&utm_medium=paid_search&utm_destinationmedium=mql_form&utm_campaign=payer_care_management_paid_search&utm_vendor=phreesia&utm_audience1=payer&utm_content=648172611574&utm_destinationco.

B.8. Dentistry

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Dentistry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. This specialty set has no proposed changes.

(Care Coordination) | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | <p>Melanoma: Tracking and Evaluation of Recurrence: Percentage of patients who had an excisional surgery for melanoma or melanoma in situ with initial American Joint Committee on Cancer (AJCC) staging of 0, I, or II in the past 5 years in which the operating provider examines and/or diagnoses the patient for recurrence of melanoma.</p> | American Academy of Dermatology | <p>We are proposing to include this measure in the Dermatology specialty set as it would be clinically relevant to this clinician type. Clinicians within this specialty care for patients diagnosed with melanoma and are most likely to be the clinician to evaluate the frequency of melanoma recurrence following excisional procedures for this patient population.⁸⁰ This measure addresses the CMS high priority outcome for care coordination, as a lack of communication has been recognized between the excising clinician and clinician continuing care. This measure would allow for the development of a system in which melanomas can be accurately tracked to increase the understanding of the effectiveness of care. The incorporation of this measure in this specialty set would help promote communications between the dermatologist treating the melanoma and the clinicians continuing care. Melanoma recurrence is an outcome that needs precise evaluation.⁸¹ The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. See Table A.6 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

Dermatology | This measure is being proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale. |

B.10. Diagnostic Radiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Diagnostic Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. As indicated in the Table Group B introduction, measure Q494 has been added to the previously finalized measure set below and measure Q436 has been removed under this proposed rule as previously finalized through the CY 2024 PFS final rule (88 FR 79556 through 79560 and 88 FR 79896). We request comment on the measures available in the proposed Diagnostic Radiology specialty set that have proposed substantive changes in Table Group D of this Appendix as indicated by an * in the Indicator column.

Specificati
ons | Process | Elder
Maltreatment
Screen and
Follow-Up Plan:
Percentage of
patients aged 60
years and older
with a
documented
elder
maltreatment
screen using an
Elder
Maltreatment
Screening tool on
the date of
encounter AND a
documented
follow-up plan
on the date of the
positive screen. | Centers for
Medicare &
Medicaid
Services | We are proposing to include this measure in the Emergency Medicine specialty set as it would be clinically relevant to this clinician type. "Emergency departments (EDs) are a potentially important setting for elder mistreatment identification because they provide care for a large number of older adults who may be elder mistreatment victims especially given that the ED is sometimes the only clinical setting that the patient may visit." ⁸² The process of standardized screening using one or a combination of validated assessment(s) and/or instrument(s) should be done to ensure that signs of abuse or neglect are not overlooked. |

⁸² Rosen, T., Platts-Mills, T. F., & Fulmer, T. (2020). Screening for Elder Mistreatment in Emergency Departments: Current Progress and Recommendations for Next Steps. *Journal of Elder Abuse & Neglect*, 32(3), 295–315. <https://doi.org/10.1080/08946566.2020.1768997>.

B.11. Emergency Medicine

| <p align="center">PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE EMERGENCY MEDICINE SPECIALTY SET</p> <p>Note: In this proposed rule, we are proposing the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p> | | | | | | | |
|--|------------------|--------------------|---|---------------------|---|--|--|
| CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Removal |
| N/A / N/A | 134 | CMS2v14 | Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQM Specifications | Process | <p>Preventive Care and Screening: Screening for Depression and Follow-Up Plan:
 Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to 2 days after the date of the qualifying encounter.</p> | Centers for Medicare & Medicaid Services | We are proposing to remove this measure from the Emergency Medicine specialty set beginning with the CY 2025 performance period/2027 MIPS payment year. Complete emergency medicine applicable coding is not available within this quality measure. Therefore, this measure has minimal eligibility for this clinician type. |
| N/A / N/A | 254 | N/A | MIPS CQM Specifications | Process | <p>Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain:
 Percentage of pregnant female patients aged 14 to 50 who present to the emergency department (ED) with a chief complaint of abdominal pain or vaginal bleeding who receive a trans-abdominal or trans-vaginal ultrasound to determine pregnancy location.</p> | American College of Emergency Physicians | This measure is being proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale. |

B.12. Endocrinology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Endocrinology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Endocrinology specialty set.

| MEASURES PROPOSED FOR ADDITION TO THE ENDOCRINOLOGY SPECIALTY SET | | | | | | | | |
|---|--------------------|-----------|-------------|-------------------------|--------------|--|--|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | <p>Adult COVID-19 Vaccination Status:
 Percentage of patients aged 18 years and older seen for a visit during the performance period that are up-to-date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination.</p> | Centers for Medicare & Medicaid Services | <p>We are proposing to include this measure in the Endocrinology specialty set as it would be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.⁸³ Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set would help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.⁸⁴ Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

⁸³ See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

⁸⁴ See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.13. Family Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Family Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Family Medicine specialty set.

| MEASURES PROPOSED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET | | | | | | | | |
|---|--------------------|-----------|-------------|-------------------------|--------------|--|--|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | <p>Adult COVID-19 Vaccination Status:
 Percentage of patients aged 18 years and older seen for a visit during the performance period that are up-to-date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination.</p> | Centers for Medicare & Medicaid Services | <p>We are proposing to include this measure in the Family Medicine specialty set as it would be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.⁸⁵ Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set would help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.⁸⁶ Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

⁸⁵ See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

⁸⁶ See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.13. Family Medicine

| PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET | | | | | | | |
|---|-----------|-------------|---------------------|--------------|---|--|---|
| Note: In this proposed rule, we are proposing the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies. | | | | | | | |
| CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Removal |
| N/A / 3475e | 472 | CMS24 9v7 | eCQM Specifications | Process | Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture: Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period. | Centers for Medicare & Medicaid Services | This measure is being proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale. |

B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Gastroenterology specialty set.

The percentage of screening colonoscopies performed in patients greater than or equal to 86 years of age from January 1 to December 31. | American Gastroenterological Association | This measure is being proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale. |

B.15. General Surgery

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the General Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed General Surgery specialty set that have proposed substantive changes in Table Group D of this Appendix as indicated by an * in the Indicator column.

| ! (Outcome) | 3665 / N/A | 495 | N/A | MIPS CQM Specifications | Patient-Reported Outcome-Based Performance Measure | Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:
The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit. | American Academy of Hospice and Palliative Medicine (AAHPM) | We are proposing to include this measure in the Geriatrics specialty set as it would be clinically relevant to this clinician type. This PRO-PM would help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with the clinician. This is an important patient-centered measure that helps patients feel heard and understood which can effectively improve the quality of care received and outcomes for patients in palliative care. Allowing patients to feel heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. As more patients are living longer with multiple comorbidities, especially true for the advanced heart disease patient population, early emergence of palliative care into the overall care of cardiac patients can notably improve their quality of life, patient satisfaction, and reduction in symptoms. ⁸⁷ This measure is predicated on existing guidelines and conceptual models ⁸⁸ and can facilitate and improve effective patient-clinician communication that engenders trust, acknowledgement, and a whole-person orientation to the care that is provided. Through the benefits of enhanced patient-provider communication, this measure would improve the quality of care received and outcomes for patients receiving palliative care. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |

⁸⁷ See footnote Kilic et al., 2020 in Table B.4a of this Appendix.

⁸⁸ See footnote National Consensus Project for Quality Palliative Care, 2018 in Table B.4a of this Appendix.

| MEASURES PROPOSED FOR ADDITION TO THE GERIATRICS SPECIALTY SET | | | | | | | | |
|--|--------------------|-----------|-------------|-------------------------|--|--|---|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| *
! (Outcome) | 2483 / N/A | 503 | N/A | MIPS CQM Specifications | Patient-Reported Outcome-Based Performance Measure | Gains in Patient Activation Measure (PAM®) Scores at 12 Months:
The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement. | Insignia Health, LLC, a wholly owned subsidiary of Phreesia | We are proposing to include this measure in the Geriatrics specialty set as it would be clinically relevant to this clinician type. The addition of this measure to this specialty set would be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized in research within the U.S. and internationally and has also been shown to be valid and reliable in different clinical settings and under different payment models. ⁸⁹ The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |

⁸⁹ See footnote Phreesia, 2024 in Table B.7 of this Appendix.

B.16. Geriatrics

| MEASURES PROPOSED FOR ADDITION TO THE GERIATRICS SPECIALTY SET | | | | | | | | |
|--|--------------------|-----------|-------------|-------------------------|--------------|--|--|---|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | <p>Adult COVID-19 Vaccination Status:
 Percentage of patients aged 18 years and older seen for a visit during the performance period that are up-to-date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination.</p> | Centers for Medicare & Medicaid Services | <p>We are proposing to include this measure in the Geriatrics specialty set as it would be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.⁹⁰ Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set would help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.⁹¹ Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

⁹⁰ See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

⁹¹ See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.17. Hospitalists

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on measures available in the proposed Hospitalists specialty set that have proposed substantive changes in Table Group D of this Appendix as indicated by an * in the Indicator column.

|--|--------------------|-----------|-------------|-------------------------|--|--|---|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| *
! (Outcome) | 2483 / N/A | 503 | N/A | MIPS CQM Specifications | Patient-Reported Outcome-Based Performance Measure | Gains in Patient Activation Measure (PAM®) Scores at 12 Months:
The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement. | Insignia Health, LLC, a wholly owned subsidiary of Phreesia | We are proposing to include this measure in the Infectious Disease specialty set as it would be clinically relevant to this clinician type. The addition of this measure to this specialty set would be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized in research within the U.S. and internationally and has also been shown to be valid and reliable in different clinical settings and under different payment models. ⁹² The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |

⁹² See footnote Phreesia, 2024 in Table B.7 of this Appendix.

B.18. Infectious Disease

| MEASURES PROPOSED FOR ADDITION TO THE INFECTIOUS DISEASE SPECIALTY SET | | | | | | | | |
|--|--------------------|-----------|-------------|-------------------------|--------------|--|--|---|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | <p>Adult COVID-19 Vaccination Status:
 Percentage of patients aged 18 years and older seen for a visit during the performance period that are up-to-date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination.</p> | Centers for Medicare & Medicaid Services | <p>We are proposing to include this measure in the Infectious Disease specialty set as it would be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.⁹³ Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set would help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.⁹⁴ Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

⁹³ See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

⁹⁴ See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.19. Internal Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Internal Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Internal Medicine specialty set.

| MEASURES PROPOSED FOR ADDITION TO THE INTERNAL MEDICINE SPECIALTY SET | | | | | | | | |
|---|--------------------|-----------|-------------|-------------------------|--------------|--|--|---|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | <p>Adult COVID-19 Vaccination Status:
 Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination.</p> | Centers for Medicare & Medicaid Services | <p>We are proposing to include this measure in the Internal Medicine specialty set as it would be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.⁹⁵ Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set would help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the (ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.⁹⁶ Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

⁹⁵ See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

⁹⁶ See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

 Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.</p> | Centers for Medicare & Medicaid Services | This measure is being proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale. |

B.20. Interventional Radiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Interventional Radiology specialty set.

B.22. Nephrology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Nephrology specialty set.

|--|--------------------|-----------|-------------|-------------------------|--|--|---|---|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| ! (Outcome) | 3665 / N/A | 495 | N/A | MIPS CQM Specifications | Patient-Reported Outcome-Based Performance Measure | Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:
The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit. | American Academy of Hospice and Palliative Medicine (AAHPM) | We are proposing to include this measure in the Nephrology specialty set as it would be clinically relevant to this clinician type. This PRO-PM would help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with the clinician. This is an important patient-centered measure that helps patients feel heard and understood which can effectively improve the quality of care received and outcomes for patients in palliative care. Allowing patients to feel heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. As more patients are living longer with multiple comorbidities, especially true for the advanced heart disease patient population, early emergence of palliative care into the overall care of cardiac patients can notably improve their quality of life, patient satisfaction, and reduction in symptoms. ⁹⁷ This measure is predicated on existing guidelines and conceptual models ⁹⁸ and can facilitate and improve effective patient-clinician communication that engenders trust, acknowledgement, and a whole-person orientation to the care that is provided. Through the benefits of enhanced patient-provider communication, this measure would improve the quality of care received and outcomes for patients receiving palliative care. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |
| | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | Adult COVID-19 Vaccination Status:

| MEASURES PROPOSED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET | | | | | | | | |
|--|--------------------|-----------|-------------|-----------------|--------------|--|-----------------|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| | | | | | | during the performance period that are up to date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination. | | 19, is critically important to stemming the morbidity and mortality caused by this disease. ⁹⁹ Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set would help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations. ¹⁰⁰ Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

⁹⁹ See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

¹⁰⁰ See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.22. Nephrology

| MEASURES PROPOSED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET | | | | | | | | |
|--|--------------------|-----------|-------------|-------------------------|--------------|--|--|---|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | <p>First Year Standardized Waitlist Ratio (FYSWR):
 The number of incident (newly initiated on dialysis) patients in a practitioner (inclusive of physicians and advanced practice providers) group who are under the age of 75, and were listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant within the first year of initiating dialysis. The measure is calculated to compare the observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, adjusted for age, patient comorbidities, and other risk factors at incidence of dialysis.</p> | Centers for Medicare & Medicaid Services | <p>We are proposing to include this measure in the Nephrology specialty set as it would be clinically relevant to this clinician type. The measure's intended objective consists of improving the overall health of patients on dialysis, with nephrologists at the forefront of caring for this patient population. Clinicians within this specialty are responsible for the education of patients about the option of transplantation, referral of patients to a transplant center for evaluation, completion of the evaluation process, and optimizing the health of the patient while on dialysis. All clinicians should be involved and actively work towards providing patients with high quality care including ensuring placement on the transplant list as quickly as possible. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

| | N/A /
N/A | TBD | N/A | MIPS
CQM
Specificati
ons | Process | <p>Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW):
The percentage of patients in each dialysis practitioner group practice who were on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status). Results are averaged across patients prevalent on the last day of each month during the reporting year. The measure is a directly standardized percentage, which is adjusted for covariates (e.g., age and risk factors).</p> | Centers for Medicare & Medicaid Services | <p>We are proposing to include this measure in the Nephrology specialty set as would be clinically relevant to this clinician type. The maintenance of end stage renal disease patients on active status on the waitlist is additionally important given demonstrated disparities and positive association with subsequent transplantation. These practices are important for nephrologists who are at the forefront of caring for this patient population. This is an important area to which dialysis practitioners can contribute through ensuring patients remain healthy and complete any ongoing testing activities required to remain active on the waitlist. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. See Table A.8 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

B.23. Neurology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Neurology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Neurology specialty set that have proposed substantive changes in Table Group D of this Appendix as indicated by an * in the Indicator column.

Measure | Gains in Patient Activation Measure (PAM®) Scores at 12 Months:
The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement. | Insignia Health, LLC, a wholly owned subsidiary of Phreesia |

B.24. Neurosurgical

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Neurosurgical specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Neurosurgical specialty set.

The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement. | Insignia Health, LLC, a wholly owned subsidiary of Phreesia |
| ! (Safety) | N/A / N/A | 504 | N/A | MIPS CQM Specifications | Process | Initiation, Review, And/OR Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk:
Percentage of adult aged 18 years and older with suicidal ideation or behavior symptoms (based on results of a standardized assessment tool or screening tool) or increased suicide risk (based on the clinician's evaluation or clinician-rating tool) for whom a suicide safety plan is initiated, reviewed, and/or updated in collaboration between the patient and their clinician. | American Psychiatric Association |

| N/A / 3475e | 472 | CMS249v7 | eCQM Specifications | Process | Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture:
Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period. | Centers for Medicare & Medicaid Services | This measure is being proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale. |

B.27a. Oncology/Hematology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Oncology/Hematology specialty set.

|---|--------------------|-----------|-------------|-------------------------|--------------|---|--|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| ! (Appropriate Use) | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | <p>Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy:
Percentage of patients, aged 18 years and older, with a diagnosis of metastatic non-small cell lung cancer or squamous cell carcinoma of head and neck on first-line immune checkpoint inhibitor (ICI) therapy, who had a positive PD-L1 biomarker expression test result prior to giving ICI therapy.</p> | Society for Immunotherapy of Cancer (SITC) | <p>We are proposing to include this measure in the Oncology/Hematology specialty set as it would be clinically relevant to this clinician type. Immunotherapy is a rapidly developing and changing subspecialty in the realm of oncology, and this measure would fill a gap within the oncologic clinical topic. The incorporation of this measure in this specialty set would help promote appropriate intervention and timeliness of PD-L1 biomarker expression testing prior to initiation of first-line treatment for the metastatic non-small cell lung cancer or squamous cell carcinoma of head and neck. This timeliness of treatment initiation can lead to improvements in patient mortality and morbidity.¹⁰³ It's important to address the proper diagnosis of metastatic non-small cell lung cancer or squamous cell carcinoma that may impact treatment decisions so that appropriate treatment delivery is not delayed, nor ineffective therapies prescribed which could both result in poor clinical outcomes and unnecessary healthcare costs.¹⁰⁴ See Table A.1 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

¹⁰³ See footnote Pai et al., 2020 in Table A.1 of this Appendix

¹⁰⁴ See footnotes Lim et al., 2015 and Pai et al., 2020 in Table A.1 of this Appendix.

B.27a. Oncology/Hematology

| MEASURES PROPOSED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET | | | | | | | | |
|---|--------------------|-----------|-------------|-------------------------|--------------|--|---------------------------------------|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | <p>Appropriate Germline Testing for Ovarian Cancer Patients:
 Percentage of patients, aged 18 and older, diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer who undergo germline testing within 6 months of diagnosis.</p> | American Society of Clinical Oncology | <p>We are proposing to include this measure in the Oncology/Hematology specialty set as it would be clinically relevant to this clinician type and would fill a gap within the oncologic clinical topic. This measure addresses patients diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer who undergo germline testing within 6 months of their diagnosis and is predicated on existing clinical guidelines and recommendations. It also addresses a CMS priority that could allow for more personalized diagnostic, predictive, prognostic, and therapeutic strategies for the patient. Current recommendations for all women diagnosed with ovarian cancer is to receive genetic testing, however, only approximately 30 percent of women undergo any genetic testing.¹⁰⁵ The high incidence of these mutations and the advent of therapy targeted toward BRCA mutations warrant testing in all individuals diagnosed with ovarian cancer for the purpose of determining treatment recommendations, risk of other cancers, and need for cascade testing of family members. See Table A.2 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

¹⁰⁵ See footnote Konstantinopoulos et al., 2020 in Table A.2 of this Appendix.

B.27a. Oncology/Hematology

| MEASURES PROPOSED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET | | | | | | | | |
|---|--------------------|-----------|-------------|-------------------------|---|---|------------------------------------|---|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| ! (Outcome) | CBE 3718 / N/A | TBD | N/A | MIPS CQM Specifications | Patient-Reported Outcome-based Performance Measure (PRO-PM) | Patient-Reported Pain Interference Following Chemotherapy among Adults with Breast Cancer: The PRO-PM will assess pain interference following chemotherapy administered with curative intent to adult patients with breast cancer. | Purchaser Business Group on Health | We are proposing to include this measure in the Oncology/Hematology specialty set as it would be clinically relevant to this clinician type and would fill a gap within the oncologic clinical topic. This measure addresses a CMS high priority as a patient-reported outcome-based performance quality measure accounting for patient experience of care for this patient population. It is predicated on existing clinical guidelines and recommendations. ¹⁰⁶ For the breast cancer patient population, it's important to routinely assess pain to properly identify barriers to acceptable pain management and to intervene appropriately, which can improve the patient's health outcome and quality of life. ¹⁰⁷ See Table A.3 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |
| ! (Outcome) | CBE 3720 / N/A | TBD | N/A | MIPS CQM Specifications | Patient-Reported Outcome-based Performance Measure (PRO-PM) | Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer: The PRO-PM will assess fatigue following chemotherapy administered with curative intent to adult patients with breast cancer. | Purchaser Business Group on Health | We are proposing to include this measure in the Oncology/Hematology specialty set as it would be clinically relevant to this clinician type, addresses a CMS high priority as a PRO-PM, and would fill a gap within the oncologic clinical topic. It takes into consideration the patient voice/experience of care for those patients with breast cancer with fatigue experienced following chemotherapy. PRO assessment in routine care remains underutilized, and very few PRO-PMs have been validated for the cancer population. By taking into consideration patient voice, necessary interventions can be completed to help improve their quality of life during cancer treatment. See Table A.4 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

See Table Group C for rationale. |

B.28. Ophthalmology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Ophthalmology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Ophthalmology specialty set that have proposed substantive changes in Table Group D of this Appendix as indicated by an * in the Indicator column. As indicated in the Table Group B Introduction, we are proposing to rename this specialty set from “Ophthalmology/Optomety” to “Ophthalmology” under this proposed rule. We are also proposing a new Optometry specialty set under Table B.29 of this Appendix.

B.29. Optometry

As indicated in the introductory language of Table Group B of this Appendix to this proposed rule, we are proposing to add a new Optometry specialty set. In addition to the considerations discussed in the introductory language of Table Group B, the Optometry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are proposing to add to this specialty set. We request comment on the measures available in the proposed Optometry specialty set.

| *
! (Care Coordination) | N/A / N/A | 019 | CMS 142v13 | eCQM Specifications, MIPS CQM Specifications | Process | Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care:
Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once during the performance period. | American Academy of Ophthalmology | We are proposing to include this measure in the Optometry specialty set as it would be clinically relevant to this clinician type. An Optometrist is needed to inform a primary care clinician about a particular patient's retinopathy severity, possible diabetic macular edema, or other ocular comorbidities. Retinopathy serves as a strong predictor of other serious medical conditions such as heart attack, stroke, kidney failure, amputation, and others. ¹¹⁰ Without regular reporting from the optometrist on this issue, the primary care clinician lacks valuable information key to the overall management of the patient. This measure is essential to patient safety and completes the feedback essential for treating a deadly, common disease. ¹¹¹ Better communication between eye specialists and primary care clinicians can play a critical role in patient care, as it's an important mechanism for clinicians to communicate with one another about a patient's disease symptoms, adherence to care plan, and treatment plans. ¹¹² The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |

| MEASURES PROPOSED FOR ADDITION TO THE OPTOMETRY SPECIALTY SET | | | | | | | | |
|---|--------------------|-----------|-------------|--|--------------|---|--|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| * § | 0055 / N/A | 117 | CMS 131v13 | eCQM Specifications, MIPS CQM Specifications | Process | Diabetes: Eye Exam:
Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period. | National Committee for Quality Assurance | We are proposing to include this measure in the Optometry specialty set as it would be clinically relevant to this clinician type. This measure could help accurately assess a clinician's ability to diagnose and treat patients safely and efficiently. We believe the numerator options, give more granular data can be captured to discern between patients with and without evidence of retinopathy. This information could give insight into those patients with controlled blood sugar and those with uncontrolled blood sugar The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |
| * § 1 (Patient Safety) | N/A / N/A | 130 | CMS 68v14 | eCQM Specifications, MIPS CQM Specifications | Process | Documentation of Current Medications in the Medical Record:
Percentage of visits for patients aged 18 years and older for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter. | Centers for Medicare & Medicaid Services | We are proposing to include this measure in the Optometry specialty set as it is clinically relevant to this clinician type. Documentation of current medications in the medical record facilitates the process of medication review and reconciliation by the clinician, which is necessary for reducing ADEs and promoting medication safety. The need for clinician-to-clinician coordination regarding medication records, and the existing gap in implementation, is highlighted in the American Medical Association's Physician's Role in Medication Reconciliation, which states that "critical patient information, including medical and medication histories, current medications the patient is receiving and taking, and sources of medications, is essential to |

| § | N/A / N/A | 226 | CMS 138v13 | Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQM Specifications | Process | Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user. | National Committee for Quality Assurance | We are proposing to include this measure in the Optometry specialty set as it is clinically relevant to this clinician type. Tobacco use is the leading preventable cause of disease, disability, and death in the U.S. cigarette smoking results in more than 480,000 premature deaths each year and accounts for approximately 1 in every 5 deaths. ¹¹⁴ Due to the harmful effect tobacco use can have on patients' health, we believe that clinicians should engage with their patients to screen for tobacco use and, if positive, provide tobacco cessation counseling annually. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |
| *
! (Patient Safety) | 0022 / N/A | 238 | CMS 156v13 | eCQM Specifications, MIPS CQM Specifications | Process | Use of High-Risk Medications in Older Adults: Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class. | National Committee for Quality Assurance | We are proposing to include this measure in the Optometry specialty set as it is clinically relevant to this clinician type. Treating patients with high-risk medications such as antidepressants or pain medications, may be associated with increased risk of harm from drug side-effects and toxicity. ¹¹⁵ Medication errors can occur anywhere throughout the many steps in the medication management process, with one of the most common |

B.31. Otolaryngology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Otolaryngology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Otolaryngology specialty set.

| | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | <p>Adult COVID-19 Vaccination Status:
 Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination.</p> | Centers for Medicare & Medicaid Services | <p>We are proposing to include this measure in the Otolaryngology specialty set as it would be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.¹¹⁷ Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set would help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.¹¹⁸ Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

B.32. Pathology

¹¹⁷ See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

¹¹⁸ See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Pathology specialty set that have proposed substantive changes in Table Group D of this Appendix as indicated by an * in the Indicator column.

B.33. Pediatrics

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Pediatrics specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Pediatrics specialty set that have proposed substantive changes in Table Group D of this Appendix as indicated by an * in the Indicator column.

B.36. Plastic Surgery

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Plastic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Plastic Surgery specialty set that have proposed substantive changes in Table Group D of this Appendix as indicated by an * in the Indicator column.

|--|--------------------|-----------|-------------|-------------------------|--------------|---|--|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | Adult COVID-19 Vaccination Status:
Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination. | Centers for Medicare & Medicaid Services | We are proposing to include this measure in the Skilled Nursing Facility specialty set as it would be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease. ¹²⁵ Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set would help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations. ¹²⁶ Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS. |

¹²⁵ See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

¹²⁶ See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.42. Speech Language Pathology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Speech Language Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Speech Language Pathology specialty set.

|---|--------------------|-----------|-------------|-------------------------|--------------|--|---|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| * | N/A / 2872e | 281 | CM S14 9v13 | eCQM Specifications | Process | Dementia: Cognitive Assessment: Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period. | American Academy of Neurology | We are proposing to include this measure in the Speech Language Pathology specialty set as it would be clinically relevant to this clinician type. Speech language pathologists (SLPs) utilize standardized instruments with demonstrated reliability for dementia screening. These instruments typically assess orientation to time, place, and person. ¹²⁷ Other tests (for example, story recall/story retelling) assess episodic memory and can be useful for screening early dementia. ¹²⁸ If screening reveals cognitive impairment, the individual is referred to an SLP for a comprehensive evaluation of communicative function. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |
| * | N/A / N/A | 282 | N/A | MIPS CQM Specifications | Process | Dementia: Functional Status Assessment: Percentage of patients with dementia for whom an assessment of functional status was performed at least once in the last 12 months. | American Academy of Neurology/ American Psychiatric Association | We are proposing to include this measure in the Speech Language Pathology specialty set as it would be clinically relevant to this clinician type. SLPs play a critical role in diagnosis and management of dysphagia in patients with dementia through comprehensive assessment, diet consistency modifications, educating their caregiver on the use of compensatory strategies, prescribing exercise programs, and referring them to other professionals as needed. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |

| *
! (Patient Safety) | N/A / N/A | 286 | N/A | MIPS CQM Specifications | Process | Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia:
Percentage of patients with dementia or their caregiver(s) for whom there was a documented safety concerns screening in two domains of risk: (1) dangerousness to self or others and (2) environmental risks; and if safety concerns screening was positive in the last 12 months, there was documentation of mitigation recommendations, including but not limited to referral to other resources. | American Psychiatric Association / American Academy of Neurology | We are proposing to include this measure in the Speech Language Pathology specialty set as it would be clinically relevant to this clinician type. Dementia patients are at high risk for safety concerns due to underlying cognitive communication impairment which may impact judgment, reasoning, and memory as well as physical weakness resulting from other medical conditions. ¹²⁹ SLPs work directly with individuals with dementia and their caregivers to screen, assess, and establish care plans to address these issues through cognitive-communication exercises, use of compensatory strategies, environmental modifications, referrals to other professionals, and providing caregiver training. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |
| *
! (Care Coordination) | N/A / N/A | 288 | N/A | MIPS CQM Specifications | Process | Dementia: Education and Support of Caregivers for Patients with Dementia:
Percentage of patients with dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months. | American Academy of Neurology / American Psychiatric Association | We are proposing to include this measure in the Speech Language Pathology specialty set as it would be clinically relevant to this clinician type. SLPs provide information about the nature of dementia and its course of progression. SLPs make recommendations for environmental modifications, such as using alarms and pill boxes for medication reminders, visual aids, and provide education on communication strategies and modifications to caregiver behaviors to ensure the safety of the patient and compliance with the plan of care. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |

Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, lawful physician-hastened death, or hospice) or whose existing end of life plan was reviewed or updated at least once annually or more frequently as clinically indicated (i.e., rapid progression). | American Academy of Neurology | We are proposing to include this measure in the Speech Language Pathology specialty set as it would be clinically relevant to this clinician type. Over the course of the disease, individuals with ALS exhibit difficulty producing intelligible speech to communicate basic needs and wants. ¹³⁰ SLPs are trained to address communication deficits via exercise programs, use of communication strategies, and introducing augmentative and alternative communication (AAC) methods. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. |

|---|--------------------|-----------|-------------|--|--------------|---|----------------------------|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| * | N/A / N/A | 488 | CM S95 1v3 | eCQM Specifications, MIPS CQM Specifications | Process | <p>Kidney Health Evaluation:
Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the measurement period.</p> | National Kidney Foundation | <p>We are proposing to include this measure in the Urgent Care specialty set as it would be clinically relevant to this clinician type. This measure encourages an estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) evaluation annually for patients diagnosed with diabetes. The measure aims for early detection which can reduce associated health risk of the comorbidities of diabetes and CKD. Having an established source of care is important in this high-risk population, however, in the general US population, approximately 15 percent of adults do not have a primary care physician.¹³¹ According to the American Diabetes Association annual assessment of glomerular filtration rate (GFR) in adolescents, in addition to adults, with diabetes is necessary to appropriately screen for early diabetic nephropathy, and the assessment of GFR is essential to accurately diagnose diabetic kidney disease early in the disease process.¹³² Including this measure in this specialty set could assist in capturing at-risk patients who may lack a primary care physician.</p> |

B.45. Urology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Urology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comment on the measures available in the proposed Urology specialty set.

| MEASURES PROPOSED FOR ADDITION TO THE UROLOGY SPECIALTY SET | | | | | | | | |
|---|--------------------|-----------|-------------|-------------------------|--------------|--|--|--|
| Indicator | CBE # / eCQM CBE # | Quality # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Steward | Rationale for Inclusion |
| | N/A / N/A | TBD | N/A | MIPS CQM Specifications | Process | <p>Adult COVID-19 Vaccination Status:
 Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination.</p> | Centers for Medicare & Medicaid Services | <p>We are proposing to include this measure in the Urology specialty set as it would be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.¹³³ Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set would help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.¹³⁴ Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure would reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p> |

¹³³ See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

¹³⁴ See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

See Table Group C for rationale. |

Table Group C: Previously Finalized Quality Measures Proposed for Removal for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years

In this proposed rule, we are proposing to remove 11 previously finalized MIPS quality measures for the CY 2025 performance period/2027 MIPS payment year and future years which are discussed in detail in the removal tables below. We note measure Q436: Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques was already finalized for removal with a 1-year delay to the CY 2025 performance period as noted in the Table Group B introduction (88 FR 79896); therefore, measure Q436 does not have a removal table in this proposed rule and there are 10 removal tables under Table Group C.

The CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959) discusses our incremental approach to removing process measures.

Under our measure removal criteria, consideration is given to the following, but is not limited to:

- Whether the removal of the process measure impacts the number of measures available for a specific specialty.
- Whether the measure addresses a priority area highlighted in the Measure Development Plan at <https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/Measure-development>.
- Whether the measure promotes positive outcomes in patients.
- Considerations and evaluation of the measure's performance data.
- Whether the measure is designated as high priority or not.
- If they do not meet case minimum and reporting volumes required for benchmarking after being in the program for two consecutive CY performance periods.
- After factoring in other considerations (such as, but not limited to: the robustness of the measure; whether it addresses a measurement gap; if the measure is a patient-reported outcomes; consideration of the measure in developing MVPs).
- If we determine the measure is not available for MIPS reporting by or on behalf of all MIPS eligible clinicians.

Further considerations are given in the evaluation of the measure's performance data to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), an additional criterion we use for the removal of measures includes extremely topped-out measures, which refers to measures topped out with an average (mean) performance rate between 98-100 percent.

For a measure proposed for removal due to criteria relating to the benchmark and performance data, further information regarding 2024 MIPS benchmarking data can be located at <https://qpp.cms.gov/benchmarks>.

C.1. Prostate Cancer: Combination Androgen Deprivation Therapy for High Risk or Very High Risk Prostate Cancer

| Category | Description |
|---|--|
| CBE# / eCQM CBE #: | N/A / N/A |
| Quality #: | 104 |
| CMS eCQM ID: | N/A |
| Collection Type: | MIPS CQM Specifications |
| Measure Description: | Percentage of patients, regardless of age, with a diagnosis of prostate cancer at high or very high risk of recurrence receiving external beam radiotherapy to the prostate who were prescribed androgen deprivation therapy in combination with external beam radiotherapy to the prostate. |
| Measure Steward: | American Urological Association Education and Research |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale for Removal: | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because the limited patient population as well as adoption of this quality measure does not allow for the creation of a benchmark. For more information on benchmarks, see the MIPS 2024 Quality Benchmarks User Guide https://www.cms.gov/files/document/2024-quality-benchmarks-user-guide-scoring-examples-pdf.pdf . The current 2024 MIPS benchmarking data is located at https://qpp.cms.gov/benchmarks . |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2025 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. |

C.2. Melanoma: Continuity of Care – Recall System

| Category | Description |
|---|---|
| CBE# / eCQM CBE #: | N/A / N/A |
| Quality #: | 137 |
| CMS eCQM ID: | N/A |
| Collection Type: | MIPS CQM Specifications |
| Measure Description: | Percentage of patients, regardless of age, with a current diagnosis of melanoma or a history of melanoma whose information was entered, at least once within a 12 month period, into a recall system that includes: <ul style="list-style-type: none"> • A target date for the next complete physical skin exam, AND • A process to follow up with patients who either did not make an appointment within the specified timeframe or who missed a scheduled appointment. |
| Measure Steward: | American Academy of Dermatology |
| High Priority Measure: | Yes |
| Measure Type: | Structure |
| Rationale for Removal: | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure is duplicative of the Melanoma: Tracking and Evaluation of Recurrence measure being proposed in Table A.6 of this Appendix. Measure Q137 establishes a recall system linked to the process of notifying patients, with a current diagnosis or history of melanoma, when their next physical exam is due, as well as to follow up with patients who did not make an appointment within the specified timeframe or who missed a scheduled appointment. It does not assess whether the patient completed an annual skin exam nor if the process to follow up for those patients who missed an appointment is effective. The new measure proposed in Table A.6 of this Appendix is a process measure that not only assesses a significantly similar patient population, but also assesses patients who had excisional surgery for melanoma or melanoma in situ in the past 5 years for completion of an exam and/or diagnosed for recurrence of melanoma. We believe the new measure provides a more meaningful impact to quality improvement for this patient population. |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2025 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. |

C.3. Oncology: Medical and Radiation – Plan of Care for Pain

| Category | Description |
|---|--|
| CBE# / eCQM CBE #: | 0383 / N/A |
| Quality #: | 144 |
| CMS eCQM ID: | N/A |
| Collection Type: | MIPS CQM Specifications |
| Measure Description: | Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain. |
| Measure Steward: | American Society of Clinical Oncology |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale for Removal: | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure is duplicative of measure Q143: Oncology: Medical and Radiation – Pain Intensity Quantified. Measure Q143 specifically questions cancer patients, currently receiving chemotherapy or radiation therapy, to quantify their pain intensity at each visit using a standardized tool. This measure is more robust than measure Q144 as it encourages the clinician to initiate a discussion regarding pain intensity with the patient at every denominator eligible visit. Measure Q144 is narrower in scope focusing on cancer patients identified with pain. To identify this patient population, a clinician would still need to screen their patients. Measure Q143 promotes screening of a broader patient population for pain, which still allows clinicians to administer care if pain is present. Additionally, measure Q143 is available for reporting within the eCQM Specifications collection type, allowing clinicians more measure options if reporting via eCQMs. |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2025 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. |

C.4. Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain

| Category | Description |
|---|--|
| CBE# / eCQM CBE #: | N/A / N/A |
| Quality #: | 254 |
| CMS eCQM ID: | N/A |
| Collection Type: | MIPS CQM Specifications |
| Measure Description: | Percentage of pregnant female patients aged 14 to 50 who present to the emergency department (ED) with a chief complaint of abdominal pain or vaginal bleeding who receive a trans-abdominal or trans-vaginal ultrasound to determine pregnancy location. |
| Measure Steward: | American College of Emergency Physicians |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale for Removal: | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure has reached the end of the topped-out lifecycle (82 FR 53640) and has a limited opportunity to improve clinical outcomes. Topped-out process measures are those with a median performance rate of 95 percent or higher (81 FR 77286). ¹³⁵ This measure's continued topped-out status is based on the current 2024 MIPS benchmarking data located at https://qpp.cms.gov/benchmarks , in addition to previous years MIPS benchmarking data. For more information on benchmarks, see the MIPS 2024 Quality Benchmarks User Guide at https://www.cms.gov/files/document/2024-quality-benchmarks-user-guide-scoring-examples-pdf.pdf . |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2025 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. |

C.5. Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2):

| Category | Description |
|--------------------|-------------|
| CBE# / eCQM CBE #: | N/A / N/A |

¹³⁵ See the 2024 MIPS Call for Measures Fact Set: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2711/2024-MIPS-Call-for-Measures-and-Activities.zip>.

| Category | Description |
|---|---|
| Quality #: | 260 |
| CMS eCQM ID: | N/A |
| Collection Type: | MIPS CQM Specifications |
| Measure Description: | Percent of asymptomatic patients undergoing Carotid Endarterectomy (CEA) who are discharged to home no later than post-operative day #2. |
| Measure Steward: | Society for Vascular Surgeons |
| High Priority Measure: | Yes |
| Measure Type: | Outcome |
| Rationale for Removal: | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure would be duplicative of measure Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) if the proposed changes to the measure are finalized. We are proposing in Table D.34 of this Appendix substantive changes to measure Q344, which describe the inclusion of the measure concept represented in Q260. Measure Q260 is focused on performing CEA on asymptomatic patients who are at low risk for morbidity and therefore are expected to have very low complication rates as indicated by patients being discharged to home by post-operative day #2. As a result, we are proposing to maintain measure Q344 and remove measure Q260 from MIPS. |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2025 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. |

C.6. Clinical Outcome Post Endovascular Stroke Treatment

| Category | Description |
|---|--|
| CBE# / eCQM CBE #: | N/A / N/A |
| Quality #: | 409 |
| CMS eCQM ID: | N/A |
| Collection Type: | MIPS CQM Specifications |
| Measure Description: | Percentage of patients with a Modified Rankin Score (mRS) score of 0 to 2 at 90 days following endovascular stroke intervention. |
| Measure Steward: | Society of Interventional Radiology |
| High Priority Measure: | Yes |
| Measure Type: | Outcome |
| Rationale for Removal: | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) at the measure steward’s request as it is no longer being maintained for inclusion. |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2025 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. |

C.7. Proportion of Patients Sustaining a Bowel Injury at the time of any Pelvic Organ Prolapse Repair

| Category | Description |
|--|---|
| CBE# / eCQM CBE #: | N/A / N/A |
| Quality #: | 433 |
| CMS eCQM ID: | N/A |
| Collection Type: | MIPS CQM Specifications |
| Measure Description: | Percentage of patients undergoing surgical repair of pelvic organ prolapse that is complicated by a bowel injury at the time of index surgery that is recognized intraoperatively or within 30 days after surgery. |
| Measure Steward: | American Urogynecologic Society |
| High Priority Measure: | Yes |
| Measure Type: | Outcome |
| Rationale for Removal: | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure would be duplicative of measure Q432: Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair, if the proposed changes to the measure are finalized. We are proposing in Table D.46 of this Appendix substantive changes to measure Q432, which describe the inclusion of the measure concept represented in measure Q433. In addition, we are proposing to update the measure title and description for measure Q432 to include patients who sustain a bowel injury at the time of any pelvic organ prolapse repair. |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2025 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. |

C.8. Age Appropriate Screening Colonoscopy

| Category | Description |
|--|--|
| CBE# / eCQM CBE #: | N/A / N/A |
| Quality #: | 439 |
| CMS eCQM ID: | N/A |
| Collection Type: | MIPS CQM Specifications |
| Measure Description: | The percentage of screening colonoscopies performed in patients greater than or equal to 86 years of age from January 1 to December 31. |
| Measure Steward: | American Gastroenterological Association |
| High Priority Measure: | Yes |
| Measure Type: | Efficiency |
| Rationale for Removal: | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because the quality action being measured has become standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this inverse measure is 0.15 percent for the MIPS CQM Specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. As such, the MIPS CQM Specifications collection type is considered extremely topped out. The average performance rate is based on the current 2024 MIPS benchmarking data located at https://qpp.cms.gov/benchmarks . For more information on benchmarks, see the MIPS 2024 Quality Benchmarks User Guide at https://www.cms.gov/files/document/2024-quality-benchmarks-user-guide-scoring-examples-pdf.pdf . |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2025 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. |

C.9. Patients with Metastatic Colorectal Cancer and RAS (KRAS or NRAS) Gene Mutation Spared Treatment with Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibodies

| Category | Description |
|--|---|
| CBE# / eCOM CBE #: | 1860 / N/A |
| Quality #: | 452 |
| CMS eCOM ID: | N/A |
| Collection Type: | MIPS CQM Specifications |
| Measure Description: | Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer and RAS (KRAS or NRAS) gene mutation spared treatment with anti-EGFR monoclonal antibodies. |
| Measure Steward: | American Society of Clinical Oncology |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale for Removal: | <p>We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure is duplicative of measure Q451: RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy. Measures Q451 and Q452 ask the same clinical question but approach questioning from different clinical perspectives. Measure Q451 assesses patients who have already received anti-EGFR monoclonal therapy to determine if they received RAS gene mutation testing prior to initiation of therapy, while measure Q452 is a standard-of-care measure, as well as the counter clinical perspective to measure Q451. Measure Q452 only evaluates for patients who received anti-EGFR monoclonal treatment. Therefore, measure Q452 is a component of the quality action within measure Q451. The molecular biomarkers for the evaluation of colorectal cancer guidelines¹³⁶ strongly recommend “Patients with colorectal carcinoma being considered for anti-EGFR therapy must receive RAS mutational testing.” which is the standard of care being evaluated by this measure.</p> <p>Measure Q451 provides an opportunity for a retrospective review and has the potential to improve clinical outcomes. For example, if the performance rates show there is a gap in medical care or high incidence of initiating therapy without first testing for the RAS gene mutation, clinical processes can be revised to improve practice. “Clinical care review is the process of retrospectively examining potential errors or gaps in medical care, with a goal of future practice improvement.”¹³⁷</p> |
| In the Circumstance the Measure Was Retained: | <p>If the measure is not finalized for removal in the CY 2025 PFS final rule, we are proposing to apply the following substantive changes to the measure specifications: (1) add denominator instructions to clarify the denominator eligible timeframe for diagnosis and (2) only patients who have been newly diagnosed with Stage IV colorectal cancer, or patients who have distant metastases at the time of colon cancer diagnosis, are to be included in the denominator of the measure to ensure the appropriate patient population is assessed for the numerator action.</p> <p>If the measure is not finalized for removal in the CY 2025 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would be addressed under Table Group C. The substantive changes outlined above would be applied to the measure specifications.</p> |

C.10. Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture

| Category | Description |
|--|---|
| CBE# / eCQM CBE #: | N/A / 3475e |
| Quality #: | 472 |
| CMS eCQM ID: | CMS249v7 |
| Collection Type: | eCQM Specifications |
| Measure Description: | Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period. |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale for Removal: | We are proposing the removal of this quality measure from MIPS (finalized in 83 FR 60104 through 60105) because the quality action being measured has become standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this inverse measure is 1.1 percent for the eCQM Specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. As such, the eCQM Specifications collection type is considered extremely topped out. The average performance rate is based on the current 2024 MIPS benchmarking data located at https://qpp.cms.gov/benchmarks . For more information on benchmarks, see the MIPS 2024 Quality Benchmarks User Guide at https://www.cms.gov/files/document/2024-quality-benchmarks-user-guide-scoring-examples-pdf.pdf . |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2025 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. |

Table Group D: Proposed Substantive Changes to Previously Finalized MIPS Quality Measures for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years

The D Tables within this proposed rule provide the substantive changes proposed for the MIPS quality measures in CY 2025. We note that some MIPS quality measures available in traditional MIPS and MVPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP) and/or APP Plus, as proposed in section IV.A.4.c.(3) of this proposed rule. For such measures, the collection type applicable for purposes of the APP and/or APP Plus (Medicare CQM for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM)) is also specified as a collection type available for such measures described in Table Group D.

The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2025 may not be identified within this proposed rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2025 CPT and ICD-10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2025. The 2025 Quality Measure Release Notes provide a comprehensive, detailed reference of exact code changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at <https://qpp.cms.gov>. In addition, eCQMs that are endorsed by a CBE are shown in Table D of this Appendix as follows: CBE # / eCQM CBE #.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes would expand or contract the measure's current eligible population. Therefore, please refer to the current year measure specification and the 2025 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has also been added, to all applicable 2025 quality measure specifications, in the form of an 'Instructions Note' to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only where telehealth encounters previously were not allowed as denominator eligible would the D table corresponding to a measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature, however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

D.1. Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)

| | |
|-------------------------------------|---|
| Category | Description |
| CBE # / eCQM CBE #: | 0059 / N/A |
| Quality #: | 001 |
| CMS eCQM ID: | CMS122v13 |
| Current Collection Type: | Medicare Part B Claims Measure Specifications/ eCQM Specifications/ MIPS CQM Specifications/ Medicare CQM Specifications (collection type available only in the APP and/or APP Plus) |
| Current Measure Description: | Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period. |
| Substantive Change: | <p>The measure title is revised from “Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)” to: Diabetes: Glycemic Status Assessment Greater Than 9%.</p> <p>The measure description is revised to read: For all collection types: Percentage of patients 18-75 years of age with diabetes who had a glycemic status assessment (hemoglobin A1c [HbA1c] or glucose management indicator [GMI]) > 9.0% during the measurement period.</p> <p>Updated denominator exclusion: For all collection types: Removed: specific encounter requirements from the frailty/advanced illness exclusion.</p> <p>The measure numerator is revised to read: For all collection types: Patients whose most recent glycemic status assessment (HbA1c or GMI) (performed during the measurement period) is > 9.0% or is missing, or was not performed during the measurement period.</p> <p>Updated guidance: For the eCQM Specifications collection type: Revised: If the glycemic status assessment (HbA1c or GMI) is in the medical record, the test can be used to determine numerator compliance.</p> <p>Added: Glycemic status assessment (HbA1c or GMI) must be reported as a percentage (%). If multiple glycemic status assessments were recorded for a single date, use the lowest result.</p> <p>Updated numerator instructions: For the MIPS CQM Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: GMI as an assessment option.</p> <p>Updated numerator options: For the MIPS CQM Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: GMI as an assessment option.</p> <p>Updated numerator note: For the MIPS CQM Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: If multiple glycemic status assessments were recorded for a single date, use the lowest result.</p> |
| Measure Steward: | National Committee for Quality Assurance |
| High Priority Measure: | Yes |
| Measure Type: | Intermediate Outcome |
| Rationale | <p>We are proposing to revise this measure to include glucose management indicators (GMI) to broaden the acceptable methods for monitoring the glycemic status of patients with diabetes. This measure revision supports those clinicians that are using this monitoring method to ensure management of persons with diabetes using continuous glucose monitoring.¹³⁸</p> <p>We are also proposing to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician’s medical record. This revision would update the denominator exclusion to remove any patient 66 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator of measure Q001. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data.</p> |

¹³⁸ ElSayed, N. A., Aleppo, G., Aroda, V. R., Bannuru, R. R., Brown, F. M., Bruemmer, D., Collins, B. S., Hilliard, M. E., Isaacs, D., Johnson, E. L., Kahan, S., Khuntj, K., Leon, J., Lyons, S. K., Perry, M. L., Prahalad, P., Pratley, R. E., Seley, J. J., Stanton, R. C., Gabbay, R. A., ... on behalf of the American Diabetes Association (2023). 7. Diabetes Technology: Standards of Care in Diabetes-2023. *Diabetes Care*, 46(Suppl 1), S111–S127. <https://doi.org/10.2337/dc23-S007>.

D.2. Anti-Depressant Medication Management

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 009 |
| CMS eCQM ID: | CMS128v13 |
| Current Collection Type: | eCQM Specifications |
| Current Measure Description: | Percentage of patients 18 years of age and older who were treated with antidepressant medication, had a diagnosis of major depression, and who remained on an antidepressant medication treatment. Two rates are reported.
a. Percentage of patients who remained on an antidepressant medication for at least 84 days (12 weeks).
b. Percentage of patients who remained on an antidepressant medication for at least 180 days (6 months). |
| Substantive Change: | The measure initial patient population is revised to read: Patients 18 years of age and older as of the IPSD who were dispensed antidepressant medications during the Intake Period, and were diagnosed with major depression 60 days prior to, or 60 days after the dispensing event and had a visit 60 days prior to, or 60 days after the dispensing event.

Updated logic and logic definition: Revised: logic to base it on age and IPSD. |
| Measure Steward: | National Committee for Quality Assurance |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to revise the initial patient population look-back window to evaluate the age of the patient when medication is dispensed during the intake period. The updated timeframe distinguishes between a new prescription and a continuing prescription to ensure the measure logic is more accurate in determining the antidepressant treatment has met the numerator's quality action. We are also proposing to update the logic to look at the age and IPSD so that the look-back window allows all patients to be assessed for the exclusion criteria related to previous anti-depression medication. |

D.3. Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 019 |
| CMS eCQM ID: | CMS142v13 |
| Current Collection Type: | eCQM Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once during the performance period. |
| Substantive Change: | Modified collection type: eCQM Specifications collection type.

Updated Guidance: Revised: The communication of results, including the level of severity of diabetic retinopathy and presence or absence of macular edema to the primary care physician providing ongoing care of a patient's diabetes should be completed soon after the dilated exam is performed. |
| Measure Steward: | American Academy of Ophthalmology |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to remove the MIPS CQM Specifications collection type as it has reached the end of the topped-out lifecycle (82 FR 53640). The average performance rate and topped-out status is based on the current MIPS benchmarking data located at https://qpp.cms.gov/benchmarks . However, the benchmarking data continues to show a gap for the eCQM Specifications collection type and as such, we are proposing to retain that collection type.

Additionally, we are proposing to revise the measure guidance to define required information to be included within the report for the purposes of numerator compliance. This ensures all appropriate information is being communicated for patient care coordination. |

D.4. Advance Care Plan

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | 0326 / N/A |
| Quality #: | 047 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | Medicare Part B Claims Specifications, MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan. |
| Substantive Change: | Updated the denominator criteria: For the MIPS CQM Specifications and the Medicare Part B Specifications collection types: Added: coding for neuropsychology. |
| Measure Steward: | National Committee for Quality Assurance |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update denominator criteria to include coding for neuropsychology as this measure is applicable to their scope of care. |

D.5. Diabetes: Eye Exam

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | 0055 / N/A |
| Quality #: | 117 |
| CMS eCQM ID: | CMS131v13 |
| Current Collection Type: | eCQM Specifications/ MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period. |
| Substantive Change: | Updated denominator exclusion: For all collection types: Removed: specific encounter requirements from the frailty/advanced illness exclusion. |
| Measure Steward: | National Committee for Quality Assurance |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician's medical record. This revision would update the denominator exclusion to remove any patient 66 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator of measure Q117. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data. |

D.6. Documentation of Current Medications in the Medical Record

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 130 |
| CMS eCQM ID: | CMS68v14 |
| Current Collection Type: | eCQM Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of visits for patients aged 18 years and older for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter. |
| Substantive Change: | <p>The measure description is revised to read: For all collection types: Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.</p> <p>Updated guidance: For the eCQM specifications collection type: Revised: allows for documentation to be completed on the day of the encounter.</p> <p>Updated initial patient population: For the eCQM specifications collection type: Removed: age criteria.</p> <p>Updated denominator: For the MIPS CQM Specifications collection type: Removed: age criteria.</p> <p>Updated denominator criteria: For the MIPS CQM Specifications collection type: Removed: age criteria.</p> <p>Added: coding for pediatric audiology services.</p> <p>Updated numerator note: For the MIPS CQM Specifications collection type: Revised: allows for documentation to be completed on the day of the encounter.</p> |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | <p>We are proposing to update multiple components of the measure to remove the age criteria so that all patients, regardless of age, are assessed for having a list of their current medications documented in their medical record. This revision broadens the denominator, supporting assessment of current medications for all patient age ranges. Assessing for missing information about the dosage, route, or frequency of a medication supports clinical communication and may assist in avoiding patient harm.¹³⁹</p> <p>Additionally, we are proposing to update the measure to allow for the quality action to occur on the day of the encounter rather than limiting to during the encounter. This allows for flexibility to align with the clinician's workflows and systems.</p> <p>We are also proposing to update the denominator criteria to include coding for pediatric audiology services as this measure is applicable to their scope of care.</p> |

¹³⁹ Owen, M. C., Chang, N. M., Chong, D. H., & Vawdrey, D. K. (2011). Evaluation of Medication List Completeness, Safety, and Annotations. *AMIA Annual Symposium Proceedings. AMIA Symposium, 2011*, 1055–1061. <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3243276/>.

D.7. Oncology: Medical and Radiation – Pain Intensity Quantified

| | |
|-------------------------------------|---|
| Category | Description |
| CBE # / eCQM CBE #: | 0384 / 0384e |
| Quality #: | 143 |
| CMS eCQM ID: | CMS157v13 |
| Current Collection Type: | eCQM Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified. |
| Substantive Change: | Updated initial patient population: For the eCQM Specifications collection type: Revised:
Population 1: All patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy.
Population 2: All patient visits, regardless of patient age, with a diagnosis of cancer currently receiving radiation therapy. |
| Measure Steward: | American Society of Clinical Oncology |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to revise this measure to split the initial patient population to delineate between patients who are receiving radiation therapy and are assessed for pain intensity and their pain level quantified. This additional patient population would allow clinicians reporting this measure the ability to distinguish their performance between patients receiving chemotherapy and those receiving radiation services. It would also align the measure across all collection types. |

D.8. Falls: Plan of Care

| | |
|-------------------------------------|---|
| Category | Description |
| CBE # / eCQM CBE #: | 0101 / N/A |
| Quality #: | 155 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | Medicare Part B Claims Measure Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months. |
| Substantive Change: | Modified collection type: MIPS CQM Specifications collection type. |
| Measure Steward: | National Committee for Quality Assurance |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to revise this measure by removing the Medicare Part B Claims Measure Specifications collection type for this measure as it has reached the end of the topped-out lifecycle (82 FR 53640). The average performance rate is based on the current 2024 MIPS benchmarking data located at https://qpp.cms.gov/benchmarks . |

D.9. Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration

| | |
|-------------------------------------|---|
| Category | Description |
| CBE # / eCQM CBE #: | 0115 / N/A |
| Quality #: | 168 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS QOM Specifications |
| Current Measure Description: | Percentage of patients aged 18 years and older undergoing isolated CABG surgery who require a return to the operating room (OR) during the current hospitalization for mediastinal bleeding with or without tamponade, graft occlusion, valve dysfunction, or other cardiac reason. |
| Substantive Change: | <p>The measure description is revised to read: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who require a return to the operating room (OR) for mediastinal bleeding with or without tamponade, unplanned coronary artery intervention (native vessel, graft or both), valve dysfunction, aortic reintervention or other cardiac reason during the current hospitalization.</p> <p>The measure numerator is revised to read: Patients undergoing isolated CABG surgery who require a return to the OR for mediastinal bleeding with or without tamponade, unplanned coronary artery intervention (native vessel, graft or both), valve dysfunction, aortic reintervention or other cardiac reason during the current hospitalization.</p> <p>Updated numerator options: Added: unplanned coronary artery intervention (native vessel, graft, or both) and aortic reintervention</p> |
| Measure Steward: | Society of Thoracic Surgeons |
| High Priority Measure: | Yes |
| Measure Type: | Outcome |
| Rationale | We are proposing to revise this measure to broaden the scope of cardiac complications that may require a return to the operating room following isolated CABG surgery. These revisions support the measure to decrease surgical re-exploration following CABG surgery, which is a serious complication and impacts length of stay, efficient use of resources, and increases risk for additional injury and death. ¹⁴⁰ Although rates of re-exploration after cardiac surgery have significantly declined recently, it has been linked to much higher complications, mortality, and hospitalizations. ¹⁴¹ |

¹⁴⁰ Tran, Z., Williamson, C., Hadaya, J., Verma, A., Sanaiha, Y., Chervu, N., Gandjian, M., & Benharash, P. (2022). Trends and Outcomes of Surgical Reexploration After Cardiac Operations in the United States. *The Annals of Thoracic Surgery*, 113(3), 783–792. <https://doi.org/10.1016/j.athoracsur.2021.04.011>.

¹⁴¹ See footnote Tran et al., 2022.

D.10. Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 176 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | If a patient has been newly prescribed a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection, then the medical record should indicate TB testing in the preceding 12-month period. |
| Substantive Change: | Updated denominator instructions: Added: new biosimilar medications. |
| Measure Steward: | American College of Rheumatology |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to update the list of medications by adding new biosimilar medications to the existing list in the denominator instructions. This expansion would provide an up-to-date list of appropriate biologics and/or immune response modifiers that clinicians may have prescribed for their patients, thereby ensuring that the right patients are identified in the denominator of this measure. These targeted immunotherapies are associated with a high risk of progression to active TB infection, therefore screening for latent TB prior to initiating first course therapy is highly recommended since it has been shown to effectively reduce the incidence of progression in patients with latent TB. ¹⁴² |

¹⁴² CDC. (2020). Latent Tuberculosis Infection – A Guide for Primary Health Care Providers. <https://www.cdc.gov/tb/media/pdfs/Latent-TB-Infection-A-Guide-for-Primary-Health-Care-Providers.pdf>.

D.11. Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | 2523 / N/A |
| Quality #: | 177 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have an assessment of disease activity using an ACR-preferred RA disease activity assessment tool at $\geq 50\%$ of encounters for RA for each patient during the measurement year. |
| Substantive Change: | <p>The measure description is revised to read: Percentage of patients aged 18 years and older with two or more diagnoses of rheumatoid arthritis (RA) at least 90 days apart who have an assessment of disease activity using an ACR-preferred RA disease activity assessment tool at $\geq 50\%$ of encounters for RA for each patient during the performance period.</p> <p>The measure denominator is revised to read: Patients aged 18 years and older with two or more RA diagnoses documented at least 90 days apart with at least one encounter with an RA diagnosis occurring during the performance period and an additional encounter with an RA diagnosis occurring in the performance period or prior performance period.</p> <p>Updated denominator definition: Added:
Encounter – An encounter during the performance period where one of the CPT or HCPCS codes listed in the patient encounter criteria is used without a telehealth modifier (i.e., only non-telehealth visits are to be considered for this measure).</p> <p>Additional encounter - An additional encounter during the performance period or prior performance period where one of the CPT or HCPCS codes listed in the patient encounter is used to confirm an RA diagnosis with ICD-10-CM diagnosis codes as listed in the Denominator criteria.</p> <p>Updated denominator criteria: Added: An additional encounter with an RA diagnosis during the performance period or prior performance period that is at least 90 days before or after an encounter with an RA diagnosis during the performance period.</p> <p>Updated numerator definition: Revised: A result within the valid range of the selected tool qualifies for meeting numerator performance as long as a result is captured at $\geq 50\%$ of each patient's qualified encounters. If the result of a recorded disease activity assessment is outside the valid range of scores for the tool (e.g., a CDAI score of 101 when the maximum possible score is 76.0) or is only recorded as a disease activity level (e.g., low, moderate, or high) in place of a calculated numerical score, this score should not be included in the count to meet the $\geq 50\%$ requirement in the numerator.</p> |
| Measure Steward: | American College of Rheumatology |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | <p>We are proposing to revise the denominator to provide greater specificity on the timeframe and criteria for denominator coding and how it should be captured to ensure the appropriate patients are being identified for this measure. Diagnosing RA requires “a combination of physical exams, blood tests for inflammatory markers, and imaging tests (like X-rays and MRIs), in addition to patient-reported symptoms,” which can take multiple visits to determine an accurate assessment of RA disease activity.¹⁴³ Therefore, this change would align more closely with the workflow of clinicians and allows the assessment of a patient for RA disease activity during more than one clinical visit. These changes support a comprehensive perspective of the patient's disease activity level and should promote optimal treatment outcomes.</p> <p>We are proposing to revise the definition for ‘Assessment of Disease Activity’ to confirm that only those assessments where the disease activity is correctly recorded are included in the numerator quality action for the purposes of meeting performance. Not only do the results need to be within the range of the selected validated qualifying tool, but also a calculated numeric score and not simply a disease activity level. This ensures that all assessment information is correctly captured to drive appropriate care.</p> |

¹⁴³ Brody, B. (2020). The American College of Rheumatology Updated Its Approved Disease Activity Measures for Rheumatoid Arthritis — Here's What That Means. <https://creakyjoints.org/living-with-arthritis/symptoms/approved-disease-activity-measures-for-rheumatoid-arthritis/>.

D.12. Rheumatoid Arthritis (RA): Functional Status Assessment

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 178 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS QOM Specifications |
| Current Measure Description: | Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) for whom a functional status assessment was performed at least once within 12 months. |
| Substantive Change: | <p>The measure description is revised to read: Percentage of patients aged 18 years and older with two or more diagnoses of rheumatoid arthritis (RA) at least 90 days apart for whom a functional status assessment was performed at least once during the performance period.</p> <p>The measure denominator is revised to read: Patients aged 18 years and older with two or more RA diagnoses documented at least 90 days apart with at least one encounter with an RA diagnosis occurring during the performance period and an additional encounter with an RA diagnosis occurring in the performance period or prior performance period.</p> <p>Updated denominator definition: Added:
 Encounter – An encounter during the performance period where one of the CPT or HCPCS codes listed in the patient encounter criteria is used.
 Additional encounter – An additional encounter during the performance period or prior performance period where one of the CPT or HCPCS codes listed in the patient encounter is used to confirm an RA diagnosis with ICD-10-CM diagnosis codes as listed in the Denominator criteria.</p> <p>Updated denominator criteria: Added: an additional encounter with an RA diagnosis during the performance period or prior performance period that is at least 90 days before or after an encounter with an RA diagnosis during the performance period.</p> |
| Measure Steward: | American College of Rheumatology |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to revise the denominator to provide greater specificity on the timeframe and criteria for denominator coding and how it should be captured to ensure the appropriate patients are being identified for this measure. Diagnosing RA requires “a combination of physical exams, blood tests for inflammatory markers, and imaging tests (like X-rays and MRIs), in addition to patient-reported symptoms,” which can take multiple visits to determine an accurate assessment of RA disease activity. ¹⁴⁴ Therefore, this change would align more closely with the workflow of clinicians and allows assessment of a patient for RA disease activity during more than one clinical visit. These changes support a comprehensive perspective of the patient’s disease activity level and should promote optimal treatment outcomes. |

¹⁴⁴ See footnote Brody, 2020 in Table D.11 of this Appendix.

D.13. Rheumatoid Arthritis (RA): Glucocorticoid Management

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 180 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have been assessed for glucocorticoid use and, for those on prolonged doses of prednisone > 5 mg daily (or equivalent) with improvement or no change in disease activity, documentation of glucocorticoid management plan within 12 months. |
| Substantive Change: | <p>The measure description is revised to read: Percentage of patients aged 18 years and older with two or more diagnoses of rheumatoid arthritis (RA) at least 90 days apart who have been assessed for glucocorticoid use and, for those on prolonged doses of prednisone >5 mg daily (or equivalent) with improvement or no change in disease activity, documentation of glucocorticoid management plan during the performance period.</p> <p>The measure denominator is revised to read: Patients aged 18 years and older with two or more RA diagnoses documented at least 90 days apart with at least one encounter with an RA diagnosis occurring during the performance period and an additional encounter with an RA diagnosis occurring in the performance period or prior performance period.</p> <p>Updated denominator definition: Added:
Encounter – An encounter during the performance period where one of the CPT or HCPCS codes listed in the patient encounter criteria is used.</p> <p>Additional encounter – An additional encounter during the performance period or prior performance period where one of the CPT or HCPCS codes listed in the patient encounter is used to confirm an RA diagnosis with ICD-10-CM diagnosis codes as listed in the Denominator criteria.</p> <p>Updated denominator criteria: Added: An additional encounter with an RA diagnosis during the performance period or prior performance period that is at least 90 days before or after an encounter with an RA diagnosis during the performance period.</p> |
| Measure Steward: | American College of Rheumatology |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to revise the denominator to provide greater specificity on the timeframe and criteria for denominator coding and how it should be captured to ensure the appropriate patients are being identified for this measure. Diagnosing RA requires “a combination of physical exams, blood tests for inflammatory markers, and imaging tests (like X-rays and MRIs), in addition to patient-reported symptoms,” which can take multiple visits to determine an accurate assessment of RA disease activity. ¹⁴⁵ Therefore, this change would align more closely with the workflow of clinicians and allows assessment of a patient for RA disease activity during more than one clinical visit. These changes support a comprehensive perspective of the patient’s disease activity level and should promote optimal treatment outcomes. |

¹⁴⁵ See footnote Brody, 2020 in Table D.11 of this Appendix.

D.14. Elder Maltreatment Screen and Follow-Up Plan

| | |
|-------------------------------------|--|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 181 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | Medicare Part B Claims Measure Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients aged 60 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen. |
| Substantive Change: | Updated denominator criteria: For all collection types: Added: coding for emergency department. |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to add encounter codes for emergency department (ED) visits to the denominator criteria as the emergency department is an appropriate setting for screening for elder maltreatment. "EDs are a potentially important setting for elder mistreatment identification because they provide care for a large number of older adults who may be elder mistreatment victims" especially given that the ED is sometimes the only clinical setting that the patient may visit. ¹⁴⁶ Expanding the denominator to include ED visits ensures a more complete denominator patient population and provides support and delivery of interventions that could prevent actual abuse. |

¹⁴⁶ See footnote Rosen et al., 2020 in Table B.11 of this Appendix.

D.15. Functional Outcome Assessment

| | |
|-------------------------------------|--|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 182 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies within two days of the date of the identified deficiencies. |
| Substantive Change: | Updated numerator definition: Revised:
Functional Outcome Assessment: Patient completed questionnaires designed to measure a patient's limitations in performing the usual human tasks of living and to directly quantify functional and behavioral symptoms. If a patient is unable to complete a questionnaire, a standardized clinical assessment tool may be used to measure a patient's limitations.
Added: To Table 1. Definitions for Magnitude of Effects, Based on Mean Between-Group Differences – Modified*: clarification that list of standardized tools is not exhaustive. |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update the numerator definition to clarify that clinicians may use a standardized clinical assessment tool to measure a patient's limitation if they are unable to complete a questionnaire. This change would allow flexibility in performing the quality action and clarify that the list of standardized tools named in the measure are only examples, not an exhaustive list. The National Institute of Health indicates that it supports the use of standardized tools, stating they offer a clinician-designed approach to promoting care standardization that accommodates patients' individual differences, respects clinicians' clinical judgement, and keeps pace with the rapid growth of medical knowledge. ¹⁴⁷ |

¹⁴⁷ Farias, M., Jenkins, K., Lock, J., Rathod, R., Newburger, J., Bates, D. W., Safran, D. G., Friedman, K., & Greenberg, J. (2013). Standardized Clinical Assessment and Management Plans (SCAMPs) Provide a Better Alternative to Clinical Practice Guidelines. *Health Affairs (Project Hope)*, 32(5), 911–920.
<https://doi.org/10.1377/hlthaff.2012.0667>.

D.16. Colonoscopy Interval for Patients with a History of Adenomatous Polyps – Avoidance of Inappropriate Use

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 185 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients aged 18 years and older receiving a surveillance colonoscopy, with a history of prior adenomatous polyp(s) in previous colonoscopy findings, which had an interval of 3 or more years since their last colonoscopy. |
| Substantive Change: | Updated denominator exception: Added: To the 'Documentation of system reasons(s): patient cannot provide precise date or details from previous colonoscopy. |
| Measure Steward: | American Gastroenterological Association |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator exception to exclude patients that are unable to provide the precise date or details from a previous colonoscopy. This addition would assist with data collection when a patient with a history of adenomatous polyps is unable to provide information regarding their last colonoscopy. |

D.17. Controlling High Blood Pressure

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 236 |
| CMS eCQM ID: | CMS165v13 |
| Current Collection Type: | Medicare Part B Claims Measure Specifications / eCQM Specifications/ MIPS CQM Specifications/ Medicare CQM Specifications (collection type available only in the APP and/or APP Plus) |
| Current Measure Description: | Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period. |
| Substantive Change: | Updated denominator exclusion: For all collection types: Removed: specific encounter requirements from the frailty/advanced illness exclusion. |
| Measure Steward: | National Committee for Quality Assurance |
| High Priority Measure: | Yes |
| Measure Type: | Intermediate Outcome |
| Rationale | We are proposing to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician's medical record. This revision would update the denominator exclusion to remove any patient 66 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator of measure Q236. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data. |

D.18. Use of High-Risk Medications in Older Adults

| | |
|-------------------------------------|---|
| Category | Description |
| CBE # / eCQM CBE #: | 0022 / N/A |
| Quality #: | 238 |
| CMS eCQM ID: | CMS156v13 |
| Current Collection Type: | eCQM Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class. |
| Substantive Change: | <p>Updated numerator definition: For the MIPS CQM Specifications collection type:
 Numerator (Submission Criteria 1): Table 1 - High-Risk Medications at any Dose or Duration</p> <p>Removed:
 From Anticholinergics, first-generation antihistamines: Carbinoxamine, Clemastine, Dexbrompheniramine, Dexchlorpheniramine, Pyrilamine
 From Antispasmodics: Belladonna alkaloids, Methscopolamine, Propantheline
 From Cardiovascular, alpha agonists, central: Methyl dopa
 From Cardiovascular, other: Disopyramide
 From Central nervous system, antidepressants: Protriptyline Trimipramine
 From Central nervous system, barbiturates: Amobarbital, Butabarbital, Pentobarbital, Secobarbital
 From Central nervous system, vasodilators: Isoxsuprine
 From Endocrine system, sulfonyleureas, long-duration: Chlorpropamide
 From Endocrine system, other: Megestrol
 From Pain medications, other: Meperidine</p> <p>Added: A row with one medication is considered a group (or drug class) of one; therefore, two orders of that same medication are numerator compliant.</p> <p>Added:
 To Central nervous system, barbiturates: Primidone
 Endocrine system, megestrol: Megestrol
 Pain medications, meperidine: Meperidine
 To Pain medications, other: Ketorolac, includes parenteral and oral</p> <p>Table 3 – High-Risk Medications With Average Daily Dose Criteria
 Removed:
 Alpha agonists, central: Reserpine >0.1 mg per day</p> <p>Numerator (Submission Criteria 2): Table 4 – High-Risk Medications
 Removed:
 From Benzodiazepines, long, short and intermediate acting: Flurazepam, Quazepam</p> <p>Added:
 To Benzodiazepines, long, short and intermediate acting: Clobazam</p> |
| Measure Steward: | National Committee for Quality Assurance |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update the list of high-risk medications to align with 2023 AGS Beers Criteria ¹⁴⁸ and ensure that older adults are not prescribed inappropriate medications. This change would also align with PY 2025 eCQM version (CMS156v13), which supports alignment between the collection types. We are also proposing to add clarification that the medications found within a single row of table one, within the specification, represent a unique group or drug class. Therefore, two orders from that group or drug class would be consider numerator compliant for this measure, which has an inverse analytic for the calculation of performance. |

¹⁴⁸ The 2023 American Geriatrics Society Beers Criteria Update Expert Panel. (2023). American Geriatrics Society 2023 updated AGS Beers Criteria for potentially inappropriate medication use in older adults. Journal of the American Geriatrics Society, 71(7), 2052-2081. <https://doi.org/10.1111/jgs.18372>.

D.19. Barrett's Esophagus

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 249 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | Medicare Part B Claims Measure Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of esophageal biopsy reports that document the presence of Barrett's mucosa that also include a statement about dysplasia. |
| Substantive Change: | Updated denominator exception: For all collection types: Added: Specimen site other than anatomic location of esophagus.

Updated denominator exclusion: For all collection types: Removed: Specimen site other than anatomic location of esophagus. |
| Measure Steward: | College of American Pathologists |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to remove the denominator exclusion so that all patients with a diagnosis for Barrett's Esophagus are included in the denominator of the measure and are proposing to add a denominator exception for specimen sites other than the anatomic location of the esophagus. Revising the measure to include this element as a denominator exception would allow for an automated capture of the relevant cases with less manual intervention reducing overall burden of measure reporting. |

D.20. Sleep Apnea: Severity Assessment at Initial Diagnosis

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 277 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea who had an apnea hypopnea index (AHI), a respiratory disturbance index (RDI), or a respiratory event index (REI) documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea. |
| Substantive Change: | Updated denominator exception: Added: patients previously diagnosed with OSA and severity assessed by another provider. |
| Measure Steward: | American Academy of Sleep Medicine |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator exception by adding that patients previously diagnosed with obstructive sleep apnea (OSA), with severity assessed by another clinician and documented would not need to have the testing completed again. This denominator exceptions allows clinician judgement as to whether repeat testing is needed, as we don't want to promote overutilization. This revision increases clarity of this element and ensures consistent implementation allowing for more comparable data. |

D.21. Dementia: Cognitive Assessment

| | |
|-------------------------------------|--|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / 2872e |
| Quality #: | 281 |
| CMS eCQM ID: | CMS149v13 |
| Current Collection Type: | eCQM Specifications |
| Current Measure Description: | Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period. |
| Substantive Change: | Updated guidance: Added: The measure requires a diagnosis of dementia is present before the routine assessment of cognition once in a 12-month period. |
| Measure Steward: | American Academy of Neurology |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to update the measure guidance to clarify that the diagnosis of dementia must be present prior to the cognitive assessment. This would ensure that any cognitive assessments performed prior to the dementia diagnosis but occurred during the 12-month lookback period would not be attributed to this measure numerator. ¹⁴⁹ This change would ensure consistency in the abstraction of the measure's numerator elements based upon a specific timeframe that support rigorous data for the calculation of MIPS performance rates. |

¹⁴⁹ Office of the Assistance Secretary for Planning and Evaluation. (2016). Examining Models of Dementia Care: Final Report. <https://aspe.hhs.gov/reports/examining-models-dementia-care-final-report-0>.

D.22. Dementia: Functional Status Assessment

| | |
|-------------------------------------|---|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 282 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS QM Specifications |
| Current Measure Description: | Percentage of patients with dementia for whom an assessment of functional status was performed at least once in the last 12 months. |
| Substantive Change: | Updated denominator criteria: Added: coding for speech language pathology and nuclear medicine. |
| Measure Steward: | American Academy of Neurology/American Psychiatric Association |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to add encounter codes for speech language pathologists and nuclear medicine to the denominator criteria as these are appropriate specialties to identify changes in functional status in patients diagnosed with dementia. Dementia, which can be caused by “different brain diseases,” affects a person’s activities of daily living including, but not limited to eating and swallowing, and speech. ¹⁵⁰ |

¹⁵⁰ American Speech-Language-Hearing Association (ASHA). Dementia.
<https://www.asha.org/public/speech/disorders/dementia/>.

D.23. Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 286 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS QM Specifications |
| Current Measure Description: | Percentage of patients with dementia or their caregiver(s) for whom there was a documented safety concerns screening in two domains of risk: 1) dangerousness to self or others and 2) environmental risks; and if safety concerns screening was positive in the last 12 months, there was documentation of mitigation recommendations, including but not limited to referral to other resources. |
| Substantive Change: | Updated denominator criteria: Added: coding for speech language pathology and nuclear medicine. |
| Measure Steward: | American Academy of Neurology/American Psychiatric Association |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator criteria to include coding for speech language pathology and nuclear medicine as this measure is applicable to their scope of care. Dementia, which can be caused by “different brain diseases,” affects a person’s activities of daily living including, but not limited to eating and swallowing, and speech. ¹⁵¹ |

¹⁵¹ See footnote ASHA in Table D.22 of this Appendix.

D.24. Dementia: Education and Support of Caregivers for Patients with Dementia

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 288 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS QOM Specifications |
| Current Measure Description: | Percentage of patients with dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months. |
| Substantive Change: | Updated denominator criteria: Added: coding for speech language pathology and nuclear medicine. |
| Measure Steward: | American Academy of Neurology/American Psychiatric Association |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator criteria to include coding for speech language pathology and nuclear medicine as this measure is applicable to their scope of care. Dementia, which can be caused by “different brain diseases,” affects a person’s activities of daily living including, but not limited to eating and swallowing, and speech. ¹⁵² |

¹⁵² See footnote ASHA in Table D.22 of this Appendix.

D.25. Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 290 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for depression, anxiety, apathy, AND psychosis once during the measurement period. |
| Substantive Change: | Updated denominator criteria: Added: coding for neuropsychology and behavioral health. |
| Measure Steward: | American Academy of Neurology |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator criteria to include coding for neuropsychology and behavioral health as it's clinically appropriate for these clinician types to assess for depression, anxiety, apathy, and psychosis. |

D.26. Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 291 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for cognitive impairment or dysfunction once during the measurement period. |
| Substantive Change: | Updated denominator criteria: Added: coding for neuropsychology, behavioral health, and physical and occupational therapy. |
| Measure Steward: | American Academy of Neurology |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator criteria to include coding for neuropsychology, behavioral health, and physical and occupational therapy as it's clinically appropriate for these clinician types to assess for cognitive impairment or dysfunction. |

D.27. Rehabilitative Therapy Referral for Patients with Parkinson's Disease

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 293 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of all patients with a diagnosis of Parkinson's Disease who were referred to physical, occupational, speech, or recreational therapy once during the measurement period. |
| Substantive Change: | Updated denominator criteria: Added: coding for neuropsychology, behavioral health, and speech language pathology. |
| Measure Steward: | American Academy of Neurology |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator criteria to include coding for neuropsychology, behavioral health, and speech language pathology as this measure is applicable to their scope of care. |

D.28. Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

| | |
|-------------------------------------|--|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 317 |
| CMS eCQM ID: | CMS22v13 |
| Current Collection Type: | Medicare Part B Claims Measure Specifications / eCQM Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive. |
| Substantive Change: | <p>Updated denominator criteria: For the MIPS CQM Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: coding for nutrition/dietitian clinician type.</p> <p>Updated numerator definition: For all collection types: Revised: intervals for rescreening for first and second hypertensive BP readings.</p> |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | <p>We are proposing to add encounter codes for nutrition therapy to the denominator criteria for the MIPS CQM Specifications and the Medicare Part B Claims Measure Specifications collection types as this is an appropriate setting to identify people who may have elevated blood pressure (BP) readings. Nutritional approaches play a pivotal role in helping to reduce the risk of hypertension or control blood pressure in people with hypertension.¹⁵³</p> <p>We are proposing to remove the minimum timeframe for follow-up screenings for patients with elevated BP readings for all collection types. This change allows clinician discretion to recommend a follow-up plan based on the patient's current health status. Additionally, this supports stability of this measure component, as the frequency is each visit, within the specification over time, while still maintaining consistency with the current guidelines.¹⁵⁴</p> |

¹⁵³ Physicians Committee for Responsible Medicine. (2023). Nutrition Guide for Clinicians: Hypertension.

https://nutritionguide.pcrm.org/nutritionguide/view/Nutrition_Guide_for_Clinicians/1342053/all/Hypertension.

J., Muntner, P., Ovbigele, B., Smith, S. C., Jr, Spencer, C. C., Stafford, R. S., Taler, S. J., Thomas, R. J., Williams, K. A., Sr, Williamson, J. D., ... Wright, J. T., Jr (2018). 2017 ACC/AHA/AAPA/ABC/ACPM/AGS/APhA/ASH/ASPC/NMA/PCNA Guideline for the Prevention, Detection, Evaluation, and Management of High Blood Pressure in Adults: A Report of the American College of Cardiology/American Heart Association Task Force on Clinical Practice Guidelines. *Journal of the American College of Cardiology*, 71(19), e127–e248. <https://doi.org/10.1016/j.jacc.2017.11.006>.

D.29. Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients

| | |
|-------------------------------------|--|
| Category | Description |
| CBE # / eCQM CBE #: | 0658 / N/A |
| Quality #: | 320 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | Medicare Part B Claims Measure Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients aged 45 to 75 years of age receiving a screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of at least 10 years for repeat colonoscopy documented in their colonoscopy report. |
| Substantive Change: | <p>The measure description is revised to read: For all collection types: Percentage of patients aged 45 to 75 years of age receiving a screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of 10 years for repeat colonoscopy documented in their colonoscopy report.</p> <p>Updated numerator: For all collection types: Revised: Patients who had recommended follow-up interval of 10 years for repeat colonoscopy documented in their colonoscopy report.</p> <p>Updated numerator note: For all collection types: Added: To meet the numerator, patients with a negative screening colonoscopy should have documentation that they received counseling or instruction to have a follow-up or repeat colonoscopy in 10 years. A 6 month period before or after 10 years is considered within the recommended follow-up interval.</p> <p>Updated numerator options: For all collection types: Revised:</p> <p>Performance Met: Recommended follow-up interval for repeat colonoscopy of 10 years documented in colonoscopy report and communicated with patient.</p> <p>Denominator Exception: Documentation of medical reason(s) for not recommending a 10 year follow-up interval (e.g., inadequate prep, familial or personal history of colonic polyps, patient had no adenoma and age is \geq 66 years old, or life expectancy $<$ 10 years, other medical reasons)</p> <p>Performance Not Met: A 10 year follow-up interval for colonoscopy not recommended, reason not otherwise specified.</p> |
| Measure Steward: | American Gastroenterological Association |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update the measure description, numerator, and numerator options to ensure the time frame for recommended follow up after a normal colonoscopy for the average risk patient accurately reflects current guidelines which states “[n]ew observational and modeling studies of colonoscopy confirm and strengthen the evidence base to support the conclusion that individuals with normal colonoscopy are at lower-than-average risk for CRC. Based on this reduced risk, we recommend CRC screening in average-risk individuals be repeated 10 years after a normal examination complete to the cecum with bowel preparation adequate to detect polyps $>$ 5 mm in size.” ¹⁵⁵ Additionally, we are proposing to add a numerator note to indicate inclusion of documentation that the patient has received counseling and instruction on when a repeat colonoscopy should be scheduled. This change would ensure the patient is aware of clinical recommendations to drive healthy outcomes. |

¹⁵⁵ Gupta, S., Lieberman, D., Anderson, J. C., Burke, C. A., Dominitz, J. A., Kaltenbach, T., Robertson, D. J., Shaikat, A., Syngal, S., & Rex, D. K. (2020). Recommendations for Follow-Up After Colonoscopy and Polypectomy: A Consensus Update by the US Multi-Society Task Force on Colorectal Cancer. *Gastrointestinal Endoscopy*, 91(3), 463–485.e5. <https://doi.org/10.1016/j.gie.2020.01.014>.

D.30. Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Preoperative Evaluation in Low-Risk Surgery Patients

| Category | Description |
|-------------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 322 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of stress single-photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHO), cardiac computed tomography angiography (CCTA), or cardiac magnetic resonance (CMR) performed in low-risk surgery patients 18 years or older for preoperative evaluation during the 12-month submission period. |
| Substantive Change: | <p>The measure description is revised to read: Percentage of stress single-photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHO), multigated acquisition scan (MUGA), cardiac computed tomography angiography (CCTA), or cardiac magnetic resonance (CMR) performed in low-risk surgery patients 18 years or older for preoperative evaluation during the 12-month submission period.</p> <p>Updated instructions: Added: multigated acquisition scan (MUGA).</p> <p>Updated denominator: Added: multigated acquisition scan (MUGA).</p> <p>Updated denominator criteria: Added: coding for multigated acquisition scan (MUGA).</p> <p>Updated numerator: Added: multigated acquisition scan (MUGA).</p> |
| Measure Steward: | American College of Cardiology Foundation |
| High Priority Measure: | Yes |
| Measure Type: | Efficiency |
| Rationale | We are proposing to update multiple components of the measure to add MUGA. Even though MUGA scanning allows a clinician to evaluate many heart parameters and can be done while resting or under stress, this diagnostic imaging test would ensure this type of imaging isn't performed on low-risk surgery patients since the risks of the procedure exceed the expected clinical benefit for the denominator eligible patient population. ¹⁵⁶ The MUGA scan is primarily used for assessing myocardial function in patients on cardiotoxic chemotherapy. ¹⁵⁷ |

¹⁵⁶ Winchester, D. E., Maron, D. J., Blankstein, R., Chang, I. C., Kirtane, A. J., Kwong, R. Y., Pellikka, P. A., Prutkin, J. M., Russell, R., & Sandhu, A. T. (2023). ¹⁵⁷ Odak, M., & Kayani, W. T. (2023). MUGA Scan. In *StatPearls*. StatPearls Publishing. <https://www.ncbi.nlm.nih.gov/books/NBK564365/>.

D.31. Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse)

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 331 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients, aged 18 years and older, with a diagnosis of acute viral sinusitis who were prescribed an antibiotic within 10 days after onset of symptoms. |
| Substantive Change: | Updated the instructions: Revised: This measure is to be submitted once for each occurrence of acute viral sinusitis (AVS) during the performance period. Each unique occurrence starts with the onset of AVS symptoms and concludes with the resolution of AVS symptoms or after 90 days if a resolution of AVS symptoms is not documented. If multiple encounters are documented within an occurrence, Merit-based Incentive Payment System (MIPS) eligible clinicians should submit the most recent encounter during that occurrence. A new occurrence of AVS cannot start until the previous occurrence during the performance period has concluded. |
| Measure Steward: | American Academy of Otolaryngology – Head and Neck Surgery Foundation |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update the measure instructions to clarify what constitutes an occurrence for the purposes of this measure. This additional guidance would further clarify how patients are attributed to the denominator of this measure for each eligible occurrence. This change would ensure consistency in the abstraction of the measure's elements that support rigorous data for the calculation of MIPS performance rates. |

D.32. Maternity Care: Postpartum Follow-up and Care Coordination

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 336 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS QOM Specifications |
| Current Measure Description: | Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 12 weeks of giving birth and received the following at a postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update. |
| Substantive Change: | <p>The measure description is revised to read: Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 12 weeks of giving birth and received the following at a postpartum visit: breastfeeding evaluation and education, postpartum depression screening, intimate partner violence screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.</p> <p>Updated numerator: Added: intimate partner violence screening.</p> <p>Updated numerator definition: Added: Intimate Partner Violence Screening – Patients who were screened for intimate partner violence before or at 12 weeks postpartum. Questions may be asked either directly by a health care provider or in the form of self-completed paper-or computer-administered questionnaires, and results should be documented in the medical record. Intimate partner violence screening should include a self-reported validated intimate partner violence screening tool (e.g., Abuse Assessment Screen (AAS), Extended – Hurt, Insult, Threaten, Scream (E-HITS), Humiliation, Afraid, Rape, Kick (HARK)).</p> <p>Updated numerator instructions: Added: intimate partner violence screening.</p> |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update multiple measure components to include intimate partner violence screening. “The effects of intimate partner violence (IPV) on maternal and neonatal outcomes are multifaceted and largely preventable.” ¹⁵⁸ This type of abuse has maternal and neonatal consequences on mental and physical health that could be far reaching beyond the perinatal period; ¹⁵⁹ therefore, intimate partner violence screening is being proposed for inclusion. This revision would support clinicians currently screening and would encourage others to begin screening for this risk within this patient population as IPV may escalate during the postpartum period. ¹⁶⁰ The American College of Obstetricians and Gynecologists recommend including screening for IPV at the postpartum checkup to help identify patients experiencing IPV so that support may be offered to break this cycle, leading to positive outcomes for both maternal and neonatal health. ¹⁶¹ |

¹⁵⁸ Alhusen, J. L., Ray, E., Sharps, P., & Bullock, L. (2015). Intimate Partner Violence During Pregnancy: Maternal and Neonatal Outcomes. *Journal of Women's Health* (2002), 24(1), 100–106. <https://doi.org/10.1089/jwh.2014.4872>.

¹⁶⁰ American College of Obstetricians and Gynecologists (ACOG). (2012). Committee on Health Care for Underserved Women Opinion: Intimate Partner Violence. <https://www.acog.org/-/media/project/acog/acogorg/clinical/files/committee-opinion/articles/2012/02/intimate-partner-violence.pdf>.

¹⁶¹ See footnote ACOG, 2012.

D.33. HIV Medical Visit Frequency

| | |
|-------------------------------------|--|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 340 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients, regardless of age with a diagnosis of HIV who had at least one medical visit in each 6 month period of the 24 month measurement period, with a minimum of 60 days between medical visits. |
| Substantive Change: | <p>Modified collection type: eCQM Specifications, MIPS CQM Specifications collection type.</p> <p>The measure title is revised from “HIV Medical Visit Frequency” to: HIV Annual Retention in Care.</p> <p>The measure description is revised to read: Percentage of patients, regardless of age, with a diagnosis of Human Immunodeficiency Virus (HIV) before or during the first 240 days of the performance period who had at least two eligible encounters or at least one eligible encounter and one HIV viral load test that were at least 90 days apart within the measurement period.</p> <p>The measure denominator is revised to read: Patients, regardless of age, with a diagnosis of HIV before or during the first 240 days of the performance period who had at least one eligible encounter during the first 240 days of the performance period.</p> <p>The measure denominator note is revised to read: Only patients with an eligible encounter in the first 240 days are included in this measure to allow for sufficient time to complete a second eligible encounter or viral load laboratory at least 90 days after the initial encounter during the performance period.</p> <p>Updated denominator criteria: Added: coding for telephone and home visit patient encounters.</p> <p>Updated denominator exclusion: Removed: Patient died at any time during the 24-month measurement period.</p> <p>The measure numerator is revised to read: Number of patients who had at least one eligible encounter and one HIV viral load test at least 90 days apart during the performance period, or who had at least two eligible encounters at least 90 days apart during the performance period.</p> <p>Updated numerator note: Added: A patient would be included in the measure numerator if they have either 1) two eligible encounters at least 90 days apart, or 2) one eligible encounter and one viral load test at least 90 days apart from each other. The encounter or encounters that cause a patient to be included in the numerator do not need to include the encounter that caused the patient to be included in the denominator.</p> <p>The measure numerator options are revised to read:
 Performance Met: Patient had two eligible encounters at least 90 days apart or one eligible encounter and one HIV viral load test at least 90 days apart
 Performance Not Met: Patient did not have two eligible encounters at least 90 days apart or one eligible encounter and one HIV viral load test at least 90 days apart</p> |
| Measure Steward: | Health Resources and Services Administration |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | <p>We are proposing to update the collection types available for this measure to include the eCQM Specifications collection type to allow choice in submission method. We are also proposing to revise multiple components of the measure allowing for improved quality outcome which is to engage persons who are infected with HIV in regular HIV care that promote test-and-treat strategies.¹⁶²</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.</p> |

D.34. Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2)

| | |
|----------------------------|--------------------|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / N/A |

¹⁶² Gardner, E. M., McLees, M. P., Steiner, J. F., Del Rio, C., & Burman, W. J. (2011). The Spectrum of Engagement in HIV Care and its Relevance to Test-and-treat Strategies for Prevention of HIV Infection. *Clinical Infectious Diseases: An Official Publication of the Infectious Diseases Society of America*, 52(6), 793–800. <https://doi.org/10.1093/cid/ciq243>.

| Category | Description |
|------------------------------|---|
| Quality #: | 344 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percent of asymptomatic patients undergoing CAS who are discharged to home no later than post-operative day #2. |
| Substantive Change: | <p>The measure title is revised from Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) to: Rate of Carotid Endarterectomy (CEA) or Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2)</p> <p>The measure description is revised to read: Percent of asymptomatic patients undergoing Carotid Endarterectomy (CEA) or Carotid Artery Stenting (CAS) without major complication who are discharged to home no later than post-operative day #2.</p> <p>Updated instructions: Added: CEA.</p> <p>Updated denominator: Added: CEA.</p> <p>Updated denominator criteria: Added: coding for carotid endarterectomy.</p> <p>Updated numerator: Added: CEA.</p> <p>Updated numerator definition: Added: procedure for CEA or CAS.</p> <p>Updated numerator options: Added: CEA.</p> |
| Measure Steward: | Society for Vascular Surgeons |
| High Priority Measure: | Yes |
| Measure Type: | Outcome |
| Rationale | <p>We are proposing to revise this measure to include Carotid Endarterectomy (CEA) to assess for post-operative complications for asymptomatic patients who had CEA. CEA for asymptomatic carotid stenosis reduces the risk of ipsilateral stroke, and any stroke, by approximately 30% over 3 years.¹⁶³ Previously, assessment of outcomes for CEA procedures was a separate measure. As both procedures are appropriate for treating asymptomatic carotid artery stenosis, these measures are being combined so that a full picture of positive outcomes can be captured for this patient population.¹⁶⁴ Additionally, by combining these measures the denominator eligible patient population may increase allowing for more robust data for participating MIPS clinicians.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.</p> |

D.35. Unplanned Reoperation within the 30-Day Postoperative Period

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 355 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients aged 18 years and older who had any unplanned reoperation within the 30 day postoperative period. |
| Substantive Change: | Updated denominator criteria: Revised: coding for fissurectomy, including sphincterotomy. |
| Measure Steward: | American College of Surgeons |
| High Priority Measure: | Yes |
| Measure Type: | Outcome |
| Rationale | We are proposing to update denominator criteria to revise coding for fissurectomy, including sphincterotomy as this is an operative procedure that could have complications requiring unplanned reoperation within 30 days postoperatively. |

D.36. Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies

| | |
|-------------------------------------|--|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 360 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of computed tomography (CT) and cardiac nuclear medicine (myocardial perfusion studies) imaging reports for all patients, regardless of age, that document a count of known previous CT (any type of CT) and cardiac nuclear medicine (myocardial perfusion) studies that the patient has received in the 12-month period prior to the current study. |
| Substantive Change: | <p>The measure description is revised to read: Percentage of computed tomography (CT) and cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) reports for all patients, regardless of age, that document a count of known previous CT (any type of CT) and cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) studies that the patient has received in the 12-month period prior to the current study.</p> <p>The measure denominator is revised to read: All final reports for patients, regardless of age, undergoing a CT or cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) procedure.</p> <p>Updated denominator criteria: Added: coding for cardiology infarct imaging.</p> <p>The measure numerator is revised to read: CT and cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) reports that document a count of known previous CT (any type of CT) and cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) studies that the patient has received in the 12-month period prior to the current study.</p> <p>Updated numerator instructions: Added: infarct avid imaging.</p> <p>The measure numerator options are revised to read:</p> <p>Performance Met: Count of previous CT (any type of CT) and cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) studies documented in the 12-month period prior to the current study.</p> <p>Performance Not Met: Count of previous CT and cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) studies not documented in the 12-month period prior to the current study, reason not given.</p> |
| Measure Steward: | American College of Radiology |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to revise multiple components of this measure to include infarct avid imaging in the cardiac nuclear medicine imaging study that involves the use of radiation, including a radiotracer or contrast agent and/or Imaging modalities, such as positron emission tomography (PET), single-photon emission computed tomography (SPECT), or magnetic resonance imaging (MRI). ¹⁶⁵ Given that this imaging can expose a patient to potentially high doses of radiation, ¹⁶⁶ including it in the denominator of this measure requires the clinician to document a more complete count of previous cardiac nuclear medicine imaging studies, increasing patient safety by preventing continued exposure to radiation. |

¹⁶⁵ Enabnit, A. & Warren, A. (2023). Infarct Avid Imaging Study: Purpose, Procedure, and Applications. <https://www.dovemed.com/health-topics/focused-health-topics/infarct-avid-imaging-study-purpose-procedure-and-applications>.

Radiation Dose to Patients and Public Exposure in Cardiac Rest and Stress Single Photon Emission Computed Tomography Examinations. *Radiation Physics and Chemistry*. <https://doi.org/10.1016/j.radphyschem.2023.111383>.

D.37. Closing the Referral Loop: Receipt of Specialist Report

| Category | Description |
|-------------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 374 |
| CMS eCQM ID: | CMS50v13 |
| Current Collection Type: | eCQM Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients with referrals, regardless of age, for which the referring clinician receives a report from the clinician to whom the patient was referred. |
| Substantive Change: | <p>Updated denominator criteria: For all collection types: Added: coding for psychology and neuropsychology.</p> <p>The measure numerator definition is revised to read: For the MIPS CQM Specifications collection type: Revised: A written document prepared by the eligible clinician (and staff) to whom the patient was referred and that accounts for their findings, provides summary of care information about findings, diagnostics, assessments and/or plans of care, or states the patient did not attend the appointment, and is provided to the referring eligible clinician.</p> |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | <p>We are proposing to add psychology and neuropsychology encounter codes to the denominator criteria as this measure is applicable to their scope of care. This expansion of the denominator would allow more clinician types to submit the measure leading to an increase in denominator eligibility, capturing a more complete patient population, as it is clinically appropriate for these clinician types to complete the quality action for a patient referred to a specialist.</p> <p>We are proposing to revise the numerator definitions for the MIPS CQM Specifications collection type to clarify which information should be included in the referring clinician's report to successfully close the referral loop. This revision increases clarity of this element and ensures consistent implementation allowing for more comparable data.</p> |

D.38. Functional Status Assessment for Total Hip Replacement

| Category | Description |
|-------------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 376 |
| CMS eCQM ID: | CMS56v13 |
| Current Collection Type: | eCQM Specifications |
| Current Measure Description: | Percentage of patients 19 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 300 – 425 days after the surgery. |
| Substantive Change: | Updated initial patient population: Revised: encounter timeframe from November of the year prior to August of the year prior. |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to revise initial patient population by changing the timing of the encounter to better align with the post-surgical assessment timeframe of 300 to 425 days after the original THA surgery. This would also harmonize the timeframe of the patient encounter with the administrative claims measure "Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)" available for Hospital Inpatient Quality Reporting (88 FR 59067 through 59070), thereby aligning timing specificity and patterns across similar measures. Measure alignment, in accordance with clinical recommendations, guidelines, and best practices, allows for consistent and comparable data points, which leads to actionable data to drive quality care, through understanding where the gaps in care are within a patient population or along the continuum of care. |

D.39. Adherence to Antipsychotic Medications For Individuals with Schizophrenia

| | |
|-------------------------------------|--|
| Category | Description |
| CBE # / eCQM CBE #: | 1879 / N/A |
| Quality #: | 383 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS QOM Specifications |
| Current Measure Description: | Percentage of individuals at least 18 years of age as of the beginning of the performance period with schizophrenia or schizoaffective disorder who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the performance period. |
| Substantive Change: | Updated denominator note: Removed: distinction of typical versus atypical, 'days' supply' notation, and medication HCPCS codes.

Updated denominator criteria: Removed: HCPCS coding from prescription criteria. |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| High Priority Measure: | Yes |
| Measure Type: | Intermediate Outcome |
| Rationale | <p>We are proposing to remove “days’ supply” and HCPCS (J codes) from the list of antipsychotic medications in the measure. This revision would ensure inclusion for any duration of the listed long acting injectables permitting the clinician, or site, to obtain days’ supply information from any appropriate clinical or administrative source, thus aligning the calculation of PDC with all appropriate medications listed in the measure. This revision reduces the burden of collecting this aspect of the measure from medical records. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data.</p> <p>Finally, we are proposing to remove “typical” and “atypical” as part of the subheadings of the lists of antipsychotic medications as this distinction does not apply to the list of oral and long-acting injectable antipsychotic medications listed under each of the categories which include both typical and atypical medications.¹⁶⁷</p> |

¹⁶⁷ Cleveland Clinic. (2023). Antipsychotic Medications. <https://my.clevelandclinic.org/health/treatments/24692-antipsychotic-medications>.

D.40. Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 384 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Patients aged 18 years and older who had surgery for primary rhegmatogenous retinal detachment who did not require a return to the operating room within 90 days of surgery. |
| Substantive Change: | Updated instructions: Revised: timeframe for when surgery for primary rhegmatogenous retinal detachment must have occurred to meet the denominator criteria.

Updated numerator note: Added: For the purposes of meeting the numerator, complications are only those related to the following procedures: 67107, 67108, 67110. |
| Measure Steward: | American Academy of Ophthalmology |
| High Priority Measure: | Yes |
| Measure Type: | Outcome |
| Rationale | We are proposing to update the instructions to clarify that surgery for primary rhegmatogenous retinal detachment must occur between January 1 st and September 30 th of the performance period to allow 90 days after the surgery to assess for the numerator action for patients who have surgeries performed by September 30 th . We are also proposing to add a numerator note to clarify that the numerator is not required to capture only procedures covered by the three original procedure codes in the denominator, but rather any procedure that is related to complications arising from the original procedures listed. |

D.41. Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 386 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, lawful physician-hastened death, or hospice) or whose existing end of life plan was reviewed or updated at least once annually or more frequency as clinically indicated (i.e., rapid progression) |
| Substantive Change: | Updated denominator criteria: Added: coding for speech language pathology. |
| Measure Steward: | American Academy of Neurology |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator criteria to include coding for speech language pathology and nuclear medicine as this measure is applicable to their scope of care. |

D.42. Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 393 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Infection rate following CIED device implantation, replacement, or revision. |
| Substantive Change: | Updated instructions: Added: A new device would be either the first device OR a device implanted with new functionality. |
| Measure Steward: | American College of Cardiology Foundation |
| High Priority Measure: | Yes |
| Measure Type: | Outcome |
| Rationale | We are proposing to update the measure instructions to clarify the definition of a new device. This change would ensure alignment and consistency in the abstraction of the measure's elements that support rigorous data for the calculation of MIPS performance rates. |

D.43. Door to Puncture Time for Endovascular Stroke Treatment

| | |
|-------------------------------------|---|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 413 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients undergoing endovascular stroke treatment who have a door to puncture time of 90 minutes or less. |
| Substantive Change: | Updated denominator exclusion: Added: Patients with secondary stroke within 5 days of the initial procedure. |
| Measure Steward: | Society of Interventional Radiology |
| High Priority Measure: | Yes |
| Measure Type: | Intermediate Outcome |
| Rationale | We are proposing to add a denominator exclusion to remove patients with secondary stroke, such as those which may occur with vasospasm in the setting of subarachnoid hemorrhage. Treatment for an initial stroke is most effective when administered very shortly after the onset of symptoms. ¹⁶⁸ However, the same is not the case for secondary stroke which is more challenging to manage as patients with secondary stroke may already be on “blood thinners or aspirin, medication to control cholesterol, or drugs to lower blood pressure” as a result of the initial stroke and “experience more severe and long-lasting disability.” ¹⁶⁹ This additional exclusion would more precisely reflect the time to reperfusion for obtaining favorable outcomes in cerebral revascularization within the target patient population. |

¹⁶⁸ Esenwa, C., & Gutierrez, J. (2015). Secondary Stroke Prevention: Challenges and Solutions. *Vascular Health and Risk Management*, 11, 437–450. <https://doi.org/10.2147/VHRM.S63791>.

¹⁶⁹ Medical News Today. (2023). Recurrent Strokes: What to Know. <https://www.medicalnewstoday.com/articles/recurrent-strokes>.

D.44. Osteoporosis Management in Women Who Had a Fracture

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | 0053 / N/A |
| Quality #: | 418 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | Medicare Part B Claims Measure Specifications / MIPS CQM Specifications |
| Current Measure Description: | The percentage of women 50–85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the six months after the fracture. |
| Substantive Change: | <p>The measure description is revised to read: For all collection types: The percentage of women 50-85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the 180 days after the fracture.</p> <p>Updated instructions: For all collection types: Revised: from six months to 180 days.</p> <p>Updated denominator exclusion: For all collection types: Removed: specific encounter requirements from the frailty/advanced illness exclusion.</p> <p>The measure numerator is revised to read: For all collection types: Patients who received either a bone mineral density test or a prescription for a drug to treat osteoporosis in the 180 days after the fracture.</p> |
| Measure Steward: | National Committee for Quality Assurance |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | <p>We are proposing to use both 6 months and 180 days within the measure denominator and numerator to allow for the appropriate time anchors. In the denominator, 6 months is used so that the measurement period to identify a fracture is always July 1 – June 30 (during the 6 months prior to the performance period through June 30 of the performance period). The numerator action of administration of a bone mineral density test or a prescription for a drug to treat osteoporosis within a specific number of days (180 days after the date of a fracture) rather than months with varying number of days (e.g., 28 – 31 days).</p> <p>We are proposing to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician’s medical record. This revision would update the denominator exclusion to remove any patient 66-80 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator of measure Q418. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data.</p> |

D.45. Varicose Vein Treatment with Saphenous Ablation: Outcome Survey

| Category | Description |
|-------------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 420 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients treated for varicose veins (CEAP C2-S) who are treated with saphenous ablation (with or without adjunctive tributary treatment) that report an improvement on a disease specific patient reported outcome survey instrument after treatment. |
| Substantive Change: | Updated numerator definition: Added: Varicose Veins Symptom Questionnaire (VVSymQ) and Venous Clinical Severity Score (VCSS). |
| Measure Steward: | Society of Interventional Radiology |
| High Priority Measure: | Yes |
| Measure Type: | Patient-Reported Outcome-Based Performance Measure |
| Rationale | We are proposing to revise the definition of an ‘Outcome Survey’ to include the VVSymQ and VCSS. These outcome surveys measure improvement for saphenous vein ablation and would allow clinicians more choices for meeting the numerator, which may encourage further adoption of this measure. ¹⁷⁰ |

¹⁷⁰ Paty, J., Turner-Bowker, D. M., Elash, C. A., & Wright, D. (2016). The VVSymQ® Instrument: Use of a New Patient-Reported Outcome Measure for Assessment of Varicose Vein Symptoms. *Phlebology*, 31(7), 481–488. <https://doi.org/10.1177/0268355515595193>.

D.46. Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair

| Category | Description |
|-------------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 432 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients undergoing pelvic organ prolapse repairs who sustain an injury to the bladder recognized either during or within 30 days after surgery. |

| | |
|---------------------|---|
| Substantive Change: | <p>The measure title is revised from Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair to: Proportion of Patients Sustaining a Bladder or Bowel Injury at the time of any Pelvic Organ Prolapse Repair.</p> <p>The measure description is revised to read: Percentage of patients undergoing surgical repair of pelvic organ prolapse that is complicated by a bladder or bowel injury at the time of index surgery that is recognized intraoperatively or within 30 days after surgery.</p> <p>The measure instructions are revised to read: This measure is to be submitted each time an anterior, posterior, or apical prolapse repair surgery is performed from December 1st of the previous performance period through November 30th of the current performance period. There is no diagnosis associated with this measure. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding.</p> <p>This measure will be calculated with 2 performance rates:</p> <ol style="list-style-type: none"> 1) Percentage of patients undergoing prolapse repair who sustain a bladder injury that necessitates repair either intraoperatively or within 30 days after surgery. 2) Percentage of patients undergoing prolapse repair who sustain a bowel injury that necessitates repair either intraoperatively or within 30 days after surgery. <p>Submission of the two performance rates is required for this measure. A simple average, which is the sum of the performance rates divided by the number of the performance rates will be used to calculate performance.</p> <p>THERE ARE TWO SUBMISSION CRITERIA FOR THIS MEASURE:</p> <ol style="list-style-type: none"> 1) All patients undergoing anterior or apical pelvic organ prolapse (POP) surgery who sustain a bladder injury. 2) All patients undergoing anterior, posterior, or apical pelvic organ prolapse (POP) surgery who sustain a bowel injury. <p>This measure contains two submission criteria which together ensure that the proper evaluation and treatment is provided for patients who undergo pelvic organ prolapse repair. Submission Criteria 1 evaluates whether patients sustained a bladder injury intraoperatively or within 30 days after surgery. Submission Criteria 2 evaluates whether patients sustained a bowel injury intraoperatively or within 30 days after surgery. Patients who undergo a procedure that meets the denominator of both submission criteria should be included in both and assessed for each clinical outcome.</p> <p>Updated denominator: Added: SUBMISSION CRITERIA 2:
All patients undergoing anterior, posterior, or apical pelvic organ prolapse (POP) surgery.</p> <p>Updated denominator criteria: Added: SUBMISSION CRITERIA 2:
All patients, regardless of age
AND
Patient procedure during the denominator identification period
WITHOUT
Telehealth Modifier</p> <p>Updated definition: Added: SUBMISSION CRITERIA 1 & 2: Denominator identification period – the twelve month period in which eligible patients have a procedure, which December 1st of the previous performance period through November 30th of the current performance period.</p> <p>Updated numerator:
Revised: SUBMISSION CRITERIA 1:
Percentage of patients undergoing prolapse repair who sustain a bladder injury that necessitates repair either intraoperatively or within 30 days after surgery.
Added: SUBMISSION CRITERIA 2:
Percentage of patients undergoing prolapse repair who sustain a bowel injury that necessitates repair either intraoperatively or within 30 days after surgery.</p> <p>Update numerator instructions: Added: SUBMISSION CRITERIA 2:
INVERSE MEASURE – A lower calculated performance rate for this measure indicates better clinical care or control. The “Performance Not Met” numerator option for this measure is the representation of the better clinical quality or control. Submitting that numerator option will produce a performance rate that trends closer to 0%, as quality increases. For inverse measures, a rate of 100% means all of the denominator eligible patients did not receive the appropriate care or were not in proper control.</p> <p>Updated numerator note: Added: SUBMISSION CRITERIA 2:
In order to meet the measure, bowel injury is sustained as a result of the prolapse surgery.</p> <p>Updated numerator options: Added: SUBMISSION CRITERIA 2:
Performance Met: Patient sustained bowel injury at the time of surgery or discovered subsequently up to 30 days post-surgery
OR
OR</p> |
|---------------------|---|

| Category | Description |
|-------------------------------|--|
| | Denominator Exception: Documented medical reasons for not reporting bowel injury (e.g. gynecologic or other pelvic malignancy documented, planned (e.g. not due to an unexpected bowel injury) resection and/or re-anastomosis of bowel, or patient death from non-medical causes not related to surgery, patient died during procedure without evidence of bowel injury)
OR
Performance Not Met: Patient did not sustain a bowel injury at the time of surgery nor discovered subsequently up to 30 days post-surgery |
| Measure Steward: | American Urogynecologic Society |
| High Priority Measure: | Yes |
| Measure Type: | Outcome |
| Rationale | <p>We are proposing to revise this measure to add a submission criteria and performance rate for patients who retain a bowel injury at the time of any pelvic organ prolapse repair. We are proposing to add submission criteria two to evaluate all patients undergoing anterior, posterior, or apical pelvic organ prolapse surgery who sustain a bowel injury.</p> <p>Previously, assessment of bowel injury outcomes for POP procedures was a separate measure. As both measures are assessing for adverse outcomes following POP procedures, these measures are being combined so that a full picture of adverse outcomes can be captured for this patient population. Additionally, by combining these measures, the denominator eligible patient population may increase allowing for more robust data for participating MIPS clinicians.</p> <p>We are also proposing to add a definition for the denominator identification period of December 1st of the previous performance period through November 30th of the current performance period.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.</p> |

D.47. Appropriate Workup Prior to Endometrial Ablation

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 448 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients, aged 18 years and older, who undergo endometrial sampling or hysteroscopy with biopsy and results are documented before undergoing an endometrial ablation. |
| Substantive Change: | Updated the instructions: Revised: submission of the measure to once per performance period. |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to change the frequency of this measure from each time a procedure for endometrial ablation is performed to once per performance period, as this is more aligned with the clinical action being assessed for this measure. |

D.48. Appropriate Treatment for Patients with Stage I (T1c) - III HER2 Positive Breast Cancer

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | 1858 / N/A |
| Quality #: | 450 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of female patients aged 18 to 70 with stage I (T1c) - III HER2 positive breast cancer for whom appropriate treatment is initiated. |
| Substantive Change: | <p>The measure description is revised to read: Percentage of patients aged 18 to 70 with stage I (T1c) – III HER2 positive breast cancer for whom appropriate treatment is initiated.</p> <p>The measure denominator is revised to read: All breast cancer patients aged 18 to 70 with pathologic stage I (T1c) – III HER2 positive breast cancer diagnosed between July 1st of the previous performance period through June 30th of the current performance period.</p> <p>Updated denominator instructions: Added: For the purposes of this measure, only pathologic staging and HER-2 testing performed between July 1st of the previous performance period through June 30th of the current performance period will be included in the denominator of this measure.</p> <p>Updated denominator note: Added: This measure includes both female and male breast cancers. While treatment recommendations for males have largely been extrapolated from results of clinical trials focused on breast cancer in females, management of breast cancer in males is similar in overall management to breast cancer in females. Consistent with guidance in NCCN guideline recommendations for adjuvant systemic therapy, chemotherapy with/without HER2-targeted therapy should be recommended for males with breast cancer according to guidelines for females with breast cancer.</p> <p>Updated denominator criteria: Revised: Patients age 18-70 years on date of encounter
 Added: diagnosis codes for male breast cancer.
 Added: Diagnosis of breast cancer between July 1st of the previous performance period through June 30th of the current performance period.</p> <p>Updated numerator note: Added: The timeframe to identify the adjuvant treatment course is within six months of breast cancer pathologic staging. To satisfy the numerator, both chemotherapy and HER2-targeted therapy must occur within six months of pathologic staging.</p> |
| Measure Steward: | American Society of Clinical Oncology |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | <p>We are proposing to update multiple components of this measure to ensure that all patients diagnosed with breast cancer are included in the measure's denominator. While treatment recommendations for males have largely been extrapolated from results of clinical trials focused on breast cancer in females,¹⁷¹ management of breast cancer in males is similar in overall management to breast cancer in females. Consistent with guidance in NCCN recommendations for adjuvant systemic therapy, chemotherapy with/without HER2-targeted therapy should be recommended for males with breast cancer according to guidelines for females with breast cancer.¹⁷²</p> <p>Additionally, revisions to the denominator definition would clarify the timeframe in which pathologic staging and HER-2 testing should be performed for patient to be included in the denominator. We are also proposing revisions to the numerator note to further clarify definition of and timeframe for when adjuvant treatment, for the purposes of this measure, should occur relative to pathologic staging.</p> |

P., Goldstein, L. J., Hurvitz, S. A., Jankowitz, R. C., Javid, S. H., Krishnamurthy, J., Leitch, A. M., ... Kumar, R. (2023). NCCN Guidelines® Insights: Breast Cancer, Version 4.2023. *Journal of the National Comprehensive Cancer Network: JNCCN*, 21(6), 594–608. <https://doi.org/10.6004/jnccn.2023.0031>.

D.49. RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who Receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | 1859 / N/A |
| Quality #: | 451 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer who receive anti-epidermal growth factor receptor monoclonal antibody therapy for whom RAS (KRAS and NRAS) gene mutation testing was performed. |
| Substantive Change: | Updated denominator instructions: Added: The denominator of this measure is intended to capture newly diagnosed stage IV patients or patients who have distant metastases at the time of colon cancer diagnosis. For the purposes of this measure, the patient's initial diagnosis may occur between December 1 of the prior year through November 30 of the performance period, and anti-EGFR monoclonal antibody therapy may occur between December 1 of the prior year through December 31 of the performance period. |
| Measure Steward: | American Society of Clinical Oncology |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to add denominator instructions to clarify that only patients who have been newly diagnosed with Stage IV colorectal cancer or patients who have distant metastases at the time of colon cancer diagnosis are to be captured in the denominator of the measure. This would ensure that the appropriate patient population is assessed for the numerator action. |

D.50. Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy

| | |
|-------------------------------------|---|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 462 |
| CMS eCQM ID: | CMS645v8 |
| Current Collection Type: | eCQM Specifications |
| Current Measure Description: | Patients determined as having prostate cancer who are currently starting or undergoing androgen deprivation therapy (ADT), for an anticipated period of 12 months or greater and who receive an initial bone density evaluation. The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT. |
| Substantive Change: | The measure denominator is revised to read: Patients with a qualifying encounter in the measurement period AND with a diagnosis of prostate cancer AND with an order for ADT or an active medication of ADT with an intent for treatment greater than or equal to 12 months during the measurement period AND order for ADT in 3 months before to 9 months after the start of the measurement period. |
| Measure Steward: | Oregon Urology Institute |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to expand the denominator to include all patients regardless of gender. This revision broadens the denominator population to capture all patients with a diagnosis of prostate cancer who are receiving androgen deprivation therapy and ensure a bone density evaluation is completed prior to the start of treatment. As significantly lower PSA screening rates were seen among transgender individuals for ages 40-54 and 55-69, but higher rates within the age group 70-80 (P.B<.B.001 for all), ¹⁷³ broadening the denominator would ensure these patient populations are being screened in accordance with current clinical guidelines. |

¹⁷³ Premo, H., Gordee, A., Lee, H. J., Scales, C. D., Moul, J. W., & Peterson, A. (2023). Disparities in Prostate Cancer Screening for Transgender Women: An Analysis of the MarketScan Database. *Urology*, 176, 237–242. <https://doi.org/10.1016/j.urology.2023.03.016>.

D.51. Otitis Media with Effusion: Systemic Antimicrobials - Avoidance of Inappropriate Use

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | 0657 / N/A |
| Quality #: | 464 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients aged 2 months through 12 years with a diagnosis of OME who were not prescribed systemic antimicrobials. |
| Substantive Change: | The measure instructions are revised to read: This measure is to be submitted once for each occurrence of otitis media with effusion (OME) in children seen during the performance period. Each unique occurrence starts with the onset of OME symptoms and concludes with the resolution of OME or after 90 days if a resolution of OME symptoms is not documented. If multiple encounters are documented within an occurrence, Merit-based Incentive Payment System (MIPS) eligible clinicians should submit the most recent encounter during that occurrence. A new occurrence of OME cannot start until the previous occurrence during the performance period has concluded. |
| Measure Steward: | American Academy of Otolaryngology – Head and Neck Surgery Foundation |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update the measure instructions to clarify what constitutes an occurrence for the purposes of this measure. This additional guidance would further clarify how patients are attributed to the denominator of this measure for each eligible occurrence. This change would ensure consistency in the abstraction of the measure’s elements that support rigorous data for the calculation of MIPS performance rates. |

D.52. Functional Status After Primary Total Knee Replacement

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 470 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | For patients age 18 and older who had a primary total knee replacement procedure, functional status is rated by the patient as greater than or equal to 37 on the Oxford Knee Score (OKS) or a 71 or greater on the KOOS, JR. tool at one year (9 to 15 months) postoperatively. |
| Substantive Change: | Updated numerator note: Revised: list of situations that denote performance not met. |
| Measure Steward: | Minnesota Community Measurement |
| High Priority Measure: | Yes |
| Measure Type: | Patient-Reported Outcome-Based Performance Measure |
| Rationale | We are proposing to revise the numerator note by clarifying that if a tool other than the Oxford Knee Score (OKS) or Knee injury/Osteoarthritis Outcome Score Joint Replacement (KOOS, JR.) is used to assess a patient’s functional status for this measure, it would result in a performance not met. The requirements for meeting this measure require use of the specific tools referenced in the measure specification, as they have been tested, validated, and determined to be most appropriate for capturing the numerator action. |

D.53. Psoriasis – Improvement in Patient-Reported Itch Severity

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 485 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | The percentage of patients aged 8 years and older, with a diagnosis of psoriasis where at an initial (index) visit have a patient-reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 3 or more points at a follow-up visit. |
| Substantive Change: | <p>Updated denominator note: Added: The initial (index) visit assessment and the follow-up visit for assessment must occur during the performance period. The initial (index) visit is the first encounter with the patient during the performance period. Every visit after the initial (index) visit during the performance period is a follow-up visit. An assessment should be completed at each visit.</p> <p>Updated numerator instructions: Removed: If a patient has multiple follow-up visits within the measurement period, the last (most recent) visit should be used.</p> |
| Measure Steward: | American Academy of Dermatology |
| High Priority Measure: | Yes |
| Measure Type: | Patient-reported Outcome-based Performance Measure |
| Rationale | We are proposing to update the denominator note to clarify encounter timing by including language outlining that a patient's first visit during the measurement period is considered the initial (index) encounter. Each visit after the initial (index) visit during the measurement period would be deemed a follow-up visit used to determine the outcome of the measure. This change would ensure consistency in the abstraction of the measure's elements that support rigorous data for the calculation of MIPS performance rates. |

D.54. Dermatitis – Improvement in Patient-Reported Itch Severity

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 486 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | The percentage of patients aged 8 years and older, with a diagnosis of dermatitis where at an initial (index) visit have a patient-reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 3 or more points at a follow-up visit. |
| Substantive Change: | <p>Updated denominator note: Added: The initial (index) assessment and the follow-up visit for assessment must occur during the performance period. The initial (index) visit is the first encounter with the patient during the performance period. Every visit after the initial (index) visit during the performance period is a follow-up visit. An assessment should be completed at each visit.</p> <p>Updated numerator instructions: Removed: If a patient has multiple follow-up visits within the measurement period, the last (most recent) visit should be used.</p> |
| Measure Steward: | American Academy of Dermatology |
| High Priority Measure: | Yes |
| Measure Type: | Patient-Reported Outcome-based Performance Measure |
| Rationale | We are proposing to update the denominator note to clarify encounter timing by including language outlining that a patient's first visit during the measurement period is considered the initial (index) encounter. Each visit after the initial (index) visit during the measurement period would be deemed a follow-up visit used to determine the outcome of the measure. This change would ensure consistency in the abstraction of the measure's elements that support rigorous data for the calculation of MIPS performance rates. |

D.55. Kidney Health Evaluation

| | |
|-------------------------------------|--|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 488 |
| CMS eCQM ID: | CMS951v3 |
| Current Collection Type: | eCQM Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the measurement period |
| Substantive Change: | <p>Updated description: For all collection types: Revised: patients aged 18-85 years.</p> <p>Updated denominator: For all collection types: Revised: patients aged 18-85 years.</p> <p>Updated denominator criteria: For the MIPS CQM Specifications collection type: Revised: patients aged 18-85 years.</p> |
| Measure Steward: | National Kidney Foundation |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to update the age from 18-75 to 18-85 years of age for denominator eligibility. Based on information from National Institutes of Health states, "A high proportion of older CKD patients are usually affected by multimorbidity, polypharmacy, frailty, functional and cognitive impairment, and disability." ¹⁷⁴ "The benefits of preventing/slowing the progression of CKD has the potential to impact different social and health domains, for example, reducing the need for long-term care and the cost related to caregiving." ¹⁷⁵ Increasing the denominator age criteria support the reporting of clinicians currently screening a broader elderly population for this preventable disease. |

¹⁷⁴ Corsonello, A., Freiberger, E., & Lattanzio, F. (2020). The Screening for Chronic Kidney Disease Among Older People across Europe (SCOPE) Project: Findings from Cross-Sectional Analysis. *BMC Geriatrics*, 20(Suppl 1), 316. <https://doi.org/10.1186/s12877-020-01701-w>.

¹⁷⁵ See footnote Corsonello et al., 2020.

D.56. Appropriate Intervention of Immune-Related Diarrhea and/or Colitis in Patients Treated with Immune Checkpoint Inhibitors

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 490 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients, aged 18 years and older, with a diagnosis of cancer, on immune checkpoint inhibitor therapy, and grade 2 or above diarrhea and/or grade 2 or above colitis, who have immune checkpoint inhibitor therapy held and corticosteroids or immunosuppressants prescribed or administered. |
| Substantive Change: | Updated denominator definition: For the MIPS CQM Specifications collection type: Added: immune checkpoint inhibitors Lag-3 inhibitor drug: Relatlimab; and Tremelimumab to CTLA-4 inhibitor drugs. |
| Measure Steward: | Society for Immunotherapy of Cancer (SITC) |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator definition to add new Food and Drug Administration (FDA) approved checkpoint inhibitors, Relatlimab and Tremelimumab. These inhibitors are clinically appropriate to include in the denominator of this measure. ^{176 177} |

¹⁷⁶ FDA. (2022). FDA Approves Tremelimumab in Combination with Durvalumab and Platinum-based Chemotherapy for Metastatic Non-small Cell Lung Cancer. <https://www.fda.gov/drugs/resources-information-approved-drugs/fda-approves-tremelimumab-combination-durvalumab-and-platinum-based-chemotherapy-metastatic-non>.

¹⁷⁷ FDA. (2022). FDA Approves Opdualag for Unresectable or Metastatic Melanoma. <https://www.fda.gov/drugs/resources-information-approved-drugs/fda-approves-opdualag-unresectable-or-metastatic-melanoma>.

D.57. Risk-Standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 492 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | Administrative Claims |
| Current Measure Description: | Annual risk-standardized rate of acute, unplanned cardiovascular-related admissions among Medicare Fee-for-Service (FFS) patients aged 65 years and older with heart failure (HF) or cardiomyopathy. |
| Substantive Change: | Updated: Reporting Requirements: Removed: individual reporting. |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| High Priority Measure: | Yes |
| Measure Type: | Outcome |
| Rationale | <p>We are proposing a substantive change to this measure that would be applied retroactively starting with the CY 2023 performance period/2025 MIPS payment year. In the CY 2023 PFS final rule, we inadvertently specified the measure was availability at the individual clinician level. The inclusion of the availability of the measure at the individual clinician level is a misrepresentation and erroneously conveys to MIPS eligible clinicians reporting at the individual clinician level that the measure is available to meet the minimum required number of measures to report under traditional MIPS or an MVP. The measure was tested and developed for implementation at the group, virtual group, subgroup via an MVP, and APM Entity levels. Thus, the measure is limited to groups, virtual groups, subgroups via an MVP, and APM Entities participating in MIPS. We believe that a failure to apply this substantive change retroactively would be contrary to the public interest.</p> <p>Prior to the finalization of this measure as a new measure available within the MIPS quality measure inventory in the CY 2023 PFS final rule, the measure was initially proposed as a new measure in the CY 2022 PFS proposed rule. Based on the public comments received in response to the initial proposal of this measure in the CY 2022 PFS proposed rule, there were concerns regarding the attribution of certain patients to clinicians, particularly the risk adjustment for clinicians with higher caseloads of patients with more complicated or severe heart failure. As a result, the measure was not finalized as part of the CY 2022 PFS final rule; however, we noted that we would continue to consider how to implement condition-specific measures such as this measure under MIPS (86 FR 65692 through 65694).</p> <p>In the CY 2023 PFS proposed rule, we re-proposed this measure, which mitigated the concerns regarding the attribution of such patients to clinicians by excluding patients at advanced stages of heart failure and requiring that a group, virtual group, subgroup via an MVP, and APM Entity to include at least 1 cardiologist (and a 21-patient case minimum); and subsequently, the measure was finalized in the CY 2023 PFS final rule (87 FR 70266) through 70271). The intent of the measure is for assessment of performance to be conducted at the group, virtual group, subgroup via an MVP, and APM Entity levels. The measure was not tested, developed, or implemented at the individual clinician level. In order for this measure to be available at the individual clinician level, the measure would need to be tested at the individual clinician level to establish validity, reliability, and risk adjustments at the individual clinician level. It is not appropriate for the measure to be available at the individual clinician level without further testing. Consequently, any assessment of data for this measure at the individual clinician level would produce invalid and unreliable results. By retroactively applying the substantive change to this measure (modifying the measure to remove the individual clinician level as an option) effective starting with the CY 2023 performance period/2025 MIPS payment year, the level of reporting available for the measure would align with the intent, implementation, and operationalization of the measure, and clarify that the measure is not available at the individual clinician level.</p> |

D.58. Adult Immunization Status

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | 3620 / N/A |
| Quality #: | 493 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal. |
| Substantive Change: | Updated instructions: Revised: pneumococcal vaccine on or after their 19th birthday.

Updated numerator: Revised: Submission Criteria 4: pneumococcal vaccine on or after their 19th birthday. |
| Measure Steward: | National Committee for Quality Assurance |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | <p>We are proposing to update the measure instructions and numerator to lower the minimum age from 60 years of age to 19 years of age. This revision aligns with the updated ACIP pneumococcal vaccination guidelines¹⁷⁸ that recommend administering conjugate vaccines to all adults with certain underlying medical conditions.</p> <p>In the CY 2023 PFS final rule, this measure was finalized, and it was noted that the scoring of the measure would use a weighted average for the first 2 years of implementation; and starting with the CY 2025 performance period/2027 MIPS payment year, the measure would be scored as an all-or-none composite measure to ensure a more thorough assessment of a patient's vaccination status (87 FR 70272 through 70274). However, based upon an analysis of preliminary data submitted for the CY 2023 performance period, low measure adoption, and feedback received through Quality Payment Program Service Now tickets regarding burden of implementation and ability to meet performance on all four components, we are proposing to maintain the weighted average analytic for the CY 2025 performance period and subsequent years as determined by CMS. The utilization of the weighted average metric/analytic beyond 2 years would provide clinicians with more time to prepare for the transition to a more stringent all-or-none metric/analytic, which would require a complete vaccination history to meet numerator compliance.</p> |

¹⁷⁸ Kobayashi, M., Pilishvili, T., Farrar, J. L., Leidner, A. J., Gierke, R., Prasad, N., Moro, P., Campos-Outcalt, D., Morgan, R. L., Long, S. S., Poehling, K. A., & Cohen, A. L. (2023). Pneumococcal Vaccine for Adults Aged ≥19 Years: Recommendations of the Advisory Committee on Immunization Practices, United States, 2023. *MMWR. Recommendations and Reports: Morbidity and Mortality Weekly Report. Recommendations and Reports*, 72(3), 1–39. <https://doi.org/10.15585/mmwr.rr7203a1>.

D.59. Preventive Care and Wellness (composite)

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 497 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS QOM Specifications |
| Current Measure Description: | Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE). |
| Substantive Change: | <p>Updated instructions: Updated: Percentage of patients 65 years of age or older who received a pneumococcal vaccination on or after their 19th birthday.</p> <p>Updated denominator exclusion: Removed: (Submission Criteria 3 and Submission Criteria 4): specific encounter requirements from the frailty/advanced illness exclusion.</p> <p>Updated denominator criteria: Added: (Submission Criteria 7) coding for nutrition/dietitian clinician type.</p> <p>Updated numerator definition: Revised: intervals for rescreening for first and second hypertensive BP readings.</p> |
| Measure Steward: | Centers for Medicare & Medicaid Services |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | <p>We are proposing to update the measure instructions for patients 65 years of age and older who have received a pneumococcal vaccination on or after their 19th birthday. This update would allow for the identification of patients 65 years of age and older who may have a clinical condition that would make them a candidate to receive the pneumococcal vaccine prior to 65 years of age.¹⁷⁹</p> <p>We are proposing to add encounter codes for nutrition therapy to the denominator criteria as this is an appropriate setting to identify people who may have elevated blood pressure (BP) readings. Nutritional approaches play a pivotal role in helping to reduce the risk of hypertension or control blood pressure in people with hypertension.¹⁸⁰</p> <p>We are proposing to remove the minimum timeframe for follow-up screenings for patients with elevated BP readings. This change allows clinician discretion to recommend a follow-up plan based on the patient's current health status. Additionally, this supports stability of this measure component, as the frequency is each visit, within the specification over time, while still maintaining consistency with the current guidelines.¹⁸¹</p> <p>We are proposing to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician's medical record. This revision would update the denominator exclusion to remove any patient 66 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator for submission criteria 3 and submission criteria 4 of measure Q497.</p> |

¹⁷⁹ See footnote Kobayashi et al., 2023 in Table D.58 of this Appendix.

¹⁸⁰ See footnote Physicians Committee for Responsible Medicine, 2023 in Table D.28 of this Appendix.

¹⁸¹ See footnote Whelton et. al., 2018 in Table D.28 of this Appendix.

D.60. Connection to Community Service Provider

| | |
|-------------------------------------|---|
| Category | Description |
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 498 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS QM Specifications |
| Current Measure Description: | Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening. |
| Substantive Change: | Updated denominator criteria: Added: coding for Dentistry, Emergency Medicine, Inpatient, Nuclear Medicine, Interventional Radiology, Psychiatry, Mental and Behavioral Health, Nephrology, Nutrition, Dietician, Obstetrics/Gynecology, Ophthalmology, Otolaryngology, Physical Therapy/Occupational Therapy, Home Care and Skilled Nursing. |
| Measure Steward: | OCHIN |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator criteria to include coding for multiple patient services as this measure is applicable to the scope of care associated with these services. Clinicians treating patients within these services have an opportunity for screening for HRSNs and connecting with an appropriate CSP. Addressing the social determinants is an important and emerging area of practice that entails starting earlier and broadening the scope of interventions, thus making entire families and communities healthier. ¹⁸² |

¹⁸² Andermann, A., & CLEAR Collaboration (2016). Taking Action on the Social Determinants of Health in Clinical Practice: A Framework for Health Professionals. *CMAJ: Canadian Medical Association Journal*, 188(17-18), E474–E483. <https://doi.org/10.1503/cmaj.160177>.

D.61. Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 500 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 8 weeks. |
| Substantive Change: | Updated denominator criteria: Added: acute PVD.
Removed: coding for non-acute disorders related to PVD. |
| Measure Steward: | American Society of Retina Specialists |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to revise the denominator criteria by removing diagnosis codes for non-acute PVD and adding acute PVD within the criteria of the denominator. The ICD-10-CM PVD diagnosis codes do not differentiate between acute and non-acute disorders of vitreous detachment; therefore, to ensure the intended patient population is identified, the denominator criteria must be specific to acute PVD. |

D.62. Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up

| Category | Description |
|-------------------------------------|---|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 501 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) and acute vitreous hemorrhage in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 2 weeks |
| Substantive Change: | Updated denominator criteria: Removed: coding for non-acute disorders related to PVD. |
| Measure Steward: | American Society of Retina Specialists |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to revise the denominator criteria by removing diagnosis codes for non-acute PVD and adding acute PVD within the criteria of the denominator. The ICD-10-CM PVD diagnosis codes do not differentiate between acute and non-acute disorders of vitreous detachment; therefore, to ensure the intended patient population is identified, the denominator criteria must be specific to acute PVD. |

D.63. Gains in Patient Activation Measure (PAM®) Scores at 12 Months

| Category | Description |
|------------------------------|--|
| CBE # / eCQM CBE #: | 2483 / N/A |
| Quality #: | 503 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | The Patient Activation Measure® (PAM®) is a 10- or 13- item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement. |
| Substantive Change: | <p>Updated instructions: Revised: follow-up PAM® survey collected on at least 25% of all eligible patients within 4 to 12 months of the baseline during the performance period.</p> <p>The measure denominator is revised to read:
 For Submission Criteria 1: Patients aged 14 years and older with at least two qualifying visits during the performance period.
 For Submission Criteria 2, 3 & 4: Patients aged 14 years and older with Performance Met for Submission Criteria 1 who had a baseline PAM® score and a second score within 4 to 12 month of baseline PAM® score and who were seen for a qualifying visit at least twice during the performance period.</p> <p>Updated denominator criteria: Revised: For Submission Criteria 2, 3, & 4: follow-up PAM® survey collected on at least 25% of all eligible patients within 4 to 12 months of the baseline during the performance period.</p> <p>Updated denominator exception: Revised: For Submission Criteria 1: to remove patients with excessive missing responses or patients who were not seen for the second PAM survey within 4 months of the baseline.</p> <p>Updated denominator exclusion: Added: For ALL Submission Criteria: Patients who died during the performance period.</p> <p>Updated numerator: Revised: for ALL Submission Criteria: timing of follow-up PAM® survey to occur 4 to 12 months after baseline.</p> <p>Updated numerator definition: Added: For Submission Criteria 1: clarification as to what denotes excessive missing responses for each PAM survey.</p> |
| Measure Steward: | Insignia Health, LLC, a wholly owned subsidiary of Phreesia |
| High Priority Measure: | Yes |
| Measure Type: | Patient-Reported Outcome-Based Performance Measure |
| Rationale | <p>We are proposing to revise multiple components of this measure to allow re-administration of the PAM® survey no less than 4 months after the baseline survey is administered as opposed to 6 months. This change would allow a higher percentage of patients to complete the survey and be included in the measure denominator.</p> <p>In addition, we are proposing to lower the minimum performance threshold for collected follow-up PAM® surveys from 50 percent to 25 percent and remove patients who were missing more than 3 responses on the PAM-10® surveys or more than 4 responses on the PAM-13® surveys. Revising the threshold for the collected follow-up PAM® survey reduces clinician burden by lowering the number of survey responses that need to be collected to meet the measure denominator. We are also proposing to add a definition to clarify what denotes excessive for missing responses. Removing patients with excessive missing responses allows for a more complete assessment of an individual's knowledge, skills, and confidence for managing their health and health care.</p> <p>We are also proposing to increase the number of qualifying visits to two during the performance period and add an exclusion to remove patients who may have died during the performance period. These revisions to the denominator ensure a patient is established within that clinician's patient population which supports the completion of the baseline and follow-up of the survey.</p> |

D.64. Initiation, Review, and/or Update to Suicide Safety Plan for Individuals with Suicidal Thoughts, Behavior, or Suicide Risk

| Category | Description |
|-------------------------------------|--|
| CBE # / eCQM CBE #: | N/A / N/A |
| Quality #: | 504 |
| CMS eCQM ID: | N/A |
| Current Collection Type: | MIPS CQM Specifications |
| Current Measure Description: | Percentage of adult aged 18 years and older with suicidal ideation or behavior symptoms (based on results of a standardized assessment tool or screening tool) or increased suicide risk (based on the clinician's evaluation or clinician-rating tool) for whom a suicide safety plan is initiated, reviewed, and/or updated in collaboration between the patient and their clinician. |
| Substantive Change: | <p>The measure description is revised to read: Percentage of patients aged 12 years and older with suicidal ideation or behavior symptoms (based on results of a standardized assessment tool or screening tool) or increased suicide risk (based on the clinician's evaluation or clinician-rating tool) for whom a suicide safety plan is initiated, reviewed, and/or updated in collaboration between the patient and their clinician.</p> <p>The measure denominator is revised to read: For denominator submission criteria 1 & 2: Patients aged 12 years and older with a mental and/or substance use disorder with suicidal ideation and/or behavior symptoms or suicide risk at a clinical encounter during the denominator identification period.</p> |
| Measure Steward: | American Psychiatric Association |
| High Priority Measure: | Yes |
| Measure Type: | Process |
| Rationale | We are proposing to revise the age from 18 years and older to 12 years and older for denominator eligibility as suicide risk assessment is an important part of child and adolescent mental health. As noted in an American Academy of Pediatrics publication, ¹⁸³ "Suicide is the second leading cause of death for 10- to 24-year-olds in the United States and is a global public health issue, with a recent declaration of a National State of Emergency in Children's Mental Health by the American Academy of Pediatrics, American Academy of Child and Adolescent Psychiatry, and Children's Hospital Association." ¹⁸⁴ |

¹⁸³ Hua, L. L., Lee, J., Rahmandar, M. H., Sigel, E. J., Committee on Adolescence, & Council on Injury, Violence, and Poison Prevention. (2024). Suicide and Suicide Risk in Adolescents. *Pediatrics*, 153(1), e2023064800. <https://doi.org/10.1542/peds.2023-064800>.

¹⁸⁴ See footnote Hua et al., 2024.

Table Group DD: Proposed Substantive Changes to Previously Finalized MIPS Quality Measures Available Only for Use in Relevant MVPs for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years

As finalized for the CY 2024 performance period/2026 MIPS payment year and future years, the following three MIPS quality measures were retained for utilization in MVPs only while removed from traditional MIPS: Q112: Breast Cancer Screening, Q113: Colorectal Cancer Screening, and Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (88 FR 79897 through 79902). We note that some MIPS quality measures available only in MVPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP) and/or APP Plus, as proposed in section XX of this proposed rule. For such measures, the collection type applicable for purposes of the APP and/or APP Plus (Medicare CQM for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM)) is also specified as a collection type available for such measures described in Table Group DD.

Table Group DD within this proposed rule provides substantive changes proposed for the CY 2025 performance period/2027 MIPS payment year for MIPS quality measures available only in a relevant MVP. Two of the aforementioned MIPS quality measures, Q112 and Q113, have proposed substantive changes under Table Group DD. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2025 may not be identified within this proposed rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2025 CPT and ICD-10 updates and assessment of these codes inclusion by the Measure Steward, these changes may be postponed until CY 2026. The 2025 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at <https://qpp.cms.gov>.

Note: Electronic clinical quality measures (eCQMs) that are endorsed by a CBE are shown in Table DD of this Appendix as follows: CBE # / eCQM CBE #.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes would expand or contract the measure's current eligible patient population. Therefore, please refer to the current year measure specification and the 2025 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature, however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

We request comments on these substantive changes.

DD.1. Breast Cancer Screening

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | 2372 / N/A |
| Quality #: | 112 |
| CMS eCQM ID: | CMS125v13 |
| Current Collection Type: | Medicare Part B Claims Measure Specifications / eCQM Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of women 40 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period. |
| Substantive Change: | <p>Modified collection type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQM Specifications, and Medicare CQM Specifications (collection type available only in the APP and/or APP Plus).</p> <p>Updated denominator exclusion: For all collection types: Removed: specific encounter requirements from the frailty/advanced illness exclusion.</p> |
| Measure Steward: | National Committee for Quality Assurance |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician's medical record. This revision would update the denominator exclusion to remove any patient 66 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator of measure Q112. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data. |

DD.2. Colorectal Cancer Screening

| Category | Description |
|------------------------------|---|
| CBE # / eCQM CBE #: | 0034 / N/A |
| Quality #: | 113 |
| CMS eCQM ID: | CMS130v13 |
| Current Collection Type: | Medicare Part B Claims Measure Specifications / eCQM Specifications / MIPS CQM Specifications |
| Current Measure Description: | Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer. |
| Substantive Change: | <p>Modified collection type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQM Specifications, and Medicare CQM Specifications (collection type available only in the APP and/or APP Plus)</p> <p>Updated denominator exclusion: For all collection types: Removed: specific encounter requirements from the frailty/advanced illness exclusion.</p> |
| Measure Steward: | National Committee for Quality Assurance |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale | We are proposing to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician's medical record. This revision would update the denominator exclusion to remove any patient 66 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator of measure Q113. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data. |

APPENDIX 2: IMPROVEMENT ACTIVITIES

In this proposed rule, for the CY 2025 performance period/2027 MIPS payment year and future years, we are proposing to add **two** new improvement activities, modify **two** previously adopted improvement activities, and remove **eight** previously adopted improvement activities. These proposals are discussed in section IV.A.4.e.(3)(b)(iii) of this proposed rule and in more detail below. We request comment on our proposals.

**TABLE A: New Improvement Activities
for the CY 2025 Performance Period/2027 MIPS Payment Year and for Future Years**

| New Improvement Activity | |
|--------------------------------|--|
| Proposed Activity ID: | IA_PM_XX |
| Proposed Subcategory: | Population Management |
| Proposed Activity Title: | Implementation of Protocols and Provision of Resources to Increase Lung Cancer Screening Uptake |
| Proposed Activity Description: | <p>Establish a process or procedure to increase rates of lung cancer screening through one or more of the following interventions:</p> <ul style="list-style-type: none"> • Implementation of protocols that support enhanced documentation methods to identify eligible patients for lung cancer screening. <ul style="list-style-type: none"> ++ Example: A practice could embed electronic health record (EHR) prompts to flag insufficient patient smoking history (for example, total pack-years) and increase practice awareness around patient eligibility for screening ++ Example: A practice could implement documentation processes or procedures (for example, retrospective chart review, lung cancer screening eligibility questionnaire) to improve patient lung cancer screening eligibility data in the medical record • Development of a patient outreach and activation plan consisting of educational materials and resources for patients at high-risk of lung cancer for improved patient engagement and decision-making. <ul style="list-style-type: none"> ++ Example: Providers or clinic staff could provide culturally and linguistically appropriate patient-directed educational or care navigation materials related to lung cancer screening, eligibility criteria for low-dose computed tomography (LDCT), and the purpose and benefits of screening ++ Example: Providers or clinic staff could provide tools to prepare patients for shared decision-making (SDM) clinical encounters and promote patient/provider communication on lung cancer screening decision-making • Establishment of a navigation program to improve uptake and adherence of lung cancer screening and increase rates of LDCT referral completion. <ul style="list-style-type: none"> ++ Example: A practice could designate and train existing clinic staff or hire an additional staff member to counsel patients on the importance of lung cancer screening and refer them to existing resources (for example, transportation assistance, translator, financial services, appointment scheduling) to support ability to obtain LDCT ++ Example: A practice could create a process to follow up with referred patients via telephone reminders or virtual notifications (for example, email, patient charts) |
| Rationale: | <p>Lung cancer is a leading cause of cancer-related deaths (21%) in the U.S., more than colon and breast cancers combined.^{1,2} While there are established guidelines for the targeted use of LDCT for eligible patients, including particular criteria for age and smoking history^{3,4}, national lung cancer screening (LCS) rates are estimated at only 6.5% as of 2020, compared to 63% for colon and 64% for breast cancer screening in 2019.^{5,6}</p> <p>Evidence demonstrates that screening for lung cancer can improve patient outcomes. The implementation of protocols that support enhanced documentation methods to identify</p> |

eligible patients for LCS has been found to increase early-stage lung cancer detection, in one study by 24 percent (Russel et al., 2022).⁷ Other studies have also shown benefits from enhancing documentation to allow for more appropriate LCS:

- Following a retrospective chart review of existing patient smoking history and implementation of a notification system for primary care providers (PCPs), a community hospital identified 82 percent of patients who were eligible for LCS not yet referred for screening, and of that, 31 percent completed an LDCT referral.⁸
- Implementation of a clinical reminder system in an EHR to refer eligible patients to an LCS program, increased the number of LDCTs performed from 54 percent to 79 percent in one Veterans Affairs (VA) medical center.⁹
- EHR prompts generating a notification for providers to order LDCT screening for eligible patients, increased documentation of complete patient smoking history by 31 percent.¹⁰
- Updating patient pack-year data in the EHR through a patient questionnaire on smoking history and implementation of an EHR screen assessing pack-year data in alignment with evidence-based guidelines; development of a patient outreach and activation plan consisting of educational materials and resources for patients at high-risk of lung cancer for improved patient engagement and decision-making: among patients from a tobacco quit-line utilizing a video-based LCS decision aid, 50 percent reported feeling well-prepared to make screening decisions than with traditional materials and 68 percent reported being clear about their values related to the harms and benefits of screening. Additionally, patients using the decision-aid were more knowledgeable about LCS than participants using standard educational materials at each follow-up assessment.¹¹
- A web-based tool developed for SDM led to improved patient engagement, knowledge of LDCT, and preparation for SDM discussions among veterans in a primary care setting.¹²
- A computer tailored decision-support tool developed in alignment with the U.S. Preventive Services Task Force (USPSTF) LCS guidelines, increased LCS knowledge scores (2.33 mean change) and patient-perceived self-efficacy and benefits of LCS in a community-based clinic.¹³

Evidence also demonstrates the outcomes-improvement potential of the establishment of a navigation program to improve uptake and adherence of LCS and to increase rates of LDCT referral completion:

- In a patient navigator-led program including patient outreach to determine LCS eligibility, SDM discussions, and appointment-scheduling with patient's PCPs, 23.5 percent of LDCTs were performed in the intervention group compared to 8.6 percent in the control group among high-risk current smokers across 5 community health centers.¹⁴
- An oncology nurse navigator-led provider education program resulted in improved provider knowledge of LDCT and documented tobacco cessation discussions, as well as increased LDCT ordering for eligible patients.¹⁵
- A nurse-practitioner-led LCS clinic observed a 60 percent increase in the total number of LDCTs conducted and 85 percent of stakeholder participants noted the clinic was effective at addressing barriers to LCS.¹⁶

Exemplifying the importance of efforts seeking to increase LCS and follow up, guidelines and recommendations on expanded LCS eligibility criteria and SDM requirements by the Centers for Medicare & Medicaid Services (CMS) have recently been implemented:

- In 2021, leading LCS clinical guideline developers, including USPSTF and the AAFP lowered the starting age of LCS with LDCT from 55 to 50 years and patient pack-year history from 30 to 20 years, resulting in a larger eligible screening population.^{17,3}
- In 2022, under the Medicare National Coverage Determination, CMS expanded LCS eligibility criteria for age and pack-year history for beneficiaries receiving LDCT in alignment with clinical guidelines (for example, USPSTF, AAFP).

| | |
|---------------------------------|---|
| | <ul style="list-style-type: none"> In addition to the expanded eligibility criteria, CMS requires a counseling and SDM visit to be appropriately documented in a patient's medical record and be inclusive of determination of beneficiary eligibility and the use of one or more decision-aids.¹⁸ <p>There is also published evidence that cost-effectiveness of care can improve as a result of expanded eligibility screening. Research has found downstream effects linked to early detection and prevention in LCS to be associated with long-term cost-effectiveness in LCS care delivery:</p> <ul style="list-style-type: none"> In 2021, the USPSTF expanded screening recommendations to include individuals at an earlier age of 50 from 55 years, and minimum cumulative smoking exposure from 30 to 20 pack-years. An economic evaluation of this guideline change indicated that the updated recommendations were cost effective compared to the earlier recommendations, with a mean incremental cost-effectiveness ratio of \$72,564 per quality-adjusted life-year (QALY) gained.¹⁹ One study demonstrates the cost-savings of earlier diagnosis of lung cancer. In a review of patients with non-small cell lung cancer (NSCLC), it was revealed that the total per-patient per-month health care costs after diagnosis were significantly higher among those diagnosed at a Stage IV and lower among those diagnosed at Stage I (\$7,239 Stage I, \$9,484 Stage II, \$11,193 Stage IIIa, \$17,415 Stage IIIb, and \$21,441 Stage IV).²⁰ One modeling study of costs and outcomes associated with lung cancer found that implementation of a patient navigation program is cost-effective for lung cancer patients in Medicare, including that the program was cost-effective at a probability of 0.91 at \$100,000/QALY.²¹ Given the significant impact of lung cancer in the U.S.--and the effectiveness of LCS and related interventions--as noted above, this activity has a high likelihood of making a positive impact on outcomes for eligible clinicians' patients. |
| New Improvement Activity | |
| Proposed Activity ID: | IA_PM_XX |
| Proposed Subcategory: | Population Management |
| Proposed Activity Title: | Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk |
| Proposed Activity Description: | <p>Implement standardized, evidence-based cardiovascular disease risk assessment and care management for a defined population in the clinician's practice.</p> <p>The clinician or clinician group will apply standardized risk assessment and care management to a broad, clinician-defined patient population in the practice. The population can be defined by 1) patient age and/or atherosclerotic cardiovascular disease (ASCVD) risk factors; or 2) the constraints of the risk assessment tool (for example, the American College of Cardiology (ACC)/American Heart Association (AHA) ASCVD Risk Calculator is validated for patients over age 40).</p> <p>The results of screening and the plan for treatment and follow up will be documented using a standardized method in the patient's medical record. Care management plan and follow up intervals will be influenced by the degree of patient risk.</p> <p>Cardiovascular care management should be defined by risk assessment and lead to the development of individualized care plans with specific goals. Shared decision making should be part of the development of every patient care plan.</p> |
| Rationale: | Heart disease is the leading cause of death in the United States. Stroke is the fifth most common cause of death in the United States. ²² This activity is informed by the results of the CMS Innovation Center Million Hearts Model, which included initial ASCVD assessment as well as cardiovascular care management. ²³ The Million Hearts Model used the ACC/AHA ASCVD Risk Calculator: ASCVD Risk Estimator (acc.org). ²⁴ |

| | |
|--|--|
| | <p>The proposed new activity supports improved identification and treatment of patients at risk for ASCVD, and would expand on the work of the model in two ways: (1) increasing flexibility in requirements, allowing more clinician specialties to participate, along with increased flexibility in risk assessment to fit the needs of attesting clinicians and their patient populations; (2) requiring the use of structured documentation of risk factors and associated treatment plans with the aim of addressing all risk factors directly.</p> <p>This activity accommodates the use of any evidence-based approach to risk evaluation and patient care management that is implemented using standardized methods and across an entire patient population. The ASCVD Risk Estimator used by the Million Hearts Model is evidence based and simple to implement but may not be appropriate for every practice scenario or patient population. There is strong published evidence validating the ACC/AHA ASCVD Risk Calculator; describing optimal care for coronary artery disease (including making comparisons to European Union best practices); and providing guidelines for primary prevention of coronary artery disease.^{25,26,27,28}</p> |

**TABLE B: Changes to Previously Adopted Improvement Activities
for the CY 2025 Performance Period/2027 MIPS Payment Year and for Future Years**

In this proposed rule, we are proposing to modify **two** previously finalized improvement activities for the CY 2025 performance period/2027 MIPS payment year and future years. These proposals are discussed in section IV.A.4.e.(3)(b)(iii) of this proposed rule and in more detail below.

| Current Improvement Activity | |
|--|---|
| Current Activity ID: | IA_ERP_6 |
| Current Subcategory: | Emergency Response & Preparedness |
| Current Activity Title: | COVID-19 Vaccine Achievement for Practice Staff |
| Current Activity Description: | Demonstrate that the MIPS eligible clinician's practice has maintained or achieved a rate of 100 percent of office staff staying up to date with COVID vaccines according to the Centers for Disease Control and Prevention. ²⁹ Please note that those who are determined to have a medical contraindication specified by CDC recommendations are excluded from this activity. |
| Current Weighting: | Medium |
| Proposed Activity ID: | IA_PM_XX |
| Proposed Subcategory: | Population Management |
| Proposed Revised Activity Title: | Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B |
| Proposed Revised Activity Description: | Demonstrate that the MIPS eligible clinician's practice has achieved and/or maintained a vaccination rate of 60 percent of clinical practice staff for COVID-19, and 80 percent for influenza. Demonstrate vaccination, immunity, or non-responder status to hepatitis B for 95 percent of clinical practice staff. Vaccination recommendations are from Centers for Disease Control and Prevention; staff with contraindications to the vaccinations, as determined by the CDC, are excluded from the requirements. Vaccines and Immunizations CDC. |
| Proposed Change and Rationale: | Adjusting the target goals for this activity would align with the latest CDC recommendations and feedback received indicates that the proposal could increase the activity's utilization. Additionally, we are expanding the focus of this activity to include influenza and hepatitis B to highlight the importance of staff vaccination for vaccine-preventable diseases prevalent today. We are also proposing a change in this activity's subcategory, from Emergency Response & Preparedness to Population Management, to emphasize that staff vaccination is a long-term strategy in reducing morbidity and mortality rates for these diseases. |
| Current Improvement Activity | |
| Current Activity ID: | IA_BE_4 |
| Current Subcategory: | Beneficiary Engagement |
| Current Activity Title: | Engagement of patients through implementation of improvements in patient portal |
| Current Activity Description: | To receive credit for this activity, MIPS eligible clinicians must provide access to an enhanced patient/caregiver portal that allows users (patients or caregivers and their clinicians) to engage in bidirectional information exchange. The primary use of this portal should be clinical and not administrative. Examples of the use of such a portal include but are not limited to: brief patient reevaluation by messaging; communication about test results and follow up; communication about medication adherence, side effects, and refills; blood pressure management for a patient with hypertension; blood sugar management for a patient with diabetes; or any relevant acute or chronic disease management. |
| Current Weighting: | Medium |
| Proposed Activity ID: | IA_BE_4 |

| | |
|--|---|
| Proposed Subcategory: | Beneficiary Engagement |
| Proposed Revised Activity Title: | Engagement of Patients through Implementation of New Patient Portal |
| Proposed Revised Activity Description: | To receive credit for this activity, MIPS eligible clinicians must implement and provide access to a new patient/caregiver portal that allows users (patients or caregivers and their clinicians) to engage in bidirectional information exchange. The primary use of this portal should be clinical and not administrative. Examples of the use of such a portal include, but are not limited to, the following: brief patient reevaluation by messaging; communication about test results and follow up; communication about medication adherence, side effects, and refills; blood pressure management for a patient with hypertension; blood sugar management for a patient with diabetes; and/or any relevant acute or chronic disease management. |
| Proposed Change and Rationale: | We are proposing to modify this activity's description and its validation criteria to specify the implementation of a new patient/caregiver portal by clinicians who were not previously using a patient portal. This activity was originally created during a time of transition to EHRs to encourage electronic information exchange. It has become standard practice to use patient portals; therefore, the activity is likely no longer driving improvement among clinicians who have already implemented a patient portal. This activity has been highly utilized year over year and continues to be in the top ten activities reported. Limiting the activity to clinicians that implement new patient portals in practices that previously did not use them would refocus the measure on its original purpose and encourage clinicians who have previously implemented patient portals to report other improvement activities that may offer meaningful opportunities for improvement. |

²⁹Centers for Disease Control and Prevention (2024). Stay Up to Date with COVID-19 Vaccines. Last Updated April 25, 2024. <https://www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date.html>

**TABLE C: Improvement Activities Proposed for Removal
for the CY 2025 Performance Period/2026/2027 MIPS Payment Year and for Future Years**

In this proposed rule, we are proposing to remove **eight** previously finalized improvement activities beginning with the CY 2025 performance period/2027 MIPS payment year. These proposals are discussed in section IV.A.4.e.(3)(b)(iii) of this proposed rule and in more detail below; activity removal factors are discussed in the CY 2020 PFS final rule (84 FR 62568 through 63563).

| Current Improvement Activity | |
|--------------------------------------|---|
| Current Activity ID: | IA_EPA_1 |
| Current Subcategory: | Expanded Practice Access |
| Current Activity Title: | Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record |
| Current Activity Description: | <p>Provide 24/7 access to MIPS eligible clinicians, groups, or care teams for advice about urgent care (for example, MIPS eligible clinician and care team access to medical record, cross-coverage with access to medical record, or protocol-driven nurse line with access to medical record) that could include one or more of the following:</p> <ul style="list-style-type: none"> • Expanded hours in evenings and weekends with access to the patient medical record for example, coordinate with small practices to provide alternate hour office visits and urgent care); • Use of alternatives to increase access to care team by MIPS eligible clinicians and groups, such as e-visits, phone visits, group visits, home visits and alternate locations (for example, senior centers and assisted living centers); and/or • Provision of same-day or next-day access to a MIPS eligible clinician, group or care team when needed for urgent care or transition management. |
| Current Weighting: | High |
| Removal Rationale: | We are proposing to remove this activity under removal factor seven, activity is obsolete; this activity was created, in part, to incentivize utilization of EHRs to increase access to clinicians in off hours and decrease emergency room (ER) visits. Today, EHRs are highly utilized, and this activity has become standard of care. This is supported by the fact that this activity continues to be in the top ten activities reported, indicating that it is overutilized and that the clinical practice improvement promoted by the activity has been achieved. We are proposing the removal of this activity in the context of our regular review of the Inventory. In conducting this review recently, we concluded that the goal of this activity has been widely achieved by eligible clinicians and practices. |
| Current Improvement Activity | |
| Current Activity ID: | IA_PM_12 |
| Current Subcategory: | Population Management |
| Current Activity Title: | Population empanelment |
| Current Activity Description: | <p>Empanel (assign responsibility for) the total population, linking each patient to a MIPS eligible clinician or group or care team.</p> <p>Empanelment is a series of processes that assign each active patient to a MIPS eligible clinician or group and/or care team, confirm assignment with patients and clinicians, and use the resultant patient panels as a foundation for individual patient and population health management.</p> <p>Empanelment identifies the patients and population for whom the MIPS eligible clinician or group and/or care team is responsible and is the foundation for the relationship continuity between patient and MIPS eligible clinician or group /care team that is at the heart of comprehensive primary care. Effective empanelment requires identification of the “active population” of the practice: those patients who identify and use your practice as a source for primary care. There are many ways to define “active patients” operationally, but generally, the definition of “active patients” includes</p> |

| | |
|-------------------------------------|--|
| | patients who have sought care within the last 24 to 36 months, allowing inclusion of younger patients who have minimal acute or preventive health care. |
| Current Weighting: | Medium |
| Removal Rationale: | We propose to remove this activity under removal factor seven, activity is obsolete; this activity was designed in the early years of the MIPS program to highlight the importance of patient population empanelment to drive patient-centered care and, over time, to drive quality improvement. Empanelment is now more widely accepted and/or used as an option to drive and/or measure comprehensive care, and this activity has no requirement for implementation or improvement beyond the empanelment; therefore, we are recommending its removal. |
| Current Improvement Activity | |
| Current Activity ID: | IA_CC_1 |
| Current Subcategory: | Care Coordination |
| Current Activity Title: | Implementation of use of specialist reports back to referring clinician or group to close referral loop |
| Current Activity Description: | Performance of regular practices that include providing specialist reports back to the referring individual MIPS eligible clinician or group to close the referral loop or where the referring individual MIPS eligible clinician or group initiates regular inquiries to specialist for specialist reports which could be documented or noted in the EHR technology. |
| Current Weighting: | Medium |
| Removal Rationale: | We propose to remove this activity under removal factor one, this activity is duplicative, and factor five, this activity does not align with the quality, cost, or Promoting Interoperability performance categories. This activity provides credit for ensuring that consultation reports are communicated between an ordering and a consulting provider, and this is now standard of care. Also, this concept is redundant with some quality and Quality Clinical Data Registry (QCDR) measures, including QM#374. Our recommendation for removal is supported by the fact that this activity continues to be in the top ten activities reported, indicating that it is overutilized and that the clinical practice improvement promoted by the activity has been achieved. We are proposing the removal of this activity in the context of our regular review of the Inventory. In conducting this review recently, we concluded that the goal of this activity has been widely achieved by eligible clinicians and practices. |
| Current Improvement Activity | |
| Current Activity ID: | IA_CC_2 |
| Current Subcategory: | Care Coordination |
| Current Activity Title: | Implementation of improvements that contribute to more timely communication of test results |
| Current Activity Description: | Timely communication of test results defined as timely identification of abnormal test results with timely follow-up. |
| Current Weighting: | Medium |
| Removal Rationale: | We propose to remove this activity under removal factor seven, activity is obsolete. This activity was created, in part, to encourage strategies for timely communication and to improve upon those strategies. This process has become widely used with the use of EHRs and the adoption of patient portals, and is now standard of care. This is supported by the fact that this activity continues to be in the top ten activities reported, indicating that it is overutilized. We are proposing the removal of this activity in the context of our regular review of the Inventory. In conducting this review recently, we concluded that the goal of this activity has been widely achieved by eligible clinicians and practices. |
| Current Improvement Activity | |
| Current Activity ID: | IA_ERP_4 |
| Current Subcategory: | Emergency Response and Preparedness |
| Current Activity Title: | Implementation of a Personal Protective Equipment (PPE) Plan |
| Current Activity Description: | Implement a plan to acquire, store, maintain, and replenish supplies of personal protective equipment (PPE) for all clinicians or other staff who are in physical proximity to patients.
In accordance with guidance from the Centers for Disease Control and Prevention (CDC) the PPE plan should address: |

| | |
|-------------------------------------|---|
| | <ul style="list-style-type: none"> • Conventional capacity: PPE controls that should be implemented in general infection prevention and control plans in healthcare settings, including training in proper PPE use. • Contingency capacity: actions that may be used temporarily during periods of expected PPE shortages. • Crisis capacity: strategies that may need to be considered during periods of known PPE shortages. <p>The PPE plan should address all of the following types of PPE:</p> <ul style="list-style-type: none"> • Standard precautions (for example, hand hygiene, prevention of needle-stick or sharps injuries, safe waste management, cleaning and disinfection of the environment) • Eye protection • Gowns (including coveralls or aprons) • Gloves • Facemasks • Respirators (including N95 respirators) |
| Current Weighting: | Medium |
| Removal Rationale: | We propose to remove this activity under removal factor seven, activity is obsolete; since the COVID-19 pandemic, most clinicians are well prepared in PPE safety, as PPE enhancements have been made throughout patient care settings. It is unlikely that this activity will drive new improvements. We acknowledge the ongoing importance of PPE, and will work to ensure that, going forward, improvement activities that support continued enhancement and maintenance of PPE protocols are reflected in MIPS. |
| Current Improvement Activity | |
| Current Activity ID: | IA ERP 5 |
| Current Subcategory: | Emergency Response and Preparedness |
| Current Activity Title: | Implementation of a Laboratory Preparedness Plan |
| Current Activity Description: | <p>Develop, implement, update, and maintain a preparedness plan for a laboratory intended to support continued or expanded patient care during COVID-19 or another public health emergency. The plan should address how the laboratory would maintain or expand patient access to health care services to improve beneficiary health outcomes and reduce healthcare disparities.</p> <p>For laboratories without a preparedness plan, MIPS eligible clinicians would meet with stakeholders, record minutes, and document a preparedness plan, as needed. The laboratory must then implement the steps identified in the plan and maintain them. For laboratories with existing preparedness plans, MIPS eligible clinicians should review, revise, or update the plan as necessary to meet the needs of the current PHE, implement new procedures, and maintain the plan.</p> <p>Maintenance of the plan in this activity could include additional hazard assessments, drills, training, and/or developing checklists to facilitate execution of the plan. Participation in debriefings to evaluate the effectiveness of plans are additional examples of engagement in this activity.</p> |
| Current Weighting: | Medium |
| Removal Rationale: | We propose to remove this activity under removal factor seven, activity is obsolete; since the COVID-19 pandemic, most clinicians are now well prepared in COVID-19-related patient safety and laboratory-preparedness enhancements have been made throughout patient care settings. It is unlikely that this activity will drive new improvements. We acknowledge the ongoing importance of laboratory preparedness, and will work to ensure that, going forward, improvement activities that support continued enhancement and maintenance of lab preparedness protocols are reflected in MIPS. |
| Current Improvement Activity | |
| Current Activity ID: | IA BMH 8 |
| Current Subcategory: | Behavioral and Mental Health |
| Current Activity Title: | Electronic Health Record Enhancements for BH data capture |
| Current Activity Description: | Enhancements to an electronic health record to capture additional data on behavioral health (BH) populations and use that data for additional decision-making purposes (for |

| | |
|-------------------------------------|--|
| | example, capture of additional BH data results in additional depression screening for at-risk patient not previously identified). |
| Current Weighting: | Medium |
| Removal Rationale: | We propose to remove this activity under removal factor two, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. This activity was created, in part, to assist in the transition from paper charts to EHRs. While the use of EHRs is now highly prevalent and has become part of current basic standards of care, there is still much progress to be made in terms of adoption and use of EHRs and other health information technologies in a behavioral health context. This activity, though, allows attestation with a low level of effort and with vague requirements related to clinical outcomes. Because there are other, more potentially impactful, behavioral health activities in the current Inventory, we are recommending that this activity be removed. IA_BMH_7, Implementation of Integrated Patient Centered Behavioral Health Model, which includes 'use of a registry or health information technology functionality to support active care management and outreach to patients in treatment,' is a strong alternative activity. We also intend, in future rulemaking, to develop a new activity (or to modify an existing activity) to promote the effective use of health information technologies in behavioral health. |
| Current Improvement Activity | |
| Current Activity ID: | IA_PSPA_27 |
| Current Subcategory: | Patient Safety and Practice Assessment |
| Current Activity Title: | Invasive Procedure or Surgery Anticoagulation Medication Management |
| Current Activity Description: | For an anticoagulated patient undergoing a planned invasive procedure for which interruption in anticoagulation is anticipated, including patients taking vitamin K antagonists (warfarin), target specific oral anticoagulants (such as apixaban, dabigatran, and rivaroxaban), and heparins/low molecular weight heparins, documentation, including through the use of electronic tools, that the plan for anticoagulation management in the periprocedural period was discussed with the patient and with the clinician responsible for managing the patient's anticoagulation. Elements of the plan should include the following: discontinuation, resumption, and, if applicable, bridging, laboratory monitoring, and management of concomitant antithrombotic medications (such as antiplatelets and nonsteroidal anti-inflammatory drugs (NSAIDs)). An invasive or surgical procedure is defined as a procedure in which skin or mucous membranes and connective tissue are incised, or an instrument is introduced through a natural body orifice. |
| Current Weighting: | Medium |
| Removal Rationale: | We propose to remove this activity under removal factor one, this activity is duplicative. We recommend removal of this activity as its focus is duplicative with IA_CC_15: PSH [Perioperative-Surgical Home] Care Coordination. IA_CC_15 requires coordination of patient care through the perioperative period and includes anticoagulant management as one part of its requirements. This activity, IA_PSPA_27, is more tightly focused in an area that is high risk and, therefore, is not likely changing clinical practice widely. We acknowledge the ongoing importance of care coordination and medication management as a patient safety goal, and will work to ensure that, going forward, improvement activities that support enhancement and maintenance of medication management activities (for example, anticoagulation) are reflected in MIPS. |

APPENDIX 3: MVP INVENTORY

MVP Development: Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854), the CY 2022 PFS final rule (86 FR 65998 through 66031), and the CY 2023 PFS final rule (87 FR 70210 through 70211) we finalized a set of criteria to use in the development of MVPs, including MVP reporting requirements, MVP maintenance, and the selection of measures and activities within an MVP.

This appendix contains two groups of proposed MVP tables: Group A: proposed new MVPs and Group B: proposed modifications to previously finalized MVPs. Group A includes six new proposed MVPs. Group B includes 16 previously finalized MVPs with proposed modifications.

Each MVP includes measures and activities from the quality performance category, improvement activities performance category, and the cost performance category relevant to the clinical theme of the MVP. Each MVP also includes a foundational layer comprised of population health measures and Promoting Interoperability performance category measures.

MVP Development: Performance Category Sources

The MVP tables contain a set of MIPS quality measures, QCDR measures (as applicable), improvement activities, cost measures, and foundational measures based on clinical topics. For further reference, the sources of the measures and activities in the MVP tables are as follows:

- Existing MIPS quality measures are in the 2024 MIPS Quality Measures List on the Quality Payment Program website.¹⁰¹⁷ See Appendix 1: MIPS Quality Measures of this proposed rule for any proposed additions (Table Group A), proposed removals (Table Group B), or proposed modifications to existing quality measures (Table Groups D and DD).
- Existing QCDR measures are based on the most recent publication of the 2024 QCDR Measure Specification file, located on the Quality Payment Program website.¹⁰¹⁸ We plan to modify the list of 2025 QCDR measures around December 2024.
- Improvement activities are in the 2024 Improvement Activities Inventory and the 2024 MIPS Data Validation Criteria, located on the Quality Payment Program website.¹⁰¹⁹ See Appendix 2: Improvement Activities of this proposed rule for any proposed additions (Table Group A), proposed modifications to existing improvement activities (Table Group B), or proposed removals (Table Group C).
- Existing cost measures are in the 2024 Cost Measures Inventory.¹⁰²⁰ See section IV.A.4.e.(2) of this proposed rule for any proposed removals, additions, or modifications to existing cost measures.
- For further details on the population health measures (attributed to the Quality Performance Category) included in the foundational layer, see the CY 2022 PFS final rule (86 FR 65408 through 65409).
- Existing Promoting Interoperability measures adopted in prior rulemaking and included in the foundational layer are located on the Quality Payment Program website.¹⁰²¹ There were policy updates to the Promoting Interoperability performance category but no proposed new, modifications, or removed Promoting Interoperability measures for the CY 2025 performance period/2027 MIPS payment year (for policy updates on this category see section IV.A.4.e. of this proposed rule).

MVP Development: Improvement Activity Policy Update and Global Inclusion of an Improvement Activity

¹⁰¹⁷ See the 2024 MIPS Quality Measures List: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2632/2024%20MIPS%20Quality%20Measures%20List.xlsx>.

¹⁰¹⁸ See <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2617/2024%20QCDR%20Measure%20Specifications.xlsx> for QCDR measures.

¹⁰¹⁹ See the 2024 Improvement Activities Inventory: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2644/2024ImprovementActivitiesInv.zip> and 2024 MIPS Data Validation Criteria: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2666/2024MIPSDataValidationCriteria.zip> for improvement activity details.

¹⁰²⁰ See the 2024 Cost Measures Inventory: <https://qpp.cms.gov/mips/explore-measures?tab=costMeasures&py=2024>.

¹⁰²¹ See the 2024 Promoting Interoperability Measure Specifications: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2223/2024%20MIPS%20Promoting%20Interoperability%20Measure%20Specifications.zip> for Promoting Interoperability measure details.

- We are proposing to eliminate the weighting from improvement activities and provide full credit for the improvement activities performance category when an MVP participant attests to one improvement activity option within the selected MVP. See section IV.A.4.e.(3)(b)(iv) of this proposed rule for detailed information regarding the proposed removal of weighting from improvement activities and for detailed information regarding our proposed reporting requirement changes for improvement activities.
- We are proposing to modify IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff to expand the focus and importance of vaccination status to drive improvement across the practice. We are proposing to add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings. See Appendix 2, Improvement Activities: Table B of this proposed rule for detailed information regarding the proposed modifications to IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff, including a proposed activity ID and title update.

MVP Table Symbol Information and Definitions

Please note the following symbols and definitions used within the MVP tables in the Group A and Group B tables below:

- Quality measures, improvement activities, and cost measures proposed for addition to a previously finalized MVP are identified with a plus sign (+) within the Group B MVP tables in this appendix.
- New quality measures, improvement activities, and cost measures proposed for inclusion in MIPS beginning with the CY 2025 performance period/2027 MIPS payment year and future years are identified with a caret symbol (^). See Appendix 1, MIPS Quality Measures: Table Group A of this proposed rule for further information regarding new MIPS quality measures. See Appendix 2: Improvement Activities: Table A of this proposed rule for further information regarding new improvement activities. See section IV.A.4.e.(2)(a)(iii) of this proposed rule for further information regarding new cost measures.
- Existing measures and improvement activities with proposed revisions are identified with a single asterisk (*). See Appendix 1, MIPS Quality Measures: Table Group D of this proposed rule for further information regarding proposed revisions to MIPS quality measures. See Appendix 2: Improvement Activities: Table B of this proposed rule for further information regarding proposed revisions to improvement activities. See section IV.A.4.e.(2)(a)(vi) and IV.A.4.e.(2)(a)(vii) of this proposed rule for further information regarding proposed revisions to cost measures. We intend to include existing measures or activities with proposed revisions in MVPs (as applicable) regardless of whether the proposed revisions are finalized beginning with the CY 2025 performance period/2027 MIPS payment year.
- Quality measures and improvement activities identified with a double asterisk (**) can only be submitted when included in an MVP.
- Quality measures considered high priority (as defined in § 414.1305) are identified with a single exclamation point (!) while outcome measures (as defined in § 414.1305) are identified with a double exclamation point (!!). Further details of these types of measures are in the CMS Measures Management System Hub.¹⁰²²
- QCDR measures identified with a pound sign (#) indicate testing data is still pending and due on or before September 1, 2024. We refer readers to the CY 2022 PFS final rule for additional details regarding requirements for QCDR measures considered for an MVP (86 FR 65407 through 65408).
- Quality measures and improvement activities that include a health equity component are identified with a tilde (~) within the MVP table.
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation is identified with a percent (%) to indicate attestation to this improvement activity provides full credit for the improvement activity performance category within an MVP.
- Quality measure collection types are identified in parentheses after each quality measure title, and improvement activity medium/high weight designations are identified in parentheses after each improvement activity

Group A: New MVPs Proposed for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years

A.1 Complete Ophthalmologic Care MVP

The proposed Complete Ophthalmologic Care MVP assesses meaningful outcomes in cataract, glaucoma, retinal detachment, and broadly applicable ocular care. This MVP would be most applicable to clinicians who treat patients within the practice of ophthalmology and optometry.

¹⁰²² See <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>.

Quality Measures

We are proposing to include 18 MIPS quality measures and 6 QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of ocular care by assessing ocular health and treatment of disorders attributed to diabetes related disease, glaucoma, retinal detachment, and cataracts. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in ocular care:

- Q012: Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation: This MIPS quality measure evaluates changes in the optic nerve which define the progression and worsening of glaucoma disease status.
- Q019: Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care: This MIPS quality measure focuses on the communication between the primary physician managing ongoing care and the physician performing the dilated macular or fundus exam on patients with diabetic retinopathy.
- Q117: Diabetes: Eye Exam: This MIPS quality measure supports eye screening for diabetic retinal disease.
- Q141: Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care: This MIPS quality measure focuses on glaucoma treatment and follow up, ensuring the IOP is within a range at which visual field loss is unlikely to significantly reduce a patient's health-related quality of life over their lifetime.
- Q191: Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery: This MIPS quality measure evaluates visual acuity as a surgical outcome following cataract surgery.
- Q303: Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery: This MIPS quality measure looks for improvement in visual function following cataract surgery.
- Q304: Cataracts: Patient Satisfaction within 90 Days Following Cataract Surgery: This MIPS quality measure assesses patient satisfaction following cataract surgery. Patient satisfaction is a valuable performance indicator for measuring quality of care delivered by clinicians providing cataract surgery. Patient satisfaction is an assessment of the patient's experience with the care process delivered by the clinician and health care services.
- Q384: Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery: This MIPS quality measure assesses for successful surgical procedures by evaluating if patients required a return to the operation room or not.
- Q385: Adult Primary Rhegmatogenous Retinal Detachment Surgery: Visual Acuity Improvement Within 90 Days of Surgery: This MIPS quality measure assesses for successful surgical procedures by evaluating if patients showed improvement of visual acuity following surgery as compared to their preoperative level.
- Q389: Cataract Surgery: Difference Between Planned and Final Refraction: This MIPS quality measure evaluates patients for achieving a final refraction within +/- 1.0 diopters of their planned (target) refraction following cataract surgery.
- Q499: Appropriate Screening and Plan of Care for Elevated Intraocular Pressure Following Intravitreal or Periocular Steroid Therapy: This MIPS quality measure focuses on patient safety and ensures appropriate screening and plan of care for elevated intraocular pressure following treatment with intravitreal or periocular steroid.
- Q500: Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up: This MIPS quality measure evaluates patients following acute posterior vitreous detachment to ensure prompt and appropriate care to minimize potential for complications.
- Q501: Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up: This MIPS quality measure evaluates patients following acute posterior vitreous detachment and acute vitreous hemorrhage to ensure prompt and appropriate care to minimize potential for complications.
- IRIS2: Glaucoma – Intraocular Pressure Reduction: This QCDR measure focuses on glaucoma patients to assess management of their IOP by evaluating if it is below a threshold level based on severity of their glaucoma.
- IRIS13: Diabetic Macular Edema – Loss of Visual Acuity: This QCDR measure evaluates outcomes of treatment for diabetic macular edema by assessing for change in visual acuity after treatment.
- IRIS39: Intraocular Pressure Reduction Following Trabeculectomy or an Aqueous Shunt Procedure: This QCDR measure assesses for successful treatment of patients with glaucoma who have undergone trabeculectomy or an aqueous shunt procedure by evaluating for intraocular pressure reduction.
- IRIS54: Complications after Cataract Surgery: This QCDR measure assesses for successful cataract surgeries by reviewing patients for complications within 90 days of the procedure.
- IRIS58: Improved Visual Acuity after Vitrectomy for Complications of Diabetic Retinopathy within 120 Days: This QCDR measure assesses for successful vitrectomy procedure in patients with diabetic retinopathy by reviewing patients for complications within 120 days of the procedure.
- IRIS61: Visual Acuity Improvement Following Cataract Surgery and Minimally Invasive Glaucoma Surgery: This QCDR measure evaluates visual acuity as a surgical outcome following cataract surgery and minimally invasive glaucoma surgery.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in ocular care. The quality measures below assess for age-specific screenings and the patients' understanding of engagement in their healthcare:

- **Q130: Documentation of Current Medications in the Medical Record:** This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- **Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** This MIPS quality measure ensures patients are screened for tobacco use and if screened positive receive tobacco cessation intervention.
- **Q374: Closing the Referral Loop: Receipt of Specialist Report:** This MIPS quality measure is attributable to the clinician referring the patient and ensures report receipt from the referred to clinician, closing the communication loop.
- **Q487: Screening for Social Drivers of Health:** This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- **Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** This MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the clinician's ability to manage their health and be an active partner in the health care journey.

Improvement Activities

We reviewed the Improvement Activities Inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 14 improvement activities that reflect actions and processes undertaken by clinicians who specialize in ocular care, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_1: Enhance Engagement of Medicaid and Other Underserved Populations
- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_25: Drug Cost Transparency
- IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_CC_10: Care transition documentation practice improvements
- IA_CC_13: Practice improvements to align with OpenNotes principles
- IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Home accreditation
- IA_PM_13: Chronic care and preventative care management for empaneled patients
- IA_PM_16: Implementation of medication management practice improvements
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

Cost Measures

We are proposing to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of ocular care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in ocular care, specifically cataract removal, and aligns with other measures and activities within this MVP:

- **Routine Cataract Removal with Intraocular Lens (IOL) Implantation:** This MIPS episode-based cost measure assesses costs associated with routine cataract removal. The addition of this measure aligns with included quality measures, such as Q191: Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery and Q303: Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery.

We are proposing to modify the Routine Cataract Removal with Intraocular Lens (IOL) Implantation cost measure, which includes a proposed measure title update. Please see section IV.A.4.e(2)(a)(vi) of this proposed rule for all proposed revisions to this measure.

Complete Ophthalmologic Care MVP Tables

As stated in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those we determined best fit the clinical concept of the proposed Complete Ophthalmologic Care MVP. We request comment on the measures and activities included in this MVP.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions
 Double asterisk (**): measures and improvement activities only available when included in an MVP
 Single exclamation point (!): high priority measures
 Double exclamation point (!!): outcome measures
 Tilde (~): measures and improvement activities that include a health equity component
 Percent (%): attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category
 Pound sign (#): QCDR measures pending testing data

TABLE A.1a: Complete Ophthalmologic Care MVP Measures and Improvement Activities

| Quality | Improvement Activities | Cost |

A.2 Dermatological Care MVP

The proposed Dermatological Care MVP focuses on the clinical theme of providing treatment and management of dermatologic care. This MVP would be most applicable to clinicians who treat patients within the practice of dermatology, including nonphysician practitioners (NPPs) such as nurse practitioners and physician assistants.

Quality Measures

We are proposing to include 11 MIPS quality measures and 6 QCDR measure within the quality performance category of this MVP, which are specific to the clinical topic of dermatology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in dermatology:

- **Q176: Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy:** This MIPS quality measure ensures TB testing is completed prior to the first course of biologic and/or immune response modifier therapy.
- **Q397: Melanoma Reporting:** This MIPS quality measure assesses that the pathology report for primary malignant cutaneous melanoma includes reporting identifiers needed for microsatellitosis of invasive tumors.
- **Q410: Psoriasis: Clinical Response to Systemic Medications:** This MIPS quality measure ensures patients with psoriasis vulgaris who are being treated with systemic medications maintain disease control by evaluating documented body surface assessments meet at least one of the specified benchmarks.
- **Q440: Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician:** This MIPS quality measure ensures pathology reports diagnosing carcinoma or melanoma are communicated from the Pathologist/Dermatopathologist within 7 days from the Pathologist receiving the specimen.
- **Q485: Psoriasis – Improvement in Patient-Reported Itch Severity:** This MIPS quality measure evaluates patients with a diagnosis of psoriasis for a reduction in itch severity of 3 or more points at follow up visits.
- **Q486: Dermatitis – Improvement in Patient-Reported Itch Severity:** This MIPS quality measure evaluates patients with a diagnosis of dermatitis for a reduction in itch severity of 3 or more points at follow up visits.

- **TBD: Melanoma: Tracking and Evaluation of Recurrence:** This proposed MIPS quality measure ensures patients who undergo excisional surgery for melanoma or melanoma in situ within the previous 5 years have documentation that an exam for recurrence of melanoma was performed within the performance period and results captured.
- **AAD6: Skin Cancer Biopsy Reporting Time – Clinician to Patient:** This QCDR measure ensures timely communication from the clinician to the patient when they have a positive finding for carcinoma, melanoma, or primary cutaneous malignancies.
- **AAD8: Chronic Skin Conditions: Patient Reported Quality-of-Life:** This QCDR measure ensures a patient-reported quality-of-life assessment is completed and recorded in the medical record with a plan of care at least once in the performance period.
- **AAD12: Melanoma: Appropriate Surgical Margins:** This QCDR measure ensures the initial biopsy and surgical margins are documented in the medical record and are in compliance with the minimum margin recommended in the current National Comprehensive Cancer Network (NCCN) guideline.
- **AAD16: Avoidance of Post-operative Systemic Antibiotics for Office-based Closures and Reconstruction After Skin:** This QCDR measure assesses for the appropriate use of post operative antibiotics for patients with skin cancer undergoing an office-based closure or reconstruction procedure.
- **AAD17: Continuation of Anticoagulation Therapy in the Office-based Setting for Closure and Reconstruction After Skin Cancer Resection Procedures:** This QCDR measure assesses the percentage of patients who had their anticoagulation therapy continued prior to an in-office procedure for intermediate layer and/or complex linear closures OR reconstruction after skin cancer resection performed.
- **AAD18: Avoidance of Opioid Prescriptions for Closure and Reconstruction After Skin Cancer Resection:** This QCDR measure identifies the number of patients diagnosed with skin cancer who were prescribed an opioid/narcotic therapy as a first line pain management option post-operative by the reconstructing surgeon.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in dermatology. The quality measures below assess for age-specific screenings, and follow-up actions for select measures:

- **Q130: Documentation of Current Medications in the Medical Record:** This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- **Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** This MIPS quality measure ensures patients are screened for tobacco use and if screened positive receive tobacco cessation intervention.
- **Q487: Screening for Social Drivers of Health:** This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- **Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** This MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the clinician's ability to manage their health and be an active partner in the health care journey.

Improvement Activities

We reviewed the Improvement Activities Inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in dermatology, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_1: Enhance Engagement of Medicaid and Other Underserved Populations
- IA_AHE_6: Provide Education Opportunities for New Clinicians
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_15: Engagement of patients, family and caregivers in developing a plan of care
- IA_EPA_2: Use of telehealth services that expand practice access
- IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_16: Implementation of medication management practice improvements
- IA_PSPA_8: Use of Patient Safety Tools

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

Cost Measures

We are proposing to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of dermatology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure

provides a meaningful assessment of the clinical care for clinicians who specialize in dermatology, specifically melanoma resection, and aligns with other measures and activities within this MVP:

- Melanoma Resection: This MIPS episode-based cost measure assesses costs associated with excision procedures to remove a cutaneous melanoma. The addition of this measure aligns with Q397: Melanoma Reporting and TBD: Melanoma: Tracking and Evaluation of Recurrence.

Dermatological Care MVP Tables

As stated in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those we determined best fit the clinical concept of the proposed Dermatological Care MVP. We request comment on the measures and activities included in this MVP.

Symbol Key:

Carat symbol (^): new proposed measures and improvement activities

Single asterisk (*): existing measures and improvement activities with proposed revisions

Double asterisk (**): measures and improvement activities only available when included in an MVP

Single exclamation point (!): high priority measures

Double exclamation point (!!): outcome measures

Tilde (~): measures and improvement activities that include a health equity component

Percent (%): attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

Pound sign (#): QCDR measures pending testing data

A.3 Gastroenterology Care MVP

The proposed Gastroenterology Care MVP focuses on the clinical theme of providing treatment and management of the digestive system and the liver. This MVP would be most applicable to clinicians who treat patients within the practice of gastroenterology, including nonphysician practitioners (NPPs) such as nurse practitioners and physician assistants.

Quality Measures

We are proposing to include 11 MIPS quality measures and 3 QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of gastroenterology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in gastroenterology:

- Q113: Colorectal Cancer Screening: This MIPS quality measure ensures appropriate screening of patients for colorectal cancer.
- Q185: Colonoscopy Interval for Patients with a History of Adenomatous Polyps - Avoidance of Inappropriate Use: This MIPS quality measure ensures appropriate follow-up, an interval of 3 or more years, for patients with a history of prior adenomatous polyp(s) in previous colonoscopy.
- Q275: Inflammatory Bowel Disease (IBD): Assessment of Hepatitis B Virus (HBV) Status Before Initiating Anti-TNF (Tumor Necrosis Factor) Therapy: This MIPS quality measure requires patients with a diagnosis of inflammatory bowel disease (IBD) have Hepatitis B Virus (HBV) status assessed prior to initiating anti-TNF (tumor necrosis factor) therapy.
- Q320: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients: This MIPS quality measure ensures appropriate follow-up for patients receiving a screening colonoscopy without biopsy or polypectomy.
- Q400: One-Time Screening for Hepatitis C Virus (HCV) and Treatment Initiation: This MIPS quality measure requires patients have received a one-time screening for hepatitis C virus (HCV) infection as well as treatment initiation or referral if screening is positive.
- Q401: Hepatitis C: Screening for Hepatocellular Carcinoma (HCC) in Patients with Cirrhosis: This MIPS quality measure ensures patients with a diagnosis of chronic Hepatitis C cirrhosis have appropriate surveillance imaging for hepatocellular carcinoma at least once during the performance period.
- GIQIC23: Appropriate follow-up interval based on pathology findings in screening colonoscopy: This QCDR measure ensures appropriate follow-up consistent with US Multi-Society Task Force (USMSTF) recommendations based upon pathology findings from screening colonoscopy with biopsy or polypectomy documented in colonoscopy report.
- GIQIC26: Screening Colonoscopy Adenoma Detection Rate: This QCDR measure evaluates patients who had a screening colonoscopy and at least one conventional adenoma or colorectal cancer was detected.
- NHCR4: Repeat screening or surveillance colonoscopy recommended within one year due to inadequate bowel preparation: This QCDR measure ensures patients with inadequate bowel prep receive a repeat screening or surveillance colonoscopy or an alternate tier 1 or tier 2 colorectal cancer screening modality within one year.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in gastroenterology. The quality measures below assess for age-specific screenings, and follow-up actions for select measures:

- Q130: Documentation of Current Medications in the Medical Record: This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure ensures patients are screened for tobacco use and if screened positive receive tobacco cessation intervention.
- Q374: Closing the Referral Loop: Receipt of Specialist Report: This MIPS quality measure is attributable to the clinician referring the patient and ensures report receipt from the referred to clinician, closing the communication loop.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the clinician's ability to manage their health and be an active partner in the health care journey.

Improvement Activities

We reviewed the Improvement Activities Inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in gastroenterology, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_AHE_6: Provide Education Opportunities for New Clinicians
- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_CC_7: Regular training in care coordination
- IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_CC_10: Care transition documentation practice improvements
- IA_CC_13: Practice improvements to align with OpenNotes principles
- IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

Cost Measures

We are proposing to include two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of gastroenterology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in gastroenterology, including colonoscopies and broader gastroenterology care, and align with other measures and activities within this MVP:

- Screening/Surveillance Colonoscopy: This MIPS episode-based cost measure assesses costs associated with screening or surveillance colonoscopy procedures. This measure aligns with quality measures such as Q113: Colorectal Cancer Screening or Q320: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients.
- Total Per Capita Cost (TPCC): This MIPS cost measure assesses the overall cost of care delivered to a Medicare patient with a focus on the primary care the patient receives from their providers. Gastroenterologists are included in attribution for the TPCC measure as they may provide broad, ongoing care to their patients, which is in line with the intent of the TPCC measure.

Gastroenterology Care MVP Tables

As stated in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those we determined best fit the clinical concept of the proposed Gastroenterology Care MVP. We request comment on the measures and activities included in this MVP.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions

Double asterisk (**): measures and improvement activities only available when included in an MVP

Single exclamation point (!): high priority measures

Double exclamation point (!!): outcome measures

Tilde (~): measures and improvement activities that include a health equity component

Percent (%): attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

Pound sign (#): QCDR measures pending testing data

TABLE A.3a: Gastroenterology Care MVP Measures and Improvement Activities

A.4 Optimal Care for Patients with Urologic Conditions MVP

The proposed Optimal Care for Patients with Urologic Conditions MVP focuses on assessing optimal care for patients treated for a broad range of urologic conditions, including kidney stones, urinary incontinence, bladder cancer, and prostate cancer. This MVP would be most applicable to clinicians who treat patients within the practice urology including general urologists, urology oncologists, and sub-specialists focused on urology care for women, including nonphysician practitioners (NPPs) such as nurse practitioners and physician assistants.

Quality Measures

We are proposing to include nine MIPS quality measures and five QCDR measure within the quality performance category of this MVP, which are specific to the clinical topic of urology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in urology:

- **Q050: Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older:** This MIPS quality measure ensures patients have a documented plan of care for urinary incontinence at least once within 12 months.
- **Q462: Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy:** This MIPS quality measure ensures patients with prostate cancer currently on or starting androgen deprivation therapy (ADT), with an intent for treatment greater than or equal to 12 months, have a bone density evaluation prior to starting or within 3 months after the start of ADT.

- Q476: Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia: This MIPS quality measure assesses for improvement in urinary symptoms for patients with a diagnosis of benign prostatic hyperplasia based upon the International Prostate Symptoms Score (IPSS) or American Urological Association (AUA) Symptom Index (SI).
- Q481: Intravesical Bacillus-Calmette Guerin for Non-muscle Invasive Bladder Cancer: This MIPS quality measure ensures patients initially diagnosed with non-muscle invasive bladder cancer have treatment initiated within 6 months of the cancer staging.
- AQUA8: Hospital Admissions or Infectious Complications Within 30 days of Prostate Biopsy: This QCDR measure assesses the number of patients who have urinary retention, infection, or a new antibiotic prescription at least 24 hours after and within 30 days of a prostate biopsy or inpatient consultation or require hospitalization within 30 days of prostate biopsy.
- AQUA14: Stones: Repeat Shock Wave Lithotripsy (SWL) Within 6 Months of Initial Treatment: This QCDR measure assesses the number of patients who had a repeat shock wave lithotripsy procedure within the 6 months of the initial treatment.
- AQUA15: Stones: Urinalysis or Urine Culture Performed Before Surgical Stone Procedures: This QCDR measure ensures patients have a urinalysis or culture within 14 days prior to surgical stone procedures.
- AQUA16: Non-Muscle Invasive Bladder Cancer: Repeat Transurethral Resection of Bladder Tumor (TURBT) for T1 disease: This QCDR measure assesses the number of patients who undergo a second TURBT within 6 weeks of the initial procedure.
- MUSIC4: Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed Low-Risk Prostate Cancer Patients: This QCDR measure ensures newly diagnosed low-risk prostate cancer patients are managed via active surveillance or watchful waiting to maintain the patient's quality of life.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in urology. The measures assess for age-specific screenings, and follow-up actions for select measures, in addition to recommended vaccinations:

- Q318: Falls: Screening for Future Fall Risk: This MIPS quality measure ensures patients are screened each performance period for future fall risk.
- Q321: CAHPS for MIPS Clinician/Group Survey: This survey provides direct input from patients and their experience regarding timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff.
- Q358: Patient-Centered Surgical Risk Assessment and Communication: This MIPS quality measure ensures a personalized surgical risk assessment is completed on each patient using a validated risk calculator or multi-institutional clinical data prior to the surgery along with discussion of the identified risks with the surgeon.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the clinician's ability to manage their health and be an active partner in the health care journey.

Improvement Activities

We reviewed the Improvement Activities Inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 17 improvement activities that reflect actions and processes undertaken by clinicians who specialize in urology, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_15: Engagement of patients, family and caregivers in developing a plan of care
- IA_CC_7: Regular training in care coordination
- IA_CC_13: Practice improvements to align with OpenNotes principles
- IA_CC_17: Patient Navigator Program
- IA_EPA_2: Use of telehealth services that expand practice access
- IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_17: Participation in Population Health Research
- IA_PM_21: Advance Care Planning
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements
- IA_PSPA_12: Participation in private payer CPIA
- IA_PSPA_19: Implementation of formal quality improvement methods, practice changes or other practice improvement processes
- IA_PSPA_21: Implementation of fall screening and assessment programs

Cost Measures

We are proposing to include three MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of urology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in urology and align with other measures and activities within this MVP:

- **Medicare Spending Per Beneficiary (MSPB) Clinician:** This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including those who treat patients with urology-related conditions or procedures.
- **Renal or Ureteral Stone Surgical Treatment:** This MIPS episode-based cost measure assesses costs associated with surgical treatment for renal or ureteral stones. This also aligns with quality measures such as AQUA14: Stones: Repeat Shock Wave Lithotripsy (SWL) Within 6 Months of Initial Treatment or AQUA15: Stones: Urinalysis or Urine Culture Performed Before Surgical Stone Procedures.
- **Prostate Cancer:** This proposed MIPS episode-based cost measure would assess costs associated with prostate cancer. This also aligns with quality measures such as Q462: Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy or MUSIC4: Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed Low-Risk Prostate Cancer Patients. We note that this is a new cost measure we are proposing to adopt as described in section IV.A.4.e.(2)(a)(iii) of this proposed rule.

Optimal Care for Patients with Urologic Conditions MVP Tables

As stated in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those we determined best fit the clinical concept of the proposed Optimal Care for Patients with Urologic Conditions MVP. We request comment on the measures and activities included in this MVP.

Symbol Key:

- Carat symbol (^): new proposed measures and improvement activities
- Single asterisk (*): existing measures and improvement activities with proposed revisions
- Double asterisk (**): measures and improvement activities only available when included in an MVP
- Single exclamation point (!): high priority measures
- Double exclamation point (!!): outcome measures
- Tilde (~): measures and improvement activities that include a health equity component
- Percent (%): attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

A.5 Pulmonology Care MVP

The proposed Pulmonology Care MVP focuses on assessing optimal care for patients treated for a broad range of pulmonology conditions including COPD, asthma, sleep apnea, and general pulmonology. This MVP would be most applicable to clinicians who treat patients within the practice of pulmonology and sleep medicine, including nonphysician practitioners (NPPs) such as nurse practitioners, and physician assistants.

Quality Measures

We are proposing to include nine MIPS quality measures and one QCDR measure within the quality performance category of this MVP, which are specific to the clinical topic of pulmonology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in pulmonology:

- **Q052: Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation for Long-Acting Inhaled Bronchodilator Therapy:** This MIPS quality measure ensures adults 18 and older diagnosed with COPD have spirometry results documented airflow obstruction confirming diagnosis, and have been prescribed a long-acting bronchodilator to provide proper treatment if symptomatic.
- **Q277: Sleep Apnea: Severity Assessment at Initial Diagnosis:** This MIPS quality measure ensures adults diagnosed with obstructive sleep apnea have an appropriate assessment completed and documented at the time of diagnosis or measured within 2 months of initial evaluation for suspected obstructive sleep apnea.
- **Q279: Sleep Apnea: Assessment of Adherence to Obstructive Sleep Apnea (OSA) Therapy:** This MIPS quality measure ensures patients with a diagnosis of obstructive sleep apnea (OSA) who were prescribed an evidence-based therapy with documentation that adherence to the therapy was assessed annually.
- **Q398: Optimal Asthma Control:** This MIPS quality measure assesses pediatric and adult patients to ensure their asthma is well-controlled as demonstrated by one of three age-appropriate patient reported outcome tools and not at risk for exacerbation.

- ACEP25: Tobacco Use: Screening and Cessation Intervention for Patients with Asthma and COPD: This QCDR measure ensures patients with asthma or COPD seen in the emergency department receive tobacco cessation if screened positive for tobacco use.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in pulmonology care. The measures assess for age-specific screenings, and follow-up actions for select measures, in addition to recommended vaccinations:

- Q047: Advance Care Plan: This MIPS quality measure assesses for medical record documentation of an advance care plan or surrogate decisions maker.
- Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure assesses patients for a BMI documented with a follow-up plan documented if their most recent documented BMI was outside of normal parameters.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure ensures patients are screened for tobacco use and if screened positive receive tobacco cessation intervention.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the clinician's ability to manage their health and be an active partner in the health care journey.

Improvement Activities

We reviewed the Improvement Activities Inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in pulmonology care, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health
- IA_BE_23: Integration of patient coaching practices between visits
- IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_EPA_2: Use of telehealth services that expand practice access
- IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_13: Chronic care and preventative care management for empaneled patients
- IA_PM_16: Implementation of medication management practice improvements

Cost Measures

We are proposing to include two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of pulmonology care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in pulmonology and align with other measures and activities within this MVP:

- Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation: This MIPS episode-based cost measure assesses costs associated with inpatient treatment for an acute exacerbation of COPD. This also aligns with quality measures such as Q052: Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation for Long-Acting Inhaled Bronchodilator Therapy.
- Asthma/Chronic Obstructive Pulmonary Disease (COPD): This MIPS episode-based cost measure assesses costs associated with medical care to manage and treat asthma or COPD. This also aligns with quality measures such as Q398: Optimal Asthma Control or ACEP25: Tobacco Use: Screening and Cessation Intervention for Patients with Asthma and COPD.

Pulmonology Care MVP Tables

As stated in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those we determined best fit the clinical concept of the proposed Pulmonology Care MVP. We request comment on the measures and activities included in this MVP.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions

Double asterisk (**): measures and improvement activities only available when included in an MVP

Single exclamation point (!): high priority measures

Double exclamation point (!!): outcome measures

Tilde (~): measures and improvement activities that include a health equity component
 Percent (%): attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

A.6 Surgical Care MVP

The proposed Surgical Care MVP focuses on the clinical theme of surgery. This MVP would be most applicable to clinicians who treat patients within the surgical settings of general surgery, neurosurgery, cardiothoracic surgery, anesthesiologists, including nonphysician practitioners (NPPs) such as certified registered nurse anesthetists (CRNAs), nurse practitioners, and physician assistants.

Quality Measures

We are proposing to include 15 MIPS quality measures within the quality performance category of this MVP, which are specific to the clinical theme of surgery. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in surgery:

- Q164: Coronary Artery Bypass Graft (CABG): Prolonged Intubation: This MIPS quality measure identifies patients who undergo an isolated CABG and require intubation > 24 hours following exit from the operating room.
- Q167: Coronary Artery Bypass Graft (CABG): Postoperative Renal Failure: This MIPS quality measure assesses patients for postoperative renal failure or who require dialysis after CABG.
- Q168: Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration: This MIPS quality measure identifies patients who return to the operating room for surgical re-exploration following an isolated CABG surgery during the current hospitalization.
- Q264: Sentinel Lymph Node Biopsy for Invasive Breast Cancer: This MIPS quality measure assesses the percentage of patients with a diagnosis of primary invasive breast cancer who undergo a sentinel lymph node procedure.
- Q354: Anastomotic Leak Intervention: This MIPS quality measure evaluates for anastomotic leak intervention following gastric bypass or colectomy surgery.
- Q355: Unplanned Reoperation within the 30-Day Postoperative Period: This MIPS quality measure evaluates for an unplanned reoperation within 30 days of a denominator eligible procedure.
- Q357: Surgical Site Infection (SSI): This MIPS quality measure evaluates for SSI within 30 days of a denominator eligible procedure.

- Q358: Patient-Centered Surgical Risk Assessment and Communication: This MIPS quality measure ensures a personalized surgical risk assessment is completed on each patient using a validated risk calculator or multi-institutional clinical data prior to the surgery along with discussion of the identified risks with the surgeon.
- Q445: Risk-Adjusted Operative Mortality for Coronary Artery Bypass Graft (CABG): This MIPS quality measure assesses patients undergoing isolated CABG for quality outcomes by identifying the percentage of patients who die, including all deaths occurring during CABG hospitalization and deaths occurring after discharge up to 30 days post CABG surgery.
- Q459: Back Pain After Lumbar Surgery: This MIPS quality measure evaluates patients for a decrease in back pain post lumbar surgery based upon predetermined benchmarks.
- Q461: Leg Pain After Lumbar Surgery: This MIPS quality measure evaluates patients for a decrease in leg pain post lumbar surgery based upon predetermined benchmarks.
- Q471: Functional Status After Lumbar Surgery: This MIPS quality measure evaluates patients for an increase in functional status post lumbar surgery based upon predetermined benchmarks.

The following broadly applicable MIPS quality measures are relevant to clinicians who treat patients in surgical settings. The measures assess for age-specific screenings, and follow-up actions for select measures, in addition to recommended vaccinations:

- Q047: Advance Care Plan: This MIPS quality measure assesses for medical record documentation of an advance care plan or surrogate decisions maker.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure ensures patients are screened for tobacco use and if screened positive receive tobacco cessation intervention.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.

Improvement Activities

We reviewed the Improvement Activities Inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 12 improvement activities that reflect actions and processes undertaken by surgical care clinicians, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_BE_12: Use evidence-based decision aids to support shared decision-making
- IA_CC_15: PSH Care Coordination
- IA_CC_17: Patient Navigator Program
- IA_CC_18: Relationship-Centered Communication
- IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_11: Regular review practices in place on targeted patient population needs
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements
- IA_PSPA_8: Use of Patient Safety Tools

Cost Measures

We are proposing to include six MIPS cost measures within the cost performance category of this MVP, which apply to the clinical theme of surgical care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in surgical care and align with other measures and activities within this MVP:

- Colon and Rectal Resection: This MIPS episode-based cost measure assesses costs associated with colon or rectal resections for either benign or malignant indications.
- Femoral or Inguinal Hernia Repair: This MIPS episode-based cost measure assesses costs associated with surgical procedures to repair a femoral or inguinal hernia.
- Lumbar Spine Fusion for Degenerative Disease, 1-3 Levels: This MIPS episode-based cost measure assesses costs associated with surgery for lumbar spine fusion. This also aligns with quality measures such as Q471: Functional Status After Lumbar Surgery or Q461: Leg Pain After Lumbar Surgery.
- Lumpectomy, Partial Mastectomy, Simple Mastectomy: This MIPS episode-based cost measure assesses costs associated with partial or total mastectomy for breast cancer.
- Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including those who treat patients within the surgical settings of general surgery, neurosurgery, and cardiothoracic surgery.

- **Non-Emergent Coronary Artery Bypass Graft (CABG):** This MIPS episode-based cost measure assesses costs associated with CABG. This also aligns with quality measures such as Q164: Coronary Artery Bypass Graft (CABG): Prolonged Intubation or Q168: Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration.

Surgical Care MVP Tables

As stated in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those we determined best fit the clinical concept of the proposed Surgical Care MVP. We request comment on the measures and activities included in this MVP.

Symbol Key:

- Single asterisk (*): existing measures and improvement activities with proposed revisions
- Double asterisk (**): measures and improvement activities only available when included in an MVP
- Single exclamation point (!): high priority measures
- Double exclamation point (!!): outcome measures
- Tilde (~): measures and improvement activities that include a health equity component
- Percent (%): attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

TABLE A.6a: Surgical Care MVP Measures and Improvement Activities

| Quality | Improvement Activities | Cost |
|--|--|---|
| (*)(!) Q047: Advance Care Plan
(Collection Type: Medicare Part B Claims Specifications, MIPS CQMs Specifications) | (~) IA_AHE_3: Promote use of Patient-Reported Outcome Tools

Group B: Modifications to Previously Finalized MVPs for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years**B.1: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP**

The B.1 tables represent the measures and activities finalized within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP (88 FR 88029 through 80032) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Quality Measures

We are proposing to modify the previously finalized Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP to remove one MIPS quality measure as it is a process measure and has become standard of care, based upon MIPS performance data showing continued high performance.

- Q254: Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰²³, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove one improvement activity being proposed for removal from MIPS:

- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Single asterisk (*): existing measures and improvement activities with proposed revisions

Double asterisk (**): measures and improvement activities only available when included in an MVP

Single exclamation point (!): high priority measures

Double exclamation point (!!): outcome measures

Tilde (~): measures and improvement activities that include a health equity component

Percent (%): attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

B.2: Advancing Cancer Care MVP

The B.2 tables represent the measures and activities finalized within the Advancing Cancer Care MVP (88 FR 80008 through 80011) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Quality Measures

We are proposing to modify the previously finalized Advancing Cancer Care MVP within the quality performance category of this MVP to include six additional MIPS quality measures and one additional QCDR measure that address appropriate cancer care treatment. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians providing care to patients with cancer:

- **Q102: Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients:** This MIPS quality measure assesses overuse of bone scans for patients with prostate cancer with low incidence of recurrence receiving treatment.
- **TBD: Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy:** This proposed MIPS quality measure ensures timely biomarker testing for patients with a diagnosis of metastatic non-small cell lung cancer or squamous cell carcinoma of head and neck on first-line immune checkpoint inhibitor (ICI) therapy.
- **TBD: Appropriate Germline Testing for Ovarian Cancer Patients:** This proposed MIPS quality measure assesses patients with a diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer for completion germline testing within 6 months of diagnosis.
- **TBD: Patient-Reported Pain Interference Following Chemotherapy among Adults with Breast Cancer:** This proposed MIPS quality measure assesses pain interference following chemotherapy administered with curative intent to adult patients with breast cancer.

- **TBD: Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer:** This proposed MIPS quality measure assesses fatigue following chemotherapy administered with curative intent to adult patients with breast cancer.
- **TBD: Utilization of Prophylactic G-CSF for Cancer Patients Receiving Low-Risk Chemotherapy (inverse measure):** The intent of this QCDR measure is to assess prophylactic use of granulocyte colony stimulating factor (G-CSF) when it is not indicated for low-risk chemotherapy and is not restricted to metastatic colorectal cancer.

In addition, we are proposing the following broadly applicable MIPS quality measure, which is relevant to patients receiving cancer care and their experience of their health care treatment journey:

- **Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:** This MIPS quality measure ensures palliative care clinicians and/or teams are actively engaged to ensure patients are understood in a significant and empowering way.

We are proposing to modify the previously finalized Advancing Cancer Care MVP to remove two MIPS quality measures as they are duplicative in concept to current MIPS quality measures and are being proposed for removal from MIPS:

- Q144: Oncology: Medical and Radiation - Plan of Care for Pain
- Q452: Patients with Metastatic Colorectal Cancer and RAS (KRAS or NRAS) Gene Mutation Spared Treatment with Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibodies

We are also proposing to remove one QCDR measure which will be replaced by TBD: Utilization of Prophylactic G-CSF for Cancer Patients Receiving Low-Risk Chemotherapy (inverse measure), which has a broader denominator and is not restricted to metastatic colorectal cancer.

- PIMSH2: Oncology: Utilization of G-CSF in Metastatic Colorectal Cancer

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰²⁴, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; and add an additional improvement activity that addresses maintenance requests from the public, as well as addresses priority areas including food insecurity and the incorporation of patient voices into health care decision making:

- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols

For the reasons stated in the introduction of this appendix, we are proposing the following: remove the weights associated with the improvement activities contained in this MVP; and remove three improvement activities being proposed for removal from MIPS:

- IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA_ERP_4: Implementation of a Personal Protective Equipment (PPE) Plan

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

Cost Measures

We are proposing to add one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of cancer care. We reviewed the MIPS cost measure inventory and considered feedback received from interested parties through the MVP maintenance process to determine the cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in cancer care and aligns with other measures and activities included within this MVP:

- **Prostate Cancer:** This proposed MIPS episode-based cost measure would assess costs associated with prostate cancer. This also aligns with quality measures such as Q102: Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients. We note that this is a new cost measure we are proposing to adopt as described in section IV.A.4.e.(2)(a)(iii) of this proposed rule.

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Carat symbol (^): new proposed measures and improvement activities

Single asterisk (*): existing measures and improvement activities with proposed revisions

Double asterisk (**): measures and improvement activities only available when included in an MVP

Single exclamation point (!): high priority measures

Double exclamation point (!!): outcome measures

B.3: Advancing Care for Heart Disease MVP

The B.3 tables represent the measures and activities finalized within the Advancing Care for Heart Disease MVP (88 FR 80022 through 80025) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Quality Measures

We are proposing to modify the previously finalized Advancing Care for Heart Disease MVP within the quality performance category of this MVP to include one additional broadly applicable MIPS quality measure relevant to patients receiving care for heart disease. We reviewed the quality measure inventory and considered feedback received during the 2025 MVP maintenance period to determine which quality measures to include in this MVP.

- **Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:** This MIPS quality measure ensures palliative care clinicians and/or teams empathize to ensure patients are understood in a significant and empowering way.

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰²⁵, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; and remove the weights associated with the improvement activities contained in this MVP.

Cost

We are not proposing to modify the MIPS cost measures included within the cost performance category of this previously finalized Advancing Care for Heart Disease MVP by proposing to add or remove cost measures from the MVP.

¹⁰²⁵ See MVP Development: Improvement Activity Policy Update and Global Inclusion of an Improvement Activity

However, we are proposing to modify the ST-Elevation Myocardial Infarction (STEMI) with Percutaneous Coronary Intervention (PCI) cost measure, which includes a proposed measure title update. Please see section IV.A.4.e.(2)(a)(vii) of this proposed rule for all proposed revisions to this cost measure.

Symbol Key:

- Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
- Single asterisk (*): existing measures and improvement activities with proposed revisions
- Double asterisk (**): measures and improvement activities only available when included in an MVP
- Single exclamation point (!): high priority measures
- Double exclamation point (!!): outcome measures
- Tilde (~): measures and improvement activities that include a health equity component
- Percent (%): attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

B.4: Advancing Rheumatology Patient Care MVP

The B.4 tables represent the measures and activities finalized within the Advancing Rheumatology Patient Care MVP (88 FR 80026 through 80029) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Quality Measures

We are proposing to modify the previously finalized Advancing Rheumatology Patient Care MVP within the quality performance category of this MVP to include one additional MIPS quality measure and two QCDR measures that are relevant to patients receiving rheumatology care. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP provide address appropriate clinical care for patients with rheumatological conditions:

- Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age: This MIPS quality measure assesses women who have ever received a dual-energy x-ray absorptiometry (DXA) test to evaluate for the disease osteoporosis.
- UREQA2: Ankylosing Spondylitis: Appropriate Pharmacologic Therapy: This QCDR measure assesses patients newly diagnosed with ankylosing spondylitis for appropriate pharmacologic therapy by ensuring a course of NSAIDs is prescribed before initiation of biologics during the first six months of treatment.
- UREQA9: Screening for Osteoporosis for Men Aged 70 Years and Older: This QCDR measure identifies male patients who have ever had a central dual-energy X-ray absorptiometry (DXA) to screen for osteoporosis to identify osteoporotic risk for fracture.

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰²⁶, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove

¹⁰²⁶ See MVP Development: Improvement Activity Policy Update and Global Inclusion of an Improvement Activity

the weights associated with the improvement activities contained in this MVP; and remove one improvement activities being proposed for removal from MIPS:

- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

Cost Measures

We are proposing to add one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of rheumatology care. We reviewed the MIPS cost measure inventory and considered feedback received from interested parties through the MVP maintenance process to determine the cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in rheumatology care and aligns with the other measures and activities included within this MVP:

- **Rheumatoid Arthritis:** This proposed MIPS episode-based cost measure would assess costs associated with medical care to manage and treat rheumatoid arthritis. This also aligns with quality measures such as Q177: Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity or Q178: Rheumatoid Arthritis (RA): Functional Status Assessment. We note that this is a new cost measure we are proposing to adopt as described in section IV.A.4.e.(2)(a)(iii) of this proposed rule.

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Carat symbol (^): new proposed measures and improvement activities

Single asterisk (*): existing measures and improvement activities with proposed revisions

Double asterisk (**): measures and improvement activities only available when included in an MVP

Single exclamation point (!): high priority measures

Double exclamation point (!!): outcome measures

Tilde (~): measures and improvement activities that include a health equity component

Percent (%): attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

B.5: Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP

The B.5 tables represent the measures and activities finalized within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP (88 FR 80039 through 80041) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Quality Measures

We are proposing to modify the previously finalized Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP to include one additional broadly applicable MIPS quality measure relevant to patients receiving stroke care and their experience of their health care treatment journey. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP maintenance period to determine which quality measures to include in this MVP.

- **Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:** This MIPS quality measure ensures palliative care clinicians and/or teams empathize to ensure patients are understood in a significant and empowering way.

We are also proposing to modify the previously finalized Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP to remove one MIPS quality measure as this measure is proposed for removal from MIPS:

- Q409: Clinical Outcome Post Endovascular Stroke Treatment

We are proposing to modify the Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) quality measure, which includes a proposed measure title update. Please see Appendix 1: MIPS Quality Measures, Table Group D of this proposed rule for all proposed revisions to this measure.

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰²⁷, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove

¹⁰²⁷ See MVP Development: Improvement Activity Policy Update and Global Inclusion of an Improvement Activity

the weights associated with the improvement activities contained in this MVP; and remove one improvement activity being proposed for removal from MIPS:

- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

Symbol Key:

B.6: Focusing on Women’s Health MVP

The B.6 tables represent the measures and activities finalized within the Focusing on Women’s Health MVP (88 FR 79981 through 79986) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Quality Measures

We are proposing to modify the previously finalized Focusing on Women’s Health MVP within the quality performance category of this MVP to include to include one additional MIPS quality measure that is relevant to women’s health. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measure proposed within this MVP provides a meaningful and comprehensive assessment of the clinical care for clinicians providing women’s health care to patients:

- **Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age:** This MIPS quality measure assesses women who have ever received a dual-energy x-ray absorptiometry (DXA) test to evaluate for the disease osteoporosis.

We are also proposing to modify the previously finalized Focusing on Women’s Health MVP to remove one MIPS quality measure as it is a process measure that has become standard of care, based on MIPS performance data as demonstrated by the measure’s high performance in the PY2024 MIPS Historical Quality Benchmarks file, as well as previous year’s benchmark data, and is being proposed for removal from MIPS:

- **Q472: Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture**

We are proposing to modify the Q432: Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair quality measure, which includes a proposed measure title update. Please see Appendix 1: MIPS Quality Measures, Table Group D of this proposed rule for all proposed revisions to this measure.

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰²⁸, we are proposing the following: add the modified proposed IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; and remove the weights associated with the improvement activities contained in this MVP.

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

B.7: Improving Care for Lower Extremity Joint Repair MVP

The B.7 tables represent the measures and activities finalized within the Improving Care for Lower Extremity Joint Repair MVP (88 FR 80033 through 80035) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰²⁹, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; and add an additional improvement activity that addresses maintenance requests from the public, as well as addresses priority areas including food insecurity and the incorporation of patient voices into health care decision making:

- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols

In addition, we are proposing the following: remove the weights associated with the improvement activities contained in this MVP; and remove one improvement activity being proposed for removal from MIPS:

- IA_PSPA_27: Invasive Procedure or Surgery Anticoagulation Medication Management

Symbol Key:

B.8: Optimal Care for Kidney Health MVP

The B.8 tables represent the measures and activities finalized within the Optimal Care for Kidney Health MVP (88 FR 80012 through 80015) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Quality Measures

We are proposing to modify the previously finalized Optimal Care for Kidney Health MVP within the quality performance category of this MVP to include three additional broadly applicable MIPS quality measures that are relevant to patients receiving care for kidney health. We reviewed the quality measure inventory and considered feedback received during the 2025 MVP maintenance period to determine which quality measures to include in this MVP.

- **Q495: Ambulatory Palliative Care Patients’ Experience of Feeling Heard and Understood:** This MIPS quality measure ensures palliative care clinicians and/or teams empathize to ensure patients are understood in a significant and empowering way.
- **TBD: First Year Standardized Waitlist Ratio (FYSWR):** This MIPS quality measure measures number of incident (newly initiated on dialysis) patients in a practitioner (inclusive of physicians and advanced practice providers) groups who were listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant within the first year of initiating dialysis.
- **TBD: Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW):** This MIPS quality measure tracks dialysis patients who at a practitioner group practice who were on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status).

We are proposing to modify the Q001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%) quality measure, which includes a proposed measure title update. Please see Appendix 1: MIPS Quality Measures, Table Group D of this proposed rule for all proposed revisions to this measure.

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰³⁰, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove one improvement activity being proposed for removal from MIPS:

- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

Cost Measures

We are proposing to add three MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of kidney health. We reviewed the MIPS cost measure inventory and considered feedback received from interested parties through the MVP maintenance process to determine the cost measures to include in this MVP. The following proposed new cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in kidney care and align with the other measures and activities included within this MVP and are described in section IV.A.4.e(2)(a)(iii) of this proposed rule:

- **Chronic Kidney Disease (CKD):** This proposed MIPS episode-based cost measure would assess costs associated with medical care to manage and treat stage 4 or 5 chronic kidney disease.
- **End-Stage Renal Disease (ESRD):** This proposed MIPS episode-based cost measure would assess costs associated with medical care to manage ESRD.
- **Kidney Transplant Management:** This proposed MIPS episode-based cost measure would assess costs associated with medical care related to kidney transplant, beginning no sooner than 90 days post-transplant.

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Carat symbol (^): new proposed measures and improvement activities

Single asterisk (*): existing measures and improvement activities with proposed revisions

Double asterisk (**): measures and improvement activities only available when included in an MVP

Single exclamation point (!): high priority measures

Double exclamation point (!!): outcome measures

Tilde (~): measures and improvement activities that include a health equity component

Percent (%): attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

B.9: Patient Safety and Support of Positive Experiences with Anesthesia MVP

The B.9 tables represent the measures and activities finalized within the Patient Safety and Support of Positive Experiences with Anesthesia MVP (88 FR 80036 through 80038) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰³¹, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove two improvement activities being proposed for removal from MIPS:

- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
 Single asterisk (*): existing measures and improvement activities with proposed revisions

B.10: Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP

The B.10 tables represent the measures and activities finalized within the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP (88 FR 79991 through 79995) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Quality Measures

We are not proposing to modify the previously finalized Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP within the quality performance category of this MVP by proposing to add or remove quality measures from the MVP. However, we are proposing to modify the Q340: HIV Medical Visit Frequency quality measure, which includes a proposed measure title update. Please see Appendix 1: MIPS Quality Measures, Table Group D of this proposed rule for all proposed revisions to this measure.

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰³², we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove one improvement activity being proposed for removal from MIPS:

- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups who Have Real-Time Access to Patient's Medical Record

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

B.11: Quality Care for Patients with Neurological Conditions MVP

We are proposing to modify the previously finalized Optimal Care for Patients with Episodic Neurological Conditions and the Supportive Care for Neurodegenerative Conditions MVPs into a single consolidated neurological MVP titled Quality Care for Patients with Neurological Conditions. This modification is being proposed because the QCDR measures previously included will no longer be available for use within both of the previously finalized MVPs. As such, due to the removal of these specialty specific QCDR measures we believe the Episodic Neurological Conditions MVP no longer provides a meaningful representation of the care provided by the clinicians identified for reporting this MVP. Therefore, we are proposing to combine the previously finalized MVPs to ensure the availability of a robust and meaningful MVP capturing a broad scope of care provided by neurologists. The B.11 tables represent the measures and activities finalized within the Optimal Care for Patients with Episodic Neurological Conditions MVP (88 FR 80015 through 80018) and the Supportive Care for Neurodegenerative Conditions MVP (88 FR 80019 through 80021) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Quality Measures

We are proposing to modify the previously finalized neurology MVPs within the quality performance category of this MVP to include two additional broadly applicable MIPS quality measures relevant to patients receiving care for neurodegenerative disorders. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

- Q155: Falls; Plan of care: This MIPS quality measure ensures adult patients, with a history of falls, have a plan of care for falls.
- Q495: Ambulatory Palliative Care Patients’ Experience of Feeling Heard and Understood: This MIPS quality measure ensures palliative care clinicians and/or teams empathize to ensure patients are understood in a significant and empowering way.

We are proposing to modify the previously finalized MVPs to remove six QCDR measures no longer being supported by Axon Registry QCDR:

- AAN5: Treatment Prescribed for Acute Migraine Attack
- AAN9: Querying and Follow-Up About Symptoms of Autonomic Dysfunction for Patients with Parkinson’s Disease
- AAN22: Quality of Life Outcome for Patients with Neurologic Conditions
- AAN31: Acute Treatment Prescribed for Cluster Headache
- AAN32: Preventive Treatment Prescribed for Cluster Headache

- AAN34: Patient reported falls and plan of care

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰³³, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove three improvement activities being proposed for removal from MIPS:

- IA_BMH_8: Electronic Health Record Enhancements for BH data capture
- IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

B.12: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP

The B.12 tables represent the measures and activities finalized within the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP (88 FR 79986 through 79990) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Quality Measures

We are proposing to modify the previously finalized Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP within the quality performance category of this MVP to remove two QCDR measures whose quality actions reflect a standard of care based upon clinical guidelines recognized as best practices by health care clinicians. Based upon MIPS performance data, AAO16 is high performing and AAO23 has had minimal variation in its historical benchmark. Though allergic rhinitis falls within the spectrum of care otolaryngologists provide, the complexity of caring for the condition is typically low. Many non-surgical clinician specialties, including primary care, treat allergic rhinitis regularly. Further, measure AAO23 requires the use of medications that all are available over the counter. Removal of AAO23 will encourage use of other measures within the MVP that represent the complexity of care otolaryngologists provide.

- AAO16: Age-Related Hearing Loss: Audiometric Evaluation
- AAO23: Allergic Rhinitis: Intranasal Corticosteroids or Oral Antihistamines

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰³⁴, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove two improvement activities being proposed for removal from MIPS:

- IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record

¹⁰³⁴ See MVP Development: Improvement Activity Policy Update and Global Inclusion of an Improvement Activity

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Single asterisk (*): existing measures and improvement activities with proposed revisions

Double asterisk (**): measures and improvement activities only available when included in an MVP

Single exclamation point (!): high priority measures

Double exclamation point (!!): outcome measures

Tilde (~): measures and improvement activities that include a health equity component

Percent (%): attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

B.13: Quality Care in Mental Health and Substance Use Disorders MVP

The B.13 tables represent the measures and activities finalized within the Quality Care in Mental Health and Substance Use Disorders MVP (88 FR 79986 through 80001) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰³⁵, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; and remove the weights associated with the improvement activities contained in this MVP.

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Single asterisk (*): existing measures and improvement activities with proposed revisions

Double asterisk (**): measures and improvement activities only available when included in an MVP

B.14: Rehabilitative Support for Musculoskeletal Care MVP

The B.14 tables represent the measures and activities finalized within the Rehabilitative Support for Musculoskeletal Care MVP (88 FR 80002 through 80007) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Quality Measures

We are proposing to modify the previously finalized Rehabilitative Support for Musculoskeletal Care MVP within the quality performance category of this MVP to include one additional MIPS quality measure and four QCDR measures that are relevant to patients receiving rehabilitative support for Musculoskeletal Care. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

- **Q050: Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older:** This MIPS quality measure ensures that female patients with a diagnosis of urinary incontinence have a documented plan of care regarding rehabilitative treatment for urinary incontinence at least once within 12 months. A rehabilitation plan of care for these patients would address the musculoskeletal impairments of the pelvic floor related to urinary incontinence in women.
- **MSK6: Patients Suffering From a Neck Injury who Improve Pain:** This QCDR measure evaluates patients with a neck

- injury for achieving the minimal clinically important difference (MCID) improvement in pain by the end of treatment.
- **MSK7: Patients Suffering From an Upper Extremity Injury who Improve Pain:** This QCDR measure evaluates patients with an upper extremity injury for achieving the minimal clinically important difference (MCID) improvement in pain by the end of treatment.
- **MSK8: Patients Suffering From a Back Injury who Improve Pain:** This QCDR measure evaluates patients with a back injury for achieving the minimal clinically important difference (MCID) improvement in pain by the end of treatment.
- **MSK9: Patients Suffering From a Lower Extremity Injury who Improve Pain:** This QCDR measure evaluates patients with a lower extremity injury for achieving the minimal clinically important difference (MCID) improvement in pain by the end of treatment.

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰³⁶, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove two improvement activities being proposed for removal from MIPS:

- IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Single asterisk (*): existing measures and improvement activities with proposed revisions

Double asterisk (**): measures and improvement activities only available when included in an MVP

Single exclamation point (!): high priority measures

Double exclamation point (!!): outcome measures

Tilde (~): measures and improvement activities that include a health equity component

Percent (%): attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

Pound sign (#): QCDR measures pending testing data

TABLE B.14a: Rehabilitative Support for Musculoskeletal Care MVP Measures and Improvement Activities

B.15: Value in Primary Care MVP

The B.15 tables represent the measures and activities finalized within the Value in Primary Care MVP (88 FR 80042 through 80047) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. We request comment on the proposed modifications included in this MVP.

Quality Measures

We are not proposing to modify the previously finalized Value in Primary Care MVP within the quality performance category of this MVP by proposing to add or remove quality measures from the MVP. However, we are proposing to modify the Q001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%) quality measure, which includes a proposed measure title update. Please see Appendix 1: MIPS Quality Measures, Table Group D of this proposed rule for all proposed revisions to this measure.

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰³⁷, we are proposing the following: add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; and add a proposed improvement activity that addresses risk for heart disease, the leading cause of death in the United States, as well as risk for stroke, which is the fifth most common cause of death. Promoting the implementation of standardized, evidence-based cardiovascular disease risk assessment and care management in the primary care setting has the potential to impact patient outcomes sizably and positively. This new activity, IA_PM_XX, is based on the results of the CMS Innovation Center Million Hearts Model:

- IA_PM_XX: Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk

In addition, we are proposing the following: remove the weights associated with the improvement activities contained in this MVP; and remove two improvement activities being proposed for removal from MIPS:

- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results

¹⁰³⁷ See MVP Development: Improvement Activity Policy Update and Global Inclusion of an Improvement Activity

- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record

We are proposing to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this proposed rule for all proposed revisions to this activity.

Symbol Key:
