receive payment for shared savings only if the estimated average per capita Medicare expenditures under the ACO for Medicare FFS beneficiaries for Parts A and B services, adjusted for beneficiary characteristics, is at least the percent specified by the Secretary below the applicable benchmark under section 1899(d)(1)(B)(ii) of the Act. Section 1899(d)(1)(B)(ii) of the Act addresses how ACO benchmarks are to be established and updated under the Shared Savings Program. This provision specifies that the Secretary shall estimate a benchmark for each agreement period for each ACO using the most recent available 3 years of per beneficiary expenditures for Parts A and B services for Medicare FFS beneficiaries assigned to the ACO. This benchmark shall be adjusted for beneficiary characteristics and such other factors as the Secretary determines appropriate and updated by the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program, as estimated by the Secretary.

In past rulemaking, we have used our authority under sections 1899(d)(1)(B)(ii) and 1899(i)(3) of the Act to establish adjustments to the benchmark and program expenditure calculations, respectively, to exclude certain Medicare Parts A and B payments. In the November 2011 final rule (76 FR 67920 through 67922), we adopted an alternate payment methodology that excluded Indirect Medical Education (IME) and Disproportionate Share Hospital (DSH) payments from ACO benchmark and performance year expenditures due to concerns that the inclusion of these amounts would incentivize ACOs to avoid referring patients to the types of providers that receive these payments. In the CY 2023 PFS final rule (87 FR 69954 through 69956), we excluded new supplemental payments to Indian Health Service/Tribal hospitals and hospitals located in Puerto Rico consistent with our longstanding policy to exclude IME, DSH and uncompensated care payments from ACOs' assigned and assignable beneficiary expenditure calculations. In the May 8, 2020 COVID-19 IFC (85 FR 27577 through 27582), we established a methodology to adjust Shared Savings Program financial calculations to account for the COVID-19 Public Health Emergency. Specifically, we established a methodology that would exclude all Medicare Parts A and B FFS payment amounts for a beneficiary's episode of care for treatment of COVID-19 to

prevent distortion to, among other calculations, an ACO's benchmark and program expenditure calculations.

(b) Background on Significant, Anomalous, and Highly Suspect Billing Activity

Recently, ACOs and other interested parties have raised concerns about an increase in billing to Medicare for selected intermittent urinary catheter supplies on Durable Medical Equipment, Prosthetics, Orthotics & Supplies (DMEPOS) claims in CY 2023, alleging that the increase in payments represents fraudulent activity (the "alleged conduct"). The observed DMEPOS billing volume for intermittent urinary catheters in CY 2023 represents significant, anomalous, and highly suspect (SAHS) billing activity.⁵²⁵

Generally, a level of billing for a given HCPCS or CPT code is considered SAHS billing activity when a given HCPCS or CPT code exhibits a level of billing that represents a significant claims increase either in the volume or dollars (for example, dollar volume significantly above prior year, or claims volume beyond expectations) with national or regional impact (for example, not only impacting one or few ACOs) and represents a deviation from historical utilization trends that is unexpected and is not clearly attributable to reasonably explained changes in policy or the supply or demand for covered items or services. The billing level is significant and represents billing activity that would cause significantly inaccurate and inequitable payments and repayment obligations in the Shared Savings Program if not addressed.

Current Shared Savings Program regulations, codified at 42 CFR part 425, do not provide a basis for CMS to adjust program expenditure or revenue calculations to remove the impact of SAHS billing activity such as that arising from the alleged conduct in advance of issuing an initial determination. As discussed in section III.G.7.c of this proposed rule, CMS may reopen an initial determination or a final agency determination and issue a revised initial determination at any time in the case of fraud or similar fault, and

⁵²⁵ SAHS billing activity may appear in claims for items and services rendered to beneficiaries assigned to an ACO as well as for beneficiaries who are not assigned to an ACO. Such activity may be caused by providers and suppliers who participate in an ACO and who do not participate in an ACO. This discussion is primarily focused on SAHS billing activity performed by providers and suppliers that do not participate in ACOs billing items and services for beneficiaries who are assigned to ACOs or who are in the assignable population used in national and regional factors used in Shared Savings Program calculations.

not later than 4 years after the date of the notification to the ACO of the initial determination of savings or losses for the relevant performance year for good cause (§ 425.315). This does not allow for CMS to address SAHS billing activity, which must be addressed prior to conducting financial reconciliation, which is an initial determination, to prevent significant inequity and inaccurate payment determinations.

We are concerned that such SAHS billing activity, should it occur in CY 2024 or later, would inflate Medicare Parts A and B payment amounts and affect Shared Savings Program calculations, including:

- Performance year reconciliation calculations, including expenditures for each ACO's assigned beneficiaries for the calendar year that has SAHS billing activity, the national-regional blended update factor used to update the benchmark for ACOs beginning an agreement period before January 1, 2024 (refer to § 425.601(b)), the three-way blended update factor used to update the benchmark for ACOs beginning an agreement period on January 1, 2024 and in subsequent years (refer to § 425.652(b)), and factors based on ACO participant revenue to determine the loss recoupment limits for ACOs participating under two-sided models of the BASIC track (Levels C, D, E) (refer to § 425.605(d)).

- Historical benchmark calculations for establishing the benchmark for ACOs beginning new agreement periods on January 1, 2025, or in subsequent years with a benchmark year that has SAHS billing activity (refer to § 425.652(a)).
- Factors used in the application cycle for ACOs applying to enter a new agreement period beginning two years after the SAHS billing activity occurred, and the change request cycle for ACOs continuing their participation in the program, including data used to determine an ACO's eligibility for Advance Investment Payments under § 425.630(b) or for the CMS Innovation Center's new ACO Primary Care Flex Model (ACO PC Flex Model) based on ACO revenue status (high revenue or low revenue), and to determine repayment mechanism amounts for ACOs entering, or continuing in, two-sided models (refer to § 425.204(f)).

The accuracy of the Shared Savings Program's determination of an ACO's financial performance (through a process referred to as financial reconciliation) in terms of the ACO's eligibility for and amount of a shared savings payment or liability for shared losses, depends on the accuracy of claims data. Absent CMS action, SAHS billing activity would affect

performance year financial reconciliation program-wide rather than being limited to ACOs that have assigned beneficiaries directly impacted by the issue. For instance:

- An ACO with assigned beneficiaries impacted by the SAHS billing activity will see an increase in performance year expenditures, reducing the ACO's shared savings or increasing the amount of shared losses owed by the ACO. The impact on the ACO's performance may be partially mitigated if the SAHS billing activity also increases the ACO's regional service area expenditures and the national expenditures used to calculate the two-way national-regional blended benchmark update factor.

- An ACO with assigned beneficiary expenditures and regional service area expenditures with little or no impact from the SAHS billing activity will receive a relatively higher benchmark update under the national-regional blended update factors used in performance year reconciliation, and therefore, may appear to perform better as a result of the national impact of the SAHS billing activity, resulting in higher earned performance payments or lower or no losses for the ACO.

Unaddressed, SAHS billing activity in a given calendar year can distort the historical benchmarks for an ACO in an agreement period that have the calendar year as a benchmark year and the accuracy of any future financial reconciliation performed against those benchmarks. Similarly, inaccurate revenue and expenditure calculations based on data from a calendar year affected by SAHS billing activity may affect an ACO's revenue status and the amount of funds an ACO in a two-sided model must secure as a repayment mechanism, one of the program's important safeguards for protecting the Medicare Trust Funds. Absent CMS action, SAHS billing activity likely would significantly impact shared savings and losses calculations for the performance year affected by SAHS billing activity, and for future performance years that have benchmark years affected by SAHS billing activity. Under these circumstances, some ACOs would likely experience adverse impacts (for example, lower or no shared savings or higher shared losses) while other ACOs would experience windfall gains (for example, higher shared savings or lower or no shared losses).

Failing to address SAHS billing activity would jeopardize the integrity of the Shared Savings Program. There are 480 ACOs in the Shared Savings Program with over 608,000 health care providers who care for 10.8 million

assigned FFS beneficiaries.⁵²⁶ In PY 2022, the most recent year for which data is available, savings achieved by ACOs relative to benchmarks amounted to \$4.3 billion, of which ACOs received shared savings payments totaling \$2.5 billion, and Medicare retained \$1.8 billion in savings.⁵²⁷ ACOs are held accountable for 100 percent of total Medicare Parts A and B expenditures for their assigned beneficiary populations (with limited exceptions). This incentivizes ACOs to generate savings for the Medicare program as they have the opportunity to share in those savings if certain requirements are met. It also discourages the ACO from generating unnecessary expenditures for Medicare as they may be required to repay those amounts to CMS. Accountable care arrangements such as this cannot function if the ACO may be held responsible for all SAHS billing activity that is outside of their control. Holding an ACO accountable for substantial losses due to SAHS billing activity is not only inequitable but will dramatically increase the level of risk associated with participation, making the Shared Savings Program unattractive.

In a separate proposed rule entitled “Medicare Program: Mitigating the Impact of Significant, Anomalous, and Highly Suspect Billing Activity on Medicare Shared Savings Program Financial Calculations in Calendar Year 2023” (89 FR 55168, July 3, 2024) (referred to herein as the SAHS billing activity proposed rule), we have proposed an approach to address the SAHS billing activity identified for CY 2023 to protect the accuracy, fairness, and integrity of Shared Savings Program financial calculations. Specifically, we have proposed to exclude payment amounts for two HCPCS codes (A4352 (*Intermittent urinary catheter; Coude (curved) tip, with or without coating (Teflon, silicone, silicone elastomeric, or hydrophilic, etc.)*, each) and A4353 (*Intermittent urinary catheter, with insertion supplies*)) on DMEPOS claims submitted by any supplier from expenditure and revenue calculations used for: assessing performance year (PY) 2023 financial performance of Shared Savings Program ACOs, establishing benchmarks for ACOs starting agreement periods in 2024,

⁵²⁶ Refer to CMS, Shared Savings Program Fast Facts—As of January 1, 2024, available at <https://www.cms.gov/files/document/2024-shared-savings-program-fast-facts.pdf>.

⁵²⁷ Refer to CMS, Shared Savings Program Performance Year Financial and Quality Results, 2022, available at <https://data.cms.gov/medicare-shared-savings-program/performance-year-financial-and-quality-results/data>.

2025, and 2026, and calculating factors used to determine revenue status and repayment mechanism amounts in the application and change request cycle for ACOs applying to enter a new agreement period beginning on January 1, 2025, or continue their participation in the program in PY 2025, respectively. There will be a 30-day public comment period on the SAHS billing activity proposed rule so as to minimize the negative impact on ACOs of a delay in the issuance of PY 2023 initial financial determinations and disbursement of performance payments, as well as to other program milestones, necessitated by the calculation of amounts under the financial methodology proposed in the SAHS billing activity proposed rule.

(2) Proposed Revisions

It is important to establish a policy that would allow CMS to proactively make similar adjustments for future calendar years, should new SAHS billing activity be identified. In general, we anticipate that billing activity that meets the high bar to be considered significant, anomalous, and highly suspect billing activity will be a rare occurrence. This is evidenced by the program’s history. The SAHS billing activity surrounding selected catheter codes in 2023 is the first occasion we have had in the program’s 12-year history to consider this issue. We propose that we would notify ACOs and ACO applicants of our determinations to remove any codes and the aggregate per capita dollar amount of the codes removed as part of the annual financial reconciliation process. While we anticipate future occurrences of the scope and magnitude observed for urinary catheters in CY 2023 to be rare, having a permanent policy in place would:

- Allow CMS to move quickly to make adjustments to financial calculations without having to engage in additional rulemaking, ensuring timely issuance of initial determinations of savings and losses and disbursement of earned performance payments;
- Provide ACOs with greater certainty that they will not be held accountable for SAHS billing activity that is out of their control, promote integrity and fairness and ensure accuracy of program calculations;
- Limit requests to reopen initial determinations, thus reducing burden for ACOs and CMS.

In this proposed rule we are therefore proposing an approach by which we would adjust Shared Savings Program calculations to mitigate the impacts of SAHS billing activity occurring in CY 2024 or subsequent calendar years.

(a) Identifying Significant, Anomalous, and Highly Suspect Billing Activity

We propose that CMS would have the sole discretion to identify cases of SAHS billing activity for a particular calendar year that would warrant the adjustment of Shared Savings Program financial calculations. We anticipate routinely examining billing trends identified by CMS and other relevant information that had been raised through complaints by ACOs or other interested parties to the HHS–OIG or to the CMS CPI. We would seek to identify and monitor any codes that would potentially trigger the adjustment policy by meeting the high bar for removal under the criteria used to determine SAHS billing activity. Shortly after the start of a calendar year CMS would make a final determination as to which codes, if any, warrant adjustments for the previous calendar year. For example, in early CY 2026 CMS would make a final determination of whether any codes met the high bar for removal under the criteria used to determine SAHS billing activity in CY 2025, allowing time for the adjustments to be incorporated in forthcoming calculations.

CMS must retain sole discretion to identify cases of SAHS billing activity because we cannot anticipate what SAHS billing activity we may encounter in the future that may warrant adjustments to the program’s financial calculations. We are also concerned about balancing adjustments for billing activity that rises to the level of SAHS versus removing payment amounts associated with billing activity due to inefficiencies that are within the ACO’s control. Depending on the frequency of the use of this authority and the occurrence of SAHS billing activity, and thus the experience we develop in this area, we would consider proposing to codify criteria to identify SAHS billing activity in the future through additional rulemaking. Nonetheless, we believe that CMS should retain sole discretion to determine whether SAHS billing activity occurred on a case-by-case basis at this time.

We anticipate considering multiple criteria in determining whether SAHS billing activity warrants removal of the corresponding billing codes from Shared Savings Program financial calculations. These criteria include:

- The observed increase in claims for a HCPCS or CPT code year-to-year meets the definition of significant, anomalous, and highly suspect billing activity, as defined elsewhere in this section of this proposed rule;

- The observed billing activity has national or regional impact or significance, such as:

- ++ Involves a Medicare provider or supplier, a beneficiary population and/or states with claims activity that significantly impacts national or regional expenditure values or trends;

- ++ Warrants adjustment (all or partial) to national Medicare expenditure trend calculations used in payment (for example, United States Per Capita Cost) and/or Federal budget forecast calculations;

- ++ Warrants removal from national and regional growth rates used to update ACO historical benchmarks;

- If no action is taken there would be an imbalance between ACO performance year and historical benchmark year expenditures;

- Use of payment amounts associated with the SAHS billing activity could result in payment inaccuracies that produce significantly inaccurate and inequitable payment determinations in the Shared Savings Program (including the amount of shared savings or shared losses), due to factors beyond the control of ACOs; and

- The claims in question may be disproportionately represented by Medicare providers or suppliers whose Medicare enrollment status has been revoked.

We anticipate utilizing this authority only in rare and extreme cases where a number of the criteria are satisfied. We anticipate we would consider the extent to which the billing activity meets each criterion when developing a holistic assessment of the billing activity's impact on the Shared Savings Program.

The extent of the geographic impact of the SAHS billing activity in question is relevant given that the proposed policy would entail adjustments program-wide. One consideration for determining whether the billing activity has national or regional significance would be if the pattern warrants an adjustment to or special assumption for calculating official Medicare expenditure trends (such as the United States Per Capita Cost (USPCC) or Federal budget forecasts) due to the activity's significant, anomalous, and highly suspect nature. For example, the 2024 Medicare Trustees Report noted a significant increase in suspected fraudulent spending on certain intermittent catheters in 2023.⁵²⁸ The

DME projections in the report include the assumption that this suspected fraud will be addressed during 2024.⁵²⁹

Billing activity in the Medicare FFS program at a scale warranting a special assumption for calculating the USPCC or Federal budget forecasts has *per se* national or regional significance, and thus would likely rise to the high bar of warranting adjustment to Shared Savings Program expenditure and revenue calculations.

We would seek to assess whether the billing activity creates an imbalance between ACO performance year and historical benchmark year expenditures. This assessment could involve considering whether the increase in billing activity was at such scale that it causes the difference between performance year and benchmark year expenditures for an ACO's assigned beneficiary population for the claim type affected by the billing activity (for example, DMEPOS) to be substantially larger than differences for other claim types.

We would also consider whether the billing activity, and any inaccurate or inequitable payment determinations that could result from using the related payment amounts, was outside of Shared Savings Program ACOs' ability to reasonably control. Most commonly, this would entail examining whether the Medicare providers or suppliers billing the codes in question are ACO providers or suppliers. Generally, we would be more likely to apply the proposed policy if the SAHS billing activity were outside of the ACO's control as the program may otherwise lack a means to control the growth of such amounts.

Finally, we would consider whether billing activity were disproportionately represented by Medicare providers or suppliers whose Medicare enrollment status has been revoked. Such a circumstance would provide further evidence that the billing activity surrounding these codes was highly suspect. We seek comment on the processes and criteria described.

(b) Adjustments to Shared Savings Program Calculations

In the event that CMS identifies one or more HCPCS or CPT codes with SAHS billing activity in CY 2024 or a subsequent calendar year that warrant adjustment, we propose to exclude all Medicare Parts A and B payment amounts associated with the identified codes on specified claim types submitted by any provider or supplier from expenditure and revenue

calculations for the relevant calendar year for which the SAHS billing activity is identified. For example, if CMS identifies one or more codes with SAHS billing activity in CY 2025 that warrant adjustment, we would exclude payments for those codes for both calculations where CY 2025 is the performance year and in calculations where CY 2025 is a benchmark year for ACOs in agreement periods beginning in 2026, 2027, and 2028.

We propose that we would also adjust the 3 most recent years prior to the start of the ACO's agreement period used in establishing the historical benchmark that is used to reconcile the ACO for a performance year corresponding to the calendar year for which the SAHS billing activity was identified. In the example where CMS identified SAHS billing activity for 2025, we would adjust benchmark expenditures (ACO, national, and regional) for 2019, 2020, and 2021, for an ACO that began an agreement period in 2022 (for which PY 2025 is the fourth performance year in its agreement period) and would adjust benchmark expenditures (ACO, national, and regional) for 2022, 2023, and 2024 for an ACO that began its agreement period in 2025 (for which PY 2025 is the first performance year in its agreement period). Note that in computing benchmark expenditures for 2023 for this second ACO, because 2023 is a benchmark year, CMS would also exclude payments for the catheter claims with SAHS billing activity in 2023, as proposed in the SAHS billing activity proposed rule, if finalized.

Our proposal to adjust an ACO's historical benchmark to exclude Medicare Parts A and B FFS payment amounts associated with the HCPCS or CPT codes displaying SAHS billing activity during a performance year would achieve greater consistency between the benchmark period and the performance year, given that we are excluding all payments on specified claim types for the selected codes from performance year calculations, including payments that would have been made in the absence of any SAHS billing activity. This helps to ensure a balance between the benchmark and the performance year such that an ACO is not unfairly benefitting from a benchmark that includes certain expenditures that are excluded from the performance year. Under our proposal, we would identify any codes warranting adjustment at the start of the next calendar year and our operational schedule would accommodate the additional calculations required. Therefore, we anticipate we would be able to compute adjusted historical

⁵²⁸ The Boards of Trustees, Federal Hospital Insurance and Federal Supplementary Medical Insurance Trust Funds, "2024 Annual Report of the Boards of Trustees of the Federal Hospital Insurance and Federal Supplementary Medical Insurance Trust Funds", p. 136, available at <https://www.cms.gov/oact/tr/2024>.

⁵²⁹ *Ibid.*

benchmarks for the affected reconciliation with minimal, if any, delays to the typical timeline for issuing initial determinations.

We propose that we would provide the historical benchmark that has been adjusted to exclude payment amounts for HCPSC or CPT codes associated with SAHS billing activity occurring in the performance year being reconciled to ACOs as part of their financial reconciliation settlement package for the performance year, as opposed to providing a separate new historical benchmark report in advance of settlement. This approach is consistent with what we have done for rare past occasions where we computed revised benchmarks immediately prior to reconciliation to correct for late-breaking data issues. Consistent with existing operational practice, in calculating these adjusted benchmarks, we would recompute ACO expenditures using beneficiary assignment data that was generated during the performance year being reconciled for all ACOs. For example, if computing adjusted historical benchmarks for PY 2025 to exclude claim payments for codes with SAHS billing activity during the performance year, we would use beneficiary assignment data generated during CY 2025. Although the benchmark year assignment data generated during the performance year being reconciled would be based on the same ACO participant list, assignment methodology selection under § 425.226(a)(1), and assignment methodology under subpart E of Part 425 of the regulations as used in calculating the ACO's most recent prior benchmark, other factors, such as more recent Medicare beneficiary eligibility data along with the ACOs included in the claims-based assignment competition, could differ and impact an ACO's assigned population. We considered whether to provide ACOs with their adjusted benchmark at the time we announce our determination of SAHS billing activity for a given calendar year (anticipated to occur near the start of the next calendar year), however we concluded this would delay other important program milestones, such as the issuance of preliminary and adjusted historical benchmarks for the new performance year.

When the calendar year with SAHS billing activity becomes a benchmark year, we are proposing adjustments to calculations for the calendar year itself, and not for other years in the benchmark period, or the performance years that will be reconciled against those benchmarks. Thus, in the example where we identified codes with SAHS

billing activity in CY 2025, in establishing or resetting the benchmark for an ACO entering an agreement period in 2026, we would exclude payments for the relevant codes identified for CY 2025 from BY 2025 calculations and, if our proposed policy in the SAHS billing activity proposed rule is finalized, would remove payments for the specified catheter codes from BY 2023 calculations. We would not exclude the catheter codes identified as having SAHS billing activity in BY 2023 or the codes identified for CY 2025 from either BY 2024 calculations or calculations for PY 2026 or any subsequent performance years in the same agreement period.⁵³⁰

Specifically, we are proposing to adjust the following Shared Savings Program calculations, as applicable, to exclude all Medicare Parts A and B payment amounts associated with a HCPSC or CPT code on claims for the specified claim types displaying SAHS billing activity:

- Calculation of Medicare Parts A and B FFS expenditures for an ACO's assigned beneficiaries for all purposes including the following: Establishing, adjusting, updating, and resetting the ACO's historical benchmark and determining performance year expenditures.

- Calculation of FFS expenditures for assignable beneficiaries as used in determining county-level FFS expenditures and national Medicare FFS expenditures, including the following calculations:

- ++ Determining average county FFS expenditures based on expenditures for the assignable population of beneficiaries in each county in the ACO's regional service area according to §§ 425.601(c) and 425.654(a) for purposes of calculating the ACO's regional FFS expenditures.

- ++ Determining the 99th percentile of national Medicare FFS expenditures for assignable beneficiaries for purposes of the following:

- Truncating assigned beneficiary expenditures used in calculating benchmark expenditures under §§ 425.601(a)(4) and 425.652(a)(4), and performance year expenditures under §§ 425.605(a)(3) and 425.610(a)(4).

- Truncating expenditures for assignable beneficiaries in each county for purposes of determining county FFS expenditures according to §§ 425.601(c)(3) and 425.654(a)(3).

- Truncating expenditures for assignable beneficiaries for purposes of

determining truncated national per capita FFS expenditures for purposes of calculating the Accountable Care Prospective Trend (ACPT) according to § 425.660(b)(3).

- ++ Determining truncated national per capita expenditures FFS per capita expenditures for assignable beneficiaries for purposes of calculating the ACPT according to § 425.660(b)(3).

- ++ Determining national per capita expenditures for Parts A and B services under the original Medicare FFS program for assignable beneficiaries for purposes of capping the regional adjustment to the ACO's historical benchmark according to §§ 425.601(a)(8)(ii)(C) and 425.656(c)(3), capping the prior savings adjustment according to § 425.658(c)(1)(ii), capping the prepaid shared savings multiplier according to § 425.640(f)(2)(v), and calculating the proposed HEBA scaler according to § 425.662(b)(2).

- ++ Determining national growth rates that are used as part of the blended growth rates used to trend forward BY1 and BY2 expenditures to BY3 according to §§ 425.601(a)(5)(ii) and 425.652(a)(5)(ii) and as part of the blended growth rates used to update the benchmark according to §§ 425.601(b)(2) and 425.652(b)(2)(i).

- Calculation of Medicare Parts A and B FFS revenue of ACO participants for purposes of calculating the ACO's loss recoupment limit under the BASIC track as specified in § 425.605(d).

- Calculation of total Medicare Parts A and B FFS revenue of ACO participants and total Medicare Parts A and B FFS expenditures for the ACO's assigned beneficiaries for purposes of identifying whether an ACO is a high revenue ACO or low revenue ACO, as defined under § 425.20, determining an ACO's eligibility to receive advance investment payments according to § 425.630, and determining whether an ACO qualifies for a shared savings payment under § 425.605(h).

- Calculation or recalculation of the amount of the ACO's repayment mechanism arrangement according to § 425.204(f)(4).

This approach would recognize that SAHS billing activity has the potential to impact an ACO's savings and loss determination for both the performance year when the SAHS billing activity occurred and future performance years for which the affected year is a benchmark year. Making adjustments when the affected period represents a performance year or benchmark year is consistent with our approach for the exclusion of payment amounts for episodes of care for treatment of COVID-19 that we established in the

⁵³⁰ This assumes these same codes were not identified as having SAHS billing activity in CY 2024 or CY 2026 or later years.

May 8, 2020 COVID–19 IFC (85 FR 27577 through 27581).

The listed calculations reflect the same set of calculations that CMS adjusts for a beneficiary's episode of care for treatment of COVID–19, specified at § 425.611(c), as amended by the CY 2021 PFS final rule (85 FR 85044), the CY 2023 PFS final rule (87 FR 70241), and the CY 2024 PFS final rule (88 FR 79548), with a few exceptions. First, § 425.611(c) includes certain provisions that are not relevant for the proposed policy.⁵³¹ Second, the proposed policy includes calculations related to truncated national per capita expenditures used in determining the ACPT as described in § 425.660(b)(3) that are not included in § 425.611(c),⁵³² as well as references to other new or proposed calculations that do not rely on expenditures from a period of time overlapping the Public Health Emergency for COVID–19 for the United States which was in effect from January 27, 2020, through May 11, 2023 (capping the proposed prepaid shared savings multiplier (§ 425.640(f)(2)(v)), calculating the proposed HEBA scaler (§ 425.662(b)(2)), and determining whether an ACO that does not meet its minimum savings requirement qualifies for a shared savings payment (§ 425.605(h)). We propose to adjust calculations used for the ACPT to mitigate the impact of any SAHS billing activity identified for CY 2024 or subsequent calendar years. Specifically, in projecting growth rates at the start of an agreement period according to § 425.660, we would make an adjustment to the growth rates to mitigate the impact that any known SAHS billing activity have on spending growth projections.

We believe it is unlikely that fixed growth rates projected at the start of agreement periods beginning in earlier

years may also need mitigation from a code displaying SAHS billing activity. For example, if CMS identifies a HCPCS or CPT code displaying SAHS billing activity in CY 2025, the projected growth rate from 2023 to 2025—which will be used to update the historical benchmark for PY 2025 financial reconciliation for ACOs that began an agreement period on January 1, 2024—would likely have assumed typical billing patterns for the code in CY 2025. Additionally, the projected growth rate from BY 2024 to PY 2025—which will be used to update the historical benchmark for PY 2025 financial reconciliation for ACOs that began an agreement period on January 1, 2025—would likely also have assumed typical billing patterns for the code in CY 2025 given the projections were finalized early in CY 2025.

However, if we determine a bias exists due to differences between adjustments to the projected growth rates for the ACPT and other Shared Savings Program calculations, we could rely on our current policy under § 425.652(b)(4)(ii) to reduce the weight of the ACPT in the three-way blend. We propose that we would use our discretion to reduce the weight of the ACPT rather than recalculate the growth rates that had been projected at the start of agreement periods starting in earlier years, as we believe it is important to maintain the policy that the projected growth rates remain fixed for the ACO's agreement period. In the CY 2023 PFS final rule (refer to 87 FR 69886 through 69898) we finalized our proposal to establish the ACPT at the outset of an agreement period, based on one or more annualized growth rates. We explained that we will not adjust the ACPT due to external factors such as geographic price changes, efficiency discounts, or other retrospective updates occurring during the performance years throughout the agreement period. In response to commenters concern that CMS might adjust the ACPT downward during the agreement period, we stated that we will not adjust the ACPT projections over the course of the agreement period (87 FR 69897). However, we acknowledged that a variety of circumstances could cause actual expenditure trends to significantly deviate from projections. If unforeseen circumstances occur during an ACO's agreement period we retained flexibility to reduce the impact of the prospectively determined ACPT portion of the three-way blend when necessary to mitigate unforeseen circumstances. We explained that we anticipate determining, on an ad hoc basis, whether an unforeseen circumstance

warrants adjustment of the weight placed on the ACPT component of the three-way blend by considering whether it has a material impact across the entire Shared Savings Program. If we determine that expenditure growth has differed significantly from projections made at the start of the agreement period due to unforeseen circumstances, such as an economic recession, pandemic, or other factors, a reduction in the weight placed on the ACPT may be considered.

To summarize, we propose that when projecting growth rates used for the ACPT at the beginning of an agreement period, we would make an adjustment to mitigate the impact of any known SAHS billing activity on spending growth projections. Additionally, in accordance with § 425.660(a), CMS would not adjust the ACPT projections over the course of the agreement period to account for SAHS billing activity later identified. Rather, CMS may use its discretion to reduce the weight of the ACPT in the three-way blend in accordance with § 425.652(b)(4)(ii) if CMS determines that the SAHS billing activity represents an unforeseen circumstance that warrants a reduction to the weight.

The direction and magnitude of the impact of the proposed adjustments may vary by ACO. However, by making these adjustments, we would be helping to ensure that no ACOs are held accountable, and financially penalized for SAHS billing activity that was outside their direct control while also protecting the Trust Funds from other ACOs potentially receiving windfall gains.

For this proposal, we rely on our authority under section 1899(d)(1)(B)(ii) of the Act. Section 1899(d)(1)(B)(ii) of the Act authorizes the Secretary to adjust the benchmark for beneficiary characteristics and such other factors as the Secretary determines appropriate. Here, we are proposing to adjust the benchmark in order to remove payments for HCPCS or CPT codes identified as exhibiting SAHS billing activity in CY 2024 or subsequent calendar years from the determination of benchmark expenditures when the calendar year serves as a benchmark year or from the determination of benchmark expenditures that will be used to reconcile the calendar year when it serves as a performance year.

We propose to use our authority under section 1899(i)(3) of the Act to remove payment amounts for HCPCS or CPT codes identified as exhibiting SAHS billing activity in CY 2024 or subsequent calendar years from the following calculations: (1) performance

⁵³¹ This includes provisions under §§ 425.600, 425.602, 425.603, 425.604, and 425.606 which are not relevant for the proposed policy because they are not applicable to PY 2024 or later performance years or for agreement periods where CY 2024 or later years are benchmark years. These provisions are relevant for the COVID–19 episode exclusion policy under § 425.611 because they are applicable to performance or benchmark years that overlap with the COVID–19 PHE.

⁵³² When establishing the ACPT in the CY 2023 PFS final rule, we noted that the first ACPT release would be published in 2024 for agreement periods beginning on January 1, 2024, and would provide a projected annualized growth rate (or rates) relative to the 2023 benchmark year (BY3). We noted further that to the extent that Medicare projections made at that time (2024) anticipated lingering effects from the COVID–19 pandemic then they would be reflected in the ACPT (see 87 FR 69894) and we opted not to amend § 425.611 to include adjustments of ACPT-related calculations. However, it is appropriate to propose making adjustments to ACPT-related calculations in this proposed rule.

year expenditures; (2) updates to the historical benchmark; and (3) ACO participants' Medicare FFS revenue used for multiple purposes across the Shared Savings Program, including determinations of loss sharing limits in the two-sided models of the BASIC track,⁵³³ determinations of eligibility for advance investment payments,⁵³⁴ and expanded criteria for certain low revenue ACOs participating in the BASIC track to qualify for shared savings in the event the ACO does not meet the minimum savings rate.⁵³⁵ Section 1899(i)(3) of the Act requires that we determine that the alternative payment methodology adopted under that provision would improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without resulting in additional program expenditures. The adjustments we are proposing herein, which would remove payment amounts for codes with identified SAHS billing activity from the specified Shared Savings Program calculations as proposed in § 425.672(c) and (e), would capture and remove from program calculations expenditures that are outside of an ACO's control, but that could significantly affect the ACO's performance under the program. In particular, failing to remove these payments would likely create highly variable savings and loss results for individual ACOs that happen to have over-representation or under-representation of SAHS billing activity for the selected codes among their assigned beneficiary populations.

As described in the Regulatory Impact Analysis (section VII. of this proposed rule), excluding payment amounts for the selected codes from the specified calculations are not expected to result in an increase in spending beyond the expenditures that would otherwise occur under the statutory payment methodology in section 1899(d) of the Act. Further, these adjustments to our calculations to remove payment amounts for these codes would promote continued integrity and fairness and improve the accuracy of Shared Savings Program financial calculations. As a result, we expect these policies would support ACOs continued participation in the Shared Savings Program and the program's goals of lowering growth in Medicare FFS expenditures and improving the quality of care furnished to Medicare beneficiaries.

Based on these considerations, and as specified in the Regulatory Impact Analysis (section VII. of this proposed rule), we have determined that adjusting certain Shared Savings Program calculations to remove payment amounts for selected codes, in the event we determine SAHS billing activity occurs in CY 2024 or subsequent calendar years, from the calculation of performance year expenditures, updates to the historical benchmark, and ACO participants' Medicare FFS revenue used for multiple purposes across the Shared Savings Program, meets the requirements for use of our authority under section 1899(i)(3) of the Act when incorporated into the existing other payment model we have established pursuant to that section.

The changes that we are proposing in this section of this proposed rule would apply to address the impact of SAHS billing activity identified in CY 2024 or subsequent calendar years, and thus would apply to ACOs currently participating in PY 2024. Therefore, if finalized, these changes to policies applicable for PY 2024 would constitute retroactive rulemaking. Section 1871(e)(1)(A)(ii) of the Act permits a substantive change in regulations, manual instructions, interpretive rules, statements of policy, or guidelines of general applicability under Title XVIII of the Act to be applied retroactively to items and services furnished before the effective date of the change if the failure to apply the change retroactively would be contrary to the public interest.

Failing to apply the proposed changes retroactively to PY 2024 would be contrary to the public interest because it would unfairly punish Shared Savings Program ACOs by forcing them to unexpectedly assume a substantial magnitude of financial risk for costs outside of their control and not previously contemplated in the Shared Savings Program, undermining both the sustainability of the Shared Savings Program and the public's faith in CMS as a fair partner, in the event we determine SAHS billing activity impacts CY 2024. We did not fully contemplate the potential for SAHS billing activity outside of an ACO's control when the Shared Savings Program was established.⁵³⁶ For this reason, the Shared Savings Program financial methodology and the procedures we have utilized in the past did not provide a means to adequately account for instances of SAHS billing activity

outside of an ACO's control, and thereby the related financial risk is assumed entirely by ACOs. We view this outcome as particularly inequitable to ACOs because they have no direct means of controlling such costs. Unlike Medicare Advantage organizations, ACOs are not responsible for processing claims for their assigned beneficiaries and otherwise have no means of causing the denial of such claims. CMS thus cannot reasonably have expected ACOs to have intended to assume responsibility for all instances of SAHS billing activity outside of an ACO's control when they joined the Shared Savings Program. For these reasons, it would be contrary to the public interest for CMS to fail to apply a policy mitigating this issue retroactively.

We did not foresee the acute need to address SAHS billing activity impacting CY 2023, and the need for the related policy proposal for addressing SAHS billing activity in CY 2024 or subsequent calendar years, with sufficient time in advance of the start of PY 2024 to undertake notice and comment rulemaking earlier, and to avoid retroactive rulemaking. More specifically, we were only able to determine that the increase in billing on HCPCS codes A4352 and A4353 in CY 2023 represented SAHS billing activity after the calendar year ended. To identify that the billing activity in CY 2023 was significant, anomalous, and highly suspect, CMS reviewed actual billing levels after the calendar year closed and services furnished in CY 2023 had occurred and the billing level could then be compared to billing levels observed in prior calendar years.

We seek comment on our proposal to apply the policy retroactively to PY 2024, including whether failing to apply the policy retroactively would be contrary to the public interest and how it would affect ACOs and their ability to participate in the Shared Savings Program.

We are proposing a new § 425.672 to describe adjustments CMS could make to Shared Savings Program calculations to mitigate the impact of SAHS billing activity for CY 2024 or subsequent calendar years. We propose that § 425.672(b) specify that CMS, at its sole discretion, may determine that the billing of specified HCPCS or CPT codes represents SAHS billing activity in calendar year 2024 or subsequent calendar years that warrants adjustment to calculations made under this part. We propose under § 425.672(c) to specify the Shared Savings Program calculations for which CMS would exclude all Medicare Parts A and B FFS payment amounts for the specified

⁵³³ Refer to § 425.605(d)(1)(iii)(D), (d)(1)(iv)(D), and (d)(1)(v)(D) for BASIC track Levels C, D and E, respectively.

⁵³⁴ Refer to § 425.630(b).

⁵³⁵ Refer to § 425.605(h).

⁵³⁶ See, for example, 76 FR 67948 through 67950. Such approaches were more focused on policies to support monitoring of ACO performance and ensuring program integrity.

claim types associated with a HCPCS or CPT code identified in § 425.672(b) when an adjustment to the calculation is appropriate in light of the SAHS billing activity. The calculations specified in § 425.672(c) include all potentially relevant financial calculation provisions, including those covering the financial benchmarking methodologies (including the proposed HEBA scaler at § 425.662(b)(2)) and those covering calculation of shared savings and losses. We propose in § 425.672(d) that for calendar year 2024 or subsequent calendar years,⁵³⁷ CMS would adjust Shared Savings Program calculations for SAHS billing activity identified under § 425.672(b) for the calendar year when it is either a performance year or a benchmark year, as well as the 3 most recent years prior to the start of the ACO's agreement period used in establishing the historical benchmark, when such a benchmark is used to reconcile the ACO for a performance year adjusted for SAHS billing activity. We propose to specify under § 425.672(e) that we would also make adjustments for any calendar year corresponding to BY3 in projecting per capita growth in Medicare Parts A and B FFS expenditures according to § 425.660(b)(1) for purposes of calculating the ACPT for agreement periods beginning on January 1, 2024, and in subsequent years. Additionally, we are proposing conforming revisions to §§ 425.601(a)(9) and 425.652(a)(9), as well as proposing new paragraphs at §§ 425.601(a)(9)(iv) and 425.652(a)(9)(ix) to include adjustments for SAHS billing activity as one of the reasons that CMS would adjust an ACO's benchmark during the term of its agreement period. While we expect that the identification of SAHS billing activity that triggers these proposed policies will be rare, we believe that, if finalized, these policies will allow us to proactively ensure the accuracy of program calculations and provide greater certainty for ACOs and the Trust Funds.

We seek comment on these proposals.

⁵³⁷ We note that by anchoring this policy on the calendar year, this proposed provision differs from many other program regulations that are applicable for a given performance year or for agreement periods beginning on a given date or within a given range. However, we believe this approach is appropriate for this policy as (1) we would adjust expenditures for the affected calendar year both when it is a performance year and when it is a benchmark year and (2) it ties the policy to the period for which the SAHS billing activity was identified much in the way the policy for COVID-19 episodes of care specified in § 425.611 is tied to the related public health emergency.

e. Seeking Comment on Establishing Higher Risk and Potential Reward Under the ENHANCED Track

(1) Background

As described in the CY 2024 PFS final rule (88 FR 79223), CMS has considered a higher risk Shared Savings Program track under which the shared savings/loss rate would be somewhere between 80 percent and 100 percent (that is, a rate higher than that currently offered under the ENHANCED track) and that builds on the experience of the Next Generation ACO (NGACO) and ACO REACH Models. A higher risk track would offer ACOs increased incentives to generate savings, which would help improve care delivery by promoting innovations in the delivery of high-quality care that is more patient-centered. In other words, by increasing sharing rates for ACOs, ACOs will be better incentivized to develop innovations in the delivery of high-quality care and, therefore, improve the care they offer to their beneficiaries. A revised ENHANCED track could be implemented in accordance with section 1899(i)(3) of the Act, provided the Secretary determines that such other payment model enhances the quality and efficiency of items and services furnished under the Medicare program and does not result in program expenditures greater than those that would result under the statutory payment model.

In the CY 2024 PFS final rule (88 FR 79223), we summarized public comments received in response to our Request for Information (RFI) regarding a potential track within the Shared Savings Program with higher risk than the current ENHANCED track. For a full summary of the comments submitted in response to our comment solicitation, we refer readers to the relevant discussion in the CY 2024 PFS final rule (88 FR 79225 through 79227). Commenters were broadly supportive of such an approach and referenced existing policies under the ACO REACH Model, and the NGACO Model. Some commenters suggested features of such a track that would serve to encourage more participation in the Shared Savings Program and help ACOs deliver more person-centered care to beneficiaries in Traditional Medicare. These features included prospective payments, full sharing rates (a sharing rate of 100 percent, similar to the Global Risk Sharing Option in the ACO REACH Model) as well as a benchmark discount rate (a reduction of the benchmark by a predetermined percentage) to protect the Medicare Trust Funds.

A higher risk sharing arrangement could incentivize participating ACOs to improve performance in the program as they would receive a greater share of any gross savings. That improved performance may, in turn, result in reduced healthcare costs for Medicare and more effective, efficient care for beneficiaries. In addition, higher risk sharing could incentivize ACOs to develop new care delivery strategies in order to improve their financial performance, such as a focus on specialty care integration and reduced care fragmentation. Offering a higher risk sharing track may also help CMS reach our goal of having all beneficiaries in the traditional Medicare program in a care relationship with a health care provider who is accountable for the costs and quality of their care by 2030 by encouraging currently participating ACOs to continue participation in the Shared Savings Program, as well as encourage ACOs not participating in the Shared Savings Program to join as a result of increased potential reward.

A recent CBO report⁵³⁸ proposed that higher sharing rates might incentivize providers to decrease spending as they would stand to gain a larger portion of the savings generated. While in the short term this might diminish CMS savings, the report postulates that this would increase participation in the Shared Savings Program and provide a means for CMS to manage long-term healthcare spending growth. The report also highlights the necessity of striking a delicate balance: devising financial incentives enticing enough for ACOs to participate actively in the Shared Savings Program, while ensuring that such participation leads to savings for the Medicare program.

We seek comment on a participation option that would allow for higher risk and reward than currently available under the ENHANCED track. A participation option of this type would replace the existing ENHANCED track in order to avoid the self-selection issues that would occur if a higher risk track were to be included alongside the ENHANCED track. If both participation options were made available to ACOs, we have concerns that only the highest-performing ACOs would self-select into the higher of the two risk tracks. While we included an RFI on the topic in CY 2024 PFS rulemaking, we are concerned that ACOs did not have enough detailed information to appropriately weigh the

⁵³⁸ For more details, please refer to Congressional Budget Office (CBO), "Medicare Accountable Care Organizations: Past Performance and Future Directions", April 2024, available at <https://www.cbo.gov/system/files/2024-04/59879-Medicare-ACOs.pdf>.

tradeoffs associated with a higher risk/reward option than the current ENHANCED track, and that the additional information we have generated since then will allow ACOs and other interested parties to provide more forthright and helpful feedback. CMS is interested in public comments on the design of a higher risk option within the Shared Savings Program that could be enacted under our authority granted by section 1899(i)(3) of the Act and that would encourage ACOs to participate actively in the Shared Savings Program while ensuring that such participation leads to savings for the Medicare program.

(a) Current ENHANCED Track

Currently, under the Shared Savings Program, ACOs may enter participation agreements under the ENHANCED track. The ENHANCED track is a two-sided model that represents the highest level of risk and potential reward currently offered under the Shared Savings Program. The rules governing the participation options available to ACOs and the progression from lower to higher risk for ACOs entering the program are described in § 425.600 of the regulations. To qualify for a shared savings payment, an ACO must meet a minimum savings rate (MSR) requirement, meet the quality performance standard or alternative quality performance standard established under § 425.512, and otherwise maintain its eligibility to participate in the Shared Savings Program under 42 CFR part 425, subpart B (§§ 425.100 through 425.118). For ACOs meeting the applicable quality performance standard established under § 425.512(a)(2) or (a)(5)(i) (for PY 2024 and subsequent performance years), the final shared savings rate is equal to the maximum sharing rate of 75 percent, or savings at a rate of 75 percent multiplied by the ACO's health equity adjusted quality performance score if the ACO meets the alternative quality performance standard at § 425.512(a)(5)(ii). CMS computes an ACO's shared savings payment by applying the final sharing rate to the ACO's savings on a first dollar basis (meaning the final sharing rate is applied to the ACO's full total savings amount), with the payment subject to a cap that is equal to 20 percent of the updated benchmark (§ 425.610(e)(2)).

ACO's that operate under a two-sided model and have losses that meet or exceed a minimum loss rate (MLR) must share losses with the Medicare program (§ 425.100(c)). Once this MLR is met or exceeded, the ACO will share in losses at a rate determined according to the

ACO's track/level of participation, up to a loss recoupment limit (also referred to as the loss sharing limit) (§ 425.605(d); § 425.610(f), (g)). In determining shared losses, ACOs participating in the ENHANCED track are subject to losses at a rate determined using a sliding scale based on ACO's health equity adjusted quality performance score, if the applicable quality performance standard established in § 425.512(a)(2) or (a)(5)(i) or the alternative quality performance standard at § 425.512(a)(5)(ii) is met; with minimum shared loss rate of 40 percent and maximum of 75 percent. If the ACO fails to meet the applicable quality performance standard established in § 425.512 or the alternative quality performance standard, the ACO is subject to 1st dollar losses at a rate of 75 percent (§ 425.610(f)(4)(ii)). Shared losses are subject to a cap that is equal to 15 percent of updated benchmark (§ 425.610(g)).

CMS adjusts historical benchmark expenditures by Medicare enrollment type by a percentage of the difference between the average per capita expenditure amount for the ACO's regional service area and the ACO's historical benchmark amount (referred to herein as the "regional adjustment") (§ 425.652(a)(8)). The weights used in the regional adjustment calculation are determined in accordance with § 425.656(e) and are dependent on whether the ACO has lower or higher spending compared to the ACO's regional service area and the agreement period for which the ACO is subject to the regional adjustment. The *first time* that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment using either 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have lower spending than the ACO's regional service area (§ 425.656(e)(1)(i)); or 15 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have higher spending than the ACO's regional service area (§ 425.656(e)(1)(ii)). The *second time* that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment using either the 50 percent of the difference

between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area (§ 425.656(e)(2)(i)); or 25 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area (§ 425.656(e)(2)(ii)). The *third time* that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment using the 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area (§ 425.656(e)(3)(i)); or the 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area (§ 425.656(e)(3)(ii)). The *fourth or subsequent time* that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment to the historical benchmark using 50 percent of the difference between the average per capita expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark (§ 425.656(e)(4)). Among the ACOs participating in PY 2024, 78 percent of BASIC track ACOs (176 of 227) received a positive regional adjustment, whereas 95 percent (155 of 163) of ACOs in the ENHANCED track received a positive regional adjustment. A positive regional adjustment indicates that their expenditures were less than that of their regional service area. For ACOs receiving a positive regional adjustment, the average regional adjustment amount was 2.21 percent (\$237) of historical benchmark expenditures.

As of January 1, 2024, 43 percent (207 of 480) Shared Savings Program ACOs are participating under the ENHANCED track. Under Shared Savings Program policies, all ACOs participating in a two-sided model can select a symmetrical MSR and MLR which applies for the duration of its agreement

period (§ 425.605(b)(2); § 425.610(b)(1)). Among ACOs participating in the ENHANCED track for PY 2024, 61 percent (126 of 207) have selected an MSR/MLR of 0.5 percent or greater while 39 percent (81 of 207) have selected an MSR/MLR of 0.0 percent. Among ACOs that participated in the ENHANCED track for PY 2022, 38 percent (55 of 146) generated gross savings between zero and 5 percent of their updated benchmark expenditures, and 12 percent (17 of 146) generated gross savings of 10 percent or more of their benchmark expenditures.

(b) Other CMS Innovation Center Models

In the NGACO Model, NGACOs were offered the choice between two risk arrangements, partial risk or full risk. Under both arrangements, the NGACO was responsible for 100 percent of performance year expenditures for services rendered to the NGACO's aligned beneficiaries. Under the partial risk arrangement, the NGACO could receive or owe up to 80 percent of savings/losses, whereas under the full risk arrangement, the NGACO could receive or owe up to 100 percent of savings/losses. To mitigate the ACO's risk of large shared losses, as well as to protect the Medicare Trust Funds against paying out excessive shared savings, NGACOs were required to choose a cap on gross savings/losses. The cap, expressed as a percentage of the benchmark, ranged from 5 percent to 15 percent. The risk arrangement chosen by the NGACO (80 or 100 percent) was applied to gross savings or losses after the application of the cap. In PYs 1–3, a discount was applied to the NGACO's benchmark that was set at a standard 3 percent, with various adjustments, that allowed the final discount to vary from 0.5 percent to 4.5 percent. In PYs 4–6, a discount of 0.5 percent was applied to the benchmark under the partial risk arrangement, and a discount of 1.25 was applied to the benchmark under the full risk arrangement. The purpose of the discount was to increase the likelihood that any savings achieved by the NGACOs participating in the model would also result in savings for the Medicare Program. The NGACO Model evaluation found that while NGACOs reduced gross Medicare Parts A and B expenditures relative to a comparison group of similar fee-for-service Medicare beneficiaries in their markets, they did not generate savings to the Medicare Trust Funds. ACOs that elected a risk cap greater than 5 percent and participated in model population-based payment mechanisms achieved greater declines in spending, suggesting that the

combination of risk and payment flows is impactful. Spending reductions grew larger almost every year, reflecting a combination of NGACOs' improvements in infrastructure and clinical processes, exit by poorer-performing NGACOs, and the COVID–19 pandemic. While the NGACO Model reduced spending in Medicare Parts A and B, CMS paid back these reductions in the form of shared savings payments to ACOs. These results highlight the need to balance the tradeoff between incentivizing participation in higher levels of risk and reward, in alternative payment models such as the Shared Savings Program and ACO models tested by the Innovation Center, and reducing the risk of loss to the Medicare Trust Funds.

Under the ACO REACH Model, REACH ACOs are offered the choice of participating under the Global or the Professional Risk Sharing Options. As in the NGACO Model, under both risk sharing options, the REACH ACO is responsible for 100 percent of performance year expenditures for services rendered to aligned beneficiaries. Because ACOs electing the Global Risk Sharing Option retain up to 100 percent of the savings/losses on all savings up to 25 percent of their benchmark, with reduced sharing rates for savings exceeding 25 percent of their benchmark, a discount is applied to the benchmark to ensure savings are also generated for CMS. For ACOs in the Global Risk Sharing Option, the benchmark is reduced by a fixed percentage based on the performance year.⁵³⁹ The discount rate for PYs 2021 and 2022 was 2 percent, for PYs 2023 and 2024 is 3 percent, and for PYs 2025 and 2026 will be above 3.5 percent. The benchmark for ACOs participating in the Professional Risk Sharing Option does not include this discount, and these ACOs are only eligible to retain 50 percent of savings or owe 50 percent of any losses.

Preliminary evaluation results of the first 2 performance years of the Global and Professional Direct Contracting Model, before its transition to the ACO REACH Model, suggest that participating ACOs had mixed results in gross spending but consistent, significant increases in net spending relative to a comparison group of similar FFS Medicare beneficiaries in their markets, which included beneficiaries assigned to ACOs participating in the

Shared Savings Program. Standard ACOs, comprised of organizations that generally have experience serving Medicare FFS beneficiaries, increased gross spending. Standard ACOs also reduced acute care spending and utilization but comparison providers had larger reductions in acute care spending and utilization. Increased spending among Standard ACOs was concentrated among the integrated delivery system/hospital system ACOs in the model. High Needs ACOs that serve Medicare FFS beneficiaries with complex needs, including dually eligible beneficiaries, decreased gross spending. High Needs ACOs comprised of organizations that have not traditionally provided services to Medicare FFS beneficiaries favorably reduced acute and post-acute care utilization and spending. New Entrant ACOs had declines in gross spending but these declines were similar to those of providers within their same markets. Standard and New Entrant ACOs showed statistically significant improvement on at least one quality measure. These interim evaluation results are mixed, and additional analyses and years of experience with the Model will inform which features of ACO REACH could drive continued growth and innovation in the Shared Savings Program and the focus of future Innovation Center ACO models.

(2) Considerations for Incorporating Higher Risk and Potential Reward Under the ENHANCED Track

As we explained in the CY 2024 PFS final rule (88 FR 79223 through 79225), when considering a higher risk track, CMS would need to balance the incentives for ACOs to transition to higher levels of risk and potential reward and increase ACO participation in the Shared Savings Program and in two-sided risk tracks, all while ensuring sufficient financial safeguards to protect against inappropriately large shared losses for ACOs coordinating and improving quality of care for high-cost beneficiaries. Considerations must also be directed towards safeguarding the Medicare Trust Funds and ensuring that CMS satisfies any statutory requirements under section 1899(i)(3) of the Act.

A revised ENHANCED track could be implemented in accordance with section 1899(i)(3) of the Act, provided the Secretary determines that such other payment model enhances the quality and efficiency of items and services furnished under the Medicare program and does not result in program expenditures greater than those that would result under the statutory

⁵³⁹ For more details, refer to CMS, ACO Realizing Equity, Access, and Community Health (REACH) Model, PY2023 Financial Settlement Overview, available at <https://innovation.cms.gov/media/document/aco-reach-py2023-fncl-settlement> (see Table 4: Schedule of Discounts by Risk Arrangement).

payment model. Increasing the sharing rate in the ENHANCED track may need to be accompanied by other modifications to prevent spending from increasing and possibly jeopardizing compliance with section 1899(i)(3) of the Act. One factor to consider is selective participation with regard to which ACOs would choose to participate in a higher risk track, if offered. For example, Shared Savings Program ACOs that have a history of high levels of earned shared savings or have received a favorable high regional adjustment to their benchmark may be more likely than other ACOs to switch to the higher risk track upon renewing or early renewing their participation in the program so they can receive additional benefit from the higher levels of potential reward offered in a higher risk track. This could result in increased spending on the part of CMS which may jeopardize compliance with section 1899(i)(3) of the Act. If a higher risk track were to be offered in the Shared Savings Program in the future, CMS would consider replacing the existing ENHANCED track in order to prevent further selective participation and maintain the balance between increased participation and compliance with applicable statutory requirements.

We are seeking comment on the following potential features of a revised ENHANCED track:

(a) Benchmark Discount Rate

Both the NGACO Model and the Global Risk Sharing Option of the ACO REACH Model feature a discount rate that is applied to benchmarks. The discount rate serves to protect the Medicare Trust Funds by reducing benchmarks and thereby improves the likelihood of achieving savings for the Medicare program for risk tracks that can feature up to 100 percent shared savings rates, such as the Global Risk Sharing Option in the ACO REACH Model. A discount would be applied to an ACO's updated historical benchmark

before gross savings/losses are calculated, which increases the likelihood of savings for CMS and the Medicare program. If an ACO were to participate in a potential higher risk track and potentially share in 100 percent of gross savings, this discount would serve as the primary means for CMS to capture savings from ACOs participating in this option, as in the absence of a discount any and all gross savings would go to ACOs in the form of a shared savings payment. For example, consider an ACO with an updated benchmark of \$10,000 and mean per-capita performance year expenditures of \$9,500. Applying a discount rate of 1 percent to the benchmark would reduce the ACO's benchmark to \$9,900. Gross savings would then be calculated based on the discounted benchmark, and the ACO's shared saving rate would be applied to the savings, provided these savings met or exceeded the ACO's selected MSR.

A discount to the benchmark could also include a guardrail policy similar to the guardrail implemented in the three-way blended update factor that was finalized in the CY 2023 PFS final rule (87 FR 69881). Under such an approach, if an ACO were to be liable for shared losses after discounting the benchmark, then gross savings or losses would be recalculated using a benchmark without the discount. However, if the ACO were to generate gross savings in excess of their MSR under the benchmark without the discount, they would still not be considered eligible to share in savings. This approach would help ensure that CMS shares in any savings generated by ACOs participating in a potential revised ENHANCED track while also not increasing downside risk for ACOs that may be liable for shared losses.

We seek comment on what rate would be appropriate for a discount to the benchmark that would protect the Medicare Trust Funds while providing an adequate incentive for ACOs to

participate in a potential revised ENHANCED track. We also seek comment on whether the model features described in following subsections might replace a discount to the benchmark while balancing financial incentives for ACOs and risk to CMS. Additionally, we also seek comments from interested parties, including ACOs, on the discount to the benchmark and what level of discount would be acceptable to ACOs participating in the Shared Savings Program, as well as what would be considered too high of a discount.

(b) Tapered Sharing Arrangements

Currently in the ENHANCED track, ACOs can receive a shared savings payment of up to 20 percent of their updated benchmark (once the MSR is met or exceeded) (§ 425.610(e)(2)) or be liable for losses not to exceed 15 percent of their updated benchmark (once the MLR is met or exceeded) (§ 425.610(g)). Alternatively, CMS could set up marginal savings bands or risk corridors under which shared savings or losses rates would vary with the amount of gross savings or losses. As gross savings/losses increase, the ACO will retain a progressively smaller portion of the total savings or will be responsible for a progressively smaller portion of the total losses. For example, consider hypothetical marginal savings bands shown in Table 44. Under this arrangement, an ACO would share in all savings up to 10 percent of their updated benchmark at a rate of 100 percent. For savings between 10 to 15 percent, the ACO would share in 60 percent of savings and CMS would retain the remaining 40 percent. For savings between 15 to 20 percent, the ACO would share in 40 percent of savings and CMS would retain the remaining 60 percent. In case of losses, ACOs would be responsible for 50–100 percent of the losses, depending on the ACO's quality performance score.

TABLE 44: Hypothetical Marginal Shared Savings Bands

| <i>Gross savings as % of benchmark</i> | <i>Shared Savings/Loss Rate¹</i> |
|--|---|
| 0-10% | 100% |
| 10-15% | 60% |
| 15-20% | 40% |
| >20% | 0% |
| Losses | 50% - 100% ² |

¹ Percentage of savings or losses retained by the ACO.

² Shared Loss Rate would depend on an ACO's quality performance, similar to § 425.610(f)(4).

We seek comment on whether the hypothetical marginal shared savings bands shown in Table 44 represent an appropriate tapering schedule that would provide sufficient incentive for an ACO to participate in a potential revised ENHANCED track, as well as whether the tapering schedule should begin with lower shared savings rates and feature increasing rates as an ACO generates greater amounts of savings. We also seek comment on whether a potential tapering schedule should be symmetrical with respect to shared loss rates. Finally, we seek comment on whether marginal shared savings bands provide the right incentives to ACOs relative to the fixed savings rate in the current ENHANCED track.

(c) MSR/MLR

We are considering the option for all ACOs under a revised ENHANCED track to be subject to a symmetric MSR/MLR of 0 percent. This would increase many ACOs' exposure to both positive savings and negative risk. While this approach would guarantee that any ACO generating savings would share in those savings (provided they meet the quality performance standard established under § 425.512 and otherwise maintain their eligibility to participate in the Shared Savings Program), ACOs with performance year expenditures greater than their historical benchmark would be liable for those losses due to the 0 percent MLR. We are seeking comment on whether a potential revised ENHANCED track should retain the existing symmetric MSR/MLR selection options that currently exist for ACOs in a two-sided risk model under § 425.610(b)(1).

(d) Cap On Regional Adjustment Weight

We are seeking comment on adjusting the weights used to calculate the regional adjustment amounts under § 425.656(e) for ACOs in the revised ENHANCED track. This may take the

form of applying a cap of 35 percent to all the weights used to calculate regional adjustment amounts. This would impact any ACOs in a second or subsequent agreement period subject to a regional adjustment if their historical benchmark spending is lower than their regional service area. If the cap were to apply to an ACO with lower spending than their regional service area, then this would result in a decreased regional adjustment to that ACO's historical benchmark. Overall, this feature would reduce the cost to CMS associated with high regional adjustments by reducing an ACO's historical benchmark in the event that an ACO in a second or subsequent agreement period receives a large positive regional adjustment, which may decrease the need for higher benchmark discount rates or lower tapered shared savings rates that are less favorable to ACOs and limit incentives for ACOs to transition from the BASIC track to the revised ENHANCED track. This feature may also increase the relative impact of the prior savings adjustment and the health equity benchmark adjustment proposed in section III.G.7.b. of this proposed rule. We seek comment on whether further reductions to or the removal of the regional adjustment to the historical benchmark would be appropriate as part of a potential revised ENHANCED track. We also seek comment on whether maintaining the regional adjustment in its current state would warrant further changes to the revised ENHANCED track features described above, including, but not limited to, a discount to the benchmark or lower tapered shared savings rates.

(e) Payment Mechanisms

We are seeking comments on alternative payment mechanisms the Innovation Center has tested and their ability to help transform care delivery and improve health outcomes for ACOs participating in the Shared Savings

Program. These payment mechanisms test whether alternative payment flows (that is, those other than fee for service reimbursement) facilitate better investment in infrastructure and care coordination and encourage innovative downstream payment arrangements that can improve health outcomes for Medicare beneficiaries. The alternative payment mechanisms on which we seek comments are described below:

- *Infrastructure Payments:* Under these arrangements, CMS makes a payment to the ACO, in addition to FFS reimbursement to the providers and suppliers participating in the ACO, that is unrelated to claims. Infrastructure payments have been distributed either as a lump sum or per beneficiary per month payments. Infrastructure payments are recouped during the payment reconciliation process.

- *Population-Based Payment, All-Inclusive Population-Based Payment, or Advance Payment Option:* In this arrangement, CMS provides a percentage of FFS reimbursement to the ACO in the form of a monthly payment to support ongoing ACO activities and provide the ACO flexibility in the types of arrangements it enters into with provider/suppliers. The ACO and providers with whom it has a written business arrangement determine percentage reductions to the base FFS payments to the providers interested in this payment arrangement. Providers participating in this option have their FFS payments reduced by the agreed upon percentage, which range from 1–100 percent. CMS pays the projected total annual amount taken out of the base FFS rates to the ACO in monthly payments. At the end of each performance year, the amount of payment paid to ACOs participating in this type of payment option is reconciled against the reductions actually made to claims payments to providers participating in these arrangements, linking the amount of

these payments directly to utilization and FFS payment.

• *Capitation:* The ACO REACH Model⁵⁴⁰ tests two capitation payment options—Primary Care Capitation and Total Care Capitation.

The Primary Care Capitation Payment is the payment for primary care services provided to aligned REACH beneficiaries by all Participant Providers and those Preferred Providers who have selected Primary Care Capitation Payment. In Primary Care Capitation, a per beneficiary, per month capitated payment is provided to an ACO for its aligned beneficiaries for the primary care services provided by the ACO's Participant Providers and its Preferred Providers who have opted to participate in Primary Care Capitation Payment. The Primary Care Capitation payment amount is generally equal to seven percent of the estimated total cost of care for the ACO's aligned population (that is, the risk adjusted, trended, and regionally blended benchmark).

The Primary Care Capitation payment includes two components, Base Primary Care Capitation and Enhanced Primary Care Capitation. The Base Primary Care Capitation amount is intended to cover primary care services furnished to aligned beneficiaries by Participant Providers and those Preferred Providers who have agreed to participate in Primary Care Capitation Payment that are thus subject to fee reductions under Primary Care Capitation Payment. The Enhanced Primary Care Capitation amount, which will be recouped by CMS in full during final financial settlement, is intended to enable ACOs to make upfront investments in infrastructure, technology, tools, and resources to support increased access to primary care, provision of care, and care coordination. The Primary Care Capitation Payment is expected to encourage greater flexibility in payment and innovative primary care service delivery as a means of improving the quality and cost effectiveness of care overall.

In Total Care Capitation, a per-beneficiary, per month capitated payment is provided to an ACO for all Medicare Part A and Part B services provided to aligned beneficiaries by the ACO's Participant Providers and its Preferred Providers who have opted to participate in Total Care Capitation payment. The Total Care Capitation

payment amount reflects the estimated total cost of care for the ACO's aligned population (that is, the risk adjusted, trended, and regionally blended benchmark) and is only available to ACOs participating in the Global risk option. Participant Providers and those Preferred Providers that have elected to participate in the ACO's selected capitation payment mechanism continue to submit claims to CMS for services provided to aligned beneficiaries. The CMS FFS claims processing system reduces claims payment amounts according to the payment reduction arrangements with their providers. More details on ACO REACH Model's capitation payment mechanisms are available here: <https://www.cms.gov/files/document/aco-reach-py24-financial-ops-capitation-and-payment-mechanisms.pdf>.

Additionally, we are interested in feedback on the following questions related to implementation of a revised ENHANCED track with higher risk and potential reward, as well as comments that could inform changes to the Shared Savings Program and future Innovation Center ACO models:

1. What would the option of a revised ENHANCED track allow an ACO to do that they are unable to do currently?

2. How would higher downside risk impact an ACO's care delivery strategies, including advanced primary care, behavioral health, specialty integration, and integration with community-based organizations to improve health outcomes or advance health equity?

3. How does higher downside risk impact an ACO's downstream provider arrangements to further advance incentives to reduce delivery of low value services and the total cost of care, and to increase savings performance?

4. What types of organizations, including but not limited to ACOs and providers, are interested in a higher risk and reward option in the Shared Savings Program?

5. What additional flexibilities or features (for example, benefit enhancements, advance payments, capitation payments, etc.) would ACOs in a revised ENHANCED track with higher risk and potential reward want CMS to offer to help them be successful in improving the quality of care and reducing costs?

6. How should a revised ENHANCED track with higher risk and potential reward also require additional accountability for quality? Should ACOs in this revised track be required to report all payer/all patient quality measures?

7. Should a revised ENHANCED track with higher risk and potential reward require ACOs with earned shared savings to share savings with beneficiaries or spend a flat dollar amount or a certain percentage on beneficiaries in the form of items or services not covered by original Medicare (for example, meals, dental, vision, hearing, or Part B cost-sharing reductions)?

8. How should CMS consider the discount, sharing rate, and risk corridors or marginal savings bands in the design of a higher risk option that can realize savings for Medicare? Are there special considerations that CMS should bear in mind when thinking through such features for different types of ACOs (for example, low revenue, high revenue, health system-based, safety net, etc.)?

9. How might we improve beneficiary assignment and are there different considerations for different types of ACOs (for example, low revenue, high revenue, health system-based, safety net, etc.)?

10. What other features should CMS consider in designing financial benchmarks that balance prospectivity and accuracy, and that can lead to savings for both ACOs and Medicare? How might administratively set benchmarks achieve these goals and what considerations should we bear in mind if we test administrative benchmarking?

11. We are interested in ways to increase participation by healthcare providers and suppliers in the Shared Savings Program and future Innovation Center ACO models, including how an ACO model requiring provider participation or stronger participation incentives might be designed.

f. Proposed Technical Change for Consistency in Financial Calculations

(1) Background

For the benchmarking methodology applicable to agreement periods beginning on January 1, 2024, and in subsequent years, we cap ACO prospective hierarchical condition category (HCC) risk score growth between BY3 and the performance year (as finalized in the CY 2023 PFS final rule, refer to 87 FR 69932 through 69946), as well as prospective HCC risk score growth in an ACO's regional service area between BY3 and the performance year (as finalized in the CY 2024 PFS final rule, refer to 88 FR 79174 through 79185). The policy to cap ACO prospective HCC risk score growth between BY3 and the performance year relied on our authority granted by section 1899(d)(1)(B)(ii) of the Act to

⁵⁴⁰ Refer to the ACO REACH Model Request for Applications, available at <https://www.cms.gov/priorities/innovation/media/document/aco-reach-rfa>, and the ACO REACH Model PY2024 Participant and Preferred Provider Management Guide, available at <https://www.cms.gov/files/document/aco-reach-py24-part-pref-provider-mgmt-guide.pdf>.

adjust the benchmark for beneficiary characteristics and such other factors as the Secretary determines appropriate (see 87 FR 69934). The policy to cap prospective HCC risk score growth in an ACO's regional service area between BY3 and the performance year by applying an adjustment factor in calculating the regional component of the three-way blended benchmark update factor required use of our statutory authority under section 1899(i)(3) of the Act (see 88 FR 79182 and 79183).

The current regulations describe how we cap ACO prospective HCC risk score growth at §§ 425.605(a)(1) and 425.610(a)(2). As specified, positive adjustments in prospective HCC risk scores are subject to a cap equal to the ACO's aggregate growth in demographic risk scores between BY3 and the performance year (positive or negative) plus 3 percentage points. The cap applies to prospective HCC risk score growth for any Medicare enrollment type only if the ACO's aggregate growth in prospective HCC risk scores between BY3 and the performance year across all of the Medicare enrollment type exceeds this cap. Growth in an ACO's risk scores by enrollment type is expressed as the ratio of the ACO's performance year risk score for that enrollment type to the ACO's BY3 risk score for that enrollment type. The aggregate growth in demographic and prospective HCC risk scores risk scores is calculated by taking a weighted average of the risk ratio for demographic risk scores or prospective HCC risk scores, as applicable, for each Medicare enrollment type using specified weights.

The current regulations further describe how we cap prospective HCC risk score growth in the ACO's regional service area at § 425.655. As specified, CMS determines aggregate growth in regional prospective HCC and demographic risk scores by calculating growth in prospective HCC and demographic risk scores between BY3 and the performance year for each Medicare enrollment type, where growth in an ACO's regional risk score by enrollment type is expressed as the ratio of the performance year regional risk score for a Medicare enrollment type to the BY3 regional risk score for that enrollment type. We then calculate aggregate risk score growth by taking a weighted average of the regional prospective HCC or demographic risk ratios, as applicable, across the four Medicare enrollment types, using specified weights. We next determine the cap on regional risk score growth

(refer to § 425.655(e)),⁵⁴¹ and then determine if the ACO's regional risk score growth is subject to a cap and apply a regional risk score growth cap adjustment factor for each Medicare enrollment type, as applicable (refer to § 425.655(f)).⁵⁴²

When describing how we will cap prospective HCC risk score growth in the ACO's regional service area in the CY 2024 PFS final rule, we included a footnote (see 88 FR 79178) that indicated that the weights to be used to compute aggregate risk score growth for this calculation are the same as the weights to be used when calculating weighted average ACO prospective HCC and demographic risk ratios under the risk adjustment methodology for capping ACO risk score growth adopted in the CY 2023 PFS final rule and codified in §§ 425.605(a)(1)(ii)(C) and 425.610(a)(2)(ii)(C). That is, it was our intention to use the same weights in both the regional risk score growth cap calculation and the ACO risk score growth cap calculation. However, in codifying the methodology for the regional risk score growth cap in the new section of the regulations, § 425.655, we inadvertently introduced a discrepancy.

In §§ 425.605(a)(1)(ii)(C) and 425.610(a)(2)(ii)(C), where we codified how we will calculate aggregate risk score growth used in determining the cap to apply to ACO prospective HCC risk score growth, we describe the weight applied to the growth in demographic or prospective HCC risk scores for each Medicare enrollment type as equal to the product of the *historical benchmark expenditures* for that enrollment type and the performance year person years for that enrollment type. In § 425.655(d)(2), where we codified how we will calculate aggregate risk score growth used in determining the cap to apply to regional prospective HCC risks score growth, we describe the weight applied to the growth in demographic or

prospective HCC risk scores for each Medicare enrollment type as equal to product of the ACO's *regionally adjusted historical benchmark expenditures* (emphasis added) for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type.

The regulations at §§ 425.605(a)(1)(ii)(C) and 425.610(a)(2)(ii)(C) provide that we will use the ACO's historical benchmark expenditures in calculating the weights used to cap ACO risk score growth. By contrast, the regulations at § 425.655(d)(2) provide that we will use an ACO's regionally adjusted historical expenditures in calculating the weights used in the calculation of regional risk score growth cap. As written, the regulations text at § 425.655(d)(2) is inconsistent with the language used in §§ 425.605(a)(1)(ii)(C) and 425.610(a)(2)(ii)(C) despite the fact that we indicated in the CY 2024 PFS final rule that we would use the same weights in both calculations. Additionally, it is unclear how we would apply the calculation described at § 425.655(d)(2) in practice. As we describe in section III.G.7.b. of this proposed rule, for agreement periods beginning on January 1, 2024, and in subsequent years, in computing an ACO's historical benchmark, CMS determines the per capita Parts A and B fee-for-service expenditures for beneficiaries that would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period using the ACO participant TINs identified before the start of the agreement period as required under § 425.118(a) and the beneficiary assignment methodology selected by the ACO for the first performance year of the agreement period as required under § 425.400(a)(4)(ii). An ACO's historical benchmark may then be subject to a regional adjustment (refer to § 425.656), a prior savings adjustment (refer to § 425.658), or no adjustment (refer to § 425.652(a)(8) and (c)). This methodology, based on policies finalized in the CY 2023 and CY 2024 PFS final rules, under which an ACO may receive a prior savings adjustment, a regional adjustment, and or no adjustment at all, differs from the methodology that was in effect for ACOs in an agreement period beginning on or after July 1, 2019, but before January 1, 2024, under which all ACO historical benchmarks incorporated a regional adjustment (see § 425.601). Furthermore, in section III.G.7.b. of this proposed rule we are proposing to add a third type of adjustment that could be

⁵⁴¹ To determine the cap on regional risk score growth, we calculate the non-market share adjusted cap on the ACO's regional risk score growth as the sum of the aggregate growth in regional demographic risk scores and 3 percentage points, then adjust the cap to reflect the ACO's aggregate market share.

⁵⁴² If the aggregate regional prospective HCC risk score growth does not exceed the cap on regional risk score growth, the ACO's regional risk score growth is not subject to the cap. For these ACOs we set the risk score growth cap adjustment factor equal to 1 for each Medicare enrollment type. If the aggregate regional prospective HCC risk score growth exceeds the market share adjusted cap, the ACO's regional risk score growth is subject to the cap. For these ACOs we next determine whether the cap on regional risk score growth applies for each Medicare enrollment type.

applied to an ACO's historical benchmark, the health equity benchmark adjustment. If the health equity benchmark adjustment is finalized as proposed, an ACO may receive a regional adjustment, a prior savings adjustment, a health equity benchmark adjustment, or no adjustment to its historical benchmark.

(2) Proposed Revisions

As we described in a footnote in the CY 2024 PFS final rule (see 88 FR 79178), it was our intention at the time to use the same weights to calculate the cap for prospective HCC risk score growth in an ACO's regional service area as the weights used to calculate the cap on prospective HCC risk score growth for the ACO. We continue to believe that the same weights should apply to both calculations. However, the regulation text language is not currently aligned among the relevant provisions or with the preamble discussion and may also create confusion with respect to how CMS will compute the weights used in setting the caps on ACO and regional prospective HCC risk score growth, given that some ACOs will receive a regional adjustment to their benchmarks, some will receive a prior savings or, if finalized, a health equity benchmark adjustment, and some will receive no adjustment at all.

To address these issues, we are proposing technical changes to the regulation text at §§ 425.605(a)(1)(ii)(C), 425.610(a)(2)(ii)(C), and 425.655(d)(2) to align the language describing the calculation of the weights that will be used to compute aggregate risk score growth across the three provisions and to clarify that the weight applied to the growth in ACO and regional risk scores for each Medicare enrollment type, respectively, would be equal to the product of the ACO's historical benchmark expenditures, adjusted in accordance with § 425.652(a)(8), for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type. That is, we would use the ACO's historical benchmark expenditures that would have already been adjusted to reflect a prior savings adjustment, a regional adjustment, a health equity benchmark adjustment, if finalized, or no adjustment. Aligning the description of the weight calculation across the three provisions would address the discrepancy that exists between the current regulation text and the preamble discussion in the CY 2024 PFS final rule. Additionally, providing additional detail in the description of the weight calculation, namely by indicating that we will use an ACO's historical

benchmark expenditures adjusted in accordance with § 425.652(a)(8), clarifies how we will operationalize the calculation which we believe is important, especially given the proposed health equity benchmark adjustment, which, if finalized, would add greater complexity to this historical benchmark calculation.

The technical changes that we are proposing in this section of this proposed rule relate to benchmark calculations for ACOs in agreement periods beginning on or after January 1, 2024. Although we will not implement the proposed methodologies for the first time until summer 2025 when we reconcile PY 2024, these policies, if finalized, would constitute retroactive rulemaking because they are the standards under which we will score ACOs that are currently participating in agreement periods that began on January 1, 2024, for PY 2024. Section 1871(e)(1)(A)(ii) of the Act permits a substantive change in regulations, manual instructions, interpretive rules, statements of policy, or guidelines of general applicability under Title XVIII of the Act to be applied retroactively to items and services furnished before the effective date of the change if the failure to apply the change retroactively would be contrary to the public interest. Here, we are proposing a technical change that would align the regulation text with our stated intention as described in previous rulemaking. The current regulation text, in combination with related discussion in the CY 2024 PFS final rule, fails to provide sufficient clarity with regard to how CMS will calculate the weights used to calculate aggregate ACO or regional risk score growth. While the discussion in the CY 2024 PFS final rule indicates that the same weights should be use in both calculations, the related regulation text does not make this clear and, furthermore, could raise questions for how CMS will perform calculations given that not all ACO historical benchmarks will include a regional adjustment. Failure to apply the proposed changes to our regulations at §§ 425.605(a)(1)(ii)(C), 425.610(a)(2)(ii)(C), and 425.655(d)(2) retroactively would be contrary to the public interest because it creates unintended ambiguity in the standard CMS will use when calculating risk score growth. Such ambiguity may make it difficult for ACOs and other interested parties to understand how CMS will perform these calculations or be interpreted to suggest that CMS would calculate risk score growth in a different

manner, which was not the agency's intention.

We seek comment on these proposals.

8. Beneficiary Notification Requirements

a. Proposal To Modify the Requirements for When ACOs Must Provide the Beneficiary Information Follow-Up Communication

Under § 425.312(a), ACOs are required to notify beneficiaries about the ACO's participation in the Shared Savings Program, the beneficiary's ability to decline claims data sharing, and the beneficiary's ability to select a provider for the purposes of voluntary alignment. In the CY 2023 PFS final rule (87 FR 69961), CMS added the beneficiary information follow up communication requirement under § 425.312(a)(2)(v), which requires an additional follow up with a beneficiary who has received the beneficiary notification. In the CY 2023 PFS final rule (87 FR 69960 through 69963), CMS noted that the follow up communication promotes transparency and empowers beneficiaries to make an informed decision in choosing a primary care physician and how they share their health data. The beneficiary information follow-up communication affords the opportunity for additional direct engagement between the beneficiary and the ACO, or ACO participant, and provides a chance for a meaningful dialog between the patient and provider about the coordination of their care, the benefits of receiving care from an ACO provider/supplier (as defined in § 425.20), the organizational operations of the ACO, and how data is used to improve care and report quality outcomes.

Currently, under § 425.312(a)(2)(v)(A), "The follow-up communication must occur no later than the earlier of the beneficiary's next primary care service visit or 180 days from the date the standardized written notice was provided." Regulations at § 425.312(a)(2)(v)(B) require ACOs to document the beneficiary information follow-up communication in a system of record supported by the ACO and to make the information available to CMS upon request.

Since CMS implemented the beneficiary information follow-up communication requirement, we have received feedback from ACOs that requiring the follow-up communication no later than the earlier of the beneficiary's next primary care service visit or 180 days from the date the standardized written notice was provided is difficult for ACOs to

operationalize as they do not always know when the beneficiary's next primary care service will be and in some cases it can be very soon after the beneficiary receives the original beneficiary notification.

In order to address this issue and the burden it creates, CMS is proposing to remove the requirement that ACOs must provide this follow up at the beneficiary's next primary care visit. Specifically, we propose to modify § 425.312(a)(2)(v)(A) to read "The follow-up communication must occur no later than 180 days from the date the standardized written notice was provided." This would provide ACOs with more flexibility to implement their strategy for following up with beneficiaries after they receive the beneficiary notice, while still providing the opportunity for a meaningful dialog between a beneficiary and their provider. We seek comment on this proposal. If finalized, this proposal would be effective beginning January 1, 2025.

b. Limit the Distribution of the Beneficiary Notification to Beneficiaries Likely To Be Assigned for ACOs Under Preliminary Prospective Assignment With Retrospective Reconciliation

ACOs that select preliminary prospective assignment with retrospective reconciliation are assigned beneficiaries in a preliminary manner and before the start of the performance year. Beneficiary assignment for these ACOs is then updated quarterly based on the most recent 12 or 24 months of data, as applicable. This assignment methodology is codified at § 425.400(a)(2). We are proposing to limit the distribution of the beneficiary notification under § 425.312(a)(2)(iii) to beneficiaries who are more likely be assigned to ACOs that select preliminary prospective assignment with retrospective reconciliation, when compared to the population of beneficiaries who must receive the beneficiary notification under current § 425.312(a)(2)(iii). Please note that this is not a proposal to modify the Shared Savings Program's assignment methodology.

Currently, ACOs that select preliminary prospective assignment with retrospective reconciliation are required to send a beneficiary notice to "each fee-for-service beneficiary" under § 425.312(a)(2)(iii). Under § 425.312(a)(2)(iii), the standardized written notice must be furnished to "all fee-for-service beneficiaries prior to or at the first primary care service visit during the first performance year in which the beneficiary receives a

primary care service from an ACO participant." This can result in ACOs sending notices each year to beneficiaries who may not ultimately be assigned to the ACO, as there are "fee-for-service beneficiar[ies]" to whom ACOs must send notices under § 425.312(a)(2)(iii) and who are not eligible to be assigned to those ACOs for a variety of reasons. This policy was intended to ensure that all beneficiaries who receive a primary care visit from a ACO provider/supplier receive the beneficiary notice. However, we have heard feedback from ACOs that this creates confusion for the beneficiary and unnecessary administrative work for the ACO.

To reduce burden on ACOs and confusion for beneficiaries, we are proposing to update the beneficiary notice requirement for ACOs that select preliminary prospective assignment with retrospective reconciliation to focus on beneficiaries that are likely to be assigned to the ACO. These beneficiaries are those who received at least one primary care service during the assignment window or applicable expanded window for assignment (as defined in § 425.20) from a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in § 425.402(c), a FQHC or RHC that is part of the ACO, or an ACO professional in the ACO whom the beneficiary designated as responsible for coordinating their overall care under § 425.402(c).

This proposal would reduce the burden of sending the beneficiary notice to all "fee for service beneficiar[ies]," including those who ultimately would not be eligible to be assigned to ACOs that select preliminary prospective assignment with retrospective reconciliation. Specifically, we propose to modify § 425.312(a)(2)(iii) to state in the case of an ACO that has selected preliminary prospective assignment with retrospective reconciliation, the beneficiary notice must be provided by the ACO or ACO participant to each beneficiary who received at least one primary care service during the assignment window or applicable expanded window for assignment (as defined in § 425.20) from a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in § 425.402(c), a FQHC or RHC that is part of the ACO, or an ACO professional in the ACO whom the beneficiary designated as responsible for coordinating their overall care under

§ 425.402(e). Each such beneficiary must receive a standardized written notice at least once during an agreement period in the form and manner specified by CMS. The standardized written notice must be furnished to all of these beneficiaries prior to or at the first primary care service visit during the first performance year in which the beneficiary receives a primary care service from an ACO participant.

For ACOs that select prospective assignment, beneficiaries are prospectively assigned to the ACO at the beginning of each benchmark or performance year based on the beneficiary's use of primary care services in the most recent 12 or 24 months, as applicable, for which data are available, using the assignment methodology described in §§ 425.402 and 425.404. See § 425.400(a)(3)(i). Beneficiaries that are prospectively assigned to an ACO under § 425.400(a)(3)(i) remain assigned to the ACO at the end of the benchmark or performance year unless they meet any of the exclusion criteria under § 425.401(b). See § 425.400(a)(3)(ii). We note that ACOs that select prospective assignment are subject to § 425.312(a)(2)(iv). Under this regulation, ACOs that select prospective assignment are required to furnish the beneficiary notice to all prospectively assigned beneficiaries once during an agreement period. We seek comment on this proposal. If finalized, this proposed change would be effective beginning on January 1, 2025.

H. Medicare Part B Payment for Preventive Services (§§ 410.10, 410.57, 410.64, 410.152)

1. Part B Preventive Vaccines and Their Administration

a. Statutory Background

Under section 1861(s)(10) of the Act, Medicare Part B covers both the vaccine and vaccine administration for the specified preventive vaccines—pneumococcal, influenza, hepatitis B and COVID-19 vaccines. Section 1861(s)(10)(B) of the Act specifies that the hepatitis B vaccine and its administration is only covered for those who are at high or intermediate risk of contracting hepatitis B, as defined at § 410.63. Under sections 1833(a)(1)(B) and (b)(1) of the Act, respectively, there is no applicable beneficiary coinsurance, and the annual Part B deductible does not apply for these vaccines or the services to administer them. Per section 1842(o)(1)(A)(iv) of the Act, payment for these vaccines is based on 95 percent of the Average Wholesale Price (AWP) for the vaccine

product, except when furnished in the settings for which payment is based on reasonable cost, such as a hospital outpatient department (HOPD), rural health clinic (RHC), or federally qualified health center (FQHC). Some other preventive vaccines, such as the zoster vaccine for the prevention of shingles, are not specified for Medicare Part B coverage under section 1861(s)(10) of the Act and are instead covered under Medicare Part D.

b. Pneumococcal, Influenza and Hepatitis B Vaccine Administration

In the CY 2022 PFS final rule (86 FR 65185), we finalized a uniform payment rate of \$30 for the administration of a pneumococcal, influenza or hepatitis B vaccine covered under the Medicare Part B preventive vaccine benefit. We explained that since payment policies for the administration of the preventive vaccines described under section 1861(s)(10) of the Act are independent of the PFS, these payment rates will be updated as necessary, independent of the valuation of any specific codes under the PFS. (Please see COVID-19 vaccine administration payment information in the next section.) The CY 2022 PFS final rule (86 FR 65180 through 65182) provides a detailed discussion on the history of the valuation of the three Level II Healthcare Common Procedure Coding System (HCPCS) codes, G0008, G0009, and G0010, which describe the services to administer an influenza, pneumococcal, and hepatitis B vaccine, respectively.

In the CY 2023 PFS final rule (87 FR 69984), we finalized a policy to annually update the payment amount for the administration of Part B preventive vaccines based upon the percentage increase in the Medicare Economic Index (MEI). Additionally, we finalized the use of the PFS Geographical Adjustment Factor (GAF) to adjust the payment amount to reflect cost differences for the geographic locality based upon the fee schedule area where the preventive vaccine is administered. These adjustments and updates apply to HCPCS codes G0008, G0009, G0010.

These adjustments and updates also apply to Current Procedural Terminology (CPT) code 90480 (Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARSCoV-2) (coronavirus disease [COVID-19]) vaccine, single dose) that describe the service to administer COVID-19 vaccines and HCPCS code M0201 (Administration of pneumococcal, influenza, hepatitis B,

and/or covid-19 vaccine inside a patient's home; reported only once per individual home per date of service when such vaccine administration(s) are performed at the patient's home), discussed below in section III.H.1.c and III.H.1.d, respectively, of this proposed rule.

The current payment rates for G0008, G0009, and G0010, as finalized in the CY 2024 PFS final rule, can be found on the CMS Vaccine Pricing website under the "Seasonal Flu Vaccines" tab, and then under the heading "Locality-Adjusted Payment Rates."⁵⁴³ The payment rates for these services, with the annual update applied for CY 2025, will be made available at the time of publication of the CY 2025 PFS final rule. The current forecast of the increase in the MEI for CY 2025 is 3.6 percent based on the 2017-based MEI. We note that the CY 2025 MEI increase factor for the final rule will be based on historical data through the 2nd quarter of 2024. Tables 45 and 46 in section III.H.1.f. of this proposed rule provide the CY 2025 projected payment rates for G0008, G0009, and G0010.

c. COVID-19 Vaccine Administration

In the CY 2022 PFS final rule (86 FR 65181 and 65182), we provided a detailed history regarding the determinations of initial payment rates for the administration of COVID-19 vaccines, and an explanation of how the payment policy evolved to a rate of \$40 per dose. For CY 2022, we maintained the payment policy for the administration of COVID-19 vaccines and stated that while we believe it is appropriate to establish a single, consistent payment rate for the administration of all four Part B preventive vaccines in the long term, we will pay a higher, \$40 payment rate for administration of COVID-19 vaccines in the short term, while pandemic conditions persisted (86 FR 65185).

In the CY 2023 PFS final rule (87 FR 69988 through 69993), we stated that due to timing distinctions between a PHE declared under section 319 of the Public Health Service (PHS) Act and an Emergency Use Authorization (EUA) declaration under section 564 of the Federal Food, Drug, and Cosmetic Act (FD&C Act), we reconsidered the policies finalized in the CY 2022 PFS final rule in light of our goal to promote broad and timely access to COVID-19 vaccines. We explained that our goal would be better served if our policies

with respect to payment for administration of these products, as addressed in the November 6, 2020 COVID-19 IFC (85 FR 71142) and CY 2022 PFS final rule (85 FR 18250), continue until the EUA declaration for drugs and biological products with respect to COVID-19 is terminated. Therefore, we finalized that we would maintain the current payment rate of \$40 per dose for the administration of COVID-19 vaccines through the end of the calendar year in which the March 27, 2020 EUA declaration under section 564 of the FD&C Act (EUA declaration) for drugs and biological products ends. Effective January 1 of the year following the year in which the EUA declaration ends, the COVID-19 vaccine administration payment would be set at a rate to align with the payment rate for the administration of other Part B preventive vaccines, that is, approximately \$30 per dose. As mentioned above, we also finalized that, beginning January 1, 2023, we would annually update the payment amount for the administration of all Part B preventive vaccines based upon the percentage increase in the MEI, and that we would use the PFS GAF to adjust the payment amount to reflect cost differences for the geographic locality based upon the fee schedule area where the vaccine is administered.

On September 11, 2023, the Food and Drug Administration (FDA) announced its recommendation to shift to a monovalent severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease 2019 [COVID-19]) vaccine that targets the predominant XBB lineage virus strain for the 2023-2024 vaccine administration season.⁵⁴⁴ In anticipation of this recommendation, in August 2023, the CPT Editorial Panel approved five new monovalent COVID-19 vaccine product codes for Pfizer and Moderna vaccines. In addition, they approved a new vaccine administration code (90480) for reporting the administration of any COVID-19 vaccine for any patient (pediatric or adult), replacing all previously approved specific vaccine administration codes. All previously approved COVID-19 vaccine product and vaccine administration codes were deleted from the CPT code set effective November 1, 2023, except for product code 91304, which represents the

⁵⁴³ <https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing>, under the tab "Seasonal Flu Vaccines", and then under the header "Locality-Adjusted Payment Rates."

⁵⁴⁴ <https://www.fda.gov/news-events/press-announcements/fda-takes-action-updated-mrna-covid-19-vaccines-better-protect-against-currently-circulating>.

Novavax COVID-19 vaccine product and remains active.⁵⁴⁵

The current payment rate for CPT code 90480 is available on the CMS COVID-19 Vaccine Pricing website, under “COVID-19 Vaccines & Monoclonal Antibodies”.⁵⁴⁶ The payment rate for this service, with the annual update applied for CY 2025, will be made available at the time of publication of the CY 2025 PFS final rule. As noted above, the current forecast of the increase in the MEI for CY 2025 is 3.6 percent based on the 2017-based MEI, however, the CY 2025 MEI increase factor for the final rule will be based on historical data through the 2nd quarter of 2024.

Due to the uncertainty surrounding the future of the EUA declaration for drugs and biological products for COVID-19, Tables 45 and 46, at the end of section III.H.1.f. of this proposed rule, reflect the potential alternative payment amounts for Part B preventive vaccine administration for CY 2025. Table 45 displays the CY 2025 Part B payment rates for preventive vaccine administration if the EUA declaration continues into CY 2025, and Table 46 displays the CY 2025 Part B payment rates for preventive vaccine administration if the EUA declaration ends on or before December 31, 2024.

d. In-Home Additional Payment for Administration of Preventive Vaccines

In the CY 2022 PFS final rule (86 FR 65187 and 65190), we provide a detailed discussion on the payment policy for COVID-19 vaccine administration in the home. In summary, providers and suppliers that administer a COVID-19 vaccine in the home, under certain circumstances, could bill Medicare for one of the existing COVID-19 vaccine administration CPT codes along with HCPCS code M0201 (*COVID-19 vaccine administration inside a patient's home; reported only once per individual home per date of service when only COVID-19 vaccine administration is performed at the patient's home*). For CY 2022, we continued to make an additional payment when a COVID-19 vaccine was administered in a beneficiary's home under certain circumstances and stated that we would make this payment until the end of the year in which the PHE expires.

⁵⁴⁵ CPT® Assistant Special Edition: August Update/Volume 33/2023. <https://www.ama-assn.org/system/files/cpt-assistant-guide-coronavirus-august-2023-updated.pdf>.

⁵⁴⁶ <https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing>, under “COVID-19 Vaccines & Monoclonal Antibodies”.

In the CY 2023 PFS final rule (87 FR 69984 through 69986), we discussed that we had received many comments and requests from interested parties that the in-home add-on payment be applied more broadly to all preventive vaccines. Commenters also expressed concerns that discontinuation of the in-home additional payment would negatively impact access to the COVID-19 vaccine for underserved homebound beneficiaries. Therefore, we continued the policy of making an additional payment when a COVID-19 vaccine is administered in a beneficiary's home, under the certain circumstances for the duration of CY 2023. We explained that we were continuing the policy of additional payment for at-home COVID-19 vaccinations for another year in order to provide us time to track utilization and trends associated with its use, in order to inform the Part B preventive vaccine policy on payments for in-home vaccine administration for CY 2024. In addition, for CY 2023 we updated the payment amount by the CY 2023 MEI percentage increase and adjusted for geographic cost differences as we do the payment for the preventive vaccine administration service, that is, based upon the fee schedule area where the COVID-19 vaccine is administered, by using the PFS GAF (87 FR 69986).

In the CY 2024 PFS final rule (88 FR 79235 through 79237), we discussed the policy for the in-home additional payment for COVID-19 vaccine administration under the Part B preventive vaccine benefit for CY 2024 and subsequent years. We maintained the payment policy for COVID-19 vaccine administration and extended the additional payment to the administration of the other three preventive vaccines included in the Part B preventive vaccine benefit—the pneumococcal, influenza, and hepatitis B vaccines. As described at § 410.152(h)(3), effective January 1, 2024, the payment amount for the in-home administration of all four vaccines is identical, that is, Medicare Part B pays the same additional payment amount to providers and suppliers that administer a pneumococcal, influenza, hepatitis B, or COVID-19 vaccine in the home. This additional payment amount is annually updated using the percentage increase in the MEI and is adjusted to reflect geographic cost variations with the PFS GAF.

We stated that the in-home additional payment is limited to one payment per home visit, even if multiple vaccines are administered during the same home visit. We noted that every vaccine dose that is furnished during a home visit still receives its own unique vaccine

administration payment. The additional payment for in-home Part B vaccine administration is only made if certain circumstances are met, as outlined at § 410.152(h)(3)(iii). Providers and suppliers that administer one of the Part B preventive vaccines in the home, under those circumstances, can bill Medicare for one of the existing Part B vaccine administration CPT codes along with HCPCS code M0201 (Administration of pneumococcal, influenza, hepatitis b, and/or covid-19 vaccine inside a patient's home; reported only once per individual home per date of service when such vaccine administration(s) are performed at the patient's home) (88 FR 79235 through 79237).

The current *payment rate* for M0201 can be found on the CMS Vaccine Pricing website under “COVID-19 Vaccines & Monoclonal Antibodies”.⁵⁴⁷ The M0201 payment rate with the annual update applied for CY 2025 will be made available at the time of publication of the CY 2025 PFS final rule. The current forecast of the increase in the MEI for CY 2025 is 3.6 percent based on the 2017-based MEI. We note that the CY 2025 MEI increase factor for the final rule will be based on historical data through the 2nd quarter of 2024. Tables 45 and 46 in section III.H.1.f. of this proposed rule provide the CY 2025 projected payment rate for M0201.

e. COVID-19 Monoclonal Antibodies and Their Administration

In CY 2023 PFS final rule (87 FR 69987 through 69993), we discussed that all COVID-19 monoclonal antibody products and their administration are covered and paid for under the Part B preventive vaccine benefit through the end of year in which the Secretary terminates the EUA declaration for drugs and biological products with respect to COVID-19. In addition, we explained that, under the authority provided by section 3713 of the CARES Act, we have established specific coding and payment rates for the COVID-19 vaccine, as well COVID-19 monoclonal antibodies and their administration, through technical direction to Medicare Administrative Contractors (MACs) and information posted publicly on the CMS website (87 FR 69987).

In the CY 2023 PFS final rule, we also established a policy to continue coverage and payment for monoclonal antibodies that are used for pre-exposure prophylaxis (PrEP) of COVID-

⁵⁴⁷ <https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing>, under “COVID-19 Vaccines & Monoclonal Antibodies”.

19 under the Part B preventive vaccine benefit if they meet applicable coverage requirements (87 FR 69992). We explained that we will continue to pay for these products and their administration even after the EUA declaration for drugs and biological products is terminated, so long as after the EUA declaration is terminated, such products have market authorization. Additionally, we established that payments for the administration of monoclonal antibodies that are used for PrEP of COVID-19 would be adjusted for geographic cost variations using the PFS GAF. In the CY 2024 PFS rule (88 FR 79239 through 79240), we codified these policies in regulations at §§ 410.10(l) and 410.57(c).

In CY 2024 PFS final rule (88 FR 79239 through 79240), we noted that we did not finalize any payment regulations regarding monoclonal antibodies for PrEP of COVID-19, since at the time of the publication of the CY 2024 PFS final rule, there were no COVID-19 monoclonal antibodies approved or authorized for use against the dominant strains of COVID-19 in the United States. We stated that if a new monoclonal antibody for PrEP of COVID-19 became authorized for use, we would use the authority provided by section 3713 of the CARES Act, as discussed in the CY 2023 PFS final rule (87 FR 69987), to establish specific coding and payment rates for the administration of that product through technical direction to MACs and information posted publicly on the CMS website. We explained that we would subsequently propose coding and payment rates for the administration of that product via rulemaking.

We also noted that, for the purposes of the in-home additional payment discussed above in section III.H.1.d. of this proposed rule, that additional payment is not applicable to the administration of monoclonal antibodies for PrEP of COVID-19. For

monoclonal antibodies for PrEP of COVID-19, we set the coding and payment rates for the administration of COVID-19 monoclonal antibodies in the home (when applicable) to be higher than those in other health care settings, and therefore such amounts already account for the higher costs of administering the product in the home.

On March 22, 2024, the FDA issued an EUA for Pempgarda (pemivibart) injection, for intravenous use.⁵⁴⁸ Pempgarda is a monoclonal antibody product indicated for use for pre-exposure prophylaxis to help prevent COVID-19 in adults and children 12 years of age and older who weigh at least 88 pounds (40 kg) who:

- Are not currently infected with SARS-CoV-2 and who have not been known to be exposed to someone who is infected with SARS-CoV-2 and
- Have moderate-to-severe immune compromise because of a medical condition or because they receive medicines or treatments that suppress the immune system and they are unlikely to have an adequate response to COVID-19 vaccination.

Therefore, under the authority provided by section 3713 of the CARES Act, we established specific coding and payment rates for the administration of Pempgarda through technical direction to MACs and information posted publicly on the CMS website. Since Pempgarda is used for pre-exposure prophylaxis of COVID-19, which CMS is covering under the Part B preventive vaccine benefit even after the EUA declaration for drugs and biological products is terminated (so long as such products still have market authorization), we plan to propose long-term coding and payment rates for the administration of this product in future rulemaking. The current payment rates for Pempgarda and its administration can be found on the

⁵⁴⁸ <https://www.fda.gov/media/177068/download?attachment>.

CMS Vaccine Pricing website under “COVID-19 Vaccines & Monoclonal Antibodies”.⁵⁴⁹ These payment rates are also listed below in Tables 45 and 46.

More information on our coding and payment policies for COVID-19 monoclonal antibodies is available at <https://www.cms.gov/monoclonal>.

f. Summary of Payment Amounts for CY 2025

Due to the uncertainty surrounding the future of the EUA declaration for drugs and biological products for COVID-19, we are including Tables 45 and 46, which summarize Medicare Part B the potential alternative preventive vaccine administration payment amounts at the time of the publication of this proposed rule. If the EUA declaration continues to be in effect on January 1, 2025, we propose that the payment rates in Table 45 will apply. If the EUA declaration is terminated before January 1, 2025, we propose that the payment rates in Table 45 will apply.

For CY 2025, the proposed growth rate of the 2017-based MEI is estimated to be 3.6 percent, based on the IHS Global, Inc. (IGI) first quarter 2024 forecast with historical data through fourth quarter 2023. Therefore, Table 45 represents our CY 2024 payment rates for the listed items, multiplied by 1.036. We propose that if more recent data are subsequently available (for example, a more recent estimate of the MEI percentage increase), we would use such data, if appropriate, to determine the CY 2025 MEI percentage increase in the CY 2025 PFS final rule; we would apply that updated MEI percentage increase to the rates found in the Tables 45 and 46 where applicable.

³ Payment is in accordance with the applicable payment system of the setting in which the product is administered. Beneficiary coinsurance and deductible are applicable.

⁴ Beneficiary coinsurance and deductible are not applicable.

⁵ Please see section III.H.1.e. of this proposed rule.

⁶ The proposed CY 2025 percentage increase of the 2017-based MEI is 3.6 percent, based on IGI's first quarter of 2024 forecast with historical data through the 4th quarter of 2023.

BILLING CODE C

2. Revised Payment Policies for Hepatitis B Vaccine Administration

In section III.M of this proposed rule, CMS proposes to improve access and utilization of hepatitis B vaccines by expanding the list of individuals who are at high or intermediate risk of contracting hepatitis B at § 410.63. Specifically, CMS proposes to expand coverage of hepatitis B vaccinations by revising § 410.63(a)(2), Intermediate Risk Groups, by adding a new paragraph (a)(2)(iv) to include individuals who have not previously received a completed hepatitis B vaccination series and individuals whose previous vaccination history is unknown. CMS believes that this proposed coverage change will help protect Medicare beneficiaries from acquiring hepatitis B infection, contribute to eliminating viral hepatitis as a public health threat in the United States, and is in the best interest of the Medicare program and its beneficiaries. Below, we discuss how the proposal to expand coverage may impact Part B payment policy for hepatitis B vaccines and administration.

a. Background

Section 2323 of the Deficit Reduction Act of 1984 (Pub. L. 98–369) amended section 1861(s)(10) of the Act by adding subparagraph (B) to provide Medicare Part B coverage for the hepatitis B vaccine and its administration for those individuals who are at high or intermediate risk of contracting hepatitis B. The statute required the Secretary to determine, by regulations, criteria for identifying individuals who are at high or intermediate risk of contracting hepatitis B. In addition, section 2323 of the Deficit Reduction Act of 1984 added section 1833(k) of the Act, which states that the Secretary may provide, instead of the amount of payment otherwise provided under Part B for the hepatitis B vaccine and its administration, for payment of such an amount or amounts as reasonably reflects the general cost of efficiently providing such services.

In the June 4, 1990 **Federal Register**, CMS issued a final rule to implement section 2323 of the Deficit Reduction Act of 1984 and the coverage provisions were codified in regulation at § 410.63(a) (55 FR 22785). In the preamble to 1990 rule, we stated that, “[f]or Medicare payment purposes, the hepatitis B vaccine may be administered—upon the order of a doctor of medicine or osteopathy—by qualified staff of home health agencies, skilled nursing facilities, ESRD facilities, hospital outpatient

departments, HMO’s, persons recognized under the ‘incident to physician’s services’ provision of the law (section 1861(s)(2)(A) of the Act), as well as doctors of medicine and osteopathy.” This policy is included in the Medicare Claims Processing Manual, Chapter 18, section 10.1.3.

In the CY 2013 PFS final rule (77 FR 69363), CMS amended the regulations at § 410.63(a) to include those diagnosed with diabetes mellitus in the list of groups at high risk of contracting hepatitis B. In the November 6, 2020 COVID–19 IFC (85 FR 71145), in preamble discussions surrounding the implementation of coverage and payment for the COVID–19 vaccine, we mentioned the unique coverage and payment requirements related the hepatitis B vaccine under Part B. We noted that, unlike pneumococcal, influenza and COVID–19 vaccines, hepatitis B vaccines require an assessment of a patient’s risk of contracting hepatitis B. Because, hepatitis B vaccinations claims needed a physician’s order, they could not be roster billed by mass immunizers. More information on the current physician’s order policy for the administration of hepatitis B vaccines in Part B can be found in the Medicare Benefit Policy Manual, Chapter 15, Section 50.4.4.2.

b. Revisions to Payment Policies for Hepatitis B Vaccinations

As discussed above, section III.M of this proposed rule revises § 410.63(a) to provide coverage under Part B for hepatitis B vaccines and their administration for an expanded range of Medicare enrollees. We explain that Medicare coverage of hepatitis B vaccination is outdated in light of recent information about the risks of contracting hepatitis B, and that current research indicates that individuals who remain unvaccinated against hepatitis B are at intermediate risk of contracting hepatitis B virus. Under the new proposal, an assessment of an individual’s vaccination status could now be made without the clinical expertise of a physician. Thus, if the rule is finalized, we would remove our policy in the manual that the administration of a Part B hepatitis B vaccine be preceded by a doctor’s order. If the new definition at § 410.63(a) is finalized as proposed, then a doctor’s order would no longer be necessary for the administration of a hepatitis B vaccine under Part B.

If the physician’s order requirement is eliminated, then we would also change our procedures to allow mass immunizers to use the roster billing process to submit Medicare Part B

claims for hepatitis B vaccines and their administration.

Currently, instructions regarding hepatitis B vaccine administration under part B are contained in CMS manual guidance. If changes to § 410.63(a) are finalized, then we would make corresponding changes to guidance in the Medicare Benefit Policy Manual and Medicare Claims Processing Manual. More information on roster billing is available on the CMS web page at <https://www.cms.gov/roster-billing>.

We note that the current payment rates for HCPCS code G0010, “Administration of hepatitis b vaccine,” as finalized in the CY 2024 PFS final rule, can be found on the CMS Vaccine Pricing website under “Seasonal Flu Vaccines”.⁵⁵⁰ The payment rates for G0010, with the annual update applied for CY 2025, will be made available at the time of publication of the CY 2025 PFS final rule. Tables 45 and 46 in section III.H.1.f. of this proposed rule provide the CY 2025 projected payment rates for G0010. More information on other policies related to the administration of G0010 can be found in the section preceding this one (section III.H.1. of this proposed rule), and proposed revisions to payment policies for the administration of G0010 in RHCs and FQHCs can be found in the section immediately below (section III.H.2.c. of this proposed rule).

c. Revisions to Payment Policies for Hepatitis B Vaccinations in Rural Health Clinics (RHC) and Federally Qualified Health Centers (FQHC)

When section 2323 of the Deficit Reduction Act of 1984 added section 1861(s)(10)(B) to the Act to add Medicare Part B coverage for the hepatitis B vaccine and its administration, it limited that coverage to certain settings. In RHCs and FQHCs, the law specified at section 1833(a)(3)(A) of the Act that the vaccines mentioned at section 1861(s)(10)(A) of the Act—namely, pneumococcal and influenza (and later, COVID–19) vaccines—are not included in the all-inclusive payment rate for an RHC or FQHC visit, but are reimbursed as a separate payment. Pneumococcal, influenza and COVID–19 vaccines and their administration are paid at 100 percent of reasonable cost when administered in an RHC or FQHC, in accordance with section 1833(a)(1)(B) of the Act. By contrast, hepatitis B vaccines and the cost of administration

⁵⁵⁰ <https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing>, under “Seasonal Flu Vaccines”; see links to the relevant year under “Locality-Adjusted Payment Rates.”

are included in the capitated payment for an RHC or FQHC visit. RHCs and FQHC visits are generally paid at 80 percent of reasonable costs, and thus, they are subject to coinsurance for Medicare Part B enrollees. The Deficit Reduction Act of 1984 also added section 1833(k) to the Act, which states that, for hepatitis B vaccines and their administration as described at section 1861(s)(10)(B), the Secretary may provide, instead of the amount of payment otherwise dictated in statute, for payment that “reasonably reflects the general cost of efficiently providing such services.”

In CY 2011 PFS final rule (75 FR 73418), we addressed the issue of coinsurance for hepatitis B vaccines and their administration in FQHCs. The CY 2011 PFS final rule, which implemented the expansion of preventive services in Medicare as mandated by the ACA, stated that effective January 1, 2011, Part B coinsurance on hepatitis B vaccinations was waived, as the vaccine and its administration were deemed “preventive services” per section 1861(ddd)(3)(A) of the Act as cross-referenced to section 1861(ww)(2) of the Act. (More information on preventive services is provided immediately below at section III.H.3. of this proposed rule). The CY 2011 PFS final rule codified this FQHC policy in regulation at § 405.2449. In the CY 2014 FQHC PPS final rule (79 FR 25474), at § 405.2410(b), we codified regulations regarding coinsurance in RHCs and FQHCs which exempt from coinsurance “preventive services for which Medicare pays 100 percent under § 410.152(l) of this chapter”, which explicitly includes the hepatitis B vaccine. In the CY 2016 PFS final rule (80 FR 71088), we clarified that these waivers of cost-sharing (both coinsurance and deductible) for preventive services applied to RHCs as well, and we subsequently clarified in subregulatory guidance that these waivers apply to the administration of hepatitis B vaccines in RHC and FQHCs.⁵⁵¹ We note that FQHC services are always exempt from the Part B deductible, per section 1833(b)(4) of the Act.

⁵⁵¹ Updates were made to Chapter 13, section 220.1 of Medicare Benefit Policy Manual via Change Request 9864, R2186CP, December 9, 2016, “Rural Health Clinic (RHC) and Federally Qualified Health Center (FQHC) Updates”: <https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/Downloads/R230BP.pdf>. Updates were also made to Chapter 9, section 60.3 of the Medicare Claims Processing Manual via Change Request 9397, R3434CP, December 31, 2015, “Reorganization of Chapter 9”: <https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/Downloads/R3434CP.pdf>.

Even though hepatitis B vaccines and their administration are deemed preventive services for which coinsurance (and deductible in RHCs) is waived, hepatitis B vaccines are still currently paid differently than other Part B vaccines in RHCs and FQHCs. Due to the statutory differences explained above, pneumococcal, influenza and COVID–19 vaccines and their administration are paid at 100 of reasonable cost in RHCs and FQHCs—that is, they are paid separately from the FQHC PPS or the RHC All-Inclusive Rate (AIR) methodology—while hepatitis B vaccines and their administration are paid as part of the FQHCs PPS or the RHC AIR, which means that they are paid through changes to the facilities’ capitated rate.

In light of the proposal to expand coverage for hepatitis B vaccination in section III.M. of this proposed rule, we propose to use the aforementioned authority at section 1833(k) of the Act to align payment for hepatitis B vaccinations in RHCs and FQHCs with the payment for pneumococcal, influenza and COVID–19 vaccinations in those settings. That is, we propose to pay for hepatitis B vaccines and their administration in RHCs and FQHCs at 100 percent of reasonable cost, separate from the FQHCs PPS and the RHC AIR methodology, for all populations identified for coverage at § 410.63(a). As is the case for pneumococcal, influenza and COVID–19 vaccine administration, under this proposal, a hepatitis B vaccine administration would not be considered an RHC or FQHC visit. If this policy is finalized, then effective January 1, 2025, RHCs and FQHCs would bill for Part B hepatitis B vaccines in the same manner as they currently bill for pneumococcal, influenza and COVID–19 vaccines, that is, on their cost report. We note that we proposed above, in section III.B.5 of this proposed rule, to allow for billing and payment of all Part B preventive vaccines and their administration at the time of service in RHCs and FQHCs, with annual reconciliation on the facilities’ cost reports. That policy, if finalized as proposed, would be effective for dates of service on or after July 1, 2025. Both proposals together support our goal of streamlining payment for all Part B vaccines across Part B settings of care. We believe that streamlining Part B vaccine and vaccine administration payments among care settings aligns with the stated goals of section 1833(k) of the Act, since those payment policy changes will allow for increased efficiency in Part B claims processing on both the part of the RHCs

and FQHCs and on the part of CMS. We also believe that the increased efficiency will promote vaccine access, and thus health equity in general, in RHCs and FQHCs that already serve vulnerable populations.

To implement this proposal regarding payment for hepatitis B vaccines and their administration in RHCs and FQHCs, we also propose to amend the regulations at § 405.2466(b)(1)(iv), to add hepatitis B vaccines to the list of vaccines covered in RHCs and FQHCs at 100 percent of reasonable cost. Upon the publication of the CY 2025 PFS final rule, if revisions to § 405.2466(b)(1)(iv) are finalized as proposed, we would make corresponding changes to guidance in the Medicare Benefit Policy Manual, Chapter 13 and Medicare Claims Processing Manual, Chapter 9. If finalized, we also plan to facilitate the necessary operational systems updates needed to implement these changes.

d. Regulations Concerning Hepatitis B Vaccines and their Administration

Listed below are several Medicare Part B regulations that mention the hepatitis B vaccine and refer to § 410.63(a) for a definition of hepatitis B vaccine coverage. Since we are proposing to revise § 410.63(a) in section III.M. of this proposed rule, we do not believe additional regulation text changes are needed to conform to the coverage proposal, as the update to the definition at § 410.63(a) will apply to the use of the definition in these regulations:

- Section 410.10(p).
- Section 410.57(d).
- Section 411.15(e)(3) and (k)(5).
- Section 414.707(a)(2)(iii).
- Section 414.904(e)(1).

In addition, we note that there are no conforming regulation text changes needed to the payment regulations at § 410.152, paragraphs (h) and (l)(1), to conform to the coverage proposal.

3. Payment for Drugs Covered as Additional Preventive Services (§ 410.152)

a. Statutory Background

Section 101 of the Medicare Improvements for Patients and Providers Act (MIPPA) of 2008 (Pub. L. 110–275) added section 1861(ddd)(1) and (2) of the Act to effectuate “improvements to coverage of preventive services” in the Medicare program. Under section 1861(ddd)(1) of the Act, Medicare Part B covers “additional preventive services” that identify medical conditions or risk factors and that the Secretary determines are reasonable and necessary

for: (A) the prevention or early detection of an illness or disability; (B) that are recommended with a grade of A or B by the United States Preventive Services Task Force; and (C) that are appropriate for individuals entitled to benefits under Part A or enrolled under Part B. Section 1861(ddd)(2) of the Act states that, in making determinations under section 1861(ddd)(1) of the Act, the Secretary should use the process for making National Coverage Determinations (NCD) in the Medicare program.

Section 101 of MIPPA also added section 1833(a)(1)(W) of the Act, which provides requirements for payment of additional preventive services. Section 1833(a)(1)(W)(i) establishes requirements for payment of additional preventive services that are clinical diagnostic laboratory tests, and section 1833(a)(1)(W)(ii) establishes requirements for payment of all other services. Section 1833(a)(1)(W)(ii) (as amended by section 4104 of the Affordable Care Act (Pub. L. 111–148)) requires that the amount paid for the provision of all other additional preventive services is 100 percent of the lesser of the actual charge for the service, or the amount determined under a fee schedule established by the Secretary for purposes of this subparagraph.

We note that “additional preventive services” are a subset of “preventive services” under Medicare Part B, per section 1861(ddd)(3) and 1861(w)(2)(O) of the Act, respectively. Section 1833(b)(1) of the Act states that the annual Part B deductible does not apply to preventive services, and section 1833(a)(1)(Y) of the Act waives coinsurance for preventive services that are recommended with a grade of A or B by the USPSTF for any indication or population. Based on all the above statutory authorities, there is no cost-sharing under Part B for additional preventive services for Medicare enrollees, that is, there is no applicable beneficiary coinsurance or deductible for these services.

The term “preventive services” is defined at § 410.2, and coverage for “additional preventive services” is delineated at § 410.64. At § 410.152(l), we list the Part B preventive services that are paid at 100 percent of the Medicare payment amount, that is, for which zero coinsurance is charged. There, at § 410.152(l)(11), we include “additional preventive services identified for coverage through the national coverage determination (NCD) process”. At § 410.160(b), we list the Part B services that are not subject to the Part B annual deductible and do not

count toward meeting that deductible, and “additional preventive services identified for coverage through the national coverage determination (NCD) process” is included there at § 410.160(b)(13).

The payment authority under section 1833(a)(1)(W)(ii) of the Act has not been utilized to date because CMS has not yet covered any additional preventive service that would require use of that payment authority. While CMS currently covers certain screenings and therapies as additional preventive services under the section 1861(ddd) of the Act, those screenings and therapies are currently paid under the existing PFS fee schedule for physician services. Furthermore, the Medicare Diabetes Prevention Program, described at section III.E of this proposed rule, uses the section 1833(a)(1)(W)(ii) authority to waive the coinsurance and deductible as described above, but its payment policy is based on separate authorities under the model.

Specifically, we note that CMS has not yet covered or paid for any drugs or biologicals (hereinafter, referred to as drugs) under the benefit category of additional preventive services. This was highlighted when CMS released a Proposed NCD for Pre-Exposure Prophylaxis (PrEP) for Human Immunodeficiency Virus (HIV) Infection Prevention on July 12, 2023. This proposed NCD announced CMS’ intention to cover and pay for those drugs under section 1861(ddd) of the Act’s additional preventive services authority, and a decision on the NCD is forthcoming. We note that CMS covers and pays for Part B vaccines, which are also considered preventive services under sections 1861(ddd)(3) and 1861(w)(2)(A) of the Act, but they have unique payment rates specified in statute at section 1842(o)(1)(A)(iv) of the Act (for more information, see above at section III.H.1.a. of this proposed rule).

b. Proposed Fee Schedule for Drugs Covered as Additional Preventive Services (DCAPS)

As discussed above, the authority at section 1833(a)(1)(W)(ii) of the Act provides for payment for additional preventive services, including drugs. This authority differs from the authority used to pay drugs that are separately paid as drugs and biologicals under other Part B payment authorities. Specifically, payment for most drugs separately payable under Part B is authorized at section 1833(a)(1)(S) of the Act and outlined at section 1842(o)(1)(C) of the Act, and those payments are generally made according to the Average Sales Price (ASP)

methodology that is described at section 1847A of the Act. In addition, because drugs covered as additional preventive services (hereinafter, DCAPS; we will use the term “DCAPS drugs” for the ease of the reader) are not described in section 1842(o)(1)(C) of the Act, provisions under section 1847A of the Act would not apply, including requirements for manufacturers to report ASP to CMS on a quarterly basis (see sections 1847A(f) and 1927(b)(3)(A)(iii) of the Act). When manufacturers are not required to report the manufacturer’s ASP for a drug, they may do so voluntarily, but the availability of voluntarily reported ASP data cannot be guaranteed, and the data may not reflect all available NDCs for the drug. However, we emphasize that DCAPS drugs that are also covered under Part B for non-preventive indications (that is, are also used for diagnosis or treatment) would be subject to ASP reporting requirements.

Above, we mentioned that section 1833(a)(1)(W)(ii) of the Act requires that the amount paid for the provision of additional preventive services is 100 percent of the lesser of the actual charge for the service, or the amount determined under a fee schedule established by the Secretary for purposes of this subparagraph. For purposes of this policy, we refer to the amount determined under the fee schedule as the payment limit, which we discuss in detail below.

We are proposing a fee schedule for DCAPS drugs that uses existing Part B drug pricing mechanisms, because we believe that it is preferable to set all drug payment limits under Part B, including those for DCAPS, as consistently as possible. Accordingly, we propose that the payment limit for a DCAPS drug be determined using the methodology described in section 1847A of the Act (also referred to as ASP methodology), or, if ASP data is not available for a particular drug, to use an alternative pricing mechanism, as described below. We propose to update the fee schedule quarterly, on the same schedule as the ASP pricing file, which is updated each calendar quarter.

(1) Payment Limit Based on Section 1847A of the Act

To determine the payment limit for the applicable billing and payment code for a DCAPS drug under the fee schedule, we propose to apply ASP methodology described in section 1847A of the Act when ASP data is available for the drug. We believe the use of ASP data would be preferable for determining the payment limit for DCAPS drug billing and payment codes

for two reasons. First, this approach would determine the payment limit for these drugs in the same way as the payment limit is usually determined for other drugs that are separately payable under Part B, when possible. This would include the application of payment limit calculations for multiple source drugs, single source drugs and biologicals, and biosimilar biological products, as is done for products under section 1847A of the Act, for each applicable billing and payment code. Second, because section 1847A(c)(3) of the Act requires that calculation of the manufacturer's ASP for an NDC must include volume discounts, prompt pay discounts, cash discounts, free goods that are contingent on any purchase requirement, chargebacks, and rebates (other than rebates under the Medicaid drug rebate program, discounts under the 340B Program, and rebates under the Part B and Part D Medicare inflation rebate program), this would set a payment limit that would likely better reflect acquisition cost of the drug than list prices in available compendia (such as Wholesale Acquisition Cost (WAC)).

We propose that CMS would determine the payment limit for DCAPS drugs as the amount that would result from application of ASP methodology in section 1847A of the Act only if ASP data for the drug is available for a given quarter (that is, positive manufacturer's ASP data is reported by the drug manufacturer, as explained in section III.A.2 of this proposed rule). We propose that if ASP data is available for a DCAPS drug, the payment limit would be the amount described in section 1847A(b) of the Act, which is usually 106 percent of ASP.

(2) Payment Limit Based on National Average Drug Acquisition Cost (NADAC) Pricing

If ASP data for a DCAPS drug (as described in the previous section) is not available (as defined in the prior paragraph), we propose to determine the payment limit for the applicable billing and payment code using the most recently published amount for the drug in Medicaid's National Average Drug Acquisition Cost (NADAC) survey (OMB control number 0938-1041).⁵⁵² When using NADAC data, we propose to determine the payment limit per billing unit, which would be an average of NADAC prices for all NDCs for the drug. If a drug is available in generic and brand formulations, we propose all

NDCs will be averaged together to determine the payment limit.

Since the timing of ASP reporting and publishing has a two-quarter lag (for example, payment limits calculated using data reported from the first quarter of sales become effective two quarters later), we propose that "most recently published" for purposes of this policy means the most recently updated NADAC survey available 30 days after the close of the quarter for which ASP data would have been reported if it were available.⁵⁵³ For example, in the calculation of the payment limit for dates of service in the third calendar quarter, if NADAC is used to determine the payment limit, CMS would use the most recent NADAC survey update available on the 30th day after the close of the first calendar quarter to determine the payment limit for the third quarter.

The NADAC survey provides a national drug pricing benchmark for certain drugs that is adequately comprehensive to serve as the first alternative pricing source in the case that ASP data is not available. CMS conducts surveys of retail community pharmacy prices to develop the NADAC pricing benchmark in the annual NADAC pricing file. The pricing benchmark is reflective of the prices paid by retail community pharmacies to acquire prescription and over-the-counter covered outpatient drugs. NADAC data is publicly available and it can be accessed at <https://data.medicaid.gov/nadac>.

In the CY 2020 PFS final rule (84 FR 62655), we similarly finalized the use of NADAC pricing as a pricing alternative for oral drugs under the Part B Opioid Treatment Program (OTP) benefit when ASP data is not available. There, we stated that "[s]urvey data on invoice prices provide the closest pricing metric to ASP that we are aware of." Because the previous statement continues to be true, it is an appropriate alternative in the pricing framework for DCAPS drugs when ASP data is not available.

(3) Payment Limit Based on the Federal Supply Schedule (FSS)

Since NADAC pricing is only available for drugs typically dispensed through retail community pharmacies, there could be circumstances in which ASP and NADAC data are not available for DCAPS drugs. Therefore, if both ASP and NADAC pricing data are not available for a DCAPS drug, we propose to use the most recently published and listed prices for pharmaceutical products in the Federal Supply Schedule (FSS) to calculate the payment

limit for the applicable billing and payment code. In the same manner as discussed in the previous section, we propose that "most recently published" for purposes of this policy means the most recently updated FSS survey available 30 days after the close of the quarter for which ASP data would have been reported if it were available.⁵⁵⁴ For example, in the calculation of the payment limit for dates of service in the third calendar quarter, if FSS is used to determine the payment limit, CMS would use the most recent FSS update available on the 30th day after the close of the first calendar quarter to determine the payment limit for the third quarter. When using the FSS, we would calculate the average price per billing unit (as described in the billing and payment code for the drug) for all NDCs listed for a drug.

Drug pricing information from the Veterans Affairs' (VA's) FSS pharmaceutical pricing database is publicly available at the NDC level and published at <https://www.va.gov/opal/nac/fss/pharmPrices.asp>. We propose to use FSS data when ASP and NADAC data are not available because FSS data is one of the few existing options for drug pricing that includes a wide variety of drug formulations, including both self-administered drugs typically dispensed through retail community pharmacies and drugs administered incident to a physician's service. We believe that using FSS data to calculate the payment limit for DCAPS drugs is preferable to instructing MACs to determine DCAPS drug payment limits according to invoice (as discussed below), because invoice-based pricing requires MACs to manually process claims and is therefore burdensome to the MACs.

(4) Invoice Pricing

Finally, if ASP, NADAC, and FSS pricing are not available for a particular drug covered as an additional preventive service, then MACs will determine the payment for that drug according to invoice. Since one of the three above pricing mechanisms should be available in nearly all cases, we expect that invoice pricing would be necessary only in rare situations. Specifically, we believe that invoice pricing would likely only be necessary for new drugs before pricing data is available.

To summarize, we propose to establish a fee schedule using the following pricing mechanisms to determine the payment limit for DCAPS

⁵⁵² <https://www.medicaid.gov/medicaid/prescription-drugs/retail-price-survey/index.html>.

⁵⁵³ 42 CFR 414.804(a)(5).

⁵⁵⁴ 42 CFR 414.804(a)(5).

drugs under Part B, which would be updated quarterly:

(1) If ASP data is available for the DCAPS drug, the payment limit would be determined based on the methodology under section 1847A(b) of the Act (usually 106 percent of ASP);

(2) If ASP data is not available, the payment limit would be calculated using NADAC prices for the drug;

(3) If ASP data and NADAC prices are not available, the payment limit would be calculated using the FSS prices for the drug; and

(4) If ASP data, NADAC prices, and FSS prices are not available, payment limit would be the invoice price determined by the MAC.

We are proposing to amend § 410.152 by adding paragraph (o) to establish the fee schedule and the pricing methodologies used to determine the payment limit for DCAPS drugs under Part B. In addition, to highlight that coinsurance does not apply to DCAPS drugs, we propose to publish the payment limits for DCAPS drugs along with other separately payable Part B drugs on the ASP pricing file.

We invite public comment on the proposed fee schedule for drugs paid as additional preventive services.

c. Payment for Supplying and Administration of Drugs Under the Additional Preventive Services Benefit

As explained above, DCAPS drugs are subject to payment under section 1833(a)(1)(W)(ii) of the Act. Because the fee schedule authorized under such section has not yet been established, and since DCAPS drugs are not covered by Part B under the same authority as other separately payable Part B drugs that would provide for administration or supplying fees, there is no existing policy regarding payment for the administration of DCAPS drugs or the supplying of DCAPS drugs by suppliers and providers. In a similar manner to the DCAPS drug pricing mechanisms described above, we propose administration and supplying fees for DCAPS drugs that mirror existing policies under the PFS and Part B drug payment. We anticipate that an NCD that adds drugs to the additional preventive services benefit would include coverage for the supplying or administration of the drug, as appropriate, and those fees would therefore be considered payment for additional preventive services as well. Therefore, we are proposing payment limits for the supply and administration of DCAPS drugs to be included on the DCAPS fee schedule. As stated above, section 1833(a)(1)(W)(ii) of the Act requires that the amount paid for the

provision of additional preventive services is 100 percent of the lesser of the actual charge for the service, or the amount determined under a fee schedule established by the Secretary for purposes of this subparagraph. That is, the amount paid for the administration or supplying of the DCAPS drug will be the lesser of either the actual charge for the service or the payment limit.

For drugs that are supplied by a pharmacy, we propose that the fee schedule include a payment limit for a supplying fee that is similar to the supplying fee for other Part B-covered drugs dispensed from a pharmacy, to allow for consistency among similar payments in Part B. These other groups of drugs covered under Part B include immunosuppressives, oral anti-cancer, and oral anti-emetic drugs, and supplying fees for these drugs are described at 42 CFR part 414, subpart L (§§ 414.1000 and 414.1001). Generally, Medicare pays \$24 for the first prescription of one of these drugs supplied by a pharmacy in a 30-day period, and pays \$16 for each subsequent prescription, after the first one, supplied in that 30-day period.⁵⁵⁵ We propose similar payment limits for supplying fees for DCAPS drugs. Specifically, we propose that CMS will establish payment limit of \$24 to a pharmacy for the first DCAPS prescription that the pharmacy supplies to a beneficiary in a 30-day period, and a payment limit of \$16 to a pharmacy for all subsequent DCAPS prescriptions that the pharmacy supplies to a beneficiary in that 30-day period. We are proposing that the same fees would apply regardless of the number of days' supply that is dispensed.

As discussed in section III.A.4.c of this proposed rule, we intend to further study the supplying fees for certain drugs paid under Part B (for example, immunosuppressive drugs) and are not proposing to make any changes to the supplying fee amounts at this time (meaning the current 30-day supplying fees would apply to any amount of days' supply). The dispensing and supplying fees under Part B (§ 414.1001) have been shown to be higher than dispensing fees paid in the commercial market.⁵⁵⁶ So, until additional study is done regarding input costs for dispensing drugs billed

⁵⁵⁵ <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c17.pdf>.

⁵⁵⁶ <https://www.pcmantet.org/rx-research-corner/mandating-pharmacy-reimbursement-increase-spending/08/31/2021/#:~:text=The%20average%20dispensing%20fee%20in,the%20state's%20Medicaid%20PFS%20rate.>

to Medicare Part B and subsequent notice-and-comment rulemaking can be done, if appropriate, in response to such information, we aim to continue the current fee schedule for such Part B drugs regardless of the days' supply dispensed. Therefore, we propose to use the same approach for payment limits that are paid to pharmacies that supply DCAPS prescriptions.

For drugs that are administered by a physician or a non-physician practitioner, we propose that the fee schedule include a payment limit for such administration that aligns with the administration fee for other drugs provided as incident to physician services, as paid according to the PFS. To operationalize this, we propose that CMS determine the payment limit for administration of a DCAPS drug provided incident to a physician service via a crosswalk to an existing, corresponding drug administration code under the PFS. Exact details on coding and corresponding crosswalks would be included on the published fee schedule once DCAPS drugs are finalized for coverage via the NCD process. The fee schedule would be published quarterly on the CMS website and implemented in the Medicare claims processing systems.

No cost sharing would apply for the administration or supplying of DCAPS drugs, because we are proposing that such administration or supplying would be considered an additional preventive service, and as explained above, there is no cost-sharing for any additional preventive services under section 1833(a)(1)(W) of the Act. We propose to codify these policies at the newly added § 410.152(o).

We note that with regard to the July 12, 2023 Proposed NCD for Pre-Exposure Prophylaxis (PrEP) for Human Immunodeficiency Virus (HIV) Infection Prevention, in section I.I.E.4.b. of this proposed rule, in item 37, we propose national rates for HCPCS code G0012 (*Injection of pre-exposure prophylaxis (PrEP) drug for HIV prevention, under skin or into muscle*) that are crosswalked from CPT code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*). Please see that section for more information.

d. Payment for Drugs Covered as Additional Preventive Services in RHCs and FQHCs

Above, we mentioned that section 4104 of the ACA amended payment for additional preventive services, to increase payment to the lesser of 100 percent of charges, or the amount

determined under a fee schedule established by the Secretary, per Section 1833(a)(1)(W)(ii). This change waived coinsurance for additional preventive services. Section 4104 of the ACA also removed several other barriers to access to preventive services in Medicare. Specifically, section 4104 of the ACA amended section 1833 of the Act to waive the deductible for preventive services at section 1833(b)(1) of the Act, and to waive coinsurance for preventive services that are recommended with a grade of A or B by the USPSTF for any indication or population by adding section 1833(a)(1)(Y) of the Act. We also mentioned above that “additional preventive services” are a subset of “preventive services” under Medicare Part B, per section 1861(ddd)(3) and 1861(ww)(2)(O) of the Act, respectively.

In the CY 2011 PFS final rule, we interpreted the above waivers of cost-sharing for preventive services to apply to FQHCs (75 FR 73417); we note that FQHC services were already exempt from the Part B deductible, per section 1833(b)(4) of the Act. The CY 2011 PFS final rule codified this FQHC policy in regulation at § 405.2449 (75 FR 73613), and in sub-regulatory guidance, we clarified that these waivers of cost-sharing for preventive services applied to RHCs as well.⁵⁵⁷ In the CY 2014 FQHC PPS final rule (79 FR 25474), at § 405.2410(b), we codified regulations regarding coinsurance in RHCs and FQHCs, “[E]xcept for preventive services for which Medicare pays 100 percent under § 410.152(l) of this chapter.” In the CY 2016 PFS final rule (80 FR 71088), we clarified explicitly that these waivers of cost-sharing (that is, both coinsurance and deductible) for preventive services applied to RHCs.

In the previous sections of III.H.3. of this proposed rule, we discussed drugs covered as additional preventive services (henceforth “DCAPS drugs,” for the ease of the reader). In this section, we are clarifying that drugs covered as additional preventive services, and any accompanying administration and supplying fees, are not subject to cost-sharing in RHCs and FQHCs. Since DCAPS drugs and the services to administer and supply them are all considered additional preventive services, as explained in the previous section, they are paid at 100 percent of the Medicare payment amount in RHCs and FQHCs per §§ 405.2410 and

410.152(l) and they are paid on a claim-by-claim basis.

In addition, we are proposing that DCAPS drugs, when administered and supplied in an RHC or FQHC, as well as any administration and supply fee for those drugs, would be paid according to the fee schedule payment limits described above at section III.H.3.b. of this proposed rule. Since regulations at § 405.2460 allow the payment limitations set out in Part 410 to apply to payment for services provided by RHCs and FQHCs, we believe it is consistent with our current RHC and FQHC payment policies to apply the proposed DCAPS fee schedule payment limits, as discussed above, to those same DCAPS drugs when furnished in an RHC or FQHC. Those payment limits are described earlier in section III.H.3.b., and if finalized as proposed, they would be codified at § 410.152(o)(1). We propose to codify this RHC/FQHC DCAPS policy in regulation as well, at a new § 405.2464(h).

We welcome comments on these proposals.

I. Medicare Prescription Drug Inflation Rebate Program

1. Background

a. Overview of the Medicare Prescription Drug Inflation Rebate Program

The Inflation Reduction Act of 2022 (IRA) (Pub. L. 117–169, enacted August 16, 2022) established new requirements under which drug manufacturers must pay inflation rebates if they raise their prices for certain Part B and Part D drugs faster than the rate of inflation. Drug manufacturers are required to pay rebates to Medicare if prices for certain Part B drugs increase faster than the rate of inflation for a calendar quarter beginning with the first quarter of 2023; drug manufacturers are required to pay rebates to Medicare if prices for certain Part D drugs increase faster than the rate of inflation over a 12-month period, starting with the 12-month period that began October 1, 2022.

Section 11101 of the IRA amended section 1847A of the Act by adding a new subsection (i), which establishes a requirement for drug manufacturers to pay rebates into the Medicare Prescription Drug Account in the Federal Supplementary Medical Insurance Trust Fund for Part B rebatable drugs if the specified amount exceeds the inflation-adjusted payment amount, which is calculated as set forth in section 1847A(i)(3)(C) of the Act. The IRA also provides for an adjustment to the beneficiary coinsurance amount in cases where the price of a Part B

rebatable drug increases faster than the rate of inflation such that the beneficiary coinsurance is calculated based on the lower inflation-adjusted payment amount instead of the applicable payment amount. Section 1847A(i)(2) of the Act defines a “Part B rebatable drug,” in part, as a single source drug or biological product (as defined in section 1847A(c)(6)(D) of the Act), including a biosimilar biological product (as defined in section 1847A(c)(6)(H) of the Act), but excluding a qualifying biosimilar biological product (as defined in section 1847A(b)(8)(B)(iii) of the Act) for which payment is made under Part B.

Section 11102 of the IRA added section 1860D–14B of the Act, which requires drug manufacturers to pay rebates into the Medicare Prescription Drug Account in the Federal Supplementary Medical Insurance Trust Fund for each 12-month applicable period, starting with the applicable period beginning on October 1, 2022, for Part D rebatable drugs if the annual manufacturer price (AnMP) of such drug exceeds the inflation-adjusted payment amount. Section 1860D–14B(g)(1)(A) of the Act defines a “Part D rebatable drug,” in part, as a drug or biological described at section 1860D–14B(g)(1)(C) of the Act that is a “covered Part D drug” as that term is defined in section 1860D–2(e) of the Act. The definition of a Part D rebatable drug includes drugs approved under a new drug application under section 505(c) of the Federal Food, Drug, and Cosmetic (FD&C) Act (that is, brand name drugs), generic drugs approved under section 505(j) of the FD&C Act that meet certain statutory criteria (that is, sole source generic drugs), and biologicals licensed under section 351 of the Public Health Service Act (PHS), including biosimilars.

Under the IRA, certain statutory requirements vary for implementation of the Medicare Part B Drug Inflation Rebate Program and the Medicare Part D Drug Inflation Rebate Program. For example, section 1847A(i) of the Act requires CMS to calculate Part B drug inflation rebates for a calendar quarter, whereas section 1860D–14B of the Act requires CMS to calculate Part D drug inflation rebates for each 12-month applicable period. With respect to invoicing manufacturers for the rebate amount owed, under section 1847A(i)(1) of the Act, CMS must report rebate amounts to each manufacturer of a Part B rebatable drug no later than 6 months after the end of each calendar quarter, except that for calendar quarters beginning in 2023 and 2024, CMS has until September 30, 2025, to invoice manufacturer for rebates. In contrast,

⁵⁵⁷ Change Request 7208, R2186CP, 03/28/2011 Waiver of Coinsurance and Deductible for Preventive Services in Rural Health Clinics (RHCs), Section 4104 of Affordable Care Act (ACA); <https://www.cms.gov/regulations-and-guidance/transmittals/downloads/r2186cp.pdf>.

under section 1860D–14B(a) of the Act, CMS must report rebate amounts to each manufacturer of a Part D rebatable drug no later than 9 months after the end of each applicable period, except that for the first two applicable periods (that is, October 1, 2022, to September 30, 2023, and October 1, 2023, to September 30, 2024), CMS has until December 31, 2025, to invoice manufacturers for Part D inflation rebates. Additionally, there are statutory differences in the inputs used to calculate the rebate amounts for Part B and Part D. As a result, CMS is proposing to use different methodologies to calculate inflation rebates for Part B rebatable drugs and Part D rebatable drugs. However, CMS has attempted to align policies across the Medicare Part B Drug Inflation Rebate Program and Medicare Part D Drug Inflation Rebate Program to the extent possible.

b. Summary of Proposed Policies for the Medicare Prescription Drug Inflation Rebate Program

CMS is proposing to codify policies established in the revised guidance for the Medicare Part B Drug Inflation Rebate Program and the Medicare Part D Drug Inflation Rebate Program⁵⁵⁸ (collectively referred to as the “Medicare Prescription Drug Inflation Rebate Program”) in regulatory text. Specifically, CMS is proposing to codify with limited modification policies set forth in guidance for the Medicare Prescription Drug Inflation Rebate Program by adding new parts 427 and 428 to title 42, chapter IV of the Code of Federal Regulations for Part B and Part D, respectively, and welcomes comments on these proposals.

In addition, CMS is proposing new policies for the Medicare Part B Drug Inflation Rebate Program as follows:

- Proposed § 427.201(b) provides that CMS would compare the payment amount in the quarterly pricing file published by CMS to the inflation-adjusted payment amount for a given quarter when determining whether the

criteria for a coinsurance adjustment are met.

- Proposed § 427.302(c)(3) provides that for a Part B rebatable drug first approved or licensed by the FDA on or before December 1, 2020 but with a first marketed date after December 1, 2020, the payment amount benchmark quarter for such drug is the third full calendar quarter after the drug’s first marketed date. Proposed § 427.302(c)(4) further provides that for a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug’s first marketed date, whichever is later, the payment amount benchmark quarter is the third full calendar quarter after the drug is assigned a billing and payment code other than a NOC code.

- Proposed § 427.303(b)(1)(i) provides that CMS would remove 340B units for professional claims with dates of service during 2024 (in addition to 2023) submitted by Medicare suppliers that are listed by the Health Resources and Services Administration (HRSA) 340B Office of Pharmacy Affairs Information System as participating in the 340B Program, by using National Provider Identifiers and/or Medicare Provider numbers to identify these suppliers and the claims submitted with such identifiers.

- Proposed § 427.303(b)(5) provides that CMS would remove units of refundable single-dose container or single-use package drugs subject to discarded drug refunds, from the calculation of rebate amounts, generally in the reconciliation process.

- Proposed § 427.501 describes CMS’ method and process for reconciliation of a rebate amount for a Part B rebatable drug, including the circumstances that may trigger such a reconciliation.

- Proposed § 427.600 establishes a civil money penalty process in accordance with section 1847A(i)(7) of the Act to address when a manufacturer of a Part B rebatable drug fails to pay the rebate amount in full by the payment deadline for such drug for such applicable calendar quarter.

- Proposed § 427.10 provides that, where any provision of part 427 to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions would be severable from part 427 and the invalidity or unenforceability would not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances.

CMS also is proposing new policies for the Medicare Part D Drug Inflation Rebate Program as follows:

- Proposed § 428.202(c)(3) provides that if a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, does not have AMP data reported under section 1927(b)(3) of the Act for any quarters during the period beginning on January 1, 2021 and ending on September 30, 2021, CMS would identify the payment amount benchmark period as the first calendar year, which would be no earlier than calendar year 2021, in which such drug has at least 1 quarter of AMP reported. Proposed § 428.202(c)(4) further provides that for a Part D rebatable drug first approved or licensed after October 1, 2021 (that is, a subsequently approved drug), for which there are no quarters during the first calendar year beginning after the drug’s first marketed date for which AMP has been reported under section 1927(b)(3), the payment amount benchmark period would be the first calendar year in which such drug has at least 1 quarter of AMP reported. CMS is also soliciting comments on alternative policies to address certain instances in which AMP are not reported for certain NDC–9s of a Part D rebatable drug.

- Proposed § 428.203(b)(2) provides that, for claims with dates of service on or after January 1, 2026, and with respect to an applicable period, CMS would exclude from the total number of units used to calculate the total rebate amount for a Part D rebatable drug those units of the Part D rebatable drug for which a manufacturer provided a discount under the 340B Program. To determine the total number of such units for which a manufacturer provided a discount under the 340B Program, CMS would use data reflecting the total number of units of a Part D rebatable drug for which a discount was provided under the 340B Program and that were dispensed during the applicable period. CMS may apply adjustment(s) to these data as needed. CMS is also soliciting comments on alternative policies for collecting and using 340B data to calculate rebate amounts for Part D rebatable drugs.

- Proposed § 428.401 describes CMS’ method and process for reconciliation of a rebate amount for a Part D rebatable drug, including the circumstances that may trigger such a reconciliation.

- Proposed § 428.500 establishes a civil money penalty process in accordance with section 1860D–14B(e) of the Act to address when a manufacturer of a Part D rebatable drug fails to pay the rebate amount in full by

⁵⁵⁸ Medicare Part B Drug Inflation Rebate Revised Guidance: <https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-revised-guidance.pdf>; Medicare Part D Drug Inflation Rebate Revised Guidance: <https://www.cms.gov/files/document/medicare-part-d-inflation-rebate-program-revised-guidance.pdf> (collectively referred to as the “revised guidance”). These revised guidance documents, published December 14, 2023, implemented policies relating to the Medicare Prescription Drug Inflation Rebate Program for 2022, 2023, and 2024. CMS also published guidance on the use of the 340B modifier to report separately payable Part B drugs and biologicals acquired under the 340B program (Revised Part B Inflation Rebate Guidance: Use of the 340B Modifier, <https://www.cms.gov/files/document/revised-part-b-inflation-rebate-340b-modifier-guidance.pdf>).

the payment deadline for such drug for such applicable period.

- Proposed § 428.10 provides that, were any provision of part 428 to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions would be severable from this part and the invalidity or unenforceability would not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances.

Unless otherwise specified, CMS proposes that the provisions herein would apply, with respect to Part B rebatable drugs, for all calendar quarters beginning with January 1, 2023, and with respect to Part D rebatable drugs, for all applicable periods beginning with October 1, 2022. The IRA directs the Secretary to calculate rebate amounts for Part B rebatable drugs beginning on January 1, 2023, and Part D rebatable drugs beginning on October 1, 2022, using pricing data from past periods of time, including benchmark data from periods prior to the statute's enactment. In some cases, the time periods during which prices are subject to rebates began as early as several weeks after the IRA was enacted. In recognition of this timing, section 1860D–14B(h) of the Act specifically requires CMS to use program instruction

to implement the Medicare Part D Drug Inflation Rebate Program for 2022, 2023, and 2024. Similarly, the existing provision at section 1847A(c)(5)(C) of the Act, provides authority for CMS to implement the Medicare Part B Drug Inflation Rebate Program using program instruction or other guidance. In addition, sections 1847A(i)(1)(C) and 1860D–14B(a)(3) of the Act, as added by the IRA, permit the Secretary to delay the issuance of Rebate Reports for certain initial calendar quarters and applicable periods until 2025.

Section 1871(e)(1)(A) of the Act provides that a substantive change in regulations, manual instructions, interpretative rules, statements of policy, or guidelines of general applicability under Title XVIII of the Act may not apply retroactively unless the Secretary has determined that such retroactive application is necessary to comply with statutory requirements or that failure to apply such policies retroactively would be contrary to the public interest. To the extent any proposed provisions in this section III.I of this proposed rule are considered to apply retroactively, CMS has determined that such retroactive application would be both necessary to establish policies to implement the statutory requirements that CMS perform various calculations that involve pricing activities from prior

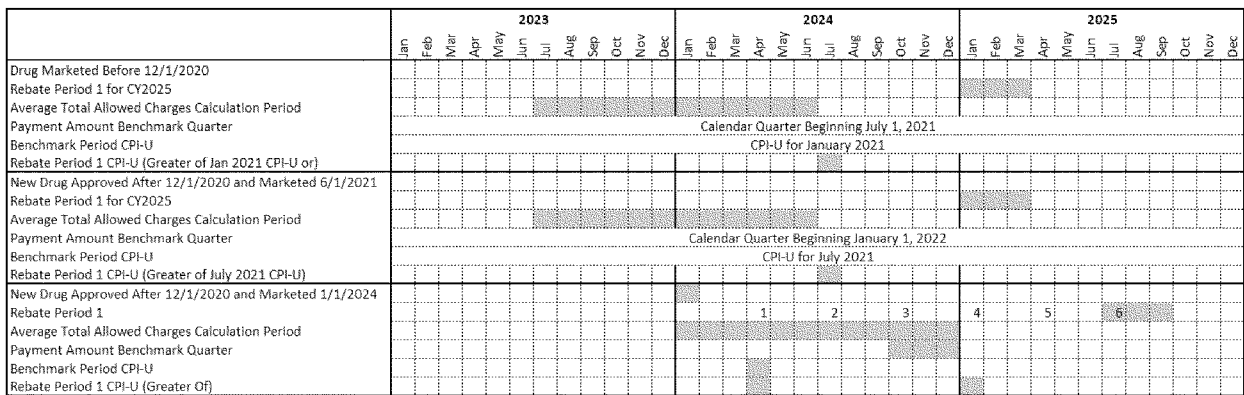

periods and also consistent with the statutory provisions expressly allowing the agency to delay the issuance of rebate reports for initial applicable periods until 2025. In addition, such retroactive application would be in the public interest because it would ensure that the proposed regulations address the same time periods and manufacturer pricing conduct Congress sought to address in the IRA and would promote consistency and continuity in program implementation.

c. Timeline of Key Dates for the Medicare Prescription Drug Inflation Rebate Program

As sections 1847A(i)(2)(C) and 1860D–14B(a)(3) of the Act allow for delayed reporting and invoicing of rebates amounts for applicable calendar quarters in 2023 and 2024 for Part B rebatable drugs and the first two applicable periods for Part D rebatable drugs, Figures 1 and 2 provide example timelines for how rebates will be calculated for applicable calendar quarters and one applicable period in calendar year 2025. The figures also depict how the rebate period and components of the rebate calculation may shift based on the marketing and approval dates for a rebatable drug or biological product.

BILLING CODE P

FIGURE 1: Summary of Data Timelines for Part B Drug Inflation Rebate Provisions for Calendar Year 2025^a

^a This graphic is an illustrative example of how rebates for quarters in calendar year 2025 will be calculated. Note: A drug will be included on the six full calendar quarters (denoted with the numbers in the figure) after the day the drug was first marketed or the first quarter of 2023, whichever is later. The Rebate Period CPI-U is the greater of the benchmark period CPI-U or the CPI-U of the first month of the quarter two quarters prior to the rebate period.

^a This graphic is an illustrative example of how rebates for one applicable period including months in calendar year 2025 will be calculated.

Table 47 describes a summary timeline for inflation rebate amount reports and deadlines for applicable

calendar quarters in calendar year 2025 and thereafter for Part B rebates and for the Part D rebate applicable period

beginning on October 1, 2024, and applicable periods thereafter.

TABLE 47: Summary of Part B and D Drug Inflation Rebate Amount Reports and Deadlines^a

| Milestone | Timing/Deadline |
|---|--|
| Part B Rebate – CMS must invoice manufacturers not later than 6 months after each calendar quarter | |
| Preliminary Rebate Report sent to Manufacturers | Not later than 5 months after the end of the calendar quarter |
| Manufacturer Reviews | Manufacturer Suggestion of Error must be submitted to CMS not later than 10 calendar days following receipt of the Preliminary Rebate Report |
| Rebate Report sent to Manufacturers | Not later than 6 months after the end of the calendar quarter |
| Manufacturer Rebate Amount Due (if applicable) | Not later than 30 calendar days after receipt of the Rebate Report |
| Preliminary Reconciliation Rebate Report sent to Manufacturers | Not later than 11 months after receipt of the Rebate Report |
| Manufacturer Reviews | Manufacturer Suggestion of Error must be submitted to CMS not later than 10 calendar days following receipt of the Preliminary Reconciliation Rebate Report |
| Reconciliation Rebate Report sent to Manufacturers | Not later than 12 months after receipt of the Rebate Report |
| Manufacturer Reconciled Rebate Amount Due (if any) | Not later than 30 calendar days after receipt of the Reconciliation Rebate Report |
| Part D Rebate – CMS must invoice manufacturers not later than 9 months after the end of each applicable period | |
| Preliminary Rebate Report sent to Manufacturers | Not later than 8 months after the end of the applicable period |
| Manufacturer Reviews | Manufacturer Suggestion of Error must be submitted to CMS not later than 10 calendar days following receipt of the Preliminary Rebate Report |
| Rebate Report sent to Manufacturers | Not later than 9 months after the end of the applicable period |
| Manufacturer Rebate Amount Due (if applicable) | Not later than 30 calendar days after receipt of the Rebate Report |
| First Reconciliation Preliminary Rebate Report sent to Manufacturers | Not later than 11 months after the receipt of the Rebate Report |
| Manufacturer Reviews | Manufacturer Suggestion of Error must be submitted to CMS not later than 10 calendar days following receipt of the First Reconciliation Preliminary Rebate Report |
| First Reconciliation Rebate Report sent to Manufacturers | Not later than 12 months after the receipt of the Rebate Report |
| Manufacturer Reconciled Rebate Amount Due (if any) | Not later than 30 calendar days after receipt of the First Reconciliation Rebate Report |
| Second Reconciliation Preliminary Rebate Report sent to Manufacturers | Not later than 35 months after the receipt of the Rebate Report |
| Manufacturer Reviews | Manufacturer Suggestion of Error should be submitted to CMS not later than 10 calendar days following receipt of the Second Reconciliation Preliminary Rebate Report |
| Second Reconciliation Rebate Report sent to Manufacturers | Not later than 36 months after the receipt of the Rebate Report |
| Manufacturer Reconciled Rebate Amount Due (if any) | Not later than 30 calendar days after receipt of the Second Reconciliation Rebate Report |

^a The months referred to in these timelines represent calendar months. This means, for example, that if a Preliminary Rebate Report is issued on August 15, 2027, the Rebate Report could be issued up until September 30, 2027.

BILLING CODE C

2. Medicare Part B Drug Rebates for Single Source Drugs and Biological Products With Prices That Increase Faster Than the Rate of Inflation

a. Definitions (§ 427.20)

In this proposed rule, CMS proposes to codify the definitions of terms consistent with the meanings given in section 1847A(i) of the Act or established in the revised Medicare Part B Drug Inflation Rebate Guidance, as applicable, as well as new definitions based on policies detailed in this proposed rule.

At proposed § 427.20, CMS is proposing that the following terms in section 1847A of the Act are defined:

- “Benchmark period CPI–U”.
- “Biosimilar biological product”.
- “Inflation-adjusted payment amount”.
- “Part B rebatable drug”.
- “Payment amount benchmark quarter”.
- “Payment amount in the payment amount benchmark quarter”.
- “Rebate period CPI–U”.
- “Single source drug or biological product”.
- “Specified amount”.
- “Subsequently approved drug”.
- “Unit”.

Further, in § 427.20 of this proposed rule, CMS proposes to codify definitions established in the revised Medicare Part B Drug Inflation Rebate Guidance and new definitions based on policies detailed in this proposed rule for the following terms:

- “Allowed charges”.
- “Applicable calendar quarter”.
- “Applicable threshold”.
- “Average sales price (ASP)”.
- “Billing and payment code”.
- “Billing unit”.
- “CPI–U”.⁵⁵⁹
- “FDA application”.
- “Final action claim”.
- “First marketed date”.
- “Grouped billing and payment code”.
- “Manufacturer”.
- “National Drug Code” (NDC).
- “Not Otherwise Classified (NOC) code”.

b. Determination of Part B Rebatable Drugs (§§ 427.100 Through 427.101)

i. Definitions

In proposed § 427.100, CMS proposes to define the following terms applicable

⁵⁵⁹ These data are referenced to 1982–84=100—that is, the average of pricing data for the 36 months from 1982 through 1984 serve as the basis for the index and are assigned a value of 100. These data are not seasonally adjusted.

to proposed subpart B (§§ 427.100 through 427.101):

- “EUA Declaration”.
- “Individual who uses such a drug or biological”.

ii. Identification of Part B Rebatable Drugs

Section 1847A(i)(2) of the Act defines a “Part B rebatable drug,” in part, as a single source drug or biological product (as defined in section 1847A(c)(6)(D)), including a biosimilar biological product (as defined in section 1847A(c)(6)(H)), but excluding a qualifying biosimilar biological product (as defined in section 1847A(b)(8)(B)(iii)), for which payment is made under Part B. The definitions for a biosimilar biological product and a qualifying biosimilar biological product are codified in § 414.902.

In § 427.101, CMS proposes to codify the policies established in section 30.1 of the revised Medicare Part B Drug Inflation Rebate Guidance to identify Part B rebatable drugs by (1) identifying the applicable billing and payment code for each single source drug or biological product, including biosimilar biological products, for which payment is made under Part B and (2) excluding any billing and payment code corresponding to a drug or biological product in excluded product categories or that have average total allowed charges below an applicable threshold, to be codified in proposed § 427.101(b) and (c), respectively.⁵⁶⁰

iii. Excluded Product Categories

Section 1847A(i)(2)(A) of the Act excludes qualifying biosimilar biological products (as defined in section 1847A(b)(8)(B)(iii) of the Act) from the definition of a Part B rebatable drug. As such, in § 427.101(b)(1) CMS proposes to codify the policy established in section 30.2 of the revised Medicare Part B Drug Inflation Rebate Guidance to exclude such products from the definition of a Part B rebatable drug and not subject them to Part B inflation rebates.

Section 1847A(i)(2) of the Act defines a Part B rebatable drug as a “single source drug or biological as defined in section 1847A(c)(6)(D) of the Act” which requires that a single source drug not be a multiple source drug. CMS has interpreted section 1847A(c)(6)(C)(ii) of the Act to mean that single source drugs

⁵⁶⁰ For more information on HCPCS codes and how they are applied, see “HEALTHCARE COMMON PROCEDURE CODING SYSTEM (HCPCS) LEVEL II CODING PROCEDURESHCPCS” at <https://www.cms.gov/medicare/coding/medhcpcsgeninfo/downloads/2018-11-30-hcpcs-level2-coding-procedure.pdf>.

or biological products are treated as multiple source drugs if they were within the same billing and payment code as of October 1, 2003. Accordingly, in § 427.101(b)(2), we are proposing to codify the existing policy established in section 30.1 of the revised Medicare Part B Drug Inflation Rebate Guidance to exclude drugs and biological products described in section 1847A(c)(6)(C)(ii) of the Act from the definition of a Part B rebatable drug and not subject them to Part B inflation rebates.

For drugs and biological products that are billed using a HCPCS code that represents a NOC code, CMS has a process to determine the allowed payment amount for such billing and payment codes; however, current Medicare claims data do not allow CMS to determine the average total allowed charges for such drug or biological product for a year per individual that uses such a drug or biological product or to identify units billed. CMS must perform these steps to determine if a drug or biological product is a Part B rebatable drug. Therefore, in § 427.101(b)(3), we are proposing to codify the policy in section 30.1 of the revised Medicare Part B Drug Inflation Rebate Guidance to exclude drugs and biological products that are billed using a billing and payment code that represents a NOC code drug or biological product or claims for such drugs and biological products when no other billing and payment code is applicable. CMS notes that few Part B drugs and biological products are billed with such codes and the quarterly process for updating billing and payment codes, including establishing new billing and payment codes, provides an existing mechanism for CMS to minimize the number of Part B rebatable drugs that are billed with such codes. As discussed in §§ 90.2 and 90.3 in Chapter 17 of the Medicare Claims Processing Manual, CMS believes NOC codes are generally used to bill Medicare for new-to-market, FDA-approved drug products until a specific billing and payment code is assigned; and so, CMS expects that the impact of this exclusion will be limited.⁵⁶¹

Consistent with section 303(h) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003, radiopharmaceutical drugs and biologicals are not paid under section 1847A of the Act. Manufacturers of radiopharmaceuticals are therefore not required to report ASP under section 1927(b)(3) of the Act and are not

⁵⁶¹ See: <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c17.pdf>.

otherwise required to report ASP data to CMS for separately payable radiopharmaceuticals. In addition, different payment methodologies across the outpatient setting result in data variations that could inappropriately trigger an inflation rebate amount due to methodological differences in reimbursement. Therefore, although some radiopharmaceuticals may appear on quarterly pricing files, in § 427.101(b)(4) CMS proposes to codify the revised Medicare Part B Drug Inflation Rebate Guidance policy (as described in section 30.1) that excludes separately payable radiopharmaceuticals for the purposes of identifying Part B rebatable drugs. Additionally, CMS proposes to codify the existing policy not to subject these units to the inflation-adjusted beneficiary coinsurance at § 427.201(c) and described further in the following section of this preamble.⁵⁶²

CMS aims to create a consistent coding and payment approach for the suite of products currently referred to as skin substitutes as stated in section 30.1 of revised Medicare Part B Drug Inflation Rebate Guidance. In the CY 2024 PFS proposed rule, CMS solicited comments on potential changes to payment for skin substitutes. In the CY 2024 PFS final rule, CMS acknowledged the comments received in response to this solicitation and stated that CMS would take these comments into consideration for future rulemaking.⁵⁶³ In § 427.101(b)(5) CMS proposes to codify existing policy to exclude cellular- and tissue-based products that would aid wound healing, currently referred to as skin substitutes, for the purposes of identifying Part B rebatable drugs. In addition, CMS proposes not to subject these products to the beneficiary coinsurance adjustment at § 427.201(c).

Section 1847A(i)(2)(A) of the Act excludes from the definition of a Part B rebatable drug a drug or biological if, as determined by the Secretary, the average total allowed charges for such drug or biological product under Part B for a year per individual who uses such a drug or biological product are less than \$100. Section 1847A(i)(2)(B) of the Act

provides that the \$100 amount for 2023 will be increased for 2024 and subsequent years by the percentage change in the CPI-U for the 12-month period ending with June of the previous year, rounded to the nearest multiple of \$10. Therefore, in § 427.101(b)(6) CMS proposes to codify the policy established in revised Medicare Part B Drug Inflation Rebate Guidance to exclude from the definition of a Part B rebatable drug those drugs and biologicals for which the Part B average total allowed charges for a year per individual who uses such drug or biological is below the applicable threshold.

Section 1847A(i)(2)(A)(ii) of the Act excludes vaccines described in subparagraph (A) or (B) of section 1861(s)(10) of the Act from the definition of a Part B rebatable drug. Such vaccines include the pneumococcal vaccine, the influenza vaccine, the COVID-19 vaccine; and the hepatitis B vaccine when furnished to an individual who is at high or intermediate risk of contracting hepatitis B (as determined by the Secretary under regulations). As such, in § 427.101(b)(7), CMS proposes to codify the existing policy established in section 30.3 of the revised Medicare Part B Drug Inflation Rebate Guidance to exclude vaccines described in subparagraph (A) or (B) of section 1861(s)(10) of the Act from the definition of a Part B rebatable drug and not subject them to Part B inflation rebates. In addition, with respect to monoclonal antibodies used for treatment or post-exposure prophylaxis of COVID-19, which are covered and paid for under section 1861(s)(10) of the Act, CMS proposes to exclude these products from the definition of Part B rebatable drugs for applicable quarters through the end of the calendar year in which the EUA declaration under section 564 of the FD&C Act for drugs and biological products is terminated. With respect to monoclonal antibodies that are used for pre-exposure prophylaxis of COVID-19 that are covered and paid for under section 1861(s)(10) of the Act, CMS proposes to exclude these products from the definition of Part B rebatable drug for applicable calendar quarters even after the year in which the EUA Declaration ends, as long as these products have an FDA-approved application or license after the EUA Declaration is terminated.

Finally, Part B drugs approved under an Abbreviated New Drug Application (ANDA) submitted under 505(j) of the FD&C Act do not meet the definition of “single source drug or biological product,” as defined under section

1847A(c)(6)(D) of the Act, and thus, are not Part B rebatable drugs. We propose to codify this exclusion at § 427.101(b)(8).

iv. Drugs and Biological Products With Average Total Allowed Charges Below the Applicable Threshold

Pursuant to section 1847A(i)(2) of the Act, drugs and biological products, for which the average total allowed charges for such drug or biological under Part B for a year per individual who uses such drug or biological are below the applicable threshold, as determined by the Secretary, are excluded from the definition of Part B rebatable drugs. As explained in section 30.2 of the revised Medicare Part B Drug Inflation Rebate Guidance, CMS uses the term “applicable threshold” to mean \$100 for all four calendar quarters in 2023. For all four calendar quarters in 2024, the applicable threshold will be \$100 as increased in accordance with section 1847A(i)(2)(B) of the Act. For calendar quarters in 2025 and beyond, the applicable threshold will be equal to the unrounded applicable threshold calculated for the prior calendar year, increased by the percentage increase in the CPI-U for the 12-month period ending with June of the previous year.

In § 427.101(c), CMS is proposing to codify policies from the revised Medicare Part B Drug Inflation Rebate Guidance to exclude these drugs from the definition of a Part B rebatable drug. To do so, in accordance with the statute, for each applicable calendar quarter, CMS proposes to identify drugs and biological products with Part B average total allowed charges for a year per individual that uses such a drug or biological product below the applicable threshold.

In § 427.101(c)(1), CMS is proposing that to identify the average total allowed charges for a year per individual, for each Part B rebatable drug, CMS would:

- For single source drugs and biological products assigned to only one billing and payment code, sum the allowed charges from final action claims greater than \$0 and divide the summed amount by the number of individuals who use such a drug or biological.

- For single source drugs and biological products assigned to more than one billing and payment code, sum the allowed charges from final action claims greater than \$0 for all billing and payment codes and divide the summed amount by the number of individuals who use such a drug or biological.

CMS may move a drug or biological product from a grouped billing and payment code to a unique billing and payment code in instances where the

⁵⁶² In this proposed rule, CMS also is proposing to clarify how radiopharmaceuticals are paid for in the physician's office and to codify these policies in regulation. Specifically, CMS proposes to clarify that for radiopharmaceuticals furnished in a setting other than the hospital outpatient department, MACs can determine payment limits for radiopharmaceuticals based on any methodology in place on or prior to November 2003.

⁵⁶³ See 88 FR 78818, November 16, 2023 (<https://www.federalregister.gov/public-inspection/2023-24184/medicare-and-medicaid-programs-calendar-year-2024-payment-policies-under-the-physician-fee-schedule>).

drug is either approved through the pathway established under section 505(b)(2) of the FD&C Act (hereinafter “section 505(b)(2) drug products”) that CMS initially assigned to the same billing and payment code as its reference drug for a period of time, or the drug was previously a multiple source drug but is now a single source drug that was moved to its own billing and payment code. There may be instances where a single source drug or biological product was previously crosswalked to a grouped billing and payment code (other than a NOC code) during the *full* year. In such instances, CMS proposes to calculate the average total allowed charges per individual per year for the drug using allowed charges and the number of individuals who used the drug or biological product based on claims for the previously grouped billing and payment code during the year. Such instances would apply to section 505(b)(2) drug products, drugs that were previously multiple source drugs where all other drugs under the same billing and payment code were discontinued (applicable only if the sole remaining product was not approved under an ANDA), and to any other situations where a drug was previously in a grouped billing and payment code (other than a NOC code).

Finally, there may be instances where a single source drug or biological product was initially billed under a grouped billing and payment code (other than a NOC code) and was later billed under a unique billing and payment code for *some* of the year. In such instances, CMS proposes to calculate the average total allowed charges per individual for a year by: summing the total allowed charges billed under the unique billing and payment code for the drug with dates of service on or after the Medicare effective date for this unique billing and payment code and identifying the individuals on those claims; summing the total allowed charges on claims billed under the previously grouped billing and payment code and identifying the individuals with claims prior to the unique billing and payment code’s effective date; and then summing the total allowed charges under both billing and payment codes across the full year and dividing by the total number of individuals (deduplicated for those individuals identified under both the previously grouped billing and payment code and the unique billing and payment code). If the average total allowed charges for a year per individual who uses such drug or biological product are less than the

applicable threshold, CMS proposes to exclude the billing and payment code for that calendar quarter. CMS welcomes comment on the proposed implementation of the exclusion for drugs and biologicals with average total allowed charges below the applicable threshold.

CMS proposes in § 427.101(c)(2) to calculate the applicable threshold as follows:

- For applicable calendar quarters in 2023, the applicable threshold is equal to \$100.
- For applicable calendar quarters in 2024, the applicable threshold is equal to \$100 increased by the percentage increase in the CPI-U for the 12-month period ending with June of 2023.
- For applicable calendar quarters in each subsequent calendar year, the applicable threshold is equal to the unrounded applicable threshold calculated for the prior calendar year increased by the percentage increase in the CPI-U for the 12-month period ending with June of the previous year.
- If the resulting amount from these calculations is not a multiple of \$10, CMS will round that amount to the nearest multiple of \$10.⁵⁶⁴

Accordingly, the formula to determine the applicable threshold for calendar quarters in 2024 is \$100 *multiplied by* (CPI-U for June 2023 *divided by* CPI-U for June 2022) (apply rounding to the nearest multiple of \$10). To illustrate, the 2024 threshold is: $100 \times (305.109 / 296.311) = 102.969178$ (which rounds down to \$100 after applying CMS rounding) so the threshold for calendar quarters in 2024 = \$100.

For the purposes of this calculation, CMS proposes that “a year” means the 4 consecutive calendar quarters beginning 6 calendar quarters before the applicable calendar quarter. CMS also proposes using final action claims from the Medicare fee-for-service claims repository to identify claims where separate payment was allowed for the applicable HCPCS code for dates of service within a year. Drugs and biological products that do not meet the applicable threshold are not considered Part B rebatable drugs. For example, for the calendar quarter beginning July 1, 2025, CMS would use available final action Medicare Part B claims with dates of service beginning January 1, 2024, and ending December 31, 2024, because January 1, 2024, is the beginning of the calendar quarter that is 6 quarters before the applicable calendar quarter beginning on July 1, 2025.

⁵⁶⁴ CMS will round any amount less than \$5 over a multiple of \$10 down to that multiple of \$10, and any amount \$5 or more over a multiple of \$10 up to the next multiple of \$10.

In § 427.101(c)(3), CMS proposes to codify the policies and methodological steps as described in section 30.2 of the revised Medicare Part B Drug Inflation Rebate Guidance for excluding drugs and biological products with average total allowed charges below the applicable threshold at the billing and payment code level. For each applicable calendar quarter, CMS would identify the applicable billing and payment codes for drugs and biological products with average total allowed charges for a year per individual less than the applicable threshold and exclude such drugs and biological products from the definition of Part B rebatable drug in accordance with proposed § 427.101(b)(6). When a single source drug or biological product with average total allowed charges below the applicable threshold is assigned to a unique billing and payment code, CMS would exclude the assigned billing and payment code for the applicable calendar quarter. There also may be instances where a single source drug or biological product is assigned to more than one billing and payment code during a year and the average total allowed charges for a year per individual that uses such drug or biological product are less than the applicable threshold. In such instances, CMS proposes to exclude all assigned billing and payment codes for such single source drug or biological product for that applicable calendar quarter.

c. Inflation-Adjusted Beneficiary Coinsurance Adjustment and Adjusted Medicare Payment for Part B Rebatable Drugs With Price Increases Faster Than Inflation (§§ 427.200 Through 427.201)

Section 1847A(i)(5) of the Act requires that for Part B rebatable drugs, as defined in section 1847A(i)(2)(A) of the Act, furnished on or after April 1, 2023, in quarters in which the payment amount described in section 1847A(i)(3)(A)(ii)(I) of the Act (or, in the case of selected drugs described under section 1192(c) of the Act, the payment amount described in section 1847A(b)(1)(B) of the Act), exceeds the inflation-adjusted payment amount determined in accordance with section 1847A(i)(3)(C) of the Act, the coinsurance will be 20 percent of the inflation-adjusted payment amount for such quarter (hereafter, the inflation-adjusted coinsurance amount). This inflation-adjusted coinsurance amount is applied as a percent, as determined by the Secretary, to the payment amount that would otherwise apply for such calendar quarter in accordance with section 1847A(b)(1)(B) or (C) of the Act, as applicable, including in the case of a

selected drug. In the CY 2024 Hospital Outpatient Prospective Payment System (OPPS) final rule and the CY 2024 PFS final rule, CMS codified this inflation-adjusted coinsurance amount at §§ 419.41(e), 410.152(m), and 489.30(b)(6), respectively.

Beginning with the April 2023 quarterly pricing files, the applicable beneficiary coinsurance percentage is shown for each HCPCS code in the pricing files that are posted on the CMS website. For example, the ASP Pricing files are posted at <https://www.cms.gov/medicare/payment/part-b-drugs/asp-pricing-files>. The applicable beneficiary coinsurance percentage for certain drugs and biologicals used predominantly in the hospital outpatient setting are listed in the Hospital Outpatient Prospective Payment System (OPPS) Addenda A and B, which can be found at <https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates>. The applicable beneficiary coinsurance percentage for certain drugs and biologicals used predominantly in the ambulatory surgical center setting are listed in the ASC Addendum, which can be found at <https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/asc-payment-rates-addenda>. The percentage is expressed as two digits with three decimal places, for example, 18.760. If an adjusted beneficiary coinsurance does not apply, the percentage would show as 20.000.

Section 11101(b) of the IRA amended section 1833(a)(1) of the Act by adding a new subparagraph (EE), which requires that if the payment amount under section 1847A(i)(3)(A)(ii)(I) of the Act or, in the case of a selected drug, the payment amount described in section 1847A(b)(1)(B) of the Act, for that drug exceeds the inflation-adjusted payment amount for a Part B rebatable drug, the Part B payment amount would, subject to the Part B deductible and sequestration, equal the difference between the payment limit and the inflation-adjusted coinsurance amount. Consistent with the clarification in section 40 of the revised Medicare Part B Drug Inflation Rebate Guidance and with the application of sequestration in the context of Medicare payment and beneficiary coinsurance in general, we note that the calculation to determine the applicable beneficiary coinsurance amount would not be adjusted for sequestration. CMS codified the Medicare payment for Part B rebatable drugs in the CY 2024 PFS final rule by adding new paragraph (m) to § 410.152. In this proposed rule, CMS proposes to adopt new provisions at §§ 427.200

and 427.201 to codify the policies regarding the computation of the inflation-adjusted beneficiary coinsurance, defined in § 427.200, for Part B rebatable drugs as required by section 1847A(i)(5) of the Act. This proposed new provision includes references to the existing provisions at §§ 410.152(m), 419.41(e), and 489.30(b)(6). CMS further proposes at § 427.201(c) that any category of products that is excluded from the identification of Part B rebatable drugs at § 427.101(b) is not subject to the inflation-adjusted beneficiary coinsurance. Examples of these excluded products include separately payable radiopharmaceuticals, skin substitute products, and qualifying biosimilar biological products.

Additionally, CMS proposes at § 427.201(b) that CMS will use the published payment amount in quarterly pricing files^{565 566 567} to determine if a Part B rebatable drug should have an adjusted beneficiary coinsurance equal to 20 percent of the inflation-adjusted payment amount as described in section 1847A(i)(3)(C) for a calendar quarter. This proposed approach deviates from the rebate calculation approach proposed in § 427.302, which relies on the specified amount defined at § 427.20 even when the specified amount and the published payment amount in quarterly pricing files differ. The approach proposed at § 427.201(b) would be used only to determine whether there should be a coinsurance adjustment and would not impact the applicability or calculation of inflation rebates. CMS believes this approach is consistent with the statutory language and appropriately reflects the differences in the statutory text of section 1847A(i)(5) of the Act, which sets forth the payment amount that is used to determine whether coinsurance should be adjusted, and section 1847A(i)(3)(A) of the Act, which sets forth the “specified amount” used to determine rebate amounts.

CMS’ intent with this proposed policy is to hold beneficiaries harmless in situations where the payment amount is calculated differently from the specified amount. Though the payment amount is generally based on the same provisions as the specified amount, there may be situations where the payment amount is updated or adjusted under other provisions of 1847A of the Act, such as

⁵⁶⁵ See: <https://www.cms.gov/medicare/payment/part-b-drugs/asp-pricing-files>.

⁵⁶⁶ See: <https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates>.

⁵⁶⁷ See: <https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/asc-payment-rates-addenda>.

when ASP data are not available under section 1847A(c)(5)(B). For example, if the specified amount is very low due to negative ASP data and the payment amount is updated using other available data resulting in a payment amount that exceeds the inflation-adjusted payment amount, beneficiaries would not receive the benefit of adjusted coinsurance. There may also be situations where the payment amount is lower than the inflation-adjusted payment amount, but the specified amount is higher than the inflation-adjusted payment amount. In such a situation, if the “specified amount” was used as the comparator to determine whether coinsurance should be adjusted, beneficiaries would pay a coinsurance *higher* than 20 percent, because 20 percent of the inflation-adjusted payment amount would be higher than 20 percent of the payment amount. As such, we propose to codify at § 427.201(b) that we will compare the published payment amount in the quarterly pricing files published by CMS to determine whether a coinsurance adjustment applies. This policy would provide an adjusted beneficiary coinsurance amount only when the payment amount for a Part B rebatable drug exceeds the inflation-adjusted payment amount in a given quarter.

CMS believes this approach is valid and gives effect to the differing statutory language in sections 1847A(i)(3)(A), 1847A(i)(5), and 1833(a)(1)(EE) of the Act, which sets forth the coinsurance adjustment for Part B rebatable drugs. Unlike the “specified amount” in section 1847A(i)(3)(A), sections 1847A(i)(5) and 1833(a)(1)(EE) both refer to a “payment amount.” Fundamentally, a payment amount cannot be a negative number; if the specified amount and payment amount were the same amount, it would result in situations where the payment amount at section 1833(a)(1)(EE) was a negative number. Rather, we believe that the term “payment amount” in both sections 1847A(i)(5) and 1833(a)(1)(EE) is most naturally read to include the amount, as updated and adjusted for the purposes of providing payment to providers, that CMS publishes as the payment amount in quarterly pricing files; and that section 1833(a)(1)(EE) operates to adjust the *percentage* of such payment amount. Furthermore, section 1847A(i)(5)(B) of the Act provides the Secretary with discretion to apply the adjusted coinsurance percentage to the payment amount that would otherwise apply under section 1847A(b)(1)(B) or (C) of the Act. Lastly, sections 1847A(i)(8)(D) and (E) of the Act

preclude administrative and judicial review of the computation of the adjusted coinsurance and amounts paid to the provider under section 1833(a)(1)(EE).

In summary, we are proposing CMS will use the payment amount in quarterly pricing files to determine if a Part B rebatable drug should have an adjusted beneficiary coinsurance, the calculation to determine the adjusted Medicare payment (if applicable) will not be adjusted for sequestration, and drugs excluded from the identification of Part B rebatable drugs will not be subject to the inflation-adjusted beneficiary coinsurance. CMS invites comment on these proposals.

d. Determination of the Rebate Amount for Part B Rebatable Drugs (§§ 427.300 Through 427.304)

i. Definitions

In proposed § 427.300, CMS proposes to define the following terms applicable to subpart D (§§ 427.300 through 427.304):

- “340B Program”.
- “Refundable single-use dose container or single-use package drug”.

ii. Calculation of the Total Part B Rebate Amount To Be Paid by Manufacturers

Section 1847A(i)(3) of the Act specifies the calculation of the rebate amount for a Part B rebatable drug assigned to a billing and payment code for an applicable calendar quarter for which a manufacturer must pay a rebate. CMS proposes to codify the rebate calculation, as established in revised Medicare Part B Drug Inflation Rebate Guidance, as the estimated amount is equal to the product of the total number of billing units determined in accordance with section 1847A(i)(3)(B) of the Act (proposed at § 427.303) and the amount (if any) by which the specified amount (proposed at § 427.302(b)) exceeds the inflation-adjusted payment amount determined in accordance with section

1847A(i)(3)(C) of the Act (proposed at § 427.302(g)) for the drug or biological product for an applicable calendar quarter. The Part B drug inflation rebate amount calculated in accordance with this subpart is subject to adjustment based on any reductions in accordance with subpart E of this part or any reconciliations in accordance with subpart F of the part.

Because Part B rebatable drugs are single source drugs or biologicals, they typically will have one manufacturer. However, a Part B rebatable drug could have more than one manufacturer. For example, a Part B rebatable drug could

be produced by one or more manufacturer(s) that is a repackager or relabeler. Multiple manufacturers of a rebatable drug also could occur in the case of one or more authorized generic products that are marketed under the same FDA-approval as the original FDA applicant. In such instances, all the NDCs for the drug typically are assigned to the same billing and payment code(s), and each manufacturer is responsible for reporting ASP data to CMS. When calculating the rebate owed by manufacturers for a rebatable drug that has more than one manufacturer, CMS proposes to codify the policy from section 50.13 of the revised Medicare Part B Drug Inflation Rebate Guidance to multiply the total rebate amount calculated for the billing and payment code by the following quotient: (Sum of the individual manufacturer’s billing units sold during the applicable calendar quarter for all NDCs of the manufacturer assigned to the billing and payment code, as reported in the ASP data submissions) *divided by* (Sum of all manufacturers’ total billing units sold during the applicable calendar quarter for all NDCs of the Part B rebatable drug assigned to the billing and payment code, as reported in the ASP data submissions)

CMS welcomes comment on this calculation approach.

Based on further review, CMS has observed that there are several instances where there are multiple manufacturers in a billing and payment code and the ASP data, including the number of units sold, for all or some manufacturers’ NDCs within a billing and payment code may be negative, zero, or missing. To enable CMS to calculate the respective rebate amounts attributable to each manufacturer when the ASP units are negative, zero, or missing, CMS is soliciting comments on the new proposed policies outlined below and any other alternative options.

(1) Scenarios in Which All NDCs Within a Billing and Payment Code Have Negative, Zero, or Missing ASP Units

If there are NDCs of multiple manufacturers in a billing and payment code, to determine the respective rebate amount when the manufacturer-reported ASP units for all NDCs are either negative, zero, or missing but there is a positive rebate amount calculated for the Part B rebatable drug, CMS proposes to: (1) apportion a \$0 rebate amount when the reported units for all NDCs are missing for NDCs not marketed or sold during the applicable

calendar quarter, negative, and/or zero; and (2) equally apportion a positive rebate amount to each NDC with missing units when the NDCs were marketed or sold during the applicable calendar quarter. If the NDCs within a billing and payment code have a mix of negative units, zero units, missing units for NDCs marketed or sold during the applicable calendar quarter, or missing units for NDCs not marketed or sold during the applicable calendar quarter, CMS will apportion a \$0 rebate amount to the NDCs with missing units that are not marketed or sold during the applicable calendar quarter, NDCs with negative units, and NDCs with zero units, and will equally apportion the positive rebate amount across all NDCs with missing units that are marketed or sold during the applicable quarter. CMS understands that this approach would treat missing units for NDCs not marketed or sold during the applicable calendar quarter, negative units, and zero units as representing zero sales, and we welcome comments on the extent to which this approach could potentially exclude from rebate liability a manufacturer of a drug that did have sales in that quarter (for example, if negative units represent price concessions). In addition, CMS welcomes comments on the extent to which, in a scenario with a billing and payment code with multiple manufacturers, a single manufacturer with missing ASP units could assume full rebate liability for the entire billing and payment code if the manufacturer’s NDCs have missing units and are marketed or sold during the applicable calendar quarter.

CMS also considered several alternative policies for attributing rebate amounts to each respective manufacturer in this scenario, including: (1) using the reported ASP units from the calendar quarter prior to the applicable calendar quarter; (2) using an average of units sold based on sales data for several calendar quarters prior to the applicable calendar quarter (for example, an average of the previous four calendar quarters); and (3) validation of ASP data based on review of AMP data in combination with one of the aforementioned alternative proposed policies to determine inflation rebate amounts. However, CMS has observed that ASP units are often negative, zero, or missing for several quarters in a four-quarter lookback, so including additional quarters may not necessarily yield additional data that could be used to apportion inflation rebate amounts (and could complicate the calculation of an average by introducing a mix of zero,

negative, missing, and positive units within a single NDC). In addition, the AMP validation of ASP sales could add another layer of complexity and potential bias as AMP data represent only sales to retail community pharmacies, and ASP data represent all sales of a drug. CMS welcomes comments on these alternatives.

(2) Scenarios in Which Some (But Not All) NDCs Have Negative, Zero, or Missing ASP Units

When some manufacturers' NDCs within a billing and payment code report negative, zero, or missing ASP units, CMS proposes to: (1) treat any NDCs with missing units that are not marketed or sold during the applicable calendar quarter, negative units, or zero units as not having any sales for the applicable calendar quarter and apportion a \$0 rebate amount to them; (2) treat NDCs with missing units that are marketed or sold during the applicable calendar quarter as though they had the same units as that of the NDC with the lowest positive units; and (3) apportion rebate amounts across NDCs with missing units that are marketed or sold during the applicable calendar quarter and NDCs with positive units based on the share of ASP units sold in accordance with the policy outlined in section 50.13 of the revised Medicare Part B Drug Inflation Rebate Guidance. CMS welcomes comments on the extent to which, in a scenario where NDCs of multiple manufacturers are assigned to the same billing and payment code, a single manufacturer that accounts for all positive ASP units could potentially be responsible for the full rebate amount for the entire billing and payment code.

CMS also considered proposing other alternative policies for attributing rebate amounts to each respective manufacturer in this scenario, including: (1) review of historical ASP data to identify the most recent calendar quarter with positive ASP units for any of the NDCs with negative, zero, or missing units in the applicable calendar quarter and allocation of financial responsibility across NDCs with positive ASP units in that quarter (excluding NDCs without positive units in that quarter); (2) using an average of units sold based on sales data for several calendar quarters prior to the applicable quarter (for example, an average of the previous four calendar quarters); (3) apportionment of rebates based on units at the NDC-9 level rather than the NDC-11 level; and (4) apportionment of rebates to only those manufacturers within a HCPCS code that reported

positive ASP units for the applicable calendar quarter.

CMS elected to not propose use of a historical lookback approach (under options 1 and 2) since ASP units are often negative, zero, or missing for the most recent calendar quarter and/or over several quarters in a four-quarter lookback period, and so including additional quarters may not necessarily yield additional data that could be used to apportion inflation rebate amounts (and could complicate the calculation of an average by introducing a mix of zero, negative, missing, and positive units within a single NDC). CMS also understands that a historical lookback approach could create outliers that could affect the resulting allocation. When evaluating option 3, CMS observed that ASP units are often negative, zero, or missing for several calendar quarters when aggregating units sold at the NDC-9 level. Consequently, this approach may not necessarily yield additional data that could be used to apportion inflation rebate amounts and doing so would differ from our general policy on using NDC-11s as set forth in the revised guidance. Finally, CMS decided not to propose apportioning the full rebate amount to only those manufacturers that reported positive ASP units within a billing and payment code under option 4, as we questioned whether that policy could inadvertently disfavor manufacturers that reported units while benefiting manufacturers that did not report ASP data. We continue to evaluate these alternative policy approaches for apportioning rebate liability and may adopt changes to this proposed policy in the final rule.

CMS reminds manufacturers of their reporting obligations under sections 1847A(f)(2) and 1927(b) of the Act and that failure to provide timely information may result in penalties as detailed in sections 1847A(d)(4)(B) and (C) and 1927(b)(3)(C)(i) of the Act.

CMS welcomes comments on these proposed approaches as well as alternative policy options on how CMS could apportion rebate amounts among multiple manufacturers' NDCs that reported negative, zero, and/or missing units for NDCs.

iii. Calculation of the Per Unit Part B Drug Rebate Amount

(1) Identification of the Specified Amount for the Applicable Calendar Quarter

In the calculation of the rebate amount for a Part B rebatable drug, CMS is statutorily required to compare the inflation-adjusted payment amount to

the specified amount, which is the amount set forth in section 1847A(i)(3)(A)(ii)(I) of the Act. Statute also requires CMS to impose an inflation rebate if the specified amount exceeds the inflation-adjusted payment amount. CMS proposes to codify at § 427.302(a) the policy established in revised Medicare Part B Drug Inflation Rebate Guidance to calculate the Part B per unit rebate amount for the applicable calendar quarter by determining the amount by which the specified amount exceeds the inflation-adjusted payment amount, after accounting for exclusions under § 427.303(b). CMS proposes to codify the current operational steps for calculating Part B inflation rebates as described in section 50 of the revised Medicare Part B Drug Inflation Rebate Guidance.

In § 427.302(b), CMS proposes to codify the policy established in section 50.2 of the revised Medicare Part B Drug Inflation Rebate Guidance on how to calculate the specified amount for the applicable calendar quarter. The "specified amount" refers to the amount specified in section 1847A(i)(3)(A)(ii)(I)(aa) or (bb) of the Act, as applicable. In general, section 1847A(i)(3)(A)(ii)(I)(aa) and (bb) of the Act cross-reference provisions governing quarterly payment limits for single source drugs and biological products that are typically, but not always, reflected in the quarterly pricing files. Specifically, the specified amount for single source drugs and biological products is 106 percent of the amount determined under section 1847A(b)(4) of the Act—that is, the lesser of ASP or WAC—for the applicable calendar quarter. For biosimilar biological products, the specified amount is the payment amount under section 1847A(b)(1)(C) of the Act, which is based on 100 percent of the ASP for the biosimilar biological product plus 6 percent of the lesser of ASP or WAC for the reference biological product.

In § 427.302(b)(1), CMS proposes that the first applicable calendar quarter for a Part B rebatable drug will be the earliest applicable calendar quarter that follows the payment amount benchmark quarter identified in § 427.302(c)(1) through (6).

Additionally, for the purposes of determining the rebate amount for a Part B rebatable drug, based on further consideration of data availability in specific circumstances, CMS proposes to clarify the policy established in section 50 of the revised Medicare Part B Drug Inflation Rebate Guidance and use the most updated price information reported by manufacturers, determined

in accordance with section 1847A(i)(3)(A)(ii)(I)(aa) or (bb) of the Act as applicable, as the specified amount for the applicable calendar quarter for each HCPCS code identified in accordance with § 427.101. That is, CMS would use the most updated price information reported by manufacturers to compare whether 106 percent of WAC or 106 percent of ASP is less, and would use the lower value for the specified amount. In circumstances in which all NDCs in the HCPCS code have neither manufacturer-reported ASP nor WAC price data available for the applicable calendar quarter, CMS proposes to use WAC price data from other public sources, if available, to calculate 106 percent of WAC, which will serve as the specified amount. CMS proposes to adopt this approach regardless of whether there is a price substitution for Medicare's payment during the quarter or whether other policies cause the published payment limit to differ from the specified amount. In circumstances in which negative or zero manufacturer ASP data is reported for all NDCs for a given quarter, that negative or zero ASP amount would be used to compare 106 percent of WAC to 106 percent of ASP to determine the lower value for use as the specified amount. CMS believes these proposals on treatment of missing pricing data and treatment of pricing differences between reported prices and the published payment limit for a billing and payment code will further clarify the application of the specified amount in the calendar quarter are consistent with the requirements set forth in section 1847A(i)(3)(A)(ii)(I) of the Act. CMS solicits comments on this policy.

(2) Identification of the Payment Amount Benchmark Quarter

In § 427.302(c), CMS proposes to codify policies from section 50.3 of the revised Medicare Part B Drug Inflation Rebate Guidance to identify the applicable payment amount benchmark quarter. Specifically, for drugs first approved or licensed by the FDA on or before December 1, 2020, and with a first marketed date on or before December 1, 2020, the payment amount benchmark quarter would be the calendar quarter beginning July 1, 2021. For subsequently approved drugs—that is, drugs approved or licensed by the FDA after December 1, 2020—the payment amount benchmark quarter would be the third full calendar quarter after a drug's first marketed date. Additionally, there may be cases where a drug was first approved or licensed on or before December 1, 2020, but with a

first marketed date after December 1, 2020, and the drug lacks ASP or WAC data to calculate the payment amount for the applicable calendar quarter beginning July 1, 2021. Under the policy applicable to drugs approved or licensed and with a first marketed date before December 1, 2020, such drugs would not have data to calculate the payment amount in the payment amount benchmark quarter. In these cases, CMS proposes to treat such drugs in the same manner as it would treat subsequently approved drugs and identify the payment amount benchmark quarter as the third full calendar quarter after a drug's first marketed date. CMS solicits comments on this policy proposal and specifically on our proposal to treat drugs approved or licensed on or before December 1, 2020, but with a first marketed date after December 1, 2020 as subsequently approved drugs.

For Part B rebatable drugs that were billed under a NOC code during the payment amount benchmark quarter, CMS stated in the revised Medicare Part B Drug Inflation Rebate Guidance that it would use the third full quarter after a drug was assigned a unique HCPCS code as the payment amount benchmark quarter. In this rulemaking, CMS proposes to determine the payment amount benchmark quarter as follows: For a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug's first marketed date, whichever is later, CMS proposes that the payment amount benchmark quarter be the third full calendar quarter after the Part B rebatable drug is assigned a billing and payment code other than a NOC code. CMS solicits comments on these proposals.

CMS continues to consider whether there is a need to identify additional or modified methodologies to appropriately determine the payment amount benchmark quarter for products with insufficient pricing data in the payment amount benchmark quarter or that otherwise do not fall squarely into the categories otherwise described in § 427.302(c) and in a manner that enables the calculation of rebate amounts consistent with section 1847A(i)(3) of the Act.

CMS has determined that ASP data are the most appropriate for identifying (1) the day on which the drug was first marketed and (2) which calendar quarter is the third full calendar quarter thereafter as the payment amount benchmark quarter for drugs first approved or licensed by the FDA after December 1, 2020, or licensed on or

before December 1, 2020, but with a first marketed date after December 1, 2020. CMS also has determined that it is most appropriate and administratively feasible to identify the first marketed date as the date of first sale of any NDC-11 within a billing and payment code among all products and package sizes under the same FDA application.

Additionally, CMS believes ASP data are accurate and reliable because manufacturers attest to the accuracy of their submitted data and have the ability to update these data quarterly. Therefore, in § 427.302(c), CMS proposes to codify existing policy from the revised Medicare Part B Drug Inflation Rebate Guidance on the identification of the payment amount benchmark quarter for each Part B rebatable drug. CMS would use the earliest first marketed date of any NDC ever marketed under any FDA application under which any NDCs that have ever been assigned to the billing and payment code for that Part B rebatable drug as of the applicable calendar quarter have ever been marketed. The earliest first marketed date would apply to all NDCs within a billing and payment code and to all products and package sizes marketed under the same FDA approved application. If the original NDC on which the first marketed date is based is terminated, the first marketed date for the associated billing and payment code would remain the same. By defining the first marketed date for the Part B rebatable drug at the level of the product's FDA approval, CMS would retain the same first marketed date for the billing and payment code even if the NDCs and/or billing and payment codes used to bill for the Part B rebatable drug change over time. In addition, when the date of first sale is missing from ASP data, CMS proposes to identify the first marketed date from alternative public sources, such as the National Institutes of Health's DailyMed.

Table 48 in this section provides an example, for illustration purposes only, of the application of first marketed date based on the earliest date of first sale of any NDC ever marketed under any NDA or BLA under which any NDCs that have ever been assigned to the billing and payment code as of the applicable calendar quarter have ever been marketed. In the example, NDC1 (marketed under NDA 000000) is first sold on January 15, 2022, and NDC2 (also marketed under NDA 000000) is first sold on October 15, 2023. Both NDCs are marketed under an NDA associated with HCPCS code X0000. The first marketed date for HCPCS code X0000 would be January 15, 2022,

because that date is the earliest date of first sale for any NDC that has ever been associated with an NDA or BLA within that HCPCS code as of the calendar quarter. If NDC2 were subsequently assigned to a new HCPCS code Y0000, the first marketed date for HCPCS Y0000 would similarly be January 15, 2022. In cases when NDCs that are marketed under different NDA/BLAs are

assigned to the same HCPCS code, using the example in the table in this section, NDC3 (marketed under NDA 111111) was first sold on November 1, 2024, and first billed under HCPCS Y0000, and the first marketed date for HCPCS Y0000 would remain January 15, 2022, as noted, given that HCPCS Y0000 includes NDC2, associated with NDA 000000. NDC3 was later assigned to a

new HCPCS code Z0000. Following CMS' approach, the first marketed date for HCPCS code Z0000 is November 1, 2024, because that is the earliest date of first sale for any NDC ever marketed under NDA 111111, which is the only NDA ever associated with Z0000 as of the calendar quarter.

TABLE 48: Example of Application of First Marketed Date at the FDA Approval Level

| Calendar Quarter | HCPCS Code | NDC | FDA Application Number | Date of First Sale for NDC | HCPCS Code Effective Date | Date of First Sale for Any NDC in NDA/BLA | First Marketed Date |
|------------------|------------|------|------------------------|----------------------------|---------------------------|---|---------------------|
| 2023 Q2 | X0000 | NDC1 | 000000 | 1/15/2022 | 4/1/2023 | 1/15/2022 | 1/15/2022 |
| 2023 Q3 | X0000 | NDC1 | 000000 | 1/15/2022 | 4/1/2023 | 1/15/2022 | 1/15/2022 |
| | | NDC2 | 000000 | 10/15/2023 | 4/1/2023 | 1/15/2022 | |
| 2023 Q4 | X0000 | NDC1 | 000000 | 1/15/2022 | 4/1/2023 | 1/15/2022 | 1/15/2022 |
| | | NDC2 | 000000 | 10/15/2023 | 4/1/2023 | 1/15/2022 | |
| 2024 Q1 | X0000 | NDC2 | 000000 | 10/15/2023 | 4/1/2023 | 1/15/2022 | 1/15/2022 |
| 2024 Q2 | X0000 | NDC2 | 000000 | 10/15/2023 | 4/1/2023 | 1/15/2022 | 1/15/2022 |
| 2024 Q3 | Y0000 | NDC2 | 000000 | 10/15/2023 | 7/1/2024 | 1/15/2022 | 1/15/2022 |
| 2024 Q4 | Y0000 | NDC2 | 000000 | 10/15/2023 | 7/1/2024 | 1/15/2022 | 1/15/2022 |
| | | NDC3 | 111111 | 11/1/2024 | 7/1/2024 | 11/1/2024 | |
| 2025 Q1 | Y0000 | NDC2 | 000000 | 10/15/2023 | 7/1/2024 | 1/15/2022 | 1/15/2022 |
| | Z0000 | NDC3 | 111111 | 11/1/2024 | 1/1/2025 | 11/1/2024 | 11/1/2024 |

(3) Identification of Payment Amount in the Payment Amount Benchmark Quarter

Section 1847A(i)(3)(C) of the Act specifies use of the "payment amount for the billing and payment code for such drug in the payment amount benchmark quarter" ("payment amount in the payment amount benchmark quarter") in the determination of the inflation-adjusted payment amount. While the specified amount and the payment amount in the payment amount benchmark quarter are similar, the statutory requirements for determining these two amounts differ. The specified amount for a Part B rebatable drug, as set forth in section 1847A(i)(3)(A)(ii)(I) of the Act, is based on item (aa) (for example, lesser of ASP+6 percent or WAC+6 percent) or

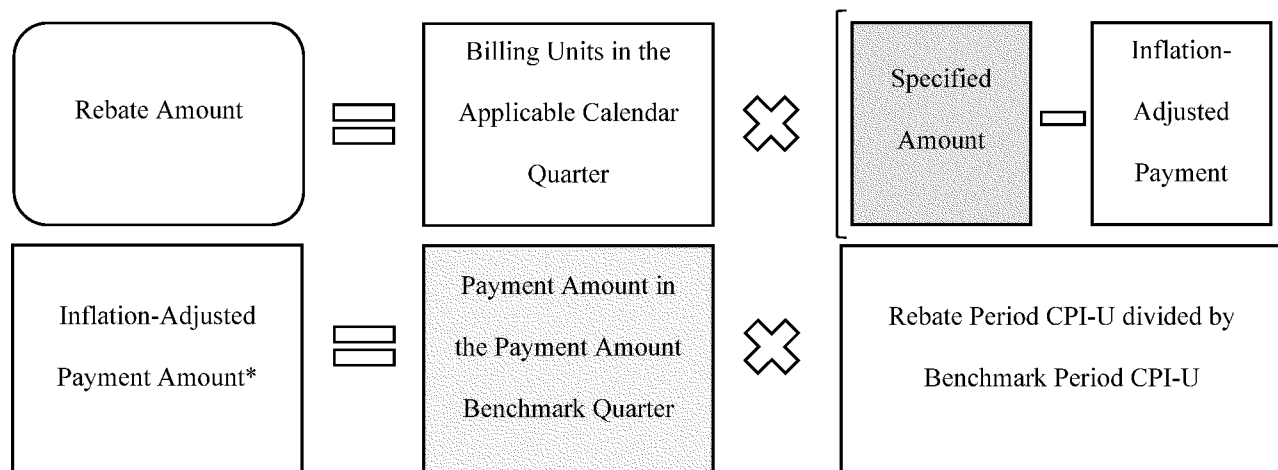

(bb) (that is, 100 percent of the ASP for the biosimilar biological product plus 6 percent of the lesser of ASP or WAC for the reference biological product). The payment amount in the payment amount benchmark quarter under section 1847A(i)(3)(C)(i) is based on various provisions within section 1847A of the Act (for example, the lesser of 106 percent ASP or WAC, WAC+3 percent, and price substitutions). To identify the payment amount in the payment amount benchmark quarter for the Part B rebatable drug by billing and payment code, in § 427.302(d), CMS proposes to codify the policies established in section 50.4 of the revised Medicare Part B Drug Inflation Rebate Guidance. CMS would use the published payment limit (as available) for the billing and payment code for the applicable payment amount benchmark quarter

determined in accordance with section 1847A of the Act. If a published payment limit is not available for the applicable payment amount benchmark quarters, CMS would use the lower of 106 percent of manufacturer-reported ASP or 106 percent of manufacturer-reported WAC. If neither a published payment limit nor manufacturer-reported ASP or WAC data are available, CMS would use WAC data from other public sources to calculate 106 percent of WAC, which, solely for the purposes of identifying the payment amount in the payment amount benchmark quarter, CMS would consider to be the payment amount for the payment amount benchmark quarter. Table 49 and Figure 3 illustrate the specified amount and payment amount in the payment amount benchmark quarter.

BILLING CODE P

TABLE 49: Comparison of Specified Amount and Payment Amount in the Payment Amount Benchmark Quarter

| Specified Amount | | Payment Amount in the Payment Amount Benchmark Quarter | |
|--|---|--|--|
| Purpose in Rebate Calculation | Pricing Methodology Under 1847A(i)(3)(A)(ii)(I) | Purpose in Rebate Calculation | Pricing Methodology Under 1847A(i)(3)(C)(i) |
| Part B amount described under 1847A(i)(3)(A)(ii)(I) for the calendar quarter in which a rebate may be assessed | <ul style="list-style-type: none"> • Lesser of ASP+6% or WAC+6% • In the case of a biosimilar biological product, 100% of ASP for the biosimilar biological product + 6% of the lesser of ASP or WAC for the reference biological product | Part B published payment limit for the payment amount benchmark quarter, which is generally the quarter beginning July 1, 2021 | <ul style="list-style-type: none"> • Various Part B pricing provisions consistent with section 1847A of the Act |

FIGURE 3: Use of the Specified Amount and the Payment Amount in the Benchmark Quarter in Rebate Calculations

* See the next section for information about identification and calculation of the inflation-adjusted payment amount.

BILLING CODE C

CMS notes that there may be situations when a Part B rebatable drug was previously billed under a grouped billing and payment code during the benchmark quarter and later billed under a unique billing and payment code, such as certain section 505(b)(2) drug products and single source drugs that were previously multiple source drugs. For example, a multiple source drug approved under an NDA may become a single source drug if all other therapeutically equivalent drugs are no longer marketed and the now-single source NDA is later shifted into a separately payable code. To identify the payment amount in the payment amount benchmark quarter for such drugs, CMS proposes to codify policy established in section 50.4 of the

Medicare Part B Drug Inflation Rebate Guidance and identify the grouped billing and payment code payment limit used by CMS for the payment amount in the payment amount benchmark quarter and use that payment limit for the benchmark quarter.

Finally, consistent with the policy established in section 50.4 of the revised Medicare Part B Drug Inflation Rebate Guidance, CMS would not apply a sequestration reduction to the payment amount in the payment amount benchmark quarter as part of the methodology to calculate a Part B inflation rebate amount.

(4) Identification of the Benchmark Period CPI-U

For each Part B rebatable drug by HCPCS code, the statute requires CMS

to identify the applicable benchmark period CPI-U. In accordance with section 1847A(i)(3)(E) of the Act, the benchmark period CPI-U for drugs first approved or licensed by the FDA on or before December 1, 2020, and with a first marketed date on or before December 1, 2020, is the CPI-U for January 2021, which is 261.582.⁵⁶⁸ CMS proposes to codify in § 427.302(e) policies established in section 50.5 of the revised Medicare Part B Drug Inflation Rebate Guidance. Specifically, the benchmark period CPI-U for drugs first approved or licensed on or before December 1, 2020, with a first marketed date after December 1, 2020, would be the CPI-U for the first month of the

⁵⁶⁸ CMS retrieved the January 2021 CPI-U from *bls.gov* on March 22, 2024.

third full calendar quarter after a drug's first marketed date. Additionally, CMS proposes to codify policies in revised guidance that the benchmark period CPI-U for subsequently approved drugs would be the first month of the first full calendar quarter after a drug's first marketed date in accordance with section 1847A(i)(4)(A) of the Act. Furthermore, CMS proposes to determine the benchmark period CPI-U for certain drugs previously billed under NOC codes as follows: For a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug's first marketed date, whichever is later, CMS proposes that the benchmark period CPI-U would be first month of the third full calendar quarter after the drug is assigned a billing and payment code other than a NOC code. CMS solicits comments on these proposals.

(5) Identification of the Rebate Period CPI-U

As specified in section 1847A(i)(3)(F) of the Act, in § 427.302(f), CMS proposes to codify the policy described in section 50.6 of the revised Medicare Part B Drug Inflation Rebate Guidance, that the rebate period CPI-U means the greater of the benchmark period CPI-U index level and the CPI-U index level for the first month of the calendar quarter that is 2 calendar quarters prior to the applicable calendar quarter in which the Part B rebatable drug is furnished. CMS will retrieve the CPI-U index level information from *bls.gov*.

(6) Determination of the Inflation-Adjusted Payment Amount

Section 1847A(i)(3)(C) of the Act specifies the determination of the inflation-adjusted payment amount. In § 427.302(g), CMS proposes to codify the policy established in section 50.7 of revised Medicare Part B Drug Inflation Rebate Guidance for determining the inflation-adjusted payment amount in accordance with this section of the Act. For each applicable calendar quarter and for each Part B rebatable drug by billing and payment code, CMS proposes to use the payment amount in the payment amount benchmark quarter (per § 427.302(d)), benchmark period CPI-U (per § 427.302(e)), and rebate period CPI-U (per § 427.302(f)) to identify the inflation-adjusted payment amount. Specifically, CMS would calculate the inflation-adjusted payment amount by dividing the rebate period CPI-U by the benchmark period CPI-U and then multiplying the quotient by the payment amount in the payment amount benchmark quarter.

iv. Determination of Total Number of Billing Units

For calendar quarters starting on or after January 1, 2023, CMS proposes in § 427.303 to codify policies established in section 50.8 of the revised Medicare Part B Drug Inflation Rebate Guidance to determine the number of billing units for each Part B rebatable drug by HCPCS code. Section 1847A(i)(3)(B) describes the total number of billing units of Part B rebatable drugs that should be included in the rebate calculation. These billing units include the number of billing units for the HCPCS code of the Part B rebatable drug furnished during the relevant calendar quarter minus billing units of drugs with respect to which the manufacturer provides a discount under the 340B Program, billing units with respect to which the manufacturer could have paid a Medicaid rebate, and billing units that are packaged into the payment amount for an item or service and are not separately payable. CMS further proposes codifying policy set forth in revised Medicare Part B Drug Inflation Rebate Guidance in § 427.303 to exclude billing units when a drug is no longer a Part B rebatable drug.

After identifying Part B rebatable drugs by HCPCS code (in accordance with policy proposed in §§ 427.10, 427.20, and 427.100 through 427.101) using final action claims in the CMS Medicare fee-for-service claims repository, CMS proposes to codify existing policy in the revised Medicare Part B Drug Inflation Rebate Guidance in § 427.303 to determine the total number of billing units for each HCPCS code as follows. CMS identifies claim lines for such HCPCS code for dates of service in the calendar quarter, excludes billing units in claim specified in section 1847A(i)(3)(B)(ii) of the Act, as applicable, and sums the number of billing units in the remaining claim lines for which Medicare payment was allowed and greater than zero. Including billing units where Medicare payment was allowed would ensure that billing units for which Medicare and some beneficiaries have financial liability would be counted in the total number of billing units.

CMS proposes to codify the policy in the revised Medicare Part B Drug Inflation Rebate Guidance in § 427.303 and will perform this process at least 3 months after the end of a calendar quarter to allow time for claims to be submitted, processed, and finalized. Subpart F of this proposed rule describes the proposed rebate process, including reports of rebate amounts, suggestion of error, and restatements.

CMS welcomes comment on the following policies and comments on any additional units that should be excluded from the rebate amount calculation.

(1) Units of Drugs Acquired Through the 340B Program

Section 1847A(i)(3)(B)(ii)(I) of the Act specifically excludes billing units of drugs for which the manufacturer provides a discount under the 340B Program from the billing units of drugs for which a manufacturer may otherwise have a Part B inflation rebate liability. CMS proposes codifying the policy described in section 50.8.1 of the revised Medicare Part B Drug Inflation Rebate Guidance in § 427.303 to remove separately payable billing units in claim lines that are billed with the "JG" or "TB" modifiers from identified final action claim lines.

On December 20, 2022, CMS issued program guidance that requires all 340B covered entities to include the "JG" or "TB" modifier, as applicable, on separately payable claim lines for drugs acquired through the 340B Program with dates of service beginning no later than January 1, 2024.⁵⁶⁹ CMS proposes to codify this requirement in § 427.303(b)(1)(ii). Furthermore, on November 22, 2023, in the CY 2024 OPPS final rule (88 FR 81791 through 81792), CMS finalized a policy to utilize a single 340B modifier ("TB"), requiring hospitals that currently report the "JG" modifier to use the "TB" modifier beginning January 1, 2025. As described in the final rule, in CY 2024, these hospitals can choose to continue to use the "JG" modifier or choose to transition to the use of "TB" modifier during that year. On December 14, 2023, CMS updated the December 20, 2022 guidance titled "Part B Inflation Rebate Guidance: Use of the 340B Modifiers" to align with the updated single modifier requirement.⁵⁷⁰

CMS proposes in § 427.303(b)(1)(i) to exclude separately payable billing units in claim lines for professional claims with dates of service during 2023 from suppliers that are covered entities listed by the HRSA 340B Office of Pharmacy Affairs Information System as participating in the 340B Program. CMS will use National Provider Identifier numbers and/or Medicare Provider Numbers to identify these suppliers and the claims submitted with such identifiers. CMS proposes to continue this approach for professional claims

⁵⁶⁹ See: <https://www.cms.gov/files/document/part-b-inflation-rebate-guidance340b-modifierfinal.pdf>.

⁵⁷⁰ See: <https://www.cms.gov/files/document/revised-part-b-inflation-rebate-340b-modifier-guidance.pdf>.

with dates of service during 2024. Consistent with the CMS updated 340B modifier guidance, CMS proposes in § 427.303(b)(1)(ii) excluding separately payable billing units in claim lines for institutional providers with the “JG” and “TB” modifiers from identified final action claims with dates of service through December 31, 2024. CMS proposes to codify policies established in section 50.8.1 of the revised Medicare Part B Drug Inflation Rebate Guidance in § 427.303(b)(1)(iii) by excluding separately payable billing units in claim lines with the “TB” modifier from identified final action claims with dates of service on or after January 1, 2025. CMS is proposing to use these modifiers to identify and exclude billing units for which a discount was acquired under the 340B Program because the “TB” modifier is an existing mechanism used to identify drugs acquired through the 340B Program and familiar to most 340B covered entities paid under the OPSS.

(2) Units With a Rebate Under Section 1927 of the Social Security Act

To receive payment under Medicaid for covered outpatient drugs, manufacturers must participate in the Medicaid Drug Rebate Program (that is, have a drug rebate agreement in effect with the Secretary of HHS) and are required to report certain pricing and drug product information and pay Medicaid drug rebates for covered outpatient drugs furnished and paid for under the Medicaid State plan. States invoice manufacturers no later than 60 days after the end of each calendar quarter on the number of units of each dosage form and strength of each covered outpatient drug furnished and paid for under the State plan. This invoice includes units of covered outpatient drugs that are furnished to dually eligible beneficiaries when the claim for the drug is paid for by Medicare Part B and the beneficiary’s cost sharing is covered by Medicaid. To determine unit counts for rebate calculations, at this time, in § 427.303(b)(2), CMS proposes codifying our policy described in revised Medicare Part B Drug Inflation Rebate Guidance in section 50.8.2 to exclude billing units from claims with dates of service during a month within a calendar quarter when the Medicare beneficiary has Medicaid coverage that may provide cost-sharing assistance. These are Qualified Medicare Beneficiary (QMB) Plus, Specified Low-Income Medicare Beneficiary (SLMB) Plus, QMB-only beneficiaries, and other full dually eligible beneficiaries. CMS further proposes codifying the policy in revised guidance that billing units for

Part B rebatable drugs furnished to Medicare beneficiaries with Medicaid coverage that does not include cost-sharing assistance (that is, SLMB Only, Qualified Disabled and Working Individuals (QDWI), and Qualifying Individuals (QI) beneficiaries) be included in rebate calculations. CMS would identify the months for which a beneficiary has Medicaid coverage with cost-sharing assistance using available information (for example the State MMA File of dually eligible beneficiaries) at the time the rebate amount is being calculated for a calendar quarter. CMS proposes codifying this policy as manufacturers pay rebates through the Medicaid Drug Rebate Program on units of covered outpatient drugs that are furnished to dually eligible beneficiaries when the claim for the drug is paid for by Medicare Part B and the beneficiary’s cost sharing is covered by Medicaid. CMS also considered excluding all units furnished to dually eligible individuals but is not proposing this alternative as it would result in the over exclusion of units.

(3) Units That Are Packaged Into the Payment Amount for an Item or Service and Are Not Separately Payable

As described earlier in this section, CMS proposes codifying our policy in section 50.8.3 of revised Medicare Part B Drug Inflation Rebate Guidance and only include claim lines with a Medicare allowed amount greater than zero. Because CMS proposes in § 427.303(b)(3) identifying billing units for separately payable claim lines for Part B rebatable drugs only, no further action would be necessary to exclude billing units that are packaged into the payment amount for an item or service and are not separately payable, such as drugs for which payment is packaged under the OPSS, or the Ambulatory Surgical Center (ASC) payment system, or those furnished in the Federally qualified health centers (FQHC) or rural health clinics (RHC) setting. CMS notes that claim lines for drugs for which payment is bundled under the End-Stage Renal Disease (ESRD) prospective payment system would not have a Medicare allowed amount that is greater than zero and such units would therefore be excluded.

In accordance with policies established in the CY 2024 OPSS/ASC final rule and codified in regulatory text at 88 FR 81540, CMS would except biosimilar biological products from the OPSS threshold packaging policy when their reference biological products are separately paid. This means that CMS would pay separately for these

biosimilar biological products even if their per-day cost is below the threshold packaging policy. Because units of these biosimilar biological products are not packaged into the payment amount for an item or service and are separately payable, they would be included in the Part B inflation rebate calculation if they are not qualifying biosimilar biological products.

(4) Units When a Drug Is No Longer a Part B Rebatable Drug

As described in section 1847A(i)(2) of the Act, multiple source drugs are not Part B rebatable drugs. A single source drug that is a Part B rebatable drug could become a multiple source drug at the start of or during a calendar quarter. In such cases, in § 427.303(b)(4), CMS proposes codifying policy in section 50.8.4 of the revised Medicare Part B Drug Inflation Rebate Guidance to identify the first marketed date, as described in § 427.20, of a drug product that is rated as therapeutically equivalent to such a drug under FDA’s most recent publication of Approved Drug Products with Therapeutic Equivalence Evaluations (commonly known as the FDA Orange Book⁵⁷¹) and determine whether the drug is no longer a Part B rebatable drug. In § 427.303(b)(4), CMS proposes to exclude billing units of such drug furnished on and after the first day of the calendar month in which the therapeutically equivalent drug was first sold or marketed during the applicable calendar quarter. CMS further proposes codifying policy that it may consult with the FDA for technical assistance in instances where there is ambiguity as to whether a new product is therapeutically equivalent. Units furnished on or after the calendar month of the first marketed date would be excluded from the units identified in accordance with § 427.303(b)(4)(iii).

(5) Operational Considerations Related to the Inclusion of Units Furnished to Beneficiaries Who Are Enrolled in Medicare Advantage (MA) Plans

Section 1847A(i) of the Act requires the manufacturer of a Part B rebatable drug to pay a rebate that, generally, is calculated based on the total number of billing units of that drug that were furnished in a calendar quarter, multiplied by the excess specified amount for the drug over a statutorily defined inflation-adjusted payment amount. The inclusion in this

⁵⁷¹ Accessible via <https://www.fda.gov/drugs/drug-approvals-and-databases/approved-drug-products-therapeutic-equivalence-evaluations-orange-book>.

calculation of billing units of drugs that are furnished to Medicare beneficiaries who are enrolled in MA plans poses significant operational complexities. At this time, CMS is not proposing to establish a policy on treatment of MA units in the calculation of Part B inflation rebates due to operational considerations, but may establish policy on this issue in future rulemaking. CMS solicits comments on this approach.

(6) Units Subject to Discarded Drug Refunds

In § 427.303(b)(5), CMS proposes a policy addressing the interaction between Part B inflation rebates and billing units of discarded drugs. Under the Infrastructure Investment and Jobs Act of 2021, section 90004, manufacturers are required to provide a refund to CMS for certain discarded amounts from separately payable single-dose container or single-use package drugs beginning January 1, 2023. To implement the discarded drugs refund provision of the Infrastructure Investment and Jobs Act of 2021, in the CY 2023 PFS final rule (87 FR 69711 through 69719), CMS finalized the requirement that providers and suppliers use the “JW” claim modifier for all separately payable drugs with discarded amounts of drugs from a single-dose container or from a single-use package Part B claims that bill for drugs and biological products to report discarded amounts. CMS also finalized a requirement for providers and suppliers to use the “JZ” modifier on claims that bill for drugs from single-dose containers that are separately payable under Medicare Part B when there are no discarded amounts to attest that no amount of drug was discarded and eligible for payment.⁵⁷² As of October 1, 2023, claims for drugs from single-dose containers that do not use the modifiers as appropriate may be returned until claims are properly resubmitted.

Although section 1847A(i)(3)(B)(ii) of the Act does not require that billing units of discarded drugs be excluded from Part B inflation rebates, CMS is proposing to exclude billing units of discarded drugs that are subject to discarded drug refunds from Part B inflation rebates. CMS believes not applying Part B inflation rebates to billing units of discarded drugs for which a refund is owed would balance fairness for manufacturers that owe refunds for billing units of discarded drugs with the need to fulfill the

requirements of section 11101 of the IRA.

As new policy not established in section 50.8.6 of the revised Medicare Part B Drug Inflation Rebate Guidance, CMS proposes to exclude billing units of a refundable single-dose container or single-use package drug as defined in § 414.902 (hereinafter referred to as “refundable drug”) subject to discarded drug refunds, from the calculation of rebate amounts during the reconciliation process except for calendar quarters in calendar year 2023. In the CY 2024 PFS final rule (codified in § 414.940), CMS finalized policy to send annual refund reports for discarded drug refunds for the 4 quarters of a calendar year at or around the time it sends Part B Inflation Rebate Reports for the first quarter of the following calendar year. Therefore, CMS invoices manufacturers for discarded drug refunds on an annual basis but CMS is required to invoice manufacturers for Part B inflation rebates on a quarterly basis.

Under the timeline for processing discarded drug refunds, data to determine which billing units of discarded drugs are subject to discarded drug refunds will generally not be available until after CMS issues the Rebate Report to the manufacturer. Due to these data limitations, CMS proposes to include all discarded billing units, including units of a refundable drug subject to the discarded drug refund (as defined in § 414.940), in the calculation of billing units for the Preliminary Rebate Report and the Rebate Report. CMS proposes to use data available during the reconciliation process to exclude billing units of discarded drugs that are subject to discarded drug refunds from the calculation of the rebate amount.

For calendar quarters in calendar year 2023, CMS proposes to exclude billing units of a refundable drug subject to discarded drug refunds from the calculation of the rebate amount before CMS issues the Rebate Report to the manufacturer. As permitted by section 1847A(i)(1)(C) of the Act, CMS is delaying reporting of rebate information required by section 1847A(i)(1)(A) for calendar quarters in calendar years 2023 and 2024 until no later than September 30, 2025. Under this timeline for calendar quarters in calendar year 2023, CMS will have data available regarding which billing units are subject to discarded drug refunds when CMS sends the Preliminary Rebate Report and Rebate Report in 2025 for calendar quarters in calendar year 2023 and can exclude these billing units from the

calculation of the rebate amount in these reports.

CMS solicits comments on the proposed approach to excluding billing units of a refundable drug subject to discarded drug refunds, from the calculation of Part B inflation rebate amounts during the reconciliation process, except for calendar quarters in calendar year 2023.

v. Adjustments for Changes to Billing and Payment Codes

Changes to billing and payment codes, including new code assignments and dose description changes, may occur.

When a new billing and payment code is assigned for a Part B rebatable drug and the code dose description, which determines that amount of drug in each billing unit, remains the same, CMS proposes to codify in § 427.304(b) the existing policy set forth in revised Medicare Part B Drug Inflation Rebate Guidance to use the benchmark quarter’s payment amount, the payment amount benchmark quarter, and the benchmark quarter CPI-U of the prior billing and payment code to calculate the per unit Part B rebate amount. For example, a single source drug or biological product may be assigned a new billing and payment code if it was initially assigned to a billing and payment code with other products and then later assigned a unique billing and payment code. In this situation, a multiple source drug in an NDA may become a single source drug if all its other therapeutically equivalent drugs are discontinued and the now-single source NDA is later shifted into a separately payable code.

When a Part B rebatable drug’s code dose description changes, CMS proposes to codify in § 427.304(a) policies established in section 50.9 of the revised Medicare Part B Drug Inflation Rebate Guidance and apply a conversion factor within the rebate calculation, when applicable. For example, a billing and payment code dose description that determines the amount of drug in each billing unit could be changed from 10mg to 5mg. If a billing and payment code dose description changes from 10mg to 5mg, the payment amount in the payment amount benchmark quarter for such drug was \$200 based on 10mg, and the rebate period payment amount is based on 5mg, then CMS would apply a conversion factor of 0.5 to the payment amount in the payment amount benchmark quarter (yielding \$100). In this example, the conversion factor would be based on the ratio of the current billing unit description to the

⁵⁷² See 87 FR 2512, November 18, 2022 (<https://www.federalregister.gov/d/2022-23873/p-2512>).

prior billing unit description (5mg/10mg = 0.5). In addition, to ensure consistency in how CMS is calculating a rebate when a billing and payment code's dose description changes, CMS proposes to apply a conversion factor before applying the percentage by which the rebate period CPI-U for the calendar quarter exceeds the benchmark period CPI-U to determine the inflation-adjusted payment amount.

In situations where a new billing and payment code is assigned for a Part B rebatable drug and the code dose description changes, CMS would apply a conversion factor, as appropriate, and use the benchmark quarter's payment amount, the payment amount benchmark quarter, and the benchmark quarter CPI-U of the prior billing and payment code to calculate the per unit Part B rebate amount—consistent with the policy in revised guidance that CMS

is proposing to codify in § 427.304(a) and (b).

To apply the provisions in section 1847A(i) of the Act appropriately, CMS also proposes in § 427.304(c) to codify existing policy to maintain a crosswalk between such changes or codes.

CMS solicits comment on these proposals.

e. Reducing the Rebate Amount for Part B Rebatable Drugs in Shortage and When There Is a Severe Supply Chain Disruption (§§ 427.400 Through 427.402)

Section 1847A(i)(3)(G) of the Act requires the Secretary to reduce or waive the rebate amount owed by a manufacturer for a Part B rebatable drug with respect to a calendar quarter in two cases: (1) when a Part B rebatable drug is described as currently in shortage on a shortage list in effect under section

506E of the FD&C Act at any point during the applicable period; and (2) when CMS determines there is a severe supply chain disruption during the applicable quarter for a Part B rebatable biosimilar biological product, such as a disruption caused by a natural disaster or other unique or unexpected event. The statute does not describe how CMS should reduce or waive inflation rebates in each of these cases.

To implement the statutory requirement under section 1847A(i)(3)(G), CMS proposes to codify in subpart E of part 427 existing policies described in sections 50.10, 50.11, and 50.12 of the revised Medicare Part B Drug Inflation Rebate Guidance to reduce the total rebate amount owed by a manufacturer in each of these cases, as summarized in Table 50 and discussed later in this section.

| | Drug Shortage | | Severe Supply Chain Disruption |
|--|---|---|--|
| Duration of Reduction | Indefinite for as long as drug is “currently in shortage” | | Four calendar quarters; manufacturer may request an extension for four additional quarters for up to eight calendar quarters total |
| Percent Reduction | Part B rebatable drug other than a plasma-derived product | Part B rebatable plasma-derived product | Part B rebatable biosimilar biological product |
| <i>First four consecutive calendar quarters</i> | 25% | 75% | 75% |
| <i>Second four consecutive calendar quarters</i> | 10% | 50% | 75% |
| <i>Subsequent calendar quarters</i> | 2% | 25% | Not applicable |

TABLE 50: Determination of Rebate Reduction Amount for Part B Rebatable Drugs

As proposed, the rebate amount owed would not be fully waived in either of the cases previously described. CMS believes the proposed rebate reduction policies balance providing appropriate financial relief for manufacturers in certain circumstances, including when there is a severe supply disruption resulting from exogenous circumstances outside of a manufacturer's control, while not incentivizing manufacturers to delay taking appropriate steps to resolve a drug shortage or severe supply chain disruption to avoid an obligation to pay rebates. CMS will continue to evaluate these policies and may update them in future years. CMS underscores that most shortages involve multiple source generic drugs,⁵⁷³ which are not

Part B rebatable drugs and thus are not subject to Part B drug inflation rebates. CMS solicits comments on the proposed approach.

i. Definitions

CMS proposes in § 427.400 to define the following terms applicable to proposed subpart E (§§ 427.400 through 427.402)—

- “Drug shortage” or “shortage”.
- “Plasma-derived product”.

Proposed § 427.400 also would codify definitions established in the revised Medicare Part B Drug Inflation Rebate Guidance for the following terms:

- “Currently in shortage”.
- “Natural disaster”.
- “Other unique or unexpected event”.
- “Severe supply chain disruption”.

ii. Reducing the Rebate Amount for Part B Rebatable Drugs Currently in Shortage

In proposed § 427.401, CMS proposes to codify the policy established in section 50.11 of the revised Medicare Part B Drug Inflation Rebate Guidance whereby CMS would reduce the total rebate amount for a Part B rebatable drug that is currently in shortage based on the length of time the drug is in shortage during a calendar quarter and decrease the amount of the reduction over time. CMS intends to use the shortage lists maintained by the FDA Center for Biologics Evaluation and Research (CBER) and Center for Drug Evaluation and Research (CDER) to determine whether a Part B rebatable drug is currently in shortage⁵⁷⁴ during

⁵⁷³ See: <https://www.iqvia.com/insights/the-iqvia-institute/reports-and-publications/reports/drug-shortages-in-the-us2023>.

⁵⁷⁴ For the purposes of this proposed rule, CMS uses the term “currently in shortage” to refer to Part B
Continued

a calendar quarter. CMS will not consider an NDC–10 in the status of “to be discontinued,” “discontinued,” or “resolved” to be “currently in shortage.” At this time, CMS intends to provide the same reduction in the rebate amount for Part B rebatable drugs currently in shortage regardless of the cause of the shortage.

CMS will not provide a full waiver of the rebate amount for drugs currently in shortage on an FDA shortage list, as providing a full waiver of the rebate amount could further incentivize manufacturers to delay taking appropriate steps that may resolve a shortage more expeditiously simply to maintain having the drug listed on FDA’s drug shortage list to avoid an obligation to pay rebates for an extended period. Further, in a report analyzing the root causes of drug shortages between 2013 and 2017, FDA found that more than 60 percent of drug shortages were the result of manufacturing or product quality issues, and providing a full waiver of the rebate amount in situations that may be within a manufacturer’s control could be perceived as rewarding manufacturers for poor quality management.⁵⁷⁵

CMS would be responsible for monitoring the status of a Part B rebatable drug on an FDA shortage list, and manufacturers would not need to submit any information to CMS to be eligible for a reduction of the rebate amount for a Part B rebatable drug that is currently in shortage.

To calculate the reduced total rebate amount for a Part B rebatable drug, in § 427.401(b), CMS proposes the following formula:

Reduced *Total Rebate Amount* = total rebate amount *multiplied by* (1 *minus* applicable percent reduction) *multiplied by* (percentage of time drug was currently in shortage during the calendar quarter) *added to* the total rebate amount *multiplied by* (1 *minus* percentage of time drug was currently in shortage during the calendar quarter)

For the purpose of this formula, for a Part B rebatable drug that is a plasma-derived product, in § 427.401(b)(2)(i), CMS proposes an applicable percent reduction of 75 percent for the first 4 consecutive calendar quarters such Part B rebatable drug is currently in shortage, 50 percent for the second 4 consecutive

calendar quarters, and 25 percent for each subsequent calendar quarter. For a Part B rebatable drug (including a biosimilar biological product) that is not a plasma-derived product, in § 427.401(b)(2)(ii), CMS proposes an applicable percent reduction of 25 percent for the first 4 consecutive calendar quarters such Part B rebatable drug is currently in shortage, 10 percent for the second 4 consecutive calendar quarters, and 2 percent for each subsequent calendar quarter.

Because drugs and biologicals on the FDA shortage lists are maintained at the NDC–10 level, and Part B drug inflation rebates are calculated at the HCPCS level, CMS proposes in § 427.401(c) that if any NDC–10 assigned to the HCPCS code(s) is currently in shortage, CMS would apply the rebate reduction to all of the NDCs under the relevant HCPCS code(s). CMS will closely monitor market data for the Part B rebatable drugs for which the rebate is reduced to ensure the integrity of the application of the rebate reduction policy.

CMS intends to provide a reduction in the rebate amount for as long as a Part B rebatable drug is currently in shortage. CMS believes the rebate reduction should be proportional to the time the drug is currently in shortage and decrease over time to balance providing financial relief to manufacturers experiencing a drug shortage while not incentivizing manufacturers to delay taking appropriate steps to resolve a shortage simply to maintain having the drug listed on an FDA shortage list to avoid an obligation to pay rebates for an extended period.

To determine the percentage of time a Part B rebatable drug was currently in shortage during the calendar quarter, as proposed in § 427.401(b)(3), CMS would count the number of days such drug is currently in shortage in a calendar quarter and divide by the total number of days in that calendar quarter.

In § 427.401(b)(2), CMS proposes codifying the policy set forth in section 50.11 of the revised Medicare Part B Drug Inflation Rebate Guidance to apply a greater applicable percent reduction for plasma-derived products than non-plasma derived products because the former rely on a variable supply of donated blood plasma that can impact downstream production and therefore hamper the ability to promptly resolve a shortage.

When the status of a Part B rebatable drug changes from currently in shortage to resolved during a calendar quarter and then changes to currently in shortage during one or more of the subsequent three calendar quarters, CMS would apply the shortage

reduction as if there was a continuous shortage beginning with the quarter in which the drug has re-entered a shortage and move to the percent reduction applicable for the second four consecutive quarters. (In this scenario, once this drug enters its fifth quarter of shortage from the first quarter in which it was listed as currently in shortage, the applicable percent reduction would be 50 percent for the fifth through eighth calendar quarters for a Part B rebatable drug that is a plasma-derived product and 10 percent for a Part B rebatable drug that is not a plasma-derived product.) When the status of a Part B rebatable drug changes from currently in shortage to resolved and either remains in the status of resolved or is removed from the list for at least 4 full consecutive calendar quarters and then subsequently reemerges on a shortage list, CMS would treat the subsequent shortage as a new shortage and would apply the applicable percent reduction for the first 4 consecutive calendar quarters.

iii. Reducing the Rebate Amount for Part B Rebatable Biosimilar Biological Products When There Is a Severe Supply Chain Disruption

In § 427.402 of this proposed rule, CMS proposes to codify the policy established in section 50.12 of the revised Medicare Part B Drug Inflation Rebate Guidance for rebate reductions when CMS determines there is a severe supply chain disruption during a calendar quarter. As proposed in § 427.402(b)(1), CMS would provide a time-limited standard reduction of 75 percent in the total rebate amount for a Part B rebatable biosimilar biological product when CMS determines there is a severe supply chain disruption during the calendar quarter, such as that caused by a natural disaster or other unique or unexpected event. To receive a rebate reduction in accordance with proposed § 427.402(b)(1), the manufacturer would have to submit to CMS a rebate reduction request⁵⁷⁶ that meets the eligibility requirements in proposed § 427.402(c). A rebate reduction request should specify each NDC–11 and HCPCS code to which the request applies and if CMS grants a manufacturer’s request for an NDC–11, CMS proposes in § 427.402(b)(3) that the rebate reduction would apply to all the NDC–11s under the relevant HCPCS code. CMS has proposed additional

B rebatable drugs that are in the status of “currently in shortage” on the CDER shortage list, as well as biological products listed on CBER’s current shortages list.

⁵⁷⁵ See: <https://www.fda.gov/media/131130/download?attachment#page=33>.

⁵⁷⁶ The rebate reduction request forms are currently going through the Paperwork Reduction Act approval process under the document identifier CMS–10858. The proposed collection was published for a 30-day comment period in the June 3, 2024 *Federal Register* (89 FR 47563).

submission requirements for rebate reduction requests in the information collection request under OMB control number: 0938–NEW (CMS–10858).

As proposed in § 427.402(c)(4), CMS would grant a reduction in the rebate amount owed if a manufacturer of an eligible drug submits to CMS a request in writing demonstrating supply chain disruption has occurred during the calendar quarter, (2) the severe supply chain disruption directly affects the manufacturer itself, a supplier of an ingredient or packaging, a contract manufacturer,⁵⁷⁷ or a method of shipping or distribution that the manufacturer uses in a significant capacity to make or distribute the Part B rebatable biosimilar biological product, and (3) the severe supply chain disruption was caused by a natural disaster or other unique or unexpected event. As proposed in § 427.402(c)(2), for a natural disaster or other unique or unexpected event occurring on or after August 2, 2024, that the manufacturer believes caused a severe supply chain disruption, the manufacturer must submit the rebate reduction request within 60 calendar days from the first day that the natural disaster or other unique or unexpected event occurred or began in order for CMS to consider a rebate reduction.

CMS believes that severe supply chain disruptions generally take time to resolve and for purposes of this proposed rule, CMS proposes in § 427.402(a) to codify the policy established in section 50.12 of the revised Medicare Part B Drug Inflation Rebate Guidance whereby a determination that a severe supply chain disruption has occurred would be deemed to disrupt the supply chain for the quarter in which the event occurred and the three subsequent calendar quarters. If the manufacturer makes a timely request that includes all the supporting documentation and CMS determines, based on its review of the reduction request and supporting documentation, that a reduction should be granted, CMS would reduce the total rebate amount owed by a manufacturer by 75 percent for the calendar quarter in which the event that caused the severe supply chain disruption occurred or began, or the following calendar quarter if the request is submitted less than 60

calendar days before the end of a calendar quarter, and the three calendar quarters thereafter.

CMS proposes in § 427.402(c)(5) that if the manufacturer believes a severe supply chain disruption continues into a fifth consecutive calendar quarter after the start of the natural disaster or other unique or unexpected event, the manufacturer may request a reduction of the rebate amount for the fifth through eighth calendar quarters by submitting a rebate reduction extension request to CMS along with any new supporting documentation. CMS has proposed additional submission requirements for rebate reduction extension requests in the information collection request under OMB control number: 0938–NEW (CMS–10858). As proposed in § 427.402(c)(5)(ii), a rebate reduction extension request and any new supporting documentation must be submitted at least 60 calendar days before the start of the fifth calendar quarter in order for CMS to consider a rebate reduction extension.

If the manufacturer submits a complete and timely extension request, and CMS determines that the information submitted warrants an extension of the rebate reduction, the total rebate amount would be reduced by 75 percent for the fifth through eighth calendar quarters for that manufacturer's Part B rebatable biosimilar biological product, in accordance with proposed § 427.402(b)(2).

Consistent with the policy established in section 50.12 of the revised Medicare Part B Drug Inflation Rebate Guidance, a manufacturer may receive only one extension of the rebate reduction per Part B rebatable biosimilar biological product per CMS determination of a severe supply chain disruption, as proposed in § 427.402(c)(5). Said differently, the severe supply chain disruption rebate reduction would be limited to 8 consecutive calendar quarters total per Part B rebatable biosimilar biological product per CMS determination of a severe supply chain disruption.

As proposed in § 427.402(b)(4)(i), if the manufacturer believes there are multiple events causing severe supply chain disruptions during the same four calendar quarters for the same Part B rebatable biosimilar biological product and submits multiple rebate reduction requests for the same product, CMS will grant no more than one rebate reduction for that Part B rebatable biosimilar biological product for those 4 consecutive calendar quarters. For example, if the manufacturer of a Part B rebatable biosimilar biological product

is granted a severe supply chain disruption rebate reduction request for its product due to a natural disaster that occurred in January 2025 and then experiences a second severe supply chain disruption caused by a second, distinct natural disaster in July 2025, CMS would not grant the second rebate reduction request. That is, the manufacturer would receive the 75 percent reduction for four calendar quarters for the severe supply chain disruption caused by the first natural disaster but would not receive a reduction for the second natural disaster. However, if the second natural disaster exacerbated the severe supply chain disruption caused by the first natural disaster, the manufacturer may reflect such circumstances in its request for an extension of the rebate reduction for the fifth through eighth calendar quarters.

As proposed in § 427.402(b)(4)(ii), if CMS grants a severe supply chain disruption rebate reduction request for a Part B rebatable biosimilar biological product, and the product appears as currently in shortage during one of the same four calendar quarter(s) as for which the severe supply chain disruption reduction was granted, CMS would apply the 75 percent reduction to the four calendar quarters for which the severe supply disruption request was granted and would not grant any additional reduction for the shortage status during those quarters. For any subsequent calendar quarters that the Part B rebatable biosimilar biological product appears as currently in shortage, CMS would reduce the rebate amount in accordance with the drug shortages reduction proposed in § 427.401, starting with the highest reduction (that is, 75 percent for a plasma-derived product and 25 percent for a Part B rebatable drug that is not a plasma-derived product). For example, if CMS grants a severe supply chain disruption rebate reduction request for a Part B rebatable biosimilar biological product that was submitted on February 15, 2024, and that product is currently in shortage from December 15, 2024 until May 15, 2025, CMS would apply a 75 percent reduction in the total rebate amount to all four calendar quarters in 2024, and then would apply the shortages reduction as proposed in § 427.401, beginning with a reduction of 25 percent for a Part B rebatable biosimilar biological product or 75 percent in the case of a plasma-derived product that is a Part B rebatable biosimilar biological product for the first two calendar quarters of 2025.

As proposed in § 427.402(b)(4)(iii), if a Part B rebatable biosimilar biological

⁵⁷⁷ A contract manufacturer is a party that performs one or more manufacturing operations on behalf of a manufacturer(s) of active pharmaceutical ingredients (APIs), drug substances, in-process materials, finished drug products, including biological products, and combination products. See "Contract Manufacturing Arrangements for Drugs: Quality Agreements Guidance for Industry," November 2016: <https://www.fda.gov/media/86193/download>.

product that is currently in shortage experiences a severe supply chain disruption, the manufacturer may submit a request for a severe supply chain disruption rebate reduction. If CMS grants the rebate reduction request, the rebate amount would be reduced by 75 percent for the duration of 4 consecutive calendar quarters (that is, the calendar quarter in which the event that caused the severe supply chain disruption occurred and the three calendar quarters thereafter), and CMS would not grant any additional reduction under § 427.401 for the currently in shortage status during those 4 calendar quarters. If CMS receives the request and all supporting documentation describing the natural disaster or other unique or unexpected event causing the severe supply chain disruption less than 60 days before the end of a calendar quarter, CMS would apply the 75 percent rebate reduction to the next calendar quarter and to the three subsequent calendar quarters thereafter. For example, if a Part B rebatable biosimilar biological product that is currently in shortage in the calendar quarter beginning October 1, 2024, is granted a severe supply chain disruption rebate reduction request as a result of a natural disaster that occurs on October 20, 2024, CMS would apply a 75 percent reduction in the rebate amount for the duration of the calendar quarter in which the natural disaster occurred and the three subsequent calendar quarters thereafter (that is, October 1, 2024, to September 30, 2025). In this same example, if the natural disaster instead occurs on November 20, 2024, CMS would apply the shortages reduction proposed in § 427.401 for the calendar quarter beginning October 1, 2024, and ending on December 31, 2024, and then a 75 percent reduction under the severe supply chain disruptions policy to the next calendar quarter and the three subsequent calendar quarters thereafter (that is, January 1, 2025 to December 31, 2025).

In proposed § 427.402(c)(6), CMS proposes to review rebate reduction requests and rebate reduction extension requests within 60 calendar days of receipt of all documentation, if feasible, beginning with the calendar quarter that begins on October 1, 2024. CMS will begin accepting rebate reduction requests and rebate reduction extension requests upon completion of the Paperwork Reduction Act (PRA) process, including for severe supply chain disruptions caused by a natural disaster or other unique or unexpected event that occurred on or after January 1, 2023, prior to completion of the PRA

process. If a manufacturer's rebate reduction request does not meet the criteria in proposed § 427.402(c)(4) or if the rebate reduction request is incomplete or untimely based on the requirements in proposed § 427.402(c), CMS would deny the request. CMS also proposes that if a manufacturer's rebate reduction extension request does not meet the criteria in proposed § 427.402(c)(5), is incomplete or untimely based on the requirements in proposed § 427.402(c)(5), or if a reduction under proposed § 427.402(b)(1) was not provided for such Part B rebatable biosimilar biological product, CMS would deny the rebate reduction extension request. As proposed in § 427.402(c)(6)(iii), CMS' decisions to deny a request would be final and not be subject to an appeals process.

As proposed at § 427.402(c)(7), CMS would keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. CMS proposes that information provided as part of a severe supply chain disruption rebate reduction request that the submitter indicates is a trade secret or confidential commercial or financial information would be protected from disclosure if CMS determines the information meets the requirements set forth under Exemptions 3 and/or 4 of the Freedom of Information Act (FOIA). In addition to the protections under the FOIA for trade secrets and commercial or financial information obtained from a person that is privileged or confidential, the Trade Secrets Act at 18 U.S.C. 1905 requires executive branch employees to protect such information. CMS would protect confidential and proprietary information as required by applicable law.

f. Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments (§§ 427.500 Through 427.505)

Section 1847A(i)(1)(A) of the Act requires the Secretary to provide a report to each manufacturer of a Part B rebatable drug with the following information not later than 6 months after the end of an applicable calendar quarter: (1) the total number of billing units for each Part B rebatable drug; (2) the amount, if any, of the excess average sales price increase (the amount by which the specified amount exceeds the inflation-adjusted payment amount as calculated in proposed § 427.301(g)) for an applicable calendar quarter; and (3) the rebate amount for the Part B rebatable drug. In compliance with section 1847A(i)(1)(B) of the Act, manufacturers of a Part B rebatable drug

must provide a rebate for each Part B rebatable drug no later than 30 calendar days after the receipt of the information provided by the Secretary in section 1847A(i)(1)(A) of the Act.

To fulfill this statutory requirement, CMS is proposing to provide a Preliminary Rebate Report followed by a Rebate Report, as described in proposed § 427.501(b) and (c), to all manufacturers of a Part B rebatable drug, even if the amount due is \$0; all rebate amounts would be subject to reconciliation as proposed in § 427.501(d). As proposed in § 427.501(d)(4), CMS does not intend to send notice to manufacturers for drugs that are not considered rebatable pursuant to proposed § 427.20.

Additionally, to address the completeness and accuracy of the rebate amount, CMS proposes to conduct one regular reconciliation to determine whether the rebate amount should be adjusted due to updated claims and payment data used in the calculation of such rebate amount (specified in proposed § 427.501(b)(1)) to occur 12 months after the issuance of the Rebate Report. The reporting process for reconciliation will be the same process described for the original Rebate Report, with payment due for any outstanding rebate amount 30 days after receipt of a report with a reconciled rebate amount. In addition to regular reconciliation, CMS proposes a process to conduct reconciliation of the rebate amount as needed to correct agency error and when CMS determines that the information used by CMS to calculate a rebate amount was inaccurate due to manufacturer misreporting.

CMS believes conducting a reconciliation for the Part B Rebate Program is important in ensuring the accuracy of the rebate amount and for programmatic alignment with the Part D Rebate Program.

i. Definitions

In proposed § 427.500, CMS proposes the following term applicable to proposed subpart F (§§ 427.500 through 427.505):

- "Date of receipt".

For example, if CMS issues a Rebate Report through the method and process described in § 427.504 on June 30, 2026, then July 1, 2026, will be the date of receipt and day one of the 30-calendar-day payment period.

ii. Reports of Rebate Amounts and Suggestion of Error

Consistent with the process specified in section 60 of the revised Medicare Part B Drug Inflation Rebate Guidance involving preliminary and final reports,

CMS proposes to codify a multi-step process to provide a manufacturer as defined in § 427.20 with the rebate information specified in section 1847A(i)(1)(A) of the Act. CMS considered the following factors in determining a method and process for providing the rebate information: meeting statutorily provided deadlines in section 1847A(i) of the Act (for example, dates by which to provide the rebate amount to the manufacturer); the operational time to acquire the relevant information specified in the proposed part 427; the operational time to calculate the rebate amount specified in subpart D of the proposed part 427; clarity of the information provided as well as potential burden on manufacturers; and how to ensure accuracy of the rebate amount.

CMS proposes at proposed § 427.501 the use of an initial Preliminary Rebate Report and a subsequent Rebate Report, with an opportunity for manufacturers to identify certain mathematical errors (see proposed § 427.503 and discussed in further detail later in this section) and one regular reconciliation of the rebate amount to account for data revisions 12 months after the Rebate Report is provided. CMS proposes at proposed § 427.501(d)(1), to conduct a reconciliation 12 months after issuance of the subsequent Rebate Report specified in § 427.501(c) to include any restatements that have occurred in the drug pricing data and claims billing data reported to CMS and used in the rebate calculation specified in subpart D of the part.

CMS proposes in proposed § 427.501 that the multi-step reporting process for providing rebate information to a manufacturer would include: (1) an initial report, which CMS proposes to entitle the “Preliminary Rebate Report” in proposed § 427.501(b) and (2) a second report, which CMS proposes to entitle the “Rebate Report” in proposed § 427.501(c). The Rebate Report would serve as the invoice for the rebate amount due, if any, for each NDC that has been assigned to a billing and payment code for a product determined to be a Part B rebatable drug for the applicable calendar quarter, as specified in proposed § 427.101. Manufacturers of Part B rebatable drugs would receive a Rebate Report for their rebatable drugs even if the amount due is \$0. CMS proposes at proposed § 427.501(d)(1) a regular reconciliation of the rebate amount to occur 12 months after issuance of the subsequent Rebate Report specified in proposed § 427.501(c).

As the first step in the reporting process, as proposed in proposed

§ 427.501(b) and consistent with section 60 of the revised Medicare Part B Drug Inflation Rebate Guidance, CMS would provide the manufacturer of a Part B rebatable drug with the preliminary rebate amount through a Preliminary Rebate Report that is provided to each manufacturer of a Part B rebatable drug at least 1 month prior to the issuance of the Rebate Report specified in proposed § 427.501(c) for an applicable calendar quarter (that is, at least 5 months after the end of the applicable calendar quarter). To facilitate manufacturer understanding of the Preliminary Rebate Report, CMS is proposing in proposed § 427.501(b)(1) that the Preliminary Rebate Report would include the following information: the NDC(s) and billing and payment code for the Part B rebatable drug as specified in proposed § 427.20, the total number of billing units as specified in proposed § 427.303; the payment amount in the payment amount benchmark quarter as specified in proposed § 427.302(d); the applicable calendar quarter specified amount as specified in proposed § 427.302(b); the applicable benchmark period and rebate period CPI-Us as specified in proposed § 427.302(e) and (f); the inflation-adjusted payment amount as specified in proposed § 427.302(g); the amount, if any, by which the specified amount as described in proposed § 427.302(b) exceeds the inflation-adjusted payment amount as described in proposed § 427.302(g) for the Part B rebatable drug for the applicable calendar quarter as determined under proposed § 427.302; any applied reduction as described in proposed §§ 427.401 and 427.402; and the rebate amount due as specified in proposed § 427.301(a).

When determining what information should be included on rebate reports, CMS considered the statutory requirements outlined in section 1847A(i)(1)(A) of the Act to determine which data elements are necessary to review the Preliminary Rebate Report for error (described later in this section) and to protect proprietary information. In response to comments on the initial Medicare Part B Drug Inflation Rebate Guidance, CMS has proposed to disclose data elements as suggested by interested parties that are not enumerated in the statute, such as the applicable benchmark period and rebate period CPI-Us. CMS acknowledges requests from interested parties to provide additional data elements such as claims-level data at the NDC–11 level, that are not included in this proposal. CMS considered these requests in development of this proposed rule but does not believe it

necessary to provide further information to fulfill its statutory obligation and believes that the potential benefit to manufacturers of additional data are outweighed by the administrative burdens additional reporting would impose to the agency. The elements listed above provide sufficient information for a manufacturer review of the Preliminary Rebate Report for mathematical error, while protecting proprietary information, and these elements are operationally feasible for CMS to provide. CMS believes the elements listed in proposed § 427.501(b)(1) satisfy these considerations.

By structuring the Rebate Report process to include a Preliminary Rebate Report before the Rebate Report, CMS is able to provide manufacturers with an opportunity to review the Preliminary Rebate Report before the rebate amount is invoiced via the Rebate Report. While CMS is not required to provide a preliminary report, CMS seeks to facilitate manufacturer understanding of the report and believes it would be beneficial for manufacturers to review the report for mathematical errors that can be corrected before invoicing via the Rebate Report. Further, a Preliminary Rebate Report would provide additional notice to manufacturers regarding whether they may owe a rebate amount.

In proposed § 427.503, CMS proposes a process in which a manufacturer may suggest to CMS that the manufacturer believes the Preliminary Rebate Report includes a mathematical error within 10 calendar days after the date of receipt of the Preliminary Rebate Report. For example, if the Preliminary Rebate Report is provided on May 31, 2026, then June 1, 2026, would be the date of receipt and, therefore, day one of the 10-calendar-day period to submit a Suggestion of Error. In this example, Suggestions of Error would be due by 11:59 p.m. PT on June 10, 2026. CMS reviewed comments on the 10-day Suggestion of Error period submitted in response to the initial Medicare Part B Drug Inflation Rebate Guidance, many of which suggested that manufacturers receive at least 30 days to review the Preliminary Rebate Report. CMS considered a 10-day, 15-day, and 30-day Suggestion of Error period and believes a 10-calendar-day period (see proposed § 427.503(c)) is sufficient after considering the volume of the data to be provided to manufacturers, the narrow scope of items that may be identified as a Suggestion of Error, and the operational time necessary for CMS to provide a Rebate Report within 6 months of the end of the applicable calendar quarter as required under

section 1847A(i)(1)(A) of the Act. However, CMS proposes in proposed § 427.502(c)(1)(ii) to expand the Suggestion of Error period to 30 calendar days for the Preliminary Rebate Report for calendar year 2023 and calendar year 2024. This extended Suggestion of Error period will provide additional time and flexibility during the first invoicing cycle of the Part B Rebate Program.

Section 1847A(i)(8) of the Act precludes administrative or judicial review on the determination of units, whether a drug is a Part B rebatable drug, and the calculation of the rebate amount (see proposed § 427.503(a)(1)). Therefore, the Suggestion of Error process will be limited to mathematical steps involved in determining the rebate amount and the elements precluded from administrative or judicial review will not be considered in-scope for the Suggestion of Error process. Additionally, CMS is not providing an administrative dispute resolution process. CMS intends to consider all in-scope submissions under the Suggestion of Error process as specified in proposed § 427.503(a) (for example, suggestions regarding a mathematical error). CMS does not intend to review suggestions of error that are out-of-scope or submissions for a rebatable drug with an amount due of \$0.

As the second step in the reporting process, CMS proposes in proposed § 427.501(c) to provide the rebate amount to the manufacturer through the Rebate Report no later than 6 months after the end of the applicable calendar quarter. As proposed in § 427.501(c)(1), the Rebate Report would include the same data elements as the Preliminary Rebate Report (specified in § 427.501(b)(1)) and include any recalculations based on CMS acceptance of a manufacturer's Suggestion of Error from proposed § 427.503, or any CMS-determined recalculations from proposed § 427.501(d)(2), if applicable. Manufacturers must pay the rebate amount within 30 calendar days from the date of receipt of the Rebate Report (see proposed § 427.505(a)). For example, if the Rebate Report is provided on June 30, 2026, then July 1, 2026, would be the date of receipt and therefore day one of the 30-calendar-day payment period; payment would be due no later than 11:59 p.m. PT on July 30, 2026.

In proposed §§ 427.504 and 427.505, CMS proposes that it will establish a standard method and process to issue Rebate Reports and accept manufacturer rebate payments. This method and process may include an online portal administered by a CMS contractor

which would provide manufacturers with access to their Rebate Reports, submit Suggestions of Error, and pay a rebate amount due. CMS intends to provide technical instructions separate from this rulemaking to manufacturers of Part B rebatable drugs regarding how to access Rebate Reports and how to receive notifications alerting the manufacturer when information is available. CMS also intends to issue reminder notices to manufacturers regarding the due date of rebate payments. In proposed § 427.504(a), CMS notes that the manufacturer that may access Rebate Reports and make applicable rebate amount payments is the manufacturer responsible for paying a rebate and, as stated above, CMS proposes to identify the manufacturer that is responsible for paying a rebate using the same approach used for reporting ASP and Medicaid Drug Rebate Program data.

iii. Reconciliation of a Rebate Amount

As discussed in section 60 of the revised Medicare Part B Drug Inflation Rebate Guidance, CMS considered options for establishing a standardized method and process at regular intervals to determine any appropriate adjustments to the rebate amount for a Part B rebatable drug for an applicable calendar quarter to account for revised information as well as options for recalculation based on CMS identifying an agency error or determining manufacturer data was misreported. While the provisions in 1847A(i) of the Act do not expressly provide for reconciliation in the Medicare Part B Drug Inflation Rebate Program, CMS has determined that a process for reconciling the rebate amount for updated information is necessary and appropriate to promote the accuracy of the rebate amount for each drug for each applicable calendar quarter. CMS is proposing policies for reconciliation, including with respect to enforcement of payment of any reconciled rebate amount, consistent with both the statutory framework for the Part B Inflation Rebate Program and the express authority in sections 1102 and 1871 of the Act to adopt regulations for the proper administration of the Medicare Prescription Drug Inflation Rebate Program.

As proposed at § 427.501(d), CMS believes that it is necessary and appropriate for CMS to recalculate the rebate amount for an applicable calendar quarter at a regular interval to include updated information about key data elements included in the calculation of the rebate amount. These data elements as set forth in proposed

§ 427.501(d)(1)(i) include: total units; the payment amount in the payment amount quarter; and any applied reductions as described in proposed §§ 427.401 and 427.402. Updating these calculation inputs at a regular reconciliation interval will result in a rebate amount that more fully reflects the majority of shifts in the underlying data following additional time for claims run-out, which refers to the maturation of claims in the claims processing system. Because the information accessed represents the claims' status in the claims processing system at that moment in time, additional claims run-out may yield different information, either because more claims with dates of service during the applicable calendar quarter were finalized and added to the claims processing system or because the status of the existing claims changed. CMS refers to "X months of run-out" as the period between the end of the applicable calendar quarter and the date when CMS accesses information about the claims; for example, "3 months of run-out" means that claims data are accessed for claims with service dates during an applicable calendar quarter 3 months after the end of such applicable calendar quarter. Conducting a reconciliation of the rebate amount with additional claims run-out will improve the accuracy of the rebate amount. Additionally, reconciliation of payment amounts is consistent with the approach to the calculation of payment amounts in other CMS programs (such as the Coverage Gap Discount Program) that provide for a reconciliation period.

CMS notes that the reconciliation of a rebate amount, whether the regular reconciliation proposed at § 427.501(d)(1) or a discretionary reconciliation proposed at § 427.501(d)(2) discussed further below, will not create a separately payable and distinct rebate amount. Rather, reconciliation updates the prior rebate amount owed to CMS, if any, by a manufacturer of a Part B rebatable drug so that the rebate amount ultimately reflects a more precise calculation of the rebate amount, as required by section 1847A(i) of the Act, to account for shifts in the underlying data following additional time for claims run-out after the Rebate Report is issued as well as subsequently identified data integrity issues. Moreover, because the reconciled rebate amount is an adjustment to the prior rebate amount, CMS proposes at § 427.501(d)(1)(i)(F) for the report of a reconciled rebate amount to also identify the difference between the rebate amount due as specified on

the Rebate Report set forth in § 427.501(c) and the reconciled rebate amount. CMS would only collect the net rebate amount due, if any, upon reconciliation, so as to prevent any duplicate payments. CMS also proposes to refund any overpayment made by a manufacturer, as determined during reconciliation, as discussed in proposed § 427.505(c).

Additionally, as CMS suggested in section 60 of the revised Medicare Part B Drug Inflation Rebate Guidance, CMS considered multiple options for establishing a standardized method and process to occur at regular intervals to determine any appropriate adjustment to the rebate amount for a Part B rebatable drug for an applicable calendar quarter to account for revised information prior to adopting the proposal described here with for reconciliation of the Part B inflation rebate amount at 12 months. CMS considerations included the length of time needed to capture relevant changes to data inputs for recalculation, whether the timing should align with the reconciliation of Part D rebate amounts, and manufacturer burden. Specifically, CMS considered the average time span needed to ensure submission of the majority of revisions from claims run-out periods for Part B,⁵⁷⁸ and how such unit revisions compare to the Part D plan unit revisions specified in section 1860D–14B(b)(6) of the Act. CMS also considered the average time span needed to ensure the majority of Part B claims submitted would already be adjudicated and determined to be final action claims, CMS' policies related to the frequency of ASP restatements, the reporting timeline for refunds on discarded drug units, and reporting timelines for 340B claims and claims for beneficiaries dually eligible for Medicare and Medicaid. Without a reconciliation process, the Part B rebate amount would include units of discarded drugs on which manufacturers potentially owe a refund, thereby potentially requiring manufacturers to pay both a discarded drug refund and a rebate amount on certain units of a Part B rebatable drug due to the timing of revisions to discarded drug units discussed in further detail in section II.2.c.iv of this proposed rule.

CMS believes a longer period of claims run-out (at least 12 months of run-out time in the proposed approach) would ensure that CMS more fully accounts for capturing of revised units.

CMS considered that penalties associated with failure to submit timely and accurate ASP data (specified in § 414.806(b)) encourage timely submission of ASP data with the submission timeline in accordance with § 414.804(a)(5) when considering the completeness of 12 months of claims run-out. While CMS considered a longer period until a revision is completed, such as the 36-month period provided by the Medicaid Drug Rebate Program (MDRP) for AMP restatements in § 447.510(d)(3), CMS believes that a 12-month reconciliation period is appropriate for the Part B rebate program because of requirements to submit timely and accurate ASP data (specified in § 414.806(b)), and it provides sufficient time to capture the majority of updates to the data specified in proposed § 427.301 while closing out (except for the proposed circumstances in proposed § 427.501(d)(2) regarding CMS' identification of mathematical errors or manufacturer misreporting) the calculation of the rebate amount for a Part B rebatable drug for an applicable calendar quarter within a reasonable time period after the Rebate Report is issued. While CMS proposes a 12- and 36-month reconciliation period in the Medicare Part D Drug Inflation Rebate Program, due largely to the 36-month restatement period provided for MDRP AMP restatements (specified in § 447.510(d)(3)), CMS does not believe a second or longer restatement process is needed for Part B rebatable drugs because, as described previously, the ASP and claims run-out periods correspond with sufficient claims run-out and ASP restatement timing for Part B (particularly when considering penalties associated with failure to submit timely and accurate ASP data (specified in § 414.806(b))).

Further, in considering whether consistency across CMS programs is critical, CMS believes that consideration for the completeness of data, as discussed above, should be prioritized over consistency across program timelines. That is, when examining timelines from other CMS programs that collect data contributing to calculation of the rebate amount, CMS prioritized that, to the extent feasible, completeness and accuracy of the data elements contributing to the calculation of the rebate amount rather than prioritizing consistency among the data collection and reconciliation timelines themselves. Finally, CMS believes that a restatement of each data element included in proposed § 427.501(d) to reconcile the rebate amount provided in the Rebate Report in proposed § 427.501(c) and

drugs acquired through the 340B Program as proposed in § 427.303(b)(1)(i) is appropriate to capture an updated rebate amount and is in line with other CMS programs that provide for a reconciliation period, including ASP restatements (see § 414.806). While some data points may not change, CMS would review the data to determine if there are any updates in the data and use the updated data in the reconciliation to provide a reconciled rebate amount to the manufacturer.

Based on these considerations, similar to the multi-step process for the Rebate Report proposed in § 427.501(b) and (c), in summary, CMS proposes a multi-step process to provide each manufacturer of a Part B rebatable drug with a reconciled rebate amount on a regular basis. At the 12 month reconciliation, CMS proposes a reconciliation process will include: (1) a preliminary reconciliation of the rebate amount, which CMS would provide to manufacturers of Part B rebatable drugs as proposed in § 427.501(d)(1) and (2) a reconciled rebate amount, which CMS would provide to manufacturers of a Part B rebatable drug as proposed in § 427.501(d)(1)(ii). CMS also proposes to apply the Suggestion of Error process specified in proposed § 427.503 to the preliminary reconciliation.

In detail, first, as specified in proposed § 427.501(d)(1) and similar to the Preliminary Rebate Report process proposed in § 427.501(b), CMS proposes to provide the manufacturer with information about the preliminary reconciliation of the rebate amount at least 1 month prior to the issuance of the reconciled rebate amount (see proposed § 427.501(d)(1)) to each manufacturer of a Part B rebatable drug for an applicable calendar quarter. CMS proposes in § 427.501(d)(1) that the preliminary reconciliation would include, at a minimum, the same information outlined for the Rebate Report and the following updated information, if applicable: updated total number of rebatable units as specified in proposed § 427.303; the payment amount in the payment amount benchmark quarter, if any inputs are restated within the reconciliation run-out period, as specified in proposed § 427.302(d); applicable calendar quarter specified amount (defined in § 427.302(b)), if any inputs are restated within the reconciliation run-out period; the excess amount by which the specified amount exceeds the inflation-adjusted payment amount, if any inputs are restated within the reconciliation run-out period, as specified in § 427.302; the reconciled total rebate amount calculated in accordance with

⁵⁷⁸ See the CCW White Paper: Medicare Claims Maturity, <https://www2.ccwdata.org/documents/10280/19002256/medicare-claims-maturity.pdf>.

§ 427.301; and the difference between the total rebate amount due as specified on the Rebate Report set forth in proposed § 427.501(d)(1)(i)).

In proposed § 427.503(a), similar to the Suggestion of Error process proposed for the Preliminary Rebate Report in proposed § 427.501(a), within 10 calendar days after date of receipt of the information about the preliminary reconciliation of the rebate amount, CMS proposes that a manufacturer may suggest to CMS that the manufacturer believes the preliminary reconciled rebate amount contains a mathematical error. CMS believes a 10-calendar-day period is sufficient due to the same considerations of data volume, the narrow set of reviewable items, and the operational time period necessary for CMS to complete the process to publish the reconciled rebate amount. The preclusions in section 1847A(i)(8) of the Act on administrative and judicial review apply to the reconciliation process.

Second, in detail, CMS proposes in § 427.501(d) to provide the reconciled rebate amount to the manufacturer 12 months after the Rebate Report was issued for an applicable calendar quarter. As proposed in § 427.501(d)(1)(i), the information in the report for the reconciled rebate amount would include the same data elements as provided in the information provided to the manufacturer of a Part B rebatable drug regarding the preliminary reconciliation of a rebate amount (specified in proposed § 427.501(d)(1)) and include any recalculations based on CMS acceptance of a manufacturer's Suggestion of Error from proposed § 427.503. A reconciliation of the rebate amount may result in an increase, decrease, or no change to the rebate amount, compared to the Rebate Report for an applicable calendar quarter (see proposed § 427.501(d)(3)).

Additionally, as CMS suggested in section 60 of the revised Medicare Part B Drug Inflation Rebate Guidance, CMS considered options for establishing circumstances where a recalculation of the rebate amount may be appropriate for an applicable calendar quarter after issuing the Rebate Report and/or a reconciled rebate amount based on CMS identifying an error or CMS determining that the information used by CMS to calculate a rebate amount was inaccurate due to false reporting or similar fault by the manufacturer (for example, manufacturer pricing or product data under section 1927(b)(3) of the Act). CMS also considered potential time limits for revisions and whether certain circumstances, such as instances

of false reporting, should be exempt from such time limits.

Based on these considerations, CMS believes that, to capture an accurate rebate amount and consistent with reconciliations of pricing data otherwise submitted to CMS that provide for revisions when necessary due to errors, including mathematical errors, and manufacturer misreporting, certain circumstances may merit a recalculation of the rebate amount separate from the 12-month reconciliation proposed in § 427.501(d)(1). Specifically, CMS proposes in § 427.501(d)(2) that CMS may recalculate a rebate amount, when CMS identifies either: (1) an agency error such as a mathematical error or an error in the information specified in a Rebate Report as described in proposed § 427.501(c) or report of a reconciled rebate amount as described in proposed § 427.501(d)(1) including reporting system or coding errors, or (2) CMS determining that information used to calculate the rebate amount was inaccurate due to manufacturer misreporting. Examples of agency errors could include CMS incorrectly assigning a billing or payment code or incorrectly calculating the billing units per package, or the mechanism that provides a Rebate Report to the manufacturer or the Rebate Report incorrectly displays a rebate amount. Examples of manufacturer misreporting could include instances in which the manufacturer has made a correction to previously submitted data as well as instances in which the individual or entity reporting data or information to CMS on behalf of the manufacturer knows or should know is inaccurate or misleading (for example, inaccurate ASP data as specified in § 414.806). This does not include standard restatements to ASP or other data outside of the standard process of issuing the reconciled rebate amount. In addition to manufacturer-initiated corrections, CMS may become aware of manufacturer misreporting based on fact finding and conclusions of enforcement authorities, for example, the HHS Office of Inspector General, the CMS Center for Program Integrity, or the Department of Justice. In a situation where an error or manufacturer misreporting is identified prior to the 12-month reconciliation of the rebate amount proposed in § 427.501(d)(1), CMS may choose to include a correction based on the circumstances proposed in § 427.501(d)(2) concurrently with the 12-month reconciliation. When CMS reconciles data due to an instance of agency error or manufacturer misreporting, CMS proposes that the

agency would limit the scope of the reconciliation to the specific information that is the basis for the reconciliation and not update or otherwise revise any other data elements in the Rebate Report (specified in proposed § 427.501(c)) or the report of the reconciled rebate amount (specified in proposed § 427.501(d)(1)) unless the correction directly impacts additional data fields. For example, CMS believes corrections to an ASP quarterly file may not change the specified amount for the applicable calendar quarter.

In addition, because reconciling a rebate amount imposes substantial administrative burden on CMS to reprocess the rebate amount, retest the reporting system, and reissue a rebate report, CMS proposes in § 427.501(d)(2) that it may exercise discretion not to initiate recalculate the rebate amount in these situations which are outside of the regular reconciliation process proposed in § 427.501(d)(1).

CMS proposes that for a recalculation due to agency error, the error must be identified within 3 years of the date of receipt of the reconciled rebate amount for the applicable calendar quarter (see proposed § 427.501(d)(2)(i)). Identification means that CMS has knowledge of the error; CMS does not need to have completed its revision of the impacted data or determined if the revision impacts the rebate amount within the 3-year period. CMS would timely complete these steps and determine, when the reconciliation does impact the rebate amount, whether the reconciliation must be included in a discretionary revision or within an upcoming reconciled rebate amount for an applicable calendar quarter. CMS believes that a 3-year period dating from the issuance of a reconciliation aligns broadly with the timeframe in which most manufacturers provide Part B ASP restatements.

CMS proposes in § 427.501(d)(2)(ii) that for a circumstance in which a manufacturer misreports data, CMS is not bound by the 3-year time limit for revision of the rebate amount. For example, if a determination is made that a manufacturer misreported ASP data, then CMS may recalculate the rebate amount owed for a Part B rebatable drug. CMS requests comments on the proposals related to manufacturer misreporting.

CMS proposes in § 427.505(a)(1) that upon receipt of the reconciled rebate amount manufacturers must pay the rebate within 30 calendar days from the date of receipt of the reconciled rebate amount. A 30-day payment deadline aligns with the payment period set forth

in statute at section 1847A(i)(1)(B) of the Act. As specified in proposed § 427.504, CMS would use the same method and process for issuing Rebate Reports and submission of payments for reports with a reconciled rebate amount. CMS would provide notice to manufacturers when a report with a reconciled rebate amount, which will include the information proposed in § 427.501(d), is available for the manufacturer's Part B rebatable drugs. CMS proposes in § 427.505(c) that if a refund is owed to a manufacturer based on a reconciled rebate amount, CMS would initiate the process to issue such a refund within 60 days from the date of receipt of the reconciled rebate amount (proposed in § 427.501(d)). CMS will issue additional information on this method and process through additional program communications.

iv. Rebate Report for Applicable Calendar Quarters in CY 2023 and CY 2024

Section 1847A(i)(1)(C) of the Act provides the CMS with the option to delay sending the information required by section 1847A(i)(1)(A) for applicable calendar quarters in calendar years 2023 and 2024 until not later than September 30, 2025. In § 427.502, consistent with section 60.2 of the revised Medicare Part B Drug Inflation Rebate Guidance, CMS proposes consolidating the Preliminary Rebate Reports and Rebate Reports for CYs 2023 and 2024 into two reports: one report for the four applicable calendar quarters in CY 2023 and one report for the four applicable calendar quarters in CY 2024. This approach allows for 12 months of claims run-out for each applicable calendar quarter in CY 2023 and at least 3 months of claims run-out for each applicable calendar quarter in CY 2024. For these combined reports, CMS proposes in § 427.502 to provide an extended 30 calendar day Suggestion of Error period for the Preliminary Rebate Report.

CMS intends to send a reconciled rebate amount for the four applicable calendar quarters in CY 2024 9 months after the Rebate Report, to allow for 12 months of claims run-out for each applicable calendar quarter; CMS does not intend to conduct reconciliation for the four applicable calendar quarters in CY 2023 since the Rebate Report would already reflect 12 months of claims run-out (see proposed § 427.502(b)). This approach aligns claims and payment data run-out with the run-out used during a regular reconciliation cycle. The Suggestion of Error period for the report containing the reconciled rebate amount for applicable calendar quarters in CY 2024 would be 10 calendar days.

This approach also minimizes the number of reports issued to manufacturers as a result of the delay in reporting and simplifies payment procedures, thereby minimizing manufacturer burden. Starting with the first applicable calendar quarter of CY 2025, reporting would begin a standard cadence and follow the procedures otherwise proposed in subpart F of this part 427.

CMS proposes that manufacturers that do not pay the Medicare Part B inflation rebate amount owed for a Part B rebatable drug within 30 calendar days of receiving a Rebate Report, including reports containing a reconciled rebate amount, may be subject to a civil money penalty of 125 percent of the rebate amount, as applicable, for such drug for the applicable calendar quarter. The civil money penalty is in addition to the rebate amount.

g. Enforcement of Manufacturer Payment of Rebate Amounts (§ 427.600)

Section 1847A(i)(7) of the Act gives CMS the authority to impose a civil money penalty equal to at least 125 percent of the rebate amount for each drug for each applicable calendar quarter on a manufacturer that fails to pay the rebate amount for each rebatable Part B drug. Subpart G would implement this section of the Act and establish the procedures for determining and collecting a civil money penalty.

In accordance with section 1847A(i)(1)(B) and proposed § 427.505(a), manufacturers must provide to CMS a rebate amount owed within 30 calendar days of receipt of the Rebate Report containing the rebate amount due. As described in proposed § 427.600(a), CMS is proposing that it may impose a civil money penalty when a manufacturer fails to pay the rebate amount in full by the payment deadlines proposed in § 427.505(a). This means a manufacturer may be subject to a civil money penalty if the manufacturer fails to pay the full the rebate amount as invoiced in the Rebate Report or any reconciled rebate amount that is greater than the amount invoiced in the Rebate Report. More specifically, a manufacturer could be subject to a civil money penalty when a manufacturer fails to pay a rebate amount due by any payment deadline proposed in § 427.505(a)(1) and (2) for: (1) a Rebate Report specified in proposed § 427.501(c); (2) a reconciled rebate amount greater than the rebate amount reflected in the Rebate Report specified in proposed § 427.501(d); or (3) a Rebate Report and a reconciled rebate amount greater than the amount reflected in the Rebate Report, if

applicable, for the applicable calendar quarters in calendar years 2023 and 2024 as specified in proposed § 427.502. As discussed earlier in subpart e.iii, CMS notes that the reconciled rebate amount is not a separately payable and distinct rebate amount. Rather, the reconciled rebate amount is an update to the rebate amount owed to CMS by a manufacturer of a Part B rebatable drug.

Civil money penalties are a point-in-time penalty tied to the rebate amount due at the applicable payment deadline, which occurs 30 days after the date of receipt of a Rebate Report. In proposed § 427.600(b), CMS proposes to establish the methodology for determining the amount of the civil money penalty as equal to 125 percent of the rebate amount for such drug for such applicable calendar quarter, and that this penalty would be due in addition to the rebate amount due. That is, a manufacturer would be responsible for paying the full rebate amount due in addition to any civil money penalty imposed because of late payment. While CMS has the statutory authority to impose a civil money penalty greater than 125 percent of the rebate amount in the Part B Rebate Program under section 1847(A)(i)(7), CMS is proposing a penalty amount of 125 percent of the rebate amount to align with the penalty amount in the Part D Inflation Rebate Program. CMS is proposing this approach to civil money penalties based on section 1847A(i)(1)(B) of the Act, which establishes a requirement by the manufacturer to provide CMS with a rebate not later than 30 days after receipt from CMS of the report on the amount of the excess average sales price increase. CMS believes that the ability to assess civil money penalties is necessary in all circumstances where a payment is due for a rebate amount to CMS to ensure compliance with the rebate program's requirements. The civil money penalty would be calculated based on the outstanding rebate amount due at the payment deadline, which is defined in proposed § 427.505(a) as 30 calendar days after the date of receipt of a Rebate Report containing any rebate amount due; once a civil money penalty is assessed due to a late payment, the penalty would remain in effect even if the manufacturer pays the outstanding amount as the penalty is initiated due to a missed payment deadline. Because the payment deadline is clearly defined in section 1847A(i)(1)(B) of the Act, any late payments of a rebate amount due, including late payment of any reconciled rebate amounts greater than the amount reflected in the Rebate

Report, would be considered a violation potentially subject to a civil money penalty. Any civil money penalty would be assessed before the next reconciliation process.

CMS is proposing in § 427.600(b)(2) that civil money penalties may be calculated at several points in time associated with missing a payment deadline for the rebate amount due reflected in the Rebate Report or missing a payment deadline associated with any rebate amount determined after a reconciliation to be greater than the amount invoiced in the Rebate Report. As these separate events can result in distinct assessments of civil money penalties, this means that CMS would not modify a civil money penalty from a prior missed payment deadline based on changes to the rebate amount due following reconciliation, including scenarios where the rebate amount is reduced following reconciliation. However, in the event that the rebate amount due on a Rebate Report was not paid and a civil money penalty was issued for violation of the payment deadline, CMS would not issue a second civil money penalty on a reconciled rebate amount if reconciliation decreased the rebate amount stated on the Rebate Report. CMS believes that enforcing this requirement after each payment deadline, regardless of what rebate amount a manufacturer may or may not owe at a future payment deadline, is necessary to maintain the integrity of the program and consistency of the implementation of the program. Further, CMS is proposing this approach to ensure an enforcement approach that is operationally feasible and applied consistently in all cases.

As an example of this approach in practice, CMS presents a scenario where the rebate amount due on the Rebate Report is \$100. Following reconciliation 12 months after the Rebate Report was issued, CMS calculates a reconciled rebate amount for the applicable calendar quarter of \$120 (an increase of \$20 from the rebate amount identified in the Rebate Report due to updated claims run-out and payment data). Under this scenario, in the event the manufacturer does not pay the \$100 rebate amount owed within the 30-day deadline following receipt of the Rebate Report, a civil money penalty for \$125 ($\100×1.25) could be assessed against the manufacturer due to their failure to meet the payment deadline. If the manufacturer pays the \$100 before the reconciliation is completed, and then timely pays the \$20 due within the 30-day payment deadline following the reconciliation 12 months after the Rebate Report or does not pay the \$100

before the reconciliation is completed but timely pays the \$120 due within the 30 day payment deadline following reconciliation 12 months after the Rebate Report, no further civil money penalty would be assessed.

Alternatively, in the event the manufacturer pays the \$100 rebate amount due within the 30-day deadline following receipt of the Rebate Report but fails to meet the payment deadline for the net \$20 rebate amount due following reconciliation, a civil money penalty of \$25 ($\20×1.25) could be assessed against the manufacturer due to their failure to meet the payment deadline for the updated rebate amount due following reconciliation. Finally, under this scenario in the event the manufacturer fails to meet any payment deadline throughout the full reconciliation cycle of this rebate amount; that is, the deadline is missed for the \$100 amount due stated in the Rebate Report, and the \$20 net rebate amount due following reconciliation, CMS may assess a separate civil money penalty on the rebate amount due at each of these missed deadlines. In this example, violations of each of these payment deadlines would result in a penalty of \$125 ($\100×1.25), followed by a penalty of \$25 ($\20×1.25), each of which would be assessed following the manufacturer's failure to meet the related payment deadline for the outstanding rebate amount due.

In an alternative possible scenario, consider the following. The rebate amount due on the Rebate Report is \$100. Following reconciliation 12 months after the Rebate Report was issued, CMS calculates a reconciled rebate amount owed for the applicable period of \$80 (a decrease of \$20 from the rebate amount identified in the Rebate Report). In this scenario, if a manufacturer does not pay the \$100 by the payment deadline for the rebate amount due in the Rebate Report, a civil money penalty for \$125 ($\100×1.25) may be assessed against the manufacturer due to its failure to meet the payment deadline for the rebate amount due identified in the Rebate Report. This civil money penalty is not affected if the manufacturer pays the rebate amount once it is past the deadline, nor is it impacted by the reconciled rebate amount, because at the payment deadline missed by the manufacturer, the manufacturer owed a rebate of \$100 to CMS and that rebate amount was not paid timely. As noted previously, under this scenario, given that there is no additional rebate amount due upon reconciliation compared to the rebate amount stated on the Rebate Report, there would not

be a civil money penalty assessed on the reconciled rebate amount.

Further, note that payment of any civil money penalty does not obviate the requirement for the manufacturer to pay any outstanding rebate amount due, including any rebate amount due following a reconciliation. Therefore, paying a civil money penalty does not satisfy the obligation to pay the underlying rebate amount on which the civil money penalty is calculated. In addition, CMS is evaluating all available options to ensure manufacturers' timely compliance with their rebate payment obligations, including, without limitation, potential recovery approaches and enforcement actions. For example, CMS may refer manufacturers to the Department of Justice, Department of the Treasury, and/or the Department of Health and Human Services Office of Inspector General for further review and investigation.

In proposed § 427.600(c), CMS proposes that if CMS makes a determination to impose a civil money penalty on a manufacturer for violation of a payment deadline, CMS would send a written notice of the decision to impose a civil money penalty that includes a description of the basis for the determination, the basis for the penalty, the amount of the penalty, the date the penalty is due, the manufacturer's right to a hearing, and information about where to file the request for a hearing. To ensure a consistent approach to civil money penalties, CMS proposes applying existing appeal procedures for civil money penalties in 42 CFR 423, subpart T of this title to manufacturers appealing a civil money penalty imposed under the Medicare Part B Drug Inflation Rebate Program. CMS has utilized this appeals process many years for civil money penalty determinations affecting MA organizations and Part D sponsors. CMS therefore proposes to use this well-established process for civil money penalty appeals from manufacturers that do not make inflation rebate payments by the payment deadline. CMS also proposes in § 427.600(e)(1) that the scope of appeals is limited to: (1) CMS determinations relating to whether the rebate payment was made by the payment deadline; and (2) the calculation of the penalty amount. Section 1847A(i)(8) of the Act precludes judicial review of specific data inputs or calculations related to the underlying Rebate Report and reconciliation; therefore, such data and calculations are not appealable through this process.

Section 1847A(i)(7) of the Act states that the provisions of section 1128A of the Act (except subsections (a) and (b)) apply to civil money penalties under this subpart to the same extent that they apply to a civil money penalty or procedure under section 1128A(a) of the Act. CMS proposes to codify this requirement in proposed § 427.600(f). In alignment with the procedure outlined in section 1128A of the Act, CMS proposes in § 427.600(d) that collection of the civil money penalty would follow expiration of the timeframe for requesting an appeal, which is 60 calendar days from the civil money penalty determination in cases where the manufacturer did not request an appeal. In cases where a manufacturer requests a hearing and the decision to impose the civil money penalty is upheld, CMS would initiate collection of the civil money penalty once the administrative decision is final. CMS is seeking comment on proposals related to the violations of payment deadlines and issuance of a civil money penalty.

CMS proposes in § 427.600(g) that in the event that a manufacturer declares bankruptcy, as described in title 11 of the United States Code, and as a result of the bankruptcy, fails to pay either the full rebate amount owed or the total sum of civil money penalties imposed, the government reserves the right to file a proof of claim with the bankruptcy court to recover the unpaid rebate amount and/or civil monetary penalties owed by the manufacturer.

h. Severability (§ 427.10)

In proposed § 427.10, we propose that, were any provision of part 427 to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions would be severable from part 427 and the invalidity or unenforceability would not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances. While the provisions in part 427 are intended to present a comprehensive approach to implementing the Medicare Part B Drug Inflation Rebate Program, we intend that each of them is a distinct, severable provision, as proposed, and would not affect similar provisions in the Medicare Part D Drug Inflation Rebate Program. Through this rulemaking, the Part B drug inflation rebate proposals are intended to operate independently of each other, even if each serves the same general purpose or policy goal. For example, CMS intends that the proposed policies related to reducing the rebate amount for Part B rebatable

drugs currently in shortage and when there is a severe supply chain disruption (§§ 427.401 and 427.402) are distinct and severable from the proposals related to the determination of Part B rebatable drugs subject to rebates (§ 427.101). As another example, CMS intends that the proposed policy for using the payment limit for purposes of calculating the beneficiary coinsurance adjustment (§ 427.201(b)) is distinct and severable from the proposals to use the specified amount for purposes of the Part B rebate calculation (§ 427.301). Even where one provision makes reference to a second provision, the preamble and the regulatory text clarify the intent of the agency that the two provisions would be severable if one provision were to be invalidated in whole or in part. For example, CMS would still be able to calculate drugs and biological products with average total allowed charges below the applicable threshold as described in § 427.101(c)(1), for exclusion from inflation rebate calculations, even if the provision to apply the applicable threshold at the billing and payment code level is deemed invalid (§ 427.101(c)(3)). We welcome comments on this severability policy.

3. Medicare Part D Drug Rebates for Drugs, Biologicals, and Sole Source Generic Drugs With Prices That Increase Faster Than the Rate of Inflation

a. Definitions (§ 428.20)

In this proposed rule, CMS proposes to codify definitions of terms with meanings given in section 1860D–14B of the Act and established in the revised Medicare Part D Drug Inflation Rebate Guidance, as well as new definitions based on policies detailed in this proposed rule.

At proposed § 428.20, CMS is proposing that the following terms in section 1860D–14B of the Act are defined:

- “Annual manufacturer price (AnMP)”.
- “Applicable period”.
- “Applicable period Consumer Price Index for All Urban Consumers (CPI–U)”.
- “Benchmark period CPI–U”.
- “Part D rebatable drug”.
- “Payment amount benchmark period”.
- “Unit”.

Further, in § 428.20 of this proposed rule, CMS proposes to codify definitions established in the revised Medicare Part D Drug Inflation Rebate Guidance and new definitions based on policies detailed in this proposed rule for the following terms:

- “Applicable threshold”.
- “Average manufacturer price (AMP)”.
- “Benchmark period manufacturer price”.
- “Covered Part D drug”.
- “CPI–U”.⁵⁷⁹
- “First marketed date”.
- “Inflation-adjusted payment amount”.
- “Manufacturer”. CMS intends that manufacturer identification in the Medicare Prescription Drug Inflation Rebate Program, inclusive of communications and rebate liability, will be consistent with the policies and practices adopted under § 447.502 for purposes of manufacturer obligations under the Medicaid Drug Rebate Program. We believe this approach will provide clarity and allow for consistency in the agency’s treatment of financial transactions, including in the contexts of debt collection, bankruptcy, and changes in ownership. We welcome feedback on this proposed approach and whether there are alternative approaches that may better achieve the agency’s goals for application of rebate liability and collection of rebate amount, including whether additional policies and/or a Medicare Prescription Drug Inflation Rebate Program agreement are needed to clarify financial accountability for rebate amounts in situations where there are changes in ownership of a manufacturer or of a rebatable drug.
- “National Drug Code (NDC)”.
- “Subsequently approved drug”.

b. Determination of Part D Rebatable Drugs (§§ 428.100 Through 428.101)

i. Definitions

In proposed § 428.100, CMS proposes to define the following terms applicable to subpart B (§§ 428.100 through 428.101):

- “Individual who uses such a drug or biological”.
- “Gross covered prescription drug costs”.

ii. Identification of Part D Rebatable Drugs

Section 1860D–14B(g)(1)(A) of the Act defines a “Part D rebatable drug,” in part, as a drug or biological described at section 1860D–14B(g)(1)(C) that is a “covered Part D drug” as that term is defined in section 1860D–2(e) of the Act. A drug or biological described in section 1860D–14B(g)(1)(C) means a

⁵⁷⁹ These data are referenced to 1982 – 84 = 100— that is, the average of pricing data for the 36 months from 1982 through 1984 serve as the basis for the index and are assigned a value of 100. These data are not seasonally adjusted.

drug or biological that, as of the first day of the applicable period involved, is: (1) a drug approved under an NDA under section 505(c) of the FD&C Act (that is, a brand name drug); (2) a drug approved under an ANDA under section 505(j) of the FD&C Act that meets the criteria in section 1860D–14B(g)(1)(C)(ii) (that is, a generic drug that meets certain sole source criteria); or (3) a biological licensed under section 351 of the PHS Act (that is, a biological product, including a biosimilar).

In § 428.101(a), CMS proposes to identify a Part D rebatable drug⁵⁸⁰ for each applicable period by determining which covered Part D drugs, as defined in section 1860D–2(e) of the Act, meet the requirements in section 1860D–14B(g)(1)(C) of the Act (that is, are brand name drugs approved under an NDA, biologicals licensed under a biologics license application (BLA), or generic drugs approved under an ANDA). As noted, a Part D rebatable drug must meet the requirements in section 1860D–14B(g)(1)(C) of the Act as of the first day of the applicable period.

To evaluate whether a generic drug approved under an ANDA meets all the criteria in section 1860D–14B(g)(1)(C)(ii) of the Act, CMS proposes in § 428.101(a)(3) to codify the policy established in section 30 of the revised Medicare Part D Drug Inflation Rebate Guidance whereby CMS would use specified FDA resources such as the “Approved Drug Products with Therapeutic Equivalence Evaluations” (commonly known as the Orange Book)⁵⁸¹ and NDC Directory to determine whether a generic drug meets the definition of a Part D rebatable drug. In § 428.101(a)(3)(i) and (ii), CMS proposes to clarify the policy established in revised Medicare Part D Drug Inflation Rebate Guidance by adding that, for purposes of § 428.101, CMS considers historical information from NDC Directory files, such as discontinued, delisted, and expired listings, provided by FDA to CMS or published by FDA on its website to be included in the NDC Directory. As proposed in § 428.101(a)(3)(iii), to determine whether the manufacturer of the generic drug is a first applicant during the 180-day exclusivity period, or whether the manufacturer of the generic drug is a first approved

applicant for a competitive generic drug therapy, CMS will refer to FDA website resources such as the Orange Book and may consult with FDA for technical assistance as needed. CMS will determine whether a generic drug that is a covered Part D drug meets the definition of a Part D rebatable drug based on the status of the drug on the first day of the applicable period.

While generic drugs that do not meet the sole source criteria in section 1860D–14B(g)(1)(C)(ii) of the Act (that is, multiple source generic drugs) are excluded from the definition of a Part D rebatable drug, CMS understands that a generic drug may meet the definition of a Part D rebatable drug on the first day of an applicable period and then cease to meet such definition later in the applicable period if, for example, the FDA approves another therapeutically equivalent generic drug under a 505(j) ANDA and that drug is marketed during such applicable period.

iii. Drugs and Biologicals With Average Annual Total Cost Under Part D Below the Applicable Threshold

Under section 1860D–14B(g)(1)(B) of the Act, a drug or biological is excluded from the definition of a Part D rebatable drug if the “average annual total cost” under Part D for such period per individual who uses such a drug or biological product is less than \$100 per year, as determined by the Secretary using the most recent data available, or, if data are not available, as estimated by the Secretary. The statute provides that the \$100 annual amount for the applicable period beginning October 1, 2022, is to be increased by percentage changes in the CPI–U for subsequent applicable periods. In § 428.101(b), CMS proposes to codify the policy established in section 30.2 of the revised Medicare Part D Drug Inflation Rebate Guidance for determining the applicable threshold and excluding from the definition of a Part D rebatable drug, and thus Part D drug inflation rebates, drugs and biologicals for which the average annual total cost under Part D for such applicable period per individual who uses such drug or biological product is below that applicable threshold.

As described in the revised Medicare Part D Drug Inflation Rebate Guidance, CMS intends to calculate the average annual total cost based on gross covered drug costs for the Part D rebatable drug at the NDC–9 level. CMS will divide the gross covered drug costs for the drug by the number of unique Part D beneficiaries as described above that were dispensed the drug in that applicable period. For this calculation,

CMS will use PDE data with gross covered drug costs greater than zero that are available for the drug with dates of service during that applicable period. Drugs that are determined to have average annual total costs under Part D of less than \$100 per individual using such drug per year, adjusted by changes in the CPI–U, will be excluded from Part D drug inflation rebate calculations for the applicable period in question.

c. Determination of the Rebate Amount for Part D Rebatable Drugs (§§ 428.200 Through 428.204)

i. Definitions

In proposed § 428.200, CMS proposes to define the following terms applicable to subpart C (§§ 428.200 through 428.204):

- “340B Program”.
- “Line extension”.
- “New formulation”.
- “Oral solid dosage form”.

ii. Calculation of the Total Rebate Amount To Be Paid by Manufacturers

Under section 1860D–14B(b)(1) of the Act, the Part D drug inflation rebate for each Part D rebatable drug and applicable period, subject to certain considerations, is the estimated amount that is equal to the product of: (1) the amount, if any, by which the annual manufacturer price (AnMP) for such Part D rebatable drug for the applicable period exceeds the inflation-adjusted payment amount for the Part D rebatable drug for the applicable period, and (2) the total number of units of the Part D rebatable drug dispensed under Part D and covered and paid by Part D plan sponsors during the applicable period. To calculate the Part D drug inflation rebate consistent with section 1860D–14B(b)(1) of the Act, CMS proposes in § 428.201(a)(1) to codify the calculation methodology described in section 40 of the revised Medicare Part D Drug Inflation Rebate Guidance, which provides that the total Part D drug inflation rebate amount is equal to the per unit Part D drug inflation rebate amount, as determined under proposed § 428.202(a), multiplied by the total number of units of a Part D rebatable drug dispensed under Part D and covered by Part D plan sponsors, as determined in accordance with proposed § 428.203. CMS proposes in § 428.201(a)(2) that the total Part D drug inflation rebate amount for a Part D rebatable drug that is a line extension of a Part D rebatable drug that is an oral solid dosage form is equal to the amount specified in proposed § 428.204. The Part D drug inflation rebate amount calculated in accordance with this

⁵⁸⁰ For purposes of this proposed rule, CMS uses the term “Part D rebatable drug” to refer to the dosage form and strength with respect to such drug for which Part D drug inflation rebates are calculated.

⁵⁸¹ FDA Orange Book: <https://www.fda.gov/drugs/drug-approvals-and-databases/approved-drug-products-therapeutic-equivalence-evaluations-orange-book>.

subpart is subject to adjustment based on any reductions in accordance with subpart D of this part or any reconciliations in accordance with subpart E of the part.

In § 428.201(b), CMS proposes to exclude from the calculation performed under subpart C drugs and biologicals that meet the definition of a Part D rebatable drug, but which are missing AMP data for the entire duration of the applicable period because, for the reasons specified below, there were no quarters during that period in which their manufacturers were required to report AMP data under section 1927(b)(3) of the Act. The calculations for the rebate amount set forth in section 1860D–14B(b) of the Act contemplate use of AMP and unit data reported by manufacturers under section 1927 of the Act. Similarly, section 1860D–14B(d) of the Act indicates CMS should use, for purposes of carrying out the Medicare Part D Drug Inflation Rebate Program, information submitted by manufacturers under section 1927(b)(3) of the Act. Section 1927 requires manufacturers that participate in the Medicaid Drug Rebate Program (MDRP) to enter into agreements with the HHS Secretary and submit price and drug product information to CMS for each covered outpatient drug (COD), as defined in sections 1927(k)(2)–(4) of the Act and in § 447.502.

Not every drug that satisfies the definition of a Part D rebatable drug may be marketed by a manufacturer that has an MDRP agreement in effect with the Secretary during the applicable period. Similarly, there may be limited instances in which a drug or biological satisfies the definition of a Part D rebatable drug but is not a COD under the MDRP. As a result, information may not be reported under section 1927(b)(3) of the Act for all Part D rebatable drugs, and thus may not be available to CMS for purposes of calculating Part D drug inflation rebates under section 1860D–14B of the Act. Said differently, in limited cases where a Part D rebatable drug is marketed by a manufacturer that does not have an obligation to report pricing and drug product data under section 1927(b)(3) of the Act for the reasons noted, the manufacturer does not currently report information needed for CMS to be able to calculate Part D drug inflation rebates.

Due to this operational issue, CMS proposes in § 428.201(b) to codify the policy established in section 30.1 of the revised Medicare Part D Drug Inflation Rebate Guidance whereby CMS would exclude from Part D drug inflation rebate calculations drugs and biologicals that meet the definition of a Part D

rebatable drug but for which the manufacturer does not have an MDRP agreement in effect with the HHS Secretary under section 1927 of the Act at any point during the applicable period, or the Part D rebatable drug is one that does not meet the definition of a COD. This would effectively exclude from rebate calculations Part D rebatable drugs for which there is missing AMP data for the entire duration of the applicable period for the sole reason that there were no quarters during that period in which the manufacturer was required to report AMP data under section 1927(b)(3) of the Act. In either of these situations, a manufacturer does not have an obligation to report pricing and drug product data under section 1927(b)(3) of the Act and thus the information required to calculate Part D drug inflation rebates for these drugs is not available to CMS. If a manufacturer is required to report AMP under section 1927(b)(3) of the Act for any part of the applicable period for a drug or biological that meets the definition of a Part D rebatable drug, CMS would not exclude such drug or biological from Part D drug inflation rebate calculations. We also clarify that the proposed exclusion at § 428.201(b) relates only to the calculation of the rebate amount and does not affect the determination of whether a drug or biological meets the definition of a Part D rebatable drug. When performing the reconciliation described at § 428.401(d), CMS would reexamine whether the manufacturer was required to report AMP for any part of the applicable period for the Part D rebatable drug; if at reconciliation the manufacturer was required to report AMP for any part of the applicable period, CMS would calculate a Part D rebate amount for this Part D rebatable drug. CMS intends to monitor how these exclusions from the Part D drug inflation rebate calculation may impact manufacturer behavior and may revisit this exclusion in the future.

In the initial Medicare Part D Drug Inflation Rebate Guidance, CMS solicited comments on the proposed approach and alternative approaches. CMS continues to be interested in comments on this topic and welcomes additional comments on this approach and alternative approaches—specifically, how CMS should address the situations in which the manufacturer of a Part D rebatable drug does not have an MDRP agreement in effect for any part of the applicable period or when a Part D rebatable drug may be excluded from the definition of a COD and manufacturers may not be required to report pricing and drug

product information under section 1927(b)(3) of the Act.

iii. Calculation of the Per Unit Part D Drug Rebate Amount

To calculate the total rebate amount in accordance with proposed § 428.201(a), CMS will first calculate the per unit Part D drug rebate amount as proposed in § 428.202. As described in the revised Medicare Part D Drug Inflation Rebate Guidance and provided in proposed § 428.202(a), CMS will calculate the per unit Part D drug inflation rebate amount by determining the amount by which the AnMP for a Part D rebatable drug exceeds the inflation-adjusted payment amount for such drug for the applicable period. To determine the per unit Part D inflation rebate amount for a Part D rebatable drug, CMS must calculate the AnMP for the drug, identify the payment amount benchmark period and calculate the benchmark period manufacturer price for the drug, identify the benchmark period CPI–U, and calculate the inflation-adjusted payment amount for the drug.

(1) Calculation of the AnMP for the Applicable Period

To determine the AnMP for a Part D rebatable drug and applicable period, CMS proposes in § 428.202(b) to codify the policy described in the revised Medicare Part D Drug Inflation Rebate Guidance whereby CMS would use the AMP reported by a manufacturer to the Medicaid Drug Programs system under sections 1927(b)(3)(A)(i) and (ii) of the Act for each calendar quarter of the applicable period, as well as the units reported by a manufacturer under section 1927(b)(3)(A)(iv) of the Act for each month of the applicable period. The manufacturer-reported AMP units represent the total units of a drug sold by the manufacturer each month to retail community pharmacy and wholesaler purchasers as described under section 1927(k)(1)(A) of the Act. Manufacturers may include under certain circumstances non-retail community pharmacy sales units in the calculation of their AMPs for 5i drugs.⁵⁸²

⁵⁸² 5i drugs are CODs that are inhaled, infused, instilled, implanted, or injected. Manufacturers are instructed to calculate the AMP for 5i drugs that are not generally dispensed through a retail community pharmacy using the methodology described at § 447.504(d) and (e). Section 447.507(b)(1) provides that a 5i drug is not generally dispensed through a retail community pharmacy if 70 percent or more of the sales (based on units at the NDC–9 level) of the 5i drug, were to entities other than retail community pharmacies or wholesalers for drugs distributed to retail community pharmacies.

As specified in section 1860D–14B(b)(2) of the Act, the AnMP for a Part D rebatable drug for an applicable period is equal to the sum of the products of (1) the AMP for the Part D rebatable drug reported for each calendar quarter of the applicable period, and (2) the total units of the Part D rebatable drug reported for each of the corresponding calendar quarters of the applicable period divided by the total units of the Part D rebatable drug reported for the 4 calendar quarters in the applicable period. The following formula illustrates how CMS would calculate the AnMP for a Part D rebatable drug as proposed in § 428.202(b):

(AMP for calendar quarter beginning October) *multiplied by* (sum of monthly units for October calendar quarter *divided by* total units for 12-month applicable period) +
 (AMP for calendar quarter beginning January) *multiplied by* (sum of monthly units for January calendar quarter *divided by* total units for 12-month applicable period) +
 (AMP for calendar quarter beginning April) *multiplied by* (sum of monthly units for April calendar quarter *divided by* total units for 12-month applicable period) +
 (AMP for calendar quarter beginning July) *multiplied by* (sum of monthly units for July calendar quarter *divided by* total units for 12-month applicable period)

In § 428.202(b)(2), CMS proposes that the first applicable period for a Part D rebatable drug will be the earliest applicable period that follows the payment amount benchmark period identified in proposed § 428.202(c)(1) through (4). For a Part D rebatable drug first approved or licensed on or before October 1, 2021, with a payment amount benchmark period identified in § 428.202(c)(1), the first applicable period would begin on October 1, 2022 and end on September 30, 2023. For a Part D rebatable drug first approved or licensed on or before October 1, 2021 with a payment amount benchmark period identified in § 428.202(c)(3), or a subsequently approved drug with a payment amount benchmark period identified in § 428.202(c)(2) or (4), the first applicable period would begin on October 1 of the year following the payment amount benchmark period identified in proposed § 428.202(c)(2) through (4). As described below, CMS is soliciting comments on alternative policies for determining the payment amount benchmark period in certain instances of missing AMP. In the case of a Part D rebatable drug that was

previously a selected drug as described in proposed § 428.202(c)(5) for which the payment amount benchmark period is reset as the last calendar year of the price applicability period for such drug, the earliest applicable period that follows the reset payment amount benchmark period would begin on October 1 of the year following the payment amount benchmark period identified in proposed § 428.202(c)(5). The date that CMS will use to determine when a drug is first approved or licensed is the FDA approval date that the manufacturer reports to the Medicaid Drug Programs system under section 1927(b)(3)(A)(v) of the Act.

(2) Identification of the Payment Amount Benchmark Period

Consistent with section 1860D–14B(g)(3) of the Act and as described in sections 40.2.2 and 40.3 of the revised Medicare Part D Drug Inflation Rebate Guidance, CMS proposes in § 428.202(c)(1) that for a drug first approved or licensed by the FDA on or before October 1, 2021, the payment amount benchmark period is the period beginning on January 1, 2021 and ending on September 30, 2021. For a subsequently approved drug, CMS proposes in § 428.202(c)(2) that the payment amount benchmark period would be the first calendar year beginning after the drug's first marketed date, as specified under section 1860D–14B(b)(5)(A) of the Act. To identify the payment amount benchmark period for a Part D rebatable drug, CMS would use the FDA approval date or the first marketed date reported under section 1927(b)(3)(A)(v) of the Act, as applicable.

(a) Proposal To Establish a Payment Amount Benchmark Period in Certain Instances of Missing AMP

Section 1860D–14B of the Act does not expressly address how CMS should calculate the benchmark period manufacturer price for a Part D rebatable drug when a manufacturer has not reported AMP during the payment amount benchmark period identified by statute. For example, as described in the revised Medicare Part D Drug Inflation Rebate Guidance, while section 1860D–14B(g)(3) of the Act contemplates that drugs first approved or licensed by the FDA on or before October 1, 2021, would have a payment amount benchmark period of January 1, 2021, through September 30, 2021, the statute does not address circumstances in which such drugs are not marketed until after October 1, 2021, and thus lack AMP from January 1, 2021, through September 30, 2021, to calculate the

benchmark period manufacturer price. In response to comments, CMS stated in section 40.1.2 of the revised Medicare Part D Drug Inflation Rebate Guidance that Part D rebatable drugs first approved or licensed on or before October 1, 2021, that were not marketed until after that date and thus did not have AMP in the statutorily defined payment amount benchmark period (that is, January 1, 2021, through September 30, 2021) would be treated in the same manner as subsequently approved drugs for purposes of establishing the payment amount benchmark period, benchmark period CPI–U, first applicable period, and first applicable period CPI–U. In the revised guidance, CMS also stated that it intended to address this policy in future rulemaking and would solicit comments on this policy at that time.

Based on further review, CMS has observed that a number of NDC–9s of Part D rebatable drugs approved on or before October 1, 2021, do not have AMP reported in the period of January 1, 2021, through September 30, 2021, and a number of NDC–9s of subsequently approved drugs do not have AMP reported in the first calendar year beginning after the drug's first marketed date. To enable CMS to calculate the benchmark period manufacturer price and inflation rebate amounts for these NDC–9s, CMS is proposing in § 428.202(c)(3) that for a Part D rebatable drug first approved or licensed on or before October 1, 2021, for which there are no quarters during the period beginning on January 1, 2021, and ending on September 30, 2021, for which AMP has been reported under section 1927(b)(3) of the Act, CMS would identify the payment amount benchmark period as the first calendar year, which would be no earlier than calendar year 2021, in which such drug has at least 1 quarter of AMP reported. Said differently, to identify the payment amount benchmark period for the purpose of calculating the benchmark period manufacturer price for a Part D rebatable drug first approved or licensed on or before October 1, 2021, CMS would first look to the period from January 1, 2021, to September 30, 2021 and if no AMP was reported to the MDRP for that 3-quarter period, CMS would then identify the payment amount benchmark period as the first calendar year no earlier than calendar year 2021 in which such drug has at least 1 quarter of AMP reported. Similarly, in proposed § 428.202(c)(4), CMS proposes that for a subsequently approved drug for which there are no quarters during the first calendar year

beginning after the drug's first marketed date for which AMP has been reported under section 1927(b)(3), the payment amount benchmark period would be the first calendar year in which such drug has at least 1 quarter of AMP reported. To identify the payment amount benchmark period for the purpose of calculating the benchmark period manufacturer price for a subsequently approved drug, CMS would look to the first calendar year beginning after the drug's first marketed date and if no AMP was reported to the MDRP for such NDC-9 for that 4-quarter period, CMS would then identify the payment amount benchmark period as the first calendar year in which such drug has at least 1 quarter of AMP reported. This approach (or the alternative approaches described below), if finalized, would replace the policy in the revised Medicare Part D Drug Inflation Rebate Guidance to treat Part D rebatable drugs first approved or licensed on or before October 1, 2021, that were not marketed until after that date in the same manner as subsequently approved drugs. As proposed in § 428.202(b)(2), the first applicable period for such drug would begin on October 1 of the year following the payment amount benchmark period. This policy would apply to Part D rebatable drugs first approved or licensed on or before October 1, 2021, drugs first approved or licensed on or before October 1, 2021, but not marketed until after that date, as well as subsequently approved drugs.

As an example of how CMS would identify the payment amount benchmark period as proposed under § 428.202(c)(3), if a Part D rebatable drug that was first approved or licensed by the FDA on July 7, 2021, and has a first marketed date of September 15, 2021, does not have AMP reported in the period beginning January 1, 2021 and ending September 30, 2021, but does have AMP reported for the second calendar quarter of 2022, CMS would identify the payment amount benchmark period for such drug as calendar year 2022 (that is, January 1, 2022, through December 31, 2022). In this example, the benchmark period CPI-U would be the CPI-U for January 2022, the first applicable period would be the applicable period beginning October 1, 2023, and ending September 30, 2024, and the applicable period CPI-U would be the CPI-U for October 2023. Similarly, as an example of how CMS would identify the payment amount benchmark period as proposed under § 428.202(c)(4), if a subsequently approved drug with a first marketed date of December 15, 2021, does not

have AMP reported for any quarters in calendar year 2022 (that is, the first calendar year after the drug's first marketed date) but does have AMP reported for the first calendar quarter of 2023, CMS would identify the payment amount benchmark period as calendar year 2023 (that is, January 1, 2023, through December 31, 2023). In this example, the benchmark period CPI-U would be the CPI-U for January 2023, the first applicable period for this drug would be the applicable period beginning October 1, 2024, and ending September 30, 2025, and the applicable period CPI-U would be the CPI-U for October 2024.

CMS is soliciting comments on this approach, as well as the alternatives described below.

(b) Comment Solicitation on Alternatives Considered for Calculating the Benchmark Period Manufacturer Price When AMP Is Missing

CMS is aware that one reason why a manufacturer may not report AMP for any quarters of a payment amount benchmark period described in § 428.202(c)(1) or (2), as applicable, is that a manufacturer may acquire a Part D rebatable drug from another manufacturer and, due to that acquisition and the use of a new labeler code, obtain a new NDC-9 for that Part D rebatable drug. In this instance, the NDC-9 of the selling manufacturer and the NDC-9 of the buying manufacturer belong to the same dosage form and strength and therefore the same Part D rebatable drug. Although the buying manufacturer may not have AMP for the new NDC-9 to report to the Medicaid Drug Programs system for the Part D rebatable drug's payment amount benchmark period described in § 428.202(c)(1) or (c)(2), the buying manufacturer is required by the MDRP to report for the new NDC-9 the base date AMP associated with the dosage form and strength to which the new NDC-9 belongs.⁵⁸³ This base date AMP is equal to the quarterly AMP that a manufacturer reports as described in § 447.509(a)(7)(ii)(B). There also may be instances outside of the acquisition context in which a new NDC-9 for an existing dosage form and strength is reported to the MDRP. To prevent a manufacturer from resetting the payment amount benchmark period and therefore the benchmark period manufacturer price by obtaining a new NDC-9 for the Part D rebatable drug,

⁵⁸³ Medicaid Drug Rebate Program Notice, Release No. 90 (April 18, 2014). <https://www.medicaid.gov/medicaid-chip-program-information/by-topics/prescription-drugs/downloads/rx-releases/mfr-releases/mfr-rel-090.pdf>.

CMS stated in section 40.2.2 of the revised Medicare Part D Drug Inflation Rebate Guidance that it will use the benchmark period manufacturer price of the earliest NDC-9 of the Part D rebatable drug.

After further consideration of this policy and the data that are available to CMS in the Medicaid Drug Programs system, CMS does not believe that calculating the benchmark period manufacturer price using the three or four quarters, as applicable, of AMP reported in the payment amount benchmark period described in proposed § 428.202(c)(1) or (2) of the earliest NDC-9 of the Part D rebatable drug is operationally feasible at this time. Although the buying manufacturer is required by the MDRP to report for the new NDC-9 the base date AMP associated with the earliest NDC-9 of the dosage form and strength, and to report the first marketed date associated with the earliest NDC-9 of the dosage form and strength as the first marketed date for the new NDC-9,⁵⁸⁴ the buying manufacturer is not required to report which NDC-9 was used to determine the base date AMP and first marketed date. CMS may therefore lack the information necessary to identify the earliest NDC-9 of the Part D rebatable drug for purposes of determining the benchmark period manufacturer price to be used in calculating the inflation rebate amount.

CMS understands that statutory provisions at section 1860D-14B of the Act require that CMS establish the payment amount benchmark period at the dosage form and strength level, and that resetting the payment amount benchmark period for a new NDC-9 of an existing Part D rebatable drug may not fully align with this directive. Simultaneously, and as described above in this section III.I.3.c.2.b, CMS understands there may be a gap in the AMP data available to calculate the benchmark period manufacturer price at the dosage form and strength level for certain drugs. To enable CMS to calculate the benchmark period manufacturer price when a new NDC-

⁵⁸⁴ See 88 FR 34238, 34257 (May 26, 2023). Section 1927(c)(2)(A)(ii)(II) of the Act expressly provides that the base date AMP quarter, with respect to a dosage form and strength of a drug, is established "without regard to whether or not the drug has been sold or transferred to an entity, including a division or subsidiary of the manufacturer . . ." See also the data field definition of market date: "For S, I, and N drugs marketed under an FDA-approved application (for example, BLA, NDA, ANDA), the earliest date the drug was first marketed under the application number by any labeler." <https://www.medicaid.gov/sites/default/files/medicaid-chip-program-information/by-topics/prescription-drugs/downloads/recordspecificationanddefinitions.pdf>.

9 of an existing Part D rebatable drug is reported to the MDRP and that NDC-9 lacks AMP data for the time period described in proposed § 428.202(c)(1) or (2), CMS is soliciting comments on alternative policy options that are described in more detail below.

First, CMS is soliciting comments on a modified version of the policy described in section 40.1.2 of the revised Medicare Part D Drug Inflation Rebate Guidance. Under this modified policy, if a new NDC-9 of an existing Part D rebatable drug is reported to the MDRP, CMS would calculate the benchmark period manufacturer price for such NDC-9 using the base date AMP reported by a manufacturer under section 1927(b)(3) of the Act for such Part D rebatable drug, if such base date AMP was reported for a calendar quarter that overlaps with the time period described in proposed § 428.202(c)(1) or (2), as applicable for that Part D rebatable drug. CMS believes this modified policy would be operationally feasible because CMS would calculate the benchmark period manufacturer price using the base date AMP that is reported with the new NDC-9; CMS therefore would not need to identify the earliest NDC-9 of the Part D rebatable drug. Under this policy, CMS would only use the base date AMP to calculate the benchmark period manufacturer price if the base date AMP was associated with a calendar quarter that overlapped with the time period described in proposed § 428.202(c)(1) or (2), as applicable for that Part D rebatable drug. If CMS were to adopt this alternative approach, CMS would expect to operationalize it through conforming changes to proposed § 428.202(c) and other applicable proposed regulatory text.

CMS notes that, if CMS were to finalize this alternative approach, CMS would be unable to use this approach to calculate the benchmark period manufacturer price in the case of a new NDC-9 of an existing Part D rebatable drug with base date AMP that does not overlap with the time period described in proposed § 428.202(c)(1) or (2). In such instances, CMS would either establish a future payment amount benchmark period using an approach similar to that described in proposed § 428.202(c)(3) and (4) or apply one of the other alternative policies described below.

Another alternative CMS is considering is to require manufacturers of Part D rebatable drugs to submit to CMS AMP data for the time period identified under proposed § 428.202(c)(1) or (2) in cases where the manufacturer did not report AMP to the

MDRP under section 1927(b)(3) of the Act for such period but AMP data are available either for the NDC-9 or for another NDC-9 within the same dosage form and strength. For example, if the quarter for which a manufacturer reports base date AMP for a new NDC-9 of an existing dosage form and strength does not overlap with the time period identified under proposed § 428.202(c)(1) or (2), but the earliest NDC-9 of the dosage form and strength that served as the basis for the base date AMP has AMP data available during any quarter of that time period, CMS would require manufacturers to report such AMP data. For a Part D rebatable drug with a payment amount benchmark period identified under proposed § 428.202(c)(1), a manufacturer would be required to submit to CMS AMP data for the calendar quarters in the period beginning January 1, 2021, and ending on September 30, 2021, to the extent such drug was first marketed before September 30, 2021. For a subsequently approved drug with a payment amount benchmark period identified under proposed § 428.202(c)(2), a manufacturer would be required to submit to CMS AMP data for the first calendar year beginning after the drug's first marketed date. CMS acknowledges the intersection between a potential reporting requirement under the Medicare Part D Drug Inflation Rebate Program for manufacturers to provide AMP data and existing AMP data reporting requirements for manufacturers under the MDRP. Should CMS pursue this option, CMS would explore using existing AMP reporting processes for the MDRP to operationalize any new AMP reporting requirement. This approach of requiring manufacturers to report such information would be consistent with CMS' understanding of the provisions of section 1860D-14B of the Act requiring CMS to establish the payment amount benchmark period at the dosage form and strength level, and with CMS' authority under sections 1102(a) and 1871(a)(1) of the Act to make rules and regulations as necessary for the efficient administration of programs, including the Medicare Part D Drug Inflation Rebate Program. CMS welcomes comments on the method by which CMS could collect such information, the timing of the potential collection and deadlines, and whether information reported by manufacturers should be taken into account for purposes of compiling the Rebate Reports for a Part D rebatable drug or instead only be included in the reconciliation processes

specified in proposed § 428.401(d) and described later in this proposed rule.

CMS is also considering an alternative policy whereby CMS would calculate the benchmark period manufacturer price for a new NDC-9 of an existing Part D rebatable drug that lacks AMP data for the time period described in § 428.202(c)(1) or (2) using a reasonable proxy metric. CMS welcomes comments on potential proxy metrics CMS could use to calculate the benchmark period manufacturer price for a new NDC-9 of an existing dosage form and strength for which no AMP data are reported for such periods.

These alternative policy options are intended to achieve the same goal as the policy described in section 40.2.2 of the revised Medicare Part D Drug Inflation Rebate Guidance (that is, to disincentivize a manufacturer from resetting its payment amount benchmark period by obtaining a new NDC-9 for an existing Part D rebatable drug). CMS also welcomes comments on the alternative policy described in the revised Medicare Part D Drug Inflation Rebate Guidance whereby CMS would treat drugs first approved or licensed on or before October 1, 2021, that were not marketed until after that date in the same manner as subsequently approved drugs for purposes of establishing the payment amount benchmark period, benchmark period CPI-U, first applicable period, and first applicable period CPI-U. CMS is soliciting comments on these alternatives and may adopt one or more of such alternatives in the final rule based on comments received. Additionally, CMS is seeking comments on other policies that CMS should consider to prevent manufacturers from inappropriately resetting the payment amount benchmark period by obtaining a new NDC-9 for an existing Part D rebatable drug.

Under CMS' proposed policy to identify a payment amount benchmark period in certain instances of missing AMP as proposed in § 428.202(c)(3) and (4) and each of these alternatives considered, CMS would consider any restatements to the AMP data used to calculate the benchmark period manufacturer price during reconciliation, as specified in proposed § 428.401(d) and described later in this proposed rule. Furthermore, CMS would also monitor the extent to which manufacturers obtain a new NDC-9 for the same Part D rebatable drug in a manner that could result in inappropriately resetting the payment amount benchmark period or otherwise affect the calculation of the benchmark period manufacturer price. CMS

reminds manufacturers of their reporting obligations under section 1927(b) of the Act and § 447.510 of this title and that failure to provide timely information may result in penalties as detailed in section 1927(b)(3)(C)(i) of the Act.

If finalized, CMS would apply the policies described above to rebate calculations beginning with the applicable period that began on October 1, 2022. CMS has determined that, consistent with the policy described in section III.I.1, in order to calculate inflation rebates for Part D rebatable drugs that do not have AMP or other pricing data available under section 1927(b)(3) on which to base the benchmark period manufacturer price, CMS' proposed policy must apply for applicable periods beginning with the applicable period that began on October 1, 2022.

(c) Identification of the Payment Amount Benchmark Period for a Part D Rebatable Drug No Longer Considered To Be a Selected Drug

In proposed § 428.202(c)(5), CMS proposes to codify policies described in section 40.2.2 of the revised Medicare Part D Drug Inflation Rebate Guidance relating to the identification of the payment amount benchmark period for a selected drug (as defined in section 1192(c) of the Act) with respect to a price applicability period (as defined in section 1191(b)(2) of the Act) in the case such Part D rebatable drug is no longer considered to be a selected drug. The Medicare Part D Drug Inflation Rebate Program applies to selected drugs notwithstanding the status of the drug as a selected drug. However, the calculation of certain components of the rebate amount formula for selected drugs depends upon whether the selected drug has reached the end of its price applicability period and is no longer considered to be a selected drug under section 1192(c) of the Act. Specifically, section 1860D-14B(b)(5)(C) of the Act specifies a different payment amount benchmark period and benchmark period CPI-U for a Part D rebatable drug in the case such drug is no longer considered to be a selected drug under section 1192(c) of the Act, for each applicable period beginning after the price applicability period with respect to such drug. Accordingly, in such a case where a Part D rebatable drug is no longer a selected drug, CMS proposes in § 428.202(c)(5) that the payment amount benchmark period will be reset as the last calendar year of such price applicability period for such selected drug.

(3) Calculation of the Benchmark Period Manufacturer Price

CMS proposes in § 428.202(d) that, subject to proposed § 428.202(g), to determine the benchmark period manufacturer price for a Part D rebatable drug, CMS would use the AMP reported by a manufacturer to the Medicaid Drug Programs system under sections 1927(b)(3)(A)(i) and (ii) of the Act for each calendar quarter of the payment amount benchmark period, as identified in accordance with proposed § 428.202(c), as well as the units reported by a manufacturer under section 1927(b)(3)(A)(iv) of the Act for each month of such payment amount benchmark period. For a Part D rebatable drug first approved or licensed on or before October 1, 2021, section 1860D-14B(b)(4) of the Act specifies that the benchmark period manufacturer price is the sum of the products of (1) the AMP for the Part D rebatable drug reported for each calendar quarter of the payment amount benchmark period (that is, January 1, 2021, through September 30, 2021), and (2) the total units reported for each of the corresponding calendar quarters of the payment amount benchmark period divided by the total units of the Part D rebatable drug reported for the 3 calendar quarters in the payment amount benchmark period. The following formula illustrates how CMS would calculate the benchmark period manufacturer price for a Part D rebatable drug with a payment amount benchmark period identified under proposed § 428.202(c)(1), as proposed in § 428.202(d)(1):

(AMP for calendar quarter beginning January 2021) *multiplied by* (sum of monthly AMP units for January 2021 calendar quarter *divided by* sum of the units reported for the 3 quarters of the payment amount benchmark period) +
 (AMP for calendar quarter beginning April 2021) *multiplied by* (sum of monthly AMP units for April 2021 calendar quarter *divided by* sum of the units reported for the 3 quarters of the payment amount benchmark period) +
 (AMP for calendar quarter beginning July 2021) *multiplied by* (sum of monthly AMP units for July 2021 calendar quarter *divided by* sum of the units reported for the 3 quarters of the payment amount benchmark period)

For a Part D rebatable drug with a payment amount benchmark period identified under proposed § 428.202(c)(2) through (5), the following formula illustrates how CMS

would calculate the benchmark period manufacturer price for a Part D rebatable drug as proposed in § 428.202(d)(2):

(AMP for calendar quarter beginning January) *multiplied by* (sum of monthly AMP units for January calendar quarter *divided by* sum of the monthly units reported for the 4 quarters of the payment amount benchmark period) +
 (AMP for calendar quarter beginning April) *multiplied by* (sum of monthly AMP units for April calendar quarter *divided by* sum of the monthly units reported for the 4 quarters of the payment amount benchmark period) +
 (AMP for calendar quarter beginning July) *multiplied by* (sum of monthly AMP units for July calendar quarter *divided by* sum of the monthly units reported for the 4 quarters of the payment amount benchmark period) +
 (AMP for calendar quarter beginning October) *multiplied by* (sum of monthly AMP units for October calendar quarter *divided by* sum of the monthly units reported for the 4 quarters of the payment amount benchmark period)

(4) Identification of the Benchmark Period CPI-U

To calculate the inflation-adjusted payment amount in accordance with section 1860D-14B(b)(3), CMS must identify the benchmark period CPI-U. As described in the revised Medicare Part D Drug Inflation Rebate Guidance and in accordance with section 1860D-14B(g)(4), CMS proposes in § 428.202(e)(1) that the benchmark period CPI-U for a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, would be the CPI-U for January 2021. For a subsequently approved drug, CMS proposes in § 428.202(e)(2) that the benchmark period CPI-U would be the CPI-U for January of the first calendar year beginning after the drug's first marketed date, as required under section 1860D-14B(b)(5)(A).

As described earlier in this proposed rule, CMS has observed that a number of NDC-9s of Part D rebatable drugs approved or licensed on or before October 1, 2021, do not have AMP reported in the period beginning January 1, 2021, and ending September 30, 2021, and a number of NDC-9s of subsequently approved drugs do not have AMP reported in the first calendar year following the drug's first marketed date. To enable CMS to calculate the benchmark period manufacturer price and inflation rebate amounts for these NDC-9s, CMS is proposing in

§ 428.202(c)(3) and (4) to identify the payment amount benchmark period for such NDC-9s as the first calendar year, which would be no earlier than calendar year 2021, in which such drug has at least 1 quarter of AMP data reported. As previously discussed, CMS is soliciting comments on alternative methodologies to identify the payment amount benchmark period and calculate the benchmark period manufacturer price to address certain instances in which AMP has not been reported and, if any such alternatives are adopted, CMS may adopt conforming modifications to proposed § 428.202(e). To identify the benchmark period CPI-U for an NDC-9 described in proposed § 428.202(c)(3), CMS further proposes in § 428.202(e)(3) that for a Part D rebatable drug first approved on or before October 1, 2021, for which there are no quarters during the period beginning on January 1, 2021, and ending on September 30, 2021, for which AMP has been reported to the MDRP, the benchmark period CPI-U would be the CPI-U for January of the calendar year in which such drug has at least 1 quarter of AMP reported. CMS proposes in § 428.202(e)(4) that for a subsequently approved drug for which there are no quarters during the first calendar year beginning after the drug's first marketed date for which AMP has been reported to the MDRP, the benchmark period CPI-U is the CPI-U for January of the calendar year in which such drug has at least 1 quarter of AMP reported.

As discussed previously, the Medicare Part D Drug Inflation Rebate Program applies to selected drugs notwithstanding the status of the drug as a selected drug. However, the calculation of certain components of the applicable rebate amount formula for selected drugs depends upon whether the selected drug has reached the end of its price applicability period and is no longer considered to be a selected drug under section 1192(c) of the Act. In accordance with section 1860D-14B(b)(5)(C) of the Act, in such a case where a Part D rebatable drug is no longer a selected drug, CMS proposes in § 428.202(e)(5) that the benchmark period CPI-U will be the CPI-U for January of the last calendar year of such price applicability period.

(5) Calculation of the Inflation-Adjusted Payment Amount

As specified in section 1860D-14B(b)(3) of the Act and described in section 40.2.3 of the revised Medicare Part D Drug Inflation Rebate Guidance, the inflation-adjusted payment amount with respect to a Part D rebatable drug and applicable period is the benchmark

period manufacturer price increased by the percentage by which the applicable period CPI-U exceeds the benchmark period CPI-U. CMS proposes in § 428.202(f) to calculate the inflation-adjusted payment amount for a Part D rebatable drug by dividing the applicable period CPI-U by the benchmark period CPI-U and then multiplying the quotient by the benchmark period manufacturer price. The following formula illustrates how CMS would calculate the inflation-adjusted payment amount for a Part D rebatable drug as proposed in § 428.202(f):

$$\text{(Benchmark period manufacturer price)} \\ \text{multiplied by (applicable period} \\ \text{CPI-U divided by benchmark} \\ \text{period CPI-U)}$$

As described earlier in this proposed rule and proposed in § 428.202(a), CMS will use the inflation-adjusted payment amount to calculate the per unit Part D drug inflation rebate amount by determining the amount by which the AnMP for a Part D rebatable drug exceeds the inflation-adjusted payment amount for a Part D rebatable drug for an applicable period.

(6) Situations in Which Manufacturers Do Not Report Units Under Section 1927(b)(3)(A)(iv)

Section 1860D-14B of the Act generally requires CMS to determine the per unit Part D drug inflation rebate amount using the monthly units reported by manufacturers to the Medicaid Drug Programs system under section 1927(b)(3)(A)(iv) of the Act. CMS understands it is possible that a manufacturer may not have sales or monthly units of a COD to report to the Medicaid Drug Programs system for a calendar quarter because, for example, there may be a temporary interruption in sales of the COD, or there may be no sales immediately after the drug is first approved or licensed by the FDA. CMS proposes in § 428.202(g)(1) to codify the policy described in section 40.1.2 of the revised Medicare Part D Drug Inflation Rebate Guidance, whereby in cases where there are 1 or more quarter(s) in the payment amount benchmark period or applicable period for which a manufacturer has not reported units under section 1927(b)(3)(A)(iv) of the Act but has reported AMP under sections 1927(b)(3)(A)(i) and (ii) of the Act, CMS would calculate the benchmark period manufacturer price or AnMP, as applicable, using data only from quarter(s) with units. That is, quarter(s) in the payment amount benchmark period or applicable period for which a manufacturer has not

reported units under section 1927(b)(3)(A)(iv) of the Act would be excluded from the calculation. CMS proposes in § 428.202(g)(2) to codify the policy described in section 40.1.2 of the revised guidance whereby if there are no quarters of the payment amount benchmark period or applicable period for which a manufacturer has reported units under section 1927(b)(3)(A)(iv) of the Act, but the manufacturer has reported AMP under sections 1927(b)(3)(A)(i) and (ii) of the Act for at least 1 quarter of such period, CMS would use the average of the AMP over the calendar quarters of the payment amount benchmark period or applicable period for which AMP is reported to calculate the benchmark period manufacturer price or AnMP, respectively.

iv. Determination of the Total Number of Units Dispensed Under Part D

In § 428.203(a), CMS proposes to codify the existing policy established in the revised Medicare Part D Drug Inflation Rebate Guidance whereby CMS would determine the total number of units of each Part D rebatable drug dispensed under Part D and covered by Part D sponsors based on information reported to CMS by Part D plan sponsors on the Part D PDE records for the 12-month applicable period. More specifically, CMS would determine the total number of units from the Quantity Dispensed field on the PDE record for each Part D rebatable drug with gross covered prescription drug costs greater than zero. Because the PDE record does not provide the unit type used to determine Quantity Dispensed, CMS proposes in § 428.203(a)(2) that CMS would crosswalk the information from the PDE record to a drug database that provides the unit type for an NDC, such as Medi-Span or the FDA's Comprehensive NDC Structured Product Labeling (SPL) Data Element (NSDE) file, matching on the NDC of the Part D rebatable drug. CMS understands that in limited instances, the unit type obtained from such drug databases may not match the AMP unit type reported by manufacturers to the Medicaid Drug Programs system, and in these cases, CMS would convert the total units reported on the PDE record to the AMP units reported to the Medicaid Drug Program system.

CMS conducts a thorough review of PDE records, which includes the identification of outliers in the quantity dispensed field of PDE records, as part of the Part D payment reconciliation process that occurs between CMS and

plan sponsors each year.⁵⁸⁵ CMS intends to rely on this payment reconciliation process, through which Part D plan sponsors have an opportunity to correct PDE records flagged by CMS as containing potential outliers, to resolve outliers that would otherwise impact the Part D drug inflation rebate amount calculated under proposed § 428.201(a). Because PDE records are not updated to reflect the resolution of outliers identified through the Part D payment reconciliation process for a given calendar year until after CMS plans to send Rebate Reports for the applicable period (capturing data that include the first three quarters of that calendar year), the Rebate Report will not reflect the resolution of unit outliers identified through the Part D payment reconciliation process. However, because CMS intends to conduct a reconciliation of the rebate amount with additional PDE run-out (as proposed in § 428.401(d) and described later in this proposed rule), the reconciled rebate amounts will reflect the resolution of any unit outliers corrected by Part D plan sponsors through the Part D payment reconciliation process. CMS does not intend to conduct separate outlier analysis of PDE for the purposes of the Medicare Part D Drug Inflation Rebate Program, but CMS did consider several adjustments to reduce the effect of outliers not resolved through the Part D payment reconciliation process, including removal of PDE records that were identified by CMS as having potential outlier quantity dispensed fields but were neither corrected nor verified by Part D plan sponsors, removal of the quantity dispensed field for certain records at or above a certain statistically derived threshold, and imputing quantity dispensed values for such records. CMS is soliciting comments on this proposed approach to rely on CMS' existing review of PDE records, as well as on the adjustments considered to reduce the effect of outliers not resolved through the Part D payment reconciliation process.

As proposed in § 428.203(b), CMS would remove from the total number of units any units of a generic drug dispensed on or after the date that such generic drug no longer meets the definition of a Part D rebatable drug, as well as units acquired through the 340B Program, as described in section III.I.3.c of this proposed rule. CMS invites comments on any additional units that

should be excluded from the rebate amount calculation.

(1) Removal of Units When a Generic Drug Is No Longer a Part D Rebatable Drug

In § 428.203(b)(1), CMS proposes to codify the policy established in section 40.2.8 of the revised Medicare Part D Drug Inflation Rebate Guidance to exclude from the rebate calculation any units of a generic drug dispensed on or after the date that such generic drug no longer meets the definition of a Part D rebatable drug. To determine whether a generic drug that meets the definition of a Part D rebatable drug on the first day of an applicable period ceases to meet such definition later in the applicable period, CMS will use the most recent version of the downloadable FDA Orange Book to identify whether FDA has approved a 505(j) ANDA for a drug that is rated as therapeutically equivalent to such generic drug. If CMS determines that FDA has approved such a therapeutically equivalent drug under a 505(j) ANDA, CMS will then use the NDC Directory, including historical information from NDC Directory files such as discontinued, delisted, and expired listings provided by FDA or published on the FDA website to determine the marketing status of such therapeutically equivalent drug and to determine whether, during the applicable period, the therapeutically equivalent drug was marketed. Similarly, CMS will use the NDC Directory to identify whether the reference listed drug, or an authorized generic of the reference listed drug was marketed during the applicable period. CMS will exclude from the rebate calculation any units dispensed on or after the first day of the calendar month that a generic drug no longer meets the definition of a Part D rebatable drug. CMS intends to apply this unit exclusion at the month level and would exclude all units of a generic drug that ceases to meet the definition of a Part D rebatable drug beginning with the first day of the first month when a therapeutically equivalent drug approved under a 505(j) ANDA is marketed based on the marketing start date in the NDC Directory or when the reference listed drug, or an authorized generic of the reference listed drug is marketed based on the marketing start date in the NDC Directory. CMS proposes to apply this exclusion each calendar month because the Orange Book downloadable data files are updated monthly.

(2) Exclusion of 340B Acquired Units From Part D Rebatable Drug Requirements

Section 1860D–14B(b)(1)(B) of the Act requires that beginning with plan year 2026, CMS shall exclude from the total number of units for a Part D rebatable drug, with respect to an applicable period, those units for which a manufacturer provides a discount under the 340B Program. Because this requirement starts after the first quarter of the applicable period that begins on October 1, 2025, the exclusion of 340B units would only apply for the last three quarters of this applicable period. That is, CMS would exclude 340B units starting on January 1, 2026.

Data on which units dispensed under Part D and covered by Part D plan sponsors were purchased under the 340B Program is unavailable under the data sources specified at section 1860D–14B(d) of the Act (that is, information submitted by manufacturers, States, and Part D plan sponsors), and CMS does not currently have access to this data through other means. CMS understands that the 340B status of a Part D drug is usually not known by the dispenser at the point-of-sale, and that 340B covered entities (hereinafter “covered entities”) typically identify the 340B status of a Part D drug retrospectively. Because the covered entity and CMS do not exchange dispensed Part D drug information confirming the 340B status of a Part D rebatable drug, CMS is unable to identify 340B units at the claim-level at this time. For these reasons, CMS believes it necessary to establish an estimation methodology to remove 340B units from the total number of units for a Part D rebatable drug, as described in this section.

(a) Estimation Methodology To Remove 340B Units From Rebate Calculations

To fulfill the statutory requirement to remove 340B units from rebate calculations beginning on January 1, 2026, CMS is proposing in § 428.203(b)(2) a new policy to remove units from the total number of units dispensed of a Part D rebatable drug for each applicable period based on a calculated percentage that reflects the portion of 340B purchasing relative to total sales. CMS proposes the percentage (hereinafter, “estimation percentage”) to equal the total number of units purchased by covered entities under the 340B Program for an NDC–9, divided by the total units sold of that NDC–9. An example calculation for a Part D rebatable drug for a given applicable period is shown below for illustrative purposes:

⁵⁸⁵ See <https://www.hhs.gov/guidance/document/pde-analysis-process-withheld-and-invoiced-outlier-pdes>.

Total number of units dispensed under Part D determined under § 428.203(a), minus the units determined under § 428.203(b)(1): 1,000

Estimation percentage:

Total number of units purchased by covered entities under the 340B Program: 5,000

Total units sold: 50,000

5,000 *divided by* 50,000 = 10 percent

340B units excluded under

§ 428.204(b)(2): 10 percent

multiplied by 1,000 = 100

The proposed estimation policy is consistent with CMS' authority under section 1860D-14B(b)(1)(B) of the Act and sections 1102(a) and 1871(a)(1) of the Act, the latter of which provide the authority to make rules and regulations as necessary for the efficient administration of programs, including the Medicare Part D Drug Inflation Rebate Program. Because the statutory requirement to remove 340B units from rebate calculations does not begin until January 1, 2026, for the applicable year that begins on October 1, 2025, CMS proposes to apply the estimation percentage only to those units associated with claims with dates of service in the last three quarters of the applicable period (that is, January 1, 2026, through September 30, 2026).

To identify the numerator of the estimation percentage (that is, the total number of units purchased under the 340B Program for an NDC-9), CMS proposes to use data from HRSA's Prime Vendor Program (PVP). Certain supply chain entities report 340B unit data to the PVP at the NDC-11 level, and based on the data received, CMS would aggregate these data at the NDC-9 level⁵⁸⁶ to identify the total number of 340B units of a Part D rebatable drug that covered entities purchased in a given time period. CMS proposes to work with HRSA to obtain the necessary data from the PVP. CMS understands that there are limitations of using the PVP data, including that some covered entities may choose not to participate in the PVP, and CMS would not have access to 340B purchases reported by supply chain entities for this share of covered entities. Further, certain 340B purchases may not be reported to the PVP if those purchases were made through alternative distribution models such as a covered entity purchasing directly from a manufacturer, certain specialty distribution channel

purchases, or drugs that receive a 340B rebate under the Ryan White HIV/AIDS Program's AIDS Drug Assistance Program. CMS is soliciting comments on what other data sources may be available to calculate the numerator of the estimation percentage. CMS is also soliciting comments on how it could account for potential underreporting of 340B units if data are not available on certain 340B purchases, such as those described above, that may not be reported to the PVP.

To identify the denominator of the estimation percentage (that is, the total units sold of an NDC-9), CMS proposes to use existing manufacturer reporting under the Medicaid Drug Rebate Program (MDRP) of unit sales. Specifically, CMS proposes to use the total number of units that are used to calculate the monthly AMP and which manufacturers are required to report to CMS for each covered outpatient drug (COD) in accordance with section 1927(b)(3)(A)(iv) of the Act. CMS believes that using these unit data to calculate an estimation percentage is consistent with the use of these same data to calculate the AnMP in proposed § 428.202(b) and the benchmark period manufacturer price in proposed § 428.202(d).

CMS recognizes the importance of ensuring that the numerator and denominator of the proposed estimation percentage reflect the same time period of sales for units dispensed in the same settings. CMS acknowledges that the proposed data source for the numerator (PVP data) reflects purchases by covered entities that dispense or administer 340B-eligible drugs in retail community pharmacies and in outpatient settings. The proposed data source for the denominator (unit sales used to calculate AMP) represents, in accordance with the definition of AMP at section 1927(k)(1) of the Act, (1) manufacturer sales to wholesalers for drugs distributed to retail community pharmacies, and (2) manufacturer sales to retail community pharmacies that purchase drugs directly from the manufacturer. Therefore, the numerator of the proposed estimation percentage represents 340B units dispensed in multiple settings, whereas the denominator represents units typically dispensed only in the retail community pharmacy setting. CMS welcomes evidence demonstrating how 340B dispensing rates differ between the retail community pharmacy setting versus multiple settings and may consider adjusting the estimation percentage to reflect variation between the percentage of 340B units dispensed in multiple settings (that is, retail

community pharmacies and outpatient settings) and the percentage of 340B units dispensed in only the retail community pharmacy setting. The proposed regulatory text at § 428.203(b)(2) would be subject to any such adjustment factor that may be adopted.

CMS also recognizes that the proposed estimation percentage represents the total number of 340B units dispensed as a proportion of total units dispensed, irrespective of insurance/payer type. CMS is soliciting comments on whether the agency should further adjust the percentage of 340B units dispensed to the general population to estimate the percentage of 340B units dispensed to Part D beneficiaries for claims with dates of service on or after January 1, 2026, including comments on how the percentage of 340B units dispensed to the general population compares with the percentage of 340B units dispensed to Part D beneficiaries. CMS welcomes evidence that demonstrates how these percentages differ. CMS will consider this information in developing its final policies and may consider adjusting the estimation percentage to reflect variation between the percentage of 340B units dispensed to Part D beneficiaries and the percentage of 340B units dispensed to the general population. The proposed regulatory text at § 428.203(b)(2) would be subject to any such adjustment factor that may be adopted. CMS is also soliciting comments on whether there are other circumstances for which CMS should apply an adjustment factor to the estimation percentage.

CMS considered using alternative data sources to calculate the estimation percentage. To identify the total number of units purchased under the 340B Program to use in the numerator of the estimation percentage, CMS considered requiring other entities throughout the pharmaceutical supply chain, including manufacturers, to report these data to CMS. An advantage of this approach is that manufacturers could provide data directly on total 340B units sold; in other words, this data would capture the limited 340B sales that the PVP data does not capture. A disadvantage of this approach is that not all manufacturers of Part D rebatable drugs may have existing mechanisms for tracking 340B sales for Medicare Part D, which could necessitate that new tracking and reporting mechanisms be created. At this time, CMS is not proposing this alternative because CMS would prefer to rely on data that are already reported to the PVP, as using these data would help to minimize reporting burdens and may

⁵⁸⁶ NDC-9 and NDC-11 numbers are identical except for two numbers in NDC-11s that indicate package size. Because of this, NDC-11 is more granular than NDC-9, and multiple NDC-11 numbers can aggregate under a single NDC-9 number.

result in cleaner and more accurate data due to the quality checks performed on the PVP data for purposes of compliance with the 340B Program. For example, audit and price integrity checks are performed on the PVP data to ensure the distributors submit and code the data correctly.

To identify the total units sold to use in the denominator of the estimation percentage, CMS similarly considered establishing a new requirement for other entities throughout the pharmaceutical supply chain, including manufacturers, to report these data to CMS. An advantage of this approach is that the denominator would represent sales that are ultimately dispensed in retail community pharmacy settings and in outpatient settings (whereas, as mentioned previously, unit reporting under the MDRP represents units typically dispensed only in the retail community pharmacy setting). A disadvantage of this approach is that it could necessitate that new tracking and reporting mechanisms be created. At this time, CMS is not proposing this alternative as CMS believes that relying upon existing manufacturer reporting of unit sales reported with AMP under the MDRP would be preferable to a new reporting option and would help minimize reporting burden. Further, the use of unit sales reported with AMP may provide cleaner and more accurate data than establishing a new manufacturer reporting requirement since manufacturers must certify their AMP reporting, in accordance with § 447.510(e), and are subject to civil money penalties for false or inaccurate reporting, in accordance with section 1927(b)(3)(B) of the Act. CMS also considered using data on unit sales available in a nationally representative and commercially available database but one disadvantage of this option would be that CMS would be unable to audit the quality of data available through such a database.

(b) Comment Solicitation on a Medicare Part D Claims Data Repository

In the initial Medicare Part D Drug Inflation Rebate Guidance, CMS solicited comments on the best mechanism to identify 340B units dispensed under Part D.⁵⁸⁷ CMS discussed requiring the dispensing entity to include a 340B claims indicator on the Part D drug claim to be included in PDE records. Many commenters disagreed that the PDE record was the most accurate way to

identify 340B discounts for Part D drugs. A few commenters highlighted the operational challenges, administrative burden, and potential for increased dispensing fees and reimbursement issues with both point-of-sale modifiers and retrospective 340B identifiers. In addition, a wide array of interested parties recommended that CMS create a mechanism through which covered entities would retrospectively submit data to CMS identifying 340B claims dispensed under Part D. Interested parties urged that this mechanism allow covered entities to submit these data directly to CMS, rather than through claims that dispensers submit via Part D plan sponsors.

In response to this feedback from interested parties, CMS is soliciting comments on establishing a Medicare Part D claims data repository (hereinafter, “repository”) in a future year of the Medicare Part D Drug Inflation Rebate Program to comply with the requirement under section 1860D–14B(1)(B) of the Act that CMS shall exclude from the total number of units for a Part D rebatable drug those units for which a manufacturer provides a discount under the 340B Program. This approach would require that covered entities submit certain data elements from 340B-identified Part D claims to the repository. CMS solicits comments on such a requirement later in this section.

As described later in this section, a repository could receive data elements submitted by covered entities from 340B-identified claims for all drugs covered under Medicare Part D billed to Medicare. As requested by interested parties in comments on the initial Medicare Part D Drug Inflation Rebate Guidance, the repository could allow covered entities to submit these data directly to CMS (or a contractor), rather than through claims that dispensers submit to Part D plan sponsors. CMS could consider all data elements received by the repository to be associated with 340B-identified claims; that is, the repository would not further verify the 340B status of a claim but rather would serve solely to store these data. Under this process, CMS could require an attestation from covered entities that the data elements from all claims submitted to the repository are from verified 340B claims. CMS is exploring approaches to confirming completeness and accuracy of the submission, and CMS is soliciting comments on methods to review and ensure the accuracy of reported data. CMS could then match the stored data elements to PDE records for each Part D

rebatable drug dispensed during the applicable period. Units associated with PDE records that match to data elements stored in the repository could be considered those for which the manufacturer provides a discount under the 340B Program and therefore removed from the total number of units used to calculate the total rebate amount.

(c) Comment Solicitation on Requiring Covered Entities To Submit 340B Claims Data to the Repository

CMS is soliciting comments on using its authority under section 1860D–14B(b)(1)(B) of the Act, as well as its authorities under sections 1102(a) and 1871(a)(1) of the Act, to require covered entities to enroll in a repository and submit certain data elements from 340B-identified claims for all covered Part D drugs billed to Medicare to this repository. CMS understands covered entities typically contract with 340B third-party administrators (340B TPAs) to determine 340B eligibility of claims using data submitted by covered entities and their contract pharmacies.⁵⁸⁸ CMS welcomes comments on whether or how, to the extent a covered entity uses a 340B TPA, CMS could require or encourage TPAs to submit certain data elements to the repository on behalf of that covered entity.

Requiring covered entities to submit data elements from 340B-identified Part D claims to the repository could allow CMS to receive data directly from the entities that participate in the 340B Program to identify 340B units to exclude from Part D drug inflation rebate calculations without intermediary entities needing to develop processes to capture these data and relay it to CMS. CMS is considering requiring covered entities to submit the following data elements from Part D claims for covered Part D drugs that are purchased under the 340B Program and dispensed to Medicare Part D beneficiaries: (1) Date of Service (that is, the date the prescription was filled by the pharmacy); (2) Prescription or Service Reference Number; (3) Fill Number (that is, the code indicating whether the prescription is an original or a refill; if a refill, the code indicates the refill number); and (4) Dispensing Pharmacy NPI. CMS believes that these would be the minimum data elements required to match claims and remove 340B units from Part D drug inflation rebate calculations. CMS is soliciting

⁵⁸⁸ Covered entities may elect to dispense 340B drugs to patients through contract pharmacy services, an arrangement in which the covered entity enters a contract with the pharmacy to provide pharmacy services.

⁵⁸⁷ See: <https://www.cms.gov/files/document/medicare-part-d-inflation-rebate-program-initial-guidance.pdf>.

comments from interested parties on this list of data elements and whether these data elements would be accessible to covered entities to submit to CMS.

(d) Comment Solicitation on Timing Requirements for Potential Submissions to a Medicare Part D Claims Data Repository

CMS is soliciting comments on requiring covered entities to submit the fields specified by CMS to the repository within 3 months of the end of a given calendar quarter. For example, for claims with dates of service between October 1, 2027, through December 31, 2027, covered entities would be required to submit data elements from 340B-identified claims to CMS no later than March 31, 2028. The 340B units identified from these quarterly submissions could be removed from the total number of units and total rebate amount specified in the Preliminary Rebate Report and Rebate Report detailed in proposed § 428.401(b) and (c), respectively.

In accordance with the proposed regulation at § 428.401(d) to reconcile the rebate amount in the case of revised information, including a reconciliation of the total number of units detailed at proposed § 428.401, CMS is soliciting comments on providing covered entities with additional time to submit data to reflect a revision to the 340B determination of claims with dates of service throughout an applicable period. A revision could come in one of two forms: (1) resubmission of data for a claim that the covered entity previously submitted to a repository in error or with errors in the requested data fields, or (2) new submission of data for a claim that the covered entity had previously determined was not purchased under the 340B Program, but later identified was purchased under such program. For the first type of revision, CMS is soliciting comments on requiring that the covered entity resubmit the data from such claim using a field to indicate that such data should be removed from the repository's dataset of 340B-identified claims; if applicable, the covered entity could resubmit the claim with the correct information. CMS is soliciting comments on the process and timing for covered entities to submit this revised data to the repository after the end of the applicable period. Updates to the total number of units and total rebate amount based on this revised information from covered entities would be reflected in the reconciliation process detailed at proposed § 428.401(d).

CMS is soliciting comments from interested parties on the feasibility of

the proposed quarterly reporting timeline for covered entities to submit data elements from Part D 340B claims, as well as the additional time to submit data to reflect a revision to the 340B determination of claims.

(e) Alternative Policy Considered: 340B Claims Identifier

As described in section 40.2.7 of the initial Medicare Part D Drug Inflation Rebate Guidance, CMS considered requiring that a 340B indicator be included on the PDE record at the time of dispense to identify drugs purchased under the 340B Program that were dispensed under Medicare Part D. As described in the “Summary of Public Comments on the Initial Medicare Part D Drug Inflation Rebates Memorandum and CMS’ Responses” in the revised Medicare Part D Drug Inflation Rebate Guidance, many commenters—including covered entities, pharmacies, Part D plan sponsors, and pharmacy benefit managers—disagreed that the PDE record would be the most accurate way to identify 340B discounts for Part D drugs. A few commenters highlighted the operational challenges, administrative burden, and potential for increased dispensing fees and reimbursement issues with 340B claim identifiers. After further consideration of comments received in response to the initial guidance and of the process through which a claim is determined to have 340B status, CMS is no longer pursuing this policy at this time but may consider it in future rulemaking.

v. Treatment of New Formulations of Part D Rebateable Drugs

Section 1860D–14B(b)(5)(B)(i) of the Act requires CMS to determine a formula for the rebate amount and the inflation-adjusted payment amount for a Part D rebateable drug that is a line extension of a Part D rebateable drug that is an oral solid dosage form for an applicable period that is consistent with the formula applied under section 1927(c)(2)(C) of the Act for determining a rebate obligation for a rebate period under such section. Section 1927(c)(2)(C) of the Act provides for an alternative rebate calculation for line extension drugs under the MDRP, and CMS issued guidance on how this calculation is performed for these purposes.⁵⁸⁹

Section 1860D–14B(b)(5)(B)(ii) of the Act further states that for a Part D rebateable drug, the term line extension

⁵⁸⁹ See: <https://www.medicaid.gov/medicaid/prescription-drugs/medicaid-drug-rebate-program/unit-rebate-calculation/unit-rebate-amount-calculation-for-line-extension-drugs-with-example/index.html>.

means, “a new formulation of the drug, such as extended release formulation, but does not include an abuse-deterrent formulation of the drug (as determined by the Secretary), regardless of whether such abuse-deterrent formulation is an extended release formulation.” This language is identical to the definition of “line extension” in section 1927(c)(2)(C) of the Act. Regulatory definitions of “line extension” and “new formulation” for the MDRP were adopted through rulemaking⁵⁹⁰ and can be found at § 447.502. In alignment with CMS’ policy in section 40.4 of the revised Medicare Part D Drug Inflation Rebate Guidance, CMS proposes in § 428.200 to adopt the definitions of “line extension” and “new formulation” at § 447.502 of this title for the purposes of identifying new formulations of Part D rebateable drugs.

In proposed § 428.204, CMS would determine the total rebate amount to be paid by manufacturers by taking the greater of (1) the total rebate amount calculated in proposed § 428.201(a) for the applicable period for the Part D rebateable drug that is a line extension, or (2) the alternative total rebate amount. This proposal is a modification to policy established in revised Medicare Part D Drug Inflation Rebate Guidance. While the revised guidance stated that CMS would compare the *per unit* rebate amount to the alternative *per unit* rebate amount, as proposed in § 428.204, CMS would compare the *total* rebate amount calculated in proposed § 428.201(a) to the alternative *total* rebate amount, which CMS believes is consistent with the existing regulations for new formulations at § 447.509(a)(4). CMS further proposes in § 428.204 to codify the policy described in section 40.4 of the revised guidance to calculate the alternative inflation rebate amount for a Part D rebateable drug that is a line extension consistent with the formula applied under section 1927(c)(2)(C) of the Act. That is, CMS would determine an inflation rebate amount ratio for the initial drug identified by the manufacturer in accordance with § 447.509(a)(4)(i)(B) by dividing the inflation rebate amount for that initial drug for the applicable period by the AnMP for that initial drug for the applicable period, as calculated under proposed § 428.202(b).

To identify the initial drug for the line extension, CMS would use information from the Medicaid Drug Program system and identify line extensions based on manufacturer reporting of drugs as line extensions and related pricing and product data in that system. CMS notes

⁵⁹⁰ See: 85 FR 87000, 87101 (December 31, 2020).

that Medicaid rebates are calculated quarterly, and a different initial drug may be identified in different quarters by the manufacturer for a particular line extension drug. Part D drug inflation rebates are calculated based on a 12-month applicable period, meaning there may be instances where a Part D rebatable line extension drug has multiple potential initial drugs during the applicable period that could be used for the alternative inflation rebate amount calculation. In such situations, for consistency, CMS will use the initial drug identified by the manufacturer in the last quarter of the Part D inflation rebate applicable period to identify the initial drug for the line extension drug alternative inflation rebate calculation. If an initial drug was not identified in the last quarter for a drug that is a line extension, CMS will use the initial drug identified for a quarter most recently in

that applicable period to identify the initial drug for the line extension drug alternative inflation rebate calculation.

d. Reducing the Rebate Amount for Part D Rebatable Drugs in Shortage and When There Is a Severe Supply Chain Disruption or Likely Shortage (§§ 428.300 Through 428.303)

Section 1860D–14B(b)(1)(C) of the Act requires the Secretary to reduce or waive the rebate amount owed by a manufacturer for a Part D rebatable drug with respect to an applicable period in three distinct cases: (1) when a Part D rebatable drug is described as currently in shortage on a shortage list in effect under section 506E of the FD&C Act at any point during the applicable period; (2) when CMS determines there is a severe supply chain disruption during the applicable period for a generic Part D rebatable drug or biosimilar, such as

a disruption caused by a natural disaster or other unique or unexpected event; and (3) when CMS determines that without such a reduction or waiver, a generic Part D rebatable drug is likely to be described as in shortage on such shortage list during a subsequent applicable period. The statute does not describe how CMS should reduce or waive inflation rebates.

To implement the statutory requirement under section 1860D–14B(b)(1)(C), CMS proposes to codify in subpart D of part 428 existing policies described in sections 40.5, 40.5.1, 40.5.2, and 40.5.3 of the revised Medicare Part D Drug Inflation Rebate Guidance to reduce the total rebate amount owed by a manufacturer in each of these three cases, as summarized in Table 51 and discussed later in this section.

| | Drug Shortage | | Severe Supply Chain Disruption | Likely to be in Shortage |
|--------------------------------------|--|--|---|-------------------------------|
| Duration of Reduction | Indefinite for as long as drug is “currently in shortage” | | One applicable period; manufacturer may request an extension for an additional applicable period for up to two applicable periods total | |
| Percent Reduction | Part D rebatable drug other than a plasma-derived product or generic Part D rebatable drug | Part D rebatable plasma-derived product or generic Part D rebatable drug | Part D rebatable biosimilar or generic Part D rebatable drug | Generic Part D rebatable drug |
| <i>First applicable period</i> | 25% | 75% | 75% | 75% |
| <i>Second applicable period</i> | 10% | 50% | 75% | 75% |
| <i>Subsequent applicable periods</i> | 2% | 25% | Not applicable | Not applicable |

TABLE 51: Determination of Rebate Reduction Amount for Part D Rebatable Drugs

As proposed, CMS would not fully waive the rebate amount owed in any case. CMS believes the proposed rebate reduction policies balance providing appropriate financial relief for manufacturers in certain circumstances, including when there is a severe supply disruption resulting from exogenous circumstances outside of a manufacturer’s control, while not incentivizing manufacturers to delay taking appropriate steps to resolve a drug shortage or severe supply chain disruption, or maintain a situation in which a generic would be at risk of shortage to avoid an obligation to pay rebates. CMS will continue to evaluate these policies and may update them in

future years. CMS underscores that most shortages involve multiple source generic drugs,⁵⁹¹ which are not Part D rebatable drugs and thus are not subject to Part D drug inflation rebates. CMS solicits comments on the proposed approach.

i. Definitions

CMS proposes in § 428.300 to define the following terms applicable to subpart D (§§ 428.300 through 428.303):

- “Biosimilar”.
- “Drug shortage” or “shortage”.
- “Generic Part D rebatable drug”.

⁵⁹¹ See: <https://www.iqvia.com/insights/the-iqvia-institute/reports-and-publications/reports/drug-shortages-in-the-us2023>.

- “Likely to be in shortage”.
 - “Plasma-derived product”.
- Proposed § 428.300 also would codify definitions established in the revised Medicare Part D Drug Inflation Rebate Guidance for the following terms:
- “Currently in shortage”.
 - “Natural disaster”.
 - “Other unique or unexpected event”.
 - “Severe supply chain disruption”.

ii. Reducing the Rebate Amount for Part D Rebatable Drugs Currently in Shortage

In proposed § 428.301, CMS proposes to codify the policy established in section 40.5.1 of the revised Medicare Part D Drug Inflation Rebate Guidance

whereby CMS would reduce the total rebate amount for a Part D rebatable drug that is currently in shortage based on the length of time the drug is in shortage during an applicable period and decrease the amount of the reduction over time. CMS intends to use the shortage lists maintained by the FDA Center for Biologics Evaluation and Research (CBER) and Center for Drug Evaluation and Research (CDER) to determine whether a Part D rebatable drug is currently in shortage⁵⁹² during an applicable period. CMS will not consider an NDC-10 in the status of “to be discontinued,” “discontinued,” or “resolved” to be “currently in shortage.” At this time, CMS intends to provide the same reduction in the rebate amount for Part D rebatable drugs currently in shortage regardless of the cause of the shortage.

CMS will not provide a full waiver of the rebate amount for drugs currently in shortage on an FDA shortage list, as providing a full waiver of the rebate amount could further incentivize manufacturers to delay taking appropriate steps that may resolve a shortage more expeditiously simply to maintain having the drug listed on FDA’s drug shortage list to avoid an obligation to pay rebates for an extended period. Further, in a report analyzing the root causes of drug shortages between 2013 and 2017, FDA found that more than 60 percent of drug shortages were the result of manufacturing or product quality issues, and providing a full waiver of the rebate amount in situations that may be within a manufacturer’s control could be perceived as rewarding manufacturers for poor quality management.⁵⁹³

CMS would be responsible for monitoring the status of a Part D rebatable drug on an FDA shortage list, and manufacturers would not need to submit any information to CMS to be eligible for a reduction of the rebate amount for a Part D rebatable drug that is currently in shortage.

To calculate the reduced total rebate amount for a Part D rebatable drug, in § 428.301(b)(1), CMS proposes the following formula:

Reduced *Total Rebate Amount* = the total rebate amount *multiplied by* (1 *minus* applicable percent reduction) *multiplied by* (percentage of time drug was

currently in shortage during the applicable period) *added to* the total rebate amount *multiplied by* (1 *minus* percentage of time drug was currently in shortage during the applicable period)

For the purpose of this formula, for a Part D rebatable drug that is a generic drug or a plasma-derived product, in § 428.301(b)(2)(i), CMS proposes an applicable percent reduction of 75 percent for the first applicable period such Part D rebatable drug is currently in shortage, 50 percent for the second applicable period, and 25 percent for each subsequent applicable period. For a Part D rebatable drug (including a biosimilar) that is not a generic drug or a plasma-derived product, in § 428.301(b)(2)(ii), CMS proposes an applicable percent reduction of 25 percent for the first applicable period such Part D rebatable drug is currently in shortage, 10 percent for the second applicable period, and 2 percent for each subsequent applicable period.

Because drugs and biologicals on the FDA shortage lists are maintained at the NDC-10 level, and Part D drug inflation rebates are calculated at the NDC-9 level, CMS proposes in § 428.301(c) that if any NDC-10 for a Part D rebatable drug is currently in shortage, CMS would apply the rebate reduction to the entire Part D rebatable drug at the NDC-9 level. CMS will closely monitor market data for the Part D rebatable drugs for which the rebate is reduced to ensure the integrity of the application of the rebate reduction policy.

CMS intends to provide a reduction in the rebate amount for as long as a Part D rebatable drug is currently in shortage. CMS believes the rebate reduction should be proportional to the time the drug is currently in shortage and decrease over time to balance providing financial relief to manufacturers experiencing a drug shortage while not incentivizing manufacturers to delay taking appropriate steps to resolve a shortage simply to maintain having the drug listed on an FDA shortage list to avoid an obligation to pay rebates for an extended period.

To determine the percentage of time a Part D rebatable drug was currently in shortage during the applicable period, as proposed in § 428.301(b)(3), CMS would count the number of days such drug is currently in shortage in an applicable period and divide by the total number of days in that applicable period.

In proposed § 428.301(b)(2), CMS proposes codifying the policy set forth in section 40.5.1 of the revised Medicare

Part D Drug Inflation Rebate Guidance to apply a greater applicable percent reduction for generic Part D rebatable drugs, which, by definition, are sole source generic drugs, compared to brand-name drugs and biologicals, including biosimilars. CMS understands that generic drugs are often low-margin products whose prices are tied to the marginal cost of production and thus are vulnerable to potential market exit and shortage when input costs increase. CMS notes that the Medicare Part D Drug Inflation Rebate Program does not apply to multiple source generic drugs, which are the generic drugs most likely to be in shortage.⁵⁹⁴ CMS proposes also applying a greater applicable percent reduction for plasma-derived products than non-plasma derived products because the former rely on a variable supply of donated blood plasma that can impact downstream production and therefore hamper the ability to promptly resolve a shortage.

When the status of a Part D rebatable drug changes from currently in shortage to “resolved” and either remains in the status of “resolved” or is removed from the list, and then reemerges on the list in the status of currently in shortage in the next applicable period, CMS would apply the shortage reduction as if there was a continuous shortage and move to the applicable percent reduction for the second applicable period. (In this scenario, the applicable percent reduction would be 50 percent for the second applicable period for a generic Part D rebatable drug or plasma-derived product and 10 percent for a Part D rebatable drug that is not a generic drug or plasma-derived product.) When the status of a Part D rebatable drug changes from currently in shortage to “resolved” and either remains in the status of “resolved” or is removed from the list for at least one applicable period, and then subsequently reemerges on a shortage list, the subsequent shortage would be treated as a new shortage. In such case, the applicable percent reduction for the first applicable period in which the drug reemerges on the shortage list would be 75 percent for a generic Part D rebatable drug or plasma-derived product and 50 percent for a Part D rebatable drug that is not a generic or plasma-derived product.

⁵⁹² For the purposes of this proposed rule, CMS uses the term “currently in shortage” to refer to Part D rebatable drugs that are in the status of “currently in shortage” on the CDER shortage list, as well as biological products listed on CBER’s current shortages list.

iii. Reducing the Rebate Amount for Generic Part D Rebatable Drugs and Biosimilars When There Is a Severe Supply Chain Disruption

In § 428.302 of this proposed rule, CMS proposes to codify existing policy established in section 40.5.2 of the revised Medicare Part D Drug Inflation Rebate Guidance for rebate reductions when CMS determines there is a severe supply chain disruption during an applicable period. As proposed in § 428.302(b)(1), CMS would provide a time-limited standard reduction of 75 percent in the total rebate amount for a generic Part D rebatable drug or biosimilar when CMS determines there is a severe supply chain disruption during the applicable period, such as that caused by a natural disaster or other unique or unexpected event. To receive a rebate reduction in accordance with proposed § 428.302(b)(1), the manufacturer would have to submit to CMS a rebate reduction request⁵⁹⁵ that meets the eligibility requirements proposed in § 428.302(c). A rebate reduction request should specify each NDC-11 to which the request applies, and if CMS grants a manufacturer's severe supply chain disruption rebate reduction request for an NDC-11, CMS proposes in § 428.302(b)(3) that the rebate reduction would apply to the entire generic Part D rebatable drug or biosimilar at the NDC-9 level. CMS has proposed additional submission requirements for rebate reduction requests in the information collection request under OMB control number: 0938-NEW (CMS-10858).

As proposed in § 428.302(c)(4), CMS would grant a reduction in the rebate amount owed if a manufacturer of an eligible drug submits to CMS a request in writing demonstrating that (1) a severe supply chain disruption has occurred during the applicable period, (2) the severe supply chain disruption directly affects the manufacturer itself, a supplier of an ingredient or packaging, a contract manufacturer,⁵⁹⁶ or a method of shipping or distribution that the manufacturer uses in a significant

capacity to make or distribute the generic Part D rebatable drug or biosimilar, and (3) the severe supply chain disruption was caused by a natural disaster or other unique or unexpected event. CMS will begin accepting rebate reduction requests and rebate reduction extension requests upon completion of the Paperwork Reduction Act (PRA) process, including for severe supply chain disruptions caused by a natural disaster or other unique or unexpected event that occurred on or after October 1, 2022, but before to completion of the PRA process. As proposed in § 428.302(c)(2), for a natural disaster or other unique or unexpected event occurring on or after August 2, 2024, that the manufacturer believes caused a severe supply chain disruption, the manufacturer must submit the rebate reduction request within 60 calendar days from the first day that the natural disaster or other unique or unexpected event occurred or began in order for CMS to consider a rebate reduction.

If the manufacturer makes a timely request that includes all the supporting documentation, and CMS determines, based on its review of the reduction request and supporting documentation, that a reduction should be granted, CMS would reduce the total rebate amount owed by a manufacturer by 75 percent for the manufacturer's generic Part D rebatable drug or biosimilar for the applicable period in which the event that caused the severe supply chain disruption occurred or began or, the following applicable period if the request is submitted less than 60 calendar days before the end of an applicable period. CMS acknowledges that the 60-day advance submission requirement may pose a challenge to timing of the rebate reduction when the severe supply chain disruption-causing event occurs late in one applicable period, and the request is not submitted until the next applicable period. In such circumstances, CMS would apply a rebate reduction to an applicable period based on the timing of the natural disaster or other unique or unexpected event causing a severe supply chain disruption and the timing of the submission of the request and may adjust the timing of the application of the rebate reduction as appropriate to meet the invoicing deadlines specified in statute and subpart E of proposed part 428.

CMS proposes in § 428.302(c)(5) that if a manufacturer believes severe supply chain disruption continues into a second, consecutive applicable period after the start of the natural disaster or other unique or unexpected event, the

manufacturer may request a reduction of the total rebate amount for that second applicable period by submitting a rebate reduction extension request to CMS, along with any new supporting documentation. CMS has proposed additional submission requirements for rebate reduction extension requests in the information collection request under OMB control number: 0938-NEW (CMS-10858). As proposed in § 428.302(c)(5)(ii), a rebate reduction extension request and any new supporting documentation must be submitted at least 60 calendar days before the start of that second applicable period in order for CMS to consider a rebate reduction extension, except for when the initial request is made less than 60 calendar days before the end of an applicable period such that the initial rebate reduction applied to the next applicable period rather than the applicable period in which the event that caused the severe supply chain disruption occurred or began. In these cases, the rebate reduction extension request must be submitted at least 60 calendar days prior to the end of the applicable period in which the initial reduction applied.

If the manufacturer submits a complete and timely extension request, and CMS determines that the information submitted warrants an extension of the rebate reduction, the total rebate amount would be reduced by 75 percent for a second consecutive applicable period for that manufacturer's generic Part D rebatable drug or biosimilar in accordance with proposed § 428.302(b)(2).

Consistent with the policy established in section 40.5.2 of the revised Medicare Part D Drug Inflation Rebate Guidance, a manufacturer may receive only one extension of the rebate reduction per generic Part D rebatable drug or biosimilar per CMS determination of a severe supply chain disruption, as proposed in § 428.302(c)(5). Said differently, CMS would limit the severe supply chain disruption rebate reduction to two consecutive applicable periods total per generic Part D rebatable drug or biosimilar per CMS determination of a severe supply chain disruption.

As proposed in § 428.302(b)(4)(i), if the manufacturer believes there are multiple events causing severe supply chain disruptions during the same applicable period for the same generic Part D rebatable drug or biosimilar and submits multiple rebate reduction requests for the same generic drug or biosimilar, CMS will grant no more than one rebate reduction for that generic drug or biosimilar for the applicable

⁵⁹⁵ The rebate reduction request forms are currently going through the Paperwork Reduction Act approval process under the document identifier CMS-10858. The proposed collection was published for a 30-day comment period in the June 3, 2024 *Federal Register* (89 FR 47563).

⁵⁹⁶ A contract manufacturer is a party that performs one or more manufacturing operations on behalf of a manufacturer(s) of active pharmaceutical ingredients (APIs), drug substances, in-process materials, finished drug products, including biological products, and combination products. See "Contract Manufacturing Arrangements for Drugs: Quality Agreements Guidance for Industry," November 2016: <https://www.fda.gov/media/86193/download>.

period. For example, if the manufacturer of a generic Part D rebatable drug or biosimilar is granted a severe supply chain disruption rebate reduction request for its product due to a natural disaster that occurred in January 2025 and then experiences a second severe supply chain disruption caused by a second, distinct natural disaster in July 2025, CMS would not grant the second rebate reduction request. That is, the manufacturer would receive the 75 percent reduction for one applicable period for the severe supply chain disruption caused by the first natural disaster but would not receive a rebate reduction for the second natural disaster. However, if the second natural disaster exacerbated the severe supply chain disruption caused by the first natural disaster, the manufacturer may reflect such circumstances in its request for an extension of the rebate reduction for a second applicable period.

As proposed in § 428.302(b)(4)(ii), if CMS grants a severe supply chain disruption rebate reduction request for a generic Part D rebatable drug or biosimilar, and the drug or biosimilar appears as currently in shortage during the same applicable period as the one for which the severe supply chain disruption reduction request was granted, CMS would apply the 75 percent reduction to the entire applicable period for which the severe supply disruption request was granted and would not grant any additional reduction for the shortage status during that applicable period. For any subsequent applicable periods that the generic Part D rebatable drug or biosimilar appears as currently in shortage, CMS would reduce the total rebate amount in accordance with the drug shortages reduction proposed in § 428.301, starting with the highest reduction (that is, 75 percent for a generic Part D rebatable drug or plasma-derived product and 25 percent for a Part D rebatable drug that is not a generic drug or plasma-derived product). For example, if CMS grants a severe supply chain disruption rebate reduction request for a generic Part D rebatable drug or biosimilar that was submitted on November 15, 2024, and that generic Part D rebatable drug or biosimilar is currently in shortage from September 15, 2025, until May 15, 2026, CMS would apply a 75 percent reduction in the total rebate amount for the duration of the applicable period for which the severe supply chain disruption rebate reduction request was granted (that is, October 1, 2024, to September 30, 2025), and then would apply the shortages reduction as

proposed in § 428.301, beginning with a reduction of 25 percent for a biosimilar or 75 percent for a generic Part D rebatable drug or plasma-derived product that is a biosimilar for the applicable period beginning October 1, 2025.

As proposed in § 428.302(b)(4)(iii), if a generic Part D rebatable drug or biosimilar that is currently in shortage experiences a severe supply chain disruption, the manufacturer may submit a severe supply chain disruption rebate reduction request. If CMS grants the rebate reduction request, the rebate amount would be reduced by 75 percent for the applicable period, and CMS would not grant any additional reduction under proposed § 428.301 for the currently in shortage status during that applicable period. For example, if a generic Part D rebatable drug or biosimilar that is currently in shortage in the applicable period beginning October 1, 2024 is granted a severe supply chain disruption rebate reduction request as a result of a natural disaster that occurs on April 5, 2025, CMS would apply a 75 percent reduction in the rebate amount for the duration of the applicable period in which the natural disaster occurred (that is, October 1, 2024, to September 30, 2025). In this same example, if the natural disaster instead occurs on September 5, 2025, CMS would apply the shortages reduction proposed in § 428.301 for the duration of the applicable period beginning October 1, 2024 (that is, October 1, 2024, to September 30, 2025), and then a 75 percent reduction under the severe supply chain disruption policy to the next applicable period beginning October 1, 2025 (that is, October 1, 2025, to September 30, 2026).

In § 428.302(c)(6), CMS proposes to review rebate reduction requests and rebate reduction extension requests within 60 calendar days of receipt of all documentation, if feasible, beginning with the applicable period that begins on October 1, 2024. If a manufacturer's rebate reduction request does not meet the criteria in proposed § 428.302(c)(4) or if the rebate reduction request is incomplete or untimely based on the requirements in proposed § 428.302(c), CMS would deny the request. CMS also proposes that if a manufacturer's rebate reduction extension request does not meet the criteria in proposed § 428.302(c)(5), is incomplete or untimely based on the requirements in proposed § 428.302(c)(5), or if a reduction under proposed § 428.302(b)(1) was not provided for such generic Part D rebatable drug or biosimilar, CMS would deny the rebate

reduction extension request. As proposed in § 428.302(c)(6)(iii), CMS' decisions to deny a request would be final and not be subject to an appeals process.

As proposed at § 428.302(c)(7), CMS would keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. CMS proposes that information provided as part of a severe supply chain disruption rebate reduction request that the submitter indicates is a trade secret or confidential commercial or financial information would be protected from disclosure if CMS determines the information meets the requirements set forth under Exemptions 3 or 4 of the Freedom of Information Act (FOIA). In addition to the protections under the FOIA for trade secrets and commercial or financial information obtained from a person that is privileged or confidential, the Trade Secrets Act at 18 U.S.C. 1905 requires executive branch employees to protect such information. CMS would protect confidential and proprietary information as required by applicable law.

iv. Reducing the Rebate Amount for Generic Part D Rebatable Drugs Likely To Be in Shortage

In § 428.303 of this proposed rule, CMS proposes to codify existing policy established in section 40.5.3 of the revised Medicare Part D Drug Inflation Rebate Guidance for rebate reductions when a generic Part D rebatable drug is likely to be in shortage, as defined in proposed § 428.300. As proposed in § 428.303(b)(1), CMS would provide a time-limited standard reduction of 75 percent in the total rebate amount for a generic Part D rebatable drug when CMS determines that the generic Part D rebatable drug is likely to be in shortage. To receive a rebate reduction in accordance with proposed § 428.303(b)(1), the manufacturer would have to submit to CMS a rebate reduction request⁵⁹⁷ that meets the eligibility requirements proposed in § 428.303(c). A rebate reduction request should specify each NDC-11 to which the request applies and if CMS grants a manufacturer's likely to be in shortage rebate reduction request for an NDC-11, CMS proposes in § 428.303(b)(3) that the rebate reduction would apply to the entire generic Part D rebatable drug at the NDC-9 level. CMS has proposed

⁵⁹⁷ The rebate reduction request forms are currently going through the Paperwork Reduction Act approval process under the document identifier CMS-10858. The proposed collection was published for a 30-day comment period in the June 3, 2024 *Federal Register* (89 FR 47563).

additional submission requirements for rebate reduction requests in the information collection request under OMB control number: 0938–NEW (CMS–10858).

As proposed in § 428.303(c)(4), CMS would grant a reduction in the rebate amount owed if a manufacturer of an eligible drug submits to CMS a request in writing demonstrating that (1) the generic Part D rebatable drug is likely to be in shortage, (2) the manufacturer is taking actions to avoid the potential drug shortage, and (3) the reduction of the rebate amount would reduce the likelihood of the drug appearing on an FDA shortage list. As proposed in § 428.303(c)(2), a manufacturer must submit the rebate reduction request before the start of the next applicable period in which the manufacturer believes the generic Part D rebatable drug is likely to be in shortage in order for CMS to consider a rebate reduction.

If the manufacturer makes a timely request that includes all the supporting documentation, and CMS determines, based on its review of the reduction request and supporting documentation, that a reduction should be granted, CMS would reduce the total rebate amount owed by a manufacturer by 75 percent for the manufacturer's generic Part D rebatable drug for the applicable period in which the request was submitted or the following applicable period, depending on the timing of the submission of the request.

CMS proposes in § 428.303(c)(5) that if a manufacturer believes the potential drug shortage continues for a second, consecutive applicable period, the manufacturer may request a reduction of the total rebate amount for that second applicable period by submitting a rebate reduction extension request to CMS, along with any new supporting documentation. CMS has proposed additional submission requirements for rebate reduction extension requests in the information collection request under OMB control number: 0938–NEW (CMS–10858). As proposed in § 428.303(c)(5)(ii), a rebate reduction extension request and any new supporting documentation must be submitted at least 60 calendar days before the start of the second applicable period in which the manufacturer believes the generic Part D rebatable drug is likely to be in shortage in order for CMS to consider a rebate reduction extension.

If the manufacturer submits a complete and timely extension request, and CMS determines that the information submitted warrants an extension of the rebate reduction, the total rebate amount would be reduced

by 75 percent for a second consecutive applicable period for that manufacturer's generic Part D rebatable drug in accordance with proposed § 428.303(b)(2).

Consistent with the policies established in section 40.5.3 of the revised Medicare Part D Drug Inflation Rebate Guidance, a manufacturer may receive only one extension of the rebate reduction per generic Part D rebatable drug per CMS determination of likelihood of shortage, as proposed in § 428.303(c)(5). Said differently, CMS would limit the likely to be in shortage rebate reduction to two consecutive applicable periods total per generic Part D rebatable drug per CMS determination of likelihood of shortage.

As proposed in § 428.303(b)(4), if CMS grants a rebate reduction request for a generic Part D rebatable drug that is likely to be in shortage, and the drug appears as currently in shortage during the same applicable period as the one for which the likely to be in shortage reduction request was granted, CMS would apply the 75 percent reduction to the entire applicable period for which the likely to be in shortage request was granted and would not grant any additional reduction for the shortage status during that applicable period. For any subsequent applicable periods that the generic Part D rebatable drug appears as currently in shortage, CMS would reduce the total rebate amount in accordance with the drug shortages reduction proposed in § 428.301, starting with the highest reduction (that is, 75 percent for a generic Part D rebatable drug). For example, if CMS grants a likely to be in shortage rebate reduction request for a generic Part D rebatable drug that was submitted on August 15, 2024, and that generic Part D rebatable drug is currently in shortage from September 15, 2025, until May 15, 2026, CMS would apply a 75 percent reduction in the total rebate amount for the duration of the applicable period for which the likely to be in shortage rebate reduction request was granted (that is, October 1, 2024, to September 30, 2025), and then would apply the shortages reduction as proposed in § 428.301, beginning with a reduction of 75 percent for a generic Part D rebatable drug for the applicable period beginning October 1, 2025.

If the manufacturer of a generic Part D rebatable drug that is currently in shortage believes such generic drug is likely to continue to be in shortage in the next applicable period, the manufacturer may submit a likely to be in shortage rebate reduction request to CMS. If the request meets the criteria described in proposed in

§ 428.303(c)(4), CMS would reduce the total rebate amount owed by a manufacturer by 75 percent for the manufacturer's generic Part D rebatable drug. Consistent with the evaluation criteria proposed in § 428.303(c)(4), CMS does not intend to consider a generic Part D rebatable drug as likely to be in shortage based solely upon the drug being currently in shortage. However, if the manufacturer believes there are circumstances that may exacerbate the current shortage such that without the reduction the generic Part D rebatable drug is likely to be in shortage in the next applicable period, the manufacturer may reflect such circumstances in its rebate reduction request. For example, if a generic Part D rebatable drug is currently in shortage during the applicable period beginning October 1, 2023 because the manufacturer had trouble meeting demand for the drug and then in August 2024, the manufacturer faces difficulties securing the API for such drug and believes this may worsen the shortage situation and result in the generic Part D rebatable drug being currently in shortage in the next applicable period, the manufacturer may submit a likely to be in shortage rebate reduction request to CMS providing information on the severity of the likely shortage. CMS welcomes comments on this approach. In § 428.303(c)(6), CMS proposes to review rebate reduction requests and rebate reduction extension requests within 60 calendar days of receipt of all documentation, if feasible, beginning with the applicable period that begins on October 1, 2024. If a manufacturer's rebate reduction request does not meet the criteria in proposed § 428.303(c)(4) or if the rebate reduction request is incomplete or untimely based on the requirements in proposed § 428.303(c), CMS would deny the request. CMS also proposes that if a manufacturer's rebate reduction extension request does not meet the criteria in proposed § 428.303(c)(5), is incomplete or untimely based on the requirements in proposed § 428.303(c)(5), or if a reduction under proposed § 428.303(b)(1) was not provided for such generic Part D rebatable drug, CMS would deny the rebate reduction extension request. As proposed in § 428.303(c)(6)(iii), CMS' decisions to deny a request would be final and not be subject to an appeals process.

As proposed at § 428.303(c)(7), CMS would keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. CMS proposes that information provided as part of a likely

to be in shortage rebate reduction request that the submitter indicates is a trade secret or confidential commercial or financial information would be protected from disclosure if CMS determines the information meets the requirements set forth under Exemptions 3 or 4 of FOIA. In addition to the protections under the FOIA for trade secrets and commercial or financial information obtained from a person that is privileged or confidential, the Trade Secrets Act at 18 U.S.C. 1905 requires executive branch employees to protect such information. CMS would protect confidential and proprietary information as required by applicable law.

e. Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments (§§ 428.400 Through 428.405)

Section 1860D–14B(a)(1) of the Act requires the Secretary to report to each manufacturer of a Part D rebatable drug the following information not later than 9 months after the end of the applicable period: (1) the amount, if any, of the excess AnMP increase described in section 1860D–14B(b)(1)(A)(ii) for each Part D rebatable drug and (2) the rebate amount for each Part D rebatable drug. In compliance with section 1860D–14B(a)(2) of the Act, the manufacturer of a Part D rebatable drug must provide a rebate for each Part D rebatable drug no later than 30 calendar days after the receipt of the information provided by the Secretary in section 1860D–14B(a)(1) of the Act.

To fulfill this statutory requirement, CMS proposes to send a Preliminary Rebate Report followed by a Rebate Report, as described in proposed § 428.401(b) and (c), to all manufacturers of a Part D rebatable drug, even if the amount due is \$0; all rebate amounts would be subject to reconciliation as proposed in § 428.401(d). As proposed in § 428.401(b), CMS does not intend to send notice to manufacturers for drugs that are not considered rebatable pursuant to proposed § 428.20.

Additionally, section 1860D–14B(b)(6) states that CMS shall provide a method and process under which CMS adjusts the calculation of the rebate amount for a Part D rebatable drug for an applicable period if CMS determines such an adjustment is necessary based on revisions to the number of units of a rebatable covered Part D drug dispensed submitted by a PDP sponsor of a prescription drug plan or an MA organization offering an MA–PD plan. The statute also specifies that CMS must reconcile any underpayments in the rebate amount paid by the manufacturer

of the applicable Part D rebatable drug due to such an adjustment and underpayments must be paid no later than 30 days from the date of receipt of information from CMS about the adjustment. To fulfill this statutory obligation and to address the completeness and accuracy of the rebate amount, CMS proposes to conduct regular reconciliations at two points in time to determine whether the rebate amount must be adjusted due to updated claims and payment data used in the calculation of such rebate amount (specified in proposed § 428.401(d)(1)): (1) 12 months after the issuance of the Rebate Report, and (2) 36 months after the issuance of the Rebate Report. The reporting process for each reconciliation will be the same process described for the original Rebate Report, with payment due for any outstanding rebate amount 30 days after receipt of a report with a reconciled rebate amount. In addition to regular reconciliations, CMS proposes a process to conduct reconciliations of the rebate amount as needed to correct agency error and when CMS determines that the information used by CMS to calculate a rebate amount was inaccurate due to manufacturer misreporting.

i. Definitions

In proposed § 428.400, CMS proposes to define the following term applicable to subpart E (§§ 428.400 through 428.405):

- “Date of receipt”.

For example, if CMS issues a Rebate Report through the method and process described in proposed § 428.404 on June 30, 2026, then July 1, 2026, will be the date of receipt and day one of the 30-calendar-day payment period.

ii. Reports of Rebate Amounts and Suggestion of Error

Consistent with the process specified in section 50 of the revised Medicare Part D Drug Inflation Rebate Guidance involving preliminary and final reports, CMS proposes to codify a multi-step process to provide a manufacturer as defined in proposed § 428.20 with the rebate information specified under section 1860D–14B(a) of the Act. CMS considered the following factors in determining a method and process for providing the rebate information: meeting statutorily provided deadlines in section 1860D–14B(a) of the Act (for example, dates by which to provide the rebate amount owed to the manufacturer); the operational time to acquire the relevant information specified in proposed part 428; the operational time to calculate the rebate amount specified in subparts B and C of

proposed part 428; clarity of the information provided as well as potential burden on manufacturers; and how to ensure the accuracy of the rebate amount.

CMS proposes at proposed § 428.401 the use of an initial Preliminary Rebate Report and a subsequent Rebate Report, with an opportunity for manufacturers to identify certain mathematical errors (see proposed § 428.403 and discussed in further detail later in this section) and two regular reconciliations of the rebate amount to account for updates to claims and payment data at 12 months and 36 months after the Rebate Report is issued as described in proposed § 428.401(d).

CMS proposes in proposed § 428.401 that the multi-step reporting process for providing rebate information to a manufacturer would include: (1) an initial report, which CMS proposes to entitle the “Preliminary Rebate Report” in proposed § 428.401(b) and (2) a second report, which CMS proposes to entitle the “Rebate Report” in proposed § 428.401(c). The Rebate Report would serve as the invoice for the rebate amount due, if any, for each product determined to be a Part D rebatable drug for the applicable period, as specified in proposed § 428.101. Manufacturers of Part D rebatable drugs would receive a Rebate Report for their rebatable drugs even if the amount due is \$0. CMS proposes at proposed § 428.401(d)(1) two regular reconciliations of the rebate amount to occur 12 months and 36 months after issuance of the subsequent Rebate Report specified in proposed § 428.401(c), which would include any restatements that have occurred in the drug pricing data and claims billing data reported to CMS and used in the rebate calculation specified in subpart C of this part.

As the first step in the reporting process, as proposed in proposed § 428.401(b) and consistent with section 50 of the revised Medicare Part D Drug Inflation Rebate Guidance, CMS would provide each manufacturer of a Part D rebatable drug with the preliminary rebate amount through a Preliminary Rebate Report at least 1 month prior to the issuance of the Rebate Report specified in proposed § 428.401(c) for an applicable period (that is, approximately 8 months after the end of the applicable period unless otherwise specified). To facilitate manufacturer understanding of the Preliminary Rebate Report, CMS is proposing in proposed § 428.401(b)(1) that the Preliminary Rebate Report would include the following information: the NDC(s) for the Part D rebatable drug as defined under proposed § 428.20; the total

number of units for the Part D rebatable drug for the applicable period as determined under proposed § 428.203 (which would remove units when a generic drug is no longer a Part D rebatable drug in proposed § 428.203(b)(1) and would exclude units acquired through the 340B Program in proposed § 428.203(b)(2)); the benchmark period manufacturer price as described in proposed § 428.202(d); the AnMP for the Part D rebatable drug for the applicable period as determined in proposed § 428.202(b); the applicable benchmark period and applicable period CPI-U as identified in proposed §§ 428.202(e) and 428.20; the inflation-adjusted payment amount as specified in proposed § 428.202(f); the amount, if any, of the excess AnMP for the Part D rebatable drug for the applicable period as determined under proposed § 428.202(a); any applied reductions as described in proposed §§ 428.301, 428.302, and 428.303; and the rebate amount due as specified in proposed § 428.201(a). As proposed under proposed § 428.204, in cases where a Part D rebatable drug is a line extension, CMS proposes to include the same elements described above in the Preliminary Rebate Report as well as: the NDC for the initial drug; the inflation rebate amount ratio for the initial drug; and the alternative rebate amount (see proposed § 428.401(b)(2)).

When determining what information should be included on rebate reports, CMS considered the statutory requirements outlined in section 1860D–14B(a)(1) of the Act to determine which data elements are necessary to review the Preliminary Rebate Report for error (described later in this section) and to protect proprietary information. In response to comments on the initial Medicare Part D Drug Inflation Rebate Guidance, CMS has proposed to disclose data elements as suggested by interested parties that are not enumerated in the statute, such as NDCs for Part D rebatable drugs and the applicable period CPI–U. CMS acknowledges requests from interested parties to provide additional data elements including claims-level data such as days' supply, fill number, and prescription ID number on rebate reports that are not included in this proposal. CMS considered these requests in development of this proposed rule but does not believe it necessary to provide this further information to fulfill its statutory obligation and believes that the potential benefit to manufacturers of additional data are outweighed by the administrative burdens additional

reporting would impose to the agency. The elements listed above provide sufficient information for a manufacturer to review the Preliminary Rebate Report for mathematical error, while protecting proprietary information, and these elements are operationally feasible for CMS to provide. In proposed § 428.203(b)(2)(i)(A) and (B), CMS would exclude 340B units beginning with January 1, 2026, which is the second calendar quarter in the applicable period starting October 1, 2025, and beyond (as discussed in further detail in section III.L.3.f of this proposed rule). This exclusion applies to all Preliminary Rebate Reports, Rebate Reports, and reconciliations of a rebate amount that include the applicable period starting with October 1, 2025, and beyond with claims for service dates on or after January 1, 2026. As such, 340B units would not be excluded from the Rebate Reports for the applicable periods beginning October 1, 2022, October 1, 2023, and October 1, 2024, as discussed in proposed § 428.402.

By structuring the Rebate Report process to include a Preliminary Rebate Report before the Rebate Report, CMS is able to provide manufacturers with an opportunity to review the Preliminary Rebate Report before the rebate amount is invoiced via the Rebate Report. While CMS is not required to provide a preliminary report, CMS seeks to facilitate manufacturer understanding of the Rebate Report and believes it would be beneficial for manufacturers to review the report for mathematical errors that could be corrected before invoicing via the Rebate Report. Further, a Preliminary Rebate Report would provide additional notice to manufacturers regarding whether they may owe a rebate amount.

In proposed § 428.403, CMS proposes a process in which a manufacturer may suggest to CMS that the manufacturer believes the Preliminary Rebate Report includes a mathematical error within 10 calendar days after the date of receipt of the Preliminary Rebate Report. For example, if the Preliminary Rebate Report is provided on May 31, 2026, then June 1, 2026, would be the date of receipt and, therefore, day one of the 10-calendar-day period to submit a Suggestion of Error; the Suggestion of Error would be due at 11:59 p.m. PT on June 10, 2026, in this example. CMS reviewed comments on the 10-day Suggestion of Error period submitted in response to the initial Medicare Part D Drug Inflation Rebate Guidance, many of which suggested that manufacturers receive at least 30 days to review the

Preliminary Rebate Report. CMS considered a 10-day, 15-day, and 30-day Suggestion of Error period and believes a 10-calendar-day period as (see proposed § 428.403(c)) is sufficient after considering the volume of the data to be provided to manufacturers, the narrow scope of items that may be identified as a Suggestion of Error, and the operational time necessary for CMS to provide a Rebate Report within 9 months of the end of the applicable period as required under section 1860D–14B(a)(1) of the Act. However, CMS proposes in § 428.402(c)(1)(i) to expand the Suggestion of Error period to 30 calendar days for the Preliminary Rebate Reports for the first two applicable periods (beginning October 1, 2022, and October 1, 2023). This extended Suggestion of Error period will provide additional time and flexibility during the first invoicing cycle of the Medicare Part D Drug Inflation Rebate Program.

Section 1860D–14B(f) of the Act precludes administrative or judicial review on the determination of units, whether a drug is a Part D rebatable drug, and the calculation of the rebate amount (see proposed § 428.403(a)(1)). Therefore, the Suggestion of Error process will be limited to mathematical steps involved in determining the rebate amount and the elements precluded from administrative or judicial review will not be considered in-scope for the Suggestion of Error process. Additionally, CMS is not providing an administrative dispute resolution process. CMS intends to consider all in-scope submissions under the Suggestion of Error process (for example, suggestions regarding a mathematical error) as described in proposed § 428.403(a). CMS does not intend to review suggestions of error that are out-of-scope or submissions for a rebatable drug with an amount due of \$0.

As the second step in the reporting process, CMS proposes in proposed § 428.401(c) to provide the rebate amount to the manufacturer through the Rebate Report no later than 9 months after the end of the applicable period. As proposed in proposed § 428.401(c)(1), the Rebate Report would include the same data elements as the Preliminary Rebate Report (specified in proposed § 428.401(b)(1)) and include any recalculations based on CMS acceptance of a manufacturer's Suggestion of Error from proposed § 428.403, or any CMS-determined recalculations from proposed § 428.401(d)(2), if applicable. Manufacturers must pay the rebate amount within 30 calendar days from the date of receipt of the Rebate Report (see proposed § 428.405(a)). For

example, if the Rebate Report is provided on June 30, 2026, then July 1, 2026, would be the date of receipt and therefore day one of the 30-calendar-day payment period; payment would be due no later than 11:59 p.m. PT on July 30, 2026.

In proposed §§ 428.404 and 428.405, CMS proposes that it will establish a standard method and process to issue Rebate Reports and accept manufacturer rebate payments. This method and process may include an online portal administered by a CMS contractor which would provide manufacturers with access to their Rebate Report, the ability to submit a Suggestions of Error, and pay a rebate amount due. CMS intends to provide technical instructions separate from this rulemaking to manufacturers of Part D rebatable drugs regarding how to access Rebate Reports and how to receive notifications alerting the manufacturer when information is available. CMS also intends to issue reminder notices to manufacturers regarding the due date of rebate payments. In proposed § 428.404(a), CMS notes that the manufacturer that may access Rebate Reports and make applicable rebate amount payments is the manufacturer responsible for paying a rebate, and as stated above, CMS proposes to identify the manufacturer that is responsible for paying a rebate using the same approach used for reporting AMP data.

iii. Reconciliation of a Rebate Amount

As discussed in section 50 of the revised Medicare Part D Drug Inflation Rebate Guidance, CMS considered options consistent with section 1860D–14B(b)(6) of the Act to establish a method and process to determine adjustment to the rebate amount in the case of a Part D plan sponsor submitting revisions to the number of units of a part D rebatable drug. As is also discussed in section 50, CMS considered options for establishing a standardized method and process at regular intervals to determinate any appropriate adjustments to the rebate amount for a Part D rebatable drug for an applicable period to account for additional revised information as well as options for recalculation based on CMS identifying an agency error or determining manufacturer data was misreported. CMS is proposing policies for reconciliation, including with respect to enforcement of payment of any reconciled rebate amount, consistent with both the statutory framework for the Part D Drug Inflation Rebate Program and the express authority in sections 1102 and 1871 of the Act to adopt regulations for the

proper administration of the Medicare Prescription Drug Inflation Rebate Program.

As proposed at § 428.401(d), CMS believes that it is necessary and appropriate for CMS to recalculate the rebate amount for an applicable period at regular intervals to include updated information about key data elements included in the calculation of the rebate amount, not limited to those data described in section 1860D–14B(b)(6) of the Act. These data elements as set forth in proposed § 428.401(d)(1)(i) include: total units; the benchmark period manufacturer price; the payment amount in the payment amount benchmark period; the AnMP; and updated data on line extension calculations. Updating these calculation inputs at regular reconciliation intervals will result in a rebate amount that more fully reflects the majority of shifts in the underlying data following additional time for claims run-out, which refers to the maturation of PDE records in CMS' internal PDE database. Because the information extracted represents the PDE records' status in CMS' internal PDE database at that moment in time, additional run-out may yield different information, either because more PDE records with dispensing dates during the applicable period were finalized and added to the database or because the status of the existing PDE records changed. CMS refers to “X months of run-out” as the period between the end of the applicable period and the date when CMS accesses information about the PDE records; for example, “3 months of run-out” means that PDE records are accessed for PDE records with dispensing dates during an applicable period 3 months after the end of such applicable period. Conducting a reconciliation of the rebate amount with additional claims run-out will improve the accuracy of the rebate amount. Additionally, reconciliation of payment amounts is consistent with the approach to the calculation of the payment amounts in other CMS programs (such as the Coverage Gap Discount Program) that provide for a reconciliation period.

CMS notes that the reconciliation of a rebate amount, whether during a reconciliation proposed at § 428.401(d)(1) or a discretionary reconciliation proposed at § 428.401(d)(2) discussed further below, will not create a separately payable and distinct rebate amount. Rather, reconciliation updates the prior rebate amount owed to CMS, if any, by a manufacturer of a Part D rebatable drug so that the rebate amount ultimately reflects a more precise calculation of the rebate amount, as required by section

1860D–14B(a)(1) of the Act, to account for shifts in the underlying data following additional time for claims run-out after the Rebate Report is issued as well as subsequently identified data integrity issues. Moreover, because the reconciled rebate amount is an adjustment of the prior rebate amount, CMS proposes at § 428.405(a)(1) for a report of a reconciled rebate amount to also identify the difference between the rebate amount due as specified on the Rebate Report set forth in proposed § 428.401(c) and the reconciled rebate amount. CMS would only collect the net rebate amount due, if any, upon reconciliation, so as to prevent any duplicate payments. CMS also proposes to refund any overpayment made by a manufacturer, as determined during reconciliation, as discussed in proposed § 428.405(b).

Additionally, as CMS suggested in section 50 of the revised Medicare Part D Drug Inflation Rebate Guidance, CMS considered multiple options for establishing a standardized method and process to occur at regular intervals to determine an appropriate adjustment to the rebate amount for a Part D rebatable drug for an applicable period to account for revised information prior to adopting the proposal described here with two proposed regular reconciliations of the Part D inflation rebate amount. CMS considerations included the length of time needed to capture relevant changes to data inputs for recalculation, whether the timing should align with the reconciliation of Part B rebate amounts, and manufacturer burden. Specifically, CMS considered the average time span needed to ensure submission of the majority of Part D plan unit revisions specified in section 1860D–14B(b)(6) of the Act, and the average time span needed for the submission of the majority of manufacturer restatements of AMP data. CMS also considered the 36-month period provided by MDRP for AMP restatements as described in § 447.510(d)(3) of this title and whether consistency among program reconciliation timelines is beneficial. CMS believes a longer period of claims run-out (at least 12 and 36 months of run-out time in the proposed approach) would ensure that CMS more fully accounts for capturing of revised units. Further, the first reconciliation would be performed to include at least 13 months of claims run-out for the applicable period and would be issued 12 months after the Rebate Report for the same applicable period. The second reconciliation would include 37 months of claims run-out for the applicable period and would be issued 36 months

after the Rebate Report for the same applicable period. The first reconciliation, issued 12 months after the Rebate Report, would provide sufficient time to capture the majority of updates to the data specified in proposed § 428.401(b)(1). The second reconciliation, to be issued 36 months after the Rebate Report, is sufficient to capture the remainder of the run-out for MDRP AMP restatements (that do not require CMS review in § 447.510) while also closing out the calculation of the rebate amount for a Part D rebatable drug for an applicable period within a reasonable time period after the Rebate Report is issued (except for the circumstances in proposed § 428.401(d)(2) regarding CMS' identification of mathematical errors or manufacturer misreporting).

Further, in considering whether consistency across CMS programs is critical, CMS believes that consideration for the completeness of data, as discussed above, should be prioritized over consistency across program timelines. That is, when examining timelines from other CMS programs that collect data contributing to calculation of the rebate amount, CMS prioritized that, to the extent feasible, completeness and accuracy of the data elements contributing to the calculation of the rebate amount rather than prioritizing consistency among the data collection and reconciliation timelines themselves. Finally, CMS believes that solely updating total units without updating other elements of the rebate calculation would lead to an inaccurate rebate amount, and therefore proposes to update additional calculation inputs as described in proposed § 428.401(d)(1)(i)(A) through (F). CMS believes that a restatement of each data element included in proposed § 428.401(d)(1) to reconcile the rebate amount provided in the Rebate Report in proposed § 428.401(c) is appropriate to capture an updated rebate amount and is in line with other CMS programs that provide for a reconciliation period. While some data points may not change, CMS would review the data to determine if there are any updates in the data and use the updated data in the reconciliation to provide a reconciled rebate amount to the manufacturer.

Based on these considerations, similar to the multi-step process for the Rebate Report proposed in § 428.401(b) and (c), CMS proposes a multi-step process to provide each manufacturer of a Part D rebatable drug with a reconciled rebate amount on a regular basis. At both the 12 month reconciliation point and the 36 month reconciliation point, CMS proposes a reconciliation process that

will include: (1) a preliminary reconciliation of the rebate amount, which CMS would provide to manufacturers of Part D rebatable drugs as proposed in § 428.401(d)(1)(i) and (d)(2) a reconciled rebate amount, which CMS would provide to manufacturers of a Part D rebatable drug as proposed in § 428.401(d)(1)(ii). CMS also proposes to apply the Suggestion of Error process specified in proposed § 428.403 to each preliminary reconciliation.

In detail, first, as specified in proposed § 428.401(d) and similar to the Preliminary Rebate Report process proposed in § 428.401(b), for each reconciliation CMS proposes to provide the manufacturer with information about the preliminary reconciliation of the rebate amount at least 1 month prior to the issuance of the reconciled rebate amount (see proposed § 428.401(d)) to each manufacturer of a Part D rebatable drug for an applicable period. CMS proposes in § 428.401(d)(1) that the preliminary reconciliation would include, at a minimum, the same information outlined for the Rebate Report and the following updated information, if applicable: updated total number of rebatable units, including updates submitted by a PDP or MA-PD plan sponsor and updates to 340B units (as applicable to the dates of service and applicable periods specified in proposed § 428.203(b)(2)(i)(A) and (B)), or units otherwise excluded as specified in proposed § 428.203(b); the benchmark period manufacturer price if any inputs are restated within the reconciliation run-out period as specified in proposed § 428.202(d); the AnMP if any inputs are restated within the reconciliation run-out period as specified in proposed § 428.202(b); the excess amount by which the AnMP exceeds the inflation-adjusted payment amount for the applicable period as specified in proposed § 428.202(a), using the most recent AMP (if any inputs are restated within the reconciliation run-out period); updated data on line extension calculations, including the initial drug identified in accordance with § 447.509(a)(4)(iii)(B), the inflation rebate amount ratio, and the alternative total rebate amount as set forth in proposed § 428.204 if any inputs are restated within the reconciliation run-out period; the reconciled rebate amount as set forth in proposed § 428.201(a); and the difference between the total rebate amount due as specified on the Rebate Report set forth in proposed § 428.201(a) and the reconciled rebate amount as set forth in proposed § 428.201(a). CMS also notes that changes to status of 5i drugs

(defined at § 447.507) are captured through AMP restatements.

In proposed § 428.403(a), similar to the Suggestion of Error process proposed for the Preliminary Rebate Report in proposed § 428.401(b), within 10 calendar days after date of receipt of the information about the preliminary reconciliation of the rebate amount, CMS proposes that a manufacturer may suggest to CMS that the manufacturer believes the preliminary reconciliation of the rebate amount contains a mathematical error. CMS believes a 10-calendar-day period is sufficient due to the same considerations of data volume, the narrow set of in-scope items for review, and the operational time necessary for CMS to publish the reconciled rebate amount. The preclusions in section 1860D-14B(f) of the Act on administrative and judicial review apply to the reconciliation process.

Second, in detail, CMS proposes in § 428.401(d)(1)(ii) to provide a reconciled rebate amount to the manufacturer within 12 months and 36 months after the Rebate Report was issued for each applicable period. As proposed in § 428.401(d)(1)(ii), the information in the report for a reconciled rebate amount would include the same data elements as provided in the information provided to the manufacturer of a Part D rebatable drug regarding the preliminary reconciliation of a rebate amount (specified in proposed § 428.401(d)(1)(i)) and would include any recalculations based on CMS acceptance of a manufacturer's Suggestion of Error from proposed § 428.403. A reconciliation of the rebate amount may result in an increase, decrease, or no change to the rebate amount, compared to the Rebate Report for an applicable period or a previous reconciliation in the case of reconciliation conducted 36 months after issuance of the Rebate Report (see proposed § 428.401(d)(3)).

Additionally, as suggested in section 50 the revised Medicare Part D Drug Inflation Rebate Guidance, CMS considered options for establishing circumstances where a recalculation of the rebate amount may be appropriate for an applicable period after issuing the Rebate Report and/or a reconciled rebate amount based on CMS identifying an error or CMS determining that the information used by CMS to calculate a rebate amount was inaccurate due to false reporting or similar fault by the manufacturer. CMS also considered potential time limits for revisions and whether certain circumstances, such as instances of false reporting, should be exempt from such time limits.

Based on these considerations, CMS believes that, to capture an accurate rebate amount and consistent with reconciliations of pricing data submitted to CMS that provide for revisions when necessary due to errors, including mathematical errors, and manufacturer misreporting, certain circumstances merit reconciliation of the rebate amount separate from the 12-month and 36-month reconciliations proposed at § 428.401(d)(1). Specifically, CMS proposes in § 428.401(d)(2) that CMS may reconcile a rebate amount of an issued Rebate Report when CMS identifies either: (1) an agency error such as a mathematical error or an error in the information specified in a Rebate Report as described in proposed § 428.401(c) or report of a reconciled rebate amount as described in proposed § 428.401(d), including reporting system or coding errors; or (2) CMS determines that information used to calculate the rebate amount was inaccurate due to manufacturer misreporting. Examples of agency errors could include CMS incorrectly calculating the billing units per Part D rebatable drug or the mechanism that provides a Rebate Report to the manufacturer or the Rebate Report incorrectly displays a rebate amount. Examples of manufacturer misreporting could include instances in which the manufacturer has made a correction to previously submitted data as well as instances in which the reporting individual or entity reporting data or information to CMS on behalf of the manufacturer knows or should know is inaccurate or misleading (for example, inaccurate manufacturer pricing or product data under section 1927(b)(3) of the Act). This does not include standard restatements to AMP or other data outside of the standard process of issuing the reconciled rebate amount. In addition to manufacturer-initiated corrections, CMS may become aware of manufacturer misreporting based on fact finding and conclusions of enforcement authorities, for example, the HHS Office of Inspector General, the CMS Center for Program Integrity, or the Department of Justice. In a situation where an error or manufacturer misreporting is identified prior to the 12- or 36-month reconciliation of the rebate amount proposed in § 428.401(d)(1), CMS may choose to include a correction based on the circumstances proposed in § 428.401(d)(2) concurrently with the 12- or 36-month reconciliation. When CMS reconciles data due to an instance of agency error or manufacturer misreporting, CMS proposes that the agency would limit the scope of the

reconciliation to the specific information that is the basis for the reconciliation and not update or otherwise revise any other data elements in the Rebate Report (specified in proposed § 428.401(c)) or the report of the reconciled rebate amount (specified in proposed § 428.401(d)) unless the correction directly impacts additional data fields. For example, corrections to an AMP file may not change the AnMP for the applicable period.

In addition, because reconciling a rebate amount imposes substantial administrative burden on CMS to reprocess the rebate amount, retest the reporting system, and reissue a Rebate Report, CMS proposes in § 428.401(d)(2) that it may exercise discretion not to initiate recalculation of the rebate amount in these situations which are outside of the regular reconciliation process proposed in § 428.401(d)(1).

CMS proposes that for a recalculation due to an agency error, the error must be identified within 5 years of the date of receipt of the Rebate Report for the applicable period (see proposed § 428.401(d)(2)(i)). Identification means that CMS has knowledge of the error; CMS does not need to have completed its revision of the impacted data or determined if the revision impacts the rebate amount within the 5-year period. CMS would timely complete these steps and determine, when reconciliation does impact the rebate amount, whether the reconciliation must be included in a discretionary revision or within an upcoming reconciled rebate amount for the applicable period. CMS proposes 5 years for Part D (as opposed to the 3-year limit proposed for Part B) to account for the additional time of the second reconciliation for Part D rebatable drugs to be conducted at 36-months proposed in § 428.401(d)(1). CMS believes that a 5-year period dating from the issuance of the Rebate Report allows for sufficient time to include AMP restatements in the MDRP while also placing a reasonable time limit on potential discretionary reconciliations, after which a manufacturer of a Part D rebatable drug would not receive additional Rebate Reports for the applicable period.

CMS proposes in § 428.401(d)(2)(ii) that for a circumstance in which a manufacturer misreports data, CMS is not bound by the 5-year time limit for revision of the rebate amount. For example, if a determination is made that a manufacturer misreported AMP data, which affected the calculation of the AnMP, then CMS may recalculate the rebate amount owed for a Part D rebatable drug. CMS requests comments

on the proposals related to manufacturer misreporting.

CMS proposes in § 428.405(a)(1) that upon receipt of a reconciled rebate amount, manufacturers must pay that reconciled rebate amount within 30 calendar days from the date of receipt of the reconciled rebate amount. A 30-day payment deadline aligns with the payment period set forth in statute at section 1860D–14B(b)(6) of the Act. As specified in proposed § 428.404, CMS would use the same method and process for issuing Rebate Reports and submission of payments for reports with a reconciled rebate amount. CMS would provide notice to manufacturers for reports with a reconciled rebate amount. CMS proposes in § 428.405(b) that if a refund is owed to a manufacturer based on a reconciled rebate amount, CMS would initiate the process to issue such refund within 60 days from the date of receipt of the reconciled rebate amount (proposed in § 428.401(d)). CMS will issue additional information on this method and process through additional program communications.

iv. Rebate Reports for the Applicable Periods Beginning October 1, 2022, and October 1, 2023

Section 1860D–14B(a)(3) of the Act provides the CMS with the option to delay sending the information required by section 1860D–14B(a)(1) for the applicable periods beginning October 1, 2022, and October 1, 2023, until not later than December 31, 2025. In § 428.402, consistent with section 50.2 of the revised Medicare Part D Drug Inflation Rebate Guidance, CMS proposes to issue a Preliminary Rebate Report for each applicable period followed by issuance of the Rebate Report for each applicable period no later than December 31, 2025. For these reports, CMS proposes in § 428.402 to provide an extended 30 calendar day Suggestion of Error period for these Preliminary Rebate Reports.

Because this approach provides for 13 months of claims run-out for the Rebate Report for the applicable period beginning October 1, 2022, CMS intends to conduct a single reconciliation 21 months after issuance of the Rebate Report for this applicable period (see proposed § 428.402(c)(1)(ii)). As specified in § 428.402(c)(2)(ii), for the applicable period beginning October 1, 2023, the rebate amount would be reconciled twice, in alignment with the reconciliation process discussed previously. The first reconciliation would occur 9 months after issuance of the Rebate Report to include 13 months of claims run-out and payment data; the second reconciliation would occur 24

months after the first reconciliation and would include 37 months of claims run-out and payment data. This approach aligns claims and payment data run-out with the run-out used during a regular invoicing cycle. The Suggestion of Error period would be 10 calendar days for the reconciliations of the rebate amount for the applicable periods beginning October 1, 2022, and the applicable period beginning October 1, 2023.

This approach also minimizes the number of reports issued to manufacturers as a result of the delay in reporting and simplifies payment procedures, thereby minimizing manufacturer burden. Starting with the applicable period beginning October 1, 2024, reporting would begin a standard cadence and follow the procedures otherwise proposed in subpart E of this part 428.

CMS proposes that manufacturers that do not pay the Medicare Part D drug inflation rebate amount owed for a Part D rebatable drug within 30 calendar days of receiving a Rebate Report, including reports containing a reconciled rebate amount, may be subject to a civil money penalty of 125 percent of the rebate amount, as applicable, for such drug for the applicable periods. The civil money penalty is in addition to the rebate amount.

f. Enforcement of Manufacturer Payment of Rebate Amounts (§ 428.500)

Section 1860D–14B(e) of the Act gives CMS the authority to impose a civil money penalty equal to 125 percent of the rebate amount for each drug for each applicable period on a manufacturer that fails to pay the rebate amount, for each dosage form and strength for each rebatable drug. Subpart F would implement this section of the Act and establish the procedures for determining and collecting a civil money penalty.

In accordance with sections 1860D–14B(a)(2) and 1860D–14B(b) of the Act and proposed § 428.405(a), manufacturers must provide to CMS a rebate amount owed within 30 calendar days of receipt of the rebate amount due. As described in proposed § 428.500(a), CMS is proposing it may impose a civil money penalty when a manufacturer fails to pay the rebate amount in full by the payment deadlines in proposed § 428.405(a). This means a manufacturer may be subject to a civil money penalty if the manufacturer fails to pay the full rebate amount as invoiced in the Rebate Report or any reconciled rebate amount that is greater than the amount invoiced in the Rebate Report. More specifically, a manufacturer could be subject to a civil

money penalty when a manufacturer fails to pay a rebate amount due by any payment deadline proposed in § 428.405(a)(1), for: (1) a Rebate Report specified in proposed § 428.401(c); (2) a reconciled rebate amount greater than the amount reflected in the Rebate Report specified in proposed § 428.401(d); or (3) a Rebate Report and a reconciled rebate amount greater than the amount reflected in the Rebate Report, if applicable, for the applicable periods beginning October 1, 2022, and October 1, 2023 specified in proposed § 428.402. As discussed earlier in section III.I.3.e, CMS notes that the reconciled or corrected rebate amount is not a separately payable and distinct rebate amount. Rather, the reconciled rebate amount is an update to the rebate amount owed to CMS by a manufacturer of a Part D rebatable drug.

Civil money penalties are a point-in-time penalty tied to the rebate amount due at the applicable payment deadline, which occurs 30 days after the date of receipt of a Rebate Report. In proposed § 428.500(b), CMS proposes to establish the methodology for determining the amount of the civil money penalty as equal to 125 percent of the rebate amount for such drug for such applicable period, and that this penalty would be due in addition to the rebate amount due. That is, a manufacturer would be responsible for paying the full rebate amount due in addition to any civil money penalty imposed because of late payment. CMS is proposing this approach to civil money penalties based on section 1860D–14B(a)(2) of the Act, which establishes a requirement by the manufacturer to provide CMS with a rebate not later than 30 days after receipt from CMS of the report on the amount of the excess annual manufacturer price increase. CMS believes that the ability to assess civil money penalties is necessary in all circumstances where a payment is due for a rebate amount to CMS to ensure compliance with the rebate program's requirements. The civil money penalty would be calculated based on the outstanding rebate amount due at the payment deadline, which is defined in proposed § 428.405(a)(1) as 30 calendar days after the date of receipt of a Rebate Report containing any rebate amount due; once a civil money penalty is assessed due to a late payment, the penalty would remain in effect even if the manufacturer pays the outstanding rebate amount as the penalty is initiated due to a missed payment deadline. Because the payment deadline is clearly defined in section 1860D–14B(a)(2) of the Act, any late payments of a rebate

amount due, including late payment of any reconciled rebate amounts greater than the amount reflected in the Rebate Report, would be considered a violation potentially subject to a civil money penalty. Any civil money penalty would be assessed before the next 12- or 36-month reconciliation.

CMS is proposing in § 428.500(b) that civil money penalties may be calculated at several points in time associated with missing a payment deadline for the rebate amount due reflected in the Rebate Report or missing a payment deadline associated with any rebate amount determined after a reconciliation to be greater than the amount invoiced in the Rebate Report. As these separate events can result in distinct assessments of civil money penalties, this means that CMS would not modify a civil money penalty from a prior missed payment deadline based on changes to the rebate amount due following reconciliation, including scenarios where the rebate amount is reduced following reconciliation. However, in the event that the rebate amount due on a Rebate Report was not paid and a civil money penalty was issued for violation of the payment deadline, CMS would not issue a second civil money penalty on a reconciled rebate amount if reconciliation decreased the rebate amount stated on the Rebate Report. CMS believes that enforcing this requirement after each payment deadline, regardless of what rebate amount a manufacturer may or may not owe at a future payment deadline, is necessary to maintain the integrity of the program and consistency of the implementation of the program. Further, CMS is proposing this approach to ensure an enforcement approach that is operationally feasible and applied consistently in all cases.

For examples of how this approach to civil money penalties will work in practice, see section III.I.2.g of this preamble. CMS is proposing that civil money penalties will function in the same way for both the Part B and Part D rebate programs. Given that the Part D rebate program has two proposed regular reconciliations, payment would be due no later than 30 days after issuance of a report of a reconciled rebate amount for each reconciliation under Part D.

Further, note that payment of any civil money penalty does not obviate the requirement for the manufacturer to pay any outstanding rebate amount due, including any rebate amount due following a reconciliation. Therefore, paying a civil money penalty does not satisfy the obligation to pay the underlying rebate amount on which the

civil money penalty is calculated. In addition, CMS is evaluating all available options to ensure manufacturers' timely compliance with their rebate payment obligations, including, without limitation, potential recovery approaches and enforcement actions. For example, CMS may refer manufacturers to the Department of Justice, Department of the Treasury, and/or the Department of Health and Human Services Office of Inspector General for further review and investigation.

In proposed § 428.500(c), CMS proposes that if CMS makes a determination to impose a civil money penalty on a manufacturer for violation of a payment deadline, CMS would send a written notice of the decision to impose a civil money penalty that includes a description of the basis for the determination, the basis for the penalty, the amount of the penalty, the date the penalty is due, the manufacturer's right to a hearing, and information about where to file the request for a hearing. To ensure a consistent approach to civil money penalties, CMS proposes applying existing appeal procedures for civil money penalties in 42 CFR 423, subpart T of this title to manufacturers appealing a civil money penalty imposed under the Medicare Part D Drug Inflation Rebate Program. CMS has utilized this appeals process for many years for civil money penalty determinations affecting MA organizations and Part D sponsors. CMS therefore proposes to use this well-established process for civil money penalty appeals from manufacturers that do not make inflation rebate payments by the payment deadline. CMS also proposes in § 428.500(e)(1) that the scope of appeals is limited to: (1) CMS determinations relating to whether the rebate payment was made by the payment deadline; and (2) the calculation of the penalty amount. Section 1860D–14B(f) of the Act precludes judicial review of specific data inputs or calculations related to the underlying Rebate Report and reconciliation; therefore, such data and calculations are not appealable through this process.

Section 1860D–14B(e) of the Act states that the provisions of section 1128A of the Act (except subsections (a) and (b)) apply to civil money penalties under this subpart to the same extent that they apply to a civil money penalty or procedure under section 1128A(a) of the Act. CMS proposes to codify this requirement in proposed § 428.500(f). In alignment with the procedure outlined in section 1128A of the Act, CMS

proposes in § 428.500(d) that collection of the civil money penalty would follow expiration of the timeframe for requesting an appeal, which is 60 calendar days from the civil money penalty determination in cases where the manufacturer did not request an appeal. In cases where a manufacturer requests a hearing and the decision to impose the civil money penalty is upheld, CMS would initiate collection of the civil money penalty once the administrative decision is final. CMS is seeking comment on proposals related to the violations of payment deadlines and issuance of a civil money penalty.

CMS proposes in § 428.500(g) that in the event that a manufacturer declares bankruptcy, as described in title 11 of the United States Code, and as a result of the bankruptcy, fails to pay either the full rebate amount owed or the total sum of civil monetary penalties imposed, the government reserves the right to file a proof of claim with the bankruptcy court to recover the unpaid rebate amount and/or civil monetary penalties owed by the manufacturer.

g. Severability (§ 428.10)

Proposed § 428.10 provides that, were any provision of part 428 to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions would be severable from this part and the invalidity or unenforceability would not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances. While the provisions in part 428 are intended to present a comprehensive approach to implementing the Medicare Part D Drug Inflation Rebate Program, we intend that each of them is a distinct, severable provision, as proposed, and would not affect similar provisions in the Medicare Part B Drug Inflation Rebate Program. Through this rulemaking, the Part D drug inflation rebate proposals are intended to operate independently of each other, even if each serves the same general purpose or policy goal. For example, CMS intends that the policies CMS is proposing related to exclusion of units acquired through the 340B Program (proposed § 428.203(b)(2)) are distinct and severable from the proposals related to Determination of Part D Rebateable Drugs (proposed §§ 428.100 and 428.101). Even where one provision makes reference to a second provision, the preamble and the regulatory text clarify the intent of the agency that the two provisions would be severable if one provision were to be invalidated in whole or in part. For

example, CMS would still be able to calculate a Part D drug inflation rebate even if the provision to identify the payment amount benchmark period for a Part D rebateable drug as the first calendar year in which such drug has at least 1 quarter of AMP in certain instances of missing AMP is deemed invalid (proposed § 428.202(c)(3) and (4)). CMS welcomes comments on this severability policy.

J. Request for Information: Building Upon the MIPS Value Pathways (MVPs) Framework To Improve Ambulatory Specialty Care

This request for information seeks input from the public regarding the design of a future ambulatory specialty model. Responses to this request for information may be used to inform potential future rulemaking and other policy development.

1. Background

Medicare beneficiaries' care is becoming more fragmented as they are increasingly seeing (1) more specialists and (2) specialists more often, while the number of visits with their primary care clinician remains relatively constant.^{598 599} A primary care team must now coordinate with more specialists than ever before⁶⁰⁰ to achieve continuity in beneficiary care. Medicare beneficiaries with chronic conditions, in particular, are at high risk of excess emergency department visits due to fragmented care.⁶⁰¹

In 2021, the Innovation Center announced a strategic refresh with a vision for a health care system that achieves equitable outcomes through high-quality, affordable, person-centered-care. This includes a bold goal of having 100 percent of Medicare fee-for-service (FFS) beneficiaries and the vast majority of Medicaid beneficiaries in an accountable care relationship by

⁵⁹⁸ Barnett ML, Bitton A, Souza J, Landon BE. Trends in Outpatient Care for Medicare Beneficiaries and Implications for Primary Care, 2000 to 2019 [published correction appears in *Ann Intern Med.* 2022 Oct;175(10): 1492]. *Ann Intern Med.* 2021;174(12): 1658–1665. doi: 10.7326/M21-1523.

⁶⁰¹ Kern, LM, Seirup, JK. Fragmented Ambulatory Care and Subsequent Healthcare Utilization Among Medicare Beneficiaries. *The American Journal of Managed Care.* 2018;24(9):e278–e284.

2030.⁶⁰² To expand accountable care among specialists and to drive more person-centered care thereby improving the quality, clinical outcomes, and affordability of healthcare for beneficiaries, the Innovation Center has created a comprehensive specialty strategy to test models and innovations. This strategy includes: (1) enhancing transparency of specialist data and performance measures; (2) maintaining momentum established by episode payment models by extending the Bundled Payments for Care Improvement Advanced (BPCI Advanced) Model, launching a new model focusing on beneficiaries with cancer, and testing a new mandatory acute episode payment model; (3) creating financial incentives to improve coordination and collaboration between primary care and specialty care in both advanced primary care models and in condition-based models; and (4) creating additional financial incentives for specialists to affiliate with population-based models and move to value-based care.^{603 604}

As part of this strategy, we are considering a model design that would increase the engagement of specialists in value-based payment and encourage specialty care provider engagement with primary care providers and beneficiaries. Specifically, we are currently exploring developing a model for specialists in ambulatory settings that would leverage the Merit-based Incentive Payment System (MIPS) Value Pathways, or MVP, framework. As currently envisioned, participants under this model would not receive a MIPS payment adjustment. Instead, a model participant would receive a payment adjustment based on (1) a set of clinically relevant MVP measures that they are required to report and (2) comparing the participant's final score against a limited pool of clinicians (other model participants of their same specialty type and clinical profile, who are also required to report on those same clinically relevant MVP measures). Currently, under MIPS, performance and the subsequent payment adjustment

are based on a range of measures voluntarily reported by clinicians, who receive a final score based on the submitted measures. A clinician's performance is assessed against a pool of all clinicians, regardless of specialty type or the services they provide. We expect that a more targeted approach where clinicians are evaluated (1) on a set of relevant performance measures they are required to report, and (2) among clinicians furnishing similar sets of services, would produce scores and subsequent payment adjustments that are more reflective of clinician performance. A more targeted approach to measurement would also offer more insight into how clinical decisions and processes, such as care coordination, affect patient outcomes. We believe this insight is necessary to support and incentivize accountable care, increasing beneficiary access to coordinated specialty care. Furthermore, equipped with more specialty-relevant performance information, we expect clinicians would be more likely to invest resources in pursuit of better outcomes, reducing the incidence of poor outcomes arising from care fragmentation, ultimately resulting in better care for patients.

MVPs are a reporting option under MIPS, which is one of the two primary ways a clinician may participate in the CMS Quality Payment Program. The Quality Payment Program, which commenced on January 1, 2017, was established pursuant to the Medicare Access and CHIP Reauthorization Act of 2015 (Pub. L. 114–10, April 16, 2015). The Quality Payment Program rewards the delivery of high-quality patient care through two avenues: Advanced Alternative Payment Models (Advanced APMs) and MIPS for eligible clinicians or groups under the Physician Fee Schedule (81 FR 77008). CMS assesses performance on measures and activities in four performance categories to determine each MIPS eligible clinician's performance under MIPS: quality; cost; clinical practice improvement activities; and Promoting Interoperability (42 CFR 414.1330, 414.1350, 414.1355, and 414.1375).

In response to concerns made by interested parties that MIPS requirements are confusing, burdensome, and that it is difficult to choose measures from the several hundred MIPS and QCDR quality measures that are meaningful to their practices and have a direct benefit to patients, CMS developed the MVP reporting option to create a simplified MIPS clinician experience, improve value, reduce burden, and better inform patient choice in selecting clinicians (86

FR 65376). MVPs provide MIPS eligible clinicians with a more cohesive subset of measures and activities related to a specific specialty or condition (86 FR 65420 through 65427). MVPs are developed in coordination with interested parties through an established process in which clinician and patient perspectives are incorporated (85 FR 84850). The use of MVPs can create more meaningful performance data, reduce complexity of the MIPS program for clinicians, and lower the burden on participating clinicians. MIPS eligible clinicians have been able to report on MVPs beginning with the CY 2023 MIPS performance period.

Like MIPS eligible clinicians participating in traditional MIPS, those who report MVPs receive an adjustment to their Medicare Part B fee-for-service payments 2 years after the corresponding MIPS performance period based on a total score calculated from reported measures and activities across the 4 MIPS performance categories (see §§ 414.1365, 414.1405(e), and 414.1305). MVPs are designed to cover a range of medical conditions, care settings, and clinician types, including primary care providers and specialists. For the 2024 performance year, 16 MVPs are reportable, allowing for a range of specialties to report a streamlined set of measures most applicable to services they provide (88 FR 79978 through 80047). For information on the MVPs reportable for the 2024 performance period we refer readers to sections IV.A.4 and Appendix 3 of this proposed rule.

Currently, 5 MVPs have quality measures including patient-reported outcome measures and chronic condition episode-based cost measures, which could be the foundation for assessing the value of care provided to chronic care patients. We believe coordination between primary and specialty care is particularly critical to the ongoing management of chronic conditions with beneficiaries not only for reasons of quality and cost, but also in understanding beneficiary goals, expectations, and experiences with care.

CMS conducts ongoing MVP development through engagement with interested parties with the long-term goal of sunseting traditional MIPS reporting and making MVP reporting mandatory for MIPS eligible clinicians in the future (86 FR 65395 and 87 FR 70040). For more information on the long-term goal of sunseting traditional MIPS reporting, see section IV.A.3.b. of this proposed rule. For more information on CY 2025 MVP reporting option proposals under the MIPS

⁶⁰⁴ "The CMS Innovation Center's Strategy to Support Person-Centered, Value-Based Specialty Care: 2024 Update." Health Affairs Forefront, April 2, 2024. DOI: 10.1377/forefront.20240328.868596.

program, see section IV.A.4 of this proposed rule.

Using the MVP framework as the foundation for a model has many benefits. First, the MVP framework advances value-based care by narrowing the available measure set based upon clinician specialty, medical condition, or patient population, which allows for meaningful comparisons to be made across providers and relevant feedback to be available to participants on their performance, strengthening the foundation for accountability in specialty care. The MVPs provide a framework for reporting a cohesive set of measures and activities focused on the clinician's performance in rendering care for their specialty or clinical condition.

Second, the payment methodology for the model built on MVPs could address concerns interested parties have raised about the MIPS program. For instance, CMS has heard from interested parties that the current range of Medicare Part B payment adjustments resulting from MIPS participation may be insufficient to encourage meaningful specialty care transformation that results in increased integration between primary and specialty care. The model could test ways to enhance existing incentives, allowing for more specific comparisons to be made between clinicians of the same type who are providing similar services to patients.

Third, such a model could reach a broad range of clinicians of various specialty types that have limited opportunity to participate in Advanced APMs. There are 16 MVPs for the 2024 performance year spanning numerous specialties, and CMS is proposing additional MVPs for the 2025 performance year with the goal of creating MVPs that would be relevant to the practices of 80 percent of MIPS eligible clinicians. Using an existing framework that is agnostic to specialty type, as opposed to creating multiple unique models that are each narrowly defined by a condition or specialty, would allow the Innovation Center to take a more inclusive and unified approach to increasing specialist engagement in value-based payment.

While CMS continues to develop more MVPs for additional health conditions and specialties, an ambulatory specialty model leveraging the MVP framework could focus on a subset of published MVPs in the initial years of implementation, with the goal of increasing the number of MVPs, and thus the range of health conditions or specialty areas, included in the model over time. Using specific MVPs as the basis for a model would, in part, require

that selected MVPs cover a sufficient volume of clinicians, address chronic conditions with high Medicare expenditures, align with existing Innovation Center models (for example, the Making Care Primary model), and present an opportunity to strengthen the integration between specialty care and primary care.

We are soliciting comments on several parameters of a potential model, including considering mandatory participation of relevant specialty care providers to overcome challenges such as selection bias and participant attrition, and to ensure the model is reaching a representative group of providers and beneficiaries to facilitate scaling of the model test. If CMS were to propose a mandatory specialty model, it would be done via notice and comment rulemaking. We expect this ambulatory specialty model would be implemented no earlier than 2026, ensuring participants have sufficient time to prepare for the model.

2. Solicitation of Public Comments

The Innovation Center is releasing this request for information (RFI) to gather feedback on testing a new model design to improve clinical outcomes and reduce or maintain Medicare spending. We request feedback on the design of a future ambulatory specialty model, specifically on the following—

- Participant definition;
- MVP performance assessment;
- Payment methodology;
- Care delivery and incentives for partnerships with accountable care entities and integration with primary care;
- Health information technology and data sharing;
- Health equity; and
- Multi-payer alignment.

Whenever possible, respondents are requested to draw their responses from objective, empirical, and actionable evidence and to cite this evidence within their responses.

a. Participant Definition

A key component of this potential model is to define the Medicare Part B clinicians that could participate in the model. Participants in an ambulatory specialty model using the MVP framework could be limited to MIPS eligible clinicians (see § 414.1305) with specific ambulatory-based specialties for a specific clinical focus area(s). The model design must also consider whether and how clinicians participating in other APMs and Advanced APMs (see §§ 414.1305 and 414.1415) would participate in the model.

To select participants, an ambulatory specialty model would need to determine which clinicians are specialists and sub-specialists practicing in the specified clinical areas prioritized in the model. This process may be complex as a single specialty often comprises several sub-specialties, all of which have specific clinical areas of expertise and practice. For example, the specialty of cardiology has subspecialties, including general cardiology, interventional cardiology, electrophysiology, among others; and interventional cardiologists treat a wide range of acute and chronic cardiovascular conditions and may receive advanced training in the endovascular treatment of specific conditions, including coronary artery disease and peripheral artery disease. The MVP framework could provide a natural starting point to identifying participants within a given specialty or sub-specialty. Each MVP provides measures and activities for a range of specialties and sub-specialties in a clinical area or health topic, allowing for specialties and sub-specialists to select an applicable MVP and report the measures and activities most relevant to them.

MVP currently policies do not require specialists to report specific MVPs but encourage individuals or groups that are MIPS eligible clinicians to elect to be an MVP Participant and report an MVP that is clinically relevant to them. Beginning with the CY 2026 performance period, an MVP Participant is assessed on an MVP in accordance with § 414.1365 as an individual MIPS eligible clinician,⁶⁰⁵ a single specialty group,⁶⁰⁶ subgroup,⁶⁰⁷ or APM entity⁶⁰⁸ (see § 414.1305, “MVP

⁶⁰⁵ A MIPS eligible clinician who is an individual and elects to report 1 MVP relevant to the clinician's clinical practice area(s).

⁶⁰⁶ A single specialty group that is a MIPS eligible clinician and reports 1 MVP. Single specialty group means a group that consists of one specialty type as determined by CMS using Medicare Part B claims (see § 414.1305). A groups means a single TIN with two or more clinicians (including at least one MIPS eligible clinician), as identified by their individual NPI, who have reassigned their billing rights to the TIN (*Id.*).

⁶⁰⁷ Subgroups means a subset of a group which contains at least one MIPS eligible clinicians and is identified by a combination of the group TIN, subgroup identifier, and each eligible clinician's NPIs (see § 414.1305). Each subgroup consists of 2 or more clinicians from a group that is a MIPS eligible clinician. Multiple subgroups can form from a single group, which may be either a single specialty group or a multispecialty group. Each subgroup reports 1 MVP. An individual eligible clinician (as represented by a TIN–NPI combination) may register for no more than one subgroup within a group's TIN. (see § 414.1318(a)(3)).

⁶⁰⁸ An APM entity is a participant in an APM or other payer arrangement through a direct agreement with CMS, other payer, or through Federal or State

participant”). CMS has encouraged MIPS eligible clinicians that are multispecialty groups to participate in subgroup reporting to allow the group to report measures more relevant to each of the group’s constituent specialties. Multispecialty groups that choose to report an MVP will be required to form subgroups for that purpose beginning in the CY 2026 performance period (§ 414.1305, “MVP participant”).

Within an ambulatory specialty model, identification of a given specialty or sub-specialty—including whether an individual would be selected to participate in the model at an individual, group, or subgroup level based on TIN and NPI combinations—would need to rely on data sources to which CMS already has access. Further, approaches to participant identification would need to appropriately identify non-physician clinician types (for example, physician assistants or nurse practitioners) that may practice within a specific specialty or sub-specialty or both but may not be categorized as practicing within a specific specialty within existing data systems.

As multispecialty groups reporting MVPs in the 2026 MIPS performance period must divide into subgroups, CMS finalized a process by which it will determine whether a MIPS eligible clinician that is a group practice is a single specialty group or multispecialty group. CMS finalized that it will use Medicare Part B claims data to determine a group’s specialty type based on the strong alignment between the Medicare Provider Enrollment, Chain, and Ownership System (PECOS) and Medicare Part B claims data sources, and historical use of claims data to identify a clinician or practice’s specialty (87 FR 70038 through 70040).

Given the different circumstances and challenges faced by clinicians working in specific contexts, an ambulatory specialty model could consider additional characteristics of clinicians or practices in addition to the identification of participants based on specialty or sub-specialty.⁶⁰⁹ Additional

law or regulation. An APM Entity can report and be scored on multiple MVPs that are of clinical interest or relevance (see § 414.1305).

⁶⁰⁹ For example, special status designations for MIPS eligible clinicians confer additional flexibilities in performance category reporting requirements and category reweighting within final score calculations. For the 2024 performance period, several provider designations can receive additional flexibilities in MVP reporting. Ambulatory Surgical Center (ASC)-based, hospital-based, non-patient facing, and small practice-based (15 or fewer clinicians) providers are eligible for automatic reweighting of the Promoting Interoperability performance category to 0 percent, with the category weight redistributed to other performance categories. Small practice-based

characteristics that could be considered in participant selection in a model could be related to factors documented to be associated with disparities in access to specialty care and disparities in specialty-sensitive outcomes. Such factors could include being a solo clinician, practicing within a rural area, serving a higher proportion of Medicare and Medicaid dually eligible beneficiaries and patients receiving Medicare Part D low-income subsidies, operating within a designated Health Provider Shortage Area, among others. For further discussion on additional health equity considerations for the model, see section III.J.2.f. of this proposed rule, Health Equity.

Participant identification approaches would also need to consider the heterogeneity of existing specialty group practices as the variation in clinical practice across different specialties has historically presented challenges for specialists to engage more deeply in value-based care.

Assuming an ambulatory specialty model would initially focus on a subset of specialists and eventually incorporate additional specialties over time, CMS would need to identify specialists for the prioritized clinical areas before the model begins. CMS seeks feedback on the following questions:

(1) How should CMS identify single specialty and multispecialty groups while accounting for regular clinician turnover? Which data sources and methodology should CMS use to consider identifying specialists and sub-specialties that could potentially participate in an ambulatory specialty model?

(2) Should CMS consider different identification approaches to identify individual clinician specialist type versus practice- or group-level specialty types? If so, how?

(3) Are there certain characteristics of clinicians or practices or both that may warrant additional policy flexibilities or exemption from participation in a mandatory ambulatory specialty model? What flexibilities should CMS consider for these participants?

(4) How should CMS collect unbiased comparison group data on quality and costs for evaluation purposes? Would mandating a control group to report MVPs be appropriate for model evaluation?

(5) How can CMS support a multispecialty group’s ability to

participants are also eligible for additional scoring flexibilities in the quality performance category (see § 414.1380). MVP policies for the CY 2024 performance period state that special status determination is determined at the group level for subgroup participants (see § 414.1365).

successfully participate in MIPS and the model if a portion of its clinicians are reporting separate measures pursuant to the model? What steps could CMS take to reduce any added administrative burden that might arise from such separate reporting?

b. MVP Performance Assessment

CMS adjusts future Medicare Part B payments to MIPS eligible clinicians based on the assessment of measures and activities⁶¹⁰ reported across the 4 MIPS *performance categories*: Quality (including Population Health), Cost, Improvement Activities, and Promoting Interoperability (see §§ 414.1380 and 414.1405). MVP Participants are assessed in the same manner (see § 414.1365(d)). Scoring policies and procedures are standardized across MVPs (see § 414.1365(d)(3)). Resulting performance category scores are weighted as defined in regulations (see §§ 414.1365(e)(1) and 414.1380(c)) and are aggregated to compute an overall final MVP score, which ranges from 0 to 100 points.

Quality—Each MVP defines a set of reportable quality measures relevant to the specialty or medical condition that provide meaningful and actionable results. Quality measure sets are designed to cover a range of process and outcomes measures that are applicable to a range of clinicians working within a given specialty or medical condition. As of the CY 2024 performance period, MVP Participants must report at least 4 quality measures, including at least 1 outcome measure or 1 measure designated “high priority” if an outcome measure is not available within an MVP (see §§ 414.1365(c)(1) and 414.1305). Individual quality measures must also meet case minimums to be scored (see § 414.1380(b)(1)). Please refer to section IV.A.4.c.(1). of this proposed rule for proposed quality measure reporting and scoring policies for the CY 2025 performance period. MVP participants are also scored on population health administrative claims-based measures, which are factored into the MVP participant’s overall quality performance category score (see § 414.1365(c)(4)(ii)) (please refer to sections IV.A.4.c.(1).(a), and IV.A.4.c.(1).(b). of this proposed rule for proposed population health measure reporting and scoring policies for the CY

⁶¹⁰ Pursuant to section 1848(q)(2)(D) of the Act, CMS selects measures for inclusion in the MIPS program through notice and comment rulemaking. To date, CMS has also elected to subject each MIPS measure to the pre-rulemaking process pursuant to section 1848(q)(2)(D)(ix) of the Act.

2025 performance period).⁶¹¹ The population health measures help indicate the quality of a population or cohort's overall health and well-being, such as, access to care, clinical outcomes, coordination of care and community services, health behaviors, preventive care and screening, health equity, or utilization of health services (see § 414.1305).

Cost—Each MVP identifies cost measures that are relevant and applicable to the MVP topic or medical condition. Given the availability of applicable cost measures, the number of reportable cost measures varies across MVPs. An MVP may include the episode-based cost measures (EBCM) that are relevant to MVP topic, total per capita cost (TPCC) measure, and Medicare Spending Per Beneficiary Clinician (MSPB Clinician) measure. Cost measures are calculated by CMS using administrative claims data, and CMS scores MVP participants on all cost measures included in the MVP that they select and report (see § 414.1365(d)(3)(ii)). Please refer to section IV.A.4.c.(2). of this proposed rule for proposed cost measure reporting and scoring policies for the CY 2025 performance period/2027 MIPS payment year.

Improvement Activities—Improvement activities (IAs) are activities that relevant MIPS eligible clinician, organizations and other relevant interested parties identify as improving clinical practice or care delivery and that are likely to result in improved outcomes. (see § 414.1305). Improvement activities may cover multiple improvement domains, including expanded patient access, population management, care coordination, beneficiary engagement, patient safety and practice assessment, health equity, emergency response and preparedness, and behavioral and mental health (see § 414.1355(c)). MVP participants must report IAs included in a given MVP while meeting overall IA reporting requirements for the performance period. Please refer to section IV.A.4.c.(3). of this proposed rule for proposed IA reporting and scoring policies for the CY 2025 performance period.

⁶¹¹ For the CY 2024 performance period, the two population health measures from which participants could select to be scored are: Hospital-Wide, 30-day, All-Cause Unplanned Readmission Rate for the MIPS Groups and Clinician, or Clinician Group Risk-standardized Hospital Admission Rate for Patients with Multiple Chronic Conditions. If the participant does not meet the case minimum for either measure, then the population health measure is excluded from scoring within the quality performance category.

Promoting Interoperability—The Promoting Interoperability requirements of MVPs are intended to emphasize the electronic exchange of information using certified electronic health record technology (CEHRT), patient access to health information, exchange of information among clinicians, and the systematic collection, analysis, and interpretation of health care data. As of the CY 2024 performance period/2026 MIPS payment year, MVP participants are required to report the entire MIPS Promoting Interoperability measure set, which includes measures related to use of CEHRT for e-prescribing, health information exchange, public health and clinical data exchange, and clinician-to-patient exchange, as well as required attestations, as specified by CMS (see §§ 414.1365(c)(4)(i) and 414.1375(b)). Please also refer to section IV.A.4.c.(4). and Table 62 for required objectives and measures for the MIPS Promoting Interoperability performance category for the CY 2025 performance period/2027 MIPS payment year.

Operating within the MVP measures framework, an ambulatory specialty model would collect data on measures across quality, cost, and improvement activities performance categories that would be clinically relevant to specialties or sub-specialties or both within an MVP topic specified by the model. As discussed in III.J.1. of this proposed rule, the model could use a subset of measures and activities included in an MVP that are most clinically relevant to the model's clinical topics and specialties. A clinically focused measure and activity set could allow CMS to set performance standards that are most clinically relevant to sub-specialties within an MVP topic under the model.

CMS requests the following feedback related to incorporating measures and activities from MVP performance categories in a possible ambulatory specialty model:

(6) If CMS were to reduce the number of measures and activities in an MVP for clinicians participating in the model to those measures and activities most relevant to a specified specialty or subspecialty, how should CMS select the measures and activities? Consider the following prioritization approaches: (a) measures with a performance gap; (b) measures with meaningful benchmarks that can be applied; (c) measures that are reliable in the model context given the expected sample size; (d) measures that are evidence-based and either strongly linked to outcomes or an outcome measure; (e) measures that capture an adequate number and representativeness of the clinicians

intended by a possible ambulatory specialty model; (f) measures that drive specialty integration with primary care and meaningful involvement with accountable entities. Are there other measure selection principles that should be prioritized when narrowing measuring in an MVP?

(7) Are there specific measure focus areas or objectives that should be prioritized across MVPs (such as equity, population health measures, or patient-reported outcome-based performance measures (PRO-PMs) and patient-reported experience measures)?

(8) To support improvements in primary and specialty care integration, an ambulatory specialty model could initially focus on specialty types eligible to become rostered specialty care partner clinicians in the MCP model, which include general cardiologists and physical medicine and rehabilitation clinicians. Accordingly, which measures within the Advancing Care for Heart Disease MVP and the Rehabilitative Support for Musculoskeletal Care MVP might be subset to apply to general cardiology and physical medicine and rehabilitation, respectively?

(9) Similar to how other Innovation Center models may test new measures during their implementation (for example, the Comprehensive Joint Replacement model (80 FR 73358 through 73382 and 86 FR 23543 through 23549) and the Guiding an Improved Dementia Experience (GUIDE) Model⁶¹²), what role could an ambulatory specialty model have in testing potential new measures, such as relevant PRO-PMs, by gathering data for consideration in future MVP measure sets?

(10) What kinds of strategies could be tested to obtain patient and family feedback on how they experience care coordination between primary care and specialty care for the clinical focus areas of the model?

(11) What types of peer engagement would specialists consider valuable to enhance their performance within a given sub-specialty or clinical topic?

c. Payment Methodology

MIPS final scores are used to determine payment adjustments for future Medicare Part B payments during the payment year that occurs 2 calendar years following the MIPS performance period (for example, scores from the CY 2021 MIPS performance period resulted in Part B Medicare payment adjustments for the 2023 calendar year) (see

⁶¹² <https://www.cms.gov/files/document/guide-rfa.pdf>.

§ 414.1305). CMS scores a MIPS eligible clinician's performance on measures and activities in accordance with section 1848(q)(5) of the Act and regulations at §§ 414.1317, 414.1365, 414.1367, and 414.1380, as applicable to determine a final score for each MIPS eligible clinician.

In accordance with section 1848(q)(6) of the Act and § 414.1405(b), CMS compares each MIPS eligible clinician's final score against the performance threshold established for that MIPS payment year and against one another in a single comparison pool to determine whether each MIPS eligible clinician will receive a positive, negative, or neutral payment adjustment. CMS calculates MIPS payment adjustment factors in accordance with regulations at § 414.1405. Scores equal to the defined performance threshold receive a neutral (0 percent) payment adjustment. Scores falling below one-quarter of the performance threshold receive a negative adjustment of minus 9 percent, while scores between one-quarter of the performance threshold and the performance threshold receive a negative payment adjustment less than 0 percent and up to minus 9 percent based on a linear sliding scale. Scores above the performance threshold can receive positive payment adjustments greater than 0 percent and up to positive 9 percent based on a linear sliding scale. Depending on the range of scores within a given performance period, a scaling factor (ranging from 0 to 3) is applied to positive adjustments to retain budget neutrality.

For the CY 2022 performance period/2024 MIPS payment year, over 624,000 clinicians received MIPS payment adjustments to their Medicare Part B payments based on participation in traditional MIPS: 14 percent of MIPS eligible clinicians received negative MIPS payment adjustments, 7 percent received neutral MIPS payment adjustments, and 79 percent received positive MIPS payment adjustments with a maximum positive payment adjustment of 8.26 percent.⁶¹³ MVPs were not a reporting option for the CY 2022 performance period/2024 MIPS payment year.

As discussed in III.J.1. of this proposed rule, an ambulatory specialty model allow for more specific comparisons between clinicians of the

same type who are providing similar services to patients. Comparing clinicians that provide a similar type of specialty care to determine future Medicare Part B payment adjustments could lead to payment adjustments that are more reflective of the range of performance of similar clinicians caring for beneficiaries within a given clinical topic area. Such comparisons could create financial incentives that drive quality improvement and care transformation within a given clinical topic and specialty. Further, a more targeted approach to performance measurement and assessment, including enhanced data on clinical and financial performance relative to similar clinicians, could incentivize shared accountability for care and lead to increased beneficiary access to coordinated specialty care.

In considering an ambulatory specialty model that leverages the MVP framework to increase specialist engagement in value-based care and transform specialist care delivery, CMS is requesting feedback on the following questions:

(12) How could a model for applicable specialists improve the comparison of similar specialists to determine future Medicare Part B payment adjustments?

(13) What range of upside and downside risk (as measured by the range of possible payment adjustments to future Medicare Part B claims) could incentivize increased and meaningful participation of specialists in APMs, care transformation, and strengthened integration between primary and specialty care?

(14) What model design features should CMS consider in designing an ambulatory specialty care model that increases risk over time to potentially qualify the model for Advanced APM (AAPM) status under the Quality Payment Program (see § 414.1415)?

d. Care Delivery and Incentives for Partnerships With Accountable Care Entities and Integration With Primary Care

CMS is exploring how an ambulatory specialty model could encourage model participants to better engage with primary care providers engaged in care coordination activities in the MCP model, Shared Savings Program, and other current and future accountable care models. By promoting coordination and partnership between specialists and these accountable entities, CMS seeks to extend opportunities for specialists to deliver comprehensive longitudinal care and improve the quality of care provided by both parties. For example, CMS could test the inclusion of new

improvement activities in model MVPs that are fulfilled through care coordination activities with an accountable care entity or its participant clinicians. As CMS considers opportunities to encourage specialist delivery of comprehensive longitudinal care, an underlying priority is care delivery from the beneficiary's perspective. To address the issue of highly fragmented care delivery to the beneficiary, CMS recognizes the need for meaningful engagement among those who deliver care and seeks to create incentives for partnerships between specialist clinicians, accountable care entities, and primary care clinicians. To help us ensure these accountable entities reduce fragmentation and provide patients with the highest value care, we seek input on the following questions:

(15) Are there model design features not discussed here that would incentivize primary care and specialty care providers to improve how beneficiaries experience care coordination?

(16) How can CMS best encourage specialist clinicians and accountable care entities collaborate to establish clear care pathways and protocols that optimize patient outcomes while ensuring efficient resource utilization?

(17) How may CMS identify specialists who are most engaged in care management, care coordination, and care improvement activities with an accountable care entity?

(18) In what ways can the model define clear expectations and performance metrics for specialists, beyond what exists in the current MVP measure sets, to foster a collaborative environment with ACOs and primary care clinicians to enhance healthcare outcomes and reduce costs? What levers, such as the MIPS's Improvement Activities, could be used to support participants to close the care loop back to accountable care entities or primary care or both?

(19) What characteristics should CMS consider in the design of this model to account for variations between ACOs, such as whether the ACO is physician-owned versus hospital-owned (or a low revenue ACO versus a high revenue ACO), whether or not an ACO identifies as an integrated delivery system (IDS), and differences in regional healthcare landscapes and local dynamics? What other characteristics should we consider?

(20) How can the model proactively address concerns related to increased consolidation, ensuring that integration efforts do not lead to reduced

⁶¹³ QPP 2022 Participation Results At-a-Glance <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2816/QPP-2022-Participation-and-Performance-Results-At-A-Glance.pdf>. Note that for the CY 2022 performance period, MIPS participants were eligible for an additional MIPS payment adjustment factor for exceptional performance (see § 414.1405).

competition and potential negative impacts on healthcare quality and costs?

(21) How might risk categorization of ACOs influence the design of incentive structures of model participants engaging with ACOs, and what adjustments might be necessary to accommodate different risk levels?

e. Health Information Technology and Data Sharing

The Quality Payment Program releases publicly the QPP Experience Report Public Use Files (with companion methodology and data dictionary documentation), which allow users to review details concerning participation and performance information in the MIPS program during each performance period. These files cover eligibility and participation, performance categories, and final score and payment adjustments, with details at the TIN/NPI level on each of the performance categories for the previous performance period. Data can be sorted by variables like clinician type, practice size, scores, and payment adjustments. Clinicians and authorized representatives of practices, virtual groups, and APM Entities (including Shared Savings Program ACOs) also have access to summaries of data that they have submitted and that CMS has collected on their behalf. This includes performance category-level scores and weights, bonus points, measure-level performance data and scores, activity-level scores, payment adjustment information, and patient-level reports. Clinicians frequently request more timely and expansive data feedback through MIPS to help guide continuous improvement efforts. CMS requests the following feedback on health information technology and data sharing:

(22) What specific issues should CMS consider when determining whether additional requirements and objectives may be necessary beyond those currently specified in the MVP framework around the use of health IT by specialists participating in a potential model?

(23) What investments in health IT or information exchange would be most beneficial to helping specialists succeed in such a model?

(24) What is your experience with the integration of health IT systems? Please highlight any interoperability issues or opportunities for seamless data exchange between different systems, such as electronic health records (EHRs) and telehealth platforms.

(25) How should CMS structure the model and any health IT and data sharing requirements to align with,

build upon, and otherwise leverage advances in Federal interoperability policy (for example, USCDI and USCDI+ or FHIR; TEFCA)?

(26) What data or metrics or both are important to clinicians in terms of monitoring performance and improving patient outcomes? What data or metrics or both should CMS share publicly to help inform beneficiaries of clinician performance?

(27) What additional resources or support mechanisms could CMS provide to help clinicians make sense of the data, enhancing the data's usability, effectiveness, and frequency of updates, so that clinicians acquire actionable insights for improving patient care and experience? And to enable data-driven referrals?

(28) What supports can this new model provide for decreasing burden of data collection and measure reporting?

f. Health Equity

Disparities in access to ambulatory specialty care and chronic condition outcomes are well documented, such as racial/ethnic and geographic disparities in rates of ischemic heart disease (IHD) among Medicare fee-for-service beneficiaries.⁶¹⁴ For example, Medicare fee-for-service beneficiaries identifying as American Indian/Alaska Native (28 percent) had the highest age-standardized prevalence of IHD and Asian/Pacific Islander (22 percent) beneficiaries had the lowest prevalence, compared to the IHD prevalence among White (27 percent), Black/African American (26 percent), and Hispanic (25 percent) beneficiaries in 2021.⁶¹⁵ Medicare fee-for-service beneficiaries with complex chronic conditions in rural areas have also been shown to have comparable access to primary care physicians but significantly lower access to ambulatory specialists and higher rates of avoidable hospitalizations for chronic conditions compared to similar beneficiaries in urban areas.⁶¹⁶ Engaging specialists in value-based care to create more integrated and efficient care provides an

⁶¹⁴ Centers for Medicare & Medicaid Services. Ischemic Heart Disease Disparities in Medicare Fee-for-Service Beneficiaries Data Snapshot. April 2021. https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/OMH_Dwnld-DataSnapshot-Ischemic-Heart-Disease.pdf.

⁶¹⁵ Centers for Medicare & Medicaid Services. Ischemic Heart Disease Disparities in Medicare Fee-for-Service Beneficiaries Data Snapshot. April 2021. https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/OMH_Dwnld-DataSnapshot-Ischemic-Heart-Disease.pdf.

⁶¹⁶ Johnston KJ, Wen H, Joynt Maddox KE. Lack Of Access to Specialists Associated with Mortality and Preventable Hospitalizations of Rural Medicare Beneficiaries. *Health Aff (Millwood)*. 2019;38(12):1993–2002. doi: 10.1377/hlthaff.2019.00838.

opportunity to expand access to specialty care for historically underserved beneficiaries and advance health equity.

Consistent with President Biden's Executive Order 13985 on "Advancing Racial Equity and Support for Underserved Communities Through the Federal Government" (86 FR 7009) and Executive Order 14091 on "Further Advancing Racial Equity and Support for Underserved Communities Through the Federal Government" (88 FR 10825), CMS has made advancing health equity⁶¹⁷ the first pillar in its Strategic Plan. Health equity is also one of the five objectives in the Innovation Center's 2021 Strategy Refresh. Improving access to high-quality, patient-centered care is a goal for the Innovation Center, and ensuring historically underserved beneficiaries are adequately represented in value-based care models may help reduce inequities when designed with the proper incentives.

The Innovation Center is also committed to prioritizing the unique needs of clinicians that care for a large proportion of underserved populations, such as creating flexibilities clinicians may need to be successful in models. To advance health equity goals within payment models, the Innovation Center has implemented multiple equity-focused strategies within existing models, including, but not limited to development of participant health equity plans, reporting of aggregated health-related social need (HRSN) screening,⁶¹⁸ reporting and analysis of attributed beneficiary sociodemographic data to support identification and monitoring of health disparities, and payment adjustments.

Within the MVP framework, several MVPs include equity-focused measures within the quality and improvement activities performance categories, such as screening for HRSNs or engaging community resources to address HRSNs. MVPs also provide additional reporting

⁶¹⁷ We define health equity as the attainment of the highest level of health for all people, where everyone has a fair and just opportunity to attain their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identity, socioeconomic status, geography, preferred language, and other factors that affect access to care and health outcomes.

⁶¹⁸ Health-related social needs are adverse social conditions that negatively impact a person's health or healthcare such as lack of access to transportation for appointments. See A Guide to Using the Accountable Health Communities Health-Related Social Needs Screening Tools: Promising Practices and Key Insights. CMS. (Updated Aug. 2022). <https://www.cms.gov/priorities/innovation/media/document/ahcm-screeningtool-companion>; Accountable Health Communities Health-Related Social Needs Screening Tool.

and scoring flexibilities for certain special status designations, many of which may include clinicians caring for historically underserved beneficiaries. There may be additional clinician- and practice-level characteristics, including the characteristics of beneficiaries served, that would be important to account for within an ambulatory specialty model to support clinicians in identifying and working to improve disparities related to access to specialty care and associated outcomes.

To understand the potential health equity impacts of a new ambulatory specialty model and to help ensure the goals laid out in the CMS Strategic Plan and the Innovation Center Strategy Refresh are met, we request feedback on the following questions:

(29) Similar to how other Innovation Center models may offer financial and technical supports to certain qualifying clinicians (for example, safety net clinicians) as part of a model's health equity strategy (for example, the GUIDE model⁶¹⁹), how might CMS support the participation of clinicians in an ambulatory specialty model that may serve a higher proportion of underserved patients (for example, small practices or clinicians in rural areas)?

(30) How could an ambulatory specialty model support participant efforts to identify health disparities within their practices, identify actionable equity goals, and design and implement strategies to improve identified disparities?

(31) How could an ambulatory specialty focused model work synergistically with other primary care focused models to improve health disparities?

(32) How could an ambulatory specialty model encourage clinicians to collect and use HRSN screening and follow-up data collected on patients attributed to the model?

(33) How can measure stratification among patient subgroups or use of composite health equity measures improve how participants identifies and quantifies potential disparities in care and outcomes related to ambulatory specialty care?

g. Multi-Payer Alignment

Given the Innovation Center's strategic goal to make multi-payer alignment available in all new models by 2030,⁶²⁰ we are seeking feedback on

⁶¹⁹ Center for Medicare and Medicaid Services. Guiding an Improved Dementia Experience (GUIDE) Model. <https://www.cms.gov/priorities/innovation/innovation-models/guide>.

⁶²⁰ Centers for Medicare and Medicaid Services. Driving Health System Transformation—A Strategy

how to best promote multi-payer alignment between a potential ambulatory model, established models and programs, and payers to achieve sustainable system-wide transformation. The increased engagement in value-based care proposed in the model could support other payers like Medicare Advantage, Medicaid, and commercial plans in achieving their goals around value-based care activities by providing an onramp for specialists inexperienced with this form of payment. Also, leveraging existing design principles from MIPS promotes directional alignment as they adhere to the broader CMS National Quality Strategy, including an effort to move toward digital quality measurement,⁶²¹ and plans to employ a “Universal Foundation” of quality measures to create greater consistency in quality reporting across payers.⁶²²

We request feedback on the following questions:

(34) Are there opportunities to reduce clinician burden between this model, other CMMI models, and beyond through multi-payer alignment, in areas such as performance measurement, quality measurement, and data/reporting requirements?

(35) How could this model align with value-based care approaches in the Medicare Advantage, Medicaid, and commercial payer space that focus on specialty integration? What model components and payment incentives can be aligned with other payers to support improvement goals?

(36) How can CMS align with other payer approaches to equity and disparity reduction? This could include alignment on definitions, methods, and requirements for equity-related data collection, etc.

(37) What technical assistance can CMS provide to support alignment and reduce burden?

K. Expand Colorectal Cancer Screening

Medicare coverage for colorectal cancer (CRC) screening tests under Part B are described in statutes (sections 1861(s)(2)(R), 1861(pp), 1862(a)(1)(H) and 1834(d) of the Social Security Act (the Act)), regulation (42 CFR 410.37), and National Coverage Determination (NCD) (Section 210.3 of the Medicare

for the CMS Innovation Center's Second Decade. October 2021. <https://www.cms.gov/priorities/innovation/strategic-direction-whitepaper>.

⁶²¹ Centers for Medicare and Medicaid Services. dQMs—Digital Quality Measures. dQM Strategic Roadmap.

⁶²² Jacobs DB, Schreiber M, Seshamani M, Tsai D, Fowler E, Fleisher LA. Aligning Quality Measures across CMS—The Universal Foundation. 2023. *New England Journal of Medicine*, 388 (9), 776–779. DOI: 10.1056/NEJMp2215539.

National Coverage Determinations Manual). The statute and regulations expressly authorize the Secretary to add other tests and procedures (and modifications to tests and procedures) for colorectal cancer screening with such frequency and payment limits as the Secretary finds appropriate based on consultation with appropriate organizations. (Section 1861(pp)(1)(D) of the Act; § 410.37(a)(1)(v)) We are proposing to exercise our authority at section 1861(pp)(1)(D) of the Act to update and expand coverage for CRC screening by:

- Removing coverage for the barium enema procedure in regulations at § 410.37,

- Adding coverage for the computed tomography colonography (CTC) procedure in regulations at § 410.37, and

- Expanding a “complete colorectal cancer screening” in § 410.37(k) to include a follow-on screening colonoscopy after a Medicare covered blood-based biomarker CRC screening test (described and authorized in NCD 210.3).

1. Background

The Center for Disease Control and Prevention (CDC) describes CRC as “a disease in which cells in the colon or rectum grow out of control . . . Sometimes abnormal growths, called polyps, form in the colon or rectum. Over time, some polyps may turn into cancer. Screening tests can find polyps so they can be removed before turning into cancer. Screening also helps find colorectal cancer at an early stage, when treatment works best.”⁶²³ The National Cancer Institute reports that CRC is the fourth most common type of cancer and estimates that the United States experienced 153,020 new cases and 52,550 new deaths from CRC in 2023. In addition, the rate of new cases and new deaths from CRC is more common in men than women and significantly greater for those of African American and Non-Hispanic American Indian/Alaska Native descent compared to all races.⁶²⁴

At § 410.37(a)(4), we define the barium enema procedure as a screening double contrast barium enema of the entire colorectum (including a physician's interpretation of the results of the procedure); or in the case of an individual whose attending physician decides that he or she cannot tolerate a screening double contrast barium

⁶²³ CDC website: https://www.cdc.gov/cancer/colorectal/basic_info/what-is-colorectal-cancer.htm.

⁶²⁴ NCI website: <https://seer.cancer.gov/statfacts/html/colorect.html>.

enema, a screening single contrast barium enema of the entire colorectum (including a physician's interpretation of the results of the procedure). The CDC describes CTC, (also called a virtual colonoscopy), as "a screening test that uses X-rays and computers to produce images of the entire colon, which are displayed on a computer screen for the doctor to analyze."⁶²⁵

The U.S. Preventative Services Task Force (USPSTF) included CTC as a CRC screening method in their June 2016 revised Final Recommendation Statement which included the topline recommendations "[t]he USPSTF recommends the (CRC screening) service. There is high certainty that the net benefit is substantial (Grade A)" and "[t]he USPSTF recommends the (CRC screening) service. There is high certainty that the net benefit is moderate, or there is moderate certainty that the net benefit is moderate to substantial) (Grade B)".⁶²⁶ The USPSTF cautioned, "[t]here is insufficient evidence about the potential harms of associated extracolonic findings, which are common." The USPSTF further wrote, "[t]here are numerous screening tests to detect early-stage colorectal cancer, including stool-based tests (gFOBT, FIT, and FIT-DNA), direct visualization tests (flexible sigmoidoscopy, alone or combined with FIT; colonoscopy; and CT colonography), and serology tests (SEPT9 DNA test). The USPSTF found no head-to-head studies demonstrating that any of these screening strategies are more effective than others, although they have varying levels of evidence supporting their effectiveness, as well as different strengths and limitations."⁶²⁷ The USPSTF again included CTC as a CRC screening method in the most recent May 2021 revised Final Recommendation Statement, which included the topline recommendations "[t]he USPSTF recommends screening for colorectal cancer in all adults aged 50 to 75 years (Grade A)" and "[t]he USPSTF recommends screening for colorectal cancer in adults aged 45 to 49 years (Grade B)".⁶²⁸ CMS describes our

⁶²⁵ CDC website: https://www.cdc.gov/cancer/colorectal/basic_info/screening/tests.htm.

⁶²⁶ USPSTF June 2016 Revised Final Recommendation Statement <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/colorectal-cancer-screening-june-2016>.

⁶²⁷ USPSTF June 2016 Revised Final Recommendation Statement <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/colorectal-cancer-screening-june-2016>.

⁶²⁸ USPSTF January 2021 Revised Final Recommendation Statement <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/colorectal-cancer-screening>.

consultations with additional organizations and our review of clinical guidelines later in our proposal.

2. Statutory Authority

Section 4104 of the Balanced Budget Act of 1997 (Pub. L. 105–33) authorized the benefit colorectal cancer screening tests under Medicare Part B. Section 1861(s)(2)(R) of the Act includes CRC screening tests in the definition of medical and other health services that fall within the scope of Medicare Part B benefits described in section 1832(a)(1) of the Act. Section 1861(pp) of the Act defines colorectal cancer screening tests and specifically names the following tests:

- Screening fecal-occult blood test;
- Screening flexible sigmoidoscopy; and
- Screening colonoscopy.

Section 1861(pp)(1)(D) of the Act also authorizes the Secretary to include in the definition of CRC screening tests other tests or procedures and modifications to the tests and procedures described under this subsection, with such frequency and payment limits as the Secretary determines appropriate, in consultation with appropriate organizations.

3. Regulatory and NCD Authority

In the CY 1998 PFS final rule (62 FR 59048), after consulting with appropriate organizations, we finalized regulations to cover barium enema procedures for CRC screening in § 410.37. Barium enema screening examinations have to be ordered by the beneficiary's attending physician (§ 410.37(h)). Currently, the regulations cover barium enemas as a CRC screening tests subject to frequency limitations and whether or not the individual was at high risk for colorectal cancer. As described in the CY 1998 PFS final rule (62 FR 59048), CMS consulted with a number of appropriate organizations such as the American Cancer Society, American College of Physicians, American Gastroenterological Association and U.S. Preventive Services Task Force (USPSTF) and the decision to cover the barium enema procedure was based on the prevailing clinical guidelines and recommendations at the time. In the CY 2023 PFS final rule (87 FR 69404), we lowered the age limit for barium enema procedures for CRC screening to age 45 at § 410.37(i)(1).

In May 2009, we established a non-coverage policy for CTC in NCD 210.3 CTC Screening Tests. We noted in the

www.uspreventiveservicestaskforce.org/uspstf/recommendation/colorectal-cancer-screening.

Final Decision Memorandum, "there is insufficient evidence on the test characteristics and performance of screening CT colonography in Medicare aged individuals and that the evidence is not sufficient to conclude that screening CT colonography improves health benefits for asymptomatic, average risk Medicare beneficiaries."⁶²⁹ At that time, the October 2008 USPSTF revised Final Recommendation Statement read, "[t]he USPSTF concludes that the evidence is insufficient to assess the benefits and harms of computed tomographic colonography and fecal DNA testing as screening modalities for colorectal cancer. (Grade I)"⁶³⁰ As described in the Final Decision Memo, guidelines from Professional Societies were mixed. A joint guideline from the American Cancer Society, the U.S. Multi-Society Task Force on Colorectal Cancer, and the American College of Radiology concluded "[i]n terms of detection of colon cancer and advanced neoplasia, which is the primary goal of screening for CRC and adenomatous polyps, recent data suggest CTC is comparable to Optical Colonoscopy for the detection of cancer and polyps of significant size when state-of-the-art techniques are applied."⁶³¹ The American Gastroenterological Association issued the following recommendation statement in 2008, "[t]he AGA does not endorse CT colonography as a first-line colon cancer screening test. While AGA supports CT colonography as a screening option, colonoscopy is the definitive test for colorectal cancer screening and prevention. Colonoscopy is the only test that can both detect cancer at an early curable stage and prevent cancer by removing precancerous polyps. At this time, while CT colonography may be another technology for colorectal cancer screening, many questions about CT colonography remain to be

⁶²⁹ National Coverage Analysis CAG–00396N Screening Computed Tomography Colonography (CTC) for Colorectal Cancer on Medicare Coverage Database ([https://www.cms.gov/medicare-coverage-database/view/ncacal-decision-memo.aspx?proposed=N&NCAId=220&NcaName=Screening+Computed+Tomography+Colonography+\(CTC\)+for+Colorectal+Cancer](https://www.cms.gov/medicare-coverage-database/view/ncacal-decision-memo.aspx?proposed=N&NCAId=220&NcaName=Screening+Computed+Tomography+Colonography+(CTC)+for+Colorectal+Cancer)).

⁶³⁰ USPSTF October 2008 Final Recommendation Statement: <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/colorectal-cancer-screening-2008>.

⁶³¹ National Coverage Analysis CAG–00396N Screening Computed Tomography Colonography (CTC) for Colorectal Cancer on Medicare Coverage Database: [https://www.cms.gov/medicare-coverage-database/view/ncacal-decision-memo.aspx?proposed=N&NCAId=220&NcaName=Screening+Computed+Tomography+Colonography+\(CTC\)+for+Colorectal+Cancer](https://www.cms.gov/medicare-coverage-database/view/ncacal-decision-memo.aspx?proposed=N&NCAId=220&NcaName=Screening+Computed+Tomography+Colonography+(CTC)+for+Colorectal+Cancer).

answered.”⁶³² The American Society for Gastrointestinal Endoscopy published guidelines in 2006 that concluded “virtual colonoscopy is an evolving technique and is not currently recommended as the primary method of screening for CRC.”⁶³³

In the 2023 PFS final rule (87 FR 69404) we expanded the regulatory definition of CRC Screening to include a complete colorectal cancer screening, which includes a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based colorectal cancer screening test returns a positive result. (§ 410.37(k)) Although CMS had previously viewed a colonoscopy after a positive non-invasive stool-based CRC screening test to be a diagnostic colonoscopy, the clinical recommendations and guidance of medical professional societies and screening experts have since evolved for stool-based colorectal cancer screening due to the relative number of false positive results, low follow-up colonoscopy rates and patient access barriers. Published evidence highlighted that individuals who did not get a follow-up colonoscopy were about twice as likely to die of colorectal cancer compared to individuals who had one. Since the overall goal of programmatic cancer screening using any CRC screening test is to prevent cancer, allowing for early detection and treatment and reducing cancer mortality, the follow-up colonoscopy was found to be integral with non-invasive stool-based CRC screening, since improvements in health outcomes would not be possible without the follow-up colonoscopy. Our goal was that the patient and their healthcare professional make the most appropriate choice in CRC screening, which included considerations of the risks, burdens and barriers presented with an invasive screening colonoscopy in a clinical setting as their first step. We went on to describe that CRC screening presents a unique scenario where there are significant differences between

screening stool-based tests and screening colonoscopy tests in terms of invasiveness and burdens to the patient and healthcare system. We recognized there are several advantages to choosing a non-invasive stool-based CRC screening test as a first step compared to a screening colonoscopy, including relative ease of administering the test and potentially reducing the experience of unnecessary burdensome preparation and invasive procedures.

We noted in preamble of the CY 2023 PFS final rule (87 FR 69404) that many commenters asked that CMS further expand our approach of a complete colorectal cancer screening. Many requested that we remove the text “stool-based” from our proposed regulatory text at § 410.37(k), resulting in a complete CRC screening including a follow-on screening colonoscopy after a Medicare covered non-invasive screening test. Many commenters requested that a complete CRC screening include a screening colonoscopy after a positive result from a blood-based biomarker test, as well as a stool-based test. We responded to these public comments by writing that “we disagree with the commenters that requested a further expansion of a complete colorectal cancer screening that would include additional first step tests beyond a non-invasive stool-based test. We believe the stool-based tests are unique to other CRC screening tests in terms of their non-invasiveness, the fact that stool-based tests can be implemented by the patient at home and mailed into the lab, the absence of bowel preparation and anesthesia and the comparatively lighter burden and mitigated potential for over servicing of the patient and the healthcare system.” We further wrote, “[w]e agree that blood-based biomarker CRC screening tests have significant potential and we expanded coverage to include them in the reconsidered NCD 210.3, effective January 2021.” We also recognized that blood-based biomarker CRC screening tests continue to be an emerging and quickly evolving technology. However, we also noted that, as of September 2022, no blood-based Biomarker tests for CRC screening had achieved the coverage requirements of NCD 210.3 and that the May 2021 USPSTF revised Final Recommendation Statement did not include serum tests.

In the CY 2023 PFS final rule (87 FR 69404) we also established regulatory text at § 410.37(k) that the frequency limitations described for screening colonoscopy shall not apply in the instance of a follow-on screening colonoscopy test. We wrote that we aimed to avoid disruption to the

existing conditions of coverage and payment for CRC screening for this unique scenario and continuum of screening.

4. Proposed Revisions

We propose to exercise our authority in section 1861(pp)(1)(D) of the Act to remove coverage for the barium enema procedure from CRC screening in regulations at § 410.37. CMS has consulted with appropriate organizations and has heard that, while the barium enema procedure was reasonable and necessary for CRC screening when it was initially covered in the CY 1998 PFS final rule (62 FR 59048), circumstances have changed. The organizations have expressed that barium enema procedures no longer meet modern clinical standards, are no longer recommended in clinical guidelines, and would not be an appropriate CRC screening test given the advancement of alternatives such as Stool-based tests, Colonoscopies, and CT Colonography. In developing our proposal, we also considered that June 2016 and the May 2021 USPSTF revised Final Recommendation Statements did not include the barium enema procedure as a CRC screening method in their revised Final Recommendation Statements.⁶³⁴ We also considered the 2017 U.S. Multi-Society Task Force of Colorectal Cancer (MSTF) recommendation statement, which reads, “CT colonography has replaced double-contrast barium enema as the test of choice for colorectal imaging for nearly all indications. CT colonography is more effective than barium enema and better tolerated.”⁶³⁵ The 2018 American Cancer Society (ACS) Colorectal Cancer Screening for Average-Risk Adults Guideline Update also reads, “double-contrast barium enema is no longer included as an acceptable screening option.”⁶³⁷

During the CY 2023 PFS, CMS received a joint public comment from the American College of Gastroenterology (ACG), American Gastroenterological Association (AGA) and the American Society for

⁶³⁷ doi: 10.3322/caac.21457. Available online at cancerjournal.com.

Gastrointestinal Endoscopy (ASGE)⁶³⁸ that brought to our attention that barium enema is not a recommended CRC screening modality in guidance from the USPSTF or the U.S. Multi-Society Task Force on Colorectal Cancer. The public comment went on to note that while the Barium Enema procedure once was considered a CRC screening modality and has been included in guidelines in the past, barium enema is no longer included in any recent CRC guidelines and is rarely performed today as it is considered inadequate for the exclusion of CRC. They urged CMS to remove Barium Enema as a covered CRC screening test for all individuals. An internal claims analysis indicates that Medicare only paid claims for barium enema for CRC screening for 72 beneficiaries in CY 2022.

A 2016 study titled “[n]ew era of colorectal cancer screening,” states, “double-contrast barium enema (DCBE) is a non-invasive radiological test, which provides a complete evaluation of the large intestine. The sensitivity and specificity of barium enema for polyps of any size is 38 percent and 86 percent, respectively. One study comparing barium enema to CTC and colonoscopy showed that DCBE has the lowest sensitivity and specificity with sensitivity of 41 percent for lesions ≥ 6 mm and sensitivity and specificity of 48 and 90 percent respectively for lesions ≥ 10 mm. These results are consistent with a meta-analysis comparing the performance of barium enema to that of CTC showing CTC is more sensitive and more specific than barium enema for large polyps (≥ 10 mm) and small polyps (6–9 mm) in average-risk and high-risk populations. In the United States, CTC has largely replaced DCBE as a radiographic option for CRC screening.”⁶³⁹

In light of the new evidence and our consultations with appropriate organizations, we are proposing to remove barium enema as a colorectal screening test under 42 CFR 410.37(a)(1)(iv). We look forward to further consultation with the public and appropriate organizations through the public comment period of this proposed rule. We invite public comment on this proposal to remove all references to barium enemas in § 410.37.

We also propose to exercise our authority in section 1861(pp)(1)(D) of the Act to add coverage for the CTC

procedure for CRC screening in regulations at § 410.37. If finalized, we will also address and revise the current non-coverage policy for CTC in NCD 210.3. In developing our proposal to expand coverage for the CTC procedure, we consulted with appropriate organizations and considered a number of potential benefits, risks and tradeoffs described in guidelines and recommendations by professional societies and government bodies.

In developing the proposed rule, we considered that the USPSTF included the CTC procedure as a CRC screening method in their June 2016 and May 2021 revised Final Recommendation Statements.^{640 641} In terms of benefits, the USPSTF wrote in their May 2021 revised Final Recommendation Statement, that CTC usually allows for greater colon visualization compared to Flexible Sigmoidoscopy. In terms of risks and tradeoffs, USPSTF noted that CTC, like Colonoscopy and flexible sigmoidoscopy, requires the burden of bowel preparation. The USPSTF wrote “[u]nlike Colonoscopy and Flexible Sigmoidoscopy, CTC may reveal extracolonic findings that require additional workup, which could lead to other potential benefits or harms.” The USPSTF went on to state, “[h]arms from CT colonography are uncommon (19 studies; n = 90,133), and the reported radiation dose for CT colonography ranges from 0.8 to 5.3 mSv (compared with an average annual background radiation dose of 3.0 mSv per person in the U.S.). Accurate estimates of rates of serious harms from colonoscopy following abnormal CTC results are not available.” Regarding extracolonic findings, the USPSTF wrote, “[e]xtracolonic findings on CTC are common. Based on 27 studies that included 48,235 participants, 1.3 percent to 11.4 percent of examinations identified extracolonic findings that required workup. Three percent or less of individuals with extracolonic findings required definitive medical or surgical treatment for an incidental finding. A few studies suggest that extracolonic findings may be more common in older age groups. Long-term clinical follow-up of extracolonic findings was reported in few studies, making it difficult to know whether it represents a benefit or harm of CT

colonography.” The USPSTF recommends screening CTC frequency of every 5 years.⁶⁴²

In a study titled “Incidental Extracolonic Findings on CT Colonography: The Impending Deluge and Its Implications,” Lincoln L. Berland, MD, describes extracolonic findings as findings on CTC that have potential deleterious health effects and are asymptomatic, unsuspected, and unrelated to the colon. The study goes on to state, “as CT image quality has improved, there has been an increase in the frequency of detecting ‘incidental findings,’ defined as findings that are unrelated to the clinical indication for the imaging examination performed. These ‘incidentalomas,’ as they are also called, often confound physicians and patients with how to manage them. Although it is known that most incidental findings are likely benign and often have little or no clinical significance, the inclination to evaluate them is often driven by physician and patient unwillingness to accept uncertainty, even given the rare possibility of an important diagnosis.”⁶⁴³ The potential for extracolonic findings, both clinically significant and insignificant, is an important tradeoff to be considered by the patient and clinician when considering CTC as a CRC Screening option.

We also consider the 2018 ACS Colorectal Cancer Screening for Average-Risk Adults Guideline Update, which includes the CTC procedure with their recommended tests and procedures for CRC Screening.⁶⁴⁴ In terms of benefits, the ACS guideline describes CTC Sensitivity and specificity for cancer and advanced adenomas comparable to colonoscopy, longer recommended screening intervals compared to stool-based tests, and no need for sedation (compared to colonoscopy). In terms of risks and tradeoffs, the ACS guideline notes incidental extracolonic findings may require workup (with unclear benefit-burden balance), exposure to low-dose radiation and requires full bowel cleansing. The ACS guidelines

⁶⁴¹ USPSTF January 2021 Revised Final Recommendation Statement, <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/colorectal-cancer-screening>.

recommended screening CTC frequency of every 5 years.

We also consider the United States Multi-Society Task Force (MSTF) of Colorectal Cancer, which represents the American College of Gastroenterology, the American Gastroenterological Association, and The American Society for Gastrointestinal Endoscopy, 2017 Colorectal Cancer Screening recommendations,⁶⁴⁵ which include CTC as a “Tier 2” procedure alongside FIT-fecal DNA and Flexible Sigmoidoscopy. The recommendation states that “CRC screening tests are ranked in 3 tiers based on performance features, costs, and practical considerations. The first-tier tests are colonoscopy every 10 years and annual fecal immunochemical test (FIT). Colonoscopy and FIT are recommended as the cornerstones of screening regardless of how screening is offered. Thus, in a sequential approach based on colonoscopy offered first, FIT should be offered to patients who decline colonoscopy. Colonoscopy and FIT are recommended as tests of choice when multiple options are presented as alternatives. A risk-stratified approach is also appropriate, with FIT screening in populations with an estimated low prevalence of advanced neoplasia and colonoscopy screening in high prevalence populations. The second-tier tests include CT colonography every 5 years, the FIT-fecal DNA test every 3 years, and flexible sigmoidoscopy every 5 to 10 years. These tests are appropriate screening tests, but each has disadvantages relative to the tier 1 tests.” In terms of benefits of CTC, the MSTF describes lower risk of perforation compared with colonoscopy and write, “CT colonography appeals to a niche of patients who are willing to undergo bowel preparation and are concerned about the risks of colonoscopy.” In terms of risks and tradeoffs, the MSTF describe the requirement for bowel preparation, extracolonic findings, inferior sensitivity compared to other screening tests and radiation exposure. The MSTF writes, “[e]vidence that CT colonography reduces CRC incidence or mortality is lacking.”

We also consider the online resource RadiologyInfo,⁶⁴⁶ which is an online public information resource developed by health care professionals in collaboration with patients. RadiologyInfo is sponsored by the

Radiological Society of North America (RSNA) and the American College of Radiology (ACR). In terms of benefits of CTC, RadiologyInfo described CTC as less invasive than a Colonoscopy, though for CTC a small tube is inserted into the rectum to allow for inflation with carbon dioxide or air. In addition, CTC does not require sedation (and transportation accommodations) and carries less risk of bowel perforation compared to Colonoscopy. In addition, CTC can identify precancerous polyps that may not be detected by stool-based and blood-based tests. CTC may be a less burdensome first option for patients who are medically fragile or have complex or unusual anatomy. In terms of risks and tradeoffs, RadiologyInfo describes a very small risk of perforated bowel (during inflation), a small risk of secondary cancer due to radiation exposure and it being not recommended for individuals who are pregnant. RadiologyInfo reports that CTC applies a patient radiation exposure similar to Barium Enema at 6 millisieverts (mSv), which is greater than other preventive screenings, such as CT Lung Cancer Screening at 1.5mSv and screening digital mammography at 0.21 mSv.⁶⁴⁷

After considering the above recommendations and guidelines from appropriate organizations, we believe CTC to be reasonable and necessary as CRC screening test, especially for patients and clinicians who seek a direct visualization procedure as a first step in CRC screening that is less invasive and less burdensome on the patient and healthcare system compared to Screening Colonoscopy. Our goal is that the patient and their clinician make the most appropriate choice in CRC screening, which includes considerations of the risks, burdens and tradeoffs for each covered test or procedure. We expect that clinicians who order CTC for CRC Screening will educate their patients on risks and context of radiation exposure and potential extracolonic findings. A shared decision-making tool is not mandated but may be helpful for clinicians and patients to weigh their options for CRC screening.

We propose to add CTC as a covered CRC screening test at § 410.37. We propose to describe in regulatory text that CTC means a test that uses X-rays and computers to produce images of the entire colon (including image processing and a physician’s interpretation of the results of the procedure). We also propose to codify in regulatory text that Medicare Part B

pays for a screening computed tomography colonography if it is ordered in writing by the beneficiary’s attending physician, physician assistant, nurse practitioner, or clinical nurse specialist. We also propose the following limitations of coverage for CTC:

- In the case of an individual age 45 or over who is not at high risk of colorectal cancer, payment may be made for a screening computed tomography colonography performed after at least 59 months have passed following the month in which the last screening computed tomography colonography or 47 months have passed following the month in which the last screening flexible sigmoidoscopy or screening colonoscopy was performed.

- In the case of an individual who is at high risk for colorectal cancer, payment may be made for a screening computed tomography colonography performed after at least 23 months have passed following the month in which the last screening computed tomography colonography or the last screening colonoscopy was performed.

Congress has eliminated Part B coinsurance (section 1833(a)(1)(Y) of the Act, § 410.152(l)(5)) and deductibles (section 1833(b)(1) of the Act) for covered prevention services recommended with a grade of A or B by the USPSTF. As described earlier in our proposal, the USPSTF included CTC as a screening method in their May 2021 revised Final Recommendation Statement on CRC screening (Grade A). Thus, if our proposal is finalized, CTC will require no Part B coinsurance nor deductible when furnished as a CRC screening procedure. We clarify that CTC will continue to require Part B coinsurance and deductible when furnished as a diagnostic or other non-preventive/screening procedure.

We look forward to further consultation with the public and appropriate organizations through the public comment period of this proposed rule. We invite public comment on this proposal.

We also propose to exercise our authority in section 1861(pp)(1)(D) of the Act to expand our approach to a “complete CRC screening” finalized in § 410.37(k). We propose to add a Medicare covered Blood-based Biomarker CRC screening test (described and authorized in NCD 210.3) alongside the Medicare covered non-invasive stool-based CRC screening test within our approach of a “complete CRC screening.”

Our goal is for the patient and their healthcare professional to make the most appropriate choice in CRC

⁶⁴⁵ Am J Gastroenterol 2017; 112:1016–1030; doi: 10.1038/ajg.2017.174; published online 6 June 2017.

⁶⁴⁶ RadiologyInfo website: <https://www.radiologyinfo.org/>.

⁶⁴⁷ <https://www.radiologyinfo.org/en/info/safety-xray>.

screening, which include considerations of the risks, burdens and barriers presented with an invasive screening colonoscopy in a clinical setting as their first step. CRC screening presents a unique scenario where there are significant differences between screening stool-based tests and direct visualization procedures such as colonoscopy, flexible sigmoidoscopy and CTC tests in terms of invasiveness and burdens to the patient and healthcare system. We recognize there are several advantages to choosing a non-invasive CRC screening test as a first step compared to a screening colonoscopy, including relative ease of administering the test and potentially reducing the experience of burdensome preparation and invasive procedures. Since the CY 2023 PFS final rule we have heard from many interested parties, including a number of professional societies, that Medicare covered blood-based biomarker tests would be appropriately placed alongside covered non-invasive stool-based tests within a complete colorectal cancer screening context. We have reconsidered our position that Medicare covered blood-based biomarker tests would not belong alongside covered non-invasive stool-based tests within our approach to a complete CRC screening. We consider that some patients may consider a blood test less uncomfortable than administering a stool-based test, especially if the blood draw is concurrent to a routine blood draw for other covered routine bloodwork. We have also heard that some patients may prefer a non-invasive test as their first step but view the stool sample collection process for stool-based tests as a meaningful barrier.⁶⁴⁸ We also consider that a blood test may be more accessible to many patients in rural and underserved communities than facilities that furnish screening colonoscopies, flexible sigmoidoscopies and CTC.

NCD 210.3 requires that Blood-based Biomarker Tests for CRC screening must have Food and Drug Administration (FDA) market authorization with an indication for colorectal cancer screening; and proven test performance characteristics for a blood-based screening test with both sensitivity greater than or equal to 74 percent and specificity greater than or equal to 90 percent in the detection of colorectal cancer compared to the recognized standard (accepted as colonoscopy at this time), as minimal threshold levels,

based on the pivotal studies included in the FDA labeling. We have heard from interested parties that Blood-based Biomarker tests for CRC screening may achieve the coverage requirements described in NCD 210.3 within the near term and thereafter quickly become adopted as a non-invasive option within the healthcare system and patient community. Given our existing coverage policy for Blood-based Biomarker Tests for CRC Screening (NCD 210.3), we believe our proposal is appropriately proactive, provides for consistent regulatory treatment between blood and stool-based tests, and will ready our regulatory policies for the quickly evolving state of medical technology in methods for CRC screening. We note that while blood-based biomarker tests were not included as a screening method within the May 2021 USPSTF revised Final Recommendation Statement on CRC Screening, they do not require beneficiary cost sharing (coinsurance and deductible) because blood-based biomarker tests will be paid under the Clinical Laboratory Fee Schedule (CLFS). For additional information, see the CMS website at <https://www.cms.gov/medicare/payment/fee-schedules/clinical-laboratory-fee-schedule-clfs>.

We propose to revise the regulatory text describing a complete CRC screening at § 410.37(k) to state that colorectal cancer screening tests include a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based colorectal cancer screening test or a Medicare covered blood-based biomarker CRC screening test returns a positive result. We also propose to revise the regulatory text at § 410.37(k) to state the instance of the follow-on colonoscopy in the context of a complete colorectal cancer screening shall not apply to the frequency limitations for colorectal cancer screenings. We believe this statement in regulatory text is clearer and recognizes, outside the context of a complete colorectal cancer screening, the instance of a screening colonoscopy is factored into the calculation of frequency limitations of other covered CRC screening tests and procedures in addition to a subsequent screening colonoscopy.

We look forward to further consultation with the public and appropriate organizations through the public comment period of this proposed rule. We invite public comment on this proposal.

6. Summary

In summary, we are proposing to exercise our authority at section

1861(pp)(1)(D) of the Act update and expand coverage for CRC screening by (1) removing coverage for the barium enema procedure for CRC screening; (2) adding coverage of the CTC procedure for CRC screening; and (3) expanding our approach to a “Complete CRC Screening” to include a covered blood-based biomarker test alongside a covered non-invasive stool-based test.

Our proposal to update and expand CRC screening aligns with the administration’s strategic pillar to advance health equity by addressing the health disparities that underlie our health system. In addition, our proposal supports Executive Order 13985 by advancing racial equity and support for underserved communities in the Medicare program. We believe our proposal will directly advance health equity by promoting access and removing barriers for much needed cancer prevention and early detection within rural communities and communities of color that are especially impacted by the incidence of CRC. Our proposal to expand colorectal cancer screening directly supports the Administration’s Cancer Moonshot Goal of reducing the deadly impact of cancer and improving patient experiences in the diagnosis, treatment, and survival of cancer.⁶⁴⁹

Our proposal is also supportive of the Administration’s Proclamation of March as National Colorectal Cancer Awareness Month in 2024, which includes the statement, “As a country, we have made impressive progress in the struggle to end cancer over the past several decades due to advancements in prevention, early-detection measures, and new medicines and therapies. Despite remarkable breakthroughs, every year, more Americans are diagnosed with cancer under the age of 50. Earlier detection and improved treatment of colorectal cancer continue to be critical goals of medical research. Further progress is also needed to improve outcomes for those who are disproportionately impacted by this disease—including Americans over the age of 45, Native Americans, Black Americans, and people with a family history of colorectal cancer. There is still more work to be done to ensure more Americans can prevent, detect, treat, and survive colorectal cancer.”⁶⁵⁰

L. Requirements for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan

1. Previous Regulatory Action

Section 2003 of the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities (SUPPORT) Act (Pub. L. 115–271, October 24, 2018) generally mandates that the prescribing of a Schedule II, III, IV, or V controlled substance under Medicare Part D be done electronically in accordance with an electronic prescription drug program beginning January 1, 2021, subject to any exceptions, which HHS may specify. In the CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules, we finalized policies for the CMS Electronic Prescribing for Controlled Substances (EPCS) Program requirements specified in section 2003 of the SUPPORT Act. We refer readers to 85 FR 84802 through 84807, 86 FR 65361 through 65370, 87 FR 70008 through 70014, and 88 FR 79285 through 79292 for the details of those finalized policies. Specifically, in the CY 2021 PFS final rule, we established a requirement that all prescribers conduct electronic prescribing of Schedule II, III, IV, and V controlled substances covered under the Medicare prescription drug program, subject to any exceptions, which HHS may specify, using the NCPDP SCRIPT standard version 2017071 with an effective date of January 1, 2021, and a compliance date of January 1, 2022 (85 FR 84807). In the CY 2022 PFS final rule, we finalized a policy to require prescribers to electronically prescribe at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs, except in cases where an exception or waiver applies (86 FR 65366); and finalized multiple proposals related to the classes of exceptions specified by section 2003 of the SUPPORT Act (86 FR 65366 through 65369). We also extended the earliest date of compliance actions to no earlier than January 1, 2023 (86 FR 65364). For prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a long-term care (LTC) facility, we extended the earliest date of compliance actions to no earlier than January 1, 2025 (86 FR 65364 and 65365). We also finalized our proposal to limit compliance actions with respect to compliance through December 31, 2023, to a non-compliance notice (86 FR 65370).

In the CY 2023 PFS final rule (87 FR 70012 through 70013), we extended the

non-compliance action of sending notices to non-compliant prescribers, which we had finalized for the CY 2023 CMS EPCS Program implementation year (January 1, 2023, through December 31, 2023), to the CY 2024 Program implementation year (January 1, 2024, through December 31, 2024). We also finalized a change to the data sources used to identify the geographic location of prescribers for purposes of the recognized emergency exception at § 423.160(a)(5)(iii) (87 FR 70011 through 70012) and finalized our proposal to use the Prescription Drug Event (PDE) data from the current evaluated year instead of the preceding year when CMS determines whether a prescriber qualifies for an exception based on issuing 100 or fewer Part D controlled substance prescriptions per calendar year (87 FR 70009 through 70011).

In the CY 2024 PFS final rule (88 FR 79285 through 79287), we identified certain terms that we will use in the CMS EPCS Program and clarified that, by virtue of the cross reference in § 423.160(a)(5) to “the applicable standards in paragraph (b) of this section,” which refers to the standards in § 423.160(b), the CMS EPCS Program will automatically adopt the electronic prescribing standards at § 423.160(b) as they are updated. Additionally, we finalized our proposals to remove the same entity exception from the CMS EPCS Program and to add “subject to the exemption in paragraph (a)(3)(iii) of this section” to § 423.160(a)(5) (88 FR 79287 through 79288). As a result, prescriptions that are prescribed and dispensed within the same legal entity are included in CMS EPCS Program compliance calculations as part of the 70 percent compliance threshold at § 423.160(a)(5), and prescribers are not exempt from the requirement to prescribe electronically at least 70 percent of their Schedule II through V controlled substances that are Part D drugs—but such prescriptions have to meet the applicable standards in § 423.160(b) subject to the exemption in § 423.160(a)(3)(iii). We also finalized a policy to count only the unique prescriptions in the measurement year for the purposes of CMS EPCS Program compliance threshold calculations (88 FR 79288). Furthermore, for the exceptions that we moved to § 423.160(a)(5)(ii) and (iii), we modified the exceptions to permit prescribers to apply for waivers in times of an emergency and disaster and to limit the emergencies or disasters that will trigger the recognized emergency exception. We also modified the duration of both exceptions and established timing

requirements for submitting a waiver application (88 FR 79288 through 79291). Lastly, we stated that we will send notices of non-compliance for each measurement year a prescriber is non-compliant and will provide educational opportunities to support prescribers in becoming compliant (88 FR 79291 through 79292).

2. Timeline for Including Prescriptions Written for Beneficiaries in Long-Term Care (LTC) Facilities in CMS EPCS Program Compliance Calculation

a. Background

In the CY 2021 PFS final rule (85 FR 84807), we adopted the requirement for all Schedule II, III, IV, and V controlled substances for covered Part D drugs prescribed electronically to be prescribed using the applicable standards in § 423.160(b), including the NCPDP SCRIPT standard version 2017071. In the CY 2022 PFS final rule (86 FR 65364), we finalized a policy to extend the date on or after which we will pursue compliance actions against prescribers based on Part D controlled substance prescriptions those prescribers write for beneficiaries in long-term care (LTC) facilities to January 1, 2025. We acknowledged that prescribers who work in LTC facilities or who provide care to residents in LTC facilities faced technological barriers that other prescribers did not face. One such barrier was that the NCPDP SCRIPT standard version 2017071 lacked appropriate guidance for EPCS in LTC facilities. We also noted that NCPDP was in the process of creating a new version of the SCRIPT standard that would be better suited for use by prescribers serving LTC facilities, which would allow willing partners to enable three-way communication between the prescriber, LTC facility, and pharmacy to bridge any outstanding gaps that impede use of the NCPDP SCRIPT standard version 2017071 for EPCS in the LTC setting (86 FR 65364).

We received public comments on the CY 2022 PFS proposed rule requesting that we exempt prescribers writing Part D controlled substance prescriptions for beneficiaries in LTC facilities from having to conduct EPCS until after NCPDP SCRIPT standard version 2022011 was adopted. In response to those comments, in the CY 2022 PFS final rule, we noted that our intent when extending the date on or after which we will pursue compliance actions against prescribers based on Part D controlled substance prescriptions those prescribers write for beneficiaries in LTC facilities was to strike a balance between being responsive to stakeholder

concerns surrounding the increased implementation barriers faced by LTC facilities, while at the same time helping to ensure that these facilities eventually implement, and receive the benefits of EPCS (86 FR 65364). Furthermore, we noted that we were not persuaded to further delay commencing compliance actions to await publication of the NCPDP SCRIPT standard version 2022011. We acknowledged that three-way communication is not as seamless in the NCPDP SCRIPT standard version 2017071 as it may be in upcoming versions. We also stated that three-way communication is still possible with some modifications to EPCS, and therefore, we did not believe it would be appropriate to adopt a further delay on this basis alone (86 FR 65364).

In the 2024 PFS final rule (88 FR 79286 through 79287), we clarified that based on the existing regulatory text at § 423.160(a)(5), the CMS EPCS Program will automatically adopt the electronic prescribing standards at § 423.160(b) as they are updated. We noted that in the “Medicare Program; Contract Year 2024 Policy and Technical Changes to the Medicare Advantage Program, Medicare Prescription Drug Benefit Program, Medicare Cost Plan Program, Medicare Parts A, B, C, and D Overpayment Provisions of the Affordable Care Act and Programs of All-Inclusive Care for the Elderly; Health Information Technology Standards and Implementation Specifications” proposed rule (CY 2024 Medicare Advantage and Part D Policy and Technical Changes proposed rule) (87 FR 79550), we proposed to update provisions related to e-prescribing standards at § 423.160(b), including, after a transition period, requiring the NCPDP SCRIPT standard version 2022011 proposed for adoption at 45 CFR 170.205(b) and retiring NCPDP SCRIPT standard version 2017071 by January 1, 2025.

Although we did not propose any policy changes regarding the NCPDP SCRIPT standard version in the CY 2024 PFS proposed rule (88 FR 52532), we received public comments requesting clarification on when the new NCPDP SCRIPT standard version would be adopted and the implications for measuring EPCS compliance in LTC. In response to those comments, in the CY 2024 PFS final rule (88 FR 79286), we acknowledged that we had not finalized our proposal regarding the NCPDP SCRIPT standard version 2022011 that was proposed in the CY 2024 Medicare Advantage and Part D Policy and Technical Changes proposed rule. We also acknowledged that some prescribers prescribing for beneficiaries

in LTC facilities have adopted EPCS, but that others have waited for the standard to be updated (88 FR 79286 through 79287). We noted that if the requirement to use an updated version of the NCPDP SCRIPT standard is finalized for a date after January 1, 2025, we may explore whether a waiver is appropriate for prescribers who are not compliant solely as a result of prescriptions they have written for beneficiaries in LTC facilities or we may revisit the compliance start date, if needed, through future rulemaking (88 FR 79287).

In the “Medicare Program; Medicare Prescription Drug Benefit Program; Health Information Technology Standards and Implementation Specifications” final rule (89 FR 51242 through 51247), which appeared in the June 17, 2024 **Federal Register** (hereinafter referred to as the June 2024 Part D and Health IT Standards final rule), we finalized at § 423.160(b)(1) the requirement that Part D sponsors, prescribers and dispensers, when electronically transmitting prescriptions and prescription-related information for covered Part D drugs for Part D eligible individuals, must comply with a standard in 45 CFR 170.205(b). Taken in conjunction with the standards and expiration date adopted by the Office of the National Coordinator for Health Information Technology (ONC), as described in the June 2024 Part D and Health IT Standards final rule (89 FR 51258 through 51259), § 423.160(b)(1) will require use of NCPDP SCRIPT standard version 2023011, which ONC is adopting at 45 CFR 170.205(b)(2), beginning January 1, 2028, and retire use of NCPDP SCRIPT standard version 2017071, which ONC previously adopted at 45 CFR 170.205(b)(1) and to which it is applying an expiration date of January 1, 2028. ONC finalized January 1, 2028, as the expiration date for NCPDP SCRIPT standard version 2017071 instead of January 1, 2027, in consideration of public comments requesting that the date be delayed. As a result of these policies being finalized, the NCPDP SCRIPT standard version 2023011 will be required for the CMS EPCS Program by January 1, 2028. As both NCPDP SCRIPT standard version 2017071 and NCPDP SCRIPT standard version 2023011 will be adopted at 45 CFR 170.205(b) and unexpired as of the effective date of the June 2024 Part D and Health IT Standards final rule, entities subject to the requirement at § 423.160(b)(1) may use either version of the NCPDP SCRIPT standard during the transition period beginning July 17, 2024, the effective date of the June 2024

Part D and Health IT Standards final rule, and ending December 31, 2027, which is the last day before NCPDP SCRIPT standard version 2017071 will expire for the purposes of HHS use.

b. Barriers to Electronic Prescribing of Controlled Substances for Beneficiaries in LTC and the Role of Three-Way Communication in the NCPDP SCRIPT Standard

We understand the challenges of conducting EPCS in the LTC setting to be multifactorial. The specific challenges include prescribers being responsible for covering multiple LTC facilities, each with different electronic health record (EHR) systems; reliance on LTC nursing staff to communicate prescriptions to the pharmacy on behalf of the prescriber; and with respect to NCPDP SCRIPT standard version 2017071, lack of three-way (or multi-party) communication between the prescriber, the LTC facility, and the pharmacy.

When conducting EPCS using the NCPDP SCRIPT standard version 2017071, prescribers can submit prescriptions electronically to the pharmacy, but the prescriber must subsequently contact the LTC facility separately to give an order for the medication so the LTC facility can administer the medication to the patient as prescribed. In cases where EPCS is being conducted and the prescriber has not communicated a separate order to the LTC facility, the pharmacy may deliver a prescription to the LTC facility and the facility staff has no record of the order. Then the LTC facility staff must contact the prescriber for an order to be able to administer the drug to the patient.

To conduct EPCS without having to separately communicate an order to the LTC facility, prescribers can use a web portal to enter an order in the LTC facility’s EHR and then, if the EHR supports the necessary EPCS capability,⁶⁵¹ the prescription can be transferred to the pharmacy. However, not all LTC facilities have EHRs with this functionality. Additionally, each LTC facility may have its own web portal, making the number of portals and credentials overly burdensome for prescribers who treat patients who

⁶⁵¹ According to the Drug Enforcement Administration (DEA), for an electronic prescribing system to be used to transmit controlled substance prescriptions, a third party must audit the electronic prescribing application for compliance with the requirements of 21 CFR part 1311, or a certifying organization whose certification process has been approved by DEA must verify and certify that the application meets the requirements of 21 CFR part 1311. See <https://www.deadiversion.usdoj.gov/ecommm/thirdparty.html>.

reside in multiple different LTC facilities. After providing an order to the LTC facility, prescribers often rely on LTC facility nursing staff to relay verbal prescription orders to pharmacies as permitted under 21 CFR 1306.03(b) and 1306.21(a).

NCPDP SCRIPT standard version 2023011 permits three-way communication that would better facilitate LTC workflows in a way that NCPDP SCRIPT standard version 2017071 does not. In comments NCPDP submitted in response to the CY 2025 Medicare Advantage and Part D Policy and Technical Changes proposed rule, NCPDP confirmed that it attempted to create guidance on three-way communication using the NCPDP SCRIPT standard version 2017071, but it was not realistic in that version of the standard.⁶⁵² In NCPDP SCRIPT standard version 2023011, through use of a MessageIndicatorFlag, an RxFill transaction may be sent as a copy to inform or synchronize systems.⁶⁵³ Through use of this functionality, a prescriber can electronically send a controlled substance prescription (including for a covered Part D drug) to a pharmacy, and the pharmacy can use the MessageIndicatorFlag in an RxFill transaction when dispensing the prescription to inform the LTC facility of the medication order. This functionality streamlines prescribers' workflows and ensures that the LTC facility responsible for providing the controlled substance to the patient is aware of the order.

c. Timeframe for Including Prescriptions Written for Beneficiaries in LTC in the CMS EPCS Program Compliance Calculation

We received multiple public comments in response to the proposal in section III.B.4. of the CY 2025 Medicare Advantage and Part D Policy and Technical Changes proposed rule (88 FR 78489) to require NCPDP SCRIPT standard version 2023011 and retire NCPDP SCRIPT standard version 2017071, requesting that we reconsider the current January 1, 2025, compliance date for when we will include prescriptions written for covered Part D drugs for Part D eligible individuals in

a LTC facility in the CMS EPCS Program compliance calculation. Commenters requested that we align the CMS EPCS Program compliance date for prescriptions written for beneficiaries in LTC with the date that NCPDP SCRIPT standard 2023011 will be required. In the June 2024 Part D and Health IT Standards final rule, we indicated that we would consider a change to the CMS EPCS Program compliance date for LTC through the annual Medicare Physician Fee Schedule rulemaking process (89 FR 51247).

In this proposed rule, we are proposing to revise § 423.160(a)(5) to state that prescriptions written for a beneficiary in a LTC facility would not be included in determining compliance until January 1, 2028, and that compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a LTC facility would commence on or after January 1, 2028. We do not otherwise propose to revise the text of § 423.160(a)(5).

As of the effective date of the June 2024 Part D and Health IT Standards final rule, July 17, 2024, Part D sponsors, prescribers and dispensers, when electronically transmitting prescriptions and prescription-related information for covered Part D drugs for Part D eligible individuals, may use NCPDP SCRIPT standard version 2023011. However, as discussed, there will be a transition period where both NCPDP SCRIPT standard version 2023011 and NCPDP SCRIPT standard version 2017071 can be used. ONC finalized an expiration date for NCPDP SCRIPT standard version 2017071 of January 1, 2028 (rather than January 1, 2027, as proposed), in part due to commenters' concern about implementing the new standard in LTC facilities (89 FR 51247).

We recognize the administrative burden prescribers could potentially face when implementing EPCS for prescriptions written for covered Part D drugs for Part D eligible individuals in LTC facilities using NCPDP SCRIPT standard version 2017071, particularly with the lack of guidance. We also believe that even though prescribers can use NCPDP SCRIPT standard version 2023011 as of July 17, 2024, it may not be feasible to have electronic prescribing systems configured to NCPDP SCRIPT standard version 2023011 by January 1, 2025, the current date by which prescriptions written for covered Part D drugs for Part D eligible individuals in LTC facilities would be included in the CMS EPCS Program compliance threshold calculation. By delaying the inclusion of prescriptions

written for covered Part D drugs for Part D eligible individuals in LTC facilities in the CMS EPCS Program compliance threshold calculation to January 1, 2028, we would be aligning CMS EPCS Program compliance calculations to the date by which the NCPDP SCRIPT standard version 2017071 is retired and the new NCPDP SCRIPT standard version 2023011 is required for prescribers when electronically transmitting prescriptions and prescription-related information for covered Part D drugs for Part D eligible individuals. We believe doing so would provide sufficient time for prescribers and pharmacies to adopt the new standard. Moreover, LTC facilities will need to configure their EHR systems to be able to receive the MessageIndicatorFlag from the pharmacy, indicating that the prescription has been filled, and establish the necessary policies or operations to convert such a message into an order for the patient in the LTC facility.

We considered an alternative where we would permit prescribers to apply for a waiver for circumstances beyond their control rather than modify the date to include prescriptions for beneficiaries in LTC in the compliance threshold calculation. In 2022, approximately 4.7 percent (4.5 million) of Part D Schedule II, III, IV, and V controlled substance prescriptions were written for beneficiaries in LTC facilities, with roughly 52 percent (2.4 million) of them not meeting the CMS EPCS Program standards for e-prescribing. If we kept the existing start date of January 1, 2025, as in the current regulatory text at § 423.160(a)(5) for the CMS EPCS Program, we estimate at least 6,800 additional prescribers would become non-compliant. These estimates are prior to considering emergency and disaster exceptions and waivers, which could reduce these numbers. If we do not extend the current date by which prescriptions written for covered Part D drugs for Part D eligible individuals in LTC facilities would be included in the CMS EPCS Program compliance threshold calculation, then starting with the CY 2025 measurement year, thousands of prescribers may become non-compliant, and those prescribers would potentially apply for a waiver. We would expect that by the CY 2028 measurement year, many of these prescribers would be compliant and would not need to apply for a waiver because beginning January 1, 2028, NCPDP SCRIPT standard version 2023011 will be the required standard for prescribing and dispensing Part D

⁶⁵² <https://standards.ncdp.org/Standards/media/pdf/Correspondence/2024/NCPDP-Letter-to-CMS-regarding-CMS-4205-P.pdf>.

⁶⁵³ National Council for Prescription Drug Programs (NCPDP) SCRIPT Standard, Implementation Guide, Version 2023011. Approval Date for American National Standards Institute (ANSI): January 17, 2023, April 2023. NCPDP SCRIPT standard implementation guides are available to NCPDP members for free and to non-members for a fee at <https://standards.ncdp.org/Access-to-Standards.aspx>.

drugs to Part D eligible individuals and commenters have indicated that this version of the standard will facilitate EPCS in LTC. We remind prescribers that the CMS EPCS Program compliance rate is calculated using the Prescription Origin Code data element in the PDE record (88 FR 79287), and the PDE is a record of the prescription dispensing event.⁶⁵⁴ We believe that the three-way communication in the NCPDP SCRIPT standard version 2023011 improves communication of the controlled substance prescription as a medication order to the LTC facility's EHR when the pharmacy fills the prescription, but we seek comment on how the NCPDP SCRIPT standard version 2023011 will improve prescribers' ability to conduct EPCS to the pharmacy dispensing the prescription for individuals in LTC facilities.

Should we finalize our proposal, we encourage prescribers who write Schedule II, III, IV, or V controlled substance prescriptions for covered Part D drugs for Part D eligible individuals in LTC facilities to use the additional time to prepare for when such prescriptions for beneficiaries in LTC facilities would be included in the CMS EPCS Program compliance threshold calculation by working to adopt the new standard or investing in technology necessary to conduct EPCS.

We seek comment on our proposals to extend the date after which prescriptions for covered Part D drugs for Part D eligible individuals in LTC facilities would be included in our CMS EPCS Program compliance threshold calculation from January 1, 2025, to January 1, 2028, and that related non-compliance actions would commence on or after January 1, 2028. We additionally seek comment on how NCPDP SCRIPT standard version 2023011 is expected to improve prescribers' ability to conduct EPCS to pharmacies dispensing covered Part D drugs to Part D eligible individuals in LTC facilities.

M. Expand Hepatitis B Vaccine Coverage

Hepatitis B vaccines are currently covered as a Medicare Part B benefit under section 1861(s)(10)(B) of the Act. Medicare beneficiaries who are at high or intermediate risk of contracting hepatitis B can receive hepatitis B vaccines, with no cost to the beneficiary. The statute expressly authorizes the Secretary to determine who is at high or intermediate risk of contracting hepatitis B by issuing regulations. The Secretary, through past rulemaking, defined high and intermediate risk groups for hepatitis B vaccine at 42 CFR 410.63. This definition was last updated in the CY 2013 PFS final rule (77 FR 69363). Beneficiaries with coverage under Medicare Part D whose level of risk falls outside high or intermediate may have their vaccine covered under the Part D benefit.⁶⁵⁵

Medicare coverage of hepatitis B vaccination is outdated in light of more recent information about the risks of contracting hepatitis B. As explained in more detail in this section, we are proposing to improve access and utilization of hepatitis B vaccines by expanding the list of individuals who are at high or intermediate risk of contracting hepatitis B in § 410.63(a).

1. Background

Hepatitis B is a vaccine-preventable liver disease caused by the hepatitis B virus.⁶⁵⁶ The vaccine consists of a series of typically 2–3 doses depending on the formulation delivered at various intervals.⁶⁵⁷ Hepatitis B virus is transmitted when body fluid (blood, semen, or other) from a person infected

with the virus enters the body of someone who is uninfected.⁶⁵⁸ This can happen through sexual contact; sharing needles, syringes, or other drug-injection equipment; transmission from the gestational parent to baby during pregnancy or at birth; direct contact with blood or open sores; or sharing contaminated items such as toothbrushes, razors or medical equipment (such as a glucose monitor) of a person who has hepatitis B.⁶⁵⁹ Hepatitis B can be an acute, short-term illness and it can develop into a long-term, chronic infection. Chronic hepatitis B can lead to serious health problems, including cirrhosis, liver cancer, and death. Treatments for hepatitis B are available but no cure exists. There are currently an estimated 2.4 million individuals in the U.S. living with hepatitis B virus and an estimated 20,000 new infections every year.⁶⁶⁰ Acute hepatitis B infections among adults leads to chronic hepatitis B disease in an estimated 2–6 percent of cases.⁶⁶¹ Rates of reported cases of acute hepatitis B have steadily increased among persons aged 40–49, 50–59 years, and 60 years and older from 2015–2019.⁶⁶² In 2020, rates declined in all adult age groups. In 2021, rates among all age groups remain stable or declined compared to 2020. The highest rates were among persons 40–49 years (1.6 cases per 100,000 population) and 50–59 years (1.0 case per 100,000 population). The rates for people aged 60 years and older were 0.5 cases per 100,000 population.

⁶⁶² CDC. Viral hepatitis. 2021 viral hepatitis surveillance report. Atlanta, GA: U.S. HHS, CDC; 2023. Retrieved from <https://www.cdc.gov/hepatitis/statistics/2021surveillance/hepatitis-b/figure-2.4.htm>.

Hepatitis B vaccines are safe and effective in preventing hepatitis B virus.⁶⁶³ The number of reported hepatitis B cases has declined substantially since the vaccine was introduced in 1982, which was achieved through incremental expansion of groups for whom the vaccine was recommended. However, vaccination coverage among adults has been deficient and further reduction in hepatitis B infections in the U.S. has stalled. Approximately 34 percent of adults aged ≥ 19 years have been vaccinated against hepatitis B.⁶⁶⁴ Furthermore, an estimated 20 percent of adults aged ≥ 60 years have been vaccinated against hepatitis B.

Since 2011, rates of reported cases of acute hepatitis B decreased among children and adolescents aged 0–19 years and persons aged 20–29 years.⁶⁶⁵ The Centers for Disease Control and Prevention (CDC) states that this is due, in part, because of the childhood hepatitis B vaccine recommendations that were first implemented in 1991. The Advisory Group for Immunization Practices (ACIP) is a group of medical and public health experts that develops recommendations on how to use vaccines to control diseases in the U.S. and the CDC updates the U.S. adult and childhood immunization schedules consistent with ACIP recommendations.⁶⁶⁶ As the cohort of persons vaccinated as children have

grown older, rates of acute hepatitis B among persons aged 30–39 years began to consistently decrease beginning in 2015.⁶⁶⁷ Conversely, rates of reported cases of acute hepatitis B have steadily increased among persons aged 40–49, 50–59 years, and 60 years and older from 2015–2019 (see Table 52). Overall, the rate of acute hepatitis B cases increased 11 percent from 2014 (0.9 per 100,000) to 2018 (1.0 per 100,000).⁶⁶⁸ Injection drug use and sexual transmission are known risk factors associated with rising acute hepatitis B cases. For example, acute hepatitis B infections increased 114 percent from 2006 to 2013 in three states affected by the opioid epidemic (Kentucky, Tennessee, and West Virginia).⁶⁶⁹

TABLE 52: Rates of Reported Acute Hepatitis B Virus Infection, by Age Group – United States

| Age (years) | 2015 | 2016 | 2017 | 2018 | 2019 |
|-------------|------|------|------|------|------|
| 0–19 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 |
| 20–29 | 0.8 | 0.6 | 0.6 | 0.6 | 0.5 |
| 30–39 | 2.6 | 2.4 | 2.3 | 2.0 | 1.8 |
| 40–49 | 2.4 | 2.2 | 2.5 | 2.6 | 2.7 |
| 50–59 | 1.4 | 1.5 | 1.6 | 1.6 | 1.6 |
| ≥ 60 | 0.5 | 0.5 | 0.6 | 0.6 | 0.6 |

* Rates per 100,000 population. Beginning in 2021, single-race population estimates are used for rate calculations. For prior years, bridged-race population estimates are used.

† Reported confirmed cases. For the case definition, see <https://ndc.services.cdc.gov/conditions/hepatitis-b-acute/>.

2. Statutory Authority

Section 1861(s)(10)(B) of the Act provides a benefit category under Part B for hepatitis B vaccine and its administration, furnished to an individual who is at high or intermediate risk of contracting hepatitis. The statute expressly authorizes the Secretary to determine who is at high or intermediate risk of

contracting hepatitis B for coverage of the hepatitis B vaccine.

3. Regulation

Medicare Part B pays for the hepatitis B vaccine as defined in § 410.63(a), which describes individuals who are at high or intermediate risk of contracting hepatitis and covered for hepatitis B vaccinations. In the CY 2013 PFS final rule (77 FR 69363), CMS expanded the definition of individuals at risk of

contracting hepatitis B, citing updated ACIP recommendations about increased risk for diabetes patients to support the change. The ACIP stated that the hepatitis B outbreaks were associated with adults with diabetes receiving assisted blood glucose monitoring.⁶⁷⁰ Today, the regulations are outdated as these risk categories have been shown ineffective and are no longer the focus of how the medical community discusses hepatitis B infection and

prevention. In 2019, risk behavior and exposure data were missing for 37 percent of case reports (1,183 of 3,192) of acute hepatitis B infections received by CDC.⁶⁷¹ ACIP also cited a large national survey of family medicine and internal medicine physicians assessing barriers to adult hepatitis B vaccination and found that 68% cited patients' non-disclosure of risk factors.⁶⁷²

4. Proposed Regulatory Revisions

Since 1991, hepatitis B vaccination has been recommended by ACIP and the CDC for infants at birth, completing the vaccination series by 16 months of age.⁶⁷³ This is important because in the U.S., the age cohorts who have received the completed series have low to no risk of contracting the hepatitis B virus, as evidenced by the rate of zero acute hepatitis B virus infections for the 0–19 age group.⁶⁷⁴ The infant and childhood recommendations were not in place for most of today's adults which is evidenced by no other age group reaching a rate of zero acute hepatitis B virus infections. Given this information, we consider the population of people who have completed the vaccination series to be at low risk of contracting the hepatitis B virus. Individuals who remain unvaccinated against hepatitis B are at intermediate risk, at minimum, of contracting hepatitis B virus.

We conclude that anyone who is not fully vaccinated to be at intermediate risk of contracting the hepatitis B virus as their risk would be above zero. Additionally, rates of reported cases of acute hepatitis B steadily increased among age groups 40 and over between 2015 and 2019, with stabilizing or declining rates between 2020 and 2021, which may be due to the COVID–19 pandemic.⁶⁷⁵ While it is encouraging to see declining rates, these populations remain at intermediate risk given their reported cases remained above zero. Therefore, we propose to revise

⁶⁷⁵ CDC, 2023. Hepatitis B surveillance 2021. Retrieved from <https://www.cdc.gov/hepatitis/statistics/2021surveillance/hepatitis-b.htm>.

§ 410.63(a)(2), Intermediate Risk Groups, by adding a new paragraph (a)(iv) to include individuals who have not previously received a completed hepatitis B vaccination series or whose vaccination history is unknown. We include the latter group in this proposal because the CDC has stated that it is not harmful to receive either extra doses or a repeat vaccination series.⁶⁷⁶ This will allow these individuals to receive a covered vaccination series when medical history may not be available. Also, the CDC states that screening for hepatitis B virus is not a requirement for vaccination, and in settings where screening is not feasible, vaccination of persons recommended to receive the vaccine should continue.

We note that § 410.63(a)(3) provides an exception to individuals considered intermediate or high risk of contracting hepatitis B. This includes individuals who have undergone a prevaccination screening and have been found to be currently positive for antibodies to hepatitis B. We propose that this exception apply to the proposed § 410.63(a)(2)(iv) because individuals with previous infection would not benefit from the vaccine. However, it should be noted that the CDC states that it is not harmful to vaccinate people who are immune to hepatitis B virus because of current or previous infection or vaccination, nor does it increase the risk for adverse events.⁶⁷⁷

5. Summary

This proposal will help protect Medicare beneficiaries from acquiring hepatitis B infection, contribute to eliminating viral hepatitis as a public health threat in the United States and is in the best interest of the Medicare program and its beneficiaries. We look forward to receiving public comment on these proposals.

N. Low Titer O+ Whole Blood Transfusion Therapy During Ground Ambulance Transport

1. Ambulance Fee Schedule Background

Section 1861(s)(7) of the Act establishes an ambulance service as a Medicare Part B service where the use of other methods of transportation is contraindicated by the individual's condition, but only to the extent provided in regulations. Our regulations relating to coverage for ambulance

⁶⁷⁶ CDC. Viral hepatitis. FAQ for health professionals. Atlanta, GA: U.S. HHS, CDC; 2022. Retrieved from <https://www.cdc.gov/hepatitis/hbv/hbvfaq.htm>.

services are set forth at 42 CFR part 410, subpart B. Since April 1, 2002, payment for ambulance services has been made under the ambulance fee schedule (AFS), which the Secretary established, as required by section 1834(l) of the Act, in 42 CFR part 414, subpart H. Payment for an ambulance service is made at the lesser of the actual billed amount or the AFS amount, which consists of a base rate for the level of service, a separate payment for mileage to the nearest appropriate facility, a geographic adjustment factor (GAF), and other applicable adjustment factors as set forth at section 1834(l) of the Act and § 414.610 of the regulations. In accordance with section 1834(l)(3) of the Act and § 414.610(f), the AFS rates are adjusted annually based on an inflation factor. The AFS also incorporates two permanent add-on payments in § 414.610(c)(5)(i) and three temporary add-on payments in § 414.610(c)(1)(ii) and (c)(5)(ii) to the base rate and/or mileage rate.

2. Low Titer O+ Whole Blood Transfusion Therapy During Ground Ambulance Transport

Under the AFS, Medicare Part B covers seven levels of service for ground (including water) ambulance transports and two levels of service for air ambulance transports. The levels of service for ground ambulance transports include basic life support (emergency); basic life support (non-emergency); advanced life support, level 1 (ALS1) (emergency); ALS1 (non-emergency); advanced life support, level 2 (ALS2); paramedic intercept; and specialty care transport (§ 410.40(c)). Definitions for the levels of service can be found at § 414.605 and in the Medicare Benefit Policy Manual, Chapter 10, Ambulance Services, section 30.1.1, Definition of Ground Ambulance Services.

At § 414.605, ALS2 is defined as either transportation by ground ambulance vehicle, medically necessary supplies and services, and the administration of at least three medications by intravenous push/bolus or by continuous infusion, excluding crystalloid, hypotonic, isotonic, and hypertonic solutions (Dextrose, Normal Saline, Ringer's Lactate); or transportation, medically necessary supplies and services, and the provision of at least one of the following ALS procedures: (1) Manual defibrillation/cardioversion; (2) Endotracheal intubation; (3) Central venous line; (4) Cardiac pacing; (5) Chest decompression; (6) Surgical airway; (7) Intraosseous line. These procedures must be performed by ALS personnel trained to the level of the emergency

medical technician-intermediate (EMT-Intermediate) or paramedic (§ 414.605).

According to the 2020 National Association of State Emergency Medical Services Organizations Assessment (NASEMSO), there are approximately 11,450 ground EMS agencies that provide 9–1–1 response with transport to an acute care hospital.⁶⁷⁸ The administration of low titer O+ whole blood transfusions, otherwise referred to as whole blood transfusion therapy (WBT), began in 2017 when two Emergency Medical Services (EMS) systems in Texas began providing WBT to patients in hemorrhagic shock during ambulance transports. Prior to this, use of blood products in the treatment of hemorrhagic shock in the form of blood component therapy was available only in the hospital setting and by one EMS system. Low titer O+ whole blood contains low levels of antibodies that patients of any blood type can receive and is provided in EMS settings to significantly increase these patients' chances of survival.

By September 2023, over 121 EMS systems in the United States were using blood products in the form of either WBT, packed red blood cells (PRBCs), plasma, or a combination of PRBCs and plasma.⁶⁷⁹ Seventy percent of these systems were using WBT.⁶⁸⁰ As of March 2024, 147 (1.2 percent of the EMS systems in the United States) now carry whole blood products, with 200 or more systems anticipated to provide some form of blood product transfusion by the end of 2024.⁶⁸¹ Today, nearly 60 percent of those 147 EMS systems carry low titer O+ whole blood, with the remainder utilizing other blood products.⁶⁸²

EMS systems that administer WBT and other blood products (PRBCs and plasma) generally utilize it for patients suffering hemorrhagic shock stemming from traumatic injury, though it may also be indicated in certain non-

traumatic medical conditions such as hemorrhagic shock from a gastrointestinal bleed.⁶⁸³ Traditional resuscitation protocol for massive hemorrhage from trauma and other medical conditions such as gastrointestinal bleeding consists of crystalloid fluids and blood component transfusions, which consist of a balanced portion of PBRCs, platelets, and fresh frozen plasma.⁶⁸⁴

During the conflicts in Iraq and Afghanistan, use of this traditional protocol was difficult due to the austere combat environment and limited availability of blood components, which often necessitated the use of fresh whole blood (FWB) in traumatic resuscitation.⁶⁸⁵ Data collected related to these conflicts demonstrated improvements in survival rate and reductions in transfusion requirements for military casualties in hemorrhagic shock who received FWB versus those receiving traditional blood component transfusion and spurred research and interest in the use of WBT in civilian trauma.⁶⁸⁶ Additional data demonstrating an improvement in 24-hour and 30-day survival rate among medically evacuated combat casualties in Afghanistan who received prehospital transfusion encouraged research and interest in these techniques for possible deployment by EMS services.⁶⁸⁷

⁶⁸⁸ Shackelford SA, del Junco DJ, Powell-Dunford N, Mazuchowski EL, et al. Association of

In the treatment of civilian patients with hemorrhagic shock from trauma, studies have demonstrated that WBT provides a substantial survival benefit versus traditional component therapy,⁶⁸⁸ especially when provided early in the prehospital and hospital settings.⁶⁸⁹ One study found WBT increased the survival of such patients by as much 60 percent and reduced the need for additional blood products in the 24-hour period following the initial transfusion by 7 percent.⁶⁹⁰ Another study noted that there was a significant increase in the 24-hour and 30-day survival rate in patients suffering from severe hemorrhage requiring a large transfusion volume.⁶⁹¹

Patients suffering from hemorrhagic shock require stabilization in the field and rapid transport to an acute care hospital to treat the source of hemorrhage.⁶⁹² Individuals who are experiencing hemorrhagic shock primarily due to blood loss may require WBT as their only resuscitative treatment. Each unit of whole blood takes 5–8 minutes to transfuse.⁶⁹³ Depending on the time needed to transport and clinical need, patients generally receive 1–2 units of WBT during ground transport.⁶⁹⁴

While there may be variance between jurisdictions, the protocols for many EMS systems currently providing WBT

⁶⁸² Ibid.

are designed for patients who require complex management at the advanced life support level, demonstrating suspicion of blood loss along with evidence of physiologic shock as indicated by parameters such as low blood pressure, an elevated pulse rate, or slow capillary refill.⁶⁹⁵ Other relevant factors may include an elevated lactate level, an EtCO₂ waveform capnography reading <25 as surrogate for elevated lactate, a shock index (heart rate/systolic blood pressure) >1, and, where appropriate and consistent with protocol, authorization by online or other medical authority.⁶⁹⁶

We believe that many ground ambulance transports providing WBT already qualify for ALS2 payment, since patients requiring such transfusions are generally critically injured or ill and often suffering from cardio-respiratory failure and/or shock, and therefore are likely to receive one or more procedures currently listed as ALS procedures in the definition of ALS2, with endotracheal intubation, chest decompression, and/or placement of a central venous line or an intraosseous line the most probable to be seen in these circumstances. Patients requiring WBT are typically suffering from hemorrhagic shock, for which the usual course of treatment includes airway stabilization, control of the hemorrhagic source, and stabilization of blood pressure using crystalloid infusion and the provision of WBT or other blood product treatments when available, but not necessarily the administration of advanced cardiac life support medications.⁶⁹⁷ Consequently, we do not believe it is likely that most patients who may require WBT would trigger the other pathway to qualify as ALS2, the administration of at least three medications by intravenous push/bolus or by continuous infusion, excluding crystalloid, hypotonic, isotonic, and hypertonic solutions (Dextrose, Normal Saline, Ringer's Lactate).

However, not all ground ambulance transports providing WBT may already qualify for ALS2 payment. An ambulance transport would not qualify for ALS2 payment where a patient

received only WBT during a ground ambulance transport, and not one or more other services that, either by themselves or in combination, presently qualify as ALS2. We believe WBT should independently qualify as an ALS2 procedure because the administration of WBT and handling of low titer O+ whole blood require a complex level of care beyond ALS1 for which EMS providers and suppliers at the EMT-Intermediate or paramedic level require additional training. In addition, WBT requires specialized equipment such as a blood warmer and rapid infuser.⁶⁹⁸ While there is no established national training protocol, many systems follow the guidelines of the Association for the Advancement of Blood and Biotherapies (AABB), which requires additional training that is 4 hours in length for paramedics and 6 hours in length for EMS supervisory staff.⁶⁹⁹ Medicare's requirements for ambulance staffing at 42 CFR 410.41(b) include compliance with state and local laws, which here would establish appropriate training requirements with respect to WBT administration.

Therefore, we believe it is appropriate to modify the definition of ALS2 to account for the instances where patients are administered WBT but do not otherwise qualify for ALS2 payment. Of note, we do not have the authority to provide an additional payment, such as an add-on payment for the administration of WBT under the AFS.

We propose to modify the definition of ALS2 at § 414.605 by adding the administration of low titer O+ whole blood transfusion to the current list of seven ALS2 procedures as a new number 8. We would also reflect this change in the Medicare Benefit Policy Manual, Chapter 10, Ambulance Services, section 30.1.1, Definition of Ground Ambulance Services. Under this proposal, a ground ambulance transport that provides WBT would itself constitute an ALS2-level transport.

We are aware that some established EMS systems may already provide WBT to treat patients in hemorrhagic shock,

while other jurisdictions, including those in rural areas, will not and often will rely on alternative blood product treatments such as PRBCs and plasma. The availability of WBT in rural areas is a complex and multifactorial issue. Fluctuating stock of the "raw product" (blood donations) along with local healthcare demands for blood products (PRBCs, platelets, plasma, etc.) affect the availability of WBT. Other issues in rural areas include the logistical challenges and the costs involved in acquiring fresh units of WBT and returning any unused units to a supplier.⁷⁰⁰

The training, administration and monitoring is the same for these alternative blood product treatments as it is for WBT. While we are not including alternative blood product treatments in our proposal, we are seeking comment on whether we should add alternative blood product treatments to the list of ALS2 procedures. We invite comments on this proposal to add the administration of low titer O+ whole blood transfusion as an ALS2 procedure and comments on whether we should add alternative blood product treatments such as the administration of PRBCs or plasma.

O. Medicare Parts A and B Overpayment Provisions of the Affordable Care Act

1. Executable Summary

In the proposed rule titled "Medicare Program; Contract Year 2024 Policy and Technical Changes to the Medicare Advantage Program, Medicare Prescription Drug Benefit Program, Medicare Cost Plan Program, Medicare Parts A, B, C, and D Overpayment Provisions of the Affordable Care Act and Programs of All-Inclusive Care for the Elderly; Health Information Technology Standards and Implementation Specifications", which appeared in the December 27, 2022 **Federal Register**, we proposed to amend our regulations regarding the standard for an "identified overpayment" under Medicare Parts A, B, C, and D to align the regulations with the statutory language in section 1128J(d)(4)(A) of the Act, which provides that the terms "knowing" and "knowingly" have the meaning given those terms in the Federal False Claims Act (the False

Claims Act) at 31 U.S.C. 3729(b)(1)(A) (87 FR 79452). We refer to that rule as the “December 2022 Overpayment Proposed Rule.” In the December 2022 Overpayment Proposed Rule, we proposed to remove the existing “reasonable diligence” standard and adopt by reference the False Claims Act definition of “knowing” and “knowingly” as set forth at 31 U.S.C. 3729(b)(1)(A).

We have not yet finalized our proposals with respect to overpayments under Medicare Parts A and B in the December 2022 Overpayment Proposed Rule. Instead, after considering the public comments we received in connection with the December 2022 Overpayments Proposed Rule, we are retaining the Parts A and B proposals published in the December 2022 Overpayment Proposed Rule and we are now making additional proposals to revise existing regulations at § 401.305(b) regarding the deadline for reporting and returning overpayments.

2. Provisions of the Proposed Regulation (Preamble)

Section 6402(a) of the Patient Protection and Affordable Care Act (Pub. L. 111–148), as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) (collectively known as the Affordable Care Act), established section 1128J(d) of the Act. Section 1128J(d)(1) of the Act requires a person who has received an overpayment to report and return the overpayment to the Secretary, the State, an intermediary, a carrier, or a contractor, as appropriate, and to notify the Secretary, State, intermediary, carrier or contractor to which the overpayment was returned in writing of the reason for the overpayment. Section 1128J(d)(4)(B) of the Act defines the term “overpayment” as any funds that a person receives or retains under title XVIII or XIX to which the person, after applicable reconciliation, is not entitled under such title. For purposes of Medicare Parts A and B, section 1128J(d)(4)(C) of the Act defines the term “person” to include providers and suppliers as those terms are defined in the Act. Section 1128J(d)(4)(C) of the Act also defines the term “person,” for purposes of Medicare Parts C and D, to also include a Medicare Advantage organization (MAO) (as defined in section 1859(a)(1) of the Act) and a Part D Plan (PDP) sponsor (as defined in section 1860D–41(a)(13) of the Act).

Section 1128J(d)(2) of the Act requires that an overpayment be reported and returned by the later of: (1) the date which is 60 days after the date on which

the overpayment was identified; or (2) the date any corresponding cost report is due, if applicable. Section 1128J(d)(3) of the Act specifies that any overpayment retained by a person after the deadline for reporting and returning an overpayment is an obligation (as defined in 31 U.S.C. 3729(b)(3)) for purposes of the False Claims Act, 31 U.S.C. 3729.

Section 1128J(d)(4)(A) of the Act provides that the terms “knowing” and “knowingly” have the meaning given those terms in the False Claims Act at 31 U.S.C. 3729(b)(1)(A). The False Claims Act (31 U.S.C. 3729(b)(1)(A)) defines the terms “knowing” and “knowingly” to include information about which a person “has actual knowledge,” “acts in deliberate ignorance of the truth or falsity of the information,” or “acts in reckless disregard of the truth or falsity of the information.”

a. Regulations Promulgated Under Section 1128J(d) of the Act

On May 23, 2014, CMS published a final rule titled “Medicare Program; Contract Year 2015 Policy and Technical Changes to the Medicare Advantage and the Medicare Prescription Drug Benefit Programs” (79 FR 29844) (hereinafter referred to as the “Parts C and D Overpayment Final Rule”), which provided, among other things, that an MAO or PDP sponsor has identified an overpayment when the MAO or PDP sponsor has determined, or should have determined through the exercise of reasonable diligence, that the MAO or PDP sponsor has received an overpayment.

On February 12, 2016, we published a final rule titled “Medicare Program; Reporting and Returning of Overpayments” (81 FR 7654) (hereinafter referred to as the “Parts A and B Overpayment Final Rule”), which provided, among other things, that a provider or supplier has identified an overpayment when the provider or supplier has determined, or should have determined through the exercise of reasonable diligence, that the provider or supplier has received an overpayment and quantified the amount of the overpayment.

In the December 2022 Overpayment Proposed Rule, we proposed to amend the existing regulations for Medicare Parts A and B, as well as Parts C and D, regarding the standard for an “identified overpayment” to align the regulations with the statutory language in section 1128J(d)(4)(A) of the Act. If finalized, these regulations would assign the meaning of the terms “knowing” and “knowingly” in the

False Claims Act at 31 U.S.C. 3729(b)(1)(A) to our regulations for purposes of Medicare overpayments. Specifically, in the December 2022 Overpayment Proposed Rule, we proposed to remove the existing “reasonable diligence” standard and adopt by reference the False Claims Act definition of “knowing” and “knowingly” as set forth at 31 U.S.C. 3729(b)(1)(A). We continue to review the comments we received on the December 2022 Overpayment Proposed Rule, and we plan to respond both to those comments and the comments we receive on our new proposals when we publish the CY 2025 Physician Fee Schedule final rule.

b. Relevant Litigation

In *UnitedHealthcare Insurance Co. v. Azar*, a group of MAOs challenged the Parts C and D Overpayment Final Rule, and the District Court held, in relevant part, that by requiring MAOs to use “reasonable diligence” in searching for and identifying overpayments, CMS impermissibly established False Claims Act liability for mere negligence. *UnitedHealthcare Ins. Co. v. Azar*, 330 F. Supp. 3d 173, 191 (D.D.C. 2018), rev’d in part on other grounds sub nom. *UnitedHealthcare Ins. Co. v. Becerra*, 16 F.4th 867 (D.C. Cir. 2021), cert. denied, 142 S. Ct. 2851 (U.S. June 21, 2022) (No. 21–1140). The District Court noted that “(t)he False Claims Act—which the ACA refers to for enforcement, see 42 U.S.C. 1320a–7k(d)(3)—imposes liability for erroneous (‘false’) claims for payment submitted to the government that are submitted ‘knowingly’ . . . a term of art defined in the FCA to include false information about which a person ‘has actual knowledge,’ ‘acts in deliberate ignorance of the truth or falsity of the information,’ or ‘acts in reckless disregard of the truth or falsity of the information.’” *Id.* at 190.

Although the court’s ruling applied only to Medicare Part C, to provide for consistency in Medicare regulations related to reporting and returning overpayments, in the December 2022 Overpayment Proposed Rule, we proposed to amend the regulations at current § 401.305(a)(2) to remove the reference to “reasonable diligence” and replace it with language incorporating the terminology of section 1128J(d)(4)(A) of the Act by ascribing the terms “knowing” and “knowingly” the same meaning given those terms in the False Claims Act at 31 U.S.C. 3729(b)(1)(A). See *UnitedHealthcare*, 330 F. Supp. 3d at 191 (finding that this language would be consistent with a 2000 agency rule, the False Claims Act,

and the Affordable Care Act's reference to the False Claims Act).

c. Provisions of Proposed Regulations

In addition to our earlier proposals, which remain under consideration, we make the following new proposals.

Existing § 401.305(b)(1) specifies when a person who has received an overpayment must report and return an overpayment. We propose to amend this paragraph to reference revised § 401.305(b)(2), as well as to reference newly-proposed § 401.305(b)(3).

Existing § 401.305(b)(2) specifies the circumstances under which the deadline for returning overpayments will be suspended. Overpayments must be reported no later than the date which is 60 days after the date on which the overpayment was identified or the date any corresponding cost report is due, if applicable. However, the deadline for returning a reported overpayment will be suspended under specified circumstances, including the acknowledgement of receipt of a submission to the OIG Self-Disclosure Protocol or the CMS Voluntary Self-Referral Disclosure Protocol, or under specified conditions if a person requests an extended repayment schedule as defined in § 401.603. We are proposing a technical modification to the introductory language in § 401.305(b)(2) to acknowledge that this section might be applicable after the suspension described in new § 401.305(b)(3) is complete.

New proposed § 401.305(b)(3) would specify the circumstances under which the deadline for reporting and returning overpayments would be suspended to allow time for providers to investigate and calculate overpayments. Proposed § 401.305(b)(3)(i) provides that the deadline to report and return an overpayment would be suspended if: (1) a person has identified an overpayment but has not yet completed a good-faith investigation to determine the existence of related overpayments that may arise from the same or similar cause or reason as the initially identified overpayment; and (2) the person conducts a timely, good-faith investigation to determine whether related overpayments exist. Proposed § 401.305(b)(3)(ii) provides that, if the conditions for proposed § 401.305(b)(3)(i) are met, the deadline for reporting and returning the initially identified overpayment and related overpayments that arise from the same or similar cause or reason as the initially identified overpayment will remain suspended until the earlier of the date that the investigation of related overpayments has concluded and the aggregate amount of the initially

identified overpayments and related overpayments is calculated, or the date that is 180 days after the date on which the initial identified overpayment was identified.

The following example may elucidate a hypothetical circumstance. Assume that, on day 1, a person identifies an overpayment arising from a physician's failure to properly document the medical record to support the coding of a specific claim, and the person has reason to believe that this may be a common practice of the physician, so there could be more affected claims. At this point, the person has up to 180 days to conduct and conclude a good faith investigation to determine whether related overpayments that arise from the same or similar cause or reason as the initially identified overpayment exist. If the person does NOT conduct an investigation, or the investigation is not timely or not conducted in good faith, the identified overpayment must be reported and returned by day 60. If the person does conduct a timely, good faith investigation, suspension of the report and return obligation under § 401.305(b)(3) begins on day 1. The suspension ends when the investigation is concluded and the initially identified overpayment and related overpayments, if any, are calculated, or by day 180, whichever is earlier. The overpayment must be reported and returned within 60 days after either completion of the investigation or day 180, whichever is earlier. However, the suspensions described in § 401.305(b)(2) may also be applicable. For example, if the person is reporting the overpayment to the OIG Self-Disclosure Protocol, as provided for in § 401.305(b)(2) the overpayment return requirement may be further suspended in accordance with that provision.

We make these proposals because many of the comments that we received on the December 2022 Overpayment Proposed Rule expressed concern that we proposed to remove the term "quantified" from the original regulatory text. We believe that our proposals, especially proposed § 401.305(b)(3)(ii)(A), would address this concern. Other commenters expressed concern that the December 2022 Overpayment Proposed Rule proposals removed a perceived 6-month time period to investigate all overpayments that was referenced in an example in the preamble to the original 2016 Parts A and B Overpayment Rule. The December 2022 Overpayment Proposed Rule was silent on this point and did not remove this time period to investigate overpayments. We understand the importance of allowing

time to investigate and calculate overpayments. Therefore, we propose to codify this allowance into regulation at proposed § 401.305(b)(3)(ii).

We solicit comment on these proposals.

IV. Updates to the Quality Payment Program

A. CY 2025 Modifications to the Quality Payment Program

1. Executive Summary

a. Overview

This section of this proposed rule sets forth proposed changes to the Quality Payment Program starting January 1, 2025, except as otherwise noted for specific provisions. We continue to move the Quality Payment Program forward, including focusing more on alignment and new options for clinicians to participate in a more meaningful way, to achieve continuous improvement in the quality of health care services provided to Medicare beneficiaries and other patients through the Quality Payment Program's Merit-based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs) for the CY 2025 performance period/2027 MIPS payment year.

Authorized by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015), the Quality Payment Program is a value-based payment program, by which the Medicare program rewards clinicians who provide high-value, high-quality care to their patients in a cost-efficient manner. There are two ways for clinicians who provide services under the Medicare program to participate in the Quality Payment Program: MIPS and Advanced APMs. The statutory requirements for the Quality Payment Program are set forth in section 1848(q) and (r) of the Act for MIPS and section 1833(z) of the Act for Advanced APMs.

For the MIPS participation track, MIPS eligible clinicians (defined in § 414.1305)⁷⁰¹ are subject to a MIPS payment adjustment (positive, negative, or neutral) based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. We assess each MIPS eligible clinician's total performance according to established performance standards with respect to

⁷⁰¹ We note that the term MIPS eligible clinician is defined in § 414.1305 as including a group of at least one MIPS eligible clinician billing under a single tax identification number. We refer readers to our policies governing group reporting and scoring under MIPS as set forth in § 414.1310(e).

the applicable measures and activities specified in each of these four performance categories during a performance period to compute a final composite performance score (a “final score” as defined at § 414.1305). In calculating the final score, we must apply different weights for the four performance categories, subject to certain exceptions, as set forth in section 1848(q)(5) of the Act and at § 414.1380. Unless we assign a different scoring weight pursuant to these exceptions, for CY 2025 performance period/2027 MIPS payment year, the scoring weights are as follows: 30 percent for the quality performance category; 30 percent for the cost performance category; 15 percent for the improvement activities performance category; and 25 percent for the Promoting Interoperability performance category.

Once calculated, each MIPS eligible clinician’s final score is compared to the performance threshold established in prior rulemaking for that performance period to calculate the MIPS payment adjustment factor as specified in section 1848(q)(6) of the Act, such that the MIPS eligible clinician will receive in the applicable MIPS payment year: (1) a positive adjustment, if their final score exceeds the performance threshold; (2) a neutral adjustment, if their final score meets the performance threshold; or (3) a negative adjustment, if their final score is below the performance threshold. In calculating the MIPS payment adjustment factor for a MIPS eligible clinician, CMS accounts for scaling factor and budget neutrality requirements, as further specified in section 1848(q)(6) of the Act. CMS then applies the MIPS payment adjustment factor to amounts otherwise paid under Part B with respect to covered professional services for the MIPS eligible clinician for the applicable MIPS payment year such that their payments for such covered professional services are increased, decreased, or not adjusted based on the MIPS eligible clinician’s final score relative to the performance threshold.

Section 1848(q) of the Act sets forth other requirements applicable to MIPS, including opportunities for feedback and targeted review and public reporting of MIPS eligible clinicians’ performance. Section 1848(r) of the Act sets forth more specific requirements for development of measures for the cost performance category under MIPS.

For the Advanced APM track, if an eligible clinician participates in an Advanced APM and achieves Qualifying APM Participant (QP) or Partial QP status, they are excluded from the MIPS

reporting requirements and payment adjustment (though eligible clinicians who are Partial QPs may elect to be subject to the MIPS reporting requirements and payment adjustment). Eligible clinicians who are QPs for the CY 2024 performance year receive a 1.88 percent APM Incentive Payment in the 2026 payment year. Beginning with the CY 2024 performance year (payment year 2026), QPs will also receive a higher PFS payment rate (calculated using the differentially higher “qualifying APM conversion factor”) than non-QPs. QPs will continue to be excluded from MIPS reporting and payment adjustments for the applicable year.

We plan to continue developing policies for the Quality Payment Program that more effectively reward high-quality of care for patients and increase opportunities for Advanced APM participation. We are continuing to develop new MIPS Value Pathways (MVPs) to allow for a more cohesive participation experience by connecting activities and measures from the four MIPS performance categories that are relevant to a specialty, medical condition, or a particular population.

As we move into the eighth year of the Quality Payment Program, we are proposing the updates set forth in this section of this proposed rule, encouraging continued improvement in clinicians’ performance with each performance year and driving improved quality of health care through payment policy.

b. Summary of Major Proposals

(1) Transforming the Quality Payment Program

Our National Quality Strategy (<https://www.cms.gov/medicare/quality/meaningful-measures-initiative/cms-quality-strategy>) addresses the urgent need to advance towards a more equitable, safe, and outcomes-based health care system for all individuals. We have a corresponding cohesive value-based care strategy for Medicare along three main pillars: Alignment, Growth, and Equity.⁷⁰² We continue to focus on transforming health care delivery⁷⁰³ and our 2030 goal to have all traditional Medicare beneficiaries in an accountable care relationship with

⁷⁰² Update On The Medicare Value-Based Care Strategy: Alignment, Growth, Equity, Health Affairs Forefront, March 14, 2024. <https://www.healthaffairs.org/content/forefront/update-medicare-value-based-care-strategy-alignment-growth-equity>.

⁷⁰³ Quality in Motion, Acting on the CMS National Quality Strategy, April 2024. <https://www.cms.gov/files/document/quality-motion-cms-national-quality-strategy.pdf>.

their health care provider. In pursuit of this vision, we are driving higher value care, supporting Advanced APM participation, increasing alignment to reduce burden, and promoting health equity. We are exploring new care delivery and payment models; for example, we are considering an ambulatory care model that would connect payment to performance for specialists in the ambulatory setting to increase the number of specialists who deliver longitudinal care in an accountable manner and to support greater integration between specialty and primary care. This potential model would utilize MVPs as a foundation for assessing specialist performance (refer to section III.J of this proposed rule). We are proposing in section II.G.2 of this proposed rule to make payment for advanced primary care management (APCM) services furnished by a physician or other qualified health care professional who is responsible for all primary care (for example, physicians and non-physician practitioners, including nurse practitioners, physician assistants, certified nurse-midwives and clinical nurse specialists), and serve as the continuing focal point for all needed health care services during a calendar month. This proposed payment would incorporate several specific, existing care management and communication technology-based services into a bundle and include a performance measurements requirement that could be met by reporting the Value in Primary Care MVP by clinicians billing for APCM services. We are proposing that billing practitioners who are not MIPS eligible clinicians (as defined at 42 CFR 414.1305) would not have to report the MVP in order to furnish and bill for APCM services.

Separately, we are implementing MVPs and subgroup reporting option to allow clinicians to report on a cohesive set of measures that more directly reflect their clinical practice. MVPs allow for more clinically relevant performance measurement, engage more specialists in performance measurement, and help reduce barriers to APM participation. While traditional MIPS continues to be a submission option, we intend to move to full MVP adoption and to sunset traditional MIPS in the future.

In section IV.A.3.d of this proposed rule, we discuss a Request for Information (RFI) that addresses how we can best achieve full MVP adoption and subgroup participation as we plan to move forward with sunseting traditional MIPS and advancing the three pillars and the National Quality Strategy. We seek feedback on clinician readiness to report MVPs, how we

should ensure there are applicable MVPs for all clinicians, and what parameters, including logistical and regulatory policies, are needed for multispecialty groups to place clinicians into subgroups for reporting an MVP relevant to the scope of care provided.

(a) MIPS Value Pathways Development and Maintenance

In an effort to promote high-quality, safe, and equitable care and to implement the vision outlined in the CMS National Quality Strategy, we are proposing six new MVPs around the following topics: Complete Ophthalmologic Care, Dermatological Care, Gastroenterology Care, Optimal Care for Patients with Urologic Conditions, Pulmonology Care and Surgical Care. Complete Ophthalmologic Care, Dermatological Care, Gastroenterology Care, Optimal Care for Patients with Urologic Conditions, Pulmonology Care, and Surgical Care.

We are also proposing to modify the MVP maintenance webinar process to provide more flexibility on how we communicate submitted maintenance recommendations prior to proposing them formally in rulemaking (refer to section IV.A.4.a of this proposed rule).

Lastly, we are proposing MVP maintenance updates to our MVP inventory that are in alignment with the MVP development criteria, and in consideration of the feedback from interested parties we have received through the maintenance process.

(b) MVP Scoring

We are proposing to update the scoring of population health measures in MVPs by using the highest score of all available population health measures, and we are proposing to remove the requirement for MVP Participants to select a population health measure at the time of MVP registration. We are also proposing to modify the MVP scoring policies at § 414.1365(d)(3)(ii) with respect to the cost performance category to refer to, and therefore align with, our methodology for scoring cost measures at § 414.1380(b)(2) under our traditional MIPS policies. Additionally, we are proposing to align MVP scoring with traditional MIPS policies by removing references to high- and medium-weighted improvement activities in MVPs. We are proposing to update MVP scoring to assign 40 points for each improvement activity to provide full credit for the improvement activities performance category for MVP Participants who report one improvement activity. For the MVP

Promoting Interoperability performance category, we are proposing to modify our policy at § 414.1365(c)(4)(i)(A), requiring a subgroup to submit the affiliated group's data for the performance category, by removing references to specific performance periods/MIPS payment years, thereby permitting subgroups to report data for this category in this manner for the CY 2025 performance period/2027 MIPS payment year and beyond.

(c) APM Performance Pathway

We are proposing to create within the APM Performance Pathway (APP) the APP Plus quality measure set beginning with the CY 2025 performance period/2027 MIPS payment year to align with the Universal Foundation measures under the CMS National Quality Strategy. We are not proposing to modify the existing APP quality measure set, which already includes five of the ten Universal Foundation measures. Instead, we are proposing to establish the APP Plus quality measure set as a second, optional measure set that would be comprised of all of the measures in the existing APP quality measure set and would additionally incrementally adopt the remaining five Universal Foundation measures from the CY 2025 performance period/2027 MIPS payment year through the CY 2028 performance period/2030 MIPS payment year. Under this proposal, a MIPS eligible clinician, group, or APM Entity that reports the APP may choose to report either the APP quality measure set or the APP Plus quality measure set.

(d) Data Submission for the Performance Categories

We are proposing to adopt minimum criteria for a qualifying data submission for a MIPS performance period for the quality, improvement activities, and Promoting Interoperability performance categories, which we propose to codify at § 414.1325(a)(1)(i) through (iii). Specifically, we are proposing that a qualifying data submission must include numerator and denominator data for at least one MIPS quality measure from the final list of MIPS quality measures for the quality performance category and include a response of "yes" for at least one activity in the MIPS improvement activities Inventory for the improvement activities performance category. For the Promoting Interoperability performance category, we are proposing a qualifying data submission must include: (1) performance data, including any claim of an applicable exclusion, for the measures in each objective, as specified by CMS; (2) required attestation

statements, as specified by CMS; (3) CMS EHR Certification ID (CEHRT ID) from the Certified Health IT Product List (CHPL); and (4) the start date and end date for the applicable performance period as set forth in § 414.1320.

We are also proposing to codify our existing policies governing our treatment of multiple data submissions received for the quality and improvement activities performance categories at § 414.1325(f)(1). We are also proposing to modify our policy governing our treatment of multiple data submissions received for the Promoting Interoperability performance category, which we propose to codify at § 414.1325(f)(2). Specifically, for the quality and improvement activities performance categories, we are proposing that for multiple data submissions received from submitters in multiple organizations, CMS will calculate a score for each submission received and assign the highest of the scores. For multiple data submissions received from a submitter in the same organization, CMS will score the most recent submission. For the Promoting Interoperability performance category, we are proposing to modify our policy so that, for multiple data submissions received, CMS would calculate a score for each data submission received and assign the highest of the scores.

(e) MIPS Performance Category Measures and Activities

(i) Quality Performance Category

We are proposing to establish the data submission criteria for the Alternative Payment Model (APM) Performance Pathway (APP) quality measure set; maintain the data completeness criteria threshold to at least 75 percent for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years; establish a measure set inventory of 196 MIPS quality measures, of which 193 are available in traditional MIPS and 3 are available only for utilization in MVPs; and codify previously established criteria pertaining to the removal of MIPS quality measures. Additionally, in section IV.A.4.e.(1)(e) of this proposed rule, there are two quality-related RFIs. The first RFI pertains to the potential expansion of the survey modes for the administration of the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey, particularly expanding the survey modes from a mail-phone protocol to a web-mail-phone protocol. The second RFI pertains to the potential development of a set of guiding principles that would be utilized for the selection and

implementation of Patient-Reported Outcome Measures (PROMs) and Patient-Reported Outcome Performance Measures (PRO-PMs).

(ii) Cost Performance Category

We are proposing to add six new episode-based measures to the cost performance category beginning with the CY 2025 performance period/2027 MIPS payment year: Chronic Kidney Disease, End-Stage Renal Disease, Kidney Transplant Management, Prostate Cancer, Rheumatoid Arthritis, and Respiratory Infection Hospitalization. We are also proposing modifications to two existing episode-based cost measures so that their specifications reflect re-evaluated versions: Cataract Removal with Intraocular Lens (IOL) Implantation (currently titled Routine Cataract Removal with IOL Implantation) and Inpatient (IP) Percutaneous Coronary Intervention (PCI) (currently titled ST-Elevation Myocardial Infarction (STEMI) PCI). We are proposing to adopt a 20-episode case minimum for the six new episode-based cost measures. We are also proposing to maintain the existing case minimums for the two measures we are proposing to modify in this rulemaking, which are a 20-episode case minimum for the IP PCI measure and a 10-episode case minimum for the Cataract Removal with IOL Implantation measure. Additionally, we are proposing to update the operational list of care episode and patient condition groups and codes to reflect these new and modified measures that we are proposing. Lastly, we are proposing to adopt criteria to specify objective bases for the removal of any cost measures from the MIPS cost performance category, which we are also proposing to codify at § 414.1350(e).

(iii) Improvement Activities Performance Category

As part of our regular maintenance of the improvement activities Inventory, we are proposing to add two new, modify two existing, and remove eight existing improvement activities. The new activities help fill gaps we have identified in the Inventory while the modified and removed activities will ensure that it includes only the most meaningful activities that have a clear path to clinical practice improvement. In addition, we are proposing two changes to the traditional MIPS improvement activities reporting and scoring policies for the CY 2025 performance period/2027 MIPS payment year: to eliminate the weighting of activities and to reduce the

number of activities to which clinicians are required to attest to achieve a score in the improvement activities performance category. Lastly, we are proposing to codify seven improvement activity removal factors to establish criteria used to identify activities for potential removal or modification.

(iv) Promoting Interoperability Performance Category

We do not have any proposals for the Promoting Interoperability performance category. We are seeking public comment on a RFI regarding the Public Health Reporting and Data Exchange Objective.

(f) MIPS Final Scoring Methodology

(i) Scoring the Quality Performance Category

We are proposing to implement defined topped out benchmarks for topped out measures in specialty sets affected by limited measure choice. Many specialty sets have not had the measure development that was envisioned early on the program. As a result, we have retained topped out measures to ensure there are applicable measures. To accommodate for this limited measure choice and the rising performance threshold, we are proposing to remove the 7-point topped out measure score cap for clinicians reporting measures included in certain specialty measures and implement a benchmarking strategy for affected measures that would ensure clinicians with limited measure choice are not unfairly penalized. Additionally, we are proposing to apply a Complex Organization Adjustment for virtual groups and APM Entities (including SSP ACOs) reporting eCQMs. We are also proposing to score Medicare CQMs using flat benchmarks for their first 2 years in the program consistent with the Shared Saving Program's policies.

(ii) Scoring the Cost Performance Category

We are proposing to modify our methodology for scoring measures for the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year. Additionally, we are proposing to adopt a new cost measure exclusion policy beginning with the CY 2025 performance period/2027 MIPS payment year.

(g) MIPS Payment Adjustments

We are proposing to establish the mean as the methodology for determining the performance threshold for the CY 2025 performance period/2027 MIPS payment year through the CY 2027 performance period/2029 MIPS

payment year. To determine the performance threshold for the CY 2025 performance period/2027 MIPS payment year, we are proposing that we will use the mean of the final scores from the CY 2017 performance period/2019 MIPS payment year. Based on the mean final score from that prior period, we are proposing to establish a performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year.

(h) Calculating the Final Score

We are proposing to adopt a new reweighting policy at § 414.1380(c)(2)(i)(A)(10) and (c)(2)(i)(C)(12). Specifically, we are proposing that, beginning with the CY 2024 performance period/2026 MIPS payment year, we may reweight one or more of the performance categories (specifically, quality, improvement activities, or Promoting Interoperability) where we determine, based on information submitted to us on or before November 1st of the year preceding the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third party intermediary, and the third party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines. We also are proposing that, to determine whether to apply reweighting to the affected performance category(ies), we will consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third party intermediary's submission of the clinician's data for the performance category(ies); whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines.

(i) Third Party Intermediaries

We are proposing to add a requirement that CMS-approved survey vendors must provide information on the cost of their services beginning with the CY 2026 performance period/2028 MIPS payment year. These costs will only be applicable to the CAHPS for MIPS Survey measure. If this proposal is finalized, the CAHPS for MIPS Survey

Vendor Participation Form and the CAHPS for MIPS Survey Minimum Business Requirements in the QPP Resource Library would be updated to detail the required survey vendor cost information.

(2) Advanced APM Proposals

(a) Overview of the APM Incentive

Eligible clinicians who meet threshold levels of participation in Advanced APMs to become QPs (or partial QPs) are excluded from MIPS reporting requirements and payment adjustments. We assess the level of participation in Advanced APMs based on payment amounts or patient counts as provided in our regulation at § 414.1425 using the threshold percentages specified in § 414.1430. The threshold percentages are calculated using the ratio of attributed beneficiaries to attribution-eligible beneficiaries. A beneficiary is considered attribution-eligible if they meet the six criteria specified in the definition of “attribution-eligible beneficiary” under § 414.1305 of our regulations. We are proposing to modify the sixth criterion under the definition of “attribution-eligible beneficiary.” Specifically, we are proposing to include as attribution-eligible any beneficiary who has received a covered professional service furnished by the eligible clinician (identified by their National Provider Identifier (NPI)) for the purpose of making QP determinations. We are also proposing to amend § 414.1430 to reflect the statutory QP and Partial QP threshold percentages for both the payment amount and patient count methods under the Medicare Option and the All-Payer Option with respect to payment year 2026 (performance year 2024) in accordance with amendments made by the CAA, 2024. Relatedly, we are proposing to amend § 414.1450 to reflect the statutory APM Incentive Payment amount for the 2026 payment year (performance year 2024) of 1.88 percent of the eligible clinician’s estimated aggregate payments for covered professional services in accordance with amendments made by the CAA, 2024.

2. Definitions

At § 414.1305, we are proposing to revise the definition of the following term:

- Attribution-eligible beneficiary

These terms and definitions are discussed in detail in the relevant sections of this proposed rule.

3. Transforming the Quality Payment Program

a. Vision and Strategy Overview

Medicare plays a lead role in transitioning the health care system away from fee-for-service payment, which incentivizes the quantity of care, toward value-based payment, which incentivizes higher-quality care and smarter spending. We continue to focus on transforming health care delivery and our 2030 goal to have all traditional Medicare beneficiaries in an accountable care relationship with their health care provider. Under accountable care, a person-centered care team is responsible for improving quality of care, care coordination, and health outcomes for a defined group of individuals, reducing care fragmentation, and avoiding unnecessary costs for individuals and the health system. We continue to pursue driving higher value care, supporting Advanced APM participation, increasing alignment to reduce burden, and promoting health equity. As stated previously (85 FR 50279 and 50284, 86 FR 65394 through 65396), we envision a full transition to MVP reporting and sunset of traditional MIPS to support movement towards value-based payment. Through this Request for Information (RFI) we seek feedback on policies to support full implementation of MVPs.

We have a cohesive value-based care strategy for Medicare based on three pillars: Alignment, Growth, and Equity.⁷⁰⁴ These pillars are inter-related and address the following:

- Aligning key aspects of value-based arrangements across Medicare can help set the stage for broader synchronization of our health system and move health care providers to higher levels of delivery system transformation.
- Growth of accountable care relationships in both traditional Medicare and Medicare Advantage can improve quality and increase savings for Medicare beneficiaries by promoting innovative care delivery that better provides whole-person care.
- The design of value-based arrangements in Medicare can be an important tool for advancing health equity by encouraging the movement of care upstream to address the health-related social needs and disparities that can lead to/exacerbate poor health outcomes.

⁷⁰⁴ Update On The Medicare Value-Based Care Strategy: Alignment, Growth, Equity, Health Affairs Forefront, March 14, 2024. <https://www.healthaffairs.org/content/forefront/update-medicare-value-based-care-strategy-alignment-growth-equity>.

We intend to continue our efforts to align the Quality Payment Program with the three pillars and broader CMS initiatives. One of our CMS National Quality Strategy goals is to improve quality and health outcomes across the health care journey through the implementation of a “Universal Foundation” of impactful measures across all our quality and value-based programs.^{705 706 707} Adoption of the Universal Foundation will focus clinician attention on specific quality measures, reduce burden, help identify disparities in care, prioritize development of interoperable digital quality measures, allow for cross-comparisons across programs, and help identify measurement gaps. We have identified adult and pediatric measures for the Universal Foundation to be used across CMS programs and populations to the extent they are applicable. For example, we finalized in the CY 2024 PFS final rule our proposal to consolidate the previously finalized Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single consolidated Value in Primary Care MVP which aligns with the adult Universal Foundation core set of quality measures (88 FR 80042 through 80047). In section IV.A.4.c.(2) of this proposed rule we are proposing the creation of a new Alternative Payment Model (APM) Performance Pathway (APP) Plus quality measure set that incrementally adopts all ten of the Adult Universal Foundation measures starting in the CY 2025 performance period/2027 MIPS payment year. In section IV.A.4.e.(1)(b)(i) of this proposed rule, we are proposing MIPS eligible clinicians, groups, and APM Entities have the option to report such measures starting the 2025 performance period/2027 MIPS payment year. We are launching the Making Care Primary (MCP) Model in July 2024 to increase the number of primary care providers in value-based care and beneficiaries in accountable care relationships in eight States.^{708 709} The MCP model supports

⁷⁰⁵ CMS National Quality Strategy. (Centers for Medicare & Medicaid Services, April 2022). <https://www.cms.gov/files/document/cms-national-quality-strategy-fact-sheet-april-2022.pdf>.

⁷⁰⁶ The CMS National Quality Strategy: A Person-Centered Approach to Improving Quality. Centers for Medicare & Medicaid Services, June 2022). The CMS National Quality Strategy: A Person-Centered Approach to Improving Quality | CMS (https://www.cms.gov/blog/cms-national-quality-strategy-person-centered-approach-improving-quality#_ftn4).

⁷⁰⁷ Quality in Motion, Acting on the CMS National Quality Strategy, April 2024. <https://www.cms.gov/files/document/quality-motion-cms-national-quality-strategy.pdf>.

⁷⁰⁸ <https://www.cms.gov/priorities/innovation/innovation-models/making-care-primary>.

care integration including expected strengthening of primary care clinicians' connections with specialists while using evidence-based behavioral health screening and evaluation to improve patient care coordination. This will include implementation of new model-specific billing codes that we expect to result in greater use of e-consults and expanded ongoing communication among clinicians with a shared patient. The quality performance measures included in the MCP model reflect our Universal Foundation work to streamline measures across programs and test new and innovative measures. We are proposing in section II.G.2. of this proposed rule to adopt specific coding and payment policies for advanced primary care management (APCM) services for use by practitioners who are providing services under this specific model of "advanced primary care", beginning January 1, 2025. These services would be furnished under the direction of a physician or other qualified health care professional who is responsible for all primary care (e.g., physicians and non-physician practitioner, including nurse practitioner, physician assistant, certified nurse midwife and clinical nurse specialist), and serve as the continuing focal point for all needed health care services, during a calendar month. We are proposing three new APCM codes that would recognize the resources involved in furnishing ongoing, beneficiary-centered care management services under the broad model of advanced primary care without paying for each activity separately while allowing for flexibility in addressing patient needs. APCM payment would incorporate several specific, existing care management and communication technology-based services into a bundle and include performance measurements requirements that could be met by reporting the Value in Primary Care MVP beginning in the CY 2025 performance period/2027 MIPS payment year. Billing practitioners who are not MIPS eligible clinicians (as defined at 42 CFR 414.1305) would not have to report the MVP in order to furnish and bill for APCM services. The Value in Primary Care MVP contains the Adult Universal Foundation quality measure set, which is consistent with the National Quality Strategy goal of using the Universal Foundation measures across as many programs as is

feasible.⁷¹⁰ The Shared Savings Program, Innovation Center, and MIPS continue to collaborate strategically to develop and elaborate on the long-term vision and implementation policies for the Quality Payment Program.

This RFI addresses how we can achieve full MVP adoption and subgroup participation as we move toward the sunset of traditional MIPS and advancing the three pillars and the National Quality Strategy. We intend to obtain more meaningful comparable performance data and to drive higher value care through MVPs and to provide as much transparency as possible as we believe about the timing for sunset of traditional MIPS (86 FR 39356). Specifically, we are seeking feedback on clinician readiness to report MVPs, how we should ensure there are applicable MVPs for all clinicians, including the option of creation of broadly applicable MVP(s), and what guidance/parameters are needed for multispecialty groups to place clinicians into subgroups for reporting an MVP relevant to the scope of care provided.

b. The Role of MVPs in Transforming MIPS

(1) Overview

We are moving towards full implementation of MVPs, which are a key component of transforming MIPS. MVPs connect the MIPS performance categories to measure quality and patient experience of care linked to related costs of care, encourage improvement of care, simplify MIPS, and assure accessible health care performance data and interoperability. We are implementing MVPs in MIPS to encourage clinicians to report on measures that are directly relevant to their clinical practice and connect the performance categories to better measure the value of care and support care improvements (86 FR 39351). MVPs may make it easier for MIPS eligible clinicians to select the measures and activities that are most relevant to their practice. Rather than selecting individual measures and activities from large inventories to report under potentially siloed MIPS performance categories under traditional MIPS, eligible clinicians who submit an MVP will have a simplified process of selecting from a smaller, cohesive set of measures and activities focused on the clinician's performance in rendering care for a specialty or clinical condition. MVPs provide a pathway to improve value, reduce burden, help patients

compare clinician performance to inform patient choice, and reduce barriers to movement into Advanced APMs (86 FR 65391).

In the CY 2024 PFS final rule, we discussed the potential of developing policies to raise the bar on quality and support continuous improvement for clinicians who consistently perform well in MIPS (88 FR 79322). At this time, we are not proposing any changes related to the continuous improvement based on feedback received. We are mindful of changes clinicians are making to move towards MVP reporting.

MVPs support the measurement and improvement of specialty and primary care practice, through a portfolio of MVPs that address care and clinician conditions of importance to our patients. MVPs align the quality performance category, cost performance category, and improvement activities performance category and a foundational layer of the Promoting Interoperability performance category and population health measures. MVPs encourage the measurement of performance on a cohesive set of measures and activities focused on the clinician's performance, and over time, improvement in performance in rendering care for clinical conditions or patient populations. Widescale adoption of MVPs, using a standardized connected set of measures and activities for a specialty or medical condition, may generate important and meaningful information for patients to be able to compare performance of clinicians on the same or similar sets of measures. As we have greater MVP adoption and subgroup reporting we expect to obtain an expanded set of clinical specialty performance data that will be meaningful to patients as they choose clinicians.

(2) Furthering MVP Adoption

We continue to incrementally develop and maintain MVPs that are relevant and meaningful for all clinicians who participate in MIPS to support a full transition to MVPs. We finalized five new MVPs in the CY 2024 PFS final rule (88 FR 79322 through 79323) and finalized modifications to previously finalized MVPs (88 FR 79323). We refer readers to section IV.A.4.a.(1) of this proposed rule for the discussion of six additional proposed MVPs addressing a range of clinical conditions and specialty care. As we increase the inventory of MVPs, a greater percentage of MIPS eligible clinicians may report MVPs. Based on our internal data the proposed addition of six MVPs, if finalized, would allow approximately

⁷⁰⁹ The CMS Innovation Center's Strategy to Support High-quality Primary Care | CMS, <https://www.cms.gov/blog/cms-innovation-centers-strategy-support-high-quality-primary-care>.

⁷¹⁰ <https://www.cms.gov/medicare/quality/cms-national-quality-strategy/aligning-quality-measures-across-cms-universal-foundation>.

80 percent of specialties participating in the program to submit applicable MVPs.

In the CY 2022 PFS final rule, we finalized that voluntary reporting of MVPs would start in the CY 2023 performance period/2025 MIPS payment year and to implement MVPs through a gradual process that allows MVP Participants and third-party intermediaries time to adapt to changes in policy, requirements, and programming updates that would need to occur in technology systems (86 FR 65394 through 65396). We support a gradual movement to MVPs. Existing flexibility allows organizations and clinicians to determine whether they are ready to make the transition to MVP reporting, and time to familiarize themselves with MVP policies and prepare to report MVPs that are relevant to their practice (86 FR 65396). Promisingly, based on internal data, over 750 groups and clinicians registered to report MVPs for the CY 2023 performance period/2025 MIPS payment year. We are interested in learning from early MVP Participants to understand lessons learned and any barriers that they encountered or overcame to enable MVP submission. We are taking steps to encourage MVP adoption and expect additional MIPS eligible clinicians to voluntarily begin reporting MVPs before the eventual sunset of traditional MIPS. To engage clinicians in MVP adoption we provide MVP webinars and outreach, and our qpp.cms.gov web page provides information for clinicians related to reporting MVPs, our MVP inventory and MVP development.⁷¹¹ We have increased our inventory of MVPs annually and we engage interested parties in MVP development, including a 45-day comment period for public input on MVP candidates each year.⁷¹²

We are collaborating with the CMS Innovation Center as new payment models are explored and developed that may incorporate specialist or clinical condition-based MVP reporting. See section III.J. of this proposed rule for a Request For Information which seeks input regarding the design of a future ambulatory specialty model, which may leverage MVPs as a foundation for increasing specialty care provider engagement in value-based payment.

(3) Sunset of Traditional MIPS

We have discussed in previous PFS rules our intention to fully transition to MVPs and sunset traditional MIPS (85

FR 50279 and 50284, 86 FR 65394 through 65396). Continuing to maintain the traditional MIPS submission option may impair MVP adoption by clinicians who have an available MVP. Slow adoption may delay the benefits of MVPs which will simplify MIPS and improve comparable clinician performance data that helps to drive value and inform clinician selection by patients. We solicited public comments in the CY 2022 PFS proposed rule on the length of time MVP reporting should be voluntary and the timing for when we should sunset traditional MIPS (86 FR 39356). Responding interested parties supported MVP goals and a transparent, gradual transition to MVPs with voluntary MVP reporting, with adequate time to prepare for reporting an MVP. Clinicians may take advantage of voluntary MVP reporting now to gain experience. We have not proposed a target year to sunset traditional MIPS; however, it is critical to develop a plan to sunset traditional MIPS for the awareness of all interested parties (such as MVP Participants, third-party intermediaries, and health systems) so they may plan their work accordingly to coincide with this timeline.

We are developing the timeline for the full transition to MVPs and are seeking feedback on clinician readiness for MVP reporting and MIPS policies needed to sunset traditional MIPS in the CY 2029 performance period/2031 MIPS payment year. This timeline would ensure MVPs may be voluntarily reported during a period of 6 to 7 years while traditional MIPS is available, allowing clinicians time to prepare for MVP reporting and to engage in the development of the MVP inventory. As we plan for the full transition to MVPs, we appreciate that we must ensure that any MIPS policies that require rulemaking to sunset traditional MIPS are proposed and finalized, and that adequate prior notice is provided to clinicians who may need to update their systems and work processes to report MVPs. We continue to assess remaining MVP gaps that must be filled and to confirm participation options for MIPS eligible clinicians. We anticipate that we may be ready to fully transition to MVPs by the CY 2029 performance period/2031 MIPS payment year.

Robust MVP availability and clinician coverage would be a precursor to sunset setting traditional MIPS. Ideally, there would be MVPs applicable to a diverse set of specialties, patient populations, and clinical conditions; and we are working towards this. We acknowledge that, even with a robust inventory of MVPs, there may be some clinicians who cannot submit an

applicable MVP, as currently structured, due to lack of measures to build a respective MVP or lack of measure case counts or specialization that does not allow reporting of MVP quality measures and calculation of a cost measure.

While we are expanding our MVP portfolio, we are hampered by the limited number of available quality and cost measures for certain patient populations, clinical conditions, and specialties. We refer readers to section IV.A.4.a.(1) of this proposed rule which discusses MVP development and measure gap areas. We recognize that resources for measure development are limited, and measure development must be prioritized to move forward with quality and cost measurement with the greatest impact. We are collaborating with measure developers and providing transparency on measure gaps and the limitations around quality and cost measure development.

(4) Potential Path Forward

We are aiming to have sufficient MVPs to meet the goals of the MVP Framework, allow reporting by all clinicians in MIPS, sunset traditional MIPS, and transition fully to MVPs. Additionally, in the CY 2026 performance period/2028 MIPS payment year, when subgroup reporting becomes mandatory for multispecialty groups that participate in MIPS as MVP Participants (§ 414.1305; 86 FR 65394 through 65397), we want to ensure there are opportunities for specialists within the multispecialty group to submit MVPs. This will allow us to better assess the scope of care provided by the group and provide a wider scope of clinician performance data to patients. While we endeavor to create a robust set of MVPs allowing for participation by all MIPS eligible clinicians as we sunset traditional MIPS in the future, we acknowledge there are constraints, including measure availability, hindering attainment of this goal. We refer readers to section IV.A.4.a.(1) of this proposed rule for a discussion of measure gaps and MVP development. We continue to explore different ways to increase MVP coverage for as many MIPS eligible clinicians as possible. The current MIPS quality and cost measure inventories contain gaps which affect both traditional MIPS and MVPs, with MVPs requiring fewer measures to meet requirements. Therefore, we are examining approaches to developing MVPs to ensure that all MIPS eligible clinicians have MVPs to report.

Currently, MVPs include performance measures and activities that are broadly applicable across specialties in addition

⁷¹¹ MIPS Value Pathways (MVPs) ([cms.gov](https://qpp.cms.gov/mips/mips-value-pathways)), <https://qpp.cms.gov/mips/mips-value-pathways>.

⁷¹² MVP Candidate Development & Submission, <https://qpp.cms.gov/mips/mips-value-pathways/submit-candidate>.

to quality measures that are specialty/subspecialty specific. When subspecialty specific or more focused measures are implemented, they are considered for addition to the corresponding MVP. As stated earlier, we have made progress with developing MVPs for the majority of specialties and priority clinical conditions. However, we are exploring options of how MVPs can be further developed to facilitate greater reporting rates for clinicians with fewer measures available for their specialty. We refer readers to the 2025 MVP Needs and Priorities document,⁷¹³ which identifies measurement gaps and specialties with limited quality measures, and often limited outcomes and high priority measures, and cost measures.

We are considering approaches that would assist in making MVPs available to all MIPS eligible clinicians, however, all approaches to be more inclusive of clinicians are hindered by the existing gaps in quality and cost measures. We seek comment on approaches that include expanding finalized MVPs to include more specialties or subspecialties related to a care condition; developing new, broader MVPs with a different emphasis from current MVPs focused on a single specialty or clinical condition; and developing MVPs for non-patient facing MIPS eligible clinicians.

- Expand previously finalized MVPs to include different specialties included in care delivery for patient population. The applicability of an MVP could be expanded through embedding measures and activities specific to additional specialties in a relevant MVP, which may allow a broader array of clinicians to report the MVP. For example, in future program years, we may be interested in expanding the Advancing Cancer Care MVP to include measures related to non-patient facing MIPS eligible clinicians that would support care to cancer patients, such as pathologists. A benefit of this approach would be the expansion of the clinician specialties who could report a given MVP, without increasing the number of stand-alone MVPs. However, the addition of too many measures and activities could undermine the goal of having a smaller, cohesive set of measures and activities in MVPs.

- Expand previously finalized MVPs to include subspecialties. The applicability of an MVP could be increased by broadening the measures

and activities to include additional subspecialties. For example, we do not anticipate the development of MVPs for each surgical subspecialty or type of surgical procedure, but rather maintain broader surgical MVPs inclusive of surgeries that are clinically related yet support multiple subspecialties and/or procedures within the surgery specialty. As an example, lumbar surgical measures may be included within MVPs for orthopedic surgeons and neurosurgeons but would not comprise a standalone MVP solely focused on lumbar surgery. Conversely, an Improving Spine Care MVP could be developed that encompasses multiple procedures and aspects of care that could support use by multiple specialties, such as orthopedic surgeons and neurosurgeons. Similar to an approach that expands MVPs to include additional specialties, this option adheres to our goal of having a meaningful set of MVPs.

- Develop MVPs based on Multiple Specialty Measure Sets. For specialties that currently do not have MVP coverage, we could develop an MVP applicable to multiple conditions or specialties that currently do not have MVP coverage. This approach would serve as a bridge until new applicable measures are developed that allow for creation of individual MVPs for clinicians without an MVP specific to their specialty, patient populations served, or the primary conditions treated. For example, we do not currently have an MVP for many non-patient facing clinicians, but we could develop an MVP geared towards these multiple specialty types as a temporary bridge until more meaningful options can be finalized. The benefit could be allowing clinicians early experience in MVPs until we have additional specifically specific measures to create more robust and meaningful MVPs. However, this approach may replicate traditional MIPS and fall short of our MVP vision and goals of a cohesive set of measures and activities; as clinicians' performance would still be based upon the various measures and activities chosen. Clinicians might repeatedly choose unlinked measures with high performance levels rather than addressing performance areas in need of improvement and may also lessen the comparability of performance measures reported by clinicians providing similar services.

- Develop MVPs based on Cross-Cutting and Broadly Applicable Measures. We may consider building an MVP which applies to multiple specialty types by leveraging frequently reported cross-cutting or broadly

applicable measures that can be reported by MIPS eligible clinicians who currently do not have MVPs specific to their scope of care. Cross-cutting quality measures address important health issues with clinical quality actions that can be completed by a multitude of clinician types, such as screening and cessation intervention for tobacco use, screening for high blood pressure and follow-up and screening for social drivers of health. Broadly applicable quality measures can be submitted by multiple specialties, including Screening for Depression and Follow-up Plan; Preventive Care and Screening; Unhealthy Alcohol Use; Screening & Brief Counseling, and Use of High-Risk Medications in Older Adults. Population-based cost measures, such as the Total Per Capital Cost (TPCC) and Medicare Spending per Beneficiary (MSPB) measures, could be used in such an MVP. A benefit of developing new MVPs would be to create a bridge allowing for early experience in MVPs for clinicians that currently have no other MVP reporting options. MVP development would need to include examination of approaches to add additional quality and cost measures to MIPS. We acknowledge this is a temporary step towards either a more robust and meaningful standalone MVP or expansion of an existing MVP once specialty specific measures are developed and finalized for use in MIPS. We also have concerns that the MVP would be duplicative in nature to the Value in Primary Care MVP that represents concepts related to promoting wellness and appropriate chronic disease management, which is of critical importance in driving positive health outcomes. However, the broader, cross-cutting MVP does not appear to solve the concerns of all specialties identified in our 2024 MVPs Needs and Priorities⁷¹⁴ interested in submitting measures and activities related to their specialties. Additionally, if we developed an MVP that relied on entirely cross-cutting and broadly applicable measures, we may need policies to discourage clinicians from choosing this broad MVP when there is a more specifically applicable MVP available. We may explore using claims-based data to ascertain services provided and whether a clinical condition or specialty specific MVP better matches the type of care delivered or if a bridge MVP submission fits,

⁷¹³ 2024 MVP Needs and Priorities. [https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20\(MVPs\)%20Development%20Resources.zip](https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20(MVPs)%20Development%20Resources.zip).

⁷¹⁴ 2024 MVP Needs and Priorities. [https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20\(MVPs\)%20Development%20Resources.zip](https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20(MVPs)%20Development%20Resources.zip).

potentially within an auditing activity or tying payment to MVP selection.

- Develop MVPs for Non-Patient Facing MIPS Eligible Clinicians. We are considering exploring statutory flexibilities that could help address future challenges related to a lack of an applicable MVP for some clinicians. Any flexibilities we explore must support our overall MIPS goals. Reweighting a performance category, for example, would mean that the quality performance category or cost performance category could be reweighted in an MVP, and this would not support performance measurement to drive value or provide comparable information for patient use in selecting clinicians or care teams.

We believe one such flexibility exists at section 1848(q)(2)(C)(iv) of the Act, which provides that we must consider the circumstances of professional types that typically furnish services that do not involve face-to-face interaction with a patient. We refer to these clinicians as non-patient facing MIPS eligible clinicians as defined at § 414.1305. Section 1848(q)(2)(C)(iv) of the Act further provides that, to the extent feasible and appropriate, we take into account such circumstances and apply to such non-patient facing MIPS eligible clinicians “alternative measures or activities that fulfill the goals of the applicable performance category.” In doing so, section 1848(q)(2)(C)(iv)(II) of the Act requires that we consult with non-patient facing MIPS eligible clinicians of such professional types or subcategories. We note that measure gaps for some non-patient facing MIPS eligible clinicians, for example diagnostic radiologists and pathologists, present challenges in developing a respective MVP. We refer readers to section IV.A.4.a.(1) of this proposed rule for discussion of MVP portfolio development and specialties with measure gaps. We are interested in exploring alternative measures and activities that would allow us to measure the performance of non-patient facing MIPS eligible clinicians.

As we explore various approaches to enable all MIPS eligible clinicians to report MVPs, we seek comment on options, such as expanding previously finalized MVPs, developing more global MVPs with broadly applicable measures as an interim bridge for those clinicians with too few specialty-specific quality measures and the potential use of statutory flexibilities, as we move to full MVP adoption and sunseting traditional MIPS.

(5) Consideration of MVP Policies and Requirements

A component of sunseting traditional MIPS is examining requirements and policy that may require revision to ensure a smooth transition into MVP reporting. For example, we intend to assess our current policy which does not allow virtual groups and opt-in⁷¹⁵ reporters to submit an MVP (§ 414.1305). We want to understand additional barriers preventing clinicians from reporting MVPs, and when possible, examine MVP policies that might need to be revised to remove the barriers. We may undertake these policy proposals in future rulemaking. We are interested in feedback on potential changes required as part of an effort to accommodate clinicians with few applicable and available quality and cost measures, who currently do not have an MVP available.

We have established a policy which states that, starting in the CY 2026 performance period/2028 MIPS payment year, multispecialty groups must form subgroups to report MVPs (86 FR 65394 through 65397). This policy will enable a subset of clinicians in a group to submit measures and activities in an MVP relevant to the scope of care provided by the subgroup and will lead to a more comprehensive evaluation of services provided by groups. As described in section IV.A.3.d. of this proposed rule, we are interested in feedback on how to balance the MVP requirement for multispecialty groups to form multiple subgroups with the ability of the program to evaluate specialty care and for patients to have meaningful information to use when making care decisions.

c. Mandatory Subgroup Reporting Requirement

(1) Overview

We have established a voluntary subgroup participation option for clinicians choosing to report an MVP beginning in the CY 2023 performance period/2025 MIPS payment year. We have also finalized a mandatory subgroup reporting requirement for multispecialty groups choosing to report as an MVP Participant beginning in the CY 2026 performance period/2028 MIPS payment year (§ 414.1305; 86 FR 65394 through 65397). Beginning with the CY 2026 performance period/2028 MIPS payment year, a single specialty group may continue to submit data for an MVP at the group level, and a multispecialty

group must form subgroups to report an MVP. Under the existing subgroup reporting policies, a group could place clinicians providing similar scope of care into one or more subgroups for reporting a relevant MVP. The remaining clinicians under the group TIN not part of a subgroup could participate as individuals for reporting an MVP or traditional MIPS. The entire group TIN (including the clinicians that are part of the subgroup) could also submit data as a group in traditional MIPS.

Subgroup participation for MVP reporting will allow group practices to comprehensively capture the diverse range of services provided by the clinicians under a group TIN. We anticipate subgroup reporting will also provide clinician information to patients related to a specific condition or care needs. Subgroup reporting will provide specialist information to primary care clinicians allowing relevant patient referrals. We finalized the implementation of the subgroup reporting option to address public comments received that the existing group reporting requirements in MIPS allow a group to report on broadly applicable quality measures that are not representative of the scope of care provided and do not allow reporting of quality measures by only a portion of the clinicians under the group TIN.

(2) Specialty Composition of a Group

We have previously established definitions for a single specialty group and a multispecialty group at § 414.1305 (87 FR 70038 through 70040). Specifically, we stated that a single specialty group means a group as defined at § 414.1305 that consists of one specialty type as determined by CMS using Medicare Part B claims. A multispecialty group means a group as defined at § 414.1305 that consists of two or more specialty types as determined by CMS using Medicare Part B claims. MIPS eligible clinicians can check their eligibility status (individual, group, virtual group, APM Entity, opt-in) on the QPP Participation Status Tool (<https://qpp.cms.gov/participation-lookup>) to determine their MIPS participation options and whether they are subject to MIPS payment adjustment for the applicable performance period. Currently, the QPP Participation Status Tool does not provide information on group specialty designations informing a group whether CMS considers its TIN is composed of a single or multiple specialties. In the CY 2023 PFS final rule (87 FR 70039), we discussed that CMS utilizes different data sources to identify a clinician’s specialty. For

⁷¹⁵ Entities that exceed one or two, but not all three elements of the low-volume threshold defined at 42 CFR 414.1305 can opt-in to participate in MIPS (§ 414.1310(b)(1)(iii) and (b)(2)).

purposes of public reporting, we rely on PECOS as the primary data source, and for purposes of MIPS eligibility determination, we use both PECOS and claims data. Additionally, we use the information on Medicare Part B claims to identify clinician specialty when attributing some of the measures in the cost and quality performance categories. Based on CMS analysis of clinician specialty identification using Medicare Part B claims data and PECOS data, we found a variance rate of less than one percent between the two data sources and finalized the use of Medicare Part B claims data as the best data source to use to determine a group's specialty type or types for purposes of participation in MVPs. We refer readers to the CY 2023 PFS final rule (87 FR 70038 through 70040) for additional details on using the Medicare Part B Claims data to determine a group's specialty composition.

We also recognize there are additional nuances to consider for using the Medicare Part B claims data to appropriately implement the current definitions of a single specialty and multispecialty group. We acknowledge a multidisciplinary group practice could consist of clinicians across multiple specialties to provide team-based care in just one clinical area. For example, a group consisting of internists, geriatricians, family medicine practitioners, physician assistants, and nurse practitioners could be focused on providing primary care services to patients, which could be reflected as multiple specialties in Medicare Part B claims. Beginning in the CY 2026 performance period/2028 MIPS payment year, such a group TIN will be considered a multispecialty group using the definition described under § 414.1305. The internists, geriatricians, and family medicine practitioners could inappropriately be identified as unique specialties resulting in the TIN having clinicians with more than one primary specialty designation. Based on our previously established definition of a multispecialty group, this TIN will be required to form subgroups to participate in MVPs even though all the clinicians under the group TIN provide primary care services. This may result in multiple subgroups under the same group TIN submitting data for the same MVP, which would yield redundant quality measure reporting. Based on the scope of care provided, all the clinicians under the TIN could choose to report the measures and activities in the Value in Primary Care MVP. Additional scenarios that we would like to consider include instances when a primary

specialty designation of certain clinician types does not accurately reflect the scope of care provided. The physician assistants and nurse practitioners that are part of a cardiology group would potentially be involved in care relevant to stroke, heart failure, and other cardiac related conditions. The physician assistants and nurse practitioners that are part of a large group practice could be involved in a wide array of services. In both these instances, the primary specialty designation of a physician assistant or nurse practitioner would only be representative of their education credentials, and not the scope of care provided.

One approach we could consider is providing flexibility for a group practice to determine and inform CMS of their specialty composition. We anticipate that allowing a group TIN to indicate if they are a single specialty or multispecialty group could mitigate a few of the above concerns. We use the above example of a group consisting of internists, geriatricians, family medicine practitioners, physician assistants, and nurse practitioners focused on providing primary care services to patients. By allowing a group TIN to identify the group's specialty composition, the group TIN could identify as a single specialty group and report the measures and activities in the Promoting Wellness MVP as a group. Providing the ability for groups to determine their specialty composition would provide the opportunity for groups to determine the MVP participation option that is consistent with the scope of care. We anticipate it would eliminate the need for duplicative reporting, support the team-based care approach, and allow groups to comprehensively categorize the care provided by the clinicians in a group.

(3) Establishing Limits on the Composition of a Subgroup

We envision a future state in the Quality Payment Program where specific and highly meaningful clinician information is available for patients to determine their care choices while allowing clinicians to receive targeted feedback relevant to the scope of care provided. We anticipate a future state where a multispecialty group would only participate as subgroups for reporting MVPs. We have stated that one of the long-term goals of MVP and subgroup reporting is to encourage team-based care and therefore, have not established any restrictions on subgroup formation. Specifically, we do not expect a subgroup to include only clinicians from a single specialty as it might be construed as discouraging

team-based care. We are also concerned that the absence of limitations on subgroup formation would result in a subgroup mimicking a multispecialty group in traditional MIPS. A subgroup of 100 clinicians under a group TIN could report on an MVP where the quality measures and activities in the MVP are applicable only to a subset of clinicians in the subgroup.

We are considering placing some limits on the composition of a subgroup to make subgroups meaningful and meet the end goals of MVP reporting. We also believe that a multispecialty group TIN could use the subgroup formation criteria as a guidance for placing clinicians into subgroups relevant to the scope of care provided. We recognize that any potential subgroup composition criteria should not interfere with the team-based approach for care provided by clinicians in multispecialty groups. We are considering whether we could establish limits on the number of clinicians per subgroup based on the size of the overall group TIN. For a multispecialty group TIN with less than 100 clinicians, should we consider limiting the maximum size of a subgroup to 50 clinicians? Similarly for a multispecialty group TIN with 100+ clinicians, should we consider placing limits on the minimum size of a subgroup? We are interested in approaches that would encourage multispecialty groups to report more than one MVP.

We are also considering whether we could utilize the information on Medicare claims data to potentially create subgroup composition restrictions. For example, we could identify the care provided by the clinicians in a group based on the specific procedures or services performed by the clinician. We are considering analyzing subgroups based on the volume of services billed by the clinicians in a group practice for a specific medical condition (for example, heart failure, joint replacement, etc.) or a specific procedure (beta blocker therapy, stent placement, hip and/knee surgery, etc.). We anticipate this approach would serve as a guidance for clinicians such as family practitioners, physician assistants, internists, etc. who provide a diverse range of services across specialty types.

(4) Mandatory Subgroup Reporting for Small Practice TINs

At § 414.1305, we define a small practice to mean a TIN consisting of 15 or fewer eligible clinicians during the MIPS determination period. For a group of 15 or fewer clinicians, participation at the group or subgroup level for MVP

reporting would provide similar performance information to clinicians and patients. Therefore, we do not anticipate additional benefits for mandating clinicians in a small practice TIN to split into multiple subgroups for reporting an MVP. One approach we could consider is making an exception for multispecialty small practice TINs from the mandatory subgroup reporting requirement for multispecialty practices beginning in the CY 2026 performance period/2028 MIPS payment year. This would alleviate the additional burden for small practice TINs to form subgroups and continue to participate as a group for reporting an MVP. A multispecialty small practice could voluntarily participate as subgroups for comprehensively capturing the diverse range of services provided by the group.

d. RFI Questions

We request public comment on specifically the following questions:

- For those clinicians who submitted an MVP for the CY 2023 performance period/2025 MIPS payment year, what practice level barriers did you overcome to successfully submit an MVP? How did you overcome any stated barriers? For those who did not submit an MVP, what key barriers impacted your decision to continue to report traditional MIPS?

- ++ For those clinicians who participated as a subgroup for reporting an MVP for the CY 2023 performance period/2025 MIPS payment year, we are interested to hear the technological barriers, if any, that impacted the ability to successfully submit subgroup level data. We are also interested to hear feedback from groups on any technical issues with de-aggregating data (specifically, the eCQM quality measure data) at the subgroup level.

- What does meaningful MIPS participation look like for clinicians who in the future with the sunset of traditional MIPS may not have an applicable MVP, e.g., clinician types without an MVP due to having less than four applicable quality performance measures and less than one cost measure identified in the 2025 MVP Needs and Priorities. Should CMS consider developing a more global MVP with broadly applicable measures as an interim bridge for those clinicians with too few specialty-specific quality measures, knowing that the measures may not be as highly relevant to the clinicians' scope of care as we would like? Should flexibilities or alternative policies such as non-patient facing clinician policy changes be considered for clinicians with limited performance

measures that allow them to participate in MIPS?

- As subgroup participation becomes mandatory for multispecialty groups reporting an MVP beginning in CY 2026, how can we balance the increase in burden for groups while allowing comprehensive reporting on the diverse range of services provided by the clinicians in a group? For example, should we consider limiting the number of subgroups that a group must form based on group size and composition?

- ++ Are there alternative approaches we could consider for setting limits on the minimum and maximum number of subgroups per group TIN?

- Could we consider establishing a process during MVP registration for groups to self-identify if the group is considered a single specialty or multispecialty group? Are there any barriers that CMS should be aware of if we established a process for a group practice to identify the overall specialty composition of a group TIN?

- Is it meaningful for a small practice to form subgroups? What additional performance information would it provide to patients and clinicians?

- Are there additional approaches we should consider for providing guidance to groups on appropriately placing clinicians into subgroups based on the scope of care provided?

Please note, this is an RFI only.

In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

Respondents are encouraged to provide complete but concise responses. This RFI does not commit the U.S. Government to contract for any supplies or services or make a grant award. Further, CMS is not seeking proposals through this RFI and will not accept unsolicited proposals.

Responders are advised that the U.S. Government will not pay for any information or administrative costs

incurred in response to this RFI; all costs associated with responding to this RFI will be solely at the interested party's expense. Not responding to this RFI does not preclude participation in any future procurement, if conducted. It is the responsibility of the potential responders to monitor this RFI announcement for additional information pertaining to this request. Please note that CMS will not respond to questions about the policy issues raised in this RFI. CMS may or may not choose to contact individual responders. Such communications would only serve to further clarify written responses. Contractor support personnel may be used to review RFI responses. Responses to this notice are not offers and cannot be accepted by the U.S. Government to form a binding contract or issue a grant. Information obtained as a result of this RFI may be used by the U.S. Government for program planning on a non-attribution basis. Respondents should not include any information that might be considered proprietary or confidential. This RFI should not be construed as a commitment or authorization to incur cost for which reimbursement would be required or sought. All submissions become U.S. Government property and will not be returned. CMS may publicly post the comments received, or a summary thereof.

a. CY 2025 MVP Development and Maintenance

(1) Development of New MIPS Value Pathways (MVPs)

In the CY 2023 PFS final rule (87 FR 70035 through 70037), we finalized modifications to the MVP development process to broaden opportunities for the general public to provide feedback on new candidate MVPs prior to the notice and comment rulemaking process. We refer readers to the Quality Payment Program website to review the public feedback we received for each 2025 MVP candidate (<https://qpp.cms.gov/mips/candidate-feedback>).

Through our development processes for new MVPs (85 FR 84849 through 84856, 87 FR 70035 through 70037), we aim to gradually develop new MVPs that are relevant and meaningful for all MIPS eligible clinicians. In this proposed rule, we are proposing the inclusion of six new MVPs titled:

- Complete Ophthalmologic Care;
- Dermatological Care;
- Gastroenterology Care;
- Optimal Care for Patients with Urologic Conditions;
- Pulmonology Care; and
- Surgical Care.

We refer readers to Appendix 3 in this proposed rule for a detailed description of each proposed new MVP. With the proposed addition of the six new MVPs, we estimate approximately 80 percent of specialties will have applicable MVPs available for reporting.

Although our intended goal has been to offer MVPs for all specialties and subspecialties during the transition from traditional MIPS to full MVP implementation (84 FR 40732 through 40740), we acknowledge our existing portfolio of quality and cost measures may not be applicable to all specialties and/or subspecialties. For quality measures, while most specialties and subspecialties can report on broadly applicable quality measures to meet the reporting requirements for the quality performance category within an MVP, some specialties/subspecialties do not have sufficient robust quality measures that are specific to their scope of care. Thus, we continue to explore options for overcoming challenges to develop MVPs for those specialties/subspecialties with limited quality measures.

For cost measures, while most specialties have at least one applicable episode-based cost measure and/or population-based cost measure, these measures may not encompass the full array of care that could be covered by a given specialty and, in some instances, some specialties/subspecialties may not have an applicable cost measure. For example, the following specialties have limited cost measures available and applicable based on the current MIPS cost measure inventory:

- Diagnostic Radiology;
- Interventional Radiology;
- Optometry;
- Pathology;
- Radiation Oncology; and
- Speech Language Pathology.

Additionally, some specialties have one or more applicable cost measures, but subspecialists may not be captured under these measures. In the case of the Melanoma Resection measure, it applies to individual MIPS eligible clinicians, groups, and subgroups that perform a sufficient number of melanoma excision procedures to meet the measure's case minimum. Although this measure is applicable to many dermatologists, whether a dermatologist is scored on this measure depends on multiple factors, including whether they submit claims on, and are attributed a sufficient number of qualifying melanoma excision procedures (minimum of 10 cases as specified under § 414.1350(c)(4)) to receive a score on this cost measure as set forth in § 414.1380(b)(2). While there are

existing policies to reweight the cost performance category for individual, groups, and subgroups of MIPS eligible clinicians that cannot be scored on cost measures in accordance with § 414.1380(b)(2), an MVP cannot be developed for a specialty/subspecialty if there is not at least one applicable cost measure, as finalized in the CY 2021 PFS final rule (85 FR 84472). The intent of MVPs is to assess MIPS eligible clinicians, groups, and subgroups across all performance categories, and additional cost measures would support this intent.

We use prioritization criteria from the CY 2022 PFS final rule (86 FR 65456) to determine which cost measures to develop:

- Clinical coherence of measure concept (to ensure valid comparisons across clinicians).
- Impact and importance to MIPS (including cost coverage, clinician coverage, and patient coverage).
- Opportunity for performance improvement.
- Alignment with quality measures and improvement activities to ensure meaningful assessments of value.

The CY 2022 PFS final rule (86 FR 65457) also established the following standards for cost measure construction:

- Measures must assign services that accurately capture the role of attributed clinicians.
- Measures must have clear, ex ante attribution to clinicians.
- Measures must be based on episode definitions that have clinical face validity and are consistent with practice standards.
- Measures' construction methodology must be readily understandable to clinicians.
- Measures must hold clinicians accountable for only the costs they can reasonably influence.
- Measures must convey clear information on how clinicians can alter their practice to improve measured performance.
- Measures must demonstrate variation to help distinguish quality of care across individual clinicians.
- Measure specifications must allow for consistent calculation and reproducibility using Medicare claims data.

As of the CY 2024 performance period/2026 MIPS payment year, we have developed and implemented 29 MIPS cost measures, which reflect the prioritization criteria and input from interested parties about potential clinical topics, measure scope, clinically related services, and potential challenges or barriers to measurement. This is a substantial achievement in

building out the cost measure portfolio since MIPS began with only two population-based cost measures, the Total Per Capita Cost (TPCC) measure and the Medicare Spending Per Beneficiary (MSPB) measure.

However, there are still MIPS eligible clinicians that do not have cost measures that apply to the major aspects of their care practice. For example, there are specialties or clinical topics where clinically coherent measure concepts have not yet been identified or where impact in terms of cost, clinician, or patient coverage is lower than that of other measure concepts that were prioritized for development. Therefore, we continue to encourage interested parties to utilize our established pre-rulemaking processes, such as the Call for Measures (<https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/overview>), to develop and submit candidate quality and cost measures relevant to their specialty. Furthermore, we continue to develop MVPs based on needs and priorities, as described in the MVP Needs and Priorities document ([https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20\(MVPs\)%20Development%20Resources.zip](https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20(MVPs)%20Development%20Resources.zip)). In section IV.A.3. of this proposed rule, we discuss our request for information on Transforming the Quality Payment Program and solicit feedback on challenges to adopting MVPs and a potential path forward for developing MVPs for MIPS eligible clinicians with limited measures.

(2) MVP Maintenance Process

In the CY 2023 PFS final rule (87 FR 70037), we finalized a modification to the annual maintenance process for MVPs previously finalized in the CY 2022 PFS final rule (86 FR 65410). We communicated that if we identified any potentially feasible and appropriate submitted maintenance recommendations, we would host a public facing webinar open to interested parties and the general public through which they could offer their feedback on the potential maintenance updates we have identified.

In this proposed rule, because we have had a low volume of submitted maintenance recommendations in past years, we are proposing to modify the MVP maintenance webinar process to provide us more flexibility in how we communicate submitted maintenance recommendations prior to proposing them formally in rulemaking. Allowing flexibility in communicating

recommendations through alternative webinar formats or other public communication channels would offer similar opportunities for public review and feedback as a live public webinar. For example, in lieu of a live webinar, we could choose to communicate submitted maintenance recommendations via a pre-recorded webinar, which will encourage interested parties to submit their feedback on the submitted recommendations in writing by email before maintenance updates are formally proposed in rulemaking. It is important to reiterate this public webinar process supports our commitment to consider interested parties' feedback when determining which maintenance updates are appropriate for inclusion in formal notice and comment rulemaking. We request comment on this proposal.

(3) MVP Maintenance Updates to Previously Finalized MVPs

Between the CY 2022 PFS final rule (86 FR 65998 through 66031) and the CY 2023 PFS final rule (87 FR 70037), we finalized 12 MVPs available for reporting beginning with the CY 2023 performance period/2025 MIPS payment year:

- Adopting Best Practices and Promoting Patient Safety within Emergency Medicine;
- Advancing Cancer Care;
- Advancing Care for Heart Disease;
- Advancing Rheumatology Patient Care;
- Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes;
- Improving Care for Lower Extremity Joint Repair;
- Optimizing Chronic Disease Management;
- Optimal Care for Kidney Health;
- Optimal Care for Neurological Conditions;
- Patient Safety and Support of Positive Experiences with Anesthesia;
- Promoting Wellness; and
- Supportive Care for Cognitive-Based Neurological Conditions.

In the CY 2024 PFS final rule (88 FR 79978 through 80047), we consolidated Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single primary care MVP titled "Value in Primary Care MVP" as well as finalized five additional MVPs available for reporting beginning with the CY 2024 performance period/2026 MIPS payment year:

- Focusing on Women's Health;
- Prevention and Treatment of Infectious Disorders Including Hepatitis C and Human Immunodeficiency Virus (HIV);

- Quality Care for the Treatment of Ear, Nose, and Throat Disorders;
- Quality Care in Mental Health and Substance Use Disorder; and
- Rehabilitative Support for Musculoskeletal Care.

In this proposed rule, we are proposing modifications to all 16 MVPs with the addition and removal of measures and improvement activities based on the MVP development criteria (85 FR 84849 through 84854). Through these modifications, we can expand upon the clinical concepts, advance health equity, address maintenance requests from the public, and remove measures and activities that would either be finalized for removal from their respective MIPS Inventory or replaced by more robust measures. In addition, through the MVP maintenance process, we are proposing to consolidate the previously finalized Optimal Care for Patients with Episodic Neurological Conditions MVP and the Supportive Care for Neurodegenerative Conditions MVP into a single consolidated neurological MVP titled Quality Care for Patients with Neurological Conditions MVP. We refer readers to Appendix 3 of this proposed rule for the proposed modifications and detailed descriptions to the previously finalized MVPs.

b. MVP Requirements and Scoring

In the CY 2022 PFS final rule (86 FR 65411 through 65415), we finalized policies for MVP reporting requirements, including subgroup requirements, which took effect beginning in the CY 2023 performance period/2025 MIPS payment year, at § 414.1365(c)(1) through (4). We noted that MVP reporting requirements are based on the reporting requirements of traditional MIPS but have some differences, such as reporting fewer measures, to reduce MVP reporting burden and allow for measurement that is more meaningful by requiring clinicians to report on measures and activities that comprehensively reflect an episode of care or clinical condition (86 FR 65411).

In the CY 2022 PFS final rule, we finalized policies for MVP scoring that took effect beginning in the CY 2023 performance period/2025 MIPS payment year. We refer readers to 86 FR 65419 through 65427 for the details of those finalized policies. We previously finalized at § 414.1365(d)(2) that, unless otherwise indicated in § 414.1365(d), the performance standards described at § 414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP (86 FR 65419 through 65421). We noted that in general, we have adopted the scoring policies from

traditional MIPS for MVP Participants unless there is a compelling reason to adopt a different policy to further the goals of the MVP framework (86 FR 65419). In this proposed rule, we are proposing to update the registration process and scoring policies for population health measures in the quality performance category, clarify the alignment between scoring cost measures in MVPs and traditional MIPS, update requirements and scoring policies for improvement activities in the improvement activities performance category, and update the requirements for subgroup reporting in the Promoting Interoperability performance category.

We refer readers to section IV.A.4.d. of this proposed rule for proposed policies on data submission requirements; IV.A.4.e.(1)(c)(i) of this proposed rule for proposed policies on the data completeness threshold, IV.A.4.f.(1)(b) of this proposed rule for proposed policies on scoring of topped out measures, and scoring virtual groups and APM Entities (including SSP ACOs) in the quality performance category; IV.A.4.f.(1)(d)(ii)(B) of this proposed rule for proposed benchmarking policies for scoring the cost performance category; IV.A.4.e.(3)(b)(iv) of this proposed rule for proposed policies for requirements and scoring that remove medium- and high-weighting from improvement activities in the improvement activities performance category; and IV.A.4.e.(4) of this proposed rule for current requirements and a Request for Information (RFI) for the Promoting Interoperability performance category.

(1) Quality Performance Category in MVPs

(a) Background on Population Health Administrative Claims-Based Measures

In the CY 2021 PFS final rule, we discussed the inclusion of population health measures as a part of the foundational layer of MVPs, to improve patient outcomes, reduce reporting burden and costs, and better align with clinician quality improvement efforts (85 FR 84856 and 84857). In the CY 2022 PFS final rule we defined a population health measure as a quality measure that indicates the quality of a population or cohort's overall health and well-being, such as, access to care, clinical outcomes, coordination of care and community services, health behaviors, preventive care and screening, health equity, or utilization of health services (86 FR 65408). We also discussed in the CY 2022 PFS final rule the importance of currently adopted population health measures,

noting that they capture outcomes important to patients and thus provide meaningful information to clinicians so they can improve their practice, and discussed the use of population health measures as the foundational layer in MVPs to ensure that important areas of measurement are reflected within all MVPs (86 FR 65408).

We finalized in the CY 2022 PFS final rule (86 FR 65414) at § 414.1365(c)(4)(ii) that an MVP Participant is scored on one population health measure in accordance with § 414.1365(d)(1). Since the MVP population health measures are administrative claims-based, they do not require data submission from clinicians and do not contribute to reporting burden. To track which population health measure an MVP Participant intends to report, we finalized in the CY 2022 PFS final rule (86 FR 65417) at § 414.1365(b)(2)(i) that MVP Participants are required to select one population health measure at the time of MVP registration.

(b) Proposal To Use the Highest Score of All Available Population Health Measures

In the CY 2022 PFS final rule (86 FR 65421 and 65422) we finalized scoring rules for population health measures in MVPs. We finalized at § 414.1365(d)(3)(i)(A) that, except as provided in paragraph (d)(3)(i)(A)(1), each selected population health measure that does not have a benchmark or meet the case minimum requirement is excluded from the MVP Participant's total measure achievement points and total available measure achievement points. In cases where an MVP Participant selects a population health measure that cannot be scored because it does not have a benchmark or meet the case minimum requirement, we do not score any other population health measures that may be applicable and available.

Population health measures are included in the MVP foundational layer because they capture outcomes important to patients (that is, hospitalizations for acute illness) and thus provide meaningful information to clinicians so they can improve their practice (86 FR 65408). Under the current policy, we cannot score an MVP Participant on a population health measure if the MVP Participant selects a measure at registration that lacks a benchmark or if their case volume does not meet the case minimum requirement for the selected measure, even if another measure is applicable and available. In the CY 2022 PFS final rule (86 FR 65414) we discussed calculating each population health measure and applying

the higher score to the quality score, however, we ultimately proposed and finalized the current policy to score only one selected population health measure to mitigate concerns from interested parties that not all population health measures are applicable to all specialties (86 FR 65414). We now realize that at the time of registration, an MVP Participant will not be able to determine if they will have enough cases to meet the case minimum required for scoring the selected population health measure and will not know, in advance, how the measure will score compared to a benchmark. Requiring an MVP participant to select the population health measure to be scored at the time of registration may penalize an MVP Participant who selects a population health measure at MVP registration.

To increase the likelihood that a population health measure can be scored, we had considered several options, including calculating the population health measure score by using an average score of all population health measures that have a benchmark and meet the case minimum requirement and using the score of the population health measure with the highest number of cases in order to score the population health measure that represents the most care provided by an MVP Participant. However, we determined these approaches could result in a lower score for an MVP Participant that did not correlate to the MVP Participant's performance. We also considered whether an MVP Participant could select a population health measure at the time of data submission when all other measures are reported. However, population health measures are calculated by CMS using administrative claims-based data and therefore do not require data submission from clinicians, and administrative claims-based data is not available for CMS calculation until at least 60 days after the end of the reporting period. Therefore, the MVP Participant would not know whether they would meet the case minimum requirement for the selected population health measure at the time of data submission.

Because population health measures in the MVP capture outcomes important to patients (that is, for example, hospitalizations for acute illness) and thus, provide meaningful information to clinicians so they can improve their practice, we want to avoid scenarios where MVP Participants may inadvertently select a measure that cannot be scored. As described for traditional MIPS at § 414.1380(b)(1)(i), CMS calculates all administrative

claims-based quality measures and scores the clinician on each measure for which there is a benchmark and the clinician meets the case minimum requirement. Calculating all population health measures in MVPs would more closely align with the policy to calculate all administrative claims-based quality measures. Additionally, we have developed MVPs with a smaller, more cohesive set of measures and streamlined reporting requirements. A policy to take the highest population health score would increase the likelihood that an MVP Participant is scored on a population health measure and would ensure that MVP Participants receive the highest possible population health score that correlates to their performance.

We are proposing to revise § 414.1365(d)(3)(i)(A) to state that for the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, MVP Participants will be scored on the selected population health measure and beginning in the CY 2025 performance period/2027 MIPS payment year, we would use the highest score of all available population health measures. If no population health measure has a benchmark or meets the case minimum requirement, then the population health measure is excluded from the MVP Participant's total measure achievement points and total available measure achievement points. To apply this policy to subgroups reporting an MVP, we also propose to update § 414.1365(d)(3)(i)(A)(1) to provide that for the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, subgroups will be scored on the selected population health measure based on its affiliated group score, if available, and beginning in the CY 2025 performance period/2027 MIPS payment year, a subgroup is scored on the highest scoring of all available population health measures based on its affiliated group score, if available. If the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points.

We are also proposing to remove the requirement for an MVP Participant to select a population health measure at the time of MVP registration. If we implement our proposal to calculate each population health measure for an MVP Participant and use the participant's highest score for population health measures in MVPs, there would be no need for the MVP Participant to select a measure during registration. We propose to revise

§ 414.1365(b)(2)(i) to provide that for the CY 2024 performance period/2026 MIPS payment year, each MVP Participant must select an MVP, one population health measure included in the MVP, and any outcomes-based administrative claims-based measure on which the MVP Participant intends to be scored. Beginning in the CY 2025 performance period/2027 MIPS payment year, each MVP Participant must select an MVP and any outcomes-based administrative claims-based measure on which the MVP Participant intends to be scored. We seek comment on these proposals.

(2) Cost Performance Category in MVPs

In the CY 2022 PFS final rule, we finalized at § 414.1365(d)(3)(ii) to use the methodology established at § 414.1380(b)(2)(i) through (v) to score the cost performance category for MVPs using the cost measures included in the MVP that MVP Participants select and report. The finalized policies at § 414.1380(b)(2) score cost measures based on achievement and improvement when the case minimum specified under § 414.1350(c) is met or exceeded and CMS has determined a benchmark (86 FR 65422 and 65423). We discussed in the CY 2022 PFS final rule that aligning MVP scoring policies with existing MIPS scoring policies balances the statutory requirements and goals of the program with ease of use, stability, and meaningfulness to MIPS eligible clinicians (86 FR 65419). We refer readers to section IV.A.4.f.(1)(d)(ii)(B) of this proposed rule for proposals to modify the cost performance category's scoring methodology.

To ensure alignment between MVP and MIPS scoring policies, it is important that MVP cost performance category scoring policies refer to the MIPS policy on how cost measures are scored. We remind readers that cost measures are scored based on the clinician's performance on the measure during the performance period compared to the measure's benchmark, as stated at § 414.1380(b)(2). Currently, § 414.1365(d)(3)(ii) provides that the cost performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(2)(i) through (v) and the cost measures included in the MVP that they select and report. To ensure continued alignment, we propose to modify § 414.1365(d)(3)(ii) to replace the reference to § 414.1380(b)(2)(i) through (v) with a broader reference to the cost performance category scoring policies at § 414.1380(b)(2).

We also propose to similarly revise § 414.1365(d)(3)(ii)(A). This regulation currently provides that a subgroup is

scored on each cost measure included in the MVP that it selects and reports based on its affiliated group score for each such measure, if available. In addition, § 414.1365(d)(3)(ii)(A) provides that, if the subgroup's affiliated group score is not available for a measure, the measure is excluded from the subgroup's total measure achievement points and total available measure achievement points, as described under § 414.1380(b)(2)(i) through (v). We propose to modify § 414.1365(d)(3)(ii)(A) to replace the reference to § 414.1380(b)(2)(i) through (v) with a broader reference to the cost performance category scoring policies at § 414.1380(b)(2).

We seek comment on these proposals.

(3) Improvement Activities Performance Category in MVPs

The improvement activities performance category should provide clinicians with an opportunity to select from a subset of improvement activities within an MVP that are relevant to the clinical topic. In the CY 2022 final PFS rule (86 FR 65412 and 64513) we finalized at § 414.1365(c)(3), that an MVP Participant who reports an MVP must report one of the following: two medium-weighted improvement activities; one high-weighted improvement activity; or participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice as described at § 414.1380(b)(3)(ii). We established that MVP Participants submitting MVPs would report fewer improvement activities than eligible clinicians reporting traditional MIPS to support MVP adoption.

Additionally, in the CY 2022 final PFS rule (86 FR 65423 and 65424) we finalized at § 414.1365(d)(3)(iii) that the improvement activities performance category score for MVP Participants is calculated based on the submission of high- and medium-weighted improvement activities. We finalized that MVP Participants would receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii). Therefore, to receive a score of 40 points, or full credit, an MVP Participant would be required to submit one high-weighted improvement activity, or two medium-weighted improvement activities included in the MVP. We stated that these requirements

would provide an incentive for reporting MVPs, since fewer improvement activities are required to receive a full score for the improvement activities category in an MVP compared to traditional MIPS (86 FR 65423).

We refer readers to section IV.A.4.e.(3)(b)(iv) of this proposed rule for proposals to remove the medium- and high-weighting for improvement activities in traditional MIPS starting in the CY 2025 performance period/2027 MIPS payment year. We now propose to align MVP policies with the traditional MIPS proposal regarding the weighting of improvement activities and to reduce the number of improvement activities an MVP Participant must submit for an MVP. Maintaining a lower reporting burden would encourage reporting MVPs. We finalized that incentives for reporting MVPs, including reduced reporting requirements, allow MVP Participants to report on a smaller, more cohesive subset of measures and activities that are relevant to a given clinical topic, condition, or episode of care (86 FR 65419 and 65420). Therefore, starting in the CY 2025 performance period/2027 MIPS payment year, MVP Participants would be required to submit one improvement activity to achieve 40 points, or full credit, whereas in traditional MIPS clinicians would be required to submit two improvement activities to achieve full credit for the improvement activities performance category. We propose to update reporting requirements and scoring rules related to the improvement activities performance category for MVPs accordingly.

We propose to revise § 414.1365(c)(3) to reflect reporting requirements for the CY 2023 and 2024 performance periods/2024 through 2026 MIPS payment years and the reporting requirements beginning in the CY 2025 performance period/2027 MIPS payment year. The revisions proposed at § 414.1365(c)(3)(i) introductory text and additions proposed at paragraphs (c)(3)(i)(A) through (C) would require that an MVP Participant who reports an MVP, in the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, report one of the following: two medium-weighted improvement activities; one high-weighted improvement activity; or participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice as described at § 414.1380(b)(3)(ii). Additionally, we propose at § 414.1365(c)(3)(ii) introductory text and (c)(3)(ii)(A) and (B), beginning in the CY 2025 performance period/2027 MIPS

payment year an MVP Participant who reports an MVP must report either one improvement activity or participation in a certified or recognized patient-centered medical home (PCMH), or comparable specialty practice as described at § 414.1380(b)(3)(ii). We seek comment on the proposals.

We also propose to align MVP scoring with proposed modifications to traditional MIPS scoring that would remove the reference to high- and medium-weighted improvement activities for scoring and assign 40 points for each improvement activity submitted by MVP Participants. We propose at § 414.1365(d)(3)(iii) that in the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, the improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. MVP Participants would receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii). Beginning in the CY 2025 performance period/2027 MIPS payment year, MVP Participants would receive 40 points for each improvement activity that is submitted or participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice. We seek comment on this proposal.

(4) Promoting Interoperability Performance Category in MVPs

In the CY 2022 PFS final rule, we finalized at § 414.1365(c)(4)(i) that an MVP Participant is required to meet the Promoting Interoperability performance category's reporting requirements. We also finalized at § 414.1365(c)(4)(i)(A) the requirements for a subgroup participating in MVP reporting (86 FR 65413 and 65414). Specifically, we stated that for the CY 2023 and 2024 MIPS performance periods/2025 and 2026 MIPS payment years, an MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category. The submission of the affiliated group's data will be on the subgroup's behalf. If the affiliated group chooses to report as a group for the Promoting Interoperability performance category, the group will still be required to submit its own data

separately and in accordance with the reporting rules for groups. We refer readers to the CY 2022 PFS final rule for additional details (86 FR 65413 and 65414).

We acknowledge the existing language under § 414.1365(c)(4)(i)(A) establishes the requirement for a subgroup to submit its affiliated group's data for the Promoting Interoperability performance category in the foundational layer of an MVP for only the CY 2023 and 2024 performance periods/2025 and 2027 MIPS payment years. In the CY 2022 PFS final rule, we stated our intent to assess the performance of clinicians participating in subgroups in the Promoting Interoperability performance category using subgroup level data to the extent that it is operationally feasible (86 FR 39371 and 39372). However, as discussed in the CY 2022 PFS final rule (86 FR 39371), we heard from interested parties through the MVP Town Hall (85 FR 84846), that some clinicians would need additional time to resolve operational challenges, including challenges related to configuration of EHR systems for reporting Promoting Interoperability data at the subgroup level. We recognize that clinicians and interested parties may need additional time to resolve the technical challenges related to configuration of EHR systems for capturing and submitting data at the subgroup level. We propose that this subgroup reporting policy for the Promoting Interoperability performance category in the MVP they select apply beyond the CY 2023 performance period/2025 MIPS payment year and CY 2024 performance period/2026 MIPS payment years currently specified at § 414.1365(c)(4)(i)(A). Specifically, we propose to modify § 414.1365(c)(4)(i)(A) by removing the references to the specific performance periods/MIPS payment years and provide that an MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category. The proposed change would allow a subgroup to continue to submit the affiliated group's data for the MVP Promoting Interoperability performance category for the CY 2025 performance period/2027 MIPS payment year and beyond. We note CMS will continue to monitor the operational challenges with the EHR systems and reassess whether subgroups should be required to submit subgroup level performance data for the Promoting Interoperability performance category.

We request public comment on this proposal.

We refer readers to section V.B.8. of this proposed rule for discussion on the burden estimates for these proposals.

c. APM Performance Pathway

(1) Overview

In the CY 2021 PFS final rule (85 FR 84859 through 84866), we finalized the APM Performance Pathway (APP) at § 414.1367 beginning in CY 2021 performance period/2023 MIPS payment year, which was designed as a reporting and scoring pathway available only to MIPS APM participants in order to provide a predictable and consistent MIPS reporting option to reduce reporting burden for, and encourage continued APM participation, by these clinicians. We also established that, beginning with the Shared Savings Program performance year 2021 (CY 2021 performance period/2023 MIPS payment year), ACOs were required to report quality data for purposes of the Shared Savings Program via the APP (42 CFR 425.512(a)(3); 85 FR 84722).

In that same rule, we finalized a quality measure set (85 FR 84860 and 84861) for purposes of quality performance category scoring for the APP. For those MIPS eligible clinicians, groups, or APM Entities for whom a given measure is unavailable due to the size of the available patient population or who are otherwise unable to meet the minimum case threshold for a measure, we established that such measure would be removed from the quality performance category score for such MIPS eligible clinician, group, or APM Entity (85 FR 84861). The complete existing APP quality measure set is shown in Table 53. As indicated in Table 53, the current APP quality measure set includes six quality measures, of which five also are Universal Foundation measures. Further, for MIPS eligible clinicians, groups, and APM Entities reporting through the APP, we established that we would not apply the quality measure scoring cap at § 414.1380(b)(1)(iv) in the event that a measure in the APP quality measure set is determined to be topped out. Because the APP quality measure set is fixed, we noted that it would not be appropriate to limit the maximum quality performance category score available to APP reporters. Should an APP quality measure be determined to be topped out, we would at that time consider amending the APP quality measure set through future rulemaking, if appropriate.

BILLING CODE P

TABLE 53: Existing APM Performance Pathway Quality Measure Set

| Quality # | Measure Title | Collection Type | Submitter Type | Meaningful Measures 2.0 Area | Measure Type | Universal Foundation Measure |
|-----------|--|---|--|------------------------------|--------------------------------|------------------------------|
| 321 | CAHPS for MIPS | CAHPS for MIPS Survey | Third Party Intermediary | Patient’s Experience | Patient Engagement/ Experience | Yes |
| :001 | Diabetes: Hemoglobin A1c (HbA1c) Poor Control | eCQM/MIPS CQM (all APP reporters) Web Interface/ Medicare CQM (SSP ACOs only) | MIPS Eligible Clinician Representative of a Practice APM Entity Third Party Intermediary | Mgt. of Chronic Conditions | Intermediate Outcome | Yes |
| 134 | Preventive Care and Screening: Screening for Depression and Follow-up Plan | eCQM/MIPS CQM (all APP reporters) Web Interface/ Medicare CQM (SSP ACOs only) | MIPS Eligible Clinician Representative of a Practice APM Entity Third Party Intermediary | Treatment of Mental Health | Process | Yes |
| 236 | Controlling High Blood Pressure | eCQM/MIPS CQM (all APP reporters) Web Interface/ Medicare CQM (SSP ACOs only) | MIPS Eligible Clinician Representative of a Practice APM Entity Third Party Intermediary | Mgt. of Chronic Conditions | Intermediate Outcome | Yes |
| 479 | Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible MIPS Clinician Groups | Administrative Claims | N/A | Admissions & Readmissions | Outcome | Yes |
| 484 | Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions | Administrative Claims | N/A | Admissions & Readmissions | Outcome | No |

BILLING CODE C

We stated when finalizing the APP that the goal of the APP quality measure set is not necessarily to reflect the specific quality goals of clinicians within their respective APMs, but rather to reduce the burden of reporting on quality measures twice: once to MIPS and once to their APMs. We believed that by using this broadly applicable population-health-based measure set, we would enable MIPS APM participants to focus more of their energy and attention on the quality

measures being reported through their APMs, while relying on a consistent measure set within the APP from one year to the next (85 FR 84862).

We also finalized the Web Interface measure set for the CY 2021 MIPS performance period within the APP for Shared Savings Program ACOs only (85 FR 84720 through 84723), and in the CY 2022 PFS final rule, extended this collection type through CY 2024 (86 FR 65429). In the CY 2024 PFS final rule, we established the Medicare Clinical Quality Measure for Accountable Care

Organizations Participating in the Medicare Shared Savings Program (Medicare CQM) collection type in the APP quality measure set and finalized that the Medicare CQM collection type would be available to only ACOs participating in the Shared Savings Program. Beginning with the 2024 performance year, ACOs in the Shared Savings Program have the option to report the Medicare CQM under the APP on only “beneficiaries eligible for Medicare CQMs as defined at § 425.20,

instead of their all payer/all patient population” (88 FR 79329).

(2) Establishment of the APP Plus Quality Measure Set To Align With the Universal Foundation

Under the goals of the CMS National Quality Strategy to improve the quality and safety of healthcare for everyone,⁷¹⁶ CMS is implementing a building-block approach to streamline quality measures across CMS quality programs for measuring primary care clinician performance in the adult and pediatric populations by leveraging the Universal Foundation of quality measures. The Universal Foundation of quality measures focuses clinicians’ attention on measures that are meaningful for the health of broad segments of the population; reduces provider burden by streamlining and aligning measures; advances equity with the use of measures that will help CMS recognize and track disparities in care among and within populations; aids the transition from manual reporting of quality measures to seamless, automatic digital reporting; and permits comparisons among various quality and value-based care programs to help the Agency better understand what drives quality improvement and what does not.⁷¹⁷ The Universal Foundation, which identifies a set of key quality measures for use where relevant throughout CMS programs, is already reflected in the Medicaid Core Sets and the Marketplace Quality Rating System.⁷¹⁸ In addition, in the CY 2024 PFS final rule (88 FR 79321 and 80043), CMS consolidated the previously finalized Promoting Wellness and Optimizing Chronic Disease Management MIPS Value Pathways (MVPs) into a single consolidated primary care MVP (Value in Primary Care MVP) that aligns with the adult Universal Foundation quality measures. In the Announcement of CY 2024 Medicare Advantage (MA) Capitation Rates and Part C and D Payment Policies, we also solicited comment on adding the Universal Foundation measures to Medicare Advantage and the Part D Star Ratings Program. We noted that we would take these comments into consideration in

the future, and that any additional measures added to the Star Ratings Program would need to be added through rulemaking.⁷¹⁹ Alignment of quality measures across CMS programs allows practitioners to better focus their quality efforts, reduces administrative burden, and drives digital transformation and stratification of a focused quality measure set to assess impact on disparities.⁷²⁰

To further advance Medicare’s overall value-based care strategy, which emphasizes preventive care and primary care and to promote greater alignment within and across CMS’s quality programs, we are proposing to create the APP Plus quality measure set within the APP specifically to incorporate all of the Adult Universal Foundation measures. Five of the ten adult Universal Foundation measures already are represented in the existing APP quality measure set for the CY 2025 performance period/2027 MIPS payment year under policies finalized in the CY 2024 PFS final rule (88 FR 79113 through 79114). The Universal Foundation measures included in the APP quality measure set are listed in Table 53. The inclusion of half of the measures in the Universal Foundation in the existing APP quality measure set and the recognition that a significant number of current and potential users of the APP—those clinicians participating in MIPS APMs—practice in primary and preventive care areas that are relevant to the Universal Foundation make the APP a meaningful addition to CMS’s efforts at quality alignment by bringing in MIPS reporting by MIPS APM participants and in turn by providing feedback in the form of their MIPS quality score to those participants as they also continue to work towards advancing the care they provide within the context of their respective MIPS APMs.

We note that we are not proposing to modify the existing APP quality measure set or the overall framework for the APP as a reporting and scoring pathway. For example, the APP will continue to be available to MIPS eligible clinicians, groups, and APM Entities participating in MIPS APMs, meaning

that only these clinician types will be able to report and be scored on the APP Plus quality measure set. We are proposing that, within the APP, the APP Plus quality measure set would be a second measure set distinct from the existing APP quality measure set that MIPS eligible clinicians identified on the Participation List or Affiliated Practitioner List of an APM Entity participating in a MIPS APM may optionally choose to report. Under the proposal, when an applicable MIPS eligible clinician, group, or APM Entity chooses to report the APP beginning in the CY 2025 performance period/2027 MIPS payment year, they will then choose whether to report the APP quality measure set or the APP Plus quality measure set. For the CY 2025 performance period/2027 MIPS payment year, the APP Plus quality measure set would include the current APP quality measures and two additional quality measures from the Adult Universal Foundation measure set. The measure set would incrementally add the remaining three Adult Universal Foundation measures by the CY 2028 performance period/2030 MIPS payment year. Specifically, we are proposing to adopt one new quality measure beginning with the CY 2026 performance period/2028 MIPS payment year, and two new quality measures beginning with the CY 2028 performance period/2030 MIPS payment year.

We are proposing to revise § 414.1367(c)(1) such that each MIPS eligible clinician, group, or APM Entity APM that elects to report the APP would choose to report either the APP quality measure set or the APP Plus quality measure set. A MIPS eligible clinician, group, or APM Entity that chooses to report the APP Plus quality measure set for a performance period would be required to report all available measures in the APP Plus quality measure set for that performance period and would be scored on all such measures. For example, with respect to the CY 2026 performance period/2028 MIPS payment year, a MIPS eligible clinician, group, or APM Entity that chooses to report the APP Plus quality measure set would be required to report all nine MIPS quality measures (to the extent applicable and available); the nine measures are the six measures incorporated from the APP quality measure set and the three additional Universal Foundation measures we are proposing to incrementally adopt in the APP Plus quality measure set in the CY 2025 and 2026 performance periods/2027 and 2028 MIPS payment years.

Retrieved March 22, 2024 from Announcement of Calendar Year (CY) 2024 Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies (<https://www.cms.gov/files/document/2024-announcement-pdf.pdf>).

⁷²⁰ “Update On The Medicare Value-Based Care Strategy: Alignment, Growth, Equity”, *Health Affairs Forefront*, March 14, 2024. DOI: 10.1377/forefront.20240311.141546.

The clinician would also be scored on all nine of these measures.

The proposal would incrementally incorporate into the APP Plus measure set the Universal Foundation measures that are not already included in the APP measure set beginning in the CY 2025 performance period/2027 MIPS payment year. The Universal Foundation measure set aligns quality measures used across CMS programs and initiatives and is relevant to a significant subset of the clinicians who are eligible to report the APP. The APP Plus quality measure set will allow MIPS eligible clinicians, groups, and APM Entities eligible to report the APP to report Universal Foundation quality measures, which are used across CMS programs and initiatives.

The APP Plus quality measure set would be separate from the APP quality measure set and would be optional for a MIPS eligible clinician, group, or APM Entity to report.⁷²¹ Although we want to promote greater familiarity with the Universal Foundation measures and to encourage clinicians to use the Universal Foundation measures through their MIPS participation, it is important to continue to allow the APP to serve its original purpose of offering a streamlined, stable reporting and scoring pathway for MIPS APM participants, who are already performing practice transformation and are reporting and being scored on quality measures within their APMs. Further, we recognize that while the Adult Universal Foundation quality measures are relevant to a significant portion of clinicians who are eligible to report the APP, they are not relevant for all such clinicians. For example, there are specialists for whom few, if any, of these measures may be relevant, and we do not wish to effectively exclude these clinicians from accessing the benefits of the APP when they otherwise are eligible. Moreover, we recognize that as CMS continues to evolve APM offerings for specialists, there may be more clinicians in the future who are participating in MIPS APMs and would therefore be eligible for the APP, which could shift the proportion of clinicians for whom the Universal Foundation measures are relevant as compared to today. For these reasons, we believe it is important to maintain the existing APP quality measure set and to continue to offer it as an option alongside the proposed APP Plus quality measure set.

⁷²¹ That said, we note that the Shared Savings Program is proposing in section [B–G pages].4.(2).a to require that an ACO report the APP Plus quality measure set starting with PY 2025.

For the reasons specified above, we are proposing to amend § 414.1367(c)(1) to establish the APP Plus quality measure set and provide MIPS eligible clinicians, groups, and APM Entities the option to report the APP quality measure set or the APP Plus quality measure set beginning with the CY 2025 performance period/2027 MIPS payment year. We request comment on this proposal.

(3) Measures Proposed for Use in the APP Quality Measure Set and APP Plus Quality Measure Sets

In the CY 2021 PFS final rule, we adopted the current APP quality measure set (85 FR 84860 and 84861). Table 53 contains the current APP quality measure set. We are not proposing any changes to the existing APP quality measure set for the CY 2025 performance period/2027 MIPS payment year or successive years.

We are proposing a phased approach to establish the APP Plus quality measure set over four years. By the CY 2028 performance period/2030 MIPS payment year, the APP Plus quality measure set would consist of the measures currently contained in the APP quality measure set and five additional quality measures from the Universal Foundation measure set. We are proposing to phase in these new measures over time to allow for both the eCQM and, for Shared Savings ACOs, Medicare CQM collection types to be developed and become available. Specifically, we are proposing that the APP Plus quality measure set will consist of the six measures currently contained in the APP quality measure set and the following five new measures, which will be added incrementally:

- Beginning with the CY 2025 performance period/2027 MIPS payment year and subsequent performance periods: The Breast Cancer Screening (Quality #: 112) and Colorectal Cancer Screening (Quality #: 113) measures. These measures are currently available as eCQMs, MIPS CQMs, and Medicare Part B Claims measures. If this proposal is finalized, we would make the Medicare CQM collection type available for these measures prior to the start of performance year 2025 only for Shared Savings Program ACOs.

- Beginning with the CY 2026 performance period/MIPS payment year 2028 and continuing for subsequent performance periods: The Initiation and Engagement of Substance Use Disorder Treatment (Quality #: 305) measure. This measure is currently available as an eCQM. If this proposal is finalized,

we would make the Medicare CQM collection type available for this measure prior to the start of performance year 2026 and only for Shared Savings Program ACOs.

- Beginning with the CY 2028 performance period/2030 MIPS payment year and continuing for subsequent performance periods: The Screening for Social Drivers of Health (Quality #: 487) and Adult Immunization Status (Quality #: 493) measures. These measures are currently available as MIPS CQMs, but are not currently available as eCQMs or Medicare CQMs. Because developing eCQM specifications typically takes three years, we are proposing to add these measures to the APP Plus quality measure set in the CY 2028 performance period/2030 MIPS payment year. If this proposal is finalized, we would make these measures available prior to the start of CY 2028 performance period/2030 MIPS payment year to report as eCQMs and, for Shared Savings Program ACOs only, Medicare CQMs.

As discussed above, we intend to incorporate the Adult Universal Foundation measures in the APP Plus quality measure set. We note that the additional Universal Foundation measures that we propose to include in the APP Plus quality measure set align with national condition-specific initiatives and CMS priorities. Below, we briefly discuss each new Universal Foundation measure that would be added to the APP Plus quality measure set and that is not already included in the APP quality measure set: Breast Cancer Screening and Colorectal Cancer Screening Measures.

Our proposed addition of the Breast Cancer Screening (Quality #: 112) and Colorectal Cancer Screening (Quality #: 113) measures to the APP Plus quality measure set for CY 2025 performance period and subsequent performance periods aligns with the President and First Lady's Cancer Moonshot initiative, of which a key objective is to "make sure everyone has access to cancer screenings—so more Americans can catch cancer early, when outcomes are best."⁷²² Breast cancer and colorectal cancer are two of the most common types of cancers, accounting for an estimated 23 percent of all new cancer diagnoses in the United States in 2023.⁷²³ Because the risk of developing

⁷²² The White House (n.d.). The President and First Lady's Cancer Moonshot. Accessed March 28, 2024. <https://www.whitehouse.gov/cancermoonshot/>.

⁷²³ Siegel, R.L., Miller, K.D., Wagle, N.S., & Jemal, A. (2023). Cancer statistics, 2023. *CA: a cancer journal for clinicians*, 73(1), 17–48. <https://doi.org/10.3322/caac.21763>.

these types of cancers increases with age, the Breast Cancer Screening measure focuses on mammogram screening for breast cancer every 24 months starting at age 50 and the Colorectal Cancer Screening measure focuses on appropriate screening for colorectal cancer once per performance period, also starting at age 50. Additionally, the February 2024 preliminary measure specifications for the eCQM version of Colorectal Cancer Screening lower the starting age for screenings to 45, an update that aligns with United States Preventive Services Task Force recommendation that colorectal cancer screening begin at age 45 to reduce risk of death.⁷²⁴

(ii) Initiation and Engagement of Substance Use Disorder Treatment Measure

An estimated 48.7 million Americans aged 12 or older (17.3 percent of the population) were classified as having had a substance use disorder (SUD) in the past year in 2022.⁷²⁵ These individuals are at an increased risk for having major medical conditions, injury, overdose, and death.⁷²⁶ Outcomes for individuals with SUDs are improved through early and regular treatment.⁷²⁷ The Initiation and Engagement of Substance Use Disorder Treatment (Quality #: 305) measure ensures patients 13 years of age and older with a new SUD episode have the initiation of intervention or medication within 14 days of the new SUD episode or engage in ongoing treatment, including two additional interventions

or short-term medications, or one long-term medication within 34 days of the initiation of treatment. This measure also supports CMS efforts to reduce deaths related to opioid overdoses, which have significantly increased in recent years,⁷²⁸ and the CMS Behavioral Health Strategy.⁷²⁹

(iii) Screening for Social Drivers of Health Measure

In the CY 2023 PFS proposed rule, we sought comment on the potential future inclusion of the Social Drivers of Health measure in the APP quality measure set (87 FR 46154 through 46155). While the majority of commenters were generally supportive of adding the Screening for Social Drivers of Health measure, several raised concerns related to the undue burden on collection, cost and resources of implementation, and holding providers accountable for the collection of data which could be beyond their scope or ability. Some supportive commenters appreciated that the Screening for Social Drivers of Health measure could drive the standardization of measures that examine social drivers of health in Federal health care quality and payment systems, and that this would ultimately drive the health of our patients and our Nation, maximize the use of limited Government resources to support vulnerable patients, and achieve quality improvement and equity in health outcomes. Commenters further stated that the Screening for Social Drivers of Health measure is crucial in recognizing the impact of Social Drivers of Health-related issues on patients and providers, in laying the foundation to invest in those communities, and in avoiding fragmentation and provider/patient burden by supporting alignment across public and private quality and payment programs. Some commenters opposed the addition of the measure and cautioned CMS to test it before it would be required. Other opposed commenters voiced their concern about the undue burden on data collection among patients and providers and the costs and resources associated with implementing new Social Drivers of Health measures, and that gathering Social Driver of Health measure data would lead to holding providers accountable for addressing social needs of patients that is beyond a provider's scope or ability.

We believe that the benefits of adding the measure to the APP Plus quality measure set outweigh these concerns. For example, while the challenges and concerns noted previously in this section associated with implementing screening for social drivers of health are voiced by family medicine clinicians, social workers, and clinical staff, including the potential negative impact screening could have on the patient-clinician relationship, screening for social drivers of health uncovers patient needs, allows clinicians to provide their patients with resources or referrals, results in appropriately adapting patient care, and prioritizes patient safety.⁷³⁰ The addition of the Screening for Social Drivers of Health (Quality #: 487) measure also is consistent with our priorities to advance health equity and move toward whole-person care throughout our various programs, including the MIPS and the Hospital Inpatient Quality Reporting (HICR) programs. This measure addresses five social and economic determinants—namely, food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety⁷³¹—that are central to the Health Equity strategic plan pillar (<https://www.cms.gov/pillar/health-equity>) and have been identified as both a measurement priority and a performance gap among CMS programs.

The movement to address socioeconomic, environmental, and behavioral health factors (referred to as drivers of health) has gained traction after a study estimated that only 20 percent of a person's health outcomes are linked to their medical care with the remaining 80 percent attributable to drivers of health.⁷³² Because of the strong relationship between Social Drivers of Health and physical health outcome, screening for Social Drivers of Health would support the goals of improving health outcomes by providing clinicians with a more comprehensive understanding of each patient's circumstances to inform

clinical decision making and ensure high-quality care.

In addition, many of these drivers of health are not only linked to poorer health, but disproportionately impact communities of color and underserved populations. Through screening, once per performance period, of patients 18 years and older for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety, screening for Social Drivers of Health and appropriate referrals can potentially improve health outcomes and reduce health disparities. As we indicated when we proposed to adopt Screening for Social Drivers of Health in MIPS in the CY 2023 PFS proposed rule, we believe that consistently addressing drivers of health will have two significant benefits. First, because drivers of health disproportionately impact individuals and communities that are disadvantaged and/or underserved by the healthcare system, the promotion of screening for these factors would support clinician practices and health systems in actualizing an expressed commitment to address disparities in care, implementing associated equity measures to track progress, and improving overall health equity.⁷³³ Second, patient-level driver of health data through screening is essential in the long-term to encourage meaningful collaboration among clinicians and community-based organizations, and implement and evaluate related innovations in healthcare and social service delivery. (87 FR 46280)

(iv) Adult Immunization Status Measure

The Adult Immunization Status measure (Quality #: 493) ensures that adults are up to date with the recommended routine vaccines: influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal. This robust measure supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease.

(v) Maintaining the Use of the Clinician and Clinician Group Risk-Standardized Hospital Admission Rates for Patients With Multiple Chronic Conditions Measure in the APP Quality Measure Set and Including It in the APP Plus Quality Measure Set

We note that Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality # 484) is an administrative claims-based measure that is in the APP quality measure set for the MIPS CY performance period 2025/2027 payment year under policies finalized in the CY 2024 PFS final rule (88 FR 79113 and 79114) but is not one of the ten Adult Universal Foundation measures. Our proposal would continue to maintain this measure in the APP quality measure set, and therefore also include it in APP Plus quality measure set, for the CY 2025 performance period/2027 MIPS payment year and subsequent performance periods. We continue to believe that hospital admission rates are an effective marker of ambulatory care quality. As noted in our rationale for adopting the measure in the measure specifications, “Hospital admissions from the outpatient setting reflect a deterioration in patients’ clinical status and as such reflect an outcome that is meaningful to both patients and providers.⁷³⁴ Patients receiving optimal, coordinated high-quality care should use fewer inpatient services than patients receiving fragmented, low-quality care. Thus, high population rates of hospitalization may signal poor quality of care or inefficiency in health system performance. Furthermore, these effects may be exacerbated in disadvantaged areas.⁷³⁵ Patients with

⁷³⁴ Centers for Medicare and Medicaid Services—Quality Payment Program (2023). multiple chronic conditions are at high risk for hospital admission, often for potentially preventable causes, such as exacerbation of pulmonary disease.”⁷³⁶ Maintaining this measure in the APP quality measure set and, as a consequence, including it in the APP Plus quality measure set also is consistent with our previously stated goals in the CY 2021 PFS final rule to align the APP with the Meaningful Measures framework, an initiative to remove lower value quality measures across CMS programs while keeping measures that have less burden and are the most meaningful with the greatest impact on patient outcomes. This measure supports the framework’s goals as it is identified among the highest priorities for quality measurement and improvement while also reducing burden, promoting alignment, moving payment toward value, and identifying key quality performance metrics for consumers (85 FR 84726).

(vi) The APP and APP Plus Quality Measure Sets Beginning With the CY 2025 Performance Period/2027 MIPS Payment Year

Table 54 identifies the measures in the Adult Universal Foundation measure set, crosswalks them to corresponding MIPS measures, and lists the proposed timeline for their incorporation into the APP Plus quality measure set between the CY 2025 and 2028 performance periods/2027 and 2030 MIPS payment years as they become available for both the eCQM and Medicare CQM collection types. We note that Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality # 484) is not one of the ten Adult Universal Foundation measures and is not listed in Table 19; however, we are maintaining reporting of this measure in the APP quality measure set, and, as such, also proposing to include it in the APP Plus quality measure set for the CY 2025 performance period/2027 MIPS payment year and subsequent performance periods.

Aligning Quality Measures across CMS – The Universal Foundation. *New England Journal of Medicine*, March 2, 2023, available at <https://www.nejm.org/doi/full/10.1056/NEJMp2215539>. Domains are from Meaningful Measures 2.0. Identification numbers are CMS Measures Inventory Tool measure family identification numbers; names reflect the descriptions associated with those numbers.

^b Domains are from Meaningful Measures 2.0. Identification numbers are CMS Measures Inventory Tool measure family identification numbers; names reflect the descriptions associated with those numbers.

We refer readers to Table 53 for the APP quality measure set for the CY 2025 performance period/2027 MIPS payment year and subsequent years. The proposed APP Plus quality measures for the CY 2025 performance period, the CY 2026 and 2027 performance periods,

and the CY 2028 performance period and subsequent performance periods are displayed in Tables 55, 56, and 57, respectively. Under our proposal, there would be eight measures in the APP Plus quality measure set in the CY 2025 performance period (Table 55), nine

measures in the CY 2026 and 2027 performance periods (Table 56), and eleven measures in the CY 2028 and subsequent performance periods (Table 57). We refer readers to Appendix 1 of this proposed rule for additional measure specification information.

TABLE 55: APP Plus Quality Measure Set for the CY 2025 Performance Period

| Quality # | Measure Title | Collection Type | Submitter Type | Meaningful Measures 2.0 Area | Measure Type |
|-----------|--|---|--|------------------------------|--------------------------------|
| 321 | CAHPS for MIPS | CAHPS for MIPS Survey | Third Party Intermediary | Patient's Experience | Patient Engagement/ Experience |

BILLING CODE C

Under our proposal, scoring for the APP quality performance category scoring methodology at § 414.1367(c)(1) would continue to be performed in

accordance with § 414.1380(b)(1). For the APP quality measure set, this means that the scoring methodology would not change. For the APP Plus quality measure set, we are proposing to calculate the MIPS quality performance category score for a MIPS eligible clinician, group, or APM Entity that chooses to report the APP Plus quality measure set via the APP by summing the scores for all of the measures, as applicable, included in the APP Plus quality measure set for a given year. Scoring clinicians on all measures, as applicable, in the APP Plus quality measure set will promote the best, safest, and most equitable care and provide a comprehensive assessment of the performance of those who choose to report the measure set.

Because we are proposing that a MIPS eligible clinician, group, or APM Entity that chooses to report the APP Plus quality measure set would be scored on all of the measures in that set, we are also proposing a conforming change to MIPS data submission requirements in § 414.1335(b) to require that a MIPS eligible clinician, group, or APM Entity that reports the APP Plus quality measure set via the APP would be required to report on all measures included in the APP Plus quality measure set, except for administrative claims-based measures, which are calculated using data from claims submissions. We solicit comment on this proposal. For further discussion on the data submission proposal for the APP Plus quality measure set, see section IV.A.4.e.(1)(b) of this proposed rule.

d. Data Submission for the Performance Categories

(1) Overview

For previously established policies relevant to data submission for the MIPS performance categories, we refer readers to § 414.1325 and the CY 2017 Quality Payment Program final rule (81 FR 77087 through 77097), CY 2018 Quality Payment Program final rule (82 FR 53619 through 53626), CY 2023 PFS final rule (86 FR 65438 through 65441) and CY 2024 PFS final rule (88 FR 79330 through 79332). Specifically, we finalized at § 414.1325(a)(1) that individual MIPS eligible clinicians, groups, virtual groups, subgroups, and Advanced Payment Model (APM) Entities must submit data on measures and activities for the quality, improvement activities, and Promoting Interoperability performance categories in accordance with § 414.1325. We note, that under the current policies described at § 414.1325(a)(2), there are

no data submission requirements for the cost performance category or administrative claims-based quality measures.

In this section, we are proposing to adopt minimum criteria for a qualifying data submission for a MIPS performance period for the quality, improvement activities, and Promoting Interoperability performance categories, which we propose to codify at § 414.1325(a)(1)(i) through (iii). We are also proposing to codify our existing policies governing our treatment of multiple data submissions received for the quality and improvement activities performance categories at § 414.1325(f)(1). We are also proposing to modify our policy governing our treatment of multiple data submissions received for the Promoting Interoperability performance category, which we propose to codify at § 414.1325(f)(2).

Proposals in this section of this proposed rule are intended to eliminate certain issues with the scoring of an unintended data submission affecting payment adjustments for individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities. We are proposing these changes to be effective beginning with the CY 2024 performance period/2026 MIPS payment year for the data submission period in CY 2025. Additionally, we refer readers to section V.B.8.e. of this proposed rule for discussion on the burden estimates for these proposals.

(2) Proposed Minimum Criteria for a Qualifying Data Submission for the MIPS Quality, Improvement Activities, and Promoting Interoperability Performance Categories

(a) Background

CMS uses the data submitted by (or on behalf of) individual MIPS eligible clinicians, groups, virtual groups, subgroups, or APM Entities in the quality, improvement activities, and Promoting Interoperability performance categories to assess their performance on the measures and activities in these three categories and to determine their MIPS payment adjustments. Under the previously established data submission policies at § 414.1325, individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities generally submit data on measures and activities for the quality, improvement activities, and Promoting Interoperability performance categories in accordance with the data submission deadlines at § 414.1325(e)(1). Currently, we consider any submission of data received for a MIPS performance

category during the designated data submission period for a MIPS performance period in accordance with § 414.1325(e)(1) to be a data submission for the corresponding MIPS performance period and assign a score for the submission.

For the quality and improvement activities performance categories, under the current reweighting policies at § 414.1380(c)(2)(i)(A)(6) through (8) for an extreme and uncontrollable circumstance (EUC) or other type of exception based on certain circumstances, we score any data submitted by (or on behalf of) a MIPS eligible clinician with an approved reweighting application. This includes MIPS eligible clinicians with an approved application-based EUC reweighting or an approved reweighting for a clinician identified in a CMS-designated region affected by an automatic EUC event. Under this current policy, in the event that a MIPS eligible clinician submits any data for the quality or improvement activities performance category, such submission overrides the approved reweighting for the applicable performance category and we will score the performance categories for which data was submitted, and include the performance category scores in the MIPS eligible clinician's final score as otherwise provided in § 414.1380(c).

Similarly, for the Promoting Interoperability performance category, under the current reweighting policies at § 414.1380(c)(2)(i)(C) for a significant hardship or other type of exception based on certain circumstances, we score any data submitted by (or on behalf of) a MIPS eligible clinician with an approved reweighting application, except as provided in § 414.1380(c)(2)(i)(C)(10) and (11). Under this current policy, in the event that a MIPS eligible clinician submits any data for the Promoting Interoperability performance category, such submission overrides the approved reweighting for the performance category and we will score the Promoting Interoperability performance category and include the category score in the MIPS eligible clinician's final score as otherwise provided in § 414.1380(c).

We have received inquiries from MIPS eligible clinicians that highlight unintended consequences associated with our current data submission requirements. Several MIPS eligible clinicians have notified us that there have been instances where they unintentionally submitted non-scorable data for a MIPS performance category, which overrode an approved

reweighting or a previously scorable data submission for the MIPS quality, improvement activities, or Promoting Interoperability performance categories. Data submissions without any scorable data (non-scorable data submissions) generally only include limited data that cannot be scored such as a practice ID, date, activity ID, measure ID, or CMS Electronic Health Record (EHR) Certification ID (CEHRT ID). MIPS eligible clinicians have also notified us that, in some instances, the data submission overriding the prior approved reweighting or prior scorable submission was performed by a third party intermediary or a practice representative.

The MIPS eligible clinician, group, virtual group, subgroup, APM Entity, or third party intermediary acting on behalf of a MIPS eligible clinician, group, virtual group, subgroup, APM Entity, as applicable, that submits data on measures and activities under MIPS is defined at § 414.1305 as the submitter type.

The mechanism by which a submitter type submits data to CMS (including, as applicable: Direct, log in and upload, log in and attest, Medicare Part B claims, and the CMS Web Interface) is defined at § 414.1305 as the submission type. The direct submission type allows users to transmit data through a computer-to-computer interaction, such as an API. The log in and upload submission type allows users to upload and submit data in the form and manner specified by CMS with a set of authenticated credentials. The log in and attest submission type allows users to manually attest that certain measures and activities were performed in the form and manner specified by CMS with a set of authenticated credentials. We refer readers to § 414.1325(b) and (c) for available data submission types individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities may utilize to submit data for the quality, improvement activities, and Promoting Interoperability performance categories.

To submit data, a submitter must gain access to the Quality Payment Program website (<https://qpp.cms.gov/login>) for submitting or viewing data for the associated individual MIPS eligible clinician, group, subgroup, virtual group, or APM Entity. We refer readers to the Quality Payment Program Resource Library (<https://qpp-cm-prod-content.s3.amazonaws.com/uploads/335/QPP%20Access%20User%20Guide.zip>) for additional information on the MIPS data submission process and obtaining access to submit data during the

designated submission period under § 414.1325(e)(1).

After gaining access to the Quality Payment Program website for the associated individual MIPS eligible clinician, group, subgroup, virtual group, or APM entity, a submitter can navigate to the “Eligibility and Reporting” tab and view whether there is any reweighting applied for one or more of the MIPS performance categories for the associated individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity. In addition, at the time of submission, the system generates warnings to the submitter (for all the available submission types) if there is an existing approved reweighting for the performance category in which the data is being submitted or an existing data submission for an individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity. For example, if a group has an approved reweighting for the Promoting Interoperability performance category, the system alerts the submitter prior to completing the data submission with a message stating: “This Action Will Impact Your Category Weights. Currently, Promoting Interoperability does not count towards your final score. By choosing to report Promoting Interoperability data, your score for this category will be included in your final score. This action cannot be undone.” The submitter must check the “Yes, I agree” box prior to confirming the data submission in the performance category. We refer readers to the Quality Payment Program Resource Library (<https://qpp.cms.gov/resources/resource-library>) for additional details on the process to submit MIPS data for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities.

Under the current process, we assign a score for any submission received from an individual MIPS eligible clinician, group, virtual group, subgroup or APM Entity for a performance period during the designated MIPS submission period regardless of whether the submission included data on the MIPS measures and activities. We implemented the process to recognize any data submitted as an extension of the policy that submission of any data overrides reweighting of the MIPS performance categories as described at § 414.1380(c)(2). We assign a score for submissions with data on MIPS measures and activities, and also for submissions that only include non-scorable data, such that they do not include any data that allows us to measure a clinician’s performance on the applicable measures and activities.

For example, if we receive a submission for a MIPS performance category without any measure or activity data (for example, without numerator and denominator data for any quality measures, without a response of “yes” for any improvement activities, without a “yes” or “no” response for an attestation, or responses for the required objectives and associated measures and attestation statements for the Promoting Interoperability performance category), and the data submission includes only non-scorable data (such as the practice ID, measure ID and TIN/NPI information), we assign a zero score for the applicable MIPS performance category in the event we do not receive a subsequent submission with measure or activity data.

Despite implementing these system warnings to alert the submitter of a potential impact of their entry on the reweighting status or existing data submission, we continue to receive non-scorable data submissions, which override an approved reweighting, or a previously scored data submission, for the MIPS quality, improvement activities, or Promoting Interoperability performance categories. To help address the unintentional overriding of an existing scorable data submission or an approved reweighting for the MIPS performance categories, we are proposing a narrower set of minimum criteria of what would qualify as a data submission under our existing policies. We note that we are not proposing to change our existing policies to assign a score for a data submission (meeting the proposed narrower minimum criteria) for the applicable MIPS performance categories, including our policy governing data submissions from a third party intermediary, even if the submission overrides an approved reweighting or a prior scorable submission for the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity.

We have identified that we could potentially avoid submissions without any scorable data on MIPS measures or activities from overriding previously approved reweighting or a prior submission for the MIPS performance categories if we require a submission to include certain data on measures or activities in the MIPS quality, improvement activities, or Promoting Interoperability performance categories in order to assign a score. Therefore, we are proposing to adopt minimum criteria for what we would consider to be a qualifying data submission for which CMS can assign a score.

Specifically, we are proposing to consider a submission valid and

scorable (including, potentially, a score of zero) for the applicable MIPS performance category only if the data submission includes: numerator and denominator data for at least one MIPS quality measure in the quality performance category; a response of “yes” for at least one improvement activity in the improvement activities performance category; and all required elements to report objectives and associated measures and attestation statements for the Promoting Interoperability performance category.⁷³⁷ We discuss the details of these proposed data submission criteria for each performance category in sections IV.A.4.d.(2)(b), IV.A.4.d.(2)(c), and IV.A.4.d.(2)(d) of this proposed rule.

We note that we are not proposing any changes to the existing scoring or reweighting policies described under § 414.1380 for the MIPS performance categories in this section of this proposed rule. If the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity does not have an approved reweighting for one or more of the MIPS performance categories and we do not receive a data submission for a performance category that has not been reweighted, we will assign a score of zero for the applicable performance category.

(b) Quality Performance Category

We refer readers to §§ 414.1325 and 414.1330 through 414.1340 and the CY 2017 Quality Payment program final rule (81 FR 77097 through 77162) and CY 2018 Quality Payment Program final rule (82 FR 53626 through 53641), the CY 2019 PFS final rule (83 FR 59754 through 59765), CY 2020 PFS final rule (84 FR 63949 through 62959), CY 2021 PFS final rule (85 FR 84866 through 84877), CY 2022 PFS final rule (86 FR 65431 through 65445), CY 2023 PFS final rule (87 FR 70047 through 70057), and CY 2024 PFS final rule (88 FR 79329 through 79338) for a description of previously established policies related to the quality performance category. The data submitted from the final list of MIPS quality measures are used to assess the performance of an individual MIPS eligible clinician,

group, virtual group, subgroup, or APM Entity for the quality performance category, to contribute to their overall score, and to help determine the payment adjustment for MIPS eligible clinicians.

We are proposing that a data submission in the quality performance category must include numerator and denominator data for at least one quality measure from the list of MIPS quality measures to be assigned a score in the quality performance category. Under the current policies described at § 414.1325, we finalized data submission types for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities. In the CY 2018 Quality Payment Program final rule (82 FR 53780), we stated that we will determine a quality performance category percent score whenever a MIPS eligible clinician has submitted at least one quality measure. As described previously in this section of this proposed rule, we currently assign a score for any data submitted for the MIPS performance categories and have implemented operational measures to limit unintentional overriding of an approved reweighting or existing scorable data submitted for a MIPS performance category. However, we continue to receive unintentional submissions without data that can be scored resulting in the overriding of an approved reweighting application or a prior data submission that can be scored for the quality performance category. We note that this proposal does not include any changes to the current scoring policies described under § 414.1380(b)(1) for the quality performance category. Therefore, we will still assign a score of zero for the quality performance category if an individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity does not submit at least one available quality measure unless the performance category has been reweighted as defined at § 414.1380(c)(2).

We propose to specify what we consider to be a data submission at § 414.1325(a)(1)(i) to state that, for the quality performance category, a data submission must include numerator and denominator data for at least one MIPS quality measure from the final list of MIPS quality measures. We anticipate the proposed change would potentially avoid unintentional overriding of an approved reweighting or a prior data submission for the quality performance category due to submissions without any quality measure data. We are not proposing any changes to the data submission requirements, data submission criteria, data completeness

criteria, and scoring for the quality performance category described under §§ 414.1325, 414.1335, 414.1440, and 414.1380(b)(1) respectively. We request public comments on this proposal.

(c) Improvement Activities Performance Category

We refer readers to §§ 414.1355 and 414.1360 and the CY 2017 Quality Payment Program final rule (81 FR 77177 and 77178), CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), CY 2019 PFS final rule (83 FR 59776 and 59777), CY 2020 PFS final rule (84 FR 62980 through 62990), CY 2022 PFS final rule (86 FR 65462) and the CY 2024 PFS final rule (88 FR 79328) for a description of previously established policies related to the improvement activities performance category.

We previously finalized at § 414.1360(a)(2) that MIPS eligible clinicians, groups, virtual groups, or subgroups must submit a yes response for each improvement activity that is performed for at least a continuous 90-day period during the applicable performance period to receive points in the improvement activities performance category described under § 414.1360(b)(3). We currently assign a score for any submission or attestation received in the improvement activities performance category via the submission types described under § 414.1325(a)(1) regardless of whether the submission or attestation included a yes response or not. In the event of a submission without yes responses, we currently assign a score of zero.

Data submitted in the improvement activities performance category is used to assess the performance of an individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity on the attestation or data submission for the improvement activities and to determine the payment adjustment for MIPS eligible clinicians. We are proposing to specify for clinicians what we consider to be a data submission and that we would score a data submission only if the submission includes a response of “yes” for at least one improvement activity included in the improvement activities inventory for the MIPS performance period. We anticipate the proposed change would potentially avoid unintentional overriding of an approved reweighting or a prior data submission for the improvement activities performance category due to submissions or attestations without a response of “yes” for any of the improvement activities.

We propose to specify what we consider to be a data submission at

⁷³⁷ Attestation is one possible way to for MIPS eligible clinicians participating in APMs to earn credit in the improvement activities performance category but is not required to earn credit. Consistent with our regulation at § 414.1380(b)(3)(i), we automatically award 50 percent credit for the improvement activities performance category to MIPS eligible clinicians participating in APMs when they attest to having completed an improvement activity or submit data for the quality or Promoting Interoperability performance categories. We are not proposing to change this.

§ 414.1325(a)(1)(ii) to state that for the improvement activities performance category, a data submission must include a response of “yes” for at least one activity in the MIPS improvement activities inventory. We note that we are not proposing any changes to the data submission criteria and scoring for the improvement activities performance category described under §§ 414.1360 and 414.1380(b)(3) respectively. We request public comments on this proposal.

(d) Promoting Interoperability Performance Category

We refer readers to § 414.1375 for our previously established policies regarding reporting for the Promoting Interoperability performance category. We also refer readers to § 414.1305 for the definition of attestation, § 414.1325 for data submission requirements, and § 414.1380(b)(4) for Promoting Interoperability performance category scoring. We refer readers to § 414.1380(c)(2)(i)(C) for our previously finalized policies regarding scoring of data submission in the Promoting Interoperability performance category after an approved reweighting for the performance category. We also refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77199 through 77245), CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), CY 2019, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (83 FR 59785 through 59820, 84 FR 62991 through 63006, 85 FR 84886 through 84895, 86 FR 65466 through 65490, 87 FR 70060 through 70087, and 88 FR 79351 through 79365, respectively) for a description of previously established policies related to the Promoting Interoperability performance category.

We currently consider any information received for the Promoting Interoperability performance category in the Quality Payment Program Submission environment a data submission and assign a performance category score based on the submission. We assign a score of zero for incomplete submissions in the Promoting Interoperability performance category, for example, submissions that include only a date and CMS CEHRT ID without any data that can be scored with respect to the required objectives, measures, or attestations, as specified by CMS. Under § 414.1375, if we receive a complete data submission for the Promoting Interoperability performance category with responses included for all the required Promoting Interoperability objectives, associated measures, and attestation statements as specified by CMS and utilizing the CEHRT (meeting

the definition at § 414.1305) as required, we score the data submission under our established scoring policies for the performance category.

We previously finalized at § 414.1380(c)(2)(i)(C) that, if a MIPS eligible clinician with an approved reweighting for the Promoting Interoperability performance category submits data, they will be scored in this performance category and the reweighting will not be applied, except as provided in § 414.1380(c)(2)(i)(C)(10) and (11). We also included in the educational materials available on the Quality Payment Program resource library (<https://qpp-cm-prod.content.s3.amazonaws.com/uploads/2602/2023MIPSSubmissionGuide.pdf>) that a MIPS eligible clinician will be scored in this performance category if they attest to any data, such as selecting performance period dates or responding to attestation statements during the submission period. As set forth under § 414.1380(c)(2)(i)(C), submission of any data for the Promoting Interoperability performance category overrides reweighting, including reweighting due to an approved significant hardship exception and automatic reweighting for clinicians that are Ambulatory Surgical Center (ASC)-based, hospital-based, non-patient facing, and small practices. Similarly, under § 414.1380(c)(2)(i)(A)(4)(iii), submission of any data also overrides our automatic reweighting of the Promoting Interoperability performance category for clinical social workers.⁷³⁸

Furthermore, to earn a performance category score for the Promoting Interoperability performance category, we established at § 414.1375 that, for the performance period established at § 414.1320, individual MIPS eligible clinicians, groups, virtual groups, subgroups, or APM Entities must use CEHRT as defined at § 414.1305, report on objectives and associated measures as specified by CMS, and submit attestations as specified by CMS. Under § 414.1325(b) and (c), individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM entities (or authorized representatives submitting on their behalf) can submit data for the Promoting Interoperability performance category using the direct, login and attest, or login and upload submission types. Specifically, to submit data for the Promoting Interoperability performance category, individual MIPS eligible clinicians, groups, virtual

groups, subgroups and APM entities (or authorized representatives submitting on their behalf) must use CEHRT as required (meeting the definition at § 414.1305) for the continuous 180-day performance period (§ 414.1320(i)) to report the applicable objectives, measures, and attestations. We refer readers to section IV.A.4.e.(4) of this proposed rule for additional details on CEHRT requirements (including ONC health IT certification criteria set forth under 45 CFR 170.315) and objectives, measures, and attestations required for the Promoting Interoperability performance category.

Currently, we receive submissions in the Promoting Interoperability performance category without completed responses for all the required objectives, measures, and attestations. For example, if a submission for the Promoting Interoperability performance category includes only a date, practice ID, and/or a CEHRT ID, or the submission does not include all of the required objectives, measures, and attestations, then we consider these to be incomplete data submissions. Currently, an incomplete data submission would void an approved reweighting of the Promoting Interoperability performance category in accordance with § 414.1380(c)(2)(i)(C). As discussed in this section of this proposed rule, we believe that we should not consider data submissions for the Promoting Interoperability performance category if the submission is incomplete, and does not include all necessary required data. We are proposing that the minimum criteria for a qualifying data submission for the Promoting Interoperability performance category must include all required reporting elements for the performance category, as specified below.

We considered whether CMS should accept incomplete submissions for the Promoting Interoperability performance category. If CEHRT is utilized as required to collect and report measure data and submit attestation statements and other requirements, it would generally result in only complete submissions for the Promoting Interoperability performance category. We recognize that some of the measures in the Promoting Interoperability performance category (such as the SAFER Guides measure and security risk analysis) do not directly require the use of CEHRT, whereas some measures (such as e-prescribing) directly require the use of CEHRT. However, all the requirements for the Promoting Interoperability performance category are directly related to a MIPS eligible clinician demonstrating that whether

⁷³⁸ We note that this automatic reweighting policy for clinical social workers only applies through the CY 2024 performance period/2026 MIPS payment year.

they are a meaningful user of CEHRT in accordance with sections 1848(q)(2)(A)(iv), (B)(iv) and 1848(o)(2)(A) of the Act. Further, section 1848(o)(2)(A) requires that all requirements set forth therein (meaningful use of CEHRT, electronic exchange of health information, and reporting on clinical quality and other measures using CEHRT) be met for a MIPS eligible clinician to be treated as a meaningful EHR user for the applicable performance period. Therefore, accepting an incomplete data submission for the Promoting Interoperability performance category would be counterintuitive to a MIPS eligible clinician demonstrating whether they are a meaningful user of CEHRT in accordance with sections 1848(q)(2)(A)(iv), (B)(iv) and 1848(o)(2)(A) of the Act.

We are proposing to adopt minimum criteria for what we would consider a qualifying data submission for the Promoting Interoperability performance category only if the submission includes all of the required reporting elements for the category, including data on all required measures (including any claim of an applicable exclusion), required attestation statements, the CEHRT ID, and the start and end date for the applicable performance period. This proposal would clarify what counts as a data submission for MIPS eligible clinicians and it would potentially avoid partial data submissions from overriding an approved reweighting or a previously scored submission for the Promoting Interoperability performance category.

Specifically, we propose to specify minimum criteria as a qualifying data submission for the Promoting Interoperability performance category at § 414.1325(a)(1)(iii) to provide that a data submission must include all of the following elements:

- Performance data, including any claim of an applicable exclusion, for the measures in each objective, as specified by CMS;
- Required attestation statements, as specified by CMS;
- CMS EHR Certification ID (CEHRT ID) from the Certified Health IT Product List (CHPL); and
- The start date and end date for the applicable performance period as set forth in § 414.1320.

As discussed previously, we are not proposing any changes to the existing scoring or reweighting policies described under § 414.1380 for the MIPS performance categories in this section of this proposed rule. If the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity does not have

an approved reweighting for one or more of the MIPS performance categories and we do not receive a data submission meeting the proposed minimum criteria for a performance category that has not been reweighted, we will assign a score of zero for the applicable performance category. If we receive a qualifying data submission meeting the proposed minimum criteria for reporting, then we will review the data submission and score the Promoting Interoperability performance category in accordance with our applicable scoring policies.

We refer readers to section IV.A.4.e.(4) of this proposed rule for additional details on the reporting requirements and scoring of the objectives, measures, and attestations the Promoting Interoperability performance category.

We request public comments on this proposal.

(3) Treatment of Multiple Data Submissions

(a) Background

Under the current policies described at § 414.1325(d), individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities may submit their MIPS data using multiple data submission types for any performance category in accordance with § 414.1325(a)(1), as applicable; provided, however, that the individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity uses the same identifier for all performance categories and all data submissions. We established the policy to offer flexibility for individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities with reporting, as it provides more options for submission of data for the applicable performance categories. We refer readers to the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77094 and 77095 and 82 FR 53619 through 53626, respectively) for additional details on the use of multiple data submission mechanisms for any MIPS performance category.

As discussed in this section of this proposed rule, at § 414.1305, we define a submitter type as a MIPS eligible clinician, group, virtual group, subgroup, APM Entity, or third party intermediary acting on behalf of a MIPS eligible clinician, group, virtual group, subgroup, APM Entity, as applicable, that submits data on measures and activities under MIPS. During a submission period, a submitter associated with an organization (for example, registry, practice

administrator, or EHR vendor) could submit data for a MIPS eligible clinician, group, subgroup, virtual group, or APM Entity. If needed, the submitter could also review and correct the data submission resulting in multiple data submissions for the MIPS performance categories. Additionally, there could be instances when a submitter unintentionally submits data multiple times. There could also be instances when we receive data for a MIPS eligible clinician, group, subgroup, virtual group, or an APM Entity from multiple organizations. For example, both a registry and a QCDR could submit MIPS data on behalf of a group practice for a performance period. Individual MIPS eligible clinicians, groups, practice representatives, and third party intermediaries benefit from the flexibility to submit data multiple times as it provides opportunities to correct errors in a prior submission and allows clinicians to submit data from multiple sources (qualified registry and group submission) to increase their chances to provide the most clinically relevant data.

For the quality, improvement activities, and Promoting Interoperability performance categories, there is an established policy governing our treatment of multiple data submissions received for a performance period; additional guidance on how we process and score multiple submissions received in the MIPS performance categories via educational and outreach materials is available on the Quality Payment Program Resource Library (<https://qpp.cms.gov/resources/resource-library>). However, we have not codified this policy in prior rules. In this section, we are proposing to codify at § 414.1325(f)(1) our existing policies governing our treatment of multiple data submissions received for the quality and improvement activities performance categories. We are also proposing to modify our policy governing our treatment of multiple data submissions received for the Promoting Interoperability performance category, which we also propose to codify at § 414.1325(f)(2).

(b) Quality and Improvement Activities Performance Categories

In the CY 2018 Quality Payment Program final rule (82 FR 53619 through 53626), we discussed scoring policies for multiple submissions received in the MIPS performance categories. Specifically, we stated that if an individual MIPS eligible clinician or group submits the same measure through two different mechanisms, each submission would be calculated and

scored separately and that we do not have the ability to aggregate data on the same measure across submission mechanisms. We would only count the submission that gives the clinician the higher score, thereby avoiding double counting (82 FR 53620). We refer readers to CY 2019 PFS final rule (83 FR 59747 through 59749) for our discussion of previously finalized policies related to the use of the term "submission mechanism."

Under the existing process for the quality and improvement performance categories, if we receive multiple submissions for an individual clinician, group, subgroup, or virtual group from submitters from separate organizations (for example, registry, practice administrator, or EHR vendor), we score each submission and assign the highest of the scores for the performance category. If we receive multiple submissions for an individual clinician, group, subgroup, or virtual group from a submitter or submitters from the same organization, we will use the most recent submission. For example, if a qualified registry submits improvement activities for a group on Tuesday and a practice administrator submits improvement activities data for the same group on Wednesday, we will score all the data submissions and assign the highest of the scores. If the practice administrator from a group practice submits improvement activities data for the group on Tuesday and either the practice administrator or another submitter employed by the group practice submits improvement activities data for the group again on Wednesday, we will score only the data submission received on Wednesday because a new data submission received from the same organization on Wednesday will override the prior data submission on Tuesday.

To codify the existing process for multiple data submissions for the quality and improvement activities performance categories, we are proposing to add at § 414.1325(f)(1) that for multiple data submissions received in the quality and improvement activities performance categories in accordance with paragraphs (a)(1)(i) and (ii) for an individual MIPS eligible clinician, group, subgroup, or virtual group from submitters in multiple organizations (for example, qualified registry, practice administrator, or EHR vendor), CMS will calculate and score each submission received and assign the highest of the scores. We are also proposing to modify our policy governing our treatment of multiple data submissions for the quality and improvement activities performance

category received for an individual MIPS eligible clinician, group, subgroup, or virtual group from one or multiple submitters in the same organization and score the most recent submission. We request public comments on this proposal.

(c) Promoting Interoperability Performance Category

For the Promoting Interoperability performance category, we explained in the educational materials published on the Quality Payment Program Resource Library (<https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2602/2023MIPSSubmissionGuide.pdf>) that any data submitted through multiple submission types or multiple submissions submitted through the same submission type will result in a score of zero for the Promoting Interoperability performance category. Additionally, we recommended using a single submission type (file upload, API, or attestation by an individual MIPS eligible clinician, group, virtual group, subgroup or a third party intermediary) to submit data for the Promoting Interoperability performance category. As discussed in section IV.A.4.d.(2)(d) of this proposed rule, the utilization of the CEHRT should not generate conflicting data for measures and objectives in the Promoting Interoperability performance category. However, we have received inquiries from MIPS eligible clinicians that were impacted by the existing process to assign a score of zero for multiple submissions in the Promoting Interoperability performance category. Specifically, we identified scenarios when a complete submission from an individual MIPS eligible clinician or group followed by an incomplete submission resulted in a score of zero, either overriding a previous score greater than zero or voiding an approved reweighting for the performance category.

On this basis, we propose to amend our policy for treatment of multiple data submissions for the Promoting Interoperability performance category. We are proposing that, for multiple data submissions received, CMS would calculate a score for each data submission received and assign the highest of the scores. We also are proposing to codify this proposal at § 414.1325(f)(2).

We believe this proposal is consistent with our existing policy for treatment of multiple data submissions received in the quality and improvement activities performance categories, as discussed previously. Implementing a similar policy for allowing multiple data

submissions in the Promoting Interoperability performance category may provide flexibility for individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities to fix errors in a prior data submission. Additionally, we recognize there may be instances when a practice switches EHR vendors during a performance period, potentially resulting in separate data submissions for the Promoting Interoperability performance category. This proposed policy also aligns with our intent to maintain consistency in data submission requirements across all MIPS performance categories, to the extent possible, as it significantly reduces the complexity for MIPS eligible clinicians participating in MIPS. We request public comments on this proposal.

f. MIPS Performance Category Measures and Activities

(1) Quality Performance Category

(a) Background

Section 1848(q)(1)(A)(i) and (ii) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards and, using such methodology, to provide for a final score for each MIPS eligible clinician. Section 1848(q)(2)(A)(i) of the Act provides that the Secretary must use the quality performance category in determining each MIPS eligible clinician's final score, and section 1848(q)(2)(B)(i) of the Act describes the measures that must be specified under the quality performance category.

We refer readers to §§ 414.1330 through 414.1340 and the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77097 through 77162 and 82 FR 53626 through 53641, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (83 FR 59754 through 59765, 84 FR 63949 through 62959, 85 FR 84866 through 84877, 86 FR 65431 through 65445, 87 FR 70047 through 70055, and 88 FR 79329 through 79338, respectively) for a description of previously established policies and statutory basis for policies regarding the quality performance category.

In this proposed rule, we are proposing to:

- Establish the data submission criteria for the Alternative Payment Model (APM) Performance Pathway (APP) quality measure set.
- Maintain the data completeness criteria threshold of at least 75 percent for the CY 2027 and CY 2028

performance periods/2029 and 2030 MIPS payment years.

- Codify previously established criteria pertaining to the removal of MIPS quality measures.
- Modify the MIPS quality measure set as described in Appendix 1 of this proposed rule, including the addition of new measures, updates to specialty sets, removal of existing measures, and substantive changes to existing measures.

(b) Data Submission Criteria

(i) Data Submission Criteria for the Quality Performance Category

In the CY 2021 PFS final rule (85 FR 84859 through 84866), we established the APP in § 414.1367 as an available reporting option starting with the CY 2021 performance period/2023 MIPS payment year, which was designed to provide a predictable and consistent MIPS reporting option to reduce reporting burden and encourage continued APM participation. Additionally, we finalized a quality measure set (85 FR 84860 through 84861) for purposes of the quality performance category scoring for the APP.

The APP and the APP quality measure set were designed to reduce the reporting burden and create new scoring opportunities for MIPS APMs by having a stable, streamlined pathway for reporting and scoring in MIPS while recognizing the reporting burden and performance scoring that MIPS eligible clinicians, groups, and APM Entities already experience in their respective MIPS APMs. We believed that using a broadly applicable population health-based measure set would enable MIPS APM participants to focus on the quality measures being reported through their APMs, while relying on a consistent measure set within the APP from year to year. (85 FR 84862).

In section IV.A.4.c.(3) of this proposed rule, we are proposing to create a second quality measure set as an available option under the APP, specifically the APP Plus quality measure set, which is a set of measures that are included in the Adult Universal Foundation measure set. Of the ten Adult Universal Foundation measures, five of the measures are already included in the APP quality measure set for the CY 2025 performance period/2027 MIPS payment year (88 FR 79113 through 79114). The APP Plus quality measure set would initially consist of all the measures currently within the APP quality measure set (five Adult Universal Foundation measures and a separate quality measure) plus two

additional measures from the Adult Universal Foundation measure set. The set would incrementally add the remaining three Adult Universal Foundation measures by the CY 2028 performance period/2030 MIPS payment year. (We refer readers to section IV.A.4.c.(3) of this proposed rule for further discussion regarding the APP Plus quality measure set.) Aligning the APP Plus quality measure set with the Adult Universal Foundation measure set serves to advance Medicare's overall value-based care strategy and maintain alignment within and across CMS's quality programs. The alignment of quality measures across CMS programs allows clinicians to better focus their quality efforts, reduce administrative burden, and drive digital transformation and stratification of a focused quality measure set to assess the impact on disparities.⁷³⁹

For the APP Plus quality measure set, we are proposing in § 414.1335(b) to require MIPS eligible clinicians, groups, and APM Entities, including Medicare Shared Savings Program Accountable Care Organizations (ACOs), to report on all measures in the APP Plus quality measure set (with the exception of the administrative claims-based quality measures automatically calculated by CMS) for the applicable performance period. As discussed further in sections IV.A.4.c.(3) of this proposed rule, the APP Plus quality measure set would be optional for MIPS eligible clinicians, groups, and APM Entities (not including Medicare Shared Savings Program ACOs) meeting the reporting requirements under the APP starting with the CY 2025 performance period/2027 MIPS payment year. However, for a Medicare Shared Savings Program ACO, they would be required to report the APP Plus quality measure set to meet the reporting requirements of the Medicare Shared Savings Program's quality performance standard as discussed in section IV.A.4.c.(2) of this proposed rule. Under the proposal in § 414.1335(b), the requirement to report all measures within the APP Plus quality measure set (with the exception of the administrative claims-based quality measures automatically calculated by CMS) would be the same regardless of whether a MIPS eligible clinician, group or APM Entity is reporting the APP Plus quality measure set on a mandatory or optional basis. We are proposing conforming amendments in § 414.1335(a).

⁷³⁹ Update On The Medicare Value-Based Care Strategy: Alignment, Growth, Equity", Health Affairs Forefront, March 14, 2024. DOI: 10.1377/forefront.20240311.141546.

Having Medicare Shared Savings Program ACOs use the APP Plus quality measure set allows for the comprehensive incorporation of the quality measures in the Adult Universal Foundation measure set by the CY 2028 performance period/2030 MIPS payment year and the better alignment of the quality measures reported by Medicare Shared Savings Program ACOs with the Medicaid Core Sets and the Marketplace Quality Rating System, which have previously adopted the quality measures in the Adult Universal Foundation.⁷⁴⁰ Also, the alignment with the Adult Universal Foundation would better align the quality measures reported by Medicare Shared Savings Program ACOs with the Value in Primary Care MIPS Value Pathway (MVP). Alignment would allow clinicians to leverage their familiarity and experience with the Adult Universal Foundation quality measures among primary care clinicians participating in this MVP as they transition to reporting the APP Plus quality measure set in the Medicare Shared Savings Program. Experience and familiarity with the same quality measures, redesigned care processes, and quality improvement activities that are commonplace in ACOs would streamline the pathway for clinicians to join ACOs in the future, which is consistent with our goal to have all beneficiaries in an accountable care relationship by 2030. The Medicare Shared Savings Program has the authority under section 1899(b)(3)(C) of the Act to seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both for purposes of assessing such quality of care.

Lastly, we note that the existing reporting requirements and scoring policies established in § 414.1367(c)(1) continue to be applicable to the APP quality measure set. Similarly, the existing scoring policies established in § 414.1367(c)(1) would be applicable to the APP Plus quality measure set. As discussed in more detail in section IV.A.4.c.(3) of this proposed rule we are proposing to require that all measures within the APP Plus quality measure set be reported (with the exception of the administrative claims-based quality measures that are automatically calculated by CMS), and all measures in the APP Plus quality measure set would be scored, unless a measure does not

⁷⁴⁰ Jacobs D, Schreiber M, Seshamani M, Tsai D, Fowler E, Fleisher L. Aligning Quality Measures across CMS—The Universal Foundation. *New England Journal of Medicine*, March 2, 2023, available at <https://www.nejm.org/doi/full/10.1056/NEJMp2215539>.

have a benchmark or meet the case minimum requirements. If a measure within the APP Plus quality measure set does not have a benchmark or meet the case minimum requirements, the measure would still be required to be reported in order to meet the reporting requirements of the APP and for the measure to be excluded from scored (such measure would not contribute to the quality performance category score as long as the measure is reported). If such a measure is not reported, then the measure would fail to meet the reporting requirements of the APP and as a result, it would receive 0 achievement points.

We are seeking public comment on the proposal to establish the data submission criteria for the APP Plus quality measure set, specifically the proposal to require the reporting of all measures within the APP Plus quality measure set (with the exception of the administrative claims-based quality measures automatically calculated by CMS).

(c) Data Completeness Criteria

(i) Data Completeness Criteria for the Quality Performance Category

As described in the CY 2017 Quality Payment Program final rule (81 FR 77125 through 77126), to ensure that data submitted on quality measures are complete enough to accurately assess each MIPS eligible clinician's quality performance, we established a data completeness requirement. Section 1848(q)(5)(H) of the Act provides that analysis of the quality performance category may include quality measure data from other payers, specifically, data submitted by MIPS eligible clinicians with respect to items and services furnished to individuals who are not entitled to benefits under Part A or enrolled under Part B of Medicare. For the CY 2017 performance period/2019 MIPS payment year (first year of the implementation of MIPS), we established the data completeness criteria threshold to reflect a threshold of at least 50 percent (81 FR 77125). The data completeness criteria threshold means the following: an individual MIPS eligible clinician, group, virtual group, or APM Entity submitting measure data on qualified clinical data registry (QCDR) measures, MIPS clinical quality measures (CQMs), or electronic clinical quality measures (eCQMs) must submit data on at least a specific percent (that is, 50 percent as specified above and 60 percent, 70 percent, and 75 percent as specified in the following paragraphs) of their patients that meet the measure's denominator criteria,

regardless of payer; an individual MIPS eligible clinician, group, virtual group, or APM Entity submitting quality measure data on Medicare Part B claims measures must submit data on at least a specified percent (*i.e.*, 50 percent as specified above and 60 percent, 70 percent, and 75 percent as specified in the following paragraphs) of their Medicare Part B patients seen during the corresponding performance period; and an APM Entity, specifically a Medicare Shared Savings ACO that meets the reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on at least a specified percent (that is, 70 percent and 75 percent as specified in the following paragraphs) of the APM Entity's applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20, who meet the measure's denominator criteria.

In the CY 2017 and CY 2018 Quality Payment Program final rules and the CY 2020 PFS final rule, we noted that we would increase the data completeness criteria threshold over time (81 FR 77121, 82 FR 53632, and 84 FR 62951). We increased the data completeness criteria threshold from at least 50 percent to at least 60 percent for the CY 2018 performance period/2020 MIPS payment year (81 FR 77125 and 82 FR 53633) and maintained a threshold of at least 60 percent for the CY 2019 performance period/2021 MIPS payment year (82 FR 53633 and 53634). For the CY 2020 performance period/2022 MIPS payment year, we increased the data completeness criteria threshold from at least 60 percent to at least 70 percent (84 FR 62952). We maintained data completeness criteria threshold of at least 70 percent for the CY 2021, CY 2022, and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years (86 FR 65435 through 65438). For the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years, we increased the data completeness criteria threshold from at least 70 percent to at least 75 percent (87 FR 70049 through 70052). Lastly, we maintained the data completeness criteria threshold of at least 75 percent for the CY 2026 performance period/2028 MIPS payment year (88 FR 79334 through 79337).

We continue to believe that it is important to incrementally increase the data completeness criteria threshold as MIPS eligible clinicians, groups, virtual groups, subgroups, and Alternative Payment Model (APM) Entities gain experience with MIPS. The incorporation of higher data completeness criteria thresholds in

future years ensures a more accurate assessment of a MIPS eligible clinician's performance on quality measures and prevents selection bias to the extent possible (81 FR 77120, 82 FR 53632, 83 FR 59758, 86 FR 65436, 87 FR 70049, and 88 FR 79334). In order to improve compliance with the data completeness threshold, we have encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients (82 FR 53632, 86 FR 65436, 87 FR 70049, and 88 FR 79334) such that all applicable cases may be used when calculating a measure. The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group's overall performance for that measure.

Increasing the data completeness criteria threshold provides for a more accurate assessment of performance. We want to ensure that an appropriate, yet achievable, data completeness criteria threshold is applied to all eligible clinicians participating in MIPS. Based on our analysis of data completeness rates from data submission for the CY 2017 performance period,⁷⁴¹ it is generally feasible for eligible clinicians and groups to achieve a higher data completeness criteria threshold without jeopardizing their ability to successfully participate and perform well in MIPS. Our approach for increasing the data completeness criteria threshold slowly and incrementally over time enhances the ability for individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities to meet the data completeness criteria threshold as it increases and consequently, enables successful participation under MIPS. Thus, a data completeness criteria threshold of less than 100 percent may reduce clinician burden and accommodate operational issues that may arise during data collection during the initial years of the program (82 FR 53632, 86 FR 65436, 87 FR 70049, and 88 FR 79334).

As MIPS eligible clinicians, groups, virtual groups, and APM Entities have gained experience participating in MIPS, particularly meeting the data completeness criteria threshold over the last 8 years (from the CY 2017 performance period to the CY 2024 performance period), such experience has prepared MIPS eligible clinicians, groups, virtual groups, subgroups (participation option available starting with the CY 2024 performance period),

⁷⁴¹ As described in the CY 2020 PFS final rule (84 FR 62951), the average data completeness rates were as follows: for individual eligible clinicians, it was 76.14; for groups, it was 85.27; and for small practices, it was 74.76.

and APM Entities to meet incremental increases in the data completeness criteria threshold. We have maintained a data completeness criteria threshold of at least 70 percent for 4 years from the CY 2020 performance period through the CY 2023 performance period and as a result, individual MIPS eligible clinicians, groups, virtual groups, and APM Entities had 4 years of a maintained data completeness criteria threshold of at least 70 percent before transitioning to an increased data completeness criteria threshold of at least 75 percent starting with the CY 2024 performance period. We believed that maintaining the data completeness criteria threshold of at least 70 percent for 4 years provided adequate time for individual MIPS eligible clinicians, groups, virtual groups, and APM Entities to adjust to the increase that went into effect at the onset of the COVID-19 public health emergency and account for the implications the COVID-19 pandemic had on the healthcare system.

As we assess the timeframe for a potential future increase to the data completeness criteria threshold, we have determined that maintaining the data completeness criteria threshold of at least 75 percent for a total of 5 years would provide sufficient time for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities to adjust to the data completeness criteria threshold of at least 75 percent. In response to the proposal in the CY 2023 PFS proposed rule to increase the data completeness criteria threshold to at least 80 percent starting with the CY 2026 performance period/2028 MIPS payment year, interested parties indicated in the public comments that increasing the data completeness threshold from 75 to 80 percent within two years of increasing the threshold from 70 to 75 percent would present various challenges such as the following, which would make it more difficult to meet the data completeness criteria threshold: increased burden (in particular, disproportionately increase burden for smaller and rural practices due to limited resources and staff, and some practices that are continuing to recover from the COVID-19 Public Health Emergency); and exacerbated technical and interoperability challenges pertaining to data aggregation across multiple EHRs, systems (utilizing different registries, and EHR developers and vendors), and sites (including multiple TINs participating in the Medicare Shared Savings Program as an ACO) (88 FR 79337). We accept these concerns, and

we thus believe that MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities require more time to adjust and prepare for an increase. We have implemented the data completeness criteria threshold of at least 75 percent for 2 years. Specifically, we previously established that for the CY 2024 performance period through the CY 2026 performance period/2026 MIPS payment year through the 2028 MIPS payment year, we would establish and maintain the data completeness threshold of at least 75 percent (87 FR 70049 through 70052, 88 FR 79334 through 79337). Therefore, for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years, we are proposing to maintain the data completeness criteria threshold of at least 75 percent. In establishing data completeness criteria thresholds in advance of an applicable performance period, it is advantageous to delineate the expectations for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities as it provides sufficient notice of the expectation and subsequently, allows such MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities to prepare for a potential increase in future years.

In this proposed rule, we are proposing to maintain the data completeness criteria threshold of at least 75 percent for 2 additional years. Specifically, in § 414.1340(a), we are proposing the following data completeness criteria thresholds pertaining to QCDR measures, MIPS CQMs, and eCQMs:

- At paragraph (a)(4), for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs must submit data on at least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients that meet the measure's denominator criteria, regardless of payer.

Similarly, in § 414.1340(b), respectively, we are proposing the following data completeness criteria thresholds pertaining to Medicare Part B claims measures:

- At paragraph (b)(4), for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on Medicare Part B claims measures must submit data on at least 75 percent of the MIPS eligible clinician, group, virtual group,

subgroup, or APM Entity's patients seen during the corresponding performance period to which the measure applies.

Additionally, in § 414.1340(d), respectively, we are proposing the following data completeness criteria thresholds pertaining to Medicare CQMs:

- At paragraph (d)(1), for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years, an APM Entity, specifically a Medicare Shared Savings Program ACO that meets the reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on at least 75 percent of the APM Entity's applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20, who meet the measure's denominator criteria.

Lastly, for the data completeness criteria pertaining to the quality performance category, we are proposing a conforming amendment to recognize that an APM Entity, specifically a Medicare Shared Savings Program ACO that meets the reporting requirements under the APP, must meet the data completeness criteria requirements established at § 414.1340(d)(1).

We are seeking public comment on these proposals.

(d) Selection of Quality Measures

(i) Addition of New Quality Measures

(A) Pre-Rulemaking Process

Prior to introducing a new MIPS quality measure in a proposed rule, CMS receives public input on measures through the pre-rulemaking process (referred to as the Pre-Rulemaking Measure Review (PRMR)) established in accordance with section 1890A of the Act. Although section 1848(q)(2)(D)(viii) of the Act provides that the pre-rulemaking process under section 1890A of the Act is not required to apply to the selection of MIPS quality measures, we have found that the pre-rulemaking process provides a comprehensive review of measures from multi-stakeholder workgroups and have accordingly elected for such measures to be reviewed utilizing the PRMR process (87 FR 70048). Pursuant to the established PRMR process (additional information regarding the PRMR process is available at <https://p4qm.org/PRMR>), CMS has contracted with a Consensus-Based Entity (CBE), which is responsible for convening a multi-stakeholder panel comprised of clinicians, patients, measure experts, and health information technology specialists to provide input on measures CMS is considering for use in Medicare.

The pre-rulemaking process begins with CMS's publication of measures under consideration for use in Medicare (the MUC List). Each measure on the MUC List is reviewed by one of several committees convened by the PQM for the purpose of providing multi-stakeholder input to the Secretary. The PRMR process includes opportunities for public comment through a 21-day public comment period, as well as public listening sessions. The PQM posts the compiled comments and listening session inputs received during the public comment period and the listening sessions within 5 days of the close of the public comment period. More details regarding the PRMR process may be found in the PQM Guidebook of Policies and Procedures for Pre-Rulemaking Measure Review and Measure Set Review.

The final vote of a multistakeholder committee convened by the CBE may result in the following disposition of a measure: recommended, recommended with conditions, do not recommend, or no consensus. A "no consensus" recommendation signals continued disagreement among the committee despite being presented with perspectives from public comment, committee member feedback and discussion, and highlights the multi-faceted assessments of quality measures. Quality measures that are considered for potential implementation in MIPS starting with the CY 2025 performance period were included on the 2023 Measures Under Consideration (MUC) List (available at <https://mmshub.cms.gov/sites/default/files/2023-MUC-List.xlsx>). The new MIPS quality measures proposed are described in Table Group A of Appendix 1 of this proposed rule. There may be cases in which the CBE does not recommend for a measure to move forward to the rulemaking process and eventual implementation due to a measure not being endorsed by the CBE or other CBE, but we go forth with proposing a measure. We note that section 1848(q)(2)(D)(iii)(v)(III) of the Act does not preclude the Secretary from proposing and implementing measures that are not endorsed by a CBE as long as the measure is evidence-based.

(ii) Removal of Quality Measures

In this proposed rule, we are codifying previously established criteria for the removal of MIPS quality measures from the MIPS quality measure inventory. In the CY 2017 Quality Payment Program final rule (81 FR 77136 through 77137), we established the following criteria for

measure removal to include: If the Secretary determines that the MIPS quality measure is no longer meaningful, such as MIPS quality measures that are topped out; and, if a measure steward is no longer able to maintain the quality measure. In the CY 2019 PFS final rule (83 FR 59763), we expanded the criteria for measure removal to include MIPS quality measures that reached an extremely topped out status (for example, a measure with an average mean performance within the 98th to 100th percentile range); the MIPS quality measure may be proposed for removal in the next rulemaking cycle, regardless of whether or not it is in the midst of the topped-out measure lifecycle, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made, after taking into account any other relevant factors.

Also, in the CY 2019 PFS final rule (83 FR 59764), we established other criteria for measure removal, specifically MIPS quality measures that are: duplicative; not maintained or updated to reflect current clinical guidelines, which are not reflective of a clinician's scope of practice; and low-bar, standard of care process measures. As described in the CY 2019 PFS final rule (83 FR 59765), we established an approach to incrementally remove process measures where prior to removal, consideration will be given to, but will not be limited to the following:

- Whether the removal of the process measure impacts the number of measures available for a specific specialty.
- Whether the MIPS quality measure addresses a priority area highlighted in the Measure Development Plan: <https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/Measuredevelopment.html>.
- Whether the MIPS quality measure promotes positive outcomes in patients.
- Considerations and evaluation of the measure's performance data.
- Whether the MIPS quality measure is designated as high priority or not.
- Whether the MIPS quality measure has reached extremely topped out status within the 98th to 100th percentile range, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made.

Lastly, in the CY 2020 PFS final rule (84 FR 62958 through 62959), we expanded the criteria for measure removal to include MIPS quality

measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods and not available for MIPS quality reporting by or on behalf of all MIPS eligible clinicians. For MIPS quality measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods, we noted that we will factor in other considerations (such as, but not limited to: The robustness of the measure; whether it addresses a measurement gap; if the measure is a patient-reported outcome; and consideration of the MIPS quality measure in developing MVPs) prior to determining whether to remove the MIPS quality measure.

We are proposing to codify the aforementioned criteria established for the removal of MIPS quality measures from the MIPS quality measure inventory in § 414.1330(c), respectively.

(iii) Inventory of Quality Measures

Section 1848(q)(2)(D)(i) of the Act requires the Secretary, through notice and comment rulemaking, to establish an annual final list of quality measures from which MIPS eligible clinicians may choose for the purpose of assessment under MIPS. Section 1848(q)(2)(D)(i)(II) of the Act requires that the Secretary annually update the list by removing measures from the list, as appropriate; adding new measures to the list, as appropriate; and determining whether measures that have undergone substantive changes should be included on the updated list.

Previously finalized MIPS quality measures can be found in the CY 2024 PFS final rule (88 FR 79556 through 79964), CY 2023 PFS final rule (87 FR 70250 through 70633), CY 2022 PFS final rule (86 FR 65687 through 65968), CY 2021 PFS final rule (85 FR 85045 through 85377), CY 2020 PFS final rule (84 FR 63205 through 63513), CY 2019 PFS final rule (83 FR 60097 through 60285), CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174), and CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). We are proposing changes to the MIPS quality measure inventory, as set forth in Appendix 1 of this proposed rule, including the following: the addition of new measures; updates to specialty sets (*i.e.*, creation of new specialty sets; addition and/or removal of measures; and substantive changes to existing measures within specialty sets); removal of existing measures; and substantive changes to existing measures. For the CY 2025 performance

period, we are proposing an inventory of 196 MIPS quality measures.

The new MIPS quality measures that we are proposing to include in MIPS for the CY 2025 performance period and future years can be found in Table Group A of Appendix 1 of this proposed rule. For the CY 2025 performance period, we are proposing 9 new MIPS quality measures, which includes 5 high priority measures, of which 2 are also patient-reported outcome measures.

On January 3, 2024, we announced that we would be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for year 9 (CY 2017 performance period/2019 MIPS payment year through CY 2025 performance period/2027 MIPS payment year) of MIPS under the Quality Payment Program.⁷⁴² The recommendations we received were based on the MIPS quality measures finalized in the CY 2024 PFS final rule and the 2023 MUC List; the recommendations include the addition or removal of current MIPS quality measures from existing specialty sets, and/or the creation of new specialty sets. All specialty set recommendations submitted for consideration were assessed and vetted, and as a result, the recommendations that we agree with are proposed in this proposed rule. We are proposing the addition of a new specialty set and additionally proposing modifications to existing specialty sets as described in Table Group B of Appendix 1 of this proposed rule. Modifications to specialty sets include the addition of new measures and/or existing measures within the MIPS quality measure inventory, removal of measures, and/or substantive changes to previously finalized measures (we refer readers to Table Group D of Appendix 1 in this proposed rule). Specialty and subspecialty sets are not inclusive of every specialty or subspecialty. We develop and maintain specialty measure sets to assist MIPS eligible clinicians with selecting quality measures that are most relevant to their scope of practice.

In addition to establishing new individual MIPS quality measures, modifying existing specialty sets, and creating new specialty sets as described in Tables Group A and Group B of Appendix 1 of this proposed rule, we refer readers to Table Group C of

Appendix 1 of this proposed rule for a list of MIPS quality measures proposed for removal and applicable rationale for each measure. We have previously specified certain criteria that will be used when we are considering the removal of a measure (81 FR 77136 and 77137; 83 FR 59763 through 59765; 84 FR 62957 through 62959); and such criteria is outlined in the proposed § 414.1330(c) (as further discussed in section IV.A.4.e.(1)(d)(ii) of this proposed rule). For the CY 2025 performance period, we are proposing to remove 11 MIPS quality measures based on the previously established criteria. Of the 11 MIPS quality measures proposed for removal, 2 MIPS quality measures are duplicative to a proposed new MIPS quality measure; 3 MIPS quality measures are duplicative of current measures; 1 MIPS quality measure has reached the topped out lifecycle; 2 MIPS quality measures are extremely topped out; 1 MIPS quality measure is no longer owned/maintained; and 2 MIPS quality measures have limited adoption and consequently, have not been able to establish benchmarks to provide a meaningful impact to quality improvement. We have continuously communicated to interested parties our desire to reduce the number of process measures within the MIPS quality measure set (*see*, for example, 83 FR 59763 through 59765). Seven of the MIPS quality measures proposed for removal are process measures that would not provide granular information related to disparities. The proposal to remove the MIPS quality measures described in Table Group C of Appendix 1 of this proposed rule would lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to removing measures should occur through an iterative process that includes an annual review of the MIPS quality measures to determine whether they meet our removal criteria.

Also, we are proposing substantive changes to several MIPS quality measures, which can be found in Table Group D of Appendix 1 of this proposed rule. We have previously established criteria that would apply when we are considering making substantive changes to a quality measure (81 FR 77137, and 86 FR 65441 through 65442). We are proposing substantive changes to 66 MIPS quality measures, which includes 2 MIPS quality measures previously retained for utilization only in MVPs (we refer readers to Table Group DD of Appendix 1 of this proposed rule for such measures). On an annual basis, we

review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive. The aforementioned proposed inventory of 196 MIPS quality measures includes 193 MIPS quality measure available for utilization in traditional MIPS and MVPs, and 3 MIPS quality measures available only for utilization in MVPs (as finalized in the CY 2024 PFS final rule (88 FR 79897 through 77902)). In the CY 2024 PFS final rule, we removed the following 3 MIPS quality measures from traditional MIPS, but retained for utilization in MVPs: Quality #112: Breast Cancer Screening; Quality #113: Colorectal Cancer Screening; and Quality #128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (88 FR 79338 and 79897 through 79902). We note that some MIPS quality measures available in traditional MIPS and/or MVPs are measures adopted by the Medicare Shared Savings Program for utilization under the APP, specifically the APP quality measure set and the newly established APP Plus quality measure set, as proposed in section IV.A.4.c.(3) of this proposed rule. For the MIPS quality measures available in the APP quality measure set and APP Plus quality measure set for the CY 2025 performance period, we refer readers to section IV.A.4.c.(1) and section IV.A.4.c.(3) of this proposed rule.

Lastly, it should be noted that in this proposed rule, we are proposing a substantive change to the following administrative claims measure, Quality #492: Risk-Standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System (we refer readers to Table Group D of Appendix 1 of this proposed rule), that would be applied retroactively starting with the CY 2023 performance period/2025 MIPS payment year. In the CY 2023 PFS final rule, we inadvertently specified the measure was availability at the individual clinician level. The inclusion of the availability of the measure at the individual clinician level is a misrepresentation and erroneously conveys to MIPS eligible clinicians reporting at the individual clinician level that the measure is available to meet the minimum required number of measures to report under traditional MIPS or an MVP. The measure was tested and developed for implementation at the group, virtual group, subgroup via an MVP, and APM Entity levels. Thus, the measure is limited to groups, virtual groups,

⁷⁴² Message to the Quality Payment Program listserv on January 3, 2024, entitled "The Centers for Medicare & Medicaid Services (CMS) is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets and/or Revisions to the Existing Specialty Measure Sets for the 2025 Performance Year of the Merit-based Incentive Payment System (MIPS)."

subgroups via an MVP, and APM Entities participating in MIPS. We believe that a failure to apply this substantive change retroactively would be contrary to the public interest.

Prior to the finalization of this measure as a new measure available within the MIPS quality measure inventory in the CY 2023 PFS final rule, the measure was initially proposed as a new measure in the CY 2022 PFS proposed rule. Based on the public comments received in response to the initial proposal of this measure in the CY 2022 PFS proposed rule, there were concerns regarding the attribution of certain patients to clinicians, particularly the risk adjustment for clinicians with higher caseloads of patients with more complicated or severe heart failure. As a result, the measure was not finalized as part of the CY 2022 PFS final rule; however, we noted that we would continue to consider how to implement condition-specific measures such as this measure under MIPS (86 FR 65692 through 65694).

In the CY 2023 PFS proposed rule, we re-proposed this measure, which mitigated the concerns regarding the attribution of such patients to clinicians by excluding patients at advanced stages of heart failure and requiring that a group, virtual group, subgroup via an MVP, and APM Entity to include at least 1 cardiologist (and a 21-patient case minimum); and subsequently, the measure was finalized in the CY 2023 PFS final rule (87 FR 70266 through 70271). The intent of the measure is for assessment of performance to be conducted at the group, virtual group, subgroup via an MVP, and APM Entity levels. The measure was not tested, developed, or implemented at the individual clinician level. In order for this measure to be available at the individual clinician level, the measure would need to be tested at the individual clinician level to establish validity, reliability, and risk adjustments at the individual clinician level. It is not appropriate for the measure to be available at the individual clinician level without further testing. Consequently, any assessment of data for this measure at the individual clinician level would produce invalid and unreliable results. By retroactively applying the substantive change to this measure (modifying the measure to remove the individual clinician level as an option) effective starting with the CY 2023 performance period/2025 MIPS payment year, the level of reporting available for the measure would align with the intent, implementation, and operationalization of the measure, and

clarify that the measure is not available at the individual clinician level.

We are seeking public comment on the proposals to modify the quality performance category measure inventory, a set of 196 MIPS quality measures for the CY 2025 performance period, which includes the following:

- Implementation of 9 new MIPS quality measures: 5 high priority measures, of which 2 are also patient-reported outcome measures;
- Removal of 11 MIPS quality measures: 2 MIPS quality measure are duplicative to a proposed new quality measure; 3 MIPS quality measures are duplicative to current quality measures; 1 MIPS quality measure has reached the topped-out lifecycle; 2 MIPS quality measures are extremely topped out; 1 MIPS quality measure is no longer owned/maintained; and 2 MIPS quality measures have limited adoption and consequently, have not been able to establish benchmarks to provide a meaningful impact to quality improvement; and
- Substantive changes to 66 MIPS quality measures.

We refer readers to Table Groups A through DD of Appendix 1 of this proposed rule for the proposed modifications to the MIPS quality measure inventory for the CY 2025 performance period.

(e) Quality Performance Category Requests for Information

In this proposed rule, we are seeking public comment on the following two requests for information (RFIs) regarding to the quality performance category (see sections IV.A.4.e.(1)(e)(i) and IV.A.4.e.(1)(e)(ii) of this proposed rule). In accordance with the implementation of regulations pertaining to the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), the general solicitation of public comments for the two RFIs are exempt from the PRA. Facts or opinions submitted in response to general solicitations of public comments published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to themselves, other than that which is necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

Respondents are encouraged to provide complete, but concise responses. The following RFIs are issued solely for information and planning purposes; they do not

constitute a Request for Proposal (RFP), applications, proposal abstracts, or quotations. The RFIs do not commit the U.S. Government to contract for any supplies or services or make a grant award. Further, CMS is not seeking proposals through the following RFIs and will not accept unsolicited proposals. Respondents are advised that the U.S. Government will not pay for any information or administrative costs incurred in response to the RFIs; all costs associated with responding to the RFIs will be solely at the interested party's expense. Not responding to the RFIs do not preclude participation in any future procurement, if conducted. It is the responsibility of the potential respondents to monitor these RFI announcements for additional information pertaining to the requests. Please note that CMS will not respond to questions about the policy issues raised in the RFIs. CMS may or may not choose to contact individual respondents. Such communications would only serve to further clarify written responses. Contractor support personnel may be used to review responses for each RFI. Responses to these notices are not offers and cannot be accepted by the U.S. Government to form a binding contract or issue a grant. Information obtained as a result of the RFIs may be used by the U.S. Government for program planning on a non-attribution basis. Respondents should not include any information that might be considered proprietary or confidential. The following RFIs should not be construed as a commitment or authorization to incur cost for which reimbursement would be required or sought. All submissions become U.S. Government property and will not be returned. CMS may publicly post the comments received, or a summary thereof.

(i) Survey Modes for the Administration of the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey Request for Information

We are seeking public comment on the potential expansion of the survey modes of the CAHPS for MIPS Survey from a mail-phone protocol to a web-mail-phone protocol. The current protocol is to administer the survey first through the mail and then by phone interview with non-respondents. The expansion to the protocol would include an initial administration of the survey by web, followed by mail, and then by phone. During the 2023 CAHPS

for MIPS Web Mode Field Test,⁷⁴³ adding the web-based survey mode to the current mail-phone protocol of CAHPS for MIPS survey administration resulted in an increased response rate. Surveys for the field test were administered to a random sample of 8,613 survey-eligible patients from 20 Medicare Shared Savings Program ACOs between March 6, 2023, and May 31, 2023, and were compared to survey data collected from the CY 2022 performance period CAHPS for MIPS Survey for the same Medicare Shared Savings Program ACOs. In total, 3,638 patients completed a survey during the field test, resulting in a 43 percent response rate for the web-mail-phone protocol compared to 28 percent for the mail-phone protocol from the CY 2022 performance period CAHPS for MIPS Survey. The percentage of patients with an email address varied by ACO, ranging from 40 percent to 88 percent, and 38 percent of sampled patients had an email address. Evidence from the 2023 field test indicates that the use of the web-mail-phone protocol results in a higher response rate. Analysis of this field test data revealed that 43 percent of surveys completed via the web-based survey mode came from patients who did not have an email address but responded by entering a URL and patient-specific PIN code printed in either the pre-notification letter or web invitation letter. The web-mail-phone protocol also achieved higher response rates among patients of Latino or Hispanic ethnicity; no statistically significant differences in response rates were found by other demographic characteristics, including gender, age, or race. Analysis of the 2023 field test data also showed that adding the web-based survey mode reduced the response by mail from 93 percent during the CY 2022 performance period to 73 percent during the field test timeframe.

Given the potential for an increased response rate by expanding to a web-mail-phone protocol, we are seeking public comment on the following:

- Would the increase in survey response rates (as shown from the results of the 2023 CAHPS field test), outweigh a possible increase in the cost of survey administration that would be associated with a three-mode survey protocol (web-mail-phone) compared to the current two-mode survey protocol (mail-phone)?

- Would providing email addresses to vendors be feasible for groups, virtual

groups, subgroups, and APM Entities (including Medicare Shared Savings Program ACOs)?

(ii) Guiding Principles for Patient-Reported Outcome Measures in Federal Models, and Quality Reporting and Payment Programs Request for Information

We are committed to elevating the patient voice in healthcare. One critical approach to elevating the patient voice that is aligned with the CMS National Quality Strategy and strategy of the CMS Innovation Center is to incorporate more Patient-Reported Outcome Measures (PROMs) and Patient-Reported Outcome Performance Measures (PRO-PMs) in CMS quality reporting and payment programs and CMS Innovation Center Models.

CMS had defined a patient-reported outcome (PRO) as any report of the status of a patient's health condition or health behavior coming directly from the patient without interpretation of the patient's response by a clinician or anyone else.⁷⁴⁴ PROs are critical for the support of person-centered care, as they provide information from the patient or caregivers perspective and offer important information to improve patient-clinician communication, decision-making, and care delivery. PROMs are structured tools used to collect data on PROs, tested for validity and reliability in the population of interest. PRO-PMs aggregate information collected using PROMs into a reliable, valid measure of performance at the measured entity level (for example, clinician or health system). Often these measures have established benchmarks for assessing risk-adjusted outcomes.

A potential path forward is the development of an accessible and unified database of PROMs/PRO-PMs used in programs and payment systems in health care by Federal, State-based, and commercial payers, and healthcare systems. This database would identify the measure steward and include information on the specifications of the measure. The PROMs in this database could serve as a resource for the subsequent development of PRO-PMs.

Separately, considerations for a data infrastructure that allows PROMs and PRO-PMs to be integrated into clinical workflow with minimal cost and administrative burden, with data seamlessly shared across different healthcare settings and systems is

important. Although we recognize there may be important reasons for not restricting PROMs/PRO-PMs to a strictly defined data infrastructure, we seek to avoid the evolution of multiple PROM/PRO-PM repositories that may inhibit the development of these measures and potentially impose additional costs on clinicians and healthcare systems.

One currently existing, unified, non-proprietary PROM repository is the Patient-Reported Outcomes Measurement Information System® (PROMIS®) developed and funded by the National Institutes of Health (NIH). PROMIS tools assess patient-reported health status for physical, social, and mental wellbeing. NIH supported the development of PROMIS, and in 2018 PROMIS was made available to the public through a platform known as HealthMeasures (www.healthmeasures.net). Northwestern University stewards HealthMeasures and oversees proprietary and copyright issues, as well as scientific work using PROMIS developed data elements and measures. HealthMeasures also provides several PRO-PMs for PROMIS available at <https://www.healthmeasures.net/implementation-healthmeasures/evaluate-quality-of-care/healthmeasures-pro-pms>. As noted previously, this repository of PROMs and PRO-PMs could be used in conjunction with a data infrastructure that integrates PROMs and PRO-PMs into clinical workflow and is able to be shared across multiple healthcare environments.

As we move forward with including more PROMs and PRO-PMs in CMS quality reporting and payment programs and CMS Innovation Center Models, it is important to develop a set of guiding principles and considerations for the selection and implementation of PROMs or PRO-PMs. An illustrative set of guiding principles may include:

- Data Infrastructure—Measures implemented in programs should, to the extent possible, use existing data systems for data collection and reporting to minimize the administrative burden associated with collecting PROMs and deriving PRO-PMs. The PROMs and PRO-PMs should be deployed in a data infrastructure that supports necessary interoperability standards to support sharing across providers, practices, hospitals, health systems, health plans and States.
- Measure Testing—The PROMs have been psychometrically tested and undergone rigorous reliability and validity testing (fully developed PRO-PMs have also been tested for scientific acceptability including reliability as a

⁷⁴³ Centers for Medicare & Medicaid Services. (June 2024). 2023 CAHPS for MIPS Web Mode Field Test. Available at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2893/2023_CAHPs_for_MIPS_WebMode_Field_Test.pdf.

⁷⁴⁴ Centers for Medicare & Medicaid Services. (December, 2023). Patient Reported Outcome Measures. Available at <https://mmshub.cms.gov/sites/default/files/Patient-Reported-Outcome-Measures.pdf>.

quality measure for the accountable entity). Moreover, PROMs have been tested as digital measures that can be collected and reported electronically, making their adaptation as electronic Patient Reported Outcomes (ePROs) feasible.

- **Feasible Clinical Implementation**—Measures that will be used for clinical decision making can be integrated into the clinical workflow with minimal cost and administrative burden. Further, the data can be seamlessly shared across different healthcare settings and payer systems. The measures can be expected to have meaningful participation and response rates to draw conclusions from measure score results (based on anticipated sample size from participating providers).

- **Accessible**—The measures are easily accessible to clinicians and care teams, without the creation of additional administrative or significant financial burdens, or the requirement for additional resources.

- **Patient Engagement**—The measures have been tested to show that the concept is meaningful to patients. Additionally, there is a validated feedback loop on how their patient-reported data is used to drive performance improvement, and improvement in individual patient outcomes/experience.

- **Equity**—Measures selection considers how measurement may ameliorate or exacerbate disparities including but not limited to considerations for language concordance and response rates. Measures may be stratified by subgroup to better understand disparities in response rates and outcomes.

Through this RFI, we are seeking comment on principles related to data infrastructure, selection, feasible implementation, and patient engagement of PROMs and PRO-PMs. We request feedback from the public regarding the overarching principles and considerations.

Specifically we are seeking input on the following areas:

- Are the aforementioned guiding principles outlined comprehensive or are there additional guiding principles and considerations we should consider for the selection, and implementation of PROM and PRO-PMs?

- How can CMS accelerate the development of PRO-PMs and advance them more rapidly into use? How can CMS support PRO-PM development while balancing the goal of accessible PRO-PMs with the additional time and resources required to construct PROMs and PRO-PMs from a PROM?

- How should CMS balance the use of broad PRO-PMs that might be applicable across multiple clinical contexts compared to condition-specific PROMs and PRO-PMs measures that can be more tailored to a given clinical situation but lead to a greater number of tools in use across measures and health care providers?

- How can CMS support making PROMs broadly accessible without limiting both innovation and resources committed to developing new tools? Are there other examples (beside PROMIS) of currently existing PROMs/PRO-PMs repositories that make their tools widely available to clinicians and healthcare systems?

(2) Cost Performance Category

Section 1848(q)(2)(A) of the Act includes resource use as a performance category under MIPS. We refer to this performance category as the cost performance category. As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of MIPS are used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians are evaluated under all four of the MIPS performance categories, including the cost performance category.

We are proposing to add six new episode-based measures to the cost performance category beginning with the CY 2025 performance period/2027 MIPS payment year. These six measures include:

- **Chronic Kidney Disease (CKD)**, which assesses MIPS eligible clinicians on the risk-adjusted and specialty-adjusted cost to Medicare for patients who receive care to manage and treat CKD stages 4 and 5;

- **End-Stage Renal Disease (ESRD)**, which assesses MIPS eligible clinicians on the risk-adjusted and specialty-adjusted cost to Medicare for patients who receive medical care to manage ESRD;

- **Kidney Transplant Management**, which assesses MIPS eligible clinicians on the risk adjusted and specialty-adjusted cost to Medicare for ongoing kidney transplant-related care and management starting at least 90 days after transplant surgery;

- **Prostate Cancer**, which assesses MIPS eligible clinicians on the risk-adjusted and specialty-adjusted cost to Medicare for the management and treatment of prostate cancer;

- **Rheumatoid Arthritis**, which assesses MIPS eligible clinicians on the risk-adjusted and specialty-adjusted cost to Medicare for the management and treatment of rheumatoid arthritis; and

- **Respiratory Infection Hospitalization**, which assesses MIPS eligible clinicians on the risk-adjusted cost to Medicare for the inpatient treatment of respiratory infection.

We are proposing modifications to two existing episode-based measures so that their specifications reflect reevaluated versions beginning with the CY 2025 performance period/2027 MIPS payment year. These two measures are:

- **Cataract Removal with Intraocular Lens (IOL) Implantation**, which assesses MIPS eligible clinicians on the risk adjusted cost to Medicare for cataract removal procedures; and

- **Inpatient (IP) Percutaneous Coronary Intervention (PCI)**, which assesses MIPS eligible clinicians on the risk-adjusted cost to Medicare for the inpatient PCI treatment of patients who present with a cardiac event.

We are proposing that MIPS eligible clinicians must be attributed a minimum of 20 cases for each of the proposed six new measures. In addition, we are proposing to maintain the existing case minimums for the two measures we are proposing to modify in this rulemaking, which are a 20-episode case minimum for the IP PCI measure and a 10-episode case minimum for the Cataract Removal with IOL Implantation measure. We are also proposing to update the operational list of care episode and patient condition groups and codes to reflect these new and modified measures we are proposing.

Finally, we are proposing to adopt criteria to specify objective bases for the removal of any cost measures from the MIPS cost performance category, which we are also proposing to codify at § 414.1350(e).

For a description of the statutory authority for and existing policies pertaining to the cost performance category, we refer readers to § 414.1350 and the CY 2017 Quality Payment Program final rule (81 FR 77162 through 77177), CY 2018 Quality Payment Program final rule (82 FR 53641 through 53648), CY 2019 PFS final rule (83 FR 59765 through 59776), CY 2020 PFS final rule (84 FR 62959 through 62979), CY 2021 PFS final rule (85 FR 84877 through 84881), CY 2022 PFS final rule (86 FR 65445 through 65461), CY 2023 PFS final rule (87 FR 70055 through 70057), and CY 2024 PFS final rule (88 FR 79339 through 79349).

More details on the proposals in this section, which we invite comments on, are provided in section IV.A.4.e.(2)(a) through section IV.A.4.e.(2)(d) of this proposed rule. We also refer readers to section V.B.8.k. of this proposed rule for discussion on the burden estimates for these proposals.

(a) Proposed Updates to MIPS Episode-Based Measure Inventory

(i) Background on Episode-Based Measure Development and Use

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. There are currently 29 cost measures in the cost performance category for the CY 2024 performance period/2026 MIPS payment year, comprising of 27 episode-based measures covering a range of conditions and procedures and two population-based measures. We worked with the measure development contractor to identify the proposed six new episode-based measures through empirical analyses and public comment. These measures cover clinical topics and MIPS eligible clinicians practicing in certain specialties for whom there are currently limited or no applicable cost measures. As such, these measures would help fill gaps in the cost performance category's measure set.

In addition, these measures would support the transition from traditional MIPS to MVPs by allowing new MVPs to be created and enhancing existing MVPs. Further, the addition of these measures would address interested parties' feedback about the need for more clinically refined episode-based measures in the cost performance category. The measures would also increase the cost coverage of care episode and patient condition groups, moving closer towards the statutory goal of covering 50 percent of expenditures under Medicare Parts A and B, as specified under section 1848(r)(2)(i)(I) of the Act.

At a high level, episode-based measures represent the cost to the Medicare Program and beneficiaries for the items and services furnished to Medicare beneficiaries during an episode. They aim to compare MIPS eligible clinicians on the basis of the cost of care that is clinically related to treatment and management of a Medicare beneficiary and provided during the episode's timeframe. Specifically, for such measures, we define and measure the cost of care for the episode based on the allowed amounts on Medicare claims, which include both Medicare trust fund payments and any applicable beneficiary deductible and coinsurance amounts. The cost of care for these measures includes amounts paid under Medicare Parts A and B, and, on a case-by-case basis, Medicare Part D that have been standardized to remove price variation from non-clinical factors. The

Parts A and B payment standardization methodology and the Part D payment standardization methodology are available at <https://resdac.org/articles/cms-price-payment-standardization-overview>. Information about how the Part D standardization methodology incorporates rebates into standardized amounts is available at <https://www.cms.gov/files/document/2023-part-d-rebate-methodology.pdf>. We refer the readers to section IV.A.4.e.(2)(a)(iii) of this proposed rule for more information on the six episode-based measures we are proposing.

In this proposed rule, we provide detail about the six new measures that we are proposing to adopt in the cost performance category beginning with the CY 2025 performance period/2027 MIPS payment year. In section IV.A.4.e.(2)(a)(ii) of this proposed rule, we summarize the timeline for development of these proposed measures, including engagement activities undertaken by the measure development contractor. In section IV.A.4.e.(2)(a)(iii) of this proposed rule, we summarize the proposed new measures that would be included in the cost performance category beginning with the CY 2025 performance period/2027 MIPS payment year. In section IV.A.4.e.(2)(a)(viii) of this proposed rule, we discuss the pre-rulemaking review process these measures underwent. In section IV.A.4.e.(2)(b) of this proposed rule, we discuss our proposal that MIPS eligible clinicians must be attributed a minimum of 20 cases for each of these proposed measures to be assessed and scored on such measure.

(ii) Overview of Measure Development Process for New Episode-Based Measures

In this section, we describe the development process for the six proposed episode-based measures.

Development of episode-based measures for the cost performance category must comply with section 1848(q)(2)(B)(ii) of the Act, which provides that measures and activities specified for a performance period include the measurement of resource use (cost) as provided under section 1848(p)(3) of the Act, using the methodology under section 1848(r) of the Act, to collaborate with physicians, practitioners, and other interested parties, as appropriate. Section 1848(p)(3) of the Act provides that costs shall be evaluated, to the extent practicable, based on a composite of appropriate measures of costs established by the Secretary as further specified therein. We note that the

measure development contractor uses a "wave" approach to indicate cycles of measure development where clinical expert panels convene to select episode groups to develop into cost measures and to provide input on the measures' specifications. All six of the proposed measures have been developed with extensive engagement from interested parties, including clinicians, persons with lived experience, and the general public. The term "persons with lived experience," as used in this section IV.A.4.e.(2) of this proposed rule, refers to persons and family of persons who have experienced these conditions or diseases. Our approach to engagement is outlined in the CY 2018 Quality Payment Program final rule (82 FR 53644 and 53645), the CY 2019 PFS final rule (83 FR 59767 through 59769), the CY 2022 PFS proposed rule (86 FR 39396 and 39397), and the CY 2024 PFS proposed rule (88 FR 52568 through 52576). These processes have been refined over time to incorporate feedback from interested parties, such as to extend the development timeline from 12 months in Wave 2 to 18 months in Waves 3 and 4, and to integrate conversations between persons with lived experience and clinical experts.

We began development of the six episode-based measures across several of these waves:

- The Prostate Cancer, Rheumatoid Arthritis, and Kidney Transplant Management measures were initiated in Wave 5 in 2022 and followed the typical 18-month process.
- The CKD and ESRD measures were initiated in 2021 as part of an off-cycle development process and were incorporated into Wave 5 in 2022 to be completed along with the other three episode-based measures (that is, Prostate Cancer, Rheumatoid Arthritis, and Kidney Transplant Management).
- The Respiratory Infection

Hospitalization measure is a revised version of the Simple Pneumonia with Hospitalization measure that was initially developed in Wave 1 in 2018. The Simple Pneumonia with Hospitalization measure was adopted in MIPS in the CY 2019 PFS final rule (83 FR 59767 through 59773) and then removed from use in MIPS in the CY 2024 PFS final rule (88 FR 79348 and 79349). The measure underwent a comprehensive reevaluation process from 2022–2023 to identify and incorporate refinements based on public feedback, clinical input, and empiric testing. Unlike the other five new measures we are proposing, this measure did not undergo further development as part of Wave 5. Because the Simple Pneumonia with

Hospitalization measure is no longer in use in MIPS, we are proposing the Respiratory Infection Hospitalization measure as a new measure, and not as modifications to an existing measure. More information on the comprehensive reevaluation process that this measure underwent is described in sections IV.A.4.e.(2)(a)(iv) and IV.A.4.e.(2)(a)(v) of this proposed rule.

This section of this proposed rule will provide more details on the development process for the measures that were developed during Wave 5 (CKD, ESRD, Kidney Transplant Management, Prostate Cancer, and Rheumatoid Arthritis measures). We began developing the CKD and ESRD measures in 2021 as priority clinical areas by convening a clinician expert workgroup and gathering feedback from persons with lived experience. However, the clinician expert workgroup recommended that we develop a Kidney Transplant Management measure to fully capture the care continuum of kidney disease care before continuing to move forward with the CKD and ESRD measures. As a result, we halted measure development on the CKD and ESRD measures until 2022, while we gathered public feedback on the development of a Kidney Transplant Management measure, and later incorporated the CKD and ESRD measures into the Wave 5 development process.

The episode-based measures that were developed in the Wave 5 cycle of measure development (CKD, ESRD, Kidney Transplant Management, Prostate Cancer, and Rheumatoid Arthritis measures) underwent an 18-month development process. As a first step, the measure development contractor held a public comment period from February to April 2022 to gather feedback on which clinical areas to prioritize for measure development. The public comment period solicited feedback on the importance and feasibility of prioritizing kidney transplant management, prostate cancer, and rheumatoid arthritis, among other clinical areas, for measure development. During the public comment period, the measure development contractor received 32 comments on the candidate episode groups for development in Wave 5. We used this feedback, in conjunction with empirical testing by the measure development contractor, to inform our decision to develop measures for three specific clinical areas—prostate cancer, rheumatoid arthritis, and kidney transplant management—into episode-based measures. The summary of the public comments is available in this document

<https://www.cms.gov/files/document/wave-5-public-comment-summary-report.pdf>. We selected these clinical areas for measure development for several reasons including: representation of high priority clinical areas, potential to improve clinician performance or patient outcomes, potential to capture high costs of care paid by the Medicare Program, and ability to fill measurement gaps in the MIPS cost performance category and MVPs.

Following our decision to develop measures for prostate cancer, rheumatoid arthritis, and kidney transplant management, in addition to continuing to develop the CKD and ESRD measures, the measure development contractor convened four clinician expert panels, comprised of a total of 45 members, affiliated with 36 organizations and specialty societies. The CKD and ESRD measures shared a clinician expert panel due to the close clinical overlap of these diseases. Each panel also incorporated the perspective of persons with lived experience; their input is collected via structured focus groups, interviews, or surveys, and then summarized and presented to the clinical expert panels.

Then, the measure development contractor held a national field testing period from January 17, 2023, to February 14, 2023 for the Wave 5 measures (CKD, ESRD, Kidney Transplant Management, Prostate Cancer, and Rheumatoid Arthritis measures). During this field testing period, individual MIPS eligible clinicians and groups meeting a minimum threshold of 20 episodes for each measure could review field test reports and an episode-level file with detailed information to understand the types of services that comprise a large or small share of their episode costs. Supplemental materials, such as testing information on measures, a Frequently Asked Questions document, and mock field test reports were posted publicly for interested parties' review. The measure development contractor gathered feedback via survey and a summary of this feedback from the field testing period is available at <https://www.cms.gov/files/document/2023-field-testing-feedback-summary-report.pdf>.

The measure development contractor also has a standing technical expert panel (TEP), which is referred to as the Physician Cost Measures and Patient Relationship Codes (PCMP) TEP. The PCMP TEP is composed of 20 members from different clinical areas, academia, health care and hospital administration, and persons with lived experience,

which provides overarching input on cross-measure topics, such as testing approaches and methodology. For example, the PCMP TEP discussed general challenges in developing chronic condition episode-based measures and ways that the chronic condition framework can address those challenges, provided feedback on the attribution rules (that is, the algorithms and the types of codes used in each algorithm) that would demonstrate a relationship between a clinician group and a patient with a chronic condition(s), and discussed service assignment, risk adjustment, and exclusions, which support the overall development of episode-based measures, including, but not limited to those episode-based measures being proposed in this rulemaking. This input helped inform the specifications for the chronic condition episode-based measure framework, which serves as the framework for the chronic condition episode-based measures (that is, Prostate Cancer, Rheumatoid Arthritis, CKD, ESRD, and Kidney Transplant Management episode-based measures) developed in Wave 5 and being proposed in this proposed rule.

More information about the measure development and interested parties' engagement process for the six episode-based measures we are proposing for adoption in the cost performance category is available in materials on the QPP Cost Measure Information page at <https://www.cms.gov/medicare/quality/value-based-programs/cost-measures>. Summaries of the public comment period and clinician expert workgroup meetings organized by the measure development contractor are also available on the QPP Cost Measure Information page at <https://www.cms.gov/medicare/quality/value-based-programs/cost-measures>. Descriptions of the methods through which the measure development contractor gathered expert input during measure development and other interested parties' engagement activities is available in the "2024 MIPS Summary of Cost Measures" document at <https://www.cms.gov/files/document/2024-mips-summary-costs-measures.pdf>.

(iii) Description of Six New Episode-Based Measures Proposed for Adoption Beginning With the CY 2025 Performance Period/2027 MIPS Payment Year

In this section of this proposed rule, we discuss the six new episode-based measures, which we propose to add to the cost performance category beginning with the CY 2025 performance period/2027 MIPS payment year.

In conjunction with our measure development contractor, we developed these measures with consideration of the common standards that are described in the CY 2022 PFS final rule (86 FR 65455 through 65459) to ensure consistency across episode-based measures being developed. Specifically, the CY 2022 PFS final rule requires that any episode-based measure for the cost performance category include the following: (1) episode definition based on trigger codes that determine the patient cohort; (2) attribution; (3) service assignment; (4) exclusions; and (5) risk adjustment. The six new episode-based measures we are proposing meet all requirements described in CY 2022 PFS final rule, including these features. We provide more information on the specific requirements for each of the episode-based measures later in this section of this rulemaking.

Generally, for all episode-based measures, we exclude episodes where costs cannot be fairly compared to the costs for the whole cohort in the

episode-based measure. These exclusions, like other features of each episode-based measure, are developed with extensive clinician and interested parties' engagement. We have specified exclusions for all six proposed episode-based measures.

We also apply a risk adjustment model to all episode-based measures in the cost performance category. The model includes standard risk adjusters that are applied to all episode-based measures (for example, CMS Hierarchical Condition Category [HCC] variables, comorbidities, age brackets, disability status, ESRD status), and measure-specific risk adjusters (for example, for the Rheumatoid Arthritis episode-based measure, rheumatoid arthritis severity, fractures, frailty, and cognitive status). We assess the risk adjustment model at the level of each stratification to ensure that only like patients are compared to each other. The risk adjustment model we use in development of the cost performance category's episode-based measures is

described in detail in CY 2019 PFS final rule (83 FR 59767 through 59773). As mentioned previously in this section, all six proposed episode-based measures have been risk adjusted in accordance with this model.

More information on the episode-based measure development requirements, which were outlined so that external interested parties could develop measures in the future, are available in the Blueprint for the CMS Measures Management System (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Blueprint>) and the Meaningful Measures Framework (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page>).

The episode-based measures that we are proposing for adoption beginning with the CY 2025 performance period/2027 MIPS payment year are set forth in Table 58.

TABLE 58: Proposed Episode-Based Measures Beginning with CY 2025 Performance Period/2027 MIPS Payment Year

| Measure Name | Episode Type |
|---------------------------------------|-----------------------------------|
| Chronic Kidney Disease (CKD) | Chronic condition |
| End-Stage Renal Disease (ESRD) | Chronic condition |
| Kidney Transplant Management | Chronic condition |
| Prostate Cancer | Chronic condition |
| Rheumatoid Arthritis | Chronic condition |
| Respiratory Infection Hospitalization | Acute inpatient medical condition |

The five chronic condition episode-based measures assess outpatient treatment and ongoing management of the following chronic conditions: CKD, ESRD, kidney transplant management, prostate cancer, and rheumatoid arthritis. These measures assess the costs of services related to these conditions, such as physician services, imaging or diagnostic services, emergency room care or hospitalizations, medications, or other services related to ongoing management or post-acute care. The measure construction for these proposed measures follows the approach described in the CY 2022 PFS final rule (86 FR 65445 through 65461), which also includes detailed discussion of the attribution methodology and examples of how episodes are attributed.

To briefly summarize, the attribution methodology that identifies a clinician-patient care relationship for these chronic condition episode-based

measures is slightly different at the clinician group and individual MIPS eligible clinician levels, to reflect that care provided at the clinician group and individual MIPS eligible clinician levels, respectively. At a high level, these proposed chronic condition episode-based measures attribute episodes to the clinician group that renders services that constitute a trigger event, which is identified by the occurrence of two claims billed in close proximity by the same clinician group. Both claims must have a diagnosis code indicating the same chronic condition related to the specific episode-based measure. For example, for the Prostate Cancer measure, both claims of the trigger event must have a diagnosis indicating prostate cancer. The services that trigger an event for these chronic condition episode-based measures are identified first by Evaluation and Management (E/M) codes for outpatient services, and then by a second claim

with either another E/M code for outpatient services or a condition-related Current Procedural Terminology (CPT)/Healthcare Common Procedure Coding System (HCPCS) code (CPT/HCPCS) related to the treatment or management of the chronic condition. Note, some measures also use additional CPT/HCPCS codes with a relevant diagnosis as the initial trigger service. The trigger event opens a year-long attribution window from the date of the initial E/M outpatient service, during which the same clinician group could reasonably be considered responsible for managing the patient's chronic condition. If we see evidence that the relationship is ongoing, represented by another E/M or condition-related procedure code that we refer to as the reaffirming claim, then this window can be extended.

For individual MIPS eligible clinicians, we would attribute episodes to each individual MIPS eligible

clinician within an attributed clinician group that renders at least 30 percent of trigger or reaffirming codes on Part B Physician/Supplier claim lines during the episode, such as office visits or diagnostic services. We also apply conditions to ensure the MIPS eligible clinicians to whom the episode is attributed are reasonably responsible for the management of the patient's chronic condition. Specifically, the MIPS eligible clinician must have provided condition-related care to this patient prior to or on the episode start date.

Additionally, for some measures, we use provider-level prescription billing patterns to ensure that we are capturing the MIPS eligible clinicians directly involved in providing ongoing chronic care management. Specifically, for some measures, the MIPS eligible clinician must also have prescribed at least two prescriptions claimed under Medicare Part D and/or Medicare Part B related to the management of the condition for two different patients during the measurement period, plus a one-year lookback period. These conditions, which we use to attribute a cost measure to MIPS eligible clinicians, also apply to the attribution methodology at the clinician group level. Specifically, the clinician group would always meet the first condition by construction (that is, there would always be an individual MIPS eligible clinician under the clinician group that has provided care to the patient prior to or on the episode start date). However, the clinician group must have at least one potentially attributable MIPS eligible clinician under it who meets the second condition.

More information about the chronic condition episode-based measures attribution methodology, including a one-page summary and a Frequently Asked Questions (FAQ) document, is available at <https://www.cms.gov/files/zip/mips-chronic-condition-episode-based-cost-measures-attribution-methodology-2023-zip.zip>. More general information about the overall chronic condition cost measure framework is available at <https://www.cms.gov/files/document/chronic-condition-cost-measure-framework-poster.pdf>.

The Respiratory Infection Hospitalization measure is an acute inpatient medical condition episode-based measure, which focuses on the inpatient treatment of respiratory infection and is attributed to clinicians and clinician groups treating a patient during the hospitalization. It includes the cost of services related to the inpatient treatment of a respiratory infection, such as initial inpatient services, subsequent outpatient

physician visits, and emergency room care or hospitalizations for related complications. As noted in section IV.A.4.e.(2)(a)(ii) of this proposed rule, the Respiratory Infection Hospitalization measure is the reevaluated version of the Simple Pneumonia with Hospitalization measure, adopted for MIPS in CY 2019 PFS final rule (83 FR 59767 through 59773) and removed from MIPS in the CY 2024 PFS final rule (88 FR 79348 and 79349). We developed the Simple Pneumonia with Hospitalization acute inpatient medical condition measure in accordance with the previously established framework for episode-based measures, which we described in detail in the CY 2019 PFS final rule (83 FR 59769 through 59771). The Simple Pneumonia with Hospitalization measure was reevaluated following the process described in sections IV.A.4.e.(2)(a)(iv), IV.A.4.e.(2)(a)(v), and IV.A.4.e.(2)(a)(viii) of this proposed rule. We are proposing the Respiratory Infection Hospitalization measure, the reevaluated version of the Simple Pneumonia with Hospitalization measure, because we continue to believe it is important to capture pneumonia and other respiratory infections, as pneumonia is a leading infectious cause of hospitalization and death among adults in the United States.⁷⁴⁵ This new, revised measure addresses the concerns with the previous version of the measure by expanding the patient cohort to include beneficiaries hospitalized for pneumonia and related respiratory infections, reflecting the coding changes as described in the CY 2024 PFS final rule (88 FR 79348 and 79349). The revised measure also incorporates feedback we received from interested parties about appropriate risk adjustment and exclusions during the reevaluation process of the prior Simple Pneumonia with Hospitalization measure.

The specifications for all six episode-based measures we are proposing for adoption in this rulemaking are available at <https://www.cms.gov/medicare/quality/value-based-programs/cost-measures>. The specifications documents for each measure consist of a methods document that describes the steps for constructing the measure and a measure codes list file that contains the medical codes used in that methodology. First, the methods document provides detailed methodology describing each step to

construct the measure, including: identifying patients receiving care; defining an episode-based measure; attributing episodes to MIPS eligible clinicians and clinician groups; assigning costs; defining exclusions; risk adjusting; and calculating measure score. Second, the measure codes list file contains the codes used in the measure specifications, including the episode triggers, attribution, stratification, assigned items and services, exclusions, and risk adjustors.

More information about the episode-based measures is available in the measure justification forms, which were posted to support Pre-rulemaking Measure Review (PRMR) discussions. These documents provide a comprehensive characterization of the measures, their justification, and testing results of the measures' specifications at this time. These documents are available through the QPP Cost Measure Information page at <https://www.cms.gov/medicare/quality/value-based-programs/cost-measures>.

(iv) Background on Episode-Based Measure Reevaluation and Maintenance

In this section, we describe the measure maintenance process we use, in conjunction with our measure development contractor, to monitor, evaluate, and potentially modify cost measures. Using this maintenance process, we holistically reviewed, and evaluated whether to modify or take other actions with respect to, certain measures in the cost performance category. As a result of this process, we propose to modify two episode-based measures currently in use (the Routine Cataract Removal with Intraocular Lens (IOL) Implantation and ST-Elevation Myocardial Infarction (STEMI) Percutaneous Coronary Intervention (PCI) measures), and propose the reevaluated Respiratory Infection Hospitalization as a new measure, replacing the Simple Pneumonia with Hospitalization measure previously removed from the cost performance category.

The measure development contractor routinely conducts three types of measure maintenance: measure monitoring, annual measure specifications updates, and comprehensive reevaluation. Comprehensive reevaluation occurs every 3 years after a measure is implemented in MIPS. The purpose of comprehensive reevaluation is to ensure that measures continue to meet criteria for importance, scientific acceptability, and usability in line with the CMS Measures Management System Blueprint (<https://mmshub.cms.gov/>

⁷⁴⁵ Regunath, Hariharan, and Yuji Oba. "Community-Acquired Pneumonia." National Library of Information, August 8, 2022. <https://www.ncbi.nlm.nih.gov/books/NBK430749>.

blueprint-measure-lifecycle-overview). In this process, we holistically review the measure, seek public comment, and consider whether any changes need to be made to measure specifications. A new version of the measure may be considered for implementation in MIPS in future years, after undergoing the pre-rulemaking and the notice-and-comment rulemaking processes. For more information on recent reevaluation efforts, please refer to the documents under the “Wave 1 cost measure comprehensive reevaluation (2022–2023)” section of the QPP Cost Measure Information page at <https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/prior>.

For the purpose of assessing performance of MIPS eligible clinicians

in the cost performance category, we finalized, in the CY 2019 PFS final rule (83 FR 59767 through 59773), the Routine Cataract Removal with Intraocular Lens (IOL) Implantation, ST-Elevation Myocardial Infarction (STEMI) Percutaneous Coronary Intervention (PCI), and Simple Pneumonia with Hospitalization measures to be included in MIPS beginning with the CY 2019 performance period/2021 MIPS payment year. In this section, we are proposing to modify the Routine Cataract Removal with IOL Implantation and STEMI PCI measures based on input from interested parties from prior public comment periods and recommendations from Clinician Expert Workgroups.

We also propose to modify the measure titles. Routine Cataract Removal with Intraocular Lens (IOL) Implantation would be revised to Cataract Removal with Intraocular Lens (IOL) Implantation to reflect substantive changes to the measure exclusions. ST-Elevation Myocardial Infarction (STEMI) Percutaneous Coronary Intervention (PCI) would be revised to Inpatient (IP) Percutaneous Coronary Intervention (PCI) to reflect the inclusion of patients with a non-STEMI PCI diagnosis and patients with a PCI diagnosis but neither STEMI nor non-STEMI diagnoses.

The episode-based measures that we propose to modify beginning with the CY 2025 performance period/2027 MIPS payment year are listed in the Table 59.

TABLE 59: Proposed Reevaluated Episode-Based Measure Modifications Beginning with CY 2025 Performance Period/2027 MIPS Payment Year

| Original Measure Name | Revised Measure Name | Episode Type |
|---|---|-----------------------------------|
| Routine Cataract Removal with Intraocular Lens (IOL) Implantation | Cataract Removal with Intraocular Lens (IOL) Implantation | Procedural |
| ST-Elevation Myocardial Infarction (STEMI) Percutaneous Coronary Intervention (PCI) | Inpatient (IP) Percutaneous Coronary Intervention (PCI) | Acute inpatient medical condition |

(v) Overview of Measure Reevaluation Process for Episode-Based Measures

As part of the reevaluation process, we worked with the measure development contractor to gather feedback from interested parties on potential refinements to the measures. The measure development contractor worked with a standing TEP, Clinician Expert Workgroups, and held two public comment periods.

Initially, a public comment period was held from February to May 2022 to gather feedback on which of the Wave 1 measures implemented in MIPS in 2019 that the measure developer should prioritize reevaluating. A summary of public comments from the 2022 public comment period can be found in the Wave 1 Comprehensive Reevaluation Public Comment Summary Report at <https://www.cms.gov/files/document/wave-one-public-comment-summary-report.pdf>.

The measure development contractor then convened the TEP for a meeting in August 2022 to provide input on the comprehensive reevaluation process for all Wave 1 episode-based measures. In October 2022, the measure development contractor convened the Cataract Removal with IOL Implantation

Clinician Expert Workgroup, the IP PCI Clinician Expert Workgroup, and the Respiratory Infection Hospitalization Clinician Expert Workgroup, to provide detailed clinical input on measure specifications for each reevaluated measure. This input was informed by empiric testing conducted by the measure development contractor. The workgroup discussions from October 2022 can be found in the Summary of Wave 1 Comprehensive Reevaluation Workgroup meetings at <https://www.cms.gov/files/zip/summary-wave-1-comprehensive-reevaluation-workgroup-meetings.zip>.

After this, a second public comment period was held in February 2023 to gather feedback on the draft revisions the measure developer made to the Cataract Removal with IOL Implantation, IP PCI, and Respiratory Infection Hospitalization measures. A summary of public comments from the 2023 public comment period can be found in the 2023 Revised Cost Measure Feedback Period Summary Report at <https://www.cms.gov/files/document/2023-revised-cost-measure-feedback-period-summary-report.pdf>.

The measure-specific expert workgroups then reviewed the feedback

received through public comments and provided input on proposed decisions regarding the measure specifications. The workgroup discussions from Spring 2023 are available in the Summary of Wave 1 Post-Feedback Period Workgroup meetings at <https://www.cms.gov/files/zip/summary-wave-1-post-feedback-period-pfr-workgroup-meetings-23.zip>. After the proposed specifications for each measure were finalized, we submitted the three revised measures (Cataract Removal with IOL Implantation, IP PCI, and Respiratory Infection with Hospitalization measures) to the 2023 MUC list and underwent review by the PRMR Clinician Committee and Clinician Committee Recommendation Group, which reviewed the measures for use in MIPS. We provide more information about this discussion in section IV.A.4.e.(2)(a)(viii) of this proposed rule.

(vi) Description of Proposed Modifications to the Routine Cataract Removal With Intraocular Lens (IOL) Implantation Measure With the Newly Titled Cataract Removal With IOL Implantation Measure

We finalized the Routine Cataract Removal with Intraocular Lens (IOL) Implantation cost measure in the CY 2019 PFS final rule (83 FR 59767 through 59773) for use in MIPS as an important measure of clinician cost performance, as cataract surgery is the most common surgical procedure in the United States.⁷⁴⁶ We continue to believe that the existing measure is appropriate to use in MIPS. When we finalized this measure for use in MIPS, we noted that as with all the cost measures, we would maintain this measure and update its specifications as appropriate (83 FR 59766 and 59767). As a part of our routine measure maintenance, we reevaluated the Routine Cataract Removal with IOL Implantation measure with consideration of input from interested parties and testing. This feedback from interested parties included:

- The patient cohort for the measure should be expanded, while still accounting for patient heterogeneity, to expand clinician and beneficiary coverage.
- The measure should account for patients with ocular conditions that impact case complexity to account for patient heterogeneity.
- Certain Medicare Part B medication costs related to cataract procedures should be included in the measure, while Medicare Part D medication costs should remain excluded to better account for more clinically-related medication costs.
- The measure should more broadly capture services associated with cataract removal.

In response to this feedback, CMS and the measure development contractor conducted additional empirical analyses and discussed potential modifications with the measure-specific expert workgroup. Summaries of these discussions are available here: <https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/prior>. Based on these testing results and the clinician expert input, we are proposing to replace the Routine Cataract Removal with IOL Implantation with the revised Cataract Removal with IOL Implantation cost measure. The modifications that we are proposing to incorporate into the

revised Cataract Removal with IOL Implantation measure and our rationale is outlined as follows.

First, we propose to modify this cost measure by expanding the patient cohort based on changes to the exclusion criteria. Testing has shown that many episodes excluded due to ocular conditions had similar cost profiles, compared to episodes included in the measure, and represented a significant portion of triggered episodes. The measure-specific expert workgroup discussed the appropriateness of the original exclusion criteria and recommended potential revisions. The proposed revised measure includes patients with certain previously excluded ocular conditions, such as glaucoma and macular degeneration, in the measure cohort because of their similar cost profiles. In response to expanding the measure cohort, we also propose updates to the risk adjustment model to risk adjust for ocular conditions that are no longer excluded but may still impact case complexity and episode costs. We believe that these changes are appropriate as they further account for patient heterogeneity in the more clinically diverse patient cohort. However, the proposed revised measure continues to exclude episodes for patients with significant ocular conditions impacting surgical complication rate or visual outcomes because testing did not suggest they had similar enough cost profiles for any expected cost differences to be accounted for through risk adjustment.

Second, we propose to modify this cost measure's service assignment specifications in two ways, to include: (1) certain clinically-related telehealth services, pre-operative testing, emergency department (ED) visits for ocular complaints, and postoperative durable medical equipment (DME); and (2) certain additional clinically-related Medicare Part B medication costs that were not initially included in the measure. The previous version of the measure included a smaller subset of these services. However, testing showed that additional clinically-related services within these categories occur during Cataract Removal episodes and exclusion of these services from the measure could result in failure to capture important costs. We are proposing to include the additional services because we believe this change would retain the original intent of the measure while capturing a more complete picture of cost performance variation. Additionally, we are proposing to expand the types of Part B medications assigned to the measure because we believe it would be

appropriate to use similar service assignment rules for all clinically-related Part B medications.

Further details about the revised Cataract Removal with IOL Implantation measure are available in the measure specifications documents, which are available at <https://www.cms.gov/medicare/quality/value-based-programs/cost-measures>.

(vii) Description of the Proposed Modifications to the ST-Elevation Myocardial Infarction (STEMI) With Percutaneous Coronary Intervention (PCI) Measure With the Newly Titled Inpatient (IP) Percutaneous Coronary Intervention (PCI) Measure

Similar to the Cataract Removal with IOL Implantation measure, we finalized the ST-Elevation Myocardial Infarction (STEMI) Percutaneous Coronary Intervention (PCI) measure in the CY 2019 PFS final rule (83 FR 59767 through 59773) for use in MIPS as an important measurement of clinician cost performance, due to the high frequency and cost of PCI procedures in the United States. PCI is one of the most common procedures for cardiac events (AMIs) and is associated with \$10 billion in health care costs annually.⁷⁴⁷ We continue to believe that the existing measure is appropriate for use in MIPS. However, when we finalized this measure for use in MIPS, we noted that, as with all the cost measures, we would maintain this measure and update its specifications as appropriate (83 FR 59766 and 59767). As a part of our routine measure maintenance, we reevaluated the STEMI PCI measure with consideration of input from interested parties and testing. This feedback from interested parties included:

- The patient cohort for the measure should be expanded, while still accounting for patient heterogeneity to increase clinician coverage and capture more clinically-related services.
- The measure should account for patients with cardiac arrest and patients who smoke tobacco to reduce factors outside of clinician control that influence measure performance.

In response to this feedback, CMS and the measure development contractor conducted additional empirical analyses

⁷⁴⁶ Pershing, S., D.E. Morrison, and T. Hernandez-Boussard. "Cataract Surgery Complications and Revisit Rates among Three States." [In eng]. *Am J Ophthalmol* 171 (Nov 2016): 130–38.

⁷⁴⁷ Amin, Amit P., Patterson, Mark, House, John A., Giersiefen, Helmut, Spertus, John A., Baklanov, Dmitri V., Chhatrivala, Adnan K., Safley, David M., Cohen, David J., Rao, Sunil V., Marso, Steven., "Cost Associated With Access Site and Same-Day Discharge Among Medicare Beneficiaries Undergoing Percutaneous Coronary Intervention: An Evaluation of the Current Percutaneous Coronary Intervention Care Pathways in the United States," *JACC Cardiovasc Interv* 10, no. 4 (2017): 342–351.

and discussed potential modifications with the measure-specific Clinician Expert Workgroup. Summaries of these discussions are available here: <https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/prior>. Based on these testing results and the clinician expert input, CMS is proposing to replace the STEMI PCI measure with the revised IP PCI measure. The modifications that we are proposing to incorporate into the revised IP PCI measure and our rationale is outlined as follows.

First, we propose to modify this cost measure by expanding the patient cohort based on changes to the triggering logic. The previous version of the measure narrowly defined a subset of STEMI PCI patients to promote homogeneity of the patient cohort. However, testing demonstrated that PCI episodes with and without STEMI appear to have similar cost profiles and involve similar clinician types. Therefore, it is appropriate to expand the patient cohort in the proposed revised measure to include episodes beyond those with STEMI diagnoses, such as PCI for non-STEMI diagnoses and PCI without either STEMI or non-STEMI diagnoses. As such, we would no longer use ICD-10 diagnosis information to restrict assessment of costs under this measure to only inpatient PCI procedures with a STEMI diagnosis. This change would increase the number of clinicians and beneficiaries for whom this cost measure would be applicable.

Second, we are proposing to modify this cost measure to include additional sub-groups to stratify the patient cohort based on diagnosis to account for variations in cost and treatment pathways for inpatient procedures. While there are overall similarities between the diagnosis for inpatient PCI episodes (that is, STEMI, non-STEMI, and other inpatient PCI episodes), there are still expected differences in observed costs between these cohorts. This modification would allow us to assess variation in clinician cost performance rather than expected cost differences due to patient diagnoses. We believe this is appropriate as testing shows differences in observed episode costs among STEMI, non-STEMI, and other inpatient PCI episodes are neutralized via sub-grouping and risk adjustment.

Third, we are proposing that the proposed revised measure excludes episodes with cardiac arrest and risk adjusters for patients with a history of tobacco use to further address heterogeneity in the patient cohort, as these cases can result in more complex

treatment and higher observed costs for reasons outside of the control of the attributed clinician. This was supported by testing on the expanded patient cohort.

Further detail about the revised IP PCI measure is included in the measure specifications documents, which are available at <https://www.cms.gov/medicare/quality/value-based-programs/cost-measures>.

(viii) Pre-Rulemaking Measure Review Process

After these extensive measure development and refinement activities, we included the six proposed new episode-based measures and two modified episode-based measures on our 2023 Measures Under Consideration (MUC) List (available for download at <https://mmshub.cms.gov/sites/default/files/2023-MUC-List.xlsx>) to be considered for potential use in MIPS. The measures then underwent PRMR during the 2023–2024 review cycle. This process involved reviews by the PRMR Clinician Committee advisory and recommendation workgroups, as well as two public comment periods. More details on the PRMR process are available at <https://p4qm.org/PRMR>.

Although we may pursue endorsement by the consensus-based entity (CBE), contracted in accordance with section 1890 of the Act, for the proposed measures at a later time, we are not required to use only CBE endorsed measures in MIPS. We emphasize that cost measures undergo extensive review and testing before they are implemented in MIPS. As described in section IV.A.4.e.(2)(a)(ii), the proposed new and revised cost measures in this proposed rule were vetted by clinicians, specialty societies, persons with lived experience, consensus panels, and the public at large without going through the CBE endorsement process. Cost measures are developed through a rigorous process with a Clinician Expert Workgroup providing detailed input on each aspect of the specifications, reviewing iterative empirical testing, and considering the input from persons with lived experience. The cost measures undergo field testing during the development process where MIPS eligible clinicians can download feedback reports to review their performance before measure implementation, and share input with the developer to help finalize the measure specifications. In addition, the proposed new and revised cost measures in this proposed rule were reviewed through the pre-rulemaking process described in this section of this proposed rule. We continue to believe

in the strength of the episode-based measures, proposed for adoption and modification in this rulemaking, based on valid and reliable testing results and extensive review from interested parties as part of the measure development and implementation process.

The PRMR Clinician Committee and Clinician Committee Recommendation Group reviewed the measure information, a preliminary analysis of the measures and their testing information developed by the CBE, and public comments. The PRMR Clinician Committee Recommendation Group met in January 2024 to discuss the measures in more detail and vote on their recommendations for the appropriateness of these measures' use in MIPS. The final result from the committee's vote can be: Recommend, Recommend with conditions, Do not recommend, or Consensus not reached. Consensus not reached signals continued disagreement among the committee despite being presented with perspectives from public comment, committee member feedback and discussion, and highlights the multi-faceted assessments of measures. More details regarding the CBE PRMR voting procedures may be found in Chapter 4 of the Guidebook of Policies and Procedures for Pre-Rulemaking Measure Review and Measure Set Review at https://p4qm.org/sites/default/files/2023-09/Guidebook-of-Policies-and-Procedures-for-Pre-Rulemaking-Measure-Review-%28PRMR%29-and-Measure-Set-Review-%28MSR%29-Final_0.pdf.

The PRMR had mixed recommendations for the episode-based measures we are proposing to adopt and modify (in section IV.A.4.e.(2)(a)(ix)) in this rulemaking.

The PRMR Clinician Committee Recommendation Group voted to “recommend with conditions” for the revised Cataract Removal with IOL Implantation and IP PCI measures. For the Cataract Removal with IOL Implantation measure, while the committee did not provide or explain its conditions, they generally suggested further examination of how implementation of cost measures may impact patient outcomes. We plan to examine patient outcomes in more detail as part of routine measure monitoring. For the IP PCI measure, the committee recommended with the two conditions: CBE endorsement and additional testing to gather performance data over a longer period. As previously discussed, CBE endorsement is not required for measures to be adopted and used in MIPS. We plan to address these

conditions by monitoring the IP PCI measure's performance over time.

The PRMR Clinician Committee Recommendation Group did not reach consensus on the CKD, ESRD, Kidney Transplant Management, Prostate Cancer, and Respiratory Infection Hospitalization measures. Overall, there was varied levels of support of the measures across the PRMR Clinician Committee Recommendation Group. The main concerns raised were related to scientific acceptability (for example, testing results suggesting low reliability for the CKD, ESRD and Kidney Transplant Management measures), appropriateness of risk adjustment, and potential unintended consequences. We recognize the Recommendation Group's concerns, but emphasize the tradeoffs between accuracy and reliability, as described in the CY 2022 PFS final rule (86 FR 65453 through 65456). However, we did work with the measure development contractor to conduct additional testing to address these concerns. We identified non-substantive updates to existing outlier exclusions applied to cost measures that would address concerns about measure reliability for the CKD, ESRD, and Kidney Transplant Management measures. These adjusted outlier exclusions substantially improve reliability and are reflected in Table 60 of this proposed rule. We note that all the proposed new and revised measures meet the 0.4 mean reliability threshold that CMS typically applies for measures' use in MIPS. The Recommendation Group also expressed a strong interest in the measures undergoing CBE endorsement. As noted above, we may pursue CBE endorsement of these measures in the future, but it is not a requirement for measures to be adopted and used in MIPS.

The voting results of the PRMR Clinician Committee Recommendation Group for the Rheumatoid Arthritis measure were "do not recommend." The PRMR final recommendations state that the Recommendation Group supported the measure concept, but ultimately had reservations about its use in MIPS and concerns about measure performance. These concerns aligned with the concerns the Recommendation Group raised about cost measures overall, such as concerns around how cost measures impact patient outcomes. More information on the PRMR recommendations is available in the PRMR 2023 Final Recommendation Report: <https://p4qm.org/sites/default/files/2024-02/PRMR-2023-MUC-Recommendations-Report-Final-.pdf>.

We acknowledge the feedback from the Recommendation Group regarding

the Rheumatoid Arthritis measure, but we disagree that the measure should not be used in MIPS. We agree with the Recommendation Group's feedback regarding the importance of this measure to assess and address wide variation in cost performance for rheumatoid arthritis treatment and management. Literature states that rheumatoid arthritis is highly prevalent and is most common among older adults.^{748 749} Given this high prevalence, rheumatoid arthritis is costly to the healthcare system and individual patients, though costs vary based on treatment regimen.⁷⁵⁰ Over the past decade, Medicare costs associated with disease-modifying treatments have increased substantially.⁷⁵¹ Additionally, certain treatment choices for Rheumatoid Arthritis are associated with increased costs due to adverse outcomes associated with these choices, suggesting room for improvement in cost performance and patient care. For example, chronic glucocorticoid use among rheumatoid arthritis patients is associated with higher health care costs due to increased occurrence of adverse events (e.g., developing diabetes or osteoporosis, cardiovascular events such as thrombotic stroke, myocardial infarction, or death).^{752 753 754} We believe that the cost of these adverse events are important to assess in terms of Medicare spending and impact on the patient population. In line with these findings, the Recommendation Group did express support for the intent of this measure from a clinician and patient perspective.

⁷⁵³ Wilson, J.C. et al., "Incidence and Risk of Glucocorticoid-Associated Adverse Effects in Patients With Rheumatoid Arthritis," *Arthritis Care & Research*, 71, no. 4, (April 2019): 498–511, <https://doi.org/10.1002/acr.23611>.

⁷⁵⁴ Best, J.H. et al., "Association Between Glucocorticoid Exposure and Healthcare Expenditures for Potential Glucocorticoid-related Adverse Events in Patients with Rheumatoid Arthritis," *Journal of Rheumatology* 45, no. 3 (March 2018): 320–328, <https://doi.org/10.3899/jrheum.170418>.

The Recommendation Group stated that public comments submitted during the PRMR process suggest the Rheumatoid Arthritis measure does not have support by certain rheumatology associations. However, the comments received during PRMR did not include comments from a major rheumatologic association that has called for the development of an episode-based measure for rheumatologists. Members of this organization were also involved in the development of the Rheumatoid Arthritis measure through the participation in the Rheumatoid Arthritis Clinician Expert Workgroup. As described in section IV.A.4.e.(2)(a)(ii) of this proposed rule, the Rheumatoid Arthritis episode-based cost measure was developed with extensive engagement from interested parties (that is, clinicians who treat this disease, persons with lived experience with Rheumatoid Arthritis, and the general public) through several mechanisms including a TEP, public comment periods, a clinician expert workgroup, person and family engagement opportunities, and national field testing. During the public comment period for determining which measures to prioritize for development, we received feedback from rheumatology professional societies that they supported the development of a Rheumatoid Arthritis measure, as the current MIPS cost measure inventory does not include cost measures specific to care typically provided by rheumatologists. Additionally, the Rheumatoid Arthritis Clinician Expert Workgroup that advised on the measure specifications included representatives from 11 professional societies, including key rheumatology societies.

The Recommendation Group also expressed concerns with the scientific acceptability of the Rheumatoid Arthritis measure. However, national field testing indicates the measure is valid and has high reliability at the group level, with a mean reliability of 0.74, and has moderate reliability at the individual level with a mean reliability of 0.52. At both the group and individual levels, the measure passes the 0.4 reliability threshold we typically apply for a cost measure's use in MIPS, as discussed in CY 2022 PFS final rule (86 FR 65453 through 65455). Additionally, several commenters expressed concerns with the Rheumatoid Arthritis measure, such as the measure could hold clinicians accountable for costs that they cannot control (for example, medications), the risk adjustment methodology may not account for differences in the patient

population, and the measure is not tied directly to patient outcomes. Testing also indicates that the cost measure reflects the cost related to treatment choices and the cost of adverse outcomes resulting from care and that the risk adjustment model is working as intended. There has not been evidence to suggest that this cost measure would impact patient outcomes negatively. More information is available in the Measure Justification Form available for download at <https://www.cms.gov/files/zip/2023-wave-5-measure-justification-forms-zip.zip>. The Recommendation Group also acknowledged that the measure is already specified to adjust for expected differences in medication costs based on whether a patient is enrolled in Medicare Part D (that is, stratifying the measure by Part D enrollment), furthering supporting the scientific acceptability of this measure.

The Recommendation Group suggested the measure should undergo endorsement review and receive CBE endorsement. As discussed previously, we may pursue CBE endorsement of these measures in the future, but CBE endorsement is not a requirement for measures to be adopted and used in MIPS.

We are continuing to propose this measure despite the “do not recommend” vote from the PRMR committee because we continue to believe in the use of this measure based on the empiric testing results discussed in this section, including indications of moderate to high reliability, and because of the importance of capturing this clinical area of care. We originally selected this measure for development because of its high impact in terms of patient population, clinician coverage, and Medicare spending, and the opportunity to build a chronic condition measure that would address a condition not captured by other episode-based measures in the MIPS cost performance category. We believe that there is a strong rationale for including this measure in the cost performance category for these same reasons.

(ix) Proposal To Adopt Six Episode-Based Measures and Modify Two Episode-Based Measures

In consideration of the extensive development, reevaluation, and pre-

rulemaking review processes described in sections IV.A.4.e.(2)(a)(i) through IV.A.4.e.(2)(a)(viii), we are proposing to make the following updates to the MIPS cost performance category:

We are proposing to adopt the six new episode-based measures in the cost performance category, outlined in Table 58 and described in section IV.A.4.e.(2)(a)(iii) of this rulemaking, beginning with the CY 2025 performance period/2027 MIPS payment year.

We are proposing to replace the original Routine Cataract Removal with Intraocular Lens (IOL) Implantation with the revised Cataract Removal with Intraocular Lens (IOL) Implantation measure, with the modifications described in section IV.A.4.e.(2)(a)(vi) of this rulemaking, in the cost performance category beginning with the CY 2025 performance period/2027 MIPS payment year.

We are proposing to replace the ST-Elevation Myocardial Infarction (STEMI) Percutaneous Coronary Intervention (PCI) with the revised Inpatient (IP) Percutaneous Coronary Intervention (PCI) measure, with the modifications described in section IV.A.4.e.(2)(a)(vii) of this rulemaking, in the cost performance category beginning with the CY 2025 performance period/2027 MIPS payment year.

We invite comments on the proposals in this section.

(b) Reliability and Case Minimum

In this section of this proposed rule, we discuss the case minima we are proposing for the episode-based measures we are proposing to adopt and modify (in section IV.A.4.e.(2)(a)(ix)) in this rulemaking.

Reliability is a metric that evaluates the extent that variation in a measure comes from clinician performance (“signal”) rather than random variation (“noise”). Higher reliability suggests that a measure is effectively capturing meaningful differences between clinicians’ performance. However, we continued to caution against using reliability as the sole metric to evaluate a measure because of the tradeoffs between accuracy and reliability, and the role of service assignment in reducing noise. These and other considerations are detailed in the CY

2022 PFS final rule (86 FR 65453 through 65455). We also noted that increasing case minima necessarily reduces the number of clinicians who meet the case minimum for a given measure. Because these are clinically refined measures, we aim to have as many MIPS eligible clinicians as possible to be able to have their costs evaluated by them. Therefore, we considered that a mean reliability of 0.4 represents moderate reliability because it accounts for these considerations and is a sufficient threshold to ensure that the measure is performing as intended when assessed in conjunction with other testing.

We previously established at § 414.1350(c)(5) a case minimum of 20 episodes for acute inpatient medical condition episode-based measures and at § 414.1350(c)(4) a case minimum of 10 episodes for procedural episode-based measures in the CY 2019 PFS final rule (83 FR 59773 through 59774). We also established at § 414.1350(c)(6) a case minimum of 20 episodes for chronic condition episode-based measures in the CY 2022 final rule (86 FR 65453 through 65455).

We examined the reliability of the eight episode-based measures (six new and two modified) we are proposing in this rulemaking, and Table 60 presents the percentage of tax identification numbers (TINs) and TIN/National Provider Identifiers (NPIs) that meet the 0.4 reliability threshold and the mean reliability for TINs and TIN/NPIs at our case minimum of 20 for each of the chronic condition and acute inpatient medical condition episode-based measures. At a 20-episode case minimum, the mean reliability for the measures exceeds 0.4 for both groups and individual clinicians, and the majority of groups and individual clinicians meet the 0.4 reliability threshold. For the procedural measure, Cataract Removal with Intraocular Lens (IOL) Implantation, we applied the case minimum of 10 episodes. At a 10-episode case minimum, the mean reliability for the measure exceeds 0.4 for both groups and individual clinicians, and all groups and individual clinicians meet the 0.4 reliability threshold.

TABLE 60: Percent of TINs and TIN/NPIs that Meet 0.4 Reliability Threshold and TIN and TIN/NPI Mean Reliability

| Measure name | % TINs meeting 0.4 reliability threshold | Mean reliability for TINs | % TIN/NPIs meeting 0.4 reliability threshold | Mean reliability for TIN/NPIs |
|---|--|---------------------------|--|-------------------------------|
| Prostate Cancer | 87.4% | 0.68 | 84.1% | 0.62 |
| Rheumatoid Arthritis | 95.0% | 0.74 | 97.3% | 0.76 |
| Chronic Kidney Disease | 88.8% | 0.63 | 82.3% | 0.57 |
| End-Stage Renal Disease | 92.5% | 0.65 | 90.0% | 0.59 |
| Kidney Transplant Management | 91.2% | 0.64 | 95.8% | 0.68 |
| Respiratory Infection Hospitalization | 100.0% | 0.74 | 100.0% | 0.53 |
| Cataract Removal with Intraocular Lens (IOL) Implantation | 100.0% | 0.97 | 100.0% | 0.96 |
| Inpatient (IP) Percutaneous Coronary Intervention (PCI) | 100.0% | 0.63 | 100.0% | 0.52 |

We believe that calculating these proposed episode-based measures with these case minimums would accurately and reliably assess the performance of clinicians and clinician group practices. Therefore, we are proposing to adopt a case minimum of 20 episodes for the chronic condition (CKD, ESRD, Kidney Transplant Management, Prostate Cancer, Rheumatoid Arthritis) and acute inpatient medical condition (Respiratory Infection Hospitalization and IP PCI) measures and a case minimum of 10 episodes for the procedural measure (Cataract Removal with IOL Implantation) listed in Table 60. For the IP PCI and Cataract Removal with IOL Implantation, these case minimums remain consistent with the case minimums for the original measures (that is, STEMI PCI and Routine Cataract Removal with IOL Implantation) that are currently in use. These proposals are also consistent with our regulation at § 414.1350(c)(4) through (6). We do not propose to modify these regulations establishing the case minima for these types of cost measures.

We invite comments on the proposals in this section.

(c) Proposed Revisions to the Operational List of Care Episode and Patient Condition Groups and Codes

We are proposing revisions to the operational list of care episode and patient condition groups and codes to reflect the proposal of any new episode-based measures. This section of this proposed rule provides context on the statutory requirements for care episode

and patient condition groups and proposes changes to the operational list.

Section 1848(r) of the Act specifies a series of steps and activities for the Secretary to undertake to involve physicians, practitioners, and other interested parties in enhancing the infrastructure for cost measurement, including for purposes of MIPS and APMs. Section 1848(r)(2) of the Act requires the development of care episode and patient condition groups, and classification codes for such groups, and provides for care episode and patient condition groups to account for a target of an estimated one-half of expenditures under Medicare Parts A and B (with this target increasing over time as appropriate). Sections 1848(r)(2)(E) through (G) of the Act require the Secretary to post on the CMS website a draft list of care episode and patient condition groups and codes for solicitation of input from interested parties, and subsequently, post an operational list of such groups and codes. Section 1848(r)(2)(H) of the Act requires that not later than November 1 of each year (beginning with 2018), the Secretary shall, through rulemaking, revise the operational list of care episode and patient condition codes as the Secretary determines may be appropriate, and that these revisions may be based on experience, new information developed under section 1848(n)(9)(A) of the Act, and input from physician specialty societies and other interested parties.

For more information about past revisions to the operational list that we made as we developed and proposed

episode-based measures, we refer readers to the CY 2023 PFS final rule (87 FR 70056 through 70057) and CY 2024 PFS final rule (88 FR 79348). The current operational list and prior operational lists are available at the QPP Cost Measure Information page at <https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/about>.

Additionally, as required by section 1848(r)(2)(I) of the Act, information on resource use (or cost) measures currently in use in MIPS, cost measures under development and the time-frame for such development, potential future cost measure topics, a description of engagement with interested parties, and the percent of expenditures under Medicare Parts A and B that are covered by cost measures must be provided on the website of CMS not later than December 31 of each year.

In accordance with section 1848(r)(2)(H) of the Act, we are proposing to revise the operational list beginning with the CY 2025 performance period/2027 MIPS payment year to include six new care episode and patient condition groups, based on input from clinician specialty societies and other interested parties, as discussed in section IV.A.4.e.(2)(a) of this proposed rule. We propose including Respiratory Infection Hospitalization as a care episode group and CKD, ESRD, Kidney Transplant Management, Prostate Cancer, and Rheumatoid Arthritis as patient condition groups. These care episode and patient condition groups serve as the basis for the six new episode-based

measures that we are proposing in section IV.A.4.e.(2)(a)(ix) of this proposed rule for the cost performance category. The codes that define these six care episode and patient condition groups align with the trigger codes of the proposed episode-based measures in section IV.A.4.e.(2)(a)(ix) of this proposed rule. As described in section IV.A.4.e.(2)(a)(ii), these specifications are developed with extensive input from interested parties.

Additionally, we propose to revise the care episode group codes listed to align with the modifications proposed for Cataract Removal with Intraocular Lens (IOL) Implantation and Inpatient (IP) Percutaneous Coronary Intervention (PCI) measures.

Our proposed revisions to the operational list are available on our QPP Cost Measure Information page at <https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/about>.

We invite public comment on our proposals in this section.

(d) Proposed Removal Criteria for MIPS Cost Measures

Once adopted, cost measures are retained in the cost performance category measure inventory, except when we specifically propose to remove a measure. We have identified a need to establish and codify objective criteria that can be used to inform the removal of a cost measure from the MIPS cost performance category. Specifically, when removing the Simple Pneumonia with Hospitalization episode-based measure from the CY 2024 PFS final rule (88 FR 79348 through 79349), we confirmed that, unlike the MIPS quality performance category, the MIPS cost performance category did not have clear guidelines for removing a measure established through the notice-and-comment rulemaking process. Establishing such criteria would allow for more consistency in our evaluation of the cost measures and our decision on whether to propose that a cost measure be removed from the MIPS cost performance category.

Therefore, we are proposing to adopt the following factors that can be used to guide the removal of a cost measure:

- *Factor 1:* It is not feasible to implement the measure specifications.
- *Factor 2:* A measure steward is no longer able to maintain the cost measure.
- *Factor 3:* The implementation costs or negative unintended consequences associated with a cost measure outweigh the benefit of its continued use in the MIPS cost performance category.

- *Factor 4:* The measure specifications do not reflect current clinical practice or guidelines.

- *Factor 5:* The availability of a more applicable measure, including a measure that applies across settings, applies across populations, or is more proximal in time to desired patient outcomes for the particular topic.

We selected these factors because they outline instances that we anticipate based on previous experience where a cost measure may not be appropriate to maintain in a program, but not limited to these instances. We also worked to align these criteria with the MIPS quality removal considerations and criteria outlined in the CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959), where possible, and, in part, the Hospital Value-Based Purchasing (HVBP) Program's removal factors that are codified in our regulations at 42 CFR 412.164(c)(3). We are proposing these specific criteria to encourage a degree of alignment between existing measure removal policies within MIPS and across Medicare programs, where appropriate, for cost measures.

There were some instances where certain removal criteria used by the MIPS quality performance category and the HVBP Program would not be applicable for cost measures and, in those instances, we are not proposing to adopt those factors. For example, we did not propose to adopt the removal criterion for measures that do not reach appropriate reporting volumes. This is because MIPS eligible clinicians do not separately report or submit data for cost measures. Instead, we assess and score cost measures based on administrative claims data. In addition, our existing scoring policies for the cost performance category at § 414.1380(b)(2) already address situations where there are insufficient number of MIPS eligible clinicians meeting the case minimum, such that the cost measure is not scored. If we were to determine that a cost measure would be unlikely to be scored moving forwards due to insufficient number of MIPS eligible clinicians meeting the case minimum, we believe that the first factor we are proposing (that is, it is not feasible to implement the measure specifications) would be applicable for removal.

We note that these factors are criteria that would be used as guidance when considering whether or not to propose to remove a measure, rather than firm requirements. Specifically, there could be instances when a measure meets one or multiple measure removal factors, but would be retained in the cost

performance category regardless, provided that we determine that the benefit of keeping the measure in the cost performance category would outweigh the benefit of removing it. Prior to proposing a measure for removal in accordance with this policy, we would carefully review the specifications of the cost measures by conducting necessary literature reviews, empirical testing, or other information gathering.

Additionally, we propose to codify this proposed measure removal policy by amending § 414.1350 by adding the proposed cost removal criteria in paragraph (e). Specifically, we are proposing at § 414.1350(e) that CMS may remove a cost measure from MIPS based on one or more of the following factors, provided however CMS may retain a cost measure that meets one or more of the following factors if CMS determines the benefit of retaining the measure outweighs the benefit of removing it.

- It is not feasible to implement the measure specifications.
- A measure steward is no longer able to maintain the cost measure.
- The implementation costs or negative unintended consequences associated with a cost measure outweigh the benefit of its continued use in the MIPS cost performance category.
- The measure specifications do not reflect current clinical practice or guidelines.
- The availability of a more applicable measure, including a measure that applies across settings, applies across populations, or is more proximal in time to desired patient outcomes for the particular topic.

We invite comments on this proposal.

(3) Improvement Activities Performance Category

(a) Background

For previous discussions on the general background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 and 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), the CY 2019 Physician Fee Schedule (PFS) final rule (83 FR 59776 and 59777), the CY 2020 PFS final rule (84 FR 62980 through 62990), CY 2021 PFS final rule (85 FR 84881 through 84886), the CY 2022 PFS final rule (86 FR 65462 through 65466), the CY 2023 PFS final rule (87 FR 70057 through 70061), and the CY 2024 PFS final rule (88 FR 79350 and 88 FR 79351). We also refer readers to 42 CFR 414.1305 for the definitions of improvement activities

and attestation, § 414.1320 for standards establishing the performance period, § 414.1325 for the data submission requirements, § 414.1355 for standards related to the improvement activity performance category generally, § 414.1360 for data submission criteria for the improvement activity performance category, and § 414.1380(b)(3) for improvement activities performance category scoring.

We are proposing two changes to the traditional Merit-based Incentive Payment System (MIPS) and the MIPS Value Pathways (MVPs) improvement activities policies for the CY 2025 performance period/2027 MIPS payment year. We are also proposing at § 414.1355 to codify the seven improvement activity removal factors, which were adopted in the CY 2020 PFS final rule (FR 84 62988 through 62990) to establish criteria used to identify activities for potential removal or modification. In addition, we are proposing changes to the improvement activities Inventory for the CY 2025 performance period/2027 MIPS payment year and future years as follows: adding two new improvement activities; modifying two existing improvement activities; and removing eight previously adopted improvement activities.

(b) Improvement Activities Inventory

(i) Annual Call for Activities Background

In the CY 2017 Quality Payment Program final rule (81 FR 77190), for the transition year of MIPS, we implemented the initial improvement activities Inventory consisting of approximately 95 activities (81 FR 77817 through 77831). We took several steps to ensure the Inventory was inclusive of activities in line with statutory and program requirements, including conducting interviews with highly performing organizations of all sizes, conducting an environmental scan to identify existing models, activities, or measures that met all or part of the improvement activities performance category criteria, and reviewing comments received in the CY 2016 PFS final rule with comment period (80 FR 71259) and in response to the MIPS and Advanced Payment Models (APMs) Requests for Information (RFIs) in relation to the improvement activities performance category.

For the CY 2018 performance period/2020 MIPS payment year, we provided an informal process for submitting new improvement activities or modifications for potential inclusion in the comprehensive improvement activities

Inventory for the CY 2018 performance period/2020 MIPS payment year and future years through guidance.⁷⁵⁵ In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), for the CY 2019 performance period/2021 MIPS payment year and for future years, we finalized a formal Annual Call for Activities process for the addition of possible new activities and possible modifications to current activities in the improvement activities Inventory. An interested party must submit a nomination form regarding a new activity or a modification to an existing improvement activity (OMB control # 0938–1314) available at www.qpp.cms.gov during the Annual Call for Activities.

(ii) Codification of Improvement Activity Removal Factors

In the CY 2018 Quality Payment Program proposed rule (82 FR 30056), we solicited comments on the criteria that may be used to identify improvement activities for removal from the improvement activities Inventory, citing that, over time, certain improvement activities should be considered for removal to ensure the Inventory is robust and relevant. In the CY 2020 PFS final rule (84 FR 62568 through 63563), we established seven removal factors to identify activities for potential removal or modification from the Inventory. In this proposed rule, we are proposing to codify at § 414.1355 the following existing seven improvement activity removal factors:

- *Factor 1:* Activity is duplicative of another activity.
- *Factor 2:* There is an alternative activity with a stronger relationship to quality care or improvements in clinical practice.
- *Factor 3:* Activity does not align with current clinical guidelines or practice.
- *Factor 4:* Activity does not align with at least one meaningful measure area.
- *Factor 5:* Activity does not align with the quality, cost, or Promoting Interoperability performance categories.
- *Factor 6:* There have been no attestations of the activity for 3 consecutive years.
- *Factor 7:* Activity is obsolete.

We note that these factors are criteria that are used as guidance in determining removal of an activity, but its use is at CMS discretion. For example, there may be instances when an activity meets one

or multiple activity removal factors but may be retained in the improvement activities performance category Inventory, because the benefit of retaining outweighs the benefit of removing. We believe that codifying these removal factors would provide transparency and alignment with removals of improvement activities from the Inventory. We solicit comment on this proposal.

(iii) Changes to the Improvement Activities Inventory

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would establish improvement activities through notice-and-comment rulemaking. We refer readers to Table H in the Appendix to the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199), Tables F and G in the Appendix to the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229), Tables A and B in the Appendix 2 to the CY 2019 PFS final rule (83 FR 60286 through 60303), Tables A, B, and C in the Appendix 2 to the CY 2020 PFS final rule (84 FR 63514 through 63538), Tables A, B, and C in the Appendix 2 to the CY 2021 PFS final rule (85 FR 85370 through 85377), Tables A, B, and C in the Appendix 2 to the CY 2022 PFS final rule (86 FR 65969 through 65997), Tables A, B, and C in the Appendix 2 to the CY 2023 PFS final rule (70633 through 70650), and Tables A, B, and C in the Appendix 2 to the CY 2024 PFS final rule (88 FR 79965 through 79977) for our previously finalized improvement activities Inventories. We also refer readers to the Quality Payment Program website under Explore Measures and Activities at <https://qpp.cms.gov/mips/explore-measures?tab=improvementActivities&py=2024#measures> for a complete list of the current improvement activities. In the CY 2017 Quality Payment Program final rule (81 FR 77539), we codified the definition of improvement activities at § 414.1305 to mean an activity that relevant MIPS eligible clinicians, organizations, and other relevant interested parties identify as improving clinical practice or care delivery and that the Secretary determines, when effectively executed, is likely to result in improved outcomes.

We are proposing to add two new improvement activities, modify two existing improvement activities, and remove eight previously adopted improvement activities for the CY 2025 performance period/2027 MIPS payment year and future years. We refer readers to Appendix 2 of this proposed rule for more details.

⁷⁵⁵ CMS, Annual Call for Measures and Activities: Fact Sheet, https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Annual-Call-for-Measures-and-Activities-for-MIPS_Overview-Factsheet.pdf.

In response to stakeholder feedback, we are making efforts to streamline the Inventory over the coming rulemaking cycles to include only the most robust and clinically meaningful improvement activities. The removal and modification of 10 total activities is an initial step toward our goal of reducing the size of the Inventory and helping to ensure that it includes only the most meaningful activities that have a clear path to clinical practice improvement, while the two proposed new activities would help fill gaps we have identified in the Inventory.

Currently, there are 106 finalized activities in the improvement activities Inventory, all of which are assigned either a high or medium weight. When each of the activities was added, their requirements reflected clinical practice standards of the time, addressed areas of opportunity for fostering clinical practice improvements, and aligned with national public health priorities and CMS programs. The last seven performance periods have provided sufficient time for analysis and review of submissions data to learn how MIPS eligible clinicians are choosing activities to report each year. Over the last several performance years, we have observed that some activities have not remained aligned with the latest updates to clinical practice standards, have not incorporated the latest national priorities, and/or have activity requirements that are no longer substantive enough to promote a sufficient level of clinical practice improvement in today's health care environment. Some activities are continuing to be highly utilized even though the goals of the improvement activity have largely been achieved, with the completion of these improvement activities contributing toward a final score without a corresponding result of ongoing improvement. Therefore, we are proposing to remove several of these improvement activities and to modify activities to better promote more meaningful clinical practice improvement opportunities. In proposing activities for removal or

modification, we are considering the seven adopted improvement activity removal factors, discussed in the CY 2020 PFS final rule (84 FR 62568 through 63563) and in section IV.A.4.e.(3)(b)(ii) of this proposed rule.

We refer readers to Table C of Appendix 2 of this proposed rule for details on the proposal of these eight activity removals.

We are proposing two new improvement activities in the Population Management subcategory. One new activity, IA_PM_XX, titled "Implementation of Protocols and Provision of Resources to Increase Lung Cancer Screening Uptake" would allow MIPS eligible clinicians to receive credit for establishing a process or procedure to increase rates of lung cancer screening. While lung cancer is a leading cause of cancer-related deaths in the U.S., lung cancer screening is underutilized. This activity aims to increase this screening and improve associated outcomes. Another activity, IA_PM_XX, titled "Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk" would allow MIPS eligible clinicians to receive credit for implementing a standardized, evidence-based cardiovascular disease risk assessment and care management plan in their practices. This activity proposal is informed by the results of the CMS Innovation Center Million Hearts Model, which included initial atherosclerotic cardiovascular disease (ASCVD) assessment as well as cardiovascular care management, which were shown to contribute to improved identification and treatment of patients at risk for ASCVD and would expand on the work of this Model by (1) increasing flexibility in requirements, allowing more clinician specialties to participate, along with increased flexibility in risk assessment to fit the needs of attesting clinicians and their patient populations; and (2) requiring the use of structured documentation of risk factors and associated treatment plans with the aim of addressing all risk factors directly.

We are proposing two modifications to improvement activities focused on

strengthening the activities to better promote more meaningful clinical practice improvement. We are proposing to modify IA_PM_XX (formerly IA-ERP_6), titled "Vaccine Achievement for Practice Staff—COVID-19, Influenza, and Hepatitis B," and its validation criteria to revise its target goals, and to expand its focus and promote the vaccination of staff for COVID-19 as well as Influenza and Hepatitis B. Adjusting the target goals for this activity would align with the latest Centers for Disease Control and Prevention (CDC) recommendations, and feedback received indicates that this could increase its utilization. Additionally, we are proposing to expand the focus of this activity to include influenza and hepatitis B to highlight the importance of staff vaccination for vaccine-preventable diseases prevalent today. We are also proposing to change the activity's subcategory, from Emergency Response & Preparedness to Population Management, to emphasize that staff vaccination is a long-term strategy in reducing morbidity and mortality rates for these diseases.

We are proposing to modify IA_BE_4, currently titled "Engagement of patients through implementation of improvements in patient portal," and its validation criteria to limit the activity to new implementations of a patient/caregiver portal and encourage the measure's adoption by clinicians who do not currently utilize this health information exchange technology. We are proposing to modify this activity's name, description, and its validation criteria to better align with current practices. This activity was originally created during a time of transition to EHRs to encourage electronic information exchange. It has become standard practice to use patient portals; therefore, the activity is no longer driving improvement among clinicians who have already implemented patient portals.

We are separately proposing to remove eight existing activities, presented in Table 61.

TABLE 61: Improvement Activities Inventory: Proposed Removals

| <i>Proposed Removals Titles</i> | <i>Removal Criteria (Factor)</i> |
|---|--|
| EPA_1 Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record | Factor 7, activity is obsolete |
| PM_12 Population empanelment | Factor 7, activity is obsolete |
| TABLE 61: Improvement Activities Inventory: Proposed Removals | TABLE 61: Improvement Activities Inventory: Proposed Removals |
| CC_2 Implementation of improvements that contribute to more timely communication of test results | Factor 7, activity is obsolete |
| ERP_4 Implementation of a Personal Protective Equipment (PPE) Plan | Factor 7, activity is obsolete |
| ERP_5 Implementation of a Laboratory Preparedness Plan | Factor 7, activity is obsolete |
| BMH_8 Electronic Health Record Enhancements for BH data capture | Factor 2, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice |
| PSPA_27 Invasive Procedure or Surgery Anticoagulation Medication Management | Factor 1, activity is duplicative |

We refer readers to Appendix 2 of this proposed rule for details on the proposed revisions to the improvement activities Inventory.

(iv) Improvement Activity Scoring and Reporting Policies

We are proposing two scoring and reporting policy changes for the improvement activities performance category effective for the CY 2025 performance period/2027 MIPS payment year and subsequent years. First, we are proposing to eliminate the weighting of improvement activities. This would simplify scoring of the category, as well as complement our ongoing efforts to refine and improve the Inventory. In the CY 2017 Quality Payment Program final rule (81 FR 77177 and 77178), we codified at 42 CFR 414.1380(b)(3) the scoring policies for the improvement activities performance category. We established there that clinicians (except for non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic health professional shortage areas (HPSAs)) receive 10 points for each medium-weighted improvement activity and 20 points for each high-weighted improvement activity. Non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity. We established a differentially weighted model for the improvement activities performance category with two categories, medium and high, to provide flexible scoring and because there are no nationally recognized standards or definitions for these activities (81 FR 28210). Weights were assigned based on the level of effort and resources needed to complete each activity, as well as alignment with current national public health priorities and programs such as the Quality Innovation Network-Quality Improvement Organization (QIN/QIO).

We have subsequently determined that the benefit to categorizing activities as high or medium weighted has greatly diminished. Over the last several years of the Quality Payment Program, we have made refinements and enhancements to the improvement activities Inventory by adding new activities to incorporate newly identified opportunities for clinical improvement and by modifying existing activities to support changes in practice standards, while also eliminating activities that are duplicative or that no longer promote a sufficient level of

clinical improvement. In this and subsequent rulemaking cycles, we are focusing our efforts on streamlining the Inventory to retain the highest priority activities that offer the strongest promotion of clinical practice improvement. As the Inventory is streamlined, each retained activity highlights a unique and vital aspect of clinical practice improvement, and therefore every activity would be considered high priority.

Second, and related to the proposal in this section of this proposed rule, we are proposing to further simplify improvement activity reporting requirements by reducing the number of activities to which clinicians are required to attest to achieve a full score in the improvement activities performance category. Currently, MIPS eligible clinicians are required to report two high-weighted activities, four medium-weighted activities, or one high-weighted and two medium-weighted activities while MVP participants are currently required to report one high-weighted activity or two medium-weighted activities. We are proposing that MIPS eligible clinicians who participate in traditional MIPS would be required to report two activities. In addition, we are proposing that MIPS eligible clinicians who are categorized as small practice, rural, in a provider-shortage area, or non-patient facing would now be required to report one activity. We are proposing that these policies would be effective for the CY 2025 performance period/2027 MIPS payment year and subsequent years.

We are also proposing that MVP participants would be required to report one activity. In the CY 2022 PFS final rule (86 FR 65412 through 65413), we established that MVP Participants submitting MVPs report fewer improvement activities than eligible clinicians reporting traditional MIPS to incentivize and support MVP adoption. We continue to believe that reduced reporting requirements are necessary to support the adoption of and reduce the burden for implementation of MVPs.

We are proposing to lower the number of activities that MIPS eligible clinicians are required to complete in order to obtain a full score to adjust for the ongoing reduction of activities in the Inventory as well as to support eligible clinicians with simplified reporting as they engage in fewer but more demanding activities. If the number of activities in the Inventory is reduced after this and subsequent rulemaking, there would be fewer activities from which to choose. However, the retained activities in the Inventory from which to choose would be the highest priority

activities that offer the strongest promotion of clinical practice improvement. This proposal is also responsive to commenters who, in the past, have requested that the number of required activities be reduced and that more activities be highly weighted (81 FR 77182). The activity removals and modifications being proposed would result in an Inventory of activities that are meaningful, timely, and rigorous. While decreasing the number of required activities would simplify reporting, MIPS eligible clinicians would still be required to participate in meaningful activities that yield significant practice improvement.

We are requesting comments on our proposals to remove weighting and to reduce the number of activities to which clinicians are required to attest to achieve a full score in the improvement activities performance category.

Specifically, we are requesting comments on our proposal to revise § 414.1380(b)(3) to read that, beginning with the CY 2025 performance period/2027 MIPS payment year, MIPS eligible clinicians (except for non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs) receive 20 points for each improvement activity, while non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs receive 40 points for each improvement activity. Therefore, to receive a score of 40 points, or full credit, MIPS eligible clinicians (except for non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs) must report two improvement activities, while non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs must report one improvement activity.

We are also requesting comment on our proposal to revise § 414.1365(c)(3) to state that, beginning with the CY 2025 performance period/2027 MIPS payment year, MVP participants receive 40 points for each improvement activity. Therefore, to receive a score of 40 points, or full credit, MVP participants would be required to report one improvement activity.

(4) Promoting Interoperability Performance Category

(a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of certified electronic health record (EHR) technology (CEHRT) as a performance category under MIPS. We refer to this performance category as the Promoting

Interoperability performance category (and in past rulemaking, we referred to it as the advancing care information performance category).

For our previously established policies regarding the Promoting Interoperability performance category, we refer readers to our regulation at 42 CFR 414.1375, the CY 2017 Quality Payment Program final rule (81 FR 77199 through 77245), CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), CY 2019 PFS final rule (83 FR 59785 through 59820), CY 2020 PFS final rule (84 FR 62991 through 63006), CY 2021 PFS final rule (85 FR 84886 through 84895), CY 2022 PFS final rule (86 FR 65466 through 65490), CY 2023 PFS final rule (87 FR 70060 through 70087), and CY 2024 PFS final rule (88 FR 79308 through 79312 and 88 FR 79351 through 79365).

(b) Current Definition of CEHRT for the Quality Payment Program

In the CY 2024 Medicare Physician Fee Schedule (PFS) final rule (88 FR 79307 through 79312), we finalized revisions to the definition of CEHRT for the Quality Payment Program at 42 CFR 414.1305. In the CY 2024 PFS final rule (88 FR 79309 and 79310), we amended the definition of CEHRT to be more flexible in response to changes proposed by the Office of the National Coordinator for Health IT (ONC) in the “Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing” (HTI–1) proposed rule (88 FR 23746 through 23917). Specifically, we amended our definition of CEHRT at § 414.1305 to ensure references to ONC’s definition of Base EHR at 45 CFR 170.102 and its health IT certification criteria at 45 CFR 170.315 were responsive to any changes ONC makes to its definition and criteria at any time. Instead of requiring that CEHRT meet only the “2015 Edition Base EHR definition,” we added that it also may meet the “subsequent Base EHR definition” as defined at 45 CFR 170.102. We also amended our definition of CEHRT to provide that the CEHRT must be certified to the ONC health IT certification criteria “as adopted and updated” in 45 CFR 170.315. This approach is consistent with the policies subsequently finalized in the HTI–1 final rule (89 FR 1205 through 1210). For additional background and information on this update, we refer readers to the discussion in the CY 2024 PFS final rule on this topic (88 FR 79307 through 79312).

In consideration of the updates finalized in the CY 2024 PFS final rule

and the HTI–1 final rule, we refer to “ONC health IT certification criteria” throughout this proposed rule where we previously would have referred to “2015 Edition health IT certification criteria.” These revisions to the definition of CEHRT in 42 CFR 414.1305 ensure that updates to the definition of Base EHR in 45 CFR 170.102, and updates to applicable ONC health IT certification criteria in 45 CFR 170.315, are incorporated into the CEHRT definition without additional regulatory action by CMS. For ease of reference, Table 65 sets forth the ONC health IT certification criteria required to meet the Promoting Interoperability performance category objectives and measures.

In the CY 2024 PFS final rule (88 FR 79408 through 79414), we also finalized changes to the CEHRT definition at 42 CFR 414.1305 for Advanced APMs requiring use of EHR technology certified under the ONC Health IT Certification Program that meets the ONC Base EHR definition at 45 CFR 170.102 and any such ONC health IT certification criteria adopted or updated in 45 CFR 170.315 that are determined applicable for the APM, for the year, considering factors such as clinical practice area, promotion of interoperability, relevance to reporting on applicable quality measures, clinical care delivery objectives of the APM, or any other factor relevant to documenting and communicating clinical care to patients or their health care providers in the APM. This CEHRT definition affords Advanced APMs the ability to tailor additional CEHRT use requirements to those features or capabilities that are clinically relevant to the APM and its participants, rather than referring to the same criteria associated with measures in the Promoting Interoperability performance category of MIPS (88 FR 79413).

We highlight certain updates to ONC health IT certification criteria finalized in the ONC HTI–1 final rule that impact certification criteria referenced under the CEHRT definition. ONC adopted the certification criterion “Decision Support Interventions (DSI)” in 45 CFR 170.315(b)(11) to ultimately replace the “clinical decision support (CDS)” certification criterion in 45 CFR 170.315(a)(9) included in the Base EHR definition (89 FR 1236). The finalized “DSI” criterion ensures that Health IT Modules certified to 45 CFR 170.315(b)(11) must, among other functions, enable a limited set of identified users to select (that is, activate) certain evidence-based decision support interventions and Predictive DSI (as the latter term is defined in 45 CFR 170.102) (89 FR 1241)

and support user access to specified “source attributes”—categories of technical performance and quality information—for both evidence-based and Predictive DSI (89 FR 1236). ONC further finalized that a Health IT Module may meet the Base EHR definition by either being certified to the existing CDS certification criterion in 45 CFR 170.315(a)(9) or being certified to the revised DSI criterion in 45 CFR 170.315(b)(11), for the period up to, and including, December 31, 2024. On and after January 1, 2025, ONC finalized that a Health IT Module must be certified to the DSI certification criterion in 45 CFR 170.315(b)(11) in order to meet the Base EHR definition, and the adoption of the CDS certification criterion in 45 CFR 170.315(a)(9) will expire on January 1, 2025 (89 FR 1281).

In the HTI–1 final rule, ONC also finalized other updates related to ONC health IT certification criteria referenced in the CEHRT definition. ONC finalized January 1, 2026, as the date when updates discussed below would take effect; accordingly, health IT developers must update and provide certified Health IT Modules to their customers consistent with the Maintenance of Certification requirements in 45 CFR 170.402(b)(3) by this date, including the following updates:

- ONC updated the “Transmission to public health agencies—electronic case reporting” criterion in 45 CFR 170.315(f)(5) to specify the use of consensus-based, industry-developed electronic standards and implementation guides (IGs) to replace functional, descriptive requirements in the existing criterion on and after January 1, 2026 (89 FR 1228).
- ONC adopted the United States Core Data for Interoperability (USCDI) version 3 in 45 CFR 170.213(b) and finalized that USCDI version 1 in 45 CFR 170.213(a) will expire on January 1, 2026 (89 FR 1211 and 1223). This change impacts ONC health IT certification criteria that reference the USCDI, including the “transitions of care” certification criteria in 45 CFR 170.315(b)(1)(iii)(A)(1) and (2), “clinical information reconciliation and incorporation—Reconciliation” (45 CFR 170.315(b)(2)(iii)(D)(1) through (3)); and “view, download, and transmit to 3rd party” (45 CFR 170.315(e)(1)(i)(A)(1)) (89 FR 1214).
- ONC updated the “demographics” certification criterion (45 CFR 170.315(a)(5)), including renaming the criterion to “patient demographics and observations” (89 FR 1295 and 1296).
- ONC updated the “standardized API for patient and population services” certification criterion in 45 CFR

170.315(g)(10) including finalizing references to newer versions of standards referenced in the criterion, such as the US Core IG 6.1.0 (89 FR 1285) and the SMART App Launch Implementation Guide Release 2.0.0 (89 FR 1292).

For complete information about the updates to ONC health IT certification criteria finalized in the HTI-1 final rule, we refer readers to the text of the final rule (89 FR 1192) as well as resources available on ONC's website.⁷⁵⁶

(c) Potential Future Update of the SAFER Guides Measure

(i) Background

ONC developed the Safety Assurance Factors for EHR Resilience Guides (SAFER Guides) in 2014, and later updated in 2016. ONC provided the SAFER Guides, including the High Priority Practices SAFER Guide, as a tool to help organizations at all levels conduct self-assessments to optimize the safety and use of EHRs.⁷⁵⁷ In the CY 2022 PFS final rule (86 FR 65475 through 65477), we adopted the SAFER Guides measure under the Protect Patient Health Information objective beginning with the CY 2022 performance period/2024 MIPS payment year. For the CY 2022 performance period/2024 MIPS payment year and the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians were required to attest to whether they have conducted an annual self-assessment using the High Priority Practices SAFER Guide⁷⁵⁸ at any point during the calendar year in which the performance period occurs, with one "yes/no" attestation statement. MIPS eligible clinicians were not scored based on their answer to the attestation, or their level of implementation of each of the practices. However, failure to attest to this measure would result in earning a score of zero for the Promoting Interoperability performance category for failing to meet the minimum reporting requirements.

In the CY 2024 PFS final rule (88 FR 79354 through 79356), we modified the SAFER Guides measure. Beginning with the CY 2024 performance period/2026 MIPS payment year, this modified measure requires MIPS eligible clinicians to conduct, and attest "yes" to having completed, an annual self-

assessment of their CEHRT, using the High Priority Practices SAFER Guide. We remind readers that the SAFER Guides measure only requires completion of a self-assessment and does not require MIPS eligible clinicians to implement fully each of the practices identified in their self-assessment.

(ii) Status of Updates to SAFER Guides

As summarized in the CY 2024 PFS final rule (88 FR 79354 through 79356), we received comments in response to our proposal to modify the SAFER Guides measure, including many comments recommending that we collaborate with ONC to update the SAFER Guides, noting that the SAFER Guides were last updated in 2016 (88 FR 59264). In response to these comments, we noted that, while the current SAFER Guides reflect relevant and valuable guidelines for safe practices with respect to current EHR systems, we would consider exploring updates in collaboration with ONC. We reminded readers to visit the CMS resource library website at <https://www.cms.gov/regulations-guidance/promoting-interoperability/resource-library> and the ONC website at <https://www.healthit.gov/topic/safety/safer-guides> for resources on the content and appropriate use of the SAFER Guides (88 FR 59262). We also noted that future updates to the SAFER Guides would be provided with accompanying educational and promotional materials to notify participants, in collaboration with ONC, when available (88 FR 59265).

In this proposed rule, we are seeking to make readers aware that efforts to update the SAFER Guides are currently underway. We anticipate that updated versions of the SAFER Guides may become available as early as CY 2025. We would consider proposing a change to the SAFER Guides measure, as soon as feasible, potentially beginning in the CY 2026 performance period/2028 MIPS payment year to permit use of an updated versions of the SAFER Guides at that time. We encourage MIPS eligible clinicians to become familiar with the updated versions of the SAFER Guides when they become available and consider them as they implement appropriate EHR safety practices.

(d) Modification of the Definition of Meaningful EHR User for Healthcare Providers That Have Committed Information Blocking

The Department of Health and Human Services (HHS) final rule "21st Century Cures Act: Establishment of Disincentives for Health Care Providers That Have Committed Information

Blocking" (hereafter referred to as the Disincentives final rule), was displayed for public inspection by the Office of the Federal Register on June 26, 2024, and appeared in the **Federal Register** on July 1, 2024.⁷⁵⁹ The final rule implements the provision of the 21st Century Cures Act specifying that a healthcare provider, determined by the HHS Office of the Inspector General (OIG) to have committed information blocking, shall be referred to the appropriate agency to be subject to appropriate disincentives set forth through notice and comment rulemaking. In the Disincentives final rule, we finalized that a MIPS eligible clinician (other than a qualified audiologist) will not be considered a meaningful EHR user in a performance period if the OIG refers, during the calendar year of the performance period, a determination that the MIPS eligible clinician committed information blocking as defined at 45 CFR 171.103. Information blocking, in the case of a health care provider as defined in 45 CFR 171.102, is a practice that is likely to interfere with the access, exchange, or use of electronic health information, except as required by law or specified in an information blocking exception in 45 CFR part 171, subpart B, C, or D, and that the health care provider knows is unreasonable and is likely to interfere with access, exchange, or use of electronic health information. Furthermore, we finalized to revise the definition of "meaningful EHR User for MIPS" at § 414.1305 to state that a MIPS eligible clinician (other than a qualified audiologist) is not a meaningful EHR user for a performance period if the OIG refers a determination that the MIPS eligible clinician committed information blocking, as defined at 45 CFR 171.103, during the calendar year of the performance period. We also finalized amending the requirements at § 414.1375(b) to specify that a MIPS eligible clinician must be a meaningful EHR user for MIPS (as defined at § 414.1305) to earn a score for MIPS Promoting Interoperability performance category. Under the final policies, a MIPS eligible clinician that OIG determines has committed information blocking would not be a meaningful EHR user, and therefore would be unable to earn a score (instead earning a score of zero) for the Promoting Interoperability performance category.

Additional regulatory provisions were finalized at 45 CFR part 171, subpart J,

⁷⁵⁶ For more information, see <https://www.healthit.gov/topic/laws-regulation-and-policy/health-data-technology-and-interoperability-certification-program>.

⁷⁵⁷ <https://www.healthit.gov/topic/safety/safer-guides>.

⁷⁵⁸ https://www.healthit.gov/sites/default/files/safer-guides/safer_high_priority_practices.pdf.

⁷⁵⁹ 88 FR 54662. Available at <https://www.govinfo.gov/content/pkg/FR-2024-07-01/pdf/2024-13793.pdf>. See also <https://www.healthit.gov/topic/information-blocking#Disincentives>.

related to the application of disincentives.

We note that, as finalized, the revised definition of “meaningful EHR user for MIPS” at § 414.1305 and the revisions to § 414.1375(b) would become effective when the final rule takes effect on July 31, 2024. For additional background and information, we refer readers to the discussion in the “21st Century Cures Act: Establishment of Disincentives for Health Care Providers That Have Committed Information Blocking” proposed rule (88 FR 74957 through 74962), as well as the Disincentives final rule.

(e) Future Goals of the Promoting Interoperability Performance Category

(i) Future Goals With Respect to Fast Healthcare Interoperability Resources® (FHIR) APIs for Patient Access

In partnership with ONC, we envision a future where patients have timely, secure, and easy access to their health information through the health application of their choice. We are working with ONC to enable this type of access to health information by requiring the use of APIs that utilize the Health Level Seven International® (HL7) FHIR standard. We work with ONC and other Federal partners to improve timely and accurate data exchange, partner with industry to enhance digital capabilities, advance adoption of FHIR, support enterprise transformation efforts that increase our technological capabilities, and promote interoperability.

In the CY 2021 PFS proposed rule (85 FR 50303), we described our future vision for the Promoting Interoperability performance category and stated that we will continue to consider changes that support a variety of HHS goals, including supporting alignment with the 21st Century Cures Act, advancing interoperability and the exchange of health information, and promoting innovative uses of health IT. We also described plans to continue to align the Promoting Interoperability performance category with policies finalized in the “21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program” final rule (85 FR 25642), including finalization of a new certification criterion for a standards-based API using FHIR, among other health IT topics.

ONC finalized the HTI–1 final rule (89 FR 1192), effective March 11, 2024, to further implement the 21st Century Cures Act, among other policy goals. ONC finalized revisions to the “standardized API for patient and

population services” certification criterion at § 170.315(g)(10). It also adopted the HL7 FHIR US Core Implementation Guide (IG) Standard for Trial Use version 6.1.0 at § 170.215(b)(1)(ii), which provides the latest consensus-based capabilities aligned with the USCDI version 3⁷⁶⁰ data elements for FHIR APIs. The HTI–1 final rule also created the Insights Condition and Maintenance of Certification requirements (Insights Condition) within the ONC Health IT Certification Program to provide transparent reporting on certified health IT (89 FR 1199). This Insights Condition will require developers of certified health IT subject to the requirements to report on measures that provide information about the use of specific certified health IT functionalities by end users. One such measure calculates the number of unique individuals who access their electronic health information overall and by different methods such as through a standardized API for patient and population services (89 FR 1313 and 1314).

By adopting these new and updated standards, implementation specifications, certification criteria, and conditions of certification, provisions in the HTI–1 final rule advance interoperability, improve transparency, and support the access, exchange, and use of electronic health information. We aim to further advance the use of FHIR APIs through policies in the Promoting Interoperability performance category to advance interoperability, encourage the exchange of health information, and promote innovative uses of health IT. We also hope to gain insights into the adoption and use of FHIR APIs by MIPS eligible clinicians due to the ONC Health IT Certification Program’s Insights Condition. We believe maintaining our focus on promoting interoperability, alignment, and simplification would reduce healthcare provider burden while allowing flexibility to pursue innovative applications that improve care delivery. For additional background and information, we refer readers to the discussion in the ONC HTI–1 final rule on this topic (89 FR 1192).

(ii) Improving Cybersecurity Practices

The Promoting Interoperability performance category encourages the advancement of EHR safety by promoting appropriate cybersecurity practices through the Security Risk Analysis and SAFER Guides measures. On February 14, 2023, the National

⁷⁶⁰ <https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi#uscdi-v3>.

Institute of Standards and Technology (NIST) published updated guidance for health care entities implementing requirements of the Health Insurance Portability and Accountability of 1996 (HIPAA) Security Rule (45 CFR part 160 and subparts A and C of 45 CFR part 164). The guidance, NIST SP 800–66r2, provides information and resources to HIPAA-covered entities to improve their cybersecurity risk practices.⁷⁶¹ We also wish to alert readers of additional HHS resources and activities regarding cybersecurity best practices as recently summarized in an HHS strategy document that provides an overview of HHS recommendations to help the health care sector address cyber threats.⁷⁶² HHS has also recently published a website detailing recommended cybersecurity performance goals.⁷⁶³ We intend to consider how the Promoting Interoperability performance can promote cybersecurity best practices for MIPS eligible clinicians in the future.

(iii) Improving Prior Authorization Processes

We recently released the CMS Interoperability and Prior Authorization final rule, which appeared in the **Federal Register** on February 8, 2024 (89 FR 8758). The final rule aims to enhance health information exchange and access to health records for patients, healthcare providers, and payers, and improve prior authorization processes. In the final rule, we finalized the addition of a new measure, the “Electronic Prior Authorization” measure, under the HIE objective for the MIPS Promoting Interoperability performance category beginning with the CY 2027 performance period/2029 MIPS payment year (89 FR 8909 through 8927).

(f) Requirements for the Promoting Interoperability Performance Category for the CY 2025 Performance Period/2027 MIPS Payment Year

(i) Objectives and Measures for the CY 2025 Performance Period/2027 MIPS Payment Year

For ease of reference, Table 62 lists the objectives and measures for the Promoting Interoperability performance category required for the CY 2025 performance period/2027 MIPS payment year as revised to reflect the

⁷⁶¹ <https://csrc.nist.gov/pubs/sp/800/66/r2/final>.

⁷⁶² <https://aspr.hhs.gov/cyber/Documents/Health-Care-Sector-Cybersecurity-Dec2023-508.pdf>.

⁷⁶³ <https://hphcyber.hhs.gov/performance-goals.html>.

policies we will finalize in the final rule.

BILLING CODE P

TABLE 62: Objectives and Measures for the Promoting Interoperability Performance Category for the CY 2025 Performance Period/2027 MIPS Payment Year

| Objective | Measure | Numerator | Denominator | Exclusion |
|--|---|--|---|---|
| Electronic Prescribing: Generate and transmit permissible prescriptions electronically | e-Prescribing: At least one permissible prescription written by the MIPS eligible clinician is transmitted electronically using CEHRT. | Number of prescriptions in the denominator generated and transmitted electronically using CEHRT. | Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription in order to be dispensed during the performance period. | Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period. |
| Electronic Prescribing | Query of PDMP: For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history. | N/A (measure is Yes/No and requires an affirmative attestation to fulfill) | N/A (measure is Yes/No and requires an affirmative attestation to fulfill) | Any MIPS eligible clinician who: 1. is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period; or 2. Any MIPS eligible clinician who does not electronically prescribe any Schedule II opioids or Schedule III or IV drugs during the performance period. |
| Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the | Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or healthcare provider (1) creates a summary of | Number of transitions of care and referrals in the denominator where the summary of care record was created using CEHRT and exchanged electronically | Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transferring or referring clinician | Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times during the performance period. |

| Objective | Measure | Numerator | Denominator | Exclusion |
|--|--|---|---|---|
| first patient encounter with a new patient, and reconciles summary of care information from other healthcare providers into their EHR using the functions of CEHRT | care using CEHRT; and (2) electronically exchanges the summary of care record. | | | |
| Health Information Exchange | Support Electronic Referral Loops by Receiving and Reconciling Health Information: For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, medication allergy, and current problem list. | Number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses. | Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient. | Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period. |
| Health Information Exchange | HIE Bi-Directional Exchange:
Statement 1: I participate in an HIE to enable secure, bi-directional exchange to occur for every patient encounter, transition or referral and record stored or maintained in the EHR during the performance period in accordance with applicable law and policy.
Statement 2: The HIE that I participate in is capable of exchanging information across a | N/A (measure is Yes/No and requires an affirmative attestation to fulfill) | N/A (measure is Yes/No and requires an affirmative attestation to fulfill) | N/A |

| Objective | Measure | Numerator | Denominator | Exclusion |
|--|--|--|--|-----------|
| | broad network of unaffiliated exchange partners including those using disparate EHRs, and not engaging in exclusionary behavior when determining exchange partners. Statement 3: I use the functions of CEHRT to support bi-directional exchange with an HIE. | | | |
| Health Information Exchange | <p>Enabling Exchange Under TEFCA MIPS eligible clinicians would attest to the following:</p> <ul style="list-style-type: none"> • Participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the Federal Register and on ONC's website) in good standing (i.e. not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for every patient encounter, transition or referral, and record stored or maintained in the EHR during the performance period, in accordance with applicable law and policy. • Using the functions of CEHRT to support bi-directional exchange of patient information, in production, under this Framework Agreement. | N/A (measure is Yes/No and requires an affirmative attestation to fulfill) | N/A (measure is Yes/No and requires an affirmative attestation to fulfill) | N/A |
| Provider to Patient Exchange: The MIPS eligible clinician provides patients (or patient-authorized | Provide Patients Electronic Access to Their Health Information: For at least one unique | Number of patients in the denominator (or patient authorized representative) who | Number of unique patients seen by the MIPS eligible clinician during the performance period. | N/A |

| Objective | Measure | Numerator | Denominator | Exclusion |
|---|---|---|--|---|
| representative) with timely electronic access to their health information. | patient seen by the MIPS eligible clinician: 1. The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and 2. The MIPS eligible clinician ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician's CEHRT. | are provided timely access to health information to view online, download, and transmit to a third party and to access using an application of their choice that is configured meet the technical specifications of the API in the MIPS eligible clinician's CEHRT. | | |
| Public Health and Clinical Data Exchange: The MIPS eligible clinician is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice. | Immunization Registry Reporting: The MIPS eligible clinician is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS). | N/A (measure is Yes/No and requires an affirmative attestation to fulfill) | N/A (measure is Yes/No and requires an affirmative attestation to fulfill) | The MIPS eligible clinician: 1. does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the performance period; OR 2. operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the performance period; OR 3. Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the performance period. |
| Public Health and Clinical Data | Electronic Case Reporting: The MIPS | N/A (measure is Yes/No and requires | N/A (measure is Yes/No and requires | The MIPS eligible clinician: 1. Does not treat or diagnose |

| physical safeguards. | data created or maintained by certified electronic health record technology (CEHRT) in accordance with requirements in 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the MIPS eligible clinician’s risk management process. | | | |
| Protect Patient Health Information | SAFER Guides High Priority Practices Guide: Conduct an annual assessment of the High Priority Practices Guide SAFER Guides | N/A (measure is Yes/No and requires an affirmative attestation to fulfill) | N/A (measure is Yes/No and requires an affirmative attestation to fulfill) | none |

(ii) Scoring Methodology for the CY 2025 Performance Period/2027 MIPS Payment Year

Interoperability performance category for the CY 2025 performance period/ 2027 MIPS payment year.

Table 63 reflects the scoring methodology for the Promoting

TABLE 63: Scoring Methodology for the CY 2025 Performance Period/2027 MIPS Payment Year

| Objective | Measure | Maximum Points | Required/Optional |
|--|--|---------------------------|---|
| Electronic Prescribing | e-Prescribing | 10 points | Required |
| | Query of PDMP | 10 points | Required |
| Health Information Exchange | Support Electronic Referral Loops by Sending Health Information | 15 points | Required (MIPS eligible clinician's choice of one of the three reporting options) |
| | Support Electronic Referral Loops by Receiving and Reconciling Health Information | 15 points | |
| | -OR- | | |
| | Health Information Exchange Bi-Directional Exchange | 30 points | |
| | -OR- | | |
| | Enabling Exchange under TEFCA | 30 points | |
| Provider to Patient Exchange | Provide Patients Electronic Access to Their Health Information | 25 points | Required |
| Public Health and Clinical Data Exchange | Report the following two measures: <ul style="list-style-type: none"> Immunization Registry Reporting Electronic Case Reporting | 25 points | Required |
| | Report one of the following measures: <ul style="list-style-type: none"> Public Health Registry Reporting Clinical Data Registry Reporting Syndromic Surveillance Reporting | 5 points (<i>bonus</i>) | Optional |

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required but will not be assigned points. Failure to submit an affirmative (“yes”) attestation will result in a zero score for the Promoting Interoperability performance category.

In addition, MIPS eligible clinicians must submit an affirmative (“yes”) attestation regarding ONC direct review, and an affirmative (“yes”) attestation that they did not knowingly and willfully take action to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3).

(iii) Exclusion Redistribution

Many required measures have exclusions associated with them as shown in Table 62. If a MIPS eligible clinician believes that an exclusion for a particular measure applies to them, they may claim it when they submit

their data. The maximum points available in Table 63 do not include the points that will be redistributed if a MIPS eligible clinician claims an exclusion for a specific measure. For ease of reference, Table 64 shows how points will be redistributed among the

objectives and measures specified for the Promoting Interoperability performance category for the CY 2025 performance period/2027 MIPS payment year in the event a MIPS eligible clinician claims an exclusion for a given measure.

TABLE 64: Exclusion Redistribution for CY 2025 Performance Period/2027 MIPS Payment Year

| Objective | Measure | Redistribution if exclusion is claimed |
|--|---|---|
| Electronic Prescribing | e-Prescribing | 10 points to HIE objective |
| | Query of PDMP | 10 points to e-Prescribing measure |
| Health Information Exchange | Support Electronic Referral Loops by Sending Health Information | 15 points to Provide Patients Electronic Access to Their Health Information measure |
| | Support Electronic Referral Loops by Receiving and Reconciling Health Information | 15 points to the Support Electronic Referral Loops by Sending Health Information measure |
| | -OR- | |
| | Health Information Exchange Bi-Directional Exchange | No exclusion |
| | -OR- | |
| | Enabling Exchange under TEFCA | No exclusion |
| Provider to Patient Exchange | Provide Patients Electronic Access to Their Health Information | No exclusion |
| Public Health and Clinical Data Exchange | Report the following two measures: <ul style="list-style-type: none"> • Electronic Case Reporting • Immunization Registry Reporting | If an exclusion is claimed for both measures, 25 points are redistributed to the Provide Patients Electronic Access to their Health Information measure |

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required but will not be assigned points. Failure to submit an affirmative (“yes”) attestation will result in a zero score for the Promoting Interoperability performance category.

In addition, MIPS eligible clinicians must submit an affirmative (“yes”) attestation regarding ONC direct review, and an affirmative (“yes”) attestation that they did not knowingly and willfully take action to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3).

(iv) ONC Health IT Certification Criteria category for the CY 2025 performance period/2027 MIPS payment year and the associated ONC health IT certification criteria set forth at 45 CFR 170.315, as is currently applicable. We refer readers to the CY 2024 PFS final rule (88 FR 79307 through 79312) for our discussion of and amendments to the definition of CEHRT at § 414.1305.

For ease of reference, Table 65 lists the objectives and measures for the Promoting Interoperability performance

TABLE 65: Promoting Interoperability Performance Category Objectives and Measures and ONC Health IT Certification Criteria

| Objective | Measure | Certification Criteria (CY 2025 Performance Period/2027 MIPS Payment Year) in Title 45 of the CFR |
|--|---|---|
| Electronic Prescribing | e-Prescribing | § 170.315(b)(3) Electronic prescribing |
| | Query of PDMP | § 170.315(b)(3) Electronic prescribing |
| Health Information Exchange | Support electronic referral loops by sending health information | § 170.315(b)(1) Transitions of care |
| | Support electronic referral loops by receiving and reconciling health information | § 170.315(b)(1) Transitions of care
§ 170.315(b)(2) Clinical information reconciliation and incorporation |
| Health Information Exchange (alternative) | Health Information Exchange (HIE Bi-Directional Exchange) | Examples of certified health IT capabilities to support the actions of this measure may include but are <u>not</u> limited to technology certified to the following criteria: |
| | | § 170.315(b)(1) Transitions of care |
| | | § 170.315(b)(2) Clinical information reconciliation and incorporation |
| | | § 170.315(g)(7) Application access — patient selection |
| | | § 170.315(g)(9) Application access — all data request |
| | | § 170.315(g)(10) Application access — standardized API for patient and population services |
| Health Information Exchange (alternative) | Enabling Exchange under TEFCA | Examples of certified health IT capabilities to support the actions of this measure may include but are <u>not</u> limited to technology certified to the following criteria: |
| | | § 170.315(b)(1) Transitions of care |
| | | § 170.315(b)(2) Clinical information reconciliation and incorporation |
| | | § 170.315(g)(7) Application access — patient selection |
| | | § 170.315(g)(9) Application access — all data request |
| | | § 170.315(g)(10) Application access — standardized API for patient and population services |
| Provider to Patient Exchange | Provide patients electronic access to their health information | § 170.315(e)(1) View, download, and transmit to 3rd party |
| | | § 170.315(g)(7) Application access — patient selection |
| | | § 170.315(g)(9) Application access — all data request |
| | | § 170.315(g)(10) Application access — standardized API for patient and population services |
| Public Health and Clinical Data Exchange | Immunization registry reporting | § 170.315(f)(1) Transmission to immunization registries |
| | Syndromic surveillance reporting | § 170.315(f)(2) Transmission to public health agencies — syndromic surveillance |
| | Electronic case reporting | § 170.315(f)(5) Transmission to public health agencies — electronic case reporting |
| | Public health registry reporting | § 170.315(f)(6) Transmission to public health agencies — antimicrobial use and resistance reporting |
| | | § 170.315(f)(7) Transmission to public health agencies — health care surveys |
| Clinical data registry reporting | No 2015 health IT certification criteria at this time. | |
| Protect Patient Health Information | Security Risk Assessment | The requirements are a part of CEHRT specific to each certification criterion. |
| | Safety Assurance Factors for EHR Resilience Guides (SAFER Guides) | No 2015 health IT certification criteria at this time. |

BILLING CODE C

(g) Request for Information (RFI)
Regarding Public Health Reporting and
Data Exchange

Please note, this is an RFI only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

Respondents are encouraged to provide complete but concise responses. This RFI is issued solely for information and planning purposes; it does not constitute a Request for Proposal (RFP), applications, proposal abstracts, or quotations. This RFI does not commit the U.S. Government to contract for any supplies or services or make a grant award. Further, CMS is not seeking proposals through this RFI and will not accept unsolicited proposals. Responders are advised that the U.S. Government will not pay for any information or administrative costs incurred in response to this RFI; all costs associated with responding to this RFI will be solely at the interested party's expense. Not responding to this RFI does not preclude participation in any future procurement, if conducted. It is the responsibility of the potential responders to monitor this RFI announcement for additional information pertaining to this request. Please note that CMS will not respond to questions about the policy issues raised in this RFI. CMS may or may not choose to contact individual responders. Such communications would only serve to further clarify written responses. Contractor support personnel may be used to review RFI responses. Responses to this notice are not offers and cannot be accepted by the U.S. Government to form a binding contract or issue a grant. Information obtained as a result of this RFI may be used by the U.S. Government for program planning on a non-attribution basis. Respondents should not include any information that might be considered proprietary or confidential. This RFI should not be construed as a commitment or authorization to incur cost for which

reimbursement would be required or sought. All submissions become U.S. Government property and will not be returned. CMS may publicly post the comments received, or a summary thereof.

(i) Background

The COVID-19 public health emergency (PHE) highlighted the interdependencies of public health and healthcare, and the importance of timely, integrated, and interoperable data exchange across the health ecosystem to protect the health and safety of patients, populations, and the broader public. It also called attention to the distance between where we are as a nation, and where we want to be, with the interoperability of data between healthcare providers and Public Health Agencies (PHAs), especially in the event of a fast-evolving pandemic or other type of PHE. While many jurisdictions were able to demonstrate the advantages of capabilities such as electronic laboratory reporting for reportable conditions, surveillance systems to support case investigations, immunization registries to track COVID-19 immunizations, and syndromic surveillance data for situational awareness, exchange across jurisdictions remains inconsistent and, in some cases, burdensome.

The Promoting Interoperability performance category plays an important role in advancing the exchange of health information between PHAs and MIPS eligible clinicians, using certified Health IT Modules that meet criteria and standards established under the ONC Health IT Certification Program. Measures under the Public Health and Clinical Data Exchange objective focus on a key set of exchange capabilities for healthcare providers that have evolved over time to incorporate new priorities and technical approaches. In recent years, we have also focused on expanding and strengthening the Public Health and Clinical Data Exchange objective to further support the exchange of data that ultimately supports better patient and public health outcomes.

Efforts across HHS to advance the public health information infrastructure offer opportunities to further evolve the Promoting Interoperability performance category. In 2020, Centers for Disease Control and Prevention (CDC) launched the Data Modernization Initiative (DMI),⁷⁶⁴ a multi-year, billion-plus dollar public health ecosystem initiative aimed at moving the public health

community from a siloed and brittle public health data system to connected, resilient, adaptable, and sustainable "response-ready" systems capable of meeting present and future health challenges. CDC's vision for public health data expands on modernization efforts and focuses on critical components to advance data for public health action to equitably protect health, safety and security.⁷⁶⁵ To establish clear, near-term priorities and milestones that complement that longer term vision and improve alignment of data modernization efforts at all levels of public health and across partners, CDC released its first Public Health Data Strategy (Ph.D.S) in 2023 and recently updated it.⁷⁶⁶ The Ph.D.S outlines the data, technology, policy, and administrative actions essential to exchange critical core data efficiently and securely across healthcare and public health and sets ambitious goals against which CDC will measure progress over the next two years.

In tandem with these efforts to chart a new strategic direction for improvements to the nation's public health infrastructure, evolving technical approaches are offering opportunities to automate and expand information exchange between healthcare providers and PHAs. ONC is exploring updates to existing health IT certification criteria that support current measures in the Promoting Interoperability performance category's Public Health and Clinical Data Exchange objective, new criteria that incorporate modern approaches to exchange, support additional types of information needed by PHAs, and criteria that focus on entities receiving public health data. In the HTI-1 final rule, ONC finalized updates to the health IT certification criterion for electronic case reporting in 45 CFR 170.315(f)(5) incorporating standards-based approaches to existing functional requirements in accordance with the HL7 FHIR Electronic Case Report (eCR) Implementation Guide (IG) or HL7 Clinical Document Architecture (CDA) Electronic Initial Case Report (eICR) IG (89 FR 1226). ONC is also considering recent recommendations from Federal advisory committees that have focused on issues related to public health interoperability. These include the Public Health Data Systems Task Force, which was charged by the Health Information Technology Advisory Committee (HITAC) to inform ONC's continued collaborative work with CDC

⁷⁶⁵ <https://www.cdc.gov/ophdst/about/advancing-data-for-public-health-action.html>.

⁷⁶⁴ <https://www.cdc.gov/surveillance/data-modernization/index.html>.

⁷⁶⁶ <https://www.cdc.gov/ophdst/public-health-data-strategy/index.html>.

on improving public health data systems, and in support of CDC's greater DMI efforts. In November 2022, the Public Health Data Systems Task Force issued recommendations to the HITAC,⁷⁶⁷ which included a focus on new criteria for Health IT modules that support public health use cases that aim to standardize technology that receives information from healthcare providers. In addition, the CDC Advisory Committee to the Director (ACD) Data and Surveillance Workgroup adopted a report on November 3, 2022, which addressed standards for public health data systems and implementing a certification program for public health IT as well as other issues.⁷⁶⁸

We are working in partnership with the CDC and ONC to explore how the Promoting Interoperability performance category could advance public health infrastructure through more advanced use of health IT and data exchange standards. This RFI describes a series of goals and principles for the Promoting Interoperability performance category's Public Health and Clinical Data Exchange objective, provides information about recommended updates to health IT certification criteria under consideration that may impact MIPS eligible clinicians, and seeks public comment on potential updates that could help achieve these goals.

(ii) Goals for Public Health Reporting

As we look toward the future of the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category, we believe decision-making and prioritization about policy change should adhere to four goals:

(1) The meaningful use of CEHRT enables continuous improvement in the quality, timeliness, and completeness of public health data being reported;

(2) The meaningful use of CEHRT allows for flexibility to respond to new public health threats and meet new data needs without requiring new and substantial regulatory and technical development;

(3) The meaningful use of CEHRT supports mutual data sharing between public health and healthcare providers; and

(4) Reporting burden on MIPS eligible clinicians is significantly reduced.

These goals inform the questions provided at the end of this RFI. We invite public comment on these four goals.

(iii) Public Health in the ONC Health IT Certification Program

We continue to collaborate closely with ONC on policy changes in the ONC Health IT Certification Program that either impact existing functionality reflected in the Promoting Interoperability performance category's measures or represent new capabilities for MIPS eligible clinicians that could offer opportunities to achieve our goals for the Public Health and Clinical Data Exchange objective in the Promoting Interoperability performance category. In this section, we describe specific topics we are discussing through this collaboration with ONC.

(1) Making available new capabilities for exchanging data with PHAs using the FHIR standard.

Current public health certification related criteria at 45 CFR 170.315(f)(1) through (7) generally reference HL7 version 2 and CDA standards that support single-patient, event-based submission of data from healthcare providers to PHAs, such as electronic transmission of laboratory results (HL7® Version 2.5.1 Implementation Guide for Electronic Laboratory Reporting to Public Health, Release 1 with Errata and Clarifications) or electronic initial case reports (HL7 CDA® R2 Implementation Guide: Public Health Case Report—the Electronic Initial Case Report (eICR) Release 2). However, these standards may not adequately support more complex data exchange use cases, such as bulk exchange of data for patients who received a specific vaccine. Approaches using FHIR could more effectively support a wide-scale public health response and reduce burden of implementation and maintenance for data exchange between and among healthcare providers and PHAs.

Increased availability of FHIR-based APIs across systems used by PHAs and healthcare providers could help to create an ecosystem where PHAs could use health IT to securely query data directly from the source, in real time, based on an initial push of relevant data when needed. Availability of a FHIR API in a healthcare provider's certified health IT could enable a PHA to query a MIPS eligible clinician's CEHRT for data on any patient with a specific condition when needed, avoiding the need for a MIPS eligible clinician to take action to submit additional information.

As noted, ONC has already finalized an update to the electronic case reporting criterion in 45 CFR 170.315(f)(5), which provides an option to implement the HL7 FHIR eCR IG as part of a Health IT Module certified to the criterion (89 FR 1226). The Public Health Data Systems Task Force report stated that "FHIR-based query may offer public health additional avenues to meet the needs of case investigation to supplement electronic case reporting and emerging public health threats" and that "FHIR may support a more focused and relevant response by providers to meet public health queries."⁷⁶⁹

While FHIR specifications are not available for all the use cases currently supported in the public health criteria at § 170.315(f)(1) through (7), ONC continues to evaluate standards development activities around the use of FHIR for public health data exchange that could be incorporated into existing or new certification criteria, such as replacing HL7 version 2 and CDA exchange specifications with a FHIR approach over time.

(2) Expanding the scope of public health exchange supported by certified health IT capabilities.

Existing health IT certification criteria are linked to measures under the Promoting Interoperability performance category, covering use cases from transmission to immunization registries and syndromic surveillance, and electronic case reporting.

The Public Health Data Systems Task Force report recommended the addition of several additional certification criteria reflecting exchange of information such as birth and death data, the results of newborn screening services, and situational awareness. ONC is monitoring these and other areas of importance to public health that are not reflected in the current certification criteria.

(3) Introducing health IT certification criteria for systems that receive public health data.

To date, ONC health IT certification criteria have been designed with systems that send data to PHAs in mind, particularly health IT systems used by healthcare providers, that exchange data with PHAs. Misalignment between certified health IT products and technology and systems used by PHAs has created challenges for both healthcare providers and PHAs, including reliance on complex

⁷⁶⁷ See "Final Report of the Health Information Technology Advisory Committee on Public Health Data Systems" https://www.healthit.gov/sites/default/files/page/2022-11/2022-11-10_PHDS_TF_Recommendations_Report_Transmittal_Letter_508.pdf.

⁷⁶⁸ See "Data and Surveillance Workgroup Report," CDC Advisory Committee to the Director (ACD) Data and Surveillance Workgroup (DSW). www.cdc.gov/about/pdf/advisory/DSW-Recommendations-Report.pdf.

⁷⁶⁹ See "Final Report of the Health Information Technology Advisory Committee on Public Health Data Systems," https://www.healthit.gov/sites/default/files/page/2022-11/2022-11-10_PHDS_TF_Recommendations_Report_Transmittal_Letter_508.pdf.

workflows to accommodate non-harmonized and variable data elements and exchange standards. Inefficiencies associated with workarounds and custom processes can lead to further reductions in data quality, completeness, consistency, and interoperability.

The HITAC Public Health Data Systems Task Force's report includes a recommendation that ONC establish certification criteria for public health technologies used by Public Health Authorities in support of their responsibilities in exchanging data for public health purposes including those defined in the existing (f) criteria.⁷⁷⁰

By establishing minimum functional capabilities and exchange standards to both send and receive public health data, health IT certification criteria could enhance interoperability across healthcare providers and PHAs and provide a long-term mechanism for alignment as data exchange matures over time. An expansion of the ONC Health IT Certification Program to focus on the receiving side could also bolster CDC's public health infrastructure modernization efforts, described above, by helping PHAs to align with healthcare provider data sources using the same certification criteria and standards, enabling these entities to move together on a common timeline for updating technology requirements.

(iv) RFI Questions

Section 1848(q)(2)(B)(iv) of the Act requires that we must apply the requirements under section 1848(o)(2) of the Act for our assessment of whether a MIPS eligible clinician is a meaningful EHR user under the Promoting Interoperability performance category. Section 1848(o)(2)(A) of the Act sets forth three criteria for determining whether a MIPS eligible clinician is a meaningful EHR user. One of these criteria at section 1848(o)(2)(A)(ii) of the Act requires that the MIPS eligible clinician demonstrate to the satisfaction of the Secretary that during the performance period their CEHRT is connected in a manner that provides, in accordance with law and standards applicable to the exchange of information, for the electronic exchange of health information to improve the quality of health care, such as promoting care coordination. We request that commenters consider this criterion in responding to our questions for this RFI.

⁷⁷⁰ Public Health Data Systems Task Force, Recommendation 23, p. 11 https://www.healthit.gov/sites/default/files/page/2022-11/2022-11-10_PHDS_TF_Recommendations_Report_Transmittal_Letter_508.pdf.

(1) Questions for Goal #1: Quality, Timeliness, and Completeness of Public Health Reporting

The Promoting Interoperability performance category's requirement that MIPS eligible clinicians report the level of "active engagement" between the MIPS eligible clinician, and a PHA, as well as the recently established one-year limitation in how long a MIPS eligible clinician may spend in Pre-Production and Validation for measures under the Public Health and Clinical Data Exchange objective, has provided a basis to broadly incentivize the exchange of EHR data (87 FR 49339 through 49340). It has helped to identify barriers that prevent MIPS eligible clinicians from moving from Pre-Production and Validation (Option 1) to Validated Data Production (Option 2), and it has helped the development of solutions to overcome identified barriers. However, because active engagement reporting only requires an attestation of whether a MIPS eligible clinician is reporting production data or still in the process of validation, this approach does not allow us to assess MIPS eligible clinicians on the comprehensiveness, quality, or timeliness of the data they provide to PHAs.

We are considering whether alternatives to the "active engagement" approach for the measures under the Public Health and Clinical Data Exchange objective could better allow us to assess MIPS eligible clinician's performance, meet the data needs of PHAs, and ultimately allow us to incentivize increased performance in these areas. We are interested in how we could recommend alternatives to the "active engagement" approach in the context of the evolving technical infrastructure described above. We are also interested in the increasing focus on leveraging FHIR-based data exchange for public health reporting. Finally, we are interested in ensuring that any changes to the active engagement approach are implemented in a way that takes advantage of opportunities to further automate reporting and minimize administrative burden for MIPS eligible clinicians.

- To date, all the measures in the Public Health and Clinical Data Exchange objective assess whether there is active engagement between a MIPS eligible clinician, but they do not measure the level of performance the MIPS eligible clinician has achieved in sending information. Specifically, we are seeking public comment on the following questions:

- ++ Should CMS shift to numerator/denominator reporting requirements for

current and future measures in the Public Health and Clinical Data Exchange objective? If so, should CMS prioritize only certain measures for numerator/denominator reporting?

- ++ New technical approaches such as the use of FHIR APIs to support information exchange with PHAs could enable PHAs to query healthcare provider systems directly, after an initial trigger, rather than relying on a healthcare provider to take action to share information. Healthcare providers having to take action to share information adds burden to the healthcare providers and increases the time it takes for the PHA to receive the information. How could performance be measured under approaches such as the use of FHIR APIs to support information exchange with PHAs? Would numerator/denominator reporting be appropriate under such approaches?

- Continued expansion of the measures under the Public Health and Clinical Data Exchange objective to address different reporting use cases can incentivize MIPS eligible clinicians to make more comprehensive information available to PHAs. We are seeking public comment on the following questions:

- ++ Should CMS continue add measures under the Public Health and Clinical Data Exchange objective to include additional system-specific requirements (for example, vital records)? If so, which ones and why?

- ++ Should CMS create a new measure for each new type of data or use case added to the Public Health and Clinical Data Exchange objective? What are the risks of including too many measures under the objective?

- ++ Alternatively, should CMS explore ways to group data types and use cases under a more limited set of Public Health and Clinical Data Exchange objective measure? If so, are there specific scenarios where doing so would make sense? Anecdotal reports suggest that some healthcare providers are attesting to active engagement with public health for the eCR measure if they report cases for at least one notifiable condition (for example, COVID-19).

- ++ How can CMS incentivize more complete electronic case reporting to PHAs? For example, should CMS update the measure to require healthcare providers to meet a certain threshold for conditions reported?

- ++ What potential benefit versus burden trade-offs CMS should consider? How should CMS account for varying levels of public health readiness and capacity for expanding conditions

reported electronically, such as in rural areas?

++ What additional levers besides the Promoting Interoperability performance category should CMS explore to improve the completeness of reporting to public health? How should CMS work with other partners to incentivize or require reporting?

(2) Questions for Goal #2: Flexibility and Adaptability of the Public Health Reporting Enterprise

During the COVID–19 and Mpox PHEs, healthcare providers and PHAs often had to quickly update their systems to report case, laboratory, and vaccination data related to these novel pathogens and interventions devised in response to them. In this section, we are seeking information about how the Promoting Interoperability performance category could improve the ability for public health infrastructure⁷⁷¹ to quickly adapt to new threats.

Specifically, we are seeking public comment on the following questions:

- How can the Promoting Interoperability performance category support or incentivize response ready reporting capabilities for healthcare providers? What, if any, challenges exist around sharing data with PHAs?

- How can CMS and ONC work with EHR vendors to ensure that provider systems are being continually updated to meet new data needs, such as those in rural areas?

(3) Questions for Goal #3: Increasing Bi-Directional Exchange With Public Health Agencies

The transition to, and use of more modern, flexible approaches and networks that support data exchange between and across public health and healthcare is a key goal of HHS efforts to modernize the public health information infrastructure. We are interested in ways that the Promoting Interoperability performance category can support this transition. Specifically, we are seeking public comment on the following questions:

- Both CDC's ACD and ONC's HITAC have recommended that CDC and ONC work together to establish certification criteria for public health technologies used by PHAs and implement a coordinated, phased approach to incentivize and eventually require their adoption.⁷⁷² How, if at all, could the Promoting Interoperability performance category support or incentivize PHA

adoption of certified systems and technologies?

- How can CMS use the Public Health and Clinical Data Exchange objective to incentivize early adoption of FHIR-based APIs for public health data exchange?

- CMS previously finalized the Enabling Exchange under TEFCA measure under the HIE objective for MIPS eligible clinicians to attest to engaging in health information exchange. Should CMS introduce an additional measure to allow MIPS eligible clinicians to receive credit for the HIE objective by exchanging public health data through participation in TEFCA?

(4) Questions for Goal #4: Significantly Reduce Reporting Burden for Healthcare Providers

We are committed to continuing to reduce reporting burden for healthcare providers, such as in rural areas, as part of any updates to the Promoting Interoperability performance category undertaken to support the priorities described above. Specifically, we are seeking public comment on the following questions:

- Under the current Public Health and Clinical Data Exchange objective, which measures, or other requirements result in the most administrative burden for MIPS eligible clinicians?

- How can the Promoting Interoperability performance category balance robust Public Health and Clinical Data Exchange objective requirements with our desire to reduce burden on MIPS eligible clinicians?

- How can new technical approaches to data exchange with PHAs, such as the use of FHIR APIs, reduce burden for MIPS eligible clinicians? What are potential barriers to achieving burden reduction as these new approaches are implemented?

f. MIPS Final Score Methodology

(1) Performance Category Scores

(a) Background

Sections 1848(q)(1)(A)(i) and (ii) and (5)(A) of the Act provide, in relevant part, that the Secretary shall develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards and, using such methodology, provide for a final score for each MIPS eligible clinician. Section 1848(q)(6)(A) of the Act specifies that, to then determine a MIPS payment adjustment factor for each MIPS eligible clinician for an applicable MIPS payment year, we must compare the MIPS eligible clinician's final score for

the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. We refer readers to section IV.A.4.g.(2) of this proposed rule for further discussion of the performance threshold, and our calculation of MIPS payment adjustment factors, and our proposals with respect thereto.

Section 1848(q)(2)(A) of the Act provides that the Secretary must assess each MIPS eligible clinician with respect to four performance categories in determining each MIPS eligible clinician's final score: quality, resource use (referred to as "cost"), clinical practice improvement activities (referred to as "improvement activities"), and meaningful use of certified EHR technology (referred to as "Promoting Interoperability"). Section 1848(q)(2)(B) of the Act describes the measures and activities that must be specified under each performance category, including the quality performance category and cost performance category. Section 1848(q)(3) of the Act provides that we must establish performance standards with respect to the measures and activities specified under the four performance categories for a performance period, considering historical performance standards, improvement, and the opportunity for continued improvement. To calculate a final score for each MIPS eligible clinician for the performance period of an applicable MIPS payment year, section 1848(q)(5)(A) of the Act provides that we must develop a methodology for assessing the total performance of each MIPS eligible clinician according to the performance standards we have established with respect to applicable measures and activities specified for each performance category, using a scoring scale of 0 to 100.

In calculating the final score, we must apply different weights for the four performance categories, subject to certain exceptions, as set forth in section 1848(q)(5) of the Act and at § 414.1380. Unless we assign a different scoring weight pursuant to these exceptions, for the CY 2025 performance period/2027 MIPS payment year, the scoring weights for each performance category are as follows: 30 percent for the quality performance category; 30 percent for the cost performance category; 15 percent for the improvement activities performance category; and 25 percent for the Promoting Interoperability performance category.

⁷⁷¹ <https://www.cdc.gov/infrastructure/pdfs/PHIC-Overview.pdf>.

⁷⁷² https://www.healthit.gov/sites/default/files/page/2023-03/2023-02_08_HITAC_Annual_Report_for_FY22_508_1.pdf.

For the CY 2025 performance period/2027 MIPS payment year, we propose to update our scoring methodologies to respond to statutory requirements and impacts observed in performance data. In this proposed rule, we are proposing to update our scoring policies consistent with these goals. Specifically, we propose to—

- Establish defined topped out benchmarks for certain topped out measures for clinicians impacted by limited measure choice;
- Establish Complex Organization Adjustment for eQMs reported by Virtual Groups and APM Entities.
- Score Medicare CQMs using flat benchmarks for their first two performance periods in the program.
- Modify the benchmarking methodology for scoring measures in the cost performance category;
- Adopt a new cost measure exclusion policy;
- Eliminate the weighting of activities in the improvement activities performance category; and
- Reduce the number of activities to which clinicians are required to attest.

We do not propose any changes to scoring policies for the Promoting Interoperability performance category.

We refer readers to section IV.A.4.e.(3)(b)(iv) for discussion of scoring proposals in the Improvement Activities performance category.

We refer readers to section IV.A.4.f.(1)(d) for discussion of proposals for scoring the cost performance category.

(b) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eQMs, MIPS CQMs, QCDR Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We refer readers to the CY 2017, CY 2018, and CY 2019 Quality Payment Program final rules, the CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules, and § 414.1380(b)(1) for our current policies regarding, among other things, quality measure benchmarks, calculating total measure achievement points, calculating the quality performance category score, including achievement and improvement points, and the small practice bonus (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, 84 FR 63011 through 63018, 85 FR 84898 through 84913, 86 FR 65490 through 65509, and 87 FR 70088 through 70091). In the CY 2024 PFS final rule, we finalized updates to our scoring flexibilities policy at

§ 414.1380(b)(1)(vii)(A) (88 FR 79368 through 79369).

(i) Scoring for Topped Out Measures in Specialty Measure Sets With Limited Measure Choice

We refer readers to the CY 2017, CY 2018, and CY 2019 Quality Payment Program final rules, the CY 2023 PFS final rule (81 FR 77282 through 77287, 82 FR 53721 through 53727, 83 FR 59761 through 59765, and 88 FR 70090 through 70091), and § 414.1380(b)(1)(iv) for our established topped out measure scoring policies.

Topped out measures are measures for which measure performance is considered so high and unvarying that meaningful distinctions and improvements in performance can no longer be made (81 FR 77136). We define topped out measures in § 414.1305 differently for process measures and non-process measures. A topped out process measure means a measure with a median performance rate of 95 percent or higher. A topped out non-process measure means a measure where the Truncated Coefficient of Variation is less than 0.01 and the 75th and 90th percentile are within 2 standard errors. For MIPS eligible clinicians electing to report on measures where they expect to perform well, we anticipated many measures would have performance distributions clustered near the top. (81 FR 77282). Section 1848(q)(3)(B) of the Act requires that in establishing performance standards with respect to measures and activities, we consider, among other things, the opportunity for continued improvement. Topped out measures do not provide an opportunity for continued improvement nor, more broadly, do payment adjustments based on topped out measures incentivize clinicians to improve their care. As a result, we finalized policies to identify and cap the scoring potential of such measures. Additionally, we established practices for the removal of such measures, such as establishing the topped out measure lifecycle, to continue to drive quality improvement in areas where such improvement is possible and necessary.

The topped out measure lifecycle is described in the CY 2018 PFS final rule (82 FR 53721 and 53727). We established at § 414.1380(b)(1)(iv)(B) that we would cap scoring for topped out measures at 7 points in the second consecutive year that it is identified as topped out. If a measure has been identified as topped out for 3 consecutive years after being originally identified through the benchmarks, such measure may then be proposed for

removal through notice-and-comment rulemaking (83 FR 59761). This timeline, however, is not fixed. We noted our concern where removal of topped out measures would leave clinicians with fewer than 6 applicable measures to report and that such removal in those instances would impact some specialties more than others (82 FR 53721). We stated that consideration for ensuring available applicable measures would be made when considering measure removals (83 FR 59763).

The topped out scoring cap and the topped out measure lifecycle were established with the intention to drive continued quality improvement by providing clinicians with the ability to plan for optimal quality measurement and reporting and by providing measure developers time to develop and submit alternative measures for use in the program (82 FR 53727). However, the pace of measure development has not matched the rate at which topped out measures would ideally be removed under the established topped out lifecycle policy. Since the CY 2017 performance period/2019 MIPS payment year, the MIPS final list of quality measures has decreased from 271 to 198 including the removal of 34 topped out measures that had reached the end of the topped out measure lifecycle.

We have received feedback from interested parties and independently verified that clinicians reporting specialty sets in which there is high presence of topped out measures receiving the 7-point cap are often facing both limited measure choice and limited scoring opportunities. Analysis of data from the CY 2022 performance period/2024 MIPS payment year showed that only 7 percent of quality measure submissions were for topped out measures. However, of those submissions, clinicians representing five specialties accounted for 54 percent of the submissions of topped out measures that contributed to the final score. When we analyzed the data from the CY2022 performance period/2024 MIPS payment year, we found that clinicians in these specialties were facing limited measure choice, with an overrepresentation of topped out measures among their measure selection. Some such topped out measures have been retained in the program to ensure specialists will have applicable measures in the absence of more robust measure development.

We acknowledge that certain clinician specialists have limited measure choice and that their opportunities to maximize their MIPS performance score may be

particularly affected by the current topped out measure scoring policy. We appreciate that, as the performance threshold increases, it may become more difficult for these clinician specialists to maximize their MIPS performance score and secure positive payment adjustments for reasons entirely outside of their control, primarily the topped-out measure scoring cap. In order to determine a MIPS payment adjustment factor for each MIPS eligible clinician for a year, we must compare the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. Section 1848(q)(6)(D)(i) of the Act requires that we compute the performance threshold such that it is the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a "prior period" specified by the Secretary. In the CY 2024 PFS final rule,

we finalized the performance threshold at a score of 75 points for the CY 2024 performance period/2026 MIPS payment year at § 414.1405(b)(9)(iii) (88 FR 79319). We are proposing in section IV.A.4.g.(2)(c) to maintain the performance threshold at 75 points for the CY 2025 performance year/2027 MIPS payment year. As the number of topped out measures a clinician reports increases, a clinician who must report topped out measures will see their maximum potential quality performance category score decrease and the clinician must score as close to perfect as possible on the topped out measures to mitigate the effect of the 7-point cap on the clinician's final score. Affected clinicians face additional difficulty should they be subject to additional scoring policies, including reweighting of performance categories and reporting quality measures that lack benchmarks. Reweighting of the Promoting Interoperability, cost, or both performance categories increases the

weighting of the quality performance category in the final score from 30 percent to 55 or 85 percent.

We want to address scoring scenarios in which limited measure choice compels clinicians to report topped out measures with scoring caps consistent with our desire to facilitate fairer scoring of all specialties. For this reason, we are proposing that beginning with the CY 2025 performance period/2027 MIPS payment year CMS could remove the 7-point cap for certain topped out measures that we would select based on evaluating the factors discussed below. This would allow clinicians who practice in specialties impacted by limited measure choice to be scored according to defined topped out measure benchmarks that do not cap scores at 7 measure achievement points. Table 66 is an illustrative example of the defined topped out measure benchmark.

TABLE 66: Example Defined Topped Out Measure Benchmark

| Measure Achievement Points | Performance Rate |
|----------------------------|------------------|
| 1-1.9 | 84-85.9% |
| 2- 2.9 | 86-87.9% |
| 3-3.9 | 88-89.9% |
| 4-4.9 | 90-91.9% |
| 5-5.9 | 92-93.9% |
| 6-6.9 | 94-95.9% |
| 7-7.9 | 96-97.9% |
| 8-8.9 | 98-99.9% |
| 10 | 100% |

As discussed above, given that clinicians reporting specialty measure sets with limited measure choice are disproportionately hindered by the 7-point topped out measure scoring cap, we would, in accordance with the methodology discussed below, focus on identifying the topped out measures within specialty measure sets which clinicians with limited measure choice report. We propose to identify the measures for which we would apply the defined topped out measure benchmark on a yearly basis. Measures receiving the defined topped out measure benchmarks would be proposed and adopted through notice-and-comment rulemaking concurrent with our adoption of the MIPS final list of quality measures.

This proposed performance standard would aim, for clinicians with limited measure availability, to continue to require high performance, but would

not cap scoring potential for exceptional performers and would offer better scoring opportunities for those performing below the median in the distribution than under our current policy. Under the proposed topped out measure benchmarking methodology, those achieving high performance rates would be rewarded for high performance. Scores between 9–9.9 were intentionally left out. We considered inclusion of scores in the 9th decile, but ultimately excluded them to necessitate exceptional clinical quality performance to achieve maximum scores. This approach would ameliorate the challenge of reporting on measures with a scoring cap while maintaining a high performance standard for topped out measures.

In addition to addressing the scoring limit of the cap, we are also proposing to address the scoring limits caused by the heavily skewed distribution of

topped out measures. Previously, because median clinician performance was heavily skewed towards the top of distribution for many topped out measures the second highest achievable decile after the 7th decile may be the 3rd or 4th decile. We therefore propose to specify a topped out measure benchmark that would set an even performance standard. Such a benchmark policy would facilitate clinician efforts to improve clinical quality among clinicians for whom improvement is still possible. The proposed distribution would allow those performing at or above the 97th percentile to achieve a score of 7.5 measure achievement points or greater to reward high performance and encourage clinical quality improvement for those who perform below the median.

We propose to conduct an analysis annually to determine which specialty

measure sets are impacted by limited measure choice and which measures should be subject to the scoring cap exemption. Our analysis would evaluate all specialty measure sets by collection type to assess the impact of limited measure choice taking into account the influence of several scoring considerations including the number of capped topped out measures, the number of measures in the specialty set without historical benchmarks, and the scoring potential to meet or exceed the performance threshold. We would then consider each capped topped out measure in the corresponding specialty measure sets on a case-by-case basis for application of the defined topped out measure benchmark. Additionally, annual consideration of which measures would have the defined topped out measure benchmark applied would take into account any changes to the availability of applicable measures and changes in the topped out status of measures that previously had the defined topped out measure applied. A measure would not have a defined topped out measure benchmark applied until it was identified as topped out for 2 consecutive performance periods, the point at which point the 7-point cap would be applied. If suppression of a measure or removal of a benchmark impacts a measure scored according to the defined topped out measure benchmark, it would not be proposed again for the application of the defined topped out measure benchmark and the performance standard would return to the standard scoring policy at § 414.1380(b)(1)(i).

Measures that are identified as topped out for 3 consecutive performance periods may still be proposed for removal through notice-and-comment rulemaking and extremely topped out measures, those with an average mean performance within the 98th to 100th percentile range, can also still be proposed for removal in the next rulemaking cycle, regardless of whether or not they are in the midst of the topped out measure lifecycle (83 FR 59763). If a measure that is scored according to a defined topped out measure benchmark later shows extremely topped out status, it will be subject to this policy. Any such measure removal would continue to occur through notice-and-comment rulemaking. While we aim to be responsive to those facing limited measure choice, we do not believe that measures with topped out performance have the same value in the program as measures that are not topped out, and they should be scored accordingly in

instances where doing so does not unfairly limit a clinician's scoring opportunity. We believe these parameters identify those most impacted by limited measure choice while continuing to encourage high clinical quality measure performance.

This proposal would remain consistent with our current topped out measure lifecycle, program goals, and historical approaches to scoring scenarios with limited measure choice. In the CY 2017 Quality Payment Program final rule, we exempted measures reported via the CMS Web Interface from the 7-point measure cap. The CMS Web Interface requires that MIPS eligible clinicians submitting via the CMS Web Interface must submit all measures included in the CMS Web Interface (81 FR 77116). Their lack of ability to select alternative measures made the application of the 7-point measure cap inappropriate. Instead, we finalized a proposal at § 414.1380(b)(1)(ii)(A) to use benchmarks from the corresponding year of the Shared Savings Program as the Shared Savings Program incorporates a methodology for measures with high performance into the benchmark (82 FR 53721). The defined topped out measure benchmark similarly aims to score clinicians facing limited measure choice on topped out measures using a methodology that adjusts for high performance.

We considered several policy options to address topped out measure scoring for clinicians facing limited measure choice. These included removing all topped out measures at the end of the topped out measure lifecycle, exempting all topped out measures in specialty measure sets from application of the 7-point cap, applying a denominator reduction for those scoring 7 out of 10 measure achievement points on topped out measures in specialty measure sets, and adopting a new reweighting policy for the quality performance category for clinicians impacted by limited measure choice that score below the performance threshold. These approaches would not appropriately address the barriers to fair scoring posed by limited measure choice, nor would they incentivize and reward improvement in clinical quality measure performance. Additionally, these alternatives would introduce additional scoring complexity and in one case, require clinicians' additional submission of a reweighting application to access potential benefits. The proposed approach of applying defined topped out measure benchmarks for certain topped out measures selected in accordance with the methodology set forth above avoids the additional

complexity of the other approaches by building on historical and current quality measure scoring policies to topped out measures that does not require additional steps to access and is applicable as we transition to MVPs.

For the reasons stated above, we are proposing to add § 414.1380(b)(1)(iv)(C) to state that beginning with the CY 2025 performance period/2027 MIPS payment year, measures impacted by limited measure choice as specified in paragraph (b)(1)(ii)(E) are not subject to the 7 measure achievement point cap specified in paragraph (b)(1)(iv)(B). We propose a conforming change to § 414.1380(b)(1)(iv)(B).

We also propose to add § 414.1380(b)(1)(ii)(E) to state that, beginning with the CY 2025 performance period/2027 MIPS payment year, CMS will publish a list in the **Federal Register** of topped out measures determined to be impacted by limited measure choice. Measures included in the list are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate in the 97th percentile corresponds to 7.5 measure achievement points. Accordingly, we also propose to update § 414.1380(b)(1)(ii) to state that except as provided in paragraphs (b)(1)(ii)(B) through (F), benchmarks will be based on performance by collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period. We are also proposing to make conforming changes to this section to include a previous inadvertent omission of paragraph (b)(1)(ii)(D) in addition the proposed new exceptions in paragraphs (b)(1)(ii)(E) and (F) corresponding to policies discussed in sections IV.A.4.f.(1)(b)(i) and IV.A.4.f.(1)(c)(i) respectively.

(ii) Proposed Approach for Determining Topped Out Measures Impacted by Limited Measure Choice and Subject to the Proposed Defined Topped Out Measure Benchmark and the Proposed List of Measures That Would Be Subject to the Defined Topped Out Measure Benchmark for the CY 2025 Performance Period/2027 MIPS Payment Year

Under this proposal, we would annually determine and publish a list of topped out measures that would have the 7-point cap removed and be subject to the proposed defined topped out measure benchmark. To identify which topped out measures would be added to

the list, we would review each specialty measure set by collection type and identify if the prevalence of topped out measures within such a set hinders a clinician's ability to successfully participate in the MIPS quality performance category. To make such a determination, we would analyze the ability of clinicians reporting the specialty measure sets under review to reasonably achieve 75 percent of available quality achievement points based upon the measures available to them and program requirements. As stated, the analysis would be conducted for each specialty measure set and would be further broken down by collection type. At the collection type level, each measure would be assigned points based upon the current benchmarking data: new measures receive 7 or 5 points based on year in the program, measures with benchmarks are given points based upon the highest decile achievable with a less than

perfect score (less than 100 percent or greater than 0 percent for inverse measures), and measures with no available historic benchmark are given 0 points. All measure set points would be added together to get an output of scoring potential; the Medicare Part B claims collection type measure sets have an additional 6 points added to the output to account for the small practice bonus. The sum of quality achievement points for each measure set would be compared to the analysis threshold, which is 75 percent of available quality achievement points, based upon number of available measures. Any measure sets that are not able to meet or exceed the threshold would be flagged as 'at-risk.' Additional factors that we would take into consideration would include whether or not:

- A measure within the specialty measure set is considered a cross cutting measure;

- A measure within the specialty measure set is a broadly applicable measure, which we would consider to be a measure included in three or more specialty sets; and

- There are more than ten measures, by collection type, available in the specialty set. We request comment on our proposal to score topped out measures impacted by limited measure choice using specialty defined topped out measures including the proposed defined topped out measure benchmark.

Table 67 contains the list of measures that meet the criteria specified above and for which we are proposing to apply the defined topped out measure benchmark for the CY 2025 performance period/2027 MIPS payment year. Specialty sets impacted by limited measure choice include Pathology, Anesthesiology, Diagnostic Radiology, and Radiation Oncology.

BILLING CODE P

TABLE 67: Proposed topped out measures impacted by limited measure choice and subject to defined topped out measure benchmark for the CY 2025 performance period/2027 MIPS Payment Year by Specialty Set

| Measure ID | Collection Type | Measure Title |
|------------|----------------------------------|---|
| 143 | eCQM, MIPS CQM | Oncology: Medical and Radiation – Pain Intensity Quantified |
| 249 | Medicare Part B Claims, MIPS CQM | Barret’s Esophagus |
| 250 | Medicare Part B, MIPS CQM | Radical Prostatectomy Pathology Reporting |
| 360 | MIPS CQM | Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medical Studies |
| 364 | MIPS CQM | Optimized Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines |
| 395 | Medicare Part B, MIPS CQM | Lung Cancer Reporting (Biopsy/Cytology Specimens) |
| 396 | MIPS CQM | Lung Cancer Reporting (Resection Specimens) |
| 397 | Medicare Part B, MIPS CQM | Melanoma Reporting |
| 405 | MIPS CQM | Appropriate Follow-up Imaging for Incidental Abdominal Lesions |
| 406 | MIPS CQM | Appropriate Follow-up Imaging for Incidental Thyroid Nodules in Patients |
| 424 | MIPS CQM | Perioperative Temperature Management |
| 430 | MIPS CQM | Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy |
| 436 | MIPS CQM | Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques |
| 440 | MIPS CQM | Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician |
| 463 | MIPS CQM | Prevention of Post-Operative (POV) – Combination Therapy (Pediatrics) |
| 477 | MIPS CQM | Multimodal Pain Management |

BILLING CODE C

We request comment on the proposed approach that we would use each year to identify the list of measures subject to the defined topped out measure benchmark, as well as the proposed list of topped out measures impacted by limited measure choice and subject to defined topped out measure benchmark for CY 2025 performance period/2027 MIPS Payment Year.

(iii) Complex Organization Adjustment for Virtual Groups and APM Entities

Section 1848(q)(5)(B)(ii)(I) of the Act requires the Secretary to encourage MIPS eligible clinicians to report on applicable quality measures through the use of Certified Electronic Health Record Technology (CEHRT) and qualified clinical data registries. Section 1848(q)(5)(B)(ii)(II) of the Act provides that the Secretary shall treat such clinicians as satisfying the clinical quality measures reporting requirement

described in section 1848(o)(2)(A)(iii) of the Act if they report such measures through the use of such EHR technology for a given performance period.⁷⁷³ In the CY 2017 Quality Payment Program final rule (81 FR 77297), we established the measure bonus point and bonus cap for

⁷⁷³ Section 1848(o)(2)(A)(iii) of the Act requires a meaningful EHR user to demonstrate to the satisfaction of the Secretary that the eligible professional, among other things, has not knowingly and willfully taken action to limit or restrict the compatibility or interoperability of the certified EHR technology.

using CEHRT for end-to-end electronic reporting. We refer readers to § 414.1380(b)(1)(v)(B) for our previously finalized policies regarding measure bonus points for end-to-end electronic reporting.

In the CY 2022 PFS final rule, we finalized our proposal to end measure bonus points for end-to-end electronic reporting. We noted that as we move to MVPs we are simplifying scoring by removing many of the transition policies that we established in the early years of the program in order to develop a stronger MVP program and promote alignment between MIPS and MVPs. As stated in previous rulemaking, we are working to develop ways to encourage the use of CEHRT for electronic reporting without offering measure bonus points. We stated that we believed that we could fulfill the statutory requirement at section 1848(q)(5)(B)(ii)(I) of the Act to encourage the usage of CEHRT, through other means. Accordingly, over the past few years, we have reduced the availability and limited who can submit data for the Medicare Part B claims collection type to only small practices noting that the Medicare Part B claims collection type is not an electronic means of submission.

In the current state, satisfying quality reporting requirements is not equally attainable for each MIPS eligible clinician or entity in the Quality Payment Program (QPP). As the QPP and its components (MIPS and Advanced APMs) has matured, reliance on and subsequent requirements necessitating the use of CEHRT have increased (88 FR 79331). The adoption of CEHRT has been slower than anticipated, indicating additional support for quality reporting may further support attainment of program goals while also addressing the observed and reported challenges faced by complex entities and organizations working to meet new requirements.

Virtual Groups and APM Entities may experience technological barriers to electronic report, including challenges aggregating patient data across multiple TINs, data deduplication, and interoperability between different health IT/EHR systems. In the CY 2018 Quality Payment Program final rule, commenters indicated that data aggregation across multiple TINs for Virtual Groups would be burdensome for rural and small practices and that this burden could be prohibitive for Virtual Groups' successful participation in MIPS (82 FR 53610). Commenters stated that the requirement for Virtual Groups to aggregate data across the Virtual Group could be a potential

barrier for Virtual Group participation and would not likely occur without error (82 FR 53610). Commenters noted that the potential penalty for failure to overcome technical challenges in data aggregation was, at that time, a severe 5 percent decrease to the payment adjustment for TINs that are already operating on small margins (82 FR 53610). Commenters noted that the aggregation of data across various TINs and health IT systems may be logistically difficult and complex, as groups and health IT systems have different ways of collecting and storing data and stated that data aggregation across various systems for measures and activities under each performance category may not be possible if qualified registries do not have the option to assist Virtual Groups (82 FR 53610). Additionally, commenters stated that practices already have an issue of not being able to deduplicate patient data across different health IT systems/multiple EHRs and indicated that Virtual Groups need clear guidelines regarding how to achieve accurate reporting (82 FR 53613).

Furthermore, commenters expressed concerns that registries supporting Virtual Group reporting would be opening themselves to potential penalties as a result of technical challenges in data aggregation across multiple EHR systems (82 FR 53610). The commenters indicated that registries may not be able to support Virtual Group reporting due to legal and operational complexity. Certain registries have internal data governance standards, including patient safety organization requirements, that they must follow when contracting with single TIN participants that may complicate their ability to support Virtual Group reporting due to necessary legal agreements between solo practitioners and small groups within a Virtual Group (82 FR 53611). Commenters requested that CMS provide guidance to registries regarding how to handle data sharing among Virtual Groups with respect to patient safety organization requirements and provide guidance regarding the expectations for registries supporting virtual group reporting (82 FR 53611).

APM Entities are organizations that participate in CMS's various APMs, including the Medicare Shared Savings Program and CMS Innovation Center models. APM Entities face similar organizational challenges reporting eCQMs because of their complex structures, new and innovative partnerships under their respective APMs, and utilization of multiple EHR technologies (88 FR 79097). For ACOs

in the Shared Savings Program, and ACOs and other large organizations in CMS Innovation Center models, these issues are further exacerbated by scale and patient volume, as discussed in more detail further in this section. In the CY 2023 PFS proposed rule, commenters noted issues for ACOs participating in the Shared Savings Program reporting all payer/all patient eCQMs/MIPS CQMs related to meeting all-payer data requirements, data completeness requirements, and data aggregation (87 FR 69837). ACOs also noted the financial burden of aggregating, deduplicating, and exporting eCQM data across multiple TINs and EHRs (88 FR 79097). As summarized in the CY 2024 PFS final rule, commenters noted that the current state of data standards and interoperability will not yet fully enable Shared Saving Programs ACOs to meet the eCQM reporting requirements successfully and encouraged CMS to continue working with providers to facilitate the transition to all-payer/all-patient measures even as/if the provider or ACO chooses to report Medicare CQMs (88 FR 79107). In the CY 2024 PFS final rule (88 FR 79098), we stated that our long-term goal continues to be to support Shared Savings Program ACOs in the adoption of all payer/all patient measures and transition to digital quality measurement reporting. These challenges also can be faced by other large APM Entities participating in CMS Innovation Center models.

Additionally, APM Entities in CMS Innovation Center models, regardless of size, are participating in innovative payment and delivery designs through which they may forging new partnerships among different providers and provider types to provide care to attributed beneficiaries to meet the APM's care delivery requirements. For example, the Making Care Primary (MCP) Model includes several payment innovations to support participants in delivering advanced primary care and aims to strengthen coordination between patients' primary care clinicians, specialists, social service providers, and behavioral health clinicians, ultimately leading to chronic disease prevention, fewer emergency room visits, and better health outcomes. The model will operate through three progressive tracks, with the first track being designed for organizations with no prior value-based care experience. Additionally, the model includes State partnerships and multi-payer alignment objectives. Participation in this model will involve forming new relationships to provide whole-person care to

beneficiaries, which is likely to necessitate bridging data across multiple technologies and involve new and complex administrative burdens in the provision of this advanced primary care.

Based on our assessment and understanding over the past 2 years, we have learned that there are complexities and challenges for Virtual Groups and APM Entities in adopting all-payer/all-patient collection types, and as a result, the widespread adoption of the all-payer/all patient collection types requires further time and support. We have come to understand that further support is needed for complex organizations. As an example, Shared Savings Program ACOs provide a high volume of services, particularly those related to preventative screening measures. An internal analysis of performance year 2022 submission data indicates that Shared Savings Program ACOs reported on 33 times more denominator eligible patients for eCQM 001—Diabetes: HbA1c Poor Control (>9%), 53 times more denominator eligible patients for eCQM 134—Preventative Care and Screening: Screening for Depression and Follow-Up Plan, and 25 times more denominator eligible patients for eCQM 236—Controlling High Blood Pressure than other MIPS reporters. In performance year 2022, one ACO reported on over 700,000 denominator eligible beneficiaries for a single eCQM.

The requirement to aggregate patient data collected across multiple health records into a single data stream before sending to CMS poses administrative challenges and the need for additional resources for Virtual Groups and APM Entities, including Shared Savings Program ACOs. Additionally, data deduplication is resource intensive and requires the development of new workflows to ensure accuracy. Stakeholders have also noted that patient files exist in multiple, disparate EHRs since each EHR system collects and stores data differently. This is important as moving to reporting eCQMs requires building new processes to fill data gaps and ensure data accuracy and causes participants often to customize workflows for data processing, such as using Quality Reporting Document Architecture (QRDA) I (individual patient) and QRDA III (measured entity's aggregate) data submission approaches for quality reporting. EHR vendors have also expressed concerns regarding the need for more time to develop new features that can facilitate eCQM reporting processes. Some interested parties have also voiced concerns that clinician specialty or patient population could

yield lower quality scores when reporting eCQMs and create resistance to switching to this collection type.

We noted in the CY 2024 PFS final rule that a few commenters agreed that Medicare CQMs would address most of ACOs' concerns regarding all payer/all patient reporting in the Shared Savings Program, such as difficulties reporting for those ACOs with a higher proportion of specialty practices or groups with multiple EHRs, beneficiaries with no primary care relationship, and shouldering a greater burden when matching and deduplicating patient records (88 FR 79101). Other commenters noted Medicare CQMs reduce concerns about specialists reporting on primary care focused measures. Commenters shared that Medicare CQMs were responsive to several key concerns raised by Shared Savings Program ACOs regarding feasibility of implementing eCQMs/MIPS CQMs, including equity concerns (88 FR 79101). However, we maintain that consistent with section 1848(j)(5)(B)(ii)(I) we support and encourage providers as they perform any necessary bridging of data across multiple technologies, which can involve new and complex administrative burdens.

To account for the organizational complexities faced by Virtual Groups and APM Entities, including ACOs in the Shared Savings Program, we are proposing to establish a Complex Organization Adjustment beginning in the CY 2025 performance period/2027 MIPS Payment Year. Virtual Group and APM Entities would receive one measure achievement point for each submitted eCQM that meets the data completeness at § 414.1380(b)(1)(iii) and case minimum requirements at § 414.1340. Each reported eCQM may not receive more than 10 measure achievement points and the total achievement points (numerator) may not exceed the total available measure achievement points (denominator) for the quality performance category. The Complex Organization Adjustment for a Virtual Group or APM Entity may not exceed 10 percent of the total available measure achievement points in the quality performance category. The adjustment would be added for each measure submitted at the individual measure level.

Adding one point for each eCQM would help complex organizations to overcome barriers to reporting eCQMs while not masking overall quality performance. By limiting the Complex Organization Adjustment to Virtual Groups and APM Entities, we can limit scoring inflation and target this

intervention to those facing challenges to eCQM implementation. Moreover, while acknowledging the Complex Organization Adjustment is a recognition of current challenges to eCQM reporting we believe that adoption of the Fast Healthcare Interoperability Resources (FHIR) Application Programming Interface (API) would reduce or eliminate the barriers posed by organizational complexities to eCQM reporting and will revisit and end this Adjustment as uptake of FHIR API increases, requirements surrounding the use of FHIR API are established, or other barriers posed by organizational complexity are otherwise reduced. This Adjustment differs from the previous end-to-end electronic reporting bonus in that it does not merely award measure achievement points for reporting but provides an adjustment for clinicians facing complex organizational barriers for adopting the eCQM collection type.

We propose to add § 414.1380(b)(1)(vii)(C) to provide that, beginning in the CY 2025 performance period/2027 payment year, a Virtual Group and an APM Entity receives one measure achievement point for each eCQM submitted that meets the case minimum requirement at paragraph (b)(1)(iii) and the data completeness requirement at § 414.1340. Each measure may not exceed 10 measure achievement points. The total adjustment to the Virtual Group or APM Entity's quality performance category score under this paragraph may not exceed 10 percent of the total available measure achievement points. Accordingly, we proposed to update § 414.1380(b)(1)(vii) to state a MIPS eligible clinician's quality performance category score is the sum of all the measure achievement points assigned for the measures required for the quality performance category criteria plus the measure bonus points in paragraph (b)(1)(v) and Complex Organization Adjustment in paragraph (b)(1)(vii)(C). The sum is divided by the sum of total available measure achievement points. The improvement percent score in paragraph (b)(1)(vi) is added to that result. The quality performance category score cannot exceed 100 percentage points.

We request comment on our proposal to implement a Complex Organization Adjustment for Virtual Groups and APM Entities, including ACOs in the Shared Savings Program.

(c) Scoring the Quality Performance Category Through MIPS for ACOs in the Shared Savings Program.

(i) Proposal To Score for Shared Savings Program ACOs Reporting Medicare CQMs Using Flat Benchmarks

In section III.G.4.c.2.c of this proposed rule we are proposing to score Shared Savings Program ACOs reporting Medicare CQMs in the APP Plus quality measure set using flat benchmarks for their first two performance periods in MIPS. Consistent with this discussion, we are proposing to add § 414.1380(b)(1)(ii)(F) to state that beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQM collection type would be scored using flat benchmarks for their first two performance periods in MIPS. We request comment on our proposal to score Medicare CQMs using flat benchmarks for their first two performance periods in MIPS.

(d) Cost Performance Category Score

(i) Scoring the Cost Performance Category Background

As discussed previously, to calculate a final score for each MIPS eligible clinician for the performance period of an applicable MIPS payment year, section 1848(q)(5)(A) of the Act requires that we must develop a methodology for assessment of the total performance of each MIPS eligible clinician, according to the performance standards we have established in accordance with section 1848(q)(3) of the Act, with respect to applicable measures and activities specified for each performance category. For the final score, we must use a scoring scale of 0 to 100.

We refer readers to § 414.1380(b)(2) for our policies regarding scoring for the cost performance category and to previous rules where these policies were finalized, including the CY 2017 Quality Payment Program final rule (81 FR 77308 through 77311), the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53752), the CY 2019 PFS final rule (83 FR 59856), the CY 2021 PFS final rule (85 FR 84877 through 84880), the CY 2022 PFS final rule (86 FR 65507 through 65509), the CY 2023 PFS final rule (87 FR 70091 through 70093), and the CY 2024 PFS final rule (88 FR 79369 through 79373).

We are proposing to: (1) modify the benchmark methodology for scoring measures specified for the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year; and (2) adopt a new cost measure exclusion policy beginning

with the CY 2025 performance period/2027 MIPS payment year.

(ii) Benchmark Methodology for Scoring the Cost Performance Category

(A) Background on Methodology for Scoring the Cost Performance Category

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. Under § 414.1380(b)(2), we score each MIPS eligible clinician⁷⁷⁴ on each cost measure attributed to them in accordance with § 414.1350(b) so long as the MIPS eligible clinician meets the minimum case volume specified under § 414.1350(c) to be scored on that cost measure. Cost performance category measures are attributed to MIPS eligible clinicians through, and scored based on, claims data; we do not require MIPS eligible clinicians to submit any additional data on cost measures to CMS (§ 414.1325(a)). We have codified our cost performance category scoring policies at § 414.1380(b)(2).

Specifically, we finalized at § 414.1380(b)(2) that we will score each cost measure attributed to a MIPS eligible clinician (meeting or exceeding the minimum case volume) by assigning achievement points between one and ten based on the MIPS eligible clinician's performance on the cost measure during the performance period compared to the measure's benchmark. We award the achievement points (including partial points) based on which benchmark decile range the MIPS eligible clinician's performance on the measure is between. The MIPS eligible clinician's cost performance category score (to be added to the final score) is the sum (not to exceed 100 percent) of: (1) the total number of achievement points earned by the MIPS eligible clinician divided by the total number of available achievement points; and (2) the cost improvement score, as determined under § 414.1380(b)(2)(iv) (§ 414.1380(b)(2)(iii)). We will not calculate a cost performance category score if the MIPS eligible clinician is not attributed any cost measures for the performance period because the MIPS eligible clinician has not met the minimum case volume as specified under § 414.1350(c) for any of the cost

⁷⁷⁴ As noted previously, the term MIPS eligible clinician is defined in § 414.1305 as including a group of at least one MIPS eligible clinician billing under a single tax identification number. A cost measure therefore may be attributed to a group that includes at least one MIPS eligible clinician and the group may therefore be scored on the cost performance category as a whole. We refer readers to our policies governing group reporting and scoring under MIPS as set forth in § 414.1310(e).

measures or a benchmark has not been created for any of the cost measures that would otherwise be attributed to the MIPS eligible clinician (§ 414.1380(b)(2)(v)).

As set forth in § 414.1380(b)(2)(i), we determine cost measure benchmark ranges based on all MIPS eligible clinicians' performance on each attributed cost measure during the performance period. We determine a benchmark for a cost measure only if at least 20 MIPS eligible clinicians are attributed and meet the minimum case volume for that measure, as specified under § 414.1350(c). If we cannot determine a benchmark for a cost measure because an insufficient number of MIPS eligible clinicians were attributed the measure (that is, less than 20 MIPS eligible clinicians meet the minimum case volume), then we will not assign any score for the measure for any MIPS eligible clinician (§ 414.1380(b)(2)(i) and (v)). We refer readers to our prior rulemakings, including the CY 2017 Quality Payment Program final rule (81 FR 77308 through 77311), for detailed discussion of our previously finalized policies for determining a benchmark for each cost measure and then assignment of achievement points based on comparison of a MIPS eligible clinician's performance to that established benchmark.

Specifically, under our current scoring policy at § 414.1380(b)(2) and benchmark methodology, MIPS eligible clinicians with the lowest average cost per episode or per beneficiary would be in the top decile (Decile 10) and receive the highest number of available achievement points (10). On the other end of the spectrum, MIPS eligible clinicians with the highest average cost per episode or per beneficiary would be in the bottom decile (Decile 1) and receive the lowest number of achievement points (1). More information about how average cost per beneficiary or per episode are calculated and translated to MIPS achievement points is available in the 2023 MIPS Cost User Guide.⁷⁷⁵

Table 68 provides an example of using benchmark deciles along with partial achievement points to assign achievement points for a sample cost measure under our current methodology. The following formula is used to determine the number of partial points awarded to the MIPS eligible clinician:

Benchmark Decile # + [(measure score, expressed as a dollar amount – bottom

⁷⁷⁵ <https://qpp.cms.gov/resources/document/fac61617-20ef-4d31-9f0f-4a0e76620ca3>.

of benchmark decile range)/(top of benchmark decile range – bottom of

benchmark decile range)] = Cost Measure Achievement Points.⁷⁷⁶

TABLE 68: Example of Using Benchmark Deciles and Partial Points to Assign Achievement Points for Performance on the Screening/Surveillance Colonoscopy Cost Measure

| Benchmark Decile | Cost per Episode | Percentile | Possible Points |
|---------------------|---------------------|------------------|-----------------|
| Benchmark Decile 1 | \$1330.65-\$1126.35 | 99 th | 1.0–1.9 |
| Benchmark Decile 2 | \$1126.34-\$1062.93 | 90 th | 2.0–2.9 |
| Benchmark Decile 3 | \$1062.92-\$1025.75 | 80 th | 3.0–3.9 |
| Benchmark Decile 4 | \$1025.74-\$997.78 | 70 th | 4.0–4.9 |
| Benchmark Decile 5 | \$997.77-\$969.73 | 60 th | 5.0–5.9 |
| Benchmark Decile 6 | \$969.72-\$940.03 | 50 th | 6.0–6.9 |
| Benchmark Decile 7 | \$940.02-\$904.83 | 40 th | 7.0–7.9 |
| Benchmark Decile 8 | \$904.82-\$860.44 | 30 th | 8.0–8.9 |
| Benchmark Decile 9 | \$860.43-\$779.69 | 20 th | 9.0–9.9 |
| Benchmark Decile 10 | \$779.68 and lower | 10 th | 10 |

In the CY 2021 PFS final rule (85 FR 84877 through 84880), we finalized at § 414.1350(d)(4) the weight of the cost performance category to be 20 percent of the MIPS final score for the 2023 MIPS payment year and at § 414.1350(d)(5) the weight of the cost performance category to be 30 percent of the MIPS final score for the 2024 MIPS payment year and each subsequent MIPS payment year. We noted that such an approach would allow us to reach the statutorily required weight of 30 percent by the 2024 MIPS payment year (see section 1848(q)(5)(E)(i)(II) of the Act) while reducing the impact of experiencing an increase in the weight of the cost performance category too much in any one year and providing clinicians with an eased gradual and incremental transition starting with the 2023 MIPS payment year.

Since, MIPS eligible clinicians have raised concerns about cost performance category scoring having a negative impact on their final MIPS score. Multiple factors have likely contributed to clinician concerns.

First, there has been an increase in weight for the cost performance category over time. Particularly, due to the COVID–19 Public Health Emergency (PHE) which ended on May 11, 2023, we reweighted the cost performance category's score to zero percent of the final score for many MIPS eligible clinicians. Specifically, we announced on April 6, 2020 that, due to the COVID–19 PHE, we would apply our extreme and uncontrollable circumstances reweighting policies

described under § 414.1380(c)(2)(i) to MIPS eligible clinicians nationwide and extend the deadline to submit an application for reweighting the quality, cost, improvement activities or Promoting Interoperability reporting categories for the CY 2019 performance period/2021 MIPS payment year (85 FR 19277 and 19278). Also, for the CY 2020 performance period/2022 MIPS payment year and the CY 2021 performance period/2023 MIPS payment year, we extensively applied our reweighting policies, described under § 414.1380(c)(2)(i), to MIPS eligible clinicians nationwide due to the COVID–19 PHE.^{777 778} As a result, the CY 2022 performance period/2024 MIPS payment year was the first MIPS payment year that the cost performance category score generally constituted 30 percent of MIPS eligible clinicians' final scores (section 1848(q)(5)(E)(i)(II) of the Act). Second, the number of cost measures has increased over time, and therefore, more MIPS eligible clinicians are being measured on the cost performance category and on new measures.

Additionally, based on our calculation of cost performance category scores for the CY 2022 performance period/2024 MIPS payment year, we observed lower scores for the cost performance category than for the quality performance category, even though they each generally constitute 30 percent of the final score. Recent analyses of CY 2022 performance period/2024 MIPS payment year data have identified the unweighted mean

cost performance category score was 59 out of 100, while the unweighted mean score for the quality performance category was 74 out of 100. We also note that the unweighted mean scores were 95 out of 100 for the improvement activities performance category and 94 out of 100 for the Promoting Interoperability performance category.

There are several factors that may have contributed to a significantly lower score in the cost performance category, compared to the other categories. First, measures in the cost performance category are scored against a benchmark determined based on average performance of all MIPS eligible clinicians during that same performance period (§ 414.1380(b)(2) introductory text and (b)(2)(i)) rather than a benchmark determined based on historical data, which is used, wherever possible, for non-administrative claims-based quality measures in the quality performance category. Benchmarks determined based on historical data for the quality performance category provide MIPS eligible clinicians with helpful performance targets in advance of or during the performance period. Meanwhile, the performance period benchmarks for the cost performance category do not provide MIPS eligible clinicians with information about performance targets before or during the performance period. We believe that using benchmarks based in the performance period is a better approach for the cost performance category than using benchmarks based on historical data because different payment policies

⁷⁷⁶ <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2378/2023%20MIPS%20Cost%20User%20Guide.pdf>.

⁷⁷⁷ <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/816/2020%20Cost%20Quick%20Start%20Guide.pdf>.

⁷⁷⁸ <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1298/2021%20MIPS%20Cost%20Quick%20Start%20Guide.pdf>.

may apply during the historical period than during the performance period, which may affect the cost of care for patients treated by MIPS eligible clinicians.

Second, in traditional MIPS (compared to MVP reporting), MIPS eligible clinicians are scored on each cost measure for which they meet the established case minimum and a benchmark can be calculated. In the quality performance category, if a clinician reports more than the required number of quality measures, we use the highest scored outcome measure and then the next highest scored measures to reach a total of 6 scored quality measures to calculate the clinician's MIPS quality performance category score. The current cost benchmark methodology uses a decile range based on linear percentile distributions and assigns 5.0 to 6.9 achievement points to clinicians with cost measure scores within the 50th to 60th percentiles (Table 68).

For the example cost measure presented in Table 68, the cost measure median, the 50th percentile, is \$969.72. If a MIPS eligible clinician's average cost per episode for the measure is \$1,104 (about \$135 above the median), the MIPS eligible clinician's cost falls within Benchmark Decile 2, for which the MIPS eligible clinician may receive between 2.0 and 2.9 achievement points. We then use the following formula to determine the number of partial points awarded to the MIPS eligible clinician:

$$\text{Benchmark Decile \#} + \left[\frac{\text{(measure score, expressed as a dollar amount} - \text{bottom of benchmark decile range)} / (\text{top of benchmark decile range} - \text{bottom of benchmark decile range})}{\text{Achievement Points}} \right] = \text{Cost Measure Achievement Points.}^{779}$$

Based on this partial points calculation formula, the clinician would receive 0.3 partial points, resulting in a cost measure score of 2.3 out of 10 achievement points for the Screening/ Surveillance Colonoscopy cost measure under this example.

This score may have the effect of lowering the MIPS eligible clinician's final score, as discussed previously. If the MIPS eligible clinician is only attributed and scored on this single cost measure and does not receive a cost improvement score, then their score for the cost performance category would be based on the cost measure's score of 2.3 out of 10 achievement points. Their score for the cost performance category

would be 0.23 ($2.3/10 = 0.23$), equal to the total number of achievement points earned by the MIPS eligible clinician divided by the total number of available achievement points under § 414.1380(b)(2)(iii)(A). Based on the final score calculation under § 414.1380(c), the contribution of the cost performance category score to the final score for this MIPS eligible clinician would be equal to the cost performance category score multiplied by the cost performance category weight (30 percent if the MIPS eligible clinician has not received any reweighting) and would be 6.9 out of 30 ($0.23 \times 30 = 6.9$), which would be 23 out of 100 points for the cost performance category's contribution to the final score.

To illustrate how this cost performance category score could lower the final score, if this MIPS eligible clinician received perfect scores in each of the other three performance categories, based on the final score calculation under § 414.1380(c) and the respective performance category weights when all four performance categories are scored without reweighting, we would use the formula as described below. For this example, we have not included the complex patient bonus.

$$\text{MIPS Final score} = [(60/60 \times 30 \text{ for quality}) + (2.3/10 \times 30 \text{ for cost}) + (40/40 \times 15 \text{ for improvement activities}) + (100/100 \times 25 \text{ for Promoting Interoperability})] \times 100 = 76.9.$$

In this example, MIPS final score of 76.9 for the MIPS eligible clinician is just above the 2024 MIPS payment year performance threshold of 75. Therefore, under the current cost scoring methodology, a MIPS eligible clinician scoring near the median on a cost measure would need to score perfectly (or nearly perfectly) within the other three performance categories to receive a final score slightly above the performance threshold and to avoid a negative payment adjustment. The unweighted cost performance category score of 23 out of 100 noticeably lowers the MIPS eligible clinician's MIPS final score.

(B) Proposed Modification to Scoring Methodology for the Cost Performance Category Beginning With CY 2024 Performance Period/2026 MIPS Payment Year

In light of the concerns identified with our current cost scoring policies, we are proposing to modify the methodology for scoring the cost performance category beginning with the CY 2024 performance period/2026

MIPS payment year. The proposed cost scoring methodology would be based on standard deviation, median, and an achievement point value that is derived from the performance threshold. Specifically, for a MIPS eligible clinician whose average costs attributed under a cost measure would be equal to the median cost for all MIPS eligible clinicians attributed that measure, we would assign an achievement point value equal to 10 percent of the performance threshold. For example, for the CY 2024 performance period/2026 MIPS payment year, the median would have an achievement point value of 7.5, based on a performance threshold of 75 as finalized at § 414.1405(b)(9)(iii). For each cost measure, the cut-offs for benchmark ranges would be calculated based on standard deviations, expressed in dollars, from the median.

The benchmark ranges, the median, and the performance threshold-derived achievement point values aligned with the median would be dynamic and responsive to changes in average costs per episode or per beneficiary assessed by cost measures and performance thresholds for each CY performance period/MIPS payment year. The performance threshold-derived point values could change based on the performance threshold established for each performance period/MIPS payment year. The standard deviations from the median used to determine cutoffs for benchmark ranges for each year would be reviewed for any necessary updates annually based on performance across MIPS eligible clinicians within the cost performance category and the performance threshold established for the performance period/MIPS payment year. We would perform analyses when the performance threshold changes to set the benchmark ranges. To determine the benchmark ranges, we would adhere to the following principles: (1) center the majority of average costs per episode or per beneficiary around the performance threshold-derived point value; (2) determine benchmark ranges according to the statistical distribution curve of the average cost per episode or per beneficiary; and (3) distribution of achievement points for cost measures should be reflective of overall program performance. We refer readers to Table 69 for an example of how the proposed cost scoring methodology could be implemented for a specific cost measure when the performance threshold is set to 75.

⁷⁷⁹ <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2378/2023%20MIPS%20Cost%20User%20Guide.pdf>.

TABLE 69: Example of Implementation of the Proposed Cost Scoring Methodology for Assignment of Achievement Points for Performance on the Screening/Surveillance Colonoscopy cost measure

| Benchmark Range | Points | Proposed Methodology for Bottom of Benchmark Range (\$) | Example Benchmark Ranges |
|--------------------|---------|---|--------------------------|
| Benchmark Range 1 | 1 - 1.9 | Median cost + (2.75 x standard deviation) | \$1341.93 - \$1308.10 |
| Benchmark Range 2 | 2 - 2.9 | Median cost + (2.5 x standard deviation) | \$1308.09 - \$1,274.26 |
| Benchmark Range 3 | 3 - 3.9 | Median cost + (2.25 x standard deviation) | \$1274.25 - \$1240.43 |
| Benchmark Range 4 | 4 - 4.9 | Median cost + (2 x standard deviation) | \$1240.42 - \$1172.75 |
| Benchmark Range 5 | 5 - 5.9 | Median cost + (1.5 x standard deviation) | \$1172.74 - \$1105.08 |
| Benchmark Range 6 | 6 - 6.9 | Median cost + (1 standard deviation) | \$1105.07 - \$1037.40 |
| Benchmark Range 7 | 7 - 7.9 | Median cost + (0.5 x standard deviation) | \$1037.39 - \$902.05 |
| Benchmark Range 8 | 8 - 8.9 | Median cost - (0.5 x standard deviation) | \$902.04 - \$834.38 |
| Benchmark Range 9 | 9 - 9.9 | Median cost - (1 x standard deviation) | \$834.37 - \$766.70 |
| Benchmark Range 10 | 10 | Median cost - (1.5 x standard deviation) | \$766.69 and below |

Continuing with the example of the Screening/Surveillance Colonoscopy cost measure, now presented in Table 69 as an example of implementation of the proposed cost scoring methodology, the median (50th percentile) cost would remain \$969.72. Under the proposed cost scoring methodology, for the CY 2024 performance period/2026 MIPS payment year, a MIPS eligible clinician with a cost per episode equal to the median cost of all cases attributed to all MIPS eligible clinicians would receive 7.5 achievement points out of 10 possible achievement points.

Using the same example as previously presented in section IV.A.4.f.(1)(d)(ii)(A) of this proposed rule, we would apply the proposed cost scoring benchmark methodology as shown in Table 69 to a MIPS eligible clinician with an average cost per episode for this measure that is \$1,104 (about \$135 above the median). Based on the analysis of data in this example, the standard deviation for the Screening/Surveillance Colonoscopy cost measure would be \$135.35. This value for the standard deviation would then be used to calculate the benchmark ranges in Table 69 by plugging in this value for the standard deviation for each benchmark range. For example, “Median cost + (1 × \$135.35)” would be calculated for “Median cost + (1 standard deviation)” for the bottom of Benchmark range 6. As shown with the example in Table 69, under our proposed cost scoring methodology, the MIPS eligible clinician’s average cost per episode of \$1,104 would fall within Benchmark Range 6 for the Screening/Surveillance Colonoscopy cost measure, for which the MIPS eligible clinician may receive between 6.0 and 6.9 achievement points.

Under our proposal to modify the cost performance category’s scoring

methodology for individual cost measures, we would continue to use our established formula to assign partial achievement points:

$$\text{Benchmark Range \#} + \left[\frac{\text{(measure score, expressed as a dollar amount - bottom of benchmark range)}}{\text{(top of benchmark range - bottom of benchmark range)}} \right] = \text{Cost Measure Achievement Points.}$$

As a result, using the example shown in Table 69, under our proposed cost scoring methodology, the MIPS clinician would receive 6.02 cost measure achievement points (6 + [(\$1,104 - \$1,105.07)/(\$1,037.40 - \$1,105.07)] = 6.02). The assignment of 6.02 achievement points under the proposed cost scoring methodology would be closer to the performance threshold equivalent of 7.5 than the assignment of 2.3 achievement points under the current cost scoring methodology, as discussed in our previous example in section IV.A.4.f.(1)(d)(ii)(A) of this proposed rule.

In this example, the MIPS eligible clinician’s score for the cost performance category would be 0.602 (6.02/10 = 0.602), equal to the total number of achievement points earned by the MIPS eligible clinician divided by the total number of available achievement points under § 414.1380(b)(2)(iii)(A). Based on the final score calculation under § 414.1380(c), the contribution of the cost performance category score to the final score for this MIPS eligible clinician would be equal to the cost performance category score multiplied by the cost performance category weight (30 percent if the MIPS eligible clinician has not received any reweighting) and

would be 18.06 out of 30 (0.602 × 30 = 18.06) or 60.2 out of 100.

If this MIPS eligible clinician received perfect scores in each of the other three performance categories, based on the final score calculation under § 414.1380(c) and the respective performance category weights when all four performance categories are scored without reweighting, we would use the formula as described below. For this example, we have not included the complex patient bonus.

$$\text{MIPS Final score} = \left[\frac{60}{60} \times 30 \text{ for quality} \right] + \left[\frac{6.02}{10} \times 30 \text{ for cost} \right] + \left[\frac{40}{40} \times 15 \text{ for improvement activities} \right] + \left[\frac{100}{100} \times 25 \text{ for Promoting Interoperability} \right] \times 100 = 88.06.$$

This MIPS final score of 88.06 for the MIPS eligible clinician would be well above the 2024 MIPS payment year performance threshold of 75. The cost performance category score of 60.2 out of 100 would not noticeably lower the MIPS eligible clinician’s MIPS final score.

This proposed modification in our scoring methodology for cost measures would align the assignment of achievement points for cost measures so that clinicians with costs near the measure’s 50th percentile (median) would not receive a disproportionately low score. Based on our analyses utilizing data from the CY 2022 performance period/2024 MIPS payment year, this proposed methodology would increase the mean cost performance category score (unweighted) for clinicians with a cost performance category score from 59 out of 100 to 71 out of 100 (an increase of 11.9 points). Further, this proposed cost scoring methodology would increase the means for each cost measure score by amounts ranging from 0.04 to 2.52

points. Our analysis showed that, under our proposed methodology, the mean final score for MIPS eligible clinicians assessed on at least one cost measure and receiving a cost performance category score would increase by 3.89 points. Under our analysis, our proposed scoring methodology would not negatively impact MIPS eligible clinicians whose average costs for a specific cost measure are around the median.

Specifically, our analysis supports our intended goal for the proposed modification to the scoring methodology: MIPS eligible clinicians who deliver care at an average cost near the median costs for all MIPS eligible clinicians attributed the measure would receive scores at, or very close to, the performance threshold-derived score. Additionally, this proposed modification would address MIPS eligible clinicians' concerns that cost measure scoring negatively impacts their final scores more than other performance categories, including disparate negative effects for MIPS eligible clinicians who are scored on the cost performance category compared to clinicians not scored on the cost performance category.

To codify this proposed policy, we propose to modify § 414.1380(b)(2) to specify that achievement points are awarded based on which benchmark range the MIPS eligible clinician's performance on the measure is in. We also propose to specify that CMS assigns partial points based on where the MIPS eligible clinician's performance falls between the top and the bottom of the benchmark ranges. The terms "decile" and "percentile distribution" are currently used in § 414.1380(b)(2) to describe the scoring methodology used to award achievement points and assign partial points. However, under the proposed methodology, the term "decile" no longer accurately describes how the benchmark ranges would be constructed. We believe the more general term "benchmark range" accurately describes both the current and the proposed cost scoring methodology, and therefore propose to modify § 414.1380(b)(2) to use "benchmark range" in lieu of "decile" and "percentile distribution." We are not proposing any modifications to the remainder of the language currently at § 414.1380(b)(2), which provides that, for each cost measure attributed to a MIPS eligible clinician, the clinician receives one to ten achievement points based on the clinician's performance on the measure during the performance period compared to the measure's benchmark.

We are also not proposing any modifications to the language currently at § 414.1380(b)(2)(i), generally governing if and how CMS determines a cost measure's benchmark. However, we are proposing to codify our current cost scoring policy, previously finalized in the CY 2017 QPP final rule (81 FR 77308 through 77311), with modification by adding language at § 414.1380(b)(2)(i)(A). We propose to specify at § 414.1380(b)(2)(i)(A) that, for the 2019 through 2025 MIPS payment years, CMS determines cost measure benchmark ranges based on linear percentile distributions.

We are also proposing to codify our proposed benchmarking methodology at § 414.1380(b)(2)(i)(B). We propose to specify at § 414.1380(b)(2)(i)(B) that, beginning with the 2026 MIPS payment year, for each cost measure, CMS determines 10 benchmark ranges based on the median cost of all MIPS eligible clinicians attributed the measure, plus or minus standard deviations and that CMS awards achievement points based on which benchmark range a MIPS eligible clinician's average cost for a cost measure corresponds. We also propose to codify at § 414.1380(b)(2)(i)(B) that, beginning with the 2026 MIPS payment year, CMS awards achievement points equivalent to 10 percent of the performance threshold for a MIPS eligible clinician whose average cost attributed under a cost measure is equal to the median cost for all MIPS eligible clinicians attributed the measure.

We request public comments on this proposal to modify our scoring methodology for measures specified under the cost performance category.

(iii) Proposed Adoption of Additional Cost Measure Exclusion Policy

(A) Background on Cost Measure Exclusion Policy

We refer readers to § 414.1380(b)(2)(v)(A) and the CY 2022 PFS final rule (86 FR 65507 through 65509) for our previously established policy for excluding a single cost measure from a MIPS eligible clinician's score for the cost performance category. As described at § 414.1380(b)(2)(v)(A), we established that, beginning with the 2024 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes during the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the MIPS eligible clinician's or group's cost performance category score. We also established at

§ 414.1380(b)(2)(v)(A) that "significant changes" are changes external to the care provided, and that CMS determines may lead to misleading or inaccurate results. We specified at § 414.1380(b)(2)(v)(A) that significant changes include, but are not limited to, rapid or unprecedented changes to service utilization, and will be empirically assessed by CMS to determine the extent to which the changes impact the calculation of a cost measure score that reflects clinician performance.

As described in the CY 2022 PFS final rule (86 FR 65507 through 65509), we finalized the policy at § 414.1380(b)(2)(v)(A) to provide scoring flexibility in instances where changes during a performance period impede the effective measurement of cost. We identified that there is a need for additional flexibility in calculating the scores for cost measures to account for the impact of changing conditions that are beyond the control of individual MIPS eligible clinicians and groups. We noted that this flexibility would allow us to ensure that clinicians are not impacted negatively when performance is affected not due to the care provided, but due to external factors. We noted that we would determine whether such external changes impede the effective measurement of cost by considering factors including: The extent and duration of the changes, and the conceptual and empirically tested relationship between the changes and each measure's ability to accurately capture clinician cost performance (86 FR 65508). Empirical testing could include assessing whether there are rapid or unprecedented changes to patient case volume or case mix, and the extent to which this could lead to misleading or inaccurate results (86 FR 65508).

(B) Proposal To Permit Exclusion of a Cost Measure When Impacted by Errors and When Significant Changes Occur Outside of the Performance Period

In the CY 2022 PFS final rule, for the quality performance category, we modified the quality measure exclusion policy at § 414.1380(b)(1)(vii)(A) to change "significant changes" to "significant changes or errors" (86 FR 65492) and to include the omission of codes or inclusion of inactive or inaccurate codes to provide that for each measure submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 414.1325(e), performance is based on data for 9 consecutive months of the applicable CY performance period. Currently, for

the cost performance category, we do not include “errors” in addition to “significant changes” within our cost measure exclusion policy at § 414.1380(b)(2)(v)(A). To provide CMS with greater flexibilities to be responsive to any errors or significant changes outside of the control of MIPS eligible clinicians that negatively impact the ability of specific cost measure(s) to assess clinician performance, we are proposing to add a new cost measure exclusion policy at § 414.1380(b)(2)(v)(B) similar to the quality measure exclusion policy. Additionally, to further align our measure exclusion policies among the performance categories, we propose to include “errors” for the cost performance category. Specifically, we are proposing that, beginning with the 2027 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes or errors affecting the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the MIPS eligible clinician’s or group’s cost performance category score.

For purposes of this cost measure exclusion policy at § 414.1380(b)(2)(v)(B), we are proposing to define “significant changes or errors” as changes or errors external to the care provided, and that CMS determines may lead to misleading or inaccurate results that negatively impact the measure’s ability to reliably assess performance. While we are proposing to include “errors” within this policy for the cost performance category, as the quality performance category already does, the list of what “significant changes or errors” includes would differ by performance category to capture differences in how cost measures and quality measures are calculated and measured. For instance, unlike quality measures for which MIPS eligible clinicians generally must submit data to CMS to be assessed, cost measures are calculated by CMS solely based on the review of administrative claims data and should not be impacted by reporting errors. However, cost measures could be impacted by CMS calculation errors. Further, under our proposed cost measure exclusion policy, errors would be external to the care provided, and such that CMS determines may lead to misleading or inaccurate results that negatively impact the measure’s ability to reliably assess performance. Under our proposed exclusion policy for cost measures, significant changes or errors would

include, but would not be limited to, rapid or unprecedented changes to service utilization, the inadvertent omission of codes or inclusion of codes, or changes to clinical guidelines or measure specifications. Additionally, these would not automatically result in cost measure exclusion. Instead, we would determine whether there is a negative impact from the significant change or error when deciding if a cost measure will be excluded.

Specifically, before applying this cost measure exclusion policy, we are proposing that CMS would empirically assess the affected cost measure to determine the extent to which the changes or errors impact the calculation of a cost measure score such that calculating the cost measure score would lead to misleading or inaccurate results that negatively impact the measure’s ability to reliably assess performance. We believe that it is important to clarify that a change or error would not automatically result in measure exclusion, but instead, that we would need to determine whether there is a negative impact from the change or error that would affect cost measure scoring.

Because significant changes or errors can have an ongoing impact on a measure beyond a single performance period, we are proposing that the new cost measure exclusion policy at § 414.1380(b)(2)(v)(B) allow us to exclude cost measures when such changes and errors occur outside of the performance period, but otherwise affect the performance period. For example, if a cost measure is impacted by a coding change or guidance that requires substantive changes to a measure, we may not be able to modify the measure within one performance period. In such circumstances, we would want to exclude the cost measure for the affected performance periods due to the ongoing impact on the measure. We would ensure that if data used to calculate a score for a cost measure are impacted by significant changes or errors affecting one or more performance periods delivering misleading or inaccurate results, then the affected cost measure could be excluded from the MIPS eligible clinician’s or group’s cost performance category score. We believe that the cost measure should be able to be excluded regardless of when we become aware of the issue, when the significant change came into effect, or when the error first occurred. Therefore, we are proposing language at § 414.1380(b)(2)(v)(B) to address data used to calculate a score for a cost measure being impacted by significant changes and errors affecting

a performance period, even if they do not occur during the performance period.

We are proposing that this cost measure exclusion policy would be effective beginning with the CY 2025 performance period/2027 MIPS payment year so this policy would be in place as soon as feasible after the opportunity for notice-and-comment rulemaking.

This proposal would add language at § 414.1380(b)(2)(v)(B) to specify that, beginning with the 2027 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes or errors affecting the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure would be excluded from the MIPS eligible clinician’s or group’s cost performance category score. We propose to specify that “significant changes or errors” are changes or errors external to the care provided, and that CMS determines may lead to misleading or inaccurate results that negatively impact the measure’s ability to reliably assess performance. We also propose to specify that significant changes or errors would include, but are not limited to, rapid or unprecedented changes to service utilization, the inadvertent omission of codes or inclusion of codes, or changes to clinical guidelines or measure specifications. We propose that CMS would empirically assess the affected cost measure to determine the extent to which the changes or errors impact the calculation of a cost measure score such that calculating the cost measure score would lead to misleading or inaccurate results that negatively impact the measure’s ability to reliably assess performance.

We request public comments on this proposal.

g. MIPS Payment Adjustments

(1) Background

Section 1848(q)(6)(A) of the Act requires that we specify a MIPS payment adjustment factor for each MIPS eligible clinician for a year. This MIPS payment adjustment factor is a percentage determined by comparing the MIPS eligible clinician’s final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. The MIPS payment adjustment factors specified for a year must result in differential payments such that MIPS eligible clinicians with final scores above the performance threshold receive a

positive MIPS payment adjustment factor, those with final scores at the performance threshold receive a neutral MIPS payment adjustment factor, and those with final scores below the performance threshold receive a negative MIPS payment adjustment factor.

For previously established policies regarding our determination and application of MIPS payment adjustment factors to each MIPS eligible clinician, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2021 PFS final rule (85 FR 84917 through 84926), CY 2022 PFS final rule (86 FR 65527 through 65537), CY 2023 PFS final rule (87 FR 70096 through 70102), and CY 2024 PFS final rule (88 FR 79373 through 79380).

(2) Establishing the Performance Threshold

(a) Statutory Authority and Background

As discussed above, to determine a MIPS payment adjustment factor for each MIPS eligible clinician for a year, we must compare the MIPS eligible clinician’s final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. Section 1848(q)(6)(D)(i) of the Act requires that we compute the performance threshold such that it is the

mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. Section 1848(q)(6)(D)(i) of the Act also provides that the Secretary may reassess the selection of the mean or median every 3 years.

Sections 1848(q)(6)(D)(ii) through (iv) of the Act provided special rules, applicable only for certain initial years of MIPS, for our computation and application of the performance threshold for our determination of MIPS payment adjustment factors. These special rules are no longer applicable for establishing the performance threshold for the CY 2025 performance period/2027 MIPS payment year. We refer readers to the CY 2024 PFS proposed rule (88 FR 52596) for further information on these previously applicable requirements as they explain our prior computations of the performance threshold.

In the CY 2022 PFS final rule (86 FR 65527 through 65532), we selected the mean as the methodology for determining the performance threshold for the CY 2022 performance period/2024 MIPS payment year through CY 2024 performance period/2026 MIPS payment year. We also established in our regulation at § 414.1405(g) that, for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold would be the mean of the final scores for all MIPS eligible clinicians from a prior period. As discussed under section IV.A.4.g.(2)(b) of this proposed rule, we are proposing

to continue using the mean as the methodology for determining the performance threshold for the 2027, 2028, and 2029 MIPS payment years.

In the CY 2024 PFS final rule (88 FR 79373 through 79380), we established the performance threshold for the CY 2024 performance period/2026 MIPS payment year by calculating the mean of the final scores for all MIPS eligible clinicians using CY 2017 performance period/2019 MIPS payment year data. As further discussed under section IV.A.4.g.(2)(c), we are proposing to continue using the mean of the final scores for all MIPS eligible clinicians from the CY 2017 performance period/2019 MIPS payment year to establish the performance threshold as 75 points for the CY 2025 performance period/2027 MIPS payment year.

For further information on our current performance threshold policies, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77333 through 77338), CY 2018 Quality Payment Program final rule (82 FR 53787 through 53792), CY 2019 PFS final rule (83 FR 59879 through 59883), CY 2020 PFS final rule (84 FR 63031 through 63037), CY 2021 PFS final rule (85 FR 84919 through 84923), CY 2022 PFS final rule (86 FR 65527 through 65532), CY 2023 PFS final rule (87 FR 70096 through 70100), and CY 2024 PFS final rule (88 FR 79373 through 79380).

We codified the performance thresholds for each of the first 8 years of MIPS at § 414.1405(b)(4) through (9). These performance thresholds are shown in Table 71.

TABLE 71: Performance Thresholds for the CY 2017 Performance Period/2019 MIPS Payment Year through the CY 2024 Performance Period/ 2026 MIPS Payment Years

| MIPS Performance Period | 2017 MIPS Performance Period | 2018 MIPS Performance Period | 2019 MIPS Performance Period | 2020 MIPS Performance Period | 2021 MIPS Performance Period | 2022 MIPS Performance Period | 2023 MIPS Performance Period | 2024 MIPS Performance Period |
|-------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| Year of MIPS | Year 1 | Year 2 | Year 3 | Year 4 | Year 5 | Year 6 | Year 7 | Year 8 |
| Performance Threshold | 3 points | 15 points | 30 points | 45 points | 60 points | 75 points | 75 Points | 75 Points |
| Change from prior year | N/A | 12 points | 15 points | 15 points | 15 points | 15 points | 0 points | 0 points |

(b) Establishing the Performance Threshold Methodology for the 2027, 2028, and 2029 MIPS Payment Years

Section 1848(q)(6)(D)(i) of the Act requires that we compute the

performance threshold such that it is the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the

Secretary. That section also provides that the Secretary may reassess the selection of the mean or median every three years. In accordance with section 1848(q)(6)(D)(i) of the Act, we are

proposing to continue using the mean of the final scores for all MIPS eligible clinicians to compute the performance threshold for the 2027, 2028, and 2029 MIPS payment years.

In the CY 2022 PFS final rule (86 FR 65527 through 65532), we selected the mean (rather than the median) as the methodology for determining the performance threshold for the 2024, 2025, and 2026 MIPS payment years. For the CY 2019 performance period/CY 2021 MIPS payment year through CY 2021 performance period/2023 MIPS payment year, section 1848(q)(6)(D)(iv) of the Act required that we methodically increase the performance threshold each year to “ensure a gradual and incremental transition” to the performance threshold we estimated would be applicable in the CY 2022 performance period/2024 MIPS payment year. Although sections 1848(q)(6)(D)(ii) through (iv) of the Act were no longer applicable for establishing the performance threshold for the CY 2024 performance period/2026 MIPS payment year, these previously applicable statutory requirements explained prior computations of the performance threshold that impacted our policy

considerations for establishing the performance threshold for MIPS going forward. Based on our review of possible values for the CY 2022 performance period/2024 MIPS payment year, we believed that using the mean as our methodology for setting the performance threshold for the CY 2022 performance period/2024 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year would continue the “gradual and incremental transition” that was previously required under section 1848(q)(6)(D)(iv) of the Act, as well as to provide consistency to our stakeholders. Therefore, we finalized the proposal to use the mean as our methodology for setting the performance threshold for that 3-year period. We also codified this methodology in our regulation at § 414.1405(g), providing that, for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold would be the mean of the final scores for all MIPS eligible clinicians from a prior period as specified.

At the time of this proposed rule, we have data available on MIPS eligible clinicians’ final scores from the CY 2017 performance period/2019 MIPS

payment year through CY 2022 performance period/2024 MIPS payment year, as shown in Table 72. These values represent all available computations of mean and median final scores for those performance periods/ MIPS payment years. As discussed previously, we may use either the mean or median of the final scores from a prior period for computing the performance threshold for the next three years, beginning with the CY 2025 performance period/2027 MIPS payment year. At the time of this proposed rule, we do not have available MIPS eligible clinicians’ final scores from performance periods after the CY 2022 performance period/2024 MIPS payment year, which may inform the performance thresholds for the CY 2026 performance period/2028 MIPS payment year and CY 2027 performance period/2029 MIPS payment year. As provided in section 1848(q)(6)(D)(i) of the Act, we must select whether we will use the mean or median of MIPS eligible clinicians’ final scores from a prior period, which we may reassess after three years. We assess these selection options based on the data we currently have available.

TABLE 72: Possible Values for the 2027 MIPS Payment Year Performance Threshold

| MIPS Payment Years | 2019 MIPS Payment Year | 2020 MIPS Payment Year | 2021 MIPS Payment Year | 2022 MIPS Payment Year | 2023 MIPS Payment Year | 2024 MIPS Payment Year |
|--------------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|
| Mean | 74.65 | 87.00 | 85.65 | 89.47 | 89.22 | 82.71 |
| Median | 89.71 | 99.63 | 92.32 | 96.82 | 97.22 | 85.17 |

As shown in Table 72, using the median final score gives a possible range of performance thresholds from 85.17 points to 99.63 points (rounded to 85 points and 100 points, respectively). Given our performance threshold of 75 points for the CY 2024 performance period/2026 MIPS payment year, these values would result in an increase of 10 points to 25 points for the CY 2025 performance period/2027 MIPS payment year, and potentially the CY 2026 performance period/2028 MIPS payment year and CY 2027 performance period/2029 MIPS payment year. Selecting the median of final scores as our methodology would, at a minimum, result in a 13 percent increase in the performance threshold of 75 points, which we had established for the CY 2022 performance period/2024 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year. Further, as shown in

Table 71, 75 points is the highest performance threshold we have established for any MIPS payment year to date.

As shown in Table 72, using the mean final score as the methodology would yield a possible range of performance thresholds from 74.65 points to 89.47 points (rounded to 75 points and 89 points, respectively). Given our performance threshold of 75 points in the CY 2024 performance period/2026 MIPS payment year, these values would result in an increase of zero to 14 points for the CY 2025 performance period/2027 MIPS payment year, and potentially the CY 2026 performance period/2028 MIPS payment year and CY 2027 performance period/2029 MIPS payment year. Selecting the mean of final scores as our methodology would, at a maximum, result in a 19 percent increase in the performance threshold of 75 points, which we had established for

the CY 2022 performance period/2024 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year.

We believe that it is appropriate to incentivize performance improvement while also ensuring that it is reflective of true clinician performance. Moreover, we believe that where possible, it is important to offer stability and consistency for clinicians. After evaluating the possible values for mean and median shown in Table 72 and our prior policies for consistently selecting a performance threshold value of 75 points for the CY 2022 performance period/2024 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year, we believe that using the mean as our methodology for the 2027 through 2029 MIPS payment years would offer the most consistent and predictable approach for MIPS eligible clinicians.

On this basis, we are proposing to continue using the mean of the final scores for all MIPS eligible clinicians from a prior period as specified to compute the performance threshold for each of the 2027 through 2029 MIPS payment years.

We also are proposing to codify this proposal by amending our regulation text at § 414.1405. We propose to amend § 414.1405 by: (1) revising paragraph (g) to read only “Performance Threshold Methodology”; (2) redesignating, with minor technical modification, the substantive provision at paragraph (g) as a new paragraph (g)(1) to reflect the performance threshold methodology we established and used to specify the performance threshold for the 2024, 2025 and 2026 MIPS payment years under § 414.1405(b)(9); and (3) adding paragraph (g)(2) to provide that, for each of the 2027, 2028, and 2029 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under § 414.1405(b)(10).

We request public comments on this proposal.

(c) Establishing the Performance Threshold for the CY 2025 Performance Period/2027 MIPS Payment Year

We believe using the mean of 75 points from the CY 2017 performance period/2019 MIPS payment year continues to be the most appropriate option for establishing the performance threshold for the CY 2025 performance period/2027 MIPS payment year for various reasons described in this section, including: providing consistency for MIPS eligible clinicians while allowing additional time for more recent data to become available, continuing to provide opportunities for MIPS eligible clinicians to gain experience with cost measure scoring (particularly if the methodology proposed in section IV.A.4.f.(1)(d)(ii)(B) of this proposed rule is finalized), and ensuring that we do not inadvertently disadvantage certain clinician types, such as small practices and solo practitioners, as we increase the performance threshold.

As shown in Table 72, we calculated the mean values for the CY 2017 performance period/2019 MIPS payment year through the CY 2022 performance period/2024 MIPS payment year, and we believe that the mean of 75 points from the CY 2017 performance period/CY 2019 MIPS payment year continues to be the most appropriate option that would provide stability for MIPS eligible clinicians while still encouraging high quality of

care. The final scores for the CY 2023 performance period/2025 MIPS payment year were not finalized in time for this proposed rule and, therefore, the mean final score for the CY 2023 performance period/2025 MIPS payment year was not included for consideration as a potential performance threshold value for the CY 2025 performance period/2027 MIPS payment year.

Though we did consider the mean of 87 points from the CY 2018 performance period/2020 MIPS payment year, we believe a substantial increase of 12 points could unfairly impact clinicians as they continue to recover from the COVID–19 public health emergency (PHE), which ended on May 11, 2023. We also considered using the means of the final scores from the CY 2019 performance period/2021 MIPS payment year through the CY 2022 performance period/2024 MIPS payment year for establishing the CY 2025 performance period/2027 MIPS payment year performance threshold. However, we decided they would not be appropriate for measuring future clinician performance given the impact of the COVID–19 PHE on data for MIPS, as described below.

Given issues with underlying data in prior periods due to the COVID–19 pandemic, we believe that we should wait for more recent data that better reflects clinicians’ performance and continue to rely on data from the CY 2017 performance period/2019 MIPS payment year, which predated the COVID–19 PHE. Due to the timing of the COVID–19 PHE and our announcement on March 22, 2020, extending the deadline for MIPS data submission,⁷⁸⁰ we are still evaluating the usability of data from the CY 2019 performance period/2021 MIPS payment year. While data collection occurred during the CY 2019 performance period prior to the start of the COVID–19 PHE, data submission for the CY 2019 performance period (occurring during the first quarter of CY 2020) was impacted. Specifically, in addition to extending the deadline for submitting MIPS data, we announced on April 6, 2020, that, due to the COVID–19 PHE, we would apply our extreme and uncontrollable circumstances reweighting policies described under § 414.1380(c)(2)(i) to MIPS eligible clinicians nationwide and extend the deadline to submit an application for reweighting the quality, cost,

⁷⁸⁰ <https://www.cms.gov/newsroom/press-releases/cms-announces-relief-clinicians-providers-hospitals-and-facilities-participating-quality-reporting>.

improvement activities or Promoting Interoperability reporting categories for the CY 2019 performance period/2021 MIPS payment year (85 FR 19277 and 19278). These flexibilities for the submission of MIPS data occurring in the first quarter of CY 2020 were intended to alleviate reporting burden on clinicians that were responding to the onset of the COVID–19 pandemic. We believe the geographic differences of COVID–19 incidence rates along with different impacts resulting from Federal, state, and local laws and policy changes implemented in response to COVID–19 may have affected which MIPS eligible clinicians were able to submit data for the CY 2019 performance period. This may have led to final scores that were not wholly representative of performance for all MIPS eligible clinicians. Also, for the CY 2020 performance period/2022 MIPS payment year and the CY 2021 performance period/2023 MIPS payment year, we extensively applied our reweighting policies, described under § 414.1380(c)(2)(i), to MIPS eligible clinicians nationwide due to the COVID–19 PHE. We believe these actions, particularly reweighting the performance categories, skewed the final scores from those years such that they are not an appropriate indicator for future performance of MIPS eligible clinicians. Specifically, we are concerned that the final scores during the COVID–19 PHE reflect the performance of only MIPS eligible clinicians that may have been less impacted by the pandemic, and do not accurately represent MIPS eligible clinician performance overall during this period.

As discussed further in section IV.A.4.f.(1)(d)(ii) of this proposed rule, MIPS eligible clinicians have expressed concern that the cost performance category scoring has a negative impact on their MIPS final score. The CY 2022 performance period/2024 MIPS payment year was the first MIPS payment year that the cost performance category score generally constituted 30 percent of MIPS eligible clinicians’ final scores (section 1848(q)(5)(E)(i)(II) of the Act). We have observed lower category scores for the cost performance category as compared to the quality performance category. In light of these concerns, which are supported by our analysis of cost performance category scores as discussed in section IV.A.4.f.(1)(d)(ii) of this proposed rule, we believe that maintaining a performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year would provide stability for MIPS eligible

clinicians as they become acquainted with the cost performance category (particularly if the scoring methodology proposed in section IV.A.4.f.(1)(d)(ii)(B) of this proposed rule is finalized) without unfairly and negatively impacting their final scores and MIPS payment adjustments. We also believe maintaining the performance threshold at 75 points for the 2027 MIPS payment year would provide us time to incorporate the impacts of this proposed cost performance category scoring methodology (if finalized) as we establish future performance thresholds.

As discussed in section IV.A.4.f.(1)(d)(ii) of this proposed rule, we believe multiple factors have likely contributed to MIPS eligible clinicians' concerns, including increases in the weight for the cost performance category over time (see section 1848(q)(5)(E)(i)(II) of the Act), the number of cost measures, and the number of MIPS eligible clinicians that are being attributed new cost measures and receiving a score for the cost performance category. This increase in weight for the cost performance category over time has been particularly notable because, as discussed previously, due to the application of our reweighting policies described under § 414.1380(c)(2)(i) for the COVID-19 PHE, many MIPS eligible clinicians were not scored on the cost performance category for the CY 2019 performance period/2021 MIPS payment year through the CY 2021 performance period/2023 MIPS payment year (85 FR 19277 through 19278).^{781 782} We believe that our proposal to maintain a performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year may help alleviate some of MIPS eligible clinicians' concerns related to the cost performance category and its impact on their MIPS final score.

We are also concerned that any increase in the performance threshold may inadvertently and unfairly disadvantage certain clinician types, specifically small practices and solo practitioners. As we stated in the CY 2024 PFS final rule, we want to consider the impacts of the performance threshold and its related policies on small practices (88 FR 79377). We have received feedback that many small practices and solo practitioners face

challenges in their ability to participate in MIPS, including the costs to implement and maintain certified electronic health record (EHR) technology (CEHRT), staff and training costs, and limited staff capacity to manage the complexity of the program. We have also heard that increases in the performance threshold add administrative and financial burden for small practices that discourage their participation in MIPS. Though we have several policies within MIPS that continue to support small and solo practices, including scoring and reweighting policies, we are interested in understanding how to best support small practices and enhance their ability to successfully participate in MIPS as MIPS continues to evolve. As such, we have performed qualitative analysis through engagement with small practices, third party intermediaries, and other interested parties to gather information about the experience of small practices participating in the program. We are also planning to reach out to small practices and solo practitioners in CY 2024 to gather additional information about barriers for actively engaging with MIPS. On this basis, we believe establishing a performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year would allow us time to gather additional data on the impacts of new policies on small and rural practices, and to develop strategies to reduce barriers for small practices and solo practitioners participating in MIPS.

We refer readers to the Regulatory Impact Analysis in section VII.E.17.d.(4) of this proposed rule for an estimate of the percent of MIPS eligible clinicians that would receive a negative payment adjustment for the CY 2025 performance period/2027 MIPS payment year if the policies proposed in this proposed rule are finalized and the performance threshold is established at 75 points.

As discussed in this section IV.A.4.g.(2)(c), we believe that maintaining a performance threshold of 75 points allows additional time for more data to become available, continues to provide opportunities for clinicians to become familiar with the cost measure scoring, and ensures that we do not inadvertently disadvantage certain clinician types, such as small practices and solo practitioners.

Therefore, we are proposing to establish a performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year based on the mean of MIPS eligible clinicians' final scores from the CY 2017 performance period/2019 MIPS payment year, and to codify

this performance threshold in our regulation by adding paragraphs at § 414.1405(b)(10) introductory text and (b)(10)(i).

We request public comments on this proposal.

(3) Example of Adjustment Factors

Figure 4 provides an illustrative example of how various final scores would be converted to a MIPS payment adjustment factor using the statutory formula and based on our proposed policies for the CY 2025 performance period/2027 MIPS payment year. In Figure 4, the performance threshold is set at 75 points, as we have proposed in section IV.A.4.g.(2)(c) of this proposed rule.

For purposes of determining the maximum and minimum range of potential MIPS payment adjustment factors, section 1848(q)(6)(B) of the Act defines the applicable percentage as 9 percent for the CY 2025 performance period/2027 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment.

However, there are two modifications to this linear sliding scale. First, as specified in section 1848(q)(6)(A)(iv)(II) of the Act, there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 18.75 points based on the proposed performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year). All MIPS eligible clinicians with a final score in this range will receive a negative MIPS payment adjustment factor equal to 9 percent (the applicable percentage). Second, the linear sliding scale for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0, as required by section 1848(q)(6)(F)(i) of the Act.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 will be less than or equal to 9 percent (the applicable percentage). If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 will be greater than 9 percent. Only those MIPS eligible clinicians with a final score equal to 75 points (the performance threshold

⁷⁸¹ <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1198/2020%20MIPS%20Automatic%20EUC%20Fact%20Sheet.pdf>.

⁷⁸² <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1437/2021%20MIPS%20Automatic%20EUC%20Fact%20Sheet.pdf>.

proposed for the CY 2025 performance period/2027 MIPS payment year) will receive a neutral MIPS payment adjustment.

Beginning with the CY 2023 performance period/2025 MIPS

payment year, the additional MIPS payment adjustment for exceptional performance described in section 1848(q)(6)(C) of the Act is no longer available. For this reason, Figure 4 does

not illustrate an additional adjustment factor for MIPS eligible clinicians with final scores at or above the additional performance threshold described in section 1848(q)(6)(D)(ii) of the Act.

FIGURE 4: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold for the CY 2025 performance period/2027 MIPS Payment Year

Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor will be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality (BN) but cannot be higher than 3.0. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

Table 73 illustrates the changes in payment adjustment based on the final policies from the CY 2024 PFS final rule (88 FR 52599 through 56001) for the CY

2024 performance period/2026 MIPS payment year and the proposed policies for the CY 2025 performance period/2027 MIPS payment year, as well as the

applicable percent required by section 1848(q)(6)(B) of the Act.

TABLE 73: Illustration of Point System and Associated Adjustments Comparison between the CY 2024 Performance Period/2026 MIPS Payment Year and the CY 2025 Performance Period/2027 MIPS Payment Year

| 2024 Performance Period Final Score Points | MIPS Adjustment for 2024 Performance Period | 2025 Performance Period Final Score Points | MIPS Adjustment for 2025 Performance Period |
|--|---|--|---|
| 0.0-18.75 | Negative 9% | 0.0-18.75 | Negative 9% |
| 18.76-74.99 | Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale | 18.76-74.99 | Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale |
| 75.00 | 0% adjustment | 75.00 | 0% adjustment |
| 75.01-100 | Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from greater than 0% to 9% for scores from 75.01 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. | 75.01-100 | Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from greater than 0% to 9% for scores from 75.01 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. |

h. Review and Correction of MIPS Final Score—Feedback and Information To Improve Performance

Under section 1848(q)(12)(A)(i) of the Act, we are required to provide MIPS eligible clinicians with timely (such as quarterly) confidential feedback on their performance under the quality and cost performance categories beginning July 1, 2017, and we have discretion to provide such feedback regarding the improvement activities and Promoting Interoperability performance categories. In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized that on an annual basis, beginning July 1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories, and if technically feasible, for the improvement activities and advancing care information (now called the Promoting Interoperability) performance categories.

We made performance feedback available for the CY 2019 performance period/2021 MIPS payment year on August 5, 2020; for the CY 2020 performance period/2022 MIPS payment year on August 2 and September 27, 2021; for the CY 2021 performance period/2023 MIPS payment year on August 22, 2022; and for the CY 2022 performance period/2024 MIPS payment year on August 10, 2023. Although we aim to provide feedback for the CY 2023 performance period/2025 MIPS payment year on or around July 1, 2024, it is possible the release date could be later depending on

circumstances. We direct readers to qpp.cms.gov for more information.

i. Calculating the Final Score

For a description of the statutory basis and our previously finalized policies for calculating the final score for each MIPS eligible clinician, including performance category weights and reweighting the performance categories, we refer readers to § 414.1380(c) and the discussion in the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019, CY 2020, CY 2021, CY 2022 and CY 2023 PFS final rules (81 FR 77319 through 77329, 82 FR 53769 through 53785, 83 FR 59868 through 59878, 84 FR 63020 through 63031, 85 FR 84908 through 84917, 86 FR 65509 through 65527, and 87 FR 70093 through 70096, respectively).

As described in more detail in the following sections, we propose to supplement our current policies for reweighting one or more performance categories (that is, quality, improvement activities, and Promoting Interoperability) to permit reweighting in circumstances where we determine that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third party intermediary, and the third party intermediary did not submit the data for the performance category(ies) on behalf

of the MIPS eligible clinician in accordance with applicable deadlines.

We note that we are only proposing that this reweighting policy be available for the quality, improvement activities, and Promoting Interoperability performance categories because a MIPS eligible clinician may delegate data submission to a third party intermediary only with respect to these three performance categories, and not the cost performance category. MIPS eligible clinicians do not submit data separately for measures for the cost performance category; we score cost measures based solely on Medicare claims data.

(1) Background

Section 1848(q)(5)(A) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to the performance standards for the applicable measures and activities for each performance category applicable to such clinician for a performance period and, using the methodology, provide for a final score (using a scoring scale of 0 to 100) for each MIPS eligible clinician for the performance period.

Additionally, section 1848(q)(5)(E) of the Act specifies how we must weigh the scores for each performance category in our calculation of the MIPS eligible clinician’s final score. We have codified these weights at § 414.1380(c)(1). Meanwhile, section 1848(q)(5)(F) of the Act provides that, if there are not sufficient measures and activities applicable and available to each type of

MIPS eligible clinician involved, the Secretary shall assign different scoring weights (including a weight of 0). We previously finalized at § 414.1380(c) that if a MIPS eligible clinician is scored on fewer than two performance categories, they will receive a final score equal to the performance threshold (81 FR 77326 through 77328 and 82 FR 53778 through 53779).

We also have finalized at § 414.1380(c)(2) several policies addressing on what basis we may reweight one or more performance categories, and how those weights will be redistributed to the remaining performance categories. For example, in the CY 2020 PFS final rule (84 FR 63023 through 63026), we finalized a reweighting policy at § 414.1380(c)(2)(i)(A)(9) and (c)(2)(i)(C)(10) for the four MIPS performance categories. Under this policy, we may reweight one or more of the performance categories for a MIPS eligible clinician if we determine, based on information known to us prior to the beginning of the relevant MIPS payment year, that data for a MIPS eligible clinician for the applicable performance category(ies) are inaccurate, unusable, or otherwise compromised due to circumstances outside of the control of the clinician and its agents. Under this policy, we are able to address circumstances where submitted data are inaccurate, unusable, or otherwise compromised.

However, we have found this policy, and our other reweighting policies at § 414.1380(c)(2), do not address circumstances where data are inaccessible or unable to be submitted due to circumstances outside of the control of the MIPS eligible clinician, particularly where the clinician has delegated submission of the data to a third party intermediary and that third party intermediary does not submit the data in accordance with applicable deadlines. In accordance with our regulations governing third party intermediaries at § 414.1400(a)(3)(iv) and (e)(1), we may take remedial action in the event a third party intermediary fails to meet the criteria necessary for their approval as a third party intermediary, fails to comply with other requirements applicable to third party intermediaries, has submitted a false certification, or discontinues their services and do not assist MIPS eligible clinicians in connecting with a different third party intermediary. However, our regulations do not address the impact of a third party intermediary's action or inaction resulting in failure to submit the MIPS eligible clinician's data as required, over which the MIPS eligible

clinician has little to no control, on a MIPS eligible clinician's final score.

Currently, if we determine that data for a MIPS eligible clinician were not submitted during the MIPS data submission period for reasons outside the clinician's control, we assign the clinician a score of zero for the performance category or categories for which data were not submitted.⁷⁸³ Because an excusable failure to submit data is not currently a basis for reweighting, the lack of data may reduce the MIPS eligible clinician's final score and therefore may reduce the clinician's MIPS payment adjustment. However, we believe that reweighting of the applicable performance categories may be appropriate in these rare cases as described in this section IV.A.4.i. of this proposed rule.

Specifically, we believe that a MIPS eligible clinician should not be penalized in cases where the MIPS eligible clinician enters into an agreement with a third party intermediary to submit data on their behalf, and the data are not submitted due to reasons outside of the control of the MIPS eligible clinician. While we encourage the impacted MIPS eligible clinician to take steps to ensure data submission for subsequent years, by, for example, selecting an alternate third party intermediary, there may be cases where there is insufficient time for the MIPS eligible clinician to submit the data through an alternative mechanism in time for the data to be considered for the relevant performance period. For instance, the MIPS eligible clinician may become aware that their third party intermediary did not submit data on their behalf after the data submission period closes. In these cases, we believe it is appropriate to provide relief to the MIPS eligible clinician so that they are not unfairly penalized for their third party intermediary's inaction.

(2) Proposal To Adopt Reweighting Performance Category(ies) Policy When a Third Party Intermediary Did Not Submit Data Due to Reasons Outside the MIPS Eligible Clinician's Control

We are proposing to adopt a new reweighting policy at § 414.1380(c)(2)(i)(A)(10) and (c)(2)(i)(C)(12) to address this

⁷⁸³ As set forth in § 414.1325(a), data is only required to be submitted for certain measures and activities as specified for certain performance categories. For example, MIPS eligible clinicians are not required to submit data for the cost performance category to receive a score for that category because cost measures are scored based on Medicare claims data. We refer readers to our data submission requirements at § 414.1325 and our proposal to modify these requirements in section IV.A.4.d. of this proposed rule.

circumstance. Specifically, beginning with the CY 2024 performance period/2026 MIPS payment year, we are proposing that we may reweight one or more of the quality, improvement activities, and Promoting Interoperability performance categories where we determine, based on documentation submitted to us through a reweighting request on or before November 1st of the year preceding the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of their data to a third party intermediary, evidenced by a written agreement between the MIPS eligible clinician and the third party intermediary, and the third party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines. We also are proposing that, to determine whether to apply reweighting to the affected performance category(ies), we will consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third party intermediary's submission of the clinician's data for the performance category(ies); whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines. We believe these factors are necessary to ensure we are only granting these requests in circumstances where MIPS eligible clinicians would otherwise be unfairly penalized due to the actions or inactions of a third party intermediary. MIPS eligible clinicians could request reweighting under this proposed policy in circumstances where no data was submitted on their behalf by their third party intermediary through the help desk at QPP@cms.hhs.gov.

Under this proposed policy, MIPS eligible clinicians would be able to request reweighting for each performance category for which their third party intermediary, to which the MIPS eligible clinician delegated submission of their data, did not submit data for reasons outside of the control of the MIPS eligible clinician. We note that we are only proposing that this reweighting policy be available for the quality, improvement activities, and Promoting Interoperability performance categories because a MIPS eligible

clinician may delegate data submission to a third party intermediary only with respect to these three performance categories, and not the cost performance category. MIPS eligible clinicians do not submit data separately for measures for the cost performance category; we score cost measures based solely on Medicare claims data.

Under this proposed reweighting policy, the MIPS eligible clinician must submit reweighting requests beginning with the close of a relevant performance period's data submission period, only after it is confirmed that no data has been submitted in accordance with applicable deadlines. MIPS eligible clinicians would be able to submit reweighting requests on or before November 1st of the year preceding the associated MIPS payment year in order to allow time for CMS to re-calculate their final score and MIPS payment adjustment factor.

We would only approve reweighting requests with evidence of a written agreement between the MIPS eligible clinician and a third party intermediary. Such written agreement must provide that the MIPS eligible clinician delegated submission of their data to the third party intermediary, and that the third party intermediary agreed to submit data on their behalf in accordance with applicable deadlines, for the performance category or performance categories in question.

We would review requests and make determinations to reweight based on our assessment that data were not submitted outside the control of the MIPS eligible clinician. As discussed in this section of this proposed rule, we are proposing that we would determine whether to apply reweighting to the affected performance category(ies) under this policy based on our consideration of the following criteria: whether the MIPS eligible clinician knew or had reason to know of the issue with its third party intermediary's submission of the clinician's data for the performance category(ies); whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines. These criteria would inform whether we would grant reweighting requests under our proposed policy at

§ 414.1380(c)(2)(i)(A)(10) and (c)(2)(i)(C)(12). Circumstances resulting in a clinician's data being inaccessible or unable to be submitted that would merit reweighting could include, but are not limited to, a critical systems failure,

the third party intermediary going out of business, the third party intermediary having collected data on a MIPS eligible clinician's behalf and refusing to hand it over for the MIPS eligible clinician to submit, or other circumstances CMS determines to be outside the control of the MIPS eligible clinician.

This proposed reweighting policy is solely intended to mitigate the potentially adverse financial impact of no data being submitted during the MIPS data submission period for one or more performance categories on behalf of the MIPS eligible clinician due to the failure of a third party intermediary to fulfill its contractual responsibilities. Our determination to grant a reweighting request under this proposed policy does not indicate, and should not be interpreted to suggest, that the third party intermediary could not be held liable for the failure to perform the task as delegated, that is, to submit data on the performance category(ies) on behalf of the MIPS eligible clinician. In these circumstances where we determine that a third party intermediary failed to fulfill its agreement with the MIPS eligible clinician to submit their data, we believe it is appropriate to give the MIPS eligible clinician the opportunity to request reweighting of the affected performance category(ies), provided that all elements of our proposed policy are met.

We propose to apply reweighting only in cases when we receive documentation of a third party intermediary failing to submit data on behalf of a MIPS eligible clinician demonstrating that all elements of our proposed policy are met.

We propose that this policy would be effective beginning with CY 2024 performance period/2026 MIPS payment year. If finalized, this policy change would become effective prospectively, prior to the beginning of the data submission period for the CY 2024 performance period/2026 MIPS payment year, which will occur January 2, 2025, through March 31, 2025. We are proposing this effective date to provide relief to MIPS eligible clinicians, whose circumstances meet all requirements set forth in this proposed reweighting policy, as soon as feasible.

We propose to codify this new reweighting policy, including all proposed elements as described in section IV.A.4.i.(2) of this proposed rule, at § 414.1380(c)(2)(i)(A)(10) for the quality and improvement activities performance categories and at § 414.1380(c)(2)(i)(C)(12) for the Promoting Interoperability performance category.

We request public comments on this proposal.

j. Third Party Intermediaries General Requirements

(1) Requirements for CMS-Approved Survey Vendors

(a) Background

As codified at § 414.1305, a CMS-approved survey vendor means a survey vendor that is approved by CMS for a particular performance period to administer the Consumer Assessment of Healthcare Providers & Systems (CAHPS) for MIPS survey and to transmit survey measures data to CMS.

We refer readers to § 414.1400(d), the CY 2017 Quality Payment Program final rule (81 FR 77386), the CY 2018 Quality Payment Program final rule (82 FR 53818 and 53819), the CY 2019 PFS final rule (83 FR 59907 and 59908), and the CY 2022 PFS final rule (86 FR 65538 and 65539) for previously finalized standards and criteria for CMS-approved survey vendors.

(b) Requirement To Submit Cost of Services

In the CY 2017 Quality Payment Program final rule (81 FR 77386 and 77387), we established that CMS-approved survey vendors may transmit data collected from the CAHPS for MIPS survey to CMS for use in MIPS. Section 414.1400(d)(2) requires that CMS-approved survey vendors submit a survey vendor application to CMS in a form and manner specified by CMS for each MIPS performance period for which it wishes to transmit such data. We implemented this requirement through the Vendor Participation Form, which is available at <https://qpp.cms.gov/resources/resource-library>.

The CY 2017 Quality Payment Program final rule contained requirements applicable to other types of third party intermediaries, which varied based on whether the third party intermediary was a Qualified Clinical Data Registry (QCDR) or qualified registry. For example, we established requirements for QCDRs and qualified registries to "sign a document verifying the QCDR's name, contact information, cost for MIPS eligible clinicians or groups to use the QCDR or qualified registry" (81 FR 77368 and 77369; 81 FR 77385 and 77386). If QCDRs and qualified registries do not provide this information, CMS may exclude them from MIPS in a subsequent year. This requirement helps eligible clinicians determine which vendors to use prior to registration and provides transparency on the cost of program participation. Currently, CMS-approved survey

vendors are not required to provide cost information even though other third party intermediaries (QCDRs and qualified registries) are required to do so.

We are proposing under the current application submission requirement at § 414.1400(d)(2) that beginning with the CY 2026 performance period/2028 MIPS payment year, a survey vendor must include on its application the range of costs of its third party intermediary services. Ranges of cost estimates would vary based on different levels of service (*i.e.*, number of survey respondents, languages provided, etc.). With respect to a third party intermediary that is solely a CMS-approved survey vendor, the publishable costs would be limited to the cost of services related to the CAHPS for MIPS survey. CMS has received inquiries from MIPS participants regarding survey vendor costs but has not been able to provide any specific information in response to those requests. The cost information from survey vendors is not easily available to the MIPS eligible clinicians who are considering contracting for services. Having such information in the publicly-accessible QPP Resource Library (as part of the list of approved vendors) would make it easier for MIPS eligible clinicians to contract for services and educate themselves about the cost of using a third party intermediary survey vendor. In recent years, some participants who registered for the CAHPS for MIPS survey later withdrew their participation once they learned the costs of survey administration. Providing information on the cost of CMS-approved CAHPS for MIPS survey vendor services may support MIPS participants who are interested in the CAHPS for MIPS Survey but want to know what the costs of administering the survey would be, thus allowing them to make more informed decisions about whether to participate in the CAHPS for MIPS survey. This would also increase the consistency in requirements across different types of third party intermediaries.

If this proposal is finalized, the CAHPS for MIPS Survey Vendor Participation Form⁷⁸⁴ and the CAHPS for MIPS Survey Minimum Business Requirements⁷⁸⁵ in the QPP Resource Library would be updated to detail the

⁷⁸⁴ 2024 CAHPS for MIPS Survey Vendor Participation Form, March 25, 2024. <https://qpp.cms.gov/resources/document/6386fe4b-49b9-42c8-9a2b-a1149f7b142a>.

⁷⁸⁵ 2024 CAHPS for MIPS Survey Vendor Minimum Business Requirements, March 11, 2024. <https://qpp.cms.gov/resources/document/02e6e596-51de-4336-a6a6-ab63fc639dbc>.

required survey vendor cost estimate information. The CAHPS for MIPS Survey Vendor Participation Form submitted by vendors seeking CMS approval would be updated to include fields to report the cost information. The vendor-specific cost information would then be published in the list of CAHPS for MIPS Survey Approved Vendors which is also posted in the Resource Library. We refer readers to section V.B.8.c.(5) of this proposed rule for discussion on the burden estimates for this proposal.

We request comment on this proposal.

k. Overview of QP Determinations and the APM Incentive

(1) Overview

The Quality Payment Program provides incentives for eligible clinicians to engage in value-based, patient-centered care under Medicare Part B via MIPS and Advanced APMs. The structure of the Quality Payment Program enables the Department to advance accountability and encourage improvements in care. The Secretary has also adopted the closely related goal that all people with Original Medicare be in an accountable care relationship by 2030, so that their needs can be holistically assessed, and their care is coordinated within a broader total cost of care system. Our vision for increased participation among clinicians in Advanced APMs is driven by the belief that integrating individuals' clinical needs across a spectrum of clinicians and settings will improve patient care and population health.

As we continue to make improvements to the Quality Payment Program, we seek to develop, propose, and implement policies that encourage broad and meaningful clinician participation, including by specialists, in Advanced APMs.

In the CY 2017 Quality Payment Program final rule (81 FR 77450 through 77457), we finalized the payment amount method and patient count method for calculation of Threshold Scores used for QP determinations under the Medicare option and codified these methods at § 414.1435(a) and (b), respectively. The payment amount method is based on payments for Medicare Part B covered professional services, including certain supplemental service payments, while the patient count method is based on numbers of patients. Both methods use the ratio of "Attributed beneficiaries" to "Attribution-eligible beneficiaries", as defined at § 415.1305.

An attributed beneficiary is a beneficiary attributed to the APM Entity

under the terms of the Advanced APM as indicated on the most recent available list of attributed beneficiaries at the time of a QP determination. An attribution-eligible beneficiary is a beneficiary who:

- Is not enrolled in Medicare Advantage or a Medicare cost plan;
- Does not have Medicare as a secondary payer;
- Is enrolled in both Medicare Parts A and B;
- Is at least 18 years of age;
- Is a United States resident; and
- Has a minimum of:

++ One claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period.

++ Or, for an Advanced APM that does not base attribution on E/M services and for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period, the attribution basis determined by CMS based upon the methodology the Advanced APM uses for attribution, which may include a combination of E/M and/or other services.

In this section, we propose to modify the definition of "attribution-eligible beneficiary" to include any beneficiary who has received a covered professional service (section 1833(z)(3)(A) of the Act; 42 CFR 414.1305; section 1848(k)(3)(A) of the Act) furnished by the eligible clinician (NPI) for whom we are making the QP determination. By no longer specifying evaluation and management (E/M) services as the default attribution basis, we also would eliminate the need to develop customized attribution bases for Advanced APMs that do not use E/M services as the basis for attribution. Therefore, our proposal would standardize the attribution methodology for QP determinations by making covered professional services the basis for attribution across all Advanced APMs.

(2) Payment Amount and Patient Count Methods

The payment amount method for calculating threshold scores is based on payments for Medicare Part B covered professional services, including certain supplemental service payments, while the patient count method is based on numbers of patients. Both methods use the ratio of "attributed beneficiaries" to

“attribution-eligible beneficiaries,” as defined at § 415.1305.⁷⁸⁶

Attributed beneficiaries are those who are attributed to the APM Entity (or individual eligible clinician) under the terms of the Advanced APM as indicated on the most recent available list of attributed beneficiaries at the time of a QP determination. Attribution-eligible beneficiaries generally are those who, during the QP Performance Period, meet six criteria (listed below) specified

in the definition of that term at § 414.1305 and described in section IV.A.4.m.(3) of this proposed rule.

When making QP determinations, we begin by calculating Threshold Scores using the payment amount and patient count methodologies. These Threshold Scores are percentages based on the ratio of the payment amounts or patient counts for attributed beneficiaries to the payment amounts or patient counts for attribution-eligible beneficiaries during

the QP performance period. If the Threshold Score (using either the payment amount or patient count method) calculated at the APM Entity or individual eligible clinician level, as applicable, meets or exceeds the relevant QP threshold described at § 414.1430(a), the relevant eligible clinician or clinicians (either the individual eligible clinician or all those on the APM Entity’s Participation List) achieve QP status for such year.

FIGURE 5: QP Determination Calculation

Our regulation at § 414.1435(b)(3) provides that a beneficiary may be counted only once in the numerator and denominator for a single APM Entity group, and at § 414.1435(b)(4) provides that a beneficiary may be counted multiple times in the numerator and denominator for multiple different APM Entity groups. In the CY 2021 PFS final rule (85 FR 84951 through 84952), we amended § 414.1435(c)(1)(i) to specify that beneficiaries who have been prospectively attributed to an APM Entity for a QP Performance Period will be excluded from the attribution-eligible beneficiary count for any other APM Entity that is participating in an APM where that beneficiary would be ineligible to be added to the APM Entity’s attributed beneficiary list. This means that beneficiaries who have been attributed to one APM Entity and are thus barred under the terms of an Advanced APM from attribution to another APM Entity are removed from the denominator of both the payment amount method and patient count method in QP Threshold Score calculations for the APM Entity to which they cannot be attributed. In other words, we do not penalize an APM Entity in the QP Threshold Score calculation by including a beneficiary in its denominator when the terms of an Advanced APM do not permit such beneficiary to be attributed to such APM Entity.

(a) Attributed Beneficiary

An attributed beneficiary is a beneficiary attributed to the APM Entity under the terms of the Advanced APM as indicated on the most recent available list of attributed beneficiaries at the time of a QP determination. There may be beneficiaries on the most recent available list who do not meet the criteria to be attribution-eligible beneficiaries because the QP performance period does not align with the Advanced APM’s performance period or attribution period, or for other reasons. There may also be cases where a beneficiary’s status changes, for example by enrolling in a Medicare Advantage Plan. We exclude these beneficiaries from our Threshold Score calculations because they do not meet criteria to be attribution-eligible beneficiaries. Although APMs may have reconciliation processes in place to address changes in beneficiary status at various intervals, those processes do not necessarily coincide with the timeframe of QP determinations. Therefore, when calculating Threshold Scores for QP determinations, we exclude from the list of attributed beneficiaries any beneficiaries who do not meet the criteria to be attribution-eligible beneficiaries at that point in time.

(b) Attribution-Eligible Beneficiary

Under our regulation at § 414.1305, we define an attribution-eligible beneficiary as a beneficiary who:

- Is not enrolled in Medicare Advantage or a Medicare cost plan;
- Does not have Medicare as a secondary payer;
- Is enrolled in both Medicare Parts A and B;
- Is at least 18 years of age;
- Is a United States resident; and
- Has a minimum of one claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period or, for an Advanced APM that does not base attribution on E/M services and for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period, the attribution basis determined by CMS based upon the methodology the Advanced APM uses for attribution, which may include a combination of E/M and/or other services.

Our stated intent when we finalized the definition of attribution-eligible beneficiary (81 FR 77451 through 77452) was to have a definition that would, for purposes of QP determinations, allow us to be consistent across Advanced APMs in how we consider the population of beneficiaries served by an APM Entity. The criteria we used to define attribution-eligible beneficiary were aligned with the attribution

⁷⁸⁶For technical information on the QP calculation methodology, see the “QP Methodology Fact Sheet” that we publish annually, which can be

found as part of the “2024 Learning Resources for QP Status and APM Incentive Payment” materials

on the Quality Payment Program Resource Library at qpp.cms.com.

methodologies and rules for our then-contemporaneous Advanced APMs. The first five criteria are conditions that are required for a beneficiary to be attributed to any Advanced APM. The sixth criterion identifies beneficiaries who have received certain services from an eligible clinician who is associated with an APM Entity for any period during the QP Performance Period. We chose to refer to E/M services as the primary basis for purposes of attribution-eligibility because many Advanced APMs use E/M claims to attribute beneficiaries to their APM Entity groups. Over time, we have updated the list of services that are considered to be E/M services for purposes of identifying attribution-eligible beneficiaries and have published this list as part of the “2024 Learning Resources for QP Status and APM Incentive Payment” materials on the Quality Payment Program Resource Library at qpp.cms.gov.

We also included an exception in this sixth criterion to allow us to use an alternative approach for Advanced APMs that do not base attribution on E/M services, and thus for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for an E/M service. To date, we have implemented this alternative approach for four Advanced APMs:

- Bundled Payments for Care Improvement Advanced Model.
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track).
- Comprehensive ESRD Care Model (LDO arrangement and Non LDO Two Sided Risk Arrangement).
- Maryland Total Cost of Care Model (Care Redesign Program).

We have published links to the methodologies we use to identify attribution-eligible beneficiaries for these Advanced APMs in the “2024 Learning Resources for QP Status and APM Incentive Payment” materials on the Quality Payment Program Resource Library at qpp.cms.gov.

We adopted the general rule with flexibility to apply alternative methods for this criterion to ensure that, for the Advanced APMs for which attribution is based on services other than E/M services, the attributed beneficiary population is truly a subset of such Advanced APMs’ attribution-eligible beneficiary populations and, ultimately, so that our way of identifying beneficiaries for purposes of Threshold Score calculations for QP determinations would be appropriate for such Advanced APMs. That said, our

thinking when we developed these approaches was shaped by the form and nature of the Advanced APMs that existed at that time. We believed that, by affording sufficient flexibility within the program, we could both foster innovation in Advanced APMs and simplify our execution of the program. However, with our more narrowly defined default approach to beneficiary attribution (relying on claims for E/M services), we have increasingly needed to exercise the flexibility to identify an alternative approach to attribution eligibility for Advanced APMs that fell into the exception, which meant that we identified several individually-tailored ways of performing the attribution methodology for specific Advanced APMs. We anticipate that Advanced APMs will continue to evolve and use novel approaches to value-based care that may emphasize a broad range of covered professional services, and in that event the application of our current regulations may result in increased variability among the ways we define attribution-eligible when making QP determinations, which frustrates our goal of a consistent approach.

Further, we recognize that primary care practitioners generally furnish a higher proportion of E/M services than do specialists for the same beneficiary. The current reliance on E/M services for attribution in our Threshold Score calculations means that primary care practitioners may contribute more significantly to achieving QP status for an APM Entity group. As such, our current policy may have inadvertently encouraged APM Entities to prefer primary care practitioners over specialists in their Participation Lists.

As discussed in the CY 2024 PFS final rule (88 FR 79400 through 79406), we proposed but did not finalize to revise the definition of “attribution-eligible beneficiary” at § 414.1305 to use covered professional services as the basis for attribution for purposes of Threshold Score calculations for all Advanced APMs regardless of the attribution methodology used under the specific Advanced APMs in which the eligible clinician participates. We expressed concern that the current policy to use E/M services as the default basis for attribution, and to use an alternative approach for Advanced APMs that use a different attribution basis, could result in a complex set of unique attribution approaches for various Advanced APMs.

After further consideration and consultation with interested parties, we believe it would be appropriate to create a uniform basis for beneficiary attribution for purposes of Threshold

Score calculations across all Advanced APMs. We are once again proposing to modify the sixth criterion of the definition of “attribution-eligible beneficiary” at § 414.1305 to include any beneficiary who has received a covered professional service furnished by the eligible clinician (NPI) for whom we are making the QP determination, beginning with the 2025 QP performance period. By no longer specifying a claim for E/M services as the default attribution basis in the sixth criterion, we also would eliminate the need to create unique attribution bases that are tied to a specific Advanced APM’s attribution methodology. This would standardize the attribution methodology by basing attribution on covered professional services across all Advanced APMs.

The proposal would address the issue discussed earlier in this section whereby, under our current policy, beneficiary attribution for purposes of QP determinations in the default methodology is contingent upon the beneficiary receiving an E/M service, and as a result, beneficiaries who are actually furnished covered professional services by eligible clinicians on an APM Entity’s Participation List are not attribution-eligible for purposes of the QP determination if none of the services are E/M services. Under our proposal, we would consider all covered professional services for purposes of attribution, and not solely the limited range of E/M services currently used for attribution. As a result, we would be able to include as attributed beneficiaries those who are receiving any services within the entire range of covered professional services through the Advanced APM. We believe this proposal would result in a QP calculation that, by including beneficiaries receiving any covered professional service, more accurately reflects eligible clinicians’ actual participation in Advanced APMs and would be consistent across all Advanced APMs. Further, we believe that the proposal better aligns the QP determination methodology with the universe of services to which the Quality Payment Program (MIPS and APMs) applies, noting that its provisions generally pertain to covered professional services (for example, its financial incentives for both MIPS eligible clinicians and QPs are applied to covered professional services payments).

We note that the proposal would not change the dates of service used for purposes of QP determinations. As such, QP determinations at any given snapshot date (March 31, June 30, and

August 31, respectively) will be made by including all covered professional services furnished during the QP Performance Period for January 1 through the applicable snapshot date.

We believe that this change would more appropriately recognize the Advanced APM participation of the eligible clinicians for whom these determinations are being made. We further believe that this proposal would simplify and streamline QP determinations and address the challenges to Advanced APM participation reportedly faced by specialists who are less likely than primary care practitioners to provide E/M services. Finally, we believe that the proposal would standardize the approach to QP determinations across all Advanced APMs and conform more closely with the scope of services that are subject to the Quality Payment Program. We also acknowledge that, while this proposal would represent significant progress toward rationalizing attribution for the broader range of Advanced APMs, our continued analysis suggests there may be more work to be done in this area. We believe there still may be situations in which the proposed change in attribution policy would limit QP determinations in certain Advanced APMs, particularly in situations where an Advanced APM is focused on a limited set of services. We recognize the need to provide, consistent with statutory requirements, equitable opportunities to achieve QP status for participants in Advanced APMs that have different focus areas, goals, scopes, and design features. Further, in the case of CMS Innovation Center models, we recognize that there will be ongoing evolution and innovation in the model tests that are Advanced APMs, including the development of new approaches to attribution that apply within the models. We will continue to analyze these developments and issues with the goal to provide for an equitable, rational, transparent, and meaningful methodology for QP determinations across the full range of Advanced APMs.

We seek comment on this proposal to revise the sixth criterion of the definition of “attribution-eligible beneficiary” at § 414.1305 to include a beneficiary who has at least one claim for a covered professional service furnished by an eligible clinician who is on the Participation List for the APM Entity (or by the individual eligible clinician, as applicable) at any determination date during the QP Performance Period. We also invite comment more generally on potential approaches we could consider to make

QP determinations in the most equitable, rational, transparent, and meaningful way for eligible clinicians across the broad range of Advanced APMs, including Advanced APMs that are focused on a limited set of services.

(3) QP Thresholds and Partial QP Thresholds

Section 1833(z)(2) of the Act specifies the thresholds for the level of participation in Advanced APMs required for an eligible clinician to become a QP for a year. The Medicare Option, based on Part B payments for covered professional services or counts of patients furnished covered professional services under Part B, has been applicable since payment year 2019 (performance period 2017). The All-Payer Combination Option, through which QP status is calculated using the Medicare Option in addition to an eligible clinician’s participation in Other Payer Advanced APMs, has been applicable since payment year 2021 (performance period 2019). In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77439), we finalized our policy for QP and Partial QP Thresholds for the Medicare Option as codified at § 414.1430(a) and for the All-Payer Combination Option at § 414.1430(b).

Section 304(a)(2) of Division G, Title I, Subtitle C, of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42, March 9, 2024) amended section 1833(z)(2) of the Act by extending for payment years 2025 and 2026 (performance periods 2023 and 2024) the applicable payment amount and patient count thresholds for an eligible clinician to achieve QP status. Specifically, section 304(a)(2) of the CAA, 2024, amended section 1833(z)(2) of the Act to continue the QP payment amount thresholds that applied in payment year 2025 (performance period 2023) to payment year 2026 (performance period 2024). Additionally, section 304(a)(2) of the CAA, 2024, amended section 1833(z)(2) of the Act to require that, for payment year 2026, the Secretary use the same percentage criteria for the QP patient count threshold that applied in payment year 2022. As such, the Medicare Option QP thresholds for payment year 2026 will remain at 50 percent for the payment amount method and 35 percent for the patient count method. Section 304(b) of the CAA, 2024, also amended section 1848(q)(1)(C)(iii) of the Act to extend through payment year 2026 the Partial QP thresholds that were established beginning for payment year 2021 under the Medicare Option. Therefore, the Partial QP thresholds for

payment year 2026 (performance period 2024) will remain at 40 percent for the payment amount method and 25 percent for the patient count method.

Under the All-Payer Combination Option, the QP thresholds for payment year 2026 (performance period 2025) will remain at 50 percent for the payment amount method and 35 percent for the patient count method. The Partial QP thresholds for payment year 2026 (performance period 2024) will continue at 40 percent for the payment amount method and 25 percent for the patient count method. To become a QP through the All-Payer Combination Option, eligible clinicians must first meet certain minimum threshold percentages under the Medicare Option. For payment year 2026 (performance period 2024), the minimum Medicare Option threshold an eligible clinician must meet for the All-Payer Combination Option to become a QP is 25 percent for the payment amount method or 20 percent for the patient count method. For Partial QP status, the minimum Medicare Option threshold an eligible clinician must meet for the All-Payer Combination Option is 20 percent for the payment amount method or 10 percent for the patient count method.

To conform our regulation with the amendments made by the CAA, 2024, we propose to amend § 414.1430 by revising paragraphs (a) and (b) to reflect the statutory QP and Partial QP threshold percentages for both the payment amount and patient count under the Medicare Option and the All-Payer Option with respect to payment year 2026 (performance period 2024).

The proposed revisions to § 414.1430(a) and (b) for the Medicare Option and All-Payer Combination Option QP and Partial QP thresholds are as follows:

- Paragraph (a)(1)(v) to state that for 2026 the amount is 50 percent, and a new paragraph (a)(1)(vi) to state that for 2027 and later, the amount is 75 percent.
- Paragraph (a)(2)(v) to state that for 2026 the amount is 40 percent, and a new paragraph (a)(2)(vi) to state that for 2027 and later, the amount is 50 percent.
- Paragraph (a)(3)(v) to state that for 2026 the amount is 35 percent, and a new paragraph (a)(3)(vi) to state that for 2027 and later, the amount is 50 percent.
- Paragraph (a)(4)(v) to state that for 2026 the amount is 25 percent, and a new paragraph (a)(4)(vi) to state that for 2027 and later, the amount is 35 percent.
- Paragraph (b)(1)(i)(A) to state that for 2021 through 2026 the amount is 50 percent, and paragraph (b)(1)(i)(B) to

state that for 2027 and later, the amount is 75 percent.

- Paragraph (b)(2)(i)(A) to state that for 2021 through 2026 the amount is 40 percent and paragraph (b)(2)(i)(B) to state that for 2027 and later, the amount is 50 percent.

- Paragraph (b)(3)(i)(A) to state that for 2021 through 2026 the amount is 35 percent, and paragraph (b)(3)(i)(B) to state that for 2027 and later, the amount is 50 percent.
- Paragraph (b)(4)(i)(A) to state that for 2021 through 2026 the amount is 25

percent, and paragraph (b)(4)(i)(B) to state that for 2027 and later, the amount is 35 percent.

TABLE 74: QP Threshold Score Updates

| Medicare Option - Payment Amount Method | | | | | | | | | |
|--|---------------------|------------------|---------------------|------------------|---------------------|------------------|-------------------------------|------------------|--|
| QP Performance Period / Payment Year | 2022/2024 (Percent) | | 2023/2025 (Percent) | | 2024/2026 (Percent) | | 2025/2027 and later (Percent) | | |
| QP Payment Amount Threshold | 50 | | 50 | | 50 | | 75 | | |
| Partial QP Payment Amount Threshold | 40 | | 40 | | 40 | | 50 | | |
| Medicare Option - Patient Count Method | | | | | | | | | |
| QP Performance Period / Payment Year | 2022/2024 (Percent) | | 2023/2025 (Percent) | | 2024/2026 (Percent) | | 2025/2027 and later (Percent) | | |
| QP Patient Count Threshold | 35 | | 35 | | 35 | | 50 | | |
| Partial QP Patient Count Threshold | 25 | | 25 | | 25 | | 35 | | |
| All-Payer Combination Option - Payment Amount Method | | | | | | | | | |
| QP Performance Period / Payment Year | 2022/2024 (Percent) | | 2023/2025 (Percent) | | 2024/2026 (Percent) | | 2025/2027 and later (Percent) | | |
| QP Patient Count Threshold | 50 | 25 | 50 | 25 | 50 | 25 | 75 | 25 | |
| Partial QP Patient Count Threshold | 40 | 20 | 40 | 20 | 40 | 20 | 50 | 20 | |
| | Total | Medicare Minimum | Total | Medicare Minimum | Total | Medicare Minimum | Total | Medicare Minimum | |
| All-Payer Combination Option - Patient Count Method | | | | | | | | | |
| QP Performance Period / Payment Year | 2022/2024 (Percent) | | 2023/2025 (Percent) | | 2024/2026 (Percent) | | 2025/2027 and later (Percent) | | |
| QP Patient Count Threshold | 35 | 20 | 35 | 20 | 35 | 20 | 50 | 20 | |
| Partial QP Patient Count Threshold | 25 | 10 | 25 | 10 | 25 | 10 | 35 | 10 | |
| | Total | Medicare Minimum | Total | Medicare Minimum | Total | Medicare Minimum | Total | Medicare Minimum | |

(4) APM Incentive Payment

Prior to amendments made by section 304(a)(1) of the CAA, 2024, section 1833(z)(1) of the Act provided for APM Incentive Payments for eligible clinicians who are QPs with respect to a year in each payment year from 2019 through 2025. Specifically, for each of the specified payment years, in addition to the amount of payment that would otherwise be made for covered professional services furnished by an

eligible clinician who is determined to be a QP for such year, an additional lump sum APM Incentive Payment equal to 5 percent of the eligible clinician’s estimated aggregate payment amounts for such covered professional services for the preceding year (which we defined as the “base year”) in each payment year from 2019 through 2024, and 3.5 percent of such amounts in payment year 2025. Covered professional services is defined at

§ 414.1305, with reference to the statutory definition at section 1848(k)(3) of the Act, as services for which payment is made under, or based on, the PFS and which are furnished by an eligible clinician (physician; practitioner as defined in section 1842(b)(18)(C) of the Act; PT, OT, or speech-language pathologist; or qualified audiologist as defined under section 1861(l)(4)(B) of the Act). Section 304(a) of the CAA, 2024 amended section 1833(z)(1) of the Act to

provide that eligible clinicians who are QPs with respect to payment year 2026 (performance period 2024) will receive an APM Incentive Payment equal to 1.88 percent of their estimated aggregate payment amounts for Medicare Part B covered professional services in the preceding year. In effect, this statutory change extends the APM Incentive Payment for one additional year, at 1.88 percent.

Accordingly, we propose to incorporate the change made by the CAA, 2024, by amending the regulation text at § 414.1450 to add the payment year 2026 APM Incentive Payment amount of 1.88 percent of covered professional services payments. We propose to amend paragraph (b)(1) to state that the amount of the APM Incentive Payment for payment years 2019 through 2024 is equal to 5 percent, for payment year 2025, 3.5 percent, and for payment year 2026, 1.88 percent of the estimated aggregate payments for covered professional services furnished during the calendar year immediately preceding the payment year.

Beginning with the 2026 payment year, which relates to the 2024 QP Performance Period, section 1848(d)(1)(A) of the Act specifies that there shall be two separate PFS conversion factors, one for items and services furnished by an eligible clinician who is a QP for the year (the qualifying APM conversion factor), and the other for other items and services not furnished by a QP (the nonqualifying APM conversion factor). Each conversion factor will be equal to the conversion factor for the previous year multiplied by the applicable update for the year specified in section 1848(d)(20) of the Act. The update

specified for the qualifying APM conversion factor for CY 2025 is 0.75 percent, while the update for the nonqualifying APM conversion factor is 0.25 percent.

V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a “collection of information” requirement (as defined under 5 CFR 1320.3(c) of the PRA’s implementing regulations) is submitted to the Office of Management and Budget (OMB) for review and approval. To fairly evaluate whether a collection of information should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comment (see section VI. of this proposed rule) on each of the aforementioned issues for the following sections of this document that contain information collection requirements (ICRs). Comments, if received, will be responded to within the subsequent final rule.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics’ (BLS) May 2023 National Occupational Employment and Wage Estimates for all salary estimates (https://bls.gov/oes/2023/may/oes_nat.htm). In this regard, Tables 75 and 76 presents BLS’ mean hourly wage, our estimated cost of fringe benefits and other indirect costs (calculated at 100 percent of salary), and our adjusted hourly wage. There are many sources of variance in the average cost estimates, both because fringe benefits and other indirect costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Therefore, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

We note that the May 2023 BLS data does not include median hourly wage rates for a number of the physician occupation types listed in Table 76; in these cases, the BLS identifies that the median wage rate is equal to or greater than \$115.00/hr or \$239,200 per year. BLS data for prior years, such as the May 2021 and May 2022 data, provide similar notes for median wage rates for occupations that are above a given threshold (\$100.00/hr or \$208,000 per year for the May 2021 BLS data (https://www.bls.gov/oes/2021/may/oes_nat.htm), and \$115.00/hr or \$239,200 per year for the May 2022 BLS data (https://www.bls.gov/oes/2022/may/oes_nat.htm)). Therefore, for consistency with previous years for estimating physician wage rates, we have continued to use mean hourly wage rates across our wage estimates.

TABLE 75: National Occupational Employment and Wage Estimates (Excluding Physicians)

| Occupation Title | Occupation Code | Mean Hourly Wage (\$/hr) | Fringe Benefits and Other Indirect Costs (\$/hr) | Adjusted Hourly Wage (\$/hr) |
|---|-----------------|--------------------------|--|------------------------------|
| Billing and Posting Clerks | 43-3021 | 22.66 | 22.66 | 45.32 |
| Computer System Analysts | 15-1211 | 53.27 | 53.27 | 106.54 |
| Chief Executives | 11-1011 | 124.47 | 124.47 | 248.94 |
| Lawyers | 23-1011 | 84.84 | 84.84 | 169.68 |
| Licensed Practical and Licensed Vocational Nurses | 29-2061 | 29.23 | 29.23 | 58.46 |
| Medical and Health Services Managers | 11-9111 | 64.64 | 64.64 | 129.28 |
| Pharmacists | 29-1051 | 64.81 | 64.81 | 129.62 |

For our purposes, BLS' May 2023 National Occupational Employment and Wage Estimates does not provide an

occupation that we could use for "Physician" wage data. To estimate a Physician's costs, we are using an

average conglomerate wage of \$291.64/hr as demonstrated below in Table 76.

TABLE 76: National Occupational Employment and Wage Estimates (Physicians)

| Occupation Title | Occupation Code | Mean Hourly Wage (\$/hr) | Fringe Benefits and Other Indirect Costs (\$/hr) | Adjusted Hourly Wage (\$/hr) |
|---------------------------------------|-----------------|--------------------------|--|------------------------------|
| Anesthesiologists | 29-1211 | 163.21 | 163.21 | 326.42 |
| Family Medicine Physicians | 29-1215 | 115.77 | 115.77 | 231.54 |
| General Internal Medicine Physicians | 29-1216 | 118.01 | 118.01 | 236.02 |
| Obstetricians and Gynecologists | 29-1218 | 133.97 | 133.97 | 267.94 |
| Orthopedic Surgeons, Except Pediatric | 29-1242 | 181.85 | 181.85 | 363.7 |
| Pediatric Surgeons | 29-1243 | 216.02 | 216.02 | 432.04 |
| Pediatricians, General | 29-1221 | 98.97 | 98.97 | 197.94 |
| Physicians, All Other | 29-1229 | 119.54 | 119.54 | 239.08 |
| Psychiatrists | 29-1223 | 123.53 | 123.53 | 247.06 |
| Surgeons | 29-1240 | 167.74 | 167.74 | 335.48 |
| Surgeons, All Other | 29-1249 | 165.38 | 165.38 | 330.76 |
| Total | | | | 3,207.98 |
| Average Physician Wage (3,207.98/11) | | | | 291.64 |

B. Proposed Information Collection Requirements (ICRs)

1. ICRs Regarding Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-In of Payment Reductions (§ 414.504)

On November 17, 2023, section 502 of the Further Continuing Appropriations and Other Extensions Act, 2024 (Pub. L. 118–22) (FCAOEA, 2024) was passed and delayed data reporting requirements for CDLTs that are not ADLTs, and it also delayed the phase-in of payment reductions under the CLFS from private payor rate implementation under section 1834A of the Act. As described in section III.D of this proposed rule, under the Clinical Laboratory Fee Schedule, "reporting entities" must report to CMS during a "data reporting period" "applicable information" collected during a "data collection period" for their component "applicable laboratories." We are proposing to revise § 414.504(a)(1) to account for a delay in reporting until January 1, 2025, through March 31, 2025. As stated in section 1834A(h)(2) of the Act, chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, does not apply to information collected under section 1834A of the Act. Consequently,

we are not setting out any proposed burden estimates under this section of this proposed rule. Please refer to section VII.XX. of this proposed rule for a discussion of the impacts associated with the proposed changes described in section III.D. of this proposed rule.

2. ICRs Regarding the Updates to the Medicare Diabetes Prevention Program

In section § 410.79(b), we are proposing to make conforming changes to our regulation Conditions of Coverage to align with the 2024 Centers for Disease Control and Prevention (CDC) Diabetes Prevention Recognition Program (DPRP) Standards.⁷⁸⁷ We are proposing to amend § 410.79(b) to add a new term for MDPP, "in-person with a distance learning component." The proposed "in-person with a distance learning component" code will reduce administrative burden and allow MDPP suppliers to streamline data reporting to CDC because they will only have to maintain one code if they are providing in-person and distance learning

⁷⁸⁷ Centers for Disease Control and Prevention Diabetes Prevention Recognition Program. Standards and Operating Procedures. Requirements for CDC Recognition. June 2024. <https://nationaldppcsc.cdc.gov/s/article/DPRP-Standards-and-Operating-Procedures>.

delivery. To further align with 2024 CDC DPRP Standards, we are also adding the term "combination with an online component" and revising the current "online" definition. We are also clarifying in § 410.79(d)(1) that MDPP make-up sessions can only be furnished using distance learning and in-person delivery modes, in alignment with the Extended flexibilities as defined in the CY 2024 PFS final rule (88 FR 79528). We are also proposing to amend § 410.79(e)(3)(iii)(C) in response to comments that beneficiaries are unable to take a picture while standing on their home scales due to risk of injury and physical health limitations (88 FR 79249). We are proposing revised language to specify that a beneficiary can self-report their weight for an MDPP distance learning session by sending 2 (two) date-stamped photos: one with their weight on the digital scale and one of the beneficiary visible in their home. Additionally, at § 414.84(c), to make it possible for Medicare Administrative Contractors (MACs) to process claims for same day make-up sessions in MDPP, we are proposing that suppliers be required to append an existing claim modifier (Current Procedural Terminology (CPT) Modifier 79) to any claim for G9886 or G9887 to indicate a

make-up session that was held on the same day as a regularly scheduled MDPP session. We are proposing to remove the MDPP bridge payment in § 414.84(a), (d), and (e). This payment is no longer necessary in MDPP's CY 2024 fee for service payment structure and could introduce the potential for fraud, waste, or abuse. Finally, we are proposing to make minor edits throughout §§ 410.79, 424.205, and 414.84 to update outdated references and align with previous rulemaking pertaining to MDPP terminology, payment structure, and requirements. Section 1115A(d)(3) of the Act exempts Innovation Center model tests and expansions, which include the MDPP expanded model, from the provisions of the PRA. Accordingly, this collection of information section does not set out any burden for the provisions, including the collection of weights, per the CY 2024 PFS final rule.

3. ICRs Regarding the Medicare Shared Savings Program

Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out proposed Shared Savings Program burden estimates under this section of the preamble. Please refer to section VII.E.11. of this proposed rule for a discussion of the impacts associated with the changes to the Shared Savings Program as described in section III.G. of this proposed rule.

4. ICRs Regarding Rebate Reduction Requests Submitted Under Sections 11101 and 11102 of the Inflation Reduction Act

The following proposed changes will be submitted to OMB for review under control number 0938-NEW (CMS-10858).

As described in section III.I. of this proposed rule, to receive consideration for an inflation rebate reduction for a specific rebatable drug when the manufacturer believes there is a severe supply chain disruption or likely shortage, we are proposing that a manufacturer must submit a rebate reduction request form along with supporting documentation. We are proposing this because manufacturers hold some of the information and documentation that is needed to determine whether the rebate amount for a Part B or Part D rebatable drug should be reduced due to either a severe supply chain disruption or a likely shortage as required by sections 1847A(i)(3)(G)(ii), 1860D-

14B(b)(1)(C)(ii), and 1860D-14B(b)(1)(C)(iii) of the Act.

In §§ 427.402(c)(4) and 428.302(c)(4), we are proposing the criteria that a Part B or Part D rebatable drug would have to meet for CMS to grant a severe supply chain disruption rebate reduction request. In §§ 427.402(c)(5) and 428.302(c)(5), we propose that if a manufacturer believes a severe supply chain disruption continues into a fifth consecutive calendar quarter for a Part B rebatable biosimilar biological product, or a second applicable period for a generic Part D rebatable drug or biosimilar after the start of the natural disaster or other unique or unexpected event, the manufacturer may request an extension of the rebate reduction one time by submitting a rebate reduction extension request and supporting documentation. In § 428.303(c)(4), we propose the criteria that a generic Part D rebatable drug would have to meet for CMS to grant a rebate reduction request because the generic Part D rebatable drug is likely to be in shortage, including the requirements for a one-time extension of a rebate reduction.

Outside of this proposed rule we have proposed additional submission requirements for rebate reduction requests under OMB control number: 0938-NEW (CMS-10858). At this time, the rebate reduction request forms are currently going through the PRA review and approval process. The 30-day notice appeared in the **Federal Register** on June 3, 2024 (89 FR 47563).

We believe that few manufacturers will submit a rebate reduction request form due to the statutory specifications regarding eligible rebatable drugs, as well as the policy criteria proposed in this proposed rule. Using the wage rates in Table 75 of this proposed rule, we anticipate collecting a total of 10 rebate reduction request forms per year. We estimate a total annual burden of 310 hours (31 hrs per form * 10 forms) and total annual cost of \$37,378 ((160 hrs × \$84.66/hr) + (80 hrs × \$129.62/hr) + (50 hrs × \$169.68/hr) + (20 hrs × \$248.94/hr)).

Using the wage rates in Table 75 of this proposed rule, we also anticipate collecting a total of 10 rebate reduction extension request forms per year, and a total annual burden estimate of 310 hours (31 hr per form * 10 forms) at a cost of \$37,378 ((160 hrs × \$84.66/hr) + (80 hrs × \$129.62/hr) + (50 hrs × \$169.68/hr) + (20 hrs × \$248.94/hr)).

5. ICRs Regarding Medicare Parts A and B Overpayment Provisions of the Affordable Care Act (§ 401.305(b)(1), (2), and (3))

Existing § 401.305(b)(1) specifies when a person who has received an overpayment must report and return an overpayment. We propose to amend this regulation to reference revised § 401.305(b)(2) and new § 401.305(b)(3). We are proposing a technical modification to the introductory language in § 401.305(b)(2) to acknowledge that this paragraph may be applicable after the suspension described in new § 401.305(b)(3) is complete. New proposed § 401.305(b)(3) would identify the circumstances under which the deadline for reporting and returning overpayments would be suspended to allow time for providers to investigate and calculate overpayments.

The proposed amendments for Medicare Parts A and B are associated with OMB control number 0938-1323 (CMS-10405); however, we are not making any revisions to the currently approved requirements and burden under this control number since we cannot predict if there will be any change to the number of overpayments identified or reported based on this rulemaking's proposed changes. We solicit comment on this assumption.

6. The Quality Payment Program (42 CFR Part 414 and Section IV of This Proposed Rule)

The following Quality Payment Program-specific ICRs reflect changes to our currently approved burden to capture proposed policy changes in this CY 2025 proposed rule as well as adjustments to the policies that have been previously finalized in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 Physician Fee Schedule (PFS) final rules (83 FR 59452, 84 FR 62568, 85 FR 84472, 86 FR 64996, 87 FR 70131, and 88 FR 78818, respectively) due to revised assumptions based on updated data available at the time of the publication of this proposed rule.

As described in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 Physician Fee Schedule (PFS) final rules (83 FR 59452, 84 FR 62568, 85 FR 84472, 86 FR 64996, 87 FR 70131, and 88 FR 78818, respectively), we have used an exhaustive approach for describing the burden associated with

the MIPS requirements for the Quality Payment Program. With the maturity and stabilization of the Quality Payment Program, we believe there may be opportunities to present streamlined annual burden estimates to account for changes, including changes due to proposed policies. We are soliciting public comment as part of this proposed rule on our exhaustive approach to presenting burden estimates associated with the Quality Payment Program.

a. Background

(1) ICRs Associated With Merit-Based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs)

In this section of this proposed rule, we discuss a series of ICRs associated with the Quality Payment Program, including for MIPS and Advanced APMs. The following sections describe the changes in the estimated burden for the information collections relevant to the proposed revisions in the policies associated with the CY 2025 PFS proposed rule and proposed revisions to our currently approved information requests for MIPS and Advanced APM ICRs. The proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621). In the CY 2024 PFS final rule (88 FR 79446 and 79447), we provided updated burden estimates for the information collections under the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey PRA package. We have submitted these burden estimates to OMB for approval under control number 0938–1222 (CMS–10450); the 60-day notice appeared in the **Federal Register** on October 17, 2023 (88 FR 71573),

while the 30-day notice appeared on January 16, 2024 (89 FR 2622). The updated information collections for the CAHPS for MIPS Survey discussed in section IV.A.4.j. of this proposed rule will be submitted to OMB for review under control number 0938–1222 (CMS–10450) if the related policy proposal is finalized in the CY 2025 PFS final rule, to be a requirement for CAHPS for MIPS survey vendors beginning with the CY 2026 performance period/2028 MIPS payment year. We note that we have received approval for the collection of information associated with the virtual election process under OMB control number 0938–1343 (CMS–10652).

(a) Summary of Annual Quality Payment Program Burden Estimates

Table 77 summarizes this proposed rule's total burden estimates for the Quality Payment Program for the CY 2025 performance period/2027 MIPS payment year. We provide details of the proposed policies, updated assumptions, and ICRs beginning in section V.B.8. of this proposed rule.

In the CY 2024 PFS final rule (87 FR 70169), the total estimated burden for the CY 2024 performance period/2026 MIPS payment year was 724,212 hours at a cost of \$81,322,556 (see Table 77, row a). Accounting for updated wage rates and the subset of all Quality Payment Program ICRs outlined in this proposed rule compared to the CY 2024 PFS final rule, the total estimated annual burden of continuing policies and information set forth in the CY 2024 PFS final rule into the CY 2025 performance period/2027 MIPS payment year is 727,906 hours at a cost of \$85,867,252 (see Table 77, row b).

These represent an increase of 3,694 hours and an increase of \$4,544,696.

To understand the burden implications of the policies proposed in this rulemaking, we provided an estimate of the total burden associated with continuing the policies and information collections set forth in the CY 2024 PFS final rule into the CY 2025 performance period/2027 MIPS payment year. The estimated burden of 657,110 hours at a cost of \$77,779,594 (see Table 77, row c) reflects the availability of more accurate data to account for all potential respondents and submissions across all the performance categories and represents a decrease of 70,796 hours and \$8,087,658 (see Table 77, row d).

Our total proposed burden estimate for the CY 2025 performance period/2027 MIPS payment year is 649,540 hours and \$76,866,418 (see Table 77, row e), which represents a decrease of 78,366 hours and \$9,000,834 from the CY 2024 PFS final rule estimate with updated wage rates and ICRs (see Table 77, row f). From these estimates, updated data and assumptions not related to policies proposed in this proposed rule would reduce burden by 70,796 hours and \$8,087,658. We estimate that the policies proposed in this proposed rule would further reduce burden by 7,570 hours (– 78,366 hours – – 70,796 hours) and \$913,176 (– \$9,000,834 – – \$8,087,658) (see Table 77, row g) between this estimate and the total burden shown in Table 78 is the decrease in burden associated with impacts of the policies proposed for the CY 2025 performance period/2027 MIPS payment year.

BILLING CODE P

TABLE 77: Summary of Burden Estimates and Requirements from the CY 2025 PFS Proposed Rule

| Burden Estimate Description | Time (Hours) | Cost |
|---|---------------------|---------------------|
| Currently Approved Burden in CY 2024 PFS Final Rule (a) | 724,212 | \$81,322,556 |
| CY 2024 PFS Final Rule w/ Updated Wage Rates and ICRs (b) | 727,906 | \$85,867,252 |
| CY 2024 PFS Final Rule w/ Updated Data and Assumptions (c) | 657,110 | \$77,779,594 |
| Change in Burden Due to Updated Data and Assumptions (d) = (c) – (b) | -70,796 | -\$8,087,658 |
| CY 2025 PFS Proposed Rule Total Burden (e) | 649,540 | \$76,866,418 |
| Total Change in Burden (f) = (e) – (b) | -78,366 | -\$9,000,834 |
| Change in Burden Associated with Policies (g) = (f) – (d) | -7,570 | -\$913,176 |

Table 79 provides the reasons for changes in the estimated burden for the CY 2025 performance period/2027 MIPS payment year for information collections in the Quality Payment

Program segment of this proposed rule. We divided the reasons for our change in burden into those related to proposed policies in the CY 2025 PFS proposed rule and those related to adjustments in

burden continued from the CY 2024 PFS final rule policies that reflect updated data and revised methods.

TABLE 79: Reasons for Proposed Change in Burden Compared to The Currently Approved CY 2024 Information Collection Burden

| ICR Title | Changes in Burden Due to CY 2025 Proposed Rule Policies | Adjustments in Burden Continued from CY 2024 PFS Final Rule Policies Due to Revised Methods or Updated Data |
|---|---|---|
| QCDR Simplified Self-Nomination and other Requirements (See Table 82) | None | Decrease in number of respondents and increase in the number of hours per respondent due to updated data. Net increase in the total number of hours due to updated data. |
| QCDR Full Self-Nomination and other Requirements (See Table 84) | None | Increase in number of respondents and increase in the number of hours per respondent due to updated data. Net increase in the total number of hours due to updated assumptions for the CY 2025 performance period/2027 MIPS payment year. |
| Qualified Registry Simplified Self-Nomination and other Requirements (See Table 86) | None | Decrease in number of respondents due to updated data. |
| Qualified Registry Full Self-Nomination and other Requirements (See Table 88) | None | Increase in number of respondents due to updated data. |
| Third Party Intermediary Plan Audits (see Table 91) | None | Decrease in number of respondents due to updated data. |
| Quality Payment Program Identity Management Application Process (see Table 96) | None | Decrease in number of respondents due to updated data. |
| Quality Performance Category: Medicare Part B Claims Collection Type (see Table 98) | Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the claims collection type due to the proposed addition of 6 new MVPs. | Decrease in the number of respondents due to updated data. |

| ICR Title | Changes in Burden Due to CY 2025 Proposed Rule Policies | Adjustments in Burden Continued from CY 2024 PFS Final Rule Policies Due to Revised Methods or Updated Data |
|---|--|---|
| Quality Performance Category: QCDR/MIPS CQM Collection Type (see Table 100) | Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the QCDR and MIPS CQM collection type due to proposed addition of new MVPs. | Increase in the number of respondents due to updated data. |
| Quality Performance Category: eCQM Collection Type (see Table 102) | Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the eCQM collection type due to proposed addition of 6 new MVPs. | Decrease in the number of respondents due to updated data. |
| MVP Registration (see Table 104) | Increase in number of respondents due to proposed addition of 6 new MVPs. | Decrease in the number of respondents due to updated data. |
| MVP Quality Submission (see Table 106) | Increase in number of respondents due to proposed addition of 6 new MVPs. | Decrease in the number of respondents due to updated data. |
| Call for Quality Measures (see Table 108) | None | Decrease in number of respondents due to updated data. |
| Reweighting Applications for MIPS Performance Categories (see Table 110) | None | Decrease in number of respondents due to updated data. |
| Data Submission for the Promoting Interoperability Performance Category (see Table 113) | None | Decrease in number of respondents due to updated data. |
| Data Submission for the Improvement Activities Performance Category (see Table 116) | None. | Decrease in number of respondents due to updated data. |
| Partial QP Elections (see Table 118) | None | Decrease in number of respondents due to updated data. |
| Other Payer Advanced APM Determinations: Payer-Initiated Process (see Table 120) | None | Decrease in number of respondents due to updated data. |
| Other Payer Advanced APM Determinations: Eligible Clinician-Initiated Process (see Table 122) | None | Decrease in number of respondents due to updated data. |
| Submission of Data for QP Determinations under the All-Payer Combination Option (see Table 124) | None | Decrease in number of respondents due to updated data. |

BILLING CODE C

(2) Summary of Proposed Changes for the Quality Payment Program: MIPS

We have included the change in the estimated burden for the CY 2025 performance period/2027 MIPS

payment year due to the proposed policies and information collections in this proposed rule. The proposed policies in this proposed rule impact the burden estimates for the CY 2025

performance period/2027 MIPS payment year.

The following five MIPS ICRs show changes in burden due to the proposed policies in this proposed rule: (1) Quality performance category data submission by Medicare Part B claims

collection type; (2) Quality performance category data submission by qualified clinical data registry (QCDR) and MIPS clinical quality measure (CQM) collection type; (3) Quality performance category data submission by electronic clinical quality measure (eCQM) collection type; (4) MIPS Value Pathways (MVP) quality performance category submission, and (5) MVP registration. In aggregate, we estimate the proposed policies would result in a net decrease in burden of 7,570 hours and \$913,176 for the CY 2025 performance period/2027 MIPS payment year. The remaining changes to our currently approved burden estimates are proposed adjustments due to the revised burden assumptions based on the updated data available at the time of preparation of this proposed rule.

We are not proposing any changes or adjustments to the following ICRs: Registration for virtual groups; CAHPS survey vendor requirements; CAHPS beneficiary burden; group registration for the CAHPS survey; call for Improvement Activities; Open Authorization (OAuth) credentialing and token request process; nomination of MVPs; subgroup registration; and opt-out of performance data display on Compare Tools for voluntary participants. See section V.B.8.a.(1). of this proposed rule for a summary of the ICRs, the overall burden estimates, and a summary of the assumption and data changes affecting each ICR.

We incorporate submission data from CY 2022 performance period/2024 MIPS payment year to calculate the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories. The accuracy of our estimates of the total burden for data submission for those performance categories may be impacted by several primary factors. First, we are unable to predict with absolute certainty who will be a Qualifying APM Participant (QP) for the CY 2025 performance period/2027 MIPS payment year. Newly eligible clinician participants in Advanced APMs who become QPs will be excluded from MIPS payment adjustments, and as such, are unlikely to report under MIPS; while some current Advanced APM participants may end participation such that the APM Entity's eligible clinicians may not be QPs for a year based on § 414.1425(c)(5), and thus be required to report under MIPS. Second, it is difficult to predict whether Partial QPs, who can elect to report to MIPS, will choose to participate in the CY 2025 performance period/2027 MIPS

payment year compared to the CY 2022 performance period/2024 MIPS payment year. Therefore, the actual number of Advanced APM participants and how they elect to submit data may differ from our estimates. However, we believe our estimates are the most appropriate given the available data. We will continue to revise our estimates as updated data becomes available.

In the CY 2024 PFS final rule, we finalized requirements to align the Shared Savings Program's certified electronic health record technology (CEHRT) requirements with MIPS Promoting Interoperability (88 FR 79124 through 79131), codified at § 425.507(a) and (b). For performance years beginning on or after January 1, 2025, unless otherwise excluded, an Accountable Care Organization (ACO) participant, ACO provider/supplier, and (ACO) professional that is a MIPS eligible clinician, Qualifying APM Participant (QP) and Partial Qualifying APM Participant (Partial QP), regardless of track must report the MIPS Promoting Interoperability measures and requirements to MIPS according to § 414(o) at the individual, group, virtual group, or APM entity level, and earn a MIPS performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level, barring an applicable exclusion defined at § 425.507(b). We refer readers to the CY 2024 PFS final rule (88 FR 79124 through 79131) for details. We note we are not updating burden estimates for the Promoting Interoperability performance category to reflect requirements for ACO participants who are not MIPS eligible clinicians. Section 1899(e) of the Act provides that chapter 35 of title 44 of the U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. In section V.B.8.e.(7). of this proposed rule, we provide our burden estimates for the Promoting Interoperability performance category for MIPS eligible clinicians.

(3) Summary of Quality Payment Program Changes: Advanced APMs

For these ICRs, we are proposing adjustments to the currently approved burden estimates for the CY 2025 performance period/2027 MIPS payment year based on updated submission trends: Partial QP elections; Other Payer Advanced APM determinations: Payer-Initiated and Eligible Clinician-initiated processes; and submission of Data for QP Determinations under the All-Payer Combination Option.

(4) Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 80 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. In Table 80, MIPS eligible clinicians and other clinicians voluntarily submitting data to MIPS may submit data as individuals, groups, or virtual groups for the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section, unless otherwise noted.

Beginning with the CY 2023 performance period/2025 MIPS payment year, clinicians could also participate as subgroups for reporting measures and activities in an MVP. We note that the subgroup reporting option is not available for clinicians participating in traditional MIPS. We finalized in the CY 2022 PFS final rule that for the CY 2023 and 2024 MIPS performance periods/2025 and 2026 MIPS payment years, a subgroup reporting measures and activities in an MVP will submit its affiliated group's data for the Promoting Interoperability performance category and in the scenario that a subgroup does not submit its affiliated group's data, the subgroup will receive a zero score for the Promoting Interoperability performance category (86 FR 65413 and 65414). As discussed in section IV.A.4.b.(1)(4). of this proposed rule, we are proposing to clarify that we intend for the policy to apply beyond the CY 2023 and 2024 performance periods/2025 and 2026 MIPS payment years. We refer readers to section V.B.8.g.(3). of this proposed rule for our burden estimates for the Promoting Interoperability performance category.

Because MIPS eligible clinicians are not required to submit any additional information for assessment under the cost performance category, the administrative claims data used to calculate the scores for the cost performance category is not represented in Table 80.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary

between performance categories and, in some instances, between MIPS APMs. We previously finalized in the CY 2021 PFS final rule that the APM Performance Pathway (APP) is available for clinicians who participate in a MIPS APM for both ACO participants and non-ACO participants to submit quality data (85 FR 84859 through 84866). Due to data limitations and our inability to determine who will use the APP versus the traditional MIPS submission mechanism for the CY 2025 performance period/2027 MIPS payment year, we assume Shared Savings Program ACO APM Entities will submit quality data through the APP as required, and MIPS eligible clinicians in non-Shared Savings Program ACO APM Entities will participate through traditional MIPS or MVPs, submitting as an individual or group rather than as an APM Entity. Per section 1899(e) of the Act, submissions received from eligible clinicians in ACOs are not included in burden estimates for this proposed rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA. Accordingly, this burden is not included in Quality Payment Program burden estimates.

In the CY 2021 PFS final rule (85 FR 84860 and 84861), we adopted the current APP quality measure set. As discussed in section IV.A.4.c.(2). of this proposed rule, we are proposing to create the APP Plus quality measure set that would allow for alignment of the APP with the Adult Universal Foundation measures. Under this proposal, Shared Savings Program ACOs would be required to report the APP Plus quality measure beginning with the CY 2025 performance period/2027 MIPS payment year. We are not proposing to modify the existing APP quality measure set of six quality measures; instead, we are proposing to create the APP Plus measure set that would be optional, with exception to the Shared Savings Program ACOs, beginning in the CY 2025 performance period/2027 MIPS payment year. Under this proposal, each MIPS eligible clinician, group, or APM Entity that elects to report the APP may choose to report either the APP quality measure set or the APP Plus quality measure set. MIPS APM participants may also elect to report via traditional MIPS or MVPs.

We are proposing to adopt five new quality measures for the APP Plus quality measure set incrementally over several performance periods/MIPS payment years, as detailed in Tables 55, 56, and 57 in section IV.A.4.c.(3)(f): two new quality measures beginning with the CY 2025 performance period; one

new quality measure beginning with the CY 2026 performance period, and two new quality measures beginning with the CY 2028 performance period. We refer readers to section IV.A.4.c.(3). of this proposed rule for additional details on the proposed measures and collection types of the APP Plus quality measure set. As noted in section IV.A.4.c.(3). of this proposed rule, we are proposing to establish that all measures in the APP Plus quality measure set must be reported. As detailed in Table 53, the current APP quality measure set consists of six measures: two administrative claims measures, the CAHPS for MIPS survey, and three measures that MIPS eligible clinicians reporting the APP must actively report to CMS via the Medicare CQM (Shared Savings Program ACOs only), eCQM, CQM, or Part B claims collection types. MIPS eligible clinicians, groups, or APM Entities reporting the proposed APP Plus quality measure set would report via the available collection types: eight measures for the CY 2025 performance period/2027 MIPS payment year; nine measures for the CY 2026 and 2027 performance periods/2028 and 2029 MIPS payment years; and eleven measures for the CY 2028 performance period/2030 MIPS payment period.

The quality performance category burden for MIPS eligible clinicians who elect to report the proposed APP Plus quality measure set varies compared to the current APP quality measure set, traditional MIPS, and MVPs. We assume MIPS eligible clinicians incur no burden for reporting the two administrative claims quality measures currently required under the APP quality measure set, as similar to cost measures, we automatically calculate scores from administrative claims reporting. Additionally, burden estimates for the CAHPS for MIPS registration and patient reporting are provided in the CAHPS for MIPS PRA package under OMB control number 0938–1222 (CMS–10450); we do not assume that MIPS eligible clinicians incur additional reporting burden for reporting this measure under the current APP quality measure set. Therefore, we assume that MIPS eligible clinicians reporting the proposed APP Plus quality measure set would incur burden for actively submitting their quality performance category data via the available collection types—eCQM, CQM/QCDR, and Medicare Part B claims. We note, these assumptions for actively submitting to assess clinician reporting burden may differ from MIPS scoring policy. This active submission of quality

performance data would include five of the eight quality measures for the CY 2025 performance period/2027 MIPS payment year, six of the nine quality measures for the CY 2026 and 2027 performance periods/2028 and 2029 MIPS payment years, and eight of the eleven measures for the CY 2028 performance period/2030 MIPS payment year. Continuing this burden comparison for MIPS eligible clinicians reporting the proposed APP Plus quality measure set for the CY 2025 performance period/2027 MIPS payment year, clinicians would need to actively submit quality performance category data for one less quality measure than clinicians participating in traditional MIPS (six measures), two more quality measures than clinicians participating via the APP (three measures), and one more quality measure than clinicians participating via MVPs (four measures). For the CY 2026 and 2027 performance periods/2028 and 2029 MIPS payment years, clinicians reporting the proposed APP Plus quality measure set would need to actively submit quality performance category data for the same number of quality measures as clinicians participating in traditional MIPS (six measures); they would need to report three more quality measures than clinicians participating via the APP (three measures), and two more quality measures than clinicians participating via MVPs (four measures). Beginning in the CY 2028 performance period/2030 MIPS payment year, clinicians reporting the proposed APP Plus quality measure set would need to actively submit quality performance category data for two more quality measures than clinicians reporting via traditional MIPS (six measures), five more quality measures than clinicians participating via the APP (three measures), and four more measures than clinicians participating via MVPs (four measures). For this comparison of MIPS reporting requirements, we assume that clinicians reporting via traditional MIPS and MVPs will report eCQM, CQM, and Part B Claims measures, and will not elect to report the CAHPS for MIPS survey. As proposed in section IV.A.4.c.(2). of this proposed rule, all Shared Savings Program ACOs would be required to report the APP Plus measure set for the CY 2025 performance period/2027 MIPS payment year. Per section 1899(e) of the Act, submissions received from eligible clinicians in ACOs are not included in burden estimates for this proposed rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the

PRA. As the APP Plus is a new measure set, and optional, with exception to the Shared Savings Program ACOs, we are unable to estimate how many MIPS eligible clinicians would submit quality measures via the APP Plus at this time via individual, group, or non-Shared Savings Program ACO Entity reporting. We will update these estimates as additional data are available. We refer readers to section VII.E.17.e.(2)(h). of this proposed rule for additional discussion.

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMs, or eligible clinicians in MIPS APMs may submit data individually. Additionally, APM Entities may report the Promoting

Interoperability performance category at the APM Entity level beginning with the CY 2023 performance period/2025 MIPS payment year (87 FR 70087 and 70088). In the CY 2017 Quality Payment Program final rule (81 FR 30132), we codified at § 414.1380(b)(3)(i) that individual MIPS eligible clinicians participating in APMs (as defined in section 1833(z)(3)(C) of the Act) for a performance period will earn at least 50 percent for the improvement activities performance category. We also stated that MIPS eligible clinicians participating in an APM for a performance period may receive an improvement activity score higher than 50 percent (81 FR 30132). To provide clarity for APM participants not scored

under the APP in the CY 2024 PFS final rule (88 FR 79365 through 79367), we revised § 414.1380(b)(3)(i) to state that a MIPS eligible clinician participating in an APM receives an improvement activities performance category score of at least 50 percent if the MIPS eligible clinician reports a completed improvement activity or submits data for the quality and Promoting Interoperability performance categories.

MIPS eligible clinicians who attain Partial QP status may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 Quality Payment Program final rule (82 FR 53841 through 53844).

BILLING CODE P

TABLE 80: Clinicians or Organizations Submitting MIPS Data on Behalf of Clinicians, by Type of Data and Category of Clinician

| Type of Data Submitted | Category of Clinician |
|--|--|
| Quality Performance Category | Individual clinician (MIPS eligible, voluntary, opt-in), group, virtual group, subgroup, or APM Entity.
Subgroup reporting is only available for clinicians participating in MVP reporting. Voluntary reporting and virtual group reporting are only available for clinicians participating in traditional MIPS.
Opt-in reporting is only available for clinicians participating in traditional MIPS and the APM Performance Pathway. |
| Promoting Interoperability Performance Category | Individual clinician (MIPS eligible, voluntary, opt-in), group, virtual group, subgroup, or APM Entity.
Each eligible clinician in an APM Entity could report data for the Promoting Interoperability performance category at the individual level, or as part of their group TIN, or under their APM Entity TIN. The burden estimates for this proposed rule assume group TIN-level reporting. |
| Improvement Activities Performance Category | Individual clinician (MIPS eligible, voluntary, opt-in), group, virtual group, subgroup, or APM Entity.
For eligible clinicians in an APM Entity, the burden estimates for this proposed rule assume individual or group TIN-level reporting. |
| Reweighting Applications for extreme and uncontrollable circumstances, significant hardship, or other exceptions | Clinicians who submit an application may be eligible for a reweighting of the approved performance category to zero percent under specific circumstances as set forth in § 414.1380(c)(2), including, but not limited to, extreme and uncontrollable circumstances, significant hardship, or another exception. Certain types of MIPS eligible clinicians are automatically eligible reweighting for the Promoting Interoperability performance category to zero percent as described in § 414.1380(c)(2)(i)(C). |
| MVP and Subgroup Registration | An MVP participant, as described at § 414.1305, electing to submit data for the measures and activities in an MVP must register. Clinicians who choose to participate as a subgroup for reporting an MVP must also register. |
| Partial QP Election | Eligible clinicians who attain Partial QP status and choose to participate in MIPS must submit a partial QP election form. |
| Registration for the CAHPS for MIPS Survey | Groups electing to use a CMS-approved survey vendor to administer the CAHPS for MIPS Survey must register. |
| Virtual Group Registration | Virtual groups must register via email. Virtual group participation is limited to MIPS eligible clinicians, specifically, solo practitioners who are MIPS eligible and groups consisting of 10 eligible clinicians or fewer that have at least one MIPS eligible clinician. |
| APM Performance Pathway (APP) | Clinicians in MIPS APMs electing the APP. The burden estimates for this proposed rule assume that Shared Savings ACO APM Entities will submit data through the APP via the APP Plus measure set beginning in CY 2025 performance period/2027 MIPS payment year, and non-Shared Savings Program ACO APM Entities will participate through traditional MIPS, submitting as an individual or group rather than as an APM Entity. |

BILLING CODE C

The policies finalized in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568), the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (83 FR 59452, 84 FR 62568, 85 FR 84472, 86 FR 64996, 87 FR 70131, and 88 FR 78818), and continued in this proposed rule create some additional data collection requirements not listed in Table 80. These additional data collections, some of which are currently

approved by OMB under the control number 0938–1314 (Quality Payment Program/MIPS, CMS–10621) or pending renewal under 0938–1222 (CAHPS for MIPS, CMS–10450), are as follows:

Additional ICRs related to MIPS third party intermediaries (see sections V.B.8.c. and V.B.8.d. of this proposed rule):

- Self-nomination of new QCDRs (81 FR 77507 and 77508, 82 FR 53906 through 53908, and 83 FR 59998 through 60000) (OMB 0938–1314).

- Simplified self-nomination process of returning QCDRs (88 FR 79426 and 79427) (OMB 0938–1314).

- Self-nomination of new qualified registries (81 FR 77507 and 77508, 82 FR 53906 through 53908, and 83 FR 59997 and 59998) (OMB 0938–1314),

- Simplified self-nomination process of returning qualified registries (88 FR 79429) (OMB 0938–1314).

- Third party intermediary plan audits (87 FR 70140 through 70144) (OMB 0938–1314).

- Approval process for new and returning CAHPS for MIPS survey vendors (82 FR 53908) (OMB 0938–1222).

- Open Authorization Credentialing and Token Request Process (OMB 0938–1314) (85 FR 84969 and 84970).

Additional ICRs related to the data submission and the quality performance category (see section V.B.8.e. of this proposed rule):

- CAHPS for MIPS Survey completion by beneficiaries (81 FR 77509, 82 FR 53916 and 53917, and 83 FR 60008 and 60009) (OMB 0938–1222).

- Quality Payment Program Identity Management Application Process (82 FR 53914 and 83 FR 60003 and 60004) (OMB 0938–1314).

Additional ICRs related to the Promoting Interoperability performance category (see section V.B.8.g. of this proposed rule):

- Reweighting Applications for MIPS performance categories (82 FR 53918 and 83 FR 60011 and 60012) (OMB 0938–1314).

Additional ICRs related to call for new MIPS measures and activities (see sections V.B.8.i., V.B.8.f., and V.B.8.j. of this proposed rule):

- Nomination of improvement activities (82 FR 53922 and 83 FR 60017 and 60018) (OMB 0938–1314).

- Call for MIPS quality measures (83 FR 60010 and 60011) (OMB 0938–1314).

- Nomination of MVPs (85 FR 84990 through 84991) (OMB 0938–1314).

Additional ICRs related to MIPS (see section V.B.8.n. of this proposed rule):

- Opt out of performance data display on Compare Tools for voluntary reporters under MIPS (82 FR 53924 and 53925 and 83 FR 60022) (OMB 0938–1314).

Additional ICRs related to APMs (see sections V.B.8.l. and V.B.8.m. of this proposed):

- Partial QP Election (81 FR 77512 and 77513, 82 FR 53922 and 53923, and 83 FR 60018 through 60019) (OMB 0938–1314).

- Other Payer Advanced APM determinations: Payer Initiated Process (82 FR 53923 and 53924 and 83 FR 60019 through 60020) (OMB 0938–1314).

- Other Payer Advanced APM determinations: Eligible Clinician Initiated Process (82 FR 53924 and 83 FR 60020) (OMB 0938–1314).

- Submission of Data for All-Payer QP Determinations (83 FR 60021) (OMB 0938–1314).

b. ICRs Regarding the Virtual Group Election (§ 414.1315)

This rulemaking is not proposing any new or revised collection of information

requirements or burden related to the virtual group election. The virtual group election requirements and burden are currently approved by OMB under control number 0938–1343 (CMS–10652). Consequently, we are not proposing any changes under that control number.

c. ICRs Regarding Third Party Intermediaries (§ 414.1400)

In sections V.B.8.c.(2), V.B.8.c.(3), V.B.8.c.(4), and V.B.8.c.(5), of this proposed rule, we identify proposed adjustments to the estimated burden for ICRs regarding third party intermediaries that will be submitted to OMB for review under control number 0938–1314 (CMS–10621), as summarized in Tables 78 and 79. We note that these proposed adjustments to estimated burden are due to the availability of updated data and related assumptions as identified per ICR, rather than proposed policies or statute changes in section IV.A.4. of this proposed rule.

(1) Background

Under MIPS, the quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third party intermediaries, such as QCDRs and qualified registries. Data on the CAHPS for MIPS Survey, which counts as either one quality performance category measure, or towards an improvement activity, can be submitted via CMS-approved survey vendors. We refer readers to § 414.1400 for details on third party intermediary requirements. Entities seeking approval to submit data on behalf of clinicians as a QCDR, qualified registry, or survey vendor must complete a self-nomination process annually. The processes for self-nomination of entities seeking approval as QCDRs and qualified registries are similar with the exception that QCDRs have the option to nominate QCDR measures for CMS consideration for the reporting of quality performance category data. Therefore, the difference between the QCDR and qualified registry self-nomination is associated with the preparation of QCDR measures for CMS consideration. As established in the CY 2024 PFS final rule (88 FR 79425), we continue to estimate burden separately for the simplified and full self-nominations of QCDRs and qualified registries, to more accurately capture the distinct number of estimated respondents and burden per self-nomination for the different processes. In the CY 2024 PFS final rule (88 FR 79390 and 79391), we eliminated the category of health information

technology (IT) vendors from MIPS third party intermediaries beginning with the CY 2025 performance period/2027 MIPS payment period.

(2) QCDR Self-Nomination Applications

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77507 and 77508, and 82 FR 53906 through 53908, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (83 FR 59998 through 60000, 84 FR 63116 through 63121, 85 FR 84964 through 84969, 86 FR 65569 through 65573, 87 FR 70138 and 70139, and 88 FR 79426 through 79429 respectively) for our previously finalized requirements and estimated burden for self-nomination of QCDRs and nomination of QCDR measures.

We are proposing to adjust burden for QCDR self-nomination applications based on updated assumptions for the number of applications and QCDR measure submissions that we expect to receive during the CY 2024 self-nomination period for the CY 2025 performance period/2027 MIPS payment year. As discussed later in this section, we are proposing to adjust our estimates for: (1) the number of QCDRs that will submit applications under the simplified and full self-nomination processes; (2) the number of QCDR measures (existing or borrowed and new measures) submitted by a QCDR; and (3) the average time required for a QCDR to submit the QCDR measure information.

(a) Simplified Self-Nomination Process and Other Requirements

We estimate that 39 existing QCDRs will submit applications under the simplified self-nomination process for the CY 2025 performance period/2027 MIPS payment year. We derive this estimate from the number of applications received during the CY 2023 QCDR self-nomination period for the CY 2024 performance period/2026 MIPS payment year, while anticipating that: (1) some QCDRs may face remedial action or termination during the CY 2024 performance period/2026 MIPS payment year, and (2) some intermediaries may electively discontinue participating as a QCDR. This estimate is a decrease of 5 respondents from the currently approved estimate of 44 for the QCDR simplified self-nomination process (88 FR 79426 and 79427).

In line with these assumptions and QCDR measure submission trends, we estimate that simplified QCDR applicants will propose 14 QCDR measures, on average, for the CY 2025 performance period/2027 MIPS

payment year, consisting of approximately 3 new QCDR measures and 11 existing or borrowed QCDR measures per QCDR. This is an increase of 1 new QCDR measure and 1 borrowed QCDR measure per QCDR from the currently approved aggregated estimate of 12 QCDR measures in the CY 2024 PFS final rule (88 FR 79426). Due to this change, we propose to adjust the estimated weighted average time required for each QCDR to submit a QCDR measure from 0.75 hours to 0.82 hours [(3 new QCDR measures × 2 hr) + (11 existing or borrowed QCDR measures × 0.5 hr)] ÷ total # of QCDR measures (14)]. We are continuing our currently approved estimated response times to submit a new QCDR measure (2 hr/response) and an existing or borrowed QCDR measure (0.5 hr/

response). We are also continuing our currently approved response time of 0.5 hours required for existing QCDRs that do not submit QCDR measures under the simplified self-nomination process.

For existing QCDRs that submit QCDR measures as part of their self-nomination application, we estimate that it will take 11.98 hours [0.5 hr for the simplified self-nomination process + (14 QCDR measures × 0.82 hr/measure for QCDR measure submission)] for a QCDR to submit an application under the simplified self-nomination process. We note that this proposed change will result in an increase of 2.48 hours (11.98 hr adjusted estimate – 9.5 hr currently approved estimate) for each applicant to complete the simplified QCDR self-nomination process (88 FR 79426 and 79427).

From these assumptions, we estimate the total annual burden associated with a QCDR self-nominating to be considered “qualified” to submit data on behalf of MIPS eligible clinicians. As shown in Table 81, we assume that the staff involved in the simplified QCDR self-nomination process will continue to be computer systems analysts or their equivalent, who have an average adjusted labor rate of \$106.54/hr. We estimate the burden per application will be \$1,276.35 (11.98 hr × \$106.54/hr). In aggregate and inclusive of the 2.48 hr adjustment for the CY 2025 performance period/2027 MIPS payment year, we estimate an annual burden of 467 hours (39 applications × 11.98 hr/application) at a cost of \$49,778 (39 applications × \$1,276.35/application) for the simplified QCDR self-nomination process.

TABLE 81: Adjusted Burden for Simplified QCDR Self-Nomination and QCDR Measure Submission

| Burden and Respondent Descriptions | Burden Estimate |
|--|-----------------|
| # of Simplified QCDR Self-Nomination Applications Submitted (a) | 39 |
| Annual Hours Per QCDR for Simplified Process (b) | 11.98 |
| Total Annual Hours for Self-Nomination (c) = (a) × (b) | 467 |
| Cost per Application at Labor Cost for Computer Systems Analyst at \$106.54/hr (d) = \$106.54/hr × (b) | \$1,276.35 |
| Total Annual Cost (e) = (a) × (d) | \$49,778 |

In Table 82, we illustrate the proposed net change in estimated burden for simplified QCDR self-nomination and QCDR measure submission using the currently approved burden in the CY 2024 PFS

final rule (88 FR 79426 and 79427). In aggregate, using our currently approved estimates for responses and time per response, the proposed decrease in the number of simplified QCDR self-nomination applications and the

increase in the estimated burden hours per simplified QCDR self-nomination will result in a total annual adjustment of +49 hours at a cost of +\$5,244 for the CY 2025 performance period/2027 MIPS payment year.

TABLE 82: Change in Estimated Burden for Simplified QCDR Self-Nomination and QCDR Measure Submission

| Burden and Respondent Descriptions | Burden Estimate |
|---|-----------------|
| Total Currently Approved Annual Time (hr) (a) | 418 |
| Total Annual Time (hr) for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 81, row (c)) | 467 |
| Difference in Annual Hours (c) = (b) – (a) | +49 |
| Total Currently Approved Annual Cost (d) | \$44,534 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 81, row (e)) | \$49,778 |
| Difference in Annual Cost (f) = (e) – (d) | +\$5,244 |

(b) Full QCDR Self-Nomination Process and Other Requirements

We estimate that 17 QCDRs will submit applications under the full self-nomination process for the CY 2025

performance period/2027 MIPS payment year. We derive this estimate from the number of applications received during the CY 2023 QCDR self-nomination period for the CY 2024

performance period/2026 MIPS payment year, while anticipating that: (1) some existing QCDRs may face remedial action and would need to complete the full self-nomination

process for the CY 2025 performance period/2027 MIPS payment year, and (2) several new QCDR self-nominations. This estimate is an increase of 5 respondents (17 revised – 12 active applications) for the QCDR full self-nomination process (88 FR 79427).

As estimated for the QCDR simplified self-nomination process in section V.B.8.c.(2)(a). of this proposed rule, we estimate that QCDR applicants completing the full self-nomination process will propose on average 14 QCDR measures for the CY 2025 performance period/2027 MIPS payment year, consisting of approximately 3 new QCDR measures and 11 existing or borrowed QCDR measures per QCDR. This is an increase of 1 new QCDR measure and 1 borrowed QCDR measure per QCDR from the currently approved aggregated estimate of 12 QCDR measures in the CY 2024 PFS final rule (88 FR 79427). Due to this change, we also propose to adjust the estimated weighted average time required for each QCDR to submit a QCDR measure from 0.75 hours (10

existing QCDR measures \times 0.5 hr + 2 new QCDR measures \times 2 hr) \div 12 total QCDR measures) to 0.82 hours (11 existing QCDR measures \times 0.5 hours + 3 new QCDR measures \times 2 hours) \div 14 total QCDR measures). We are continuing our currently approved time of 2.5 hours required for new QCDRs that do not submit QCDR measures under the full self-nomination process, and our estimated per response times for a QCDR to submit a new QCDR measure (2 hr/response) and an existing or borrowed QCDR measure (0.5 hr/response).

Due to the estimated (– 5 applications = 44 active – 39 new estimate) increase in the average number of existing or borrowed QCDR measures (+1) and new QCDR measures (+1) submitted with the full self-nomination application, we estimate that it will take 13.98 hours [2.5 hr for the full self-nomination process + (14 QCDR measures \times 0.82 hr/measurement for QCDR measure submission)] for a QCDR to submit an application under the full self-nomination process. This proposed

change will result in an overall increase of 2.48 hours (13.98 hr revised – 11.5 hr active) required for the full QCDR self-nomination application (88 FR 79428 and 79429).

From these updated assumptions, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered “qualified” to submit data on behalf of MIPS eligible clinicians. In Table 83, we assume that the staff involved in the full QCDR self-nomination process will continue to be computer systems analysts or their equivalent who have an average adjusted labor rate of \$106.54/hr. We estimate the burden per application will be \$1,489.43 (13.98 hr \times \$106.54/hr). In aggregate, for the CY 2025 performance period/2027 MIPS payment year, we estimate an annual burden of 238 hours (17 applications \times 13.98 hr) at a cost of \$25,320 (17 applications \times \$1,489.43/application) for the full QCDR self-nomination process.

TABLE 83: Estimated Burden for Full QCDR Self-Nomination and QCDR Measure Submission

| Burden and Respondent Descriptions | Burden Estimate |
|---|-----------------|
| # of Full QCDR Self-Nomination Applications Submitted (a) | 17 |
| Annual Hours Per QCDR for Full Process (b) | 13.98 |
| Total Annual Hours for Full Self-nomination (c) = (a) \times (b) | 238 |
| Cost per Application at Labor Cost for Computer Systems Analyst at \$106.54/hr (d) = \$106.54/hr \times (b) | \$1,489.43 |
| Total Annual Cost (e) = (a) \times (d) \times (d) | \$25,320 |

In Table 84, we use the currently approved burden as the baseline for calculating the proposed net change in burden for the full QCDR self-nomination process (88 FR 79427). For

the CY 2025 performance period/2027 MIPS payment year, the proposed adjustment in the number of applicants and time per applicant results in a total annual adjustment of +100 hours at a

cost of +\$10,617 for the CY 2025 performance period/2027 MIPS payment year.

TABLE 84: Change in Estimated Burden for Full QCDR Self-Nomination and QCDR Measure Submission

| Burden and Respondent Descriptions | Burden Estimate |
|---|------------------|
| Total Currently Approved Annual Time (hr) (a) | 138 |
| Total Annual Time (hr) for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 83, row (c)) | 238 |
| Difference in Annual Hours (c) = (b) – (a) | +100 |
| Total Currently Approved Annual Cost (d) | \$14,703 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 83, row (e)) | \$25,320 |
| Difference in Annual Cost (f) = (e) – (d) | +\$10,617 |

(3) Qualified Registry Self-Nomination Process and Other Requirements

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77507 and 77508, and 82 FR 53906 through 53908, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (83 FR 59997 and 59998, 84 FR 63114 through 63116, 85 FR 84968 and 84969, 86 FR 65573 through 65576, 87 FR 70139 and 70140, and 88 FR 79429 and 79430 respectively) for our previously finalized requirements and estimated burden for self-nomination of qualified registries.

In the CY 2024 PFS final rule (88 FR 79390 through 79391), we established the elimination of the health IT vendor category amid MIPS third party intermediary beginning with the CY 2025 performance period/2027 MIPS payment year. We believe that many third party intermediaries serve as both health IT vendors and qualified registries for the purposes of submitting data for MIPS eligible clinicians. As with our burden assumptions in the CY 2024 PFS final rule (88 FR 79425), we are not proposing any adjustments to the number of qualified registries that will submit applications for the

qualified registry self-nomination process during the CY 2025 performance period/2027 MIPS payment year.

We are proposing to adjust burden for qualified registry self-nomination applications based on the number of applications we expect to receive for the CY 2025 performance period/2027 MIPS payment year. We note these proposed changes are not due to proposed policies discussed in section IV.A. of this proposed rule.

(a) Simplified Qualified Registry Self-Nomination Process

For this proposed rule, we estimate that 76 qualified registries will complete the simplified self-nomination process in CY 2025 performance period/2027 MIPS payment year. We derive this estimate from the number of applications received during the CY 2023 qualified registry self-nomination period for the CY 2024 performance period/2026 MIPS payment year, while anticipating that: (1) some qualified registries may face remedial action or termination during the CY 2024 performance period/2026 MIPS payment year, and (2) some intermediaries may electively

discontinue participating as a qualified registry. This estimate is a decrease of eight applications from the currently approved estimate of 84 in the CY 2024 PFS final rule (88 FR 79429). We note that we are continuing the currently approved time of 0.5 hours for the simplified qualified registry self-nomination process.

Based on these assumptions, we estimate the total annual burden associated with a qualified registry self-nominating to be considered “qualified” to submit data on behalf of MIPS eligible clinicians. In Table 85, we assume that the staff involved in the simplified qualified registry self-nomination process will continue to be computer systems analysts or their equivalent, who have an average adjusted labor rate of \$106.54/hr. We estimate the burden per response will be \$53.27 (0.5 hr × \$106.54/hr) for the simplified self-nomination process. In aggregate, we estimate that the annual burden for the simplified qualified registry self-nomination process will be 38 hours (76 applications × 0.5 hr) at a cost of \$4,049 (76 applications × \$53.27/application) for the CY 2025 performance period/2027 MIPS payment year.

TABLE 85: Estimated Burden for Simplified Qualified Registry Self-Nomination

| Burden and Respondent Descriptions | Burden Estimate |
|---|-----------------|
| # of Simplified Self-Nomination Applications Submitted (a) | 76 |
| Annual Hours Per Qualified Registry for Simplified Process (b) | 0.5 |
| Total Annual Hours for Simplified Self-Nomination (c) = (a) × (b) | 38 |
| Cost per Application at Labor Cost for Computer Systems Analyst at \$106.54/hr(d) = \$106.54/hr × (b) | \$53.27 |
| Total Annual Cost (e) = (a) × (d) | \$4,049 |

In Table 86, we illustrate the proposed net change in estimated burden for the simplified qualified registry self-nomination using the currently approved burden in the CY

2024 PFS final rule (88 FR 79429). In aggregate, using our proposed adjustment to the number of applications results in a total annual change of minus 4 hours (42 hr

active – 38 hr revised) and minus \$426 (\$4,475 – \$4,049) for the CY 2025 performance period/2027 MIPS payment year.

TABLE 86: Change in Estimated Burden for Simplified Qualified Registry Self-Nomination

| Burden and Respondent Descriptions | Burden Estimate |
|---|-----------------|
| Total Currently Approved Annual Time (hr) (a) | 42 |
| Total Annual Time (hr) for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 85, row (c)) | 38 |
| Difference in Annual Hours (c) = (b) – (a) | -4 |
| Total Currently Approved Annual Cost (d) | \$4,475 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 85, row (e)) | \$4,049 |
| Difference in Annual Cost (f) = (e) – (d) | -\$426 |

(b) Full Qualified Registry Self-Nomination Process

We estimate that 30 qualified registries will submit applications under the full self-nomination process for the CY 2025 performance period/2027 MIPS payment year. We derive this estimate from the number of applications received during the CY 2023 qualified registry self-nomination period for the CY 2024 performance period/2026 MIPS payment year, while anticipating: (1) that some existing qualified registries may face remedial action during the CY 2025 performance period/2026 MIPS payment year and may need to submit

full self-nomination applications, and (2) several new qualified registry applicants. This is an increase of 3 respondents from the currently approved estimate of 27 in the CY 2024 PFS final rule (88 FR 79430). We note we are continuing our currently approved per response time estimate of 2 hours for the full qualified registry self-nomination process.

Based on the assumptions discussed in this section, we provide an estimate of the total annual burden associated with a qualified registry self-nominating to be considered “qualified” to submit data on MIPS eligible clinicians.

In Table 87, we assume the staff involved in the qualified registry self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$106.54/hr. We estimate the burden per response will be \$213.08 (2 hr × 106.54/hr) for the full qualified registry self-nomination process. In aggregate, for the CY 2025 performance period/2027 MIPS payment year, we estimate that the annual burden for the full qualified registry self-nomination process will be 60 hours (30 applications × 2 hr) at a cost of \$6,392 (30 applications × \$213.08/application).

TABLE 87: Estimated Burden for Full Qualified Registry Self-Nomination

| Burden and Respondent Descriptions | Burden Estimate |
|--|-----------------|
| # of Qualified Registry Full Self-Nomination Applications submitted (a) | 30 |
| Annual Hours Per Qualified Registry for Full Process (b) | 2 |
| Total Annual Hours for Full Self-Nomination (c) = (a) × (b) | 60 |
| Cost per Application at Labor Cost for Computer Systems Analyst at \$106.54/hr (d) = \$106.54/hr × (b) | \$213.08 |
| Total Annual Cost (e) = (a) × (d) | \$6,392 |

In Table 88, we illustrate the proposed net change in estimated burden for the full qualified registry self-nomination process using the currently approved burden in the CY

2024 PFS final rule (88 FR 79429). In aggregate, the proposed adjustments result in a total annual adjustment of +6 hours (+3 applications × 2 hr/response) at a cost of +\$639 (3 applications ×

\$213.08/application) for the full qualified registry self-nomination process for the CY 2025 performance period/2027 MIPS payment year.

TABLE 88: Change in Estimated Burden for Full Qualified Registry Self-Nomination

| Burden and Respondent Descriptions | Burden Estimate |
|---|-----------------|
| Total Currently Approved Annual Time (hr) (a) | 54 |
| Total Annual Time (hr) for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 87, row (c)) | 60 |
| Difference in Annual Hours (c) = (b) – (a) | +6 |
| Total Currently Approved Annual Cost (d) | \$5,753 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 87, row (e)) | \$6,392 |
| Difference in Annual Cost (f) = (e) – (d) | +\$639 |

(4) Third Party Intermediary Plan Audits

The following proposed burden adjustments are due to the availability of updated data and assumptions, rather than proposed policy changes.

(a) Targeted Audits

In the CY 2022 PFS final rule (86 FR 65547 and 65548), we finalized that beginning with the CY 2021 performance period/CY 2023 MIPS payment year, the QCDR or qualified registry must conduct targeted audits in accordance with requirements at § 414.1400(b)(3)(vi). Consistent with our assumptions in the CY 2022 PFS, CY 2023 PFS, and CY 2024 PFS final rules for the QCDRs (86 FR 65574, 87 FR 70141, and 88 FR 79431 and 79432 respectively) and qualified registries (86 FR 65571, 87 FR 70141, and 88 FR 79431 and 79432 respectively) that would submit the results of targeted audits, we estimate that the time required for a QCDR or qualified registry to submit a targeted audit ranges between 5 and 10 hours for the simplified and full self-nomination process, respectively. We assume the staff involved in submitting the targeted audits will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$106.54/hr.

Due to an increase in data issues among third party intermediaries during the CY 2023 performance period/2025 MIPS payment year, we estimate that 35 third party intermediaries will submit targeted audits for the CY 2025 performance period/2027 MIPS payment year (see Table 89). We estimate that the cost for a QCDR or a qualified registry to submit a targeted audit will range from \$532.70 (5 hr × \$106.54/hr) to \$1,065.40 (10 hr × \$106.54/hr). In aggregate for the CY 2025 performance period/2027 MIPS payment year, we estimate an annual burden ranging from 175 hours (35 responses × 5 hr/audits × 5 hr/audit) and \$18,645 (35 targeted audits ×

\$532.70/audit) to 350 hours (35 audits × 10 hr/audit) and \$37,289 (35 targeted audits × \$1,065.40/audit) (see Table 90 for the cost per audit).

(b) Participation Plans

In the CY 2022 PFS final rule (86 FR 65546), we finalized requirements for approved QCDRs and qualified registries that did not submit performance data and therefore will need to submit a participation plan as part of their self-nomination process. We refer readers to § 414.1400(e) for to submit a participation plan as part of their self-nomination process. We refer readers to § 414.1400(e) for additional details on policies for remedial action and termination of third party intermediaries. In the CY 2020 PFS final rule (82 FR 63074), we finalized requirements for QCDRs to submit a QCDR measure participation plan in instances where a QCDR believes the low-reported QCDR measure that did not meet benchmarking thresholds is still important and relevant to a specialist's practice. We refer readers to § 414.1400(b)(4)(iii)(B)(10) for additional details on policies for QCDR measure participation plans.

Consistent with our assumptions in the CY 2024 PFS final rule (88 FR 79431), we estimate that it will take 2 hours for a QCDR or qualified registry to submit a participation plan. We assume the staff involved in submitting the participation plans will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$106.54/hr.

As shown in Table 89, following additional review of the MIPS data submission reports, we estimate that 28 third party intermediaries will submit self-nomination or QCDR measure participation plans for the CY 2025 performance period/2027 MIPS payment year. This is a decrease of 36 participation plans from the currently approved estimate of 64 (88 FR 79431). Many QCDRs submitted a QCDR measure participation plan in their self-

nomination for CY 2024 performance period/2026 MIPS payment year, and therefore we anticipate limited QCDR measure participation plan for QCDR self-nominations for the CY 2025 performance period/2027 MIPS payment year.

In Table 90, we estimate that the cost for a QCDR or a qualified registry to submit a participation plan is \$213.08 (2 hr × \$106.54/hr). In aggregate for the CY 2025 performance period/2027 MIPS payment year, we estimate the total impact associated with QCDRs and qualified registries to submit participation plans will be 56 hours (28 participation plans × 2 hr/plan) at a cost of \$5,966 ((28 participation plans × \$213.08/plan) (see Table 90 for the cost per audit).

(c) Corrective Action Plans (CAPs)

In the CY 2017 Quality Payment Program final rule, we established the process for corrective action plans (CAPs) (81 FR 77386 through 77389). We refer readers to § 414.1400(e)(1)(i) for third party intermediary requirements for submitting CAPs.

We have observed a decrease in the number of CAPs required from third party intermediaries due to non-compliance with MIPS program requirements. Accordingly, we estimate 20 third party intermediaries will submit CAPs for the CY 2025 performance period/2027 MIPS payment year. This is a decrease of 4 respondents from the currently approved estimate of 24 (88 FR 79431). We are continuing our currently approved estimate of 3 hours for a QCDR or qualified registry to submit a CAP. We also assume the staff involved in submitting the CAP will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$106.54/hr. In Table 90, we estimate that the cost for a QCDR or a qualified registry to submit a CAP is \$319.62 (3 hr × \$106.54/hr). In aggregate for the CY 2025 performance period/2027 MIPS payment year, we estimate

the total impact associated with QCDRs and qualified registries to CAPs would be 60 hours (20 CAPs × 3 hr/plan) at a cost of \$6,392 (20 CAPs × \$319.62/plan).

(d) Transition Plans

We established a policy at § 414.1400(a)(3)(iv) that states a condition of approval for the third party intermediary is to agree that prior to discontinuing services to any MIPS eligible individual clinician, group, virtual group, subgroup, or APM Entity during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to an alternate third party intermediary, submitter type, or, for any measure on which data has

been collected, collection type according to a CMS approved transition plan. In this proposed rule, we estimate that we will receive 6 transition plans for the CY 2025 performance period/2027 MIPS payment year. This adjustment would result in a decrease of 3 transition plans from the currently approved estimate of 9 transition plans (88 FR 79431). We continue to estimate it will take 1 hour for a computer system analyst or their equivalent at a labor rate of \$106.54/hr to develop a transition plan on behalf of each QCDR or qualified registry during the self-nomination period. However, we are unable to estimate the burden for implementing the actions in the transition plan because the level of

effort may vary for each QCDR or qualified registry. In aggregate for the CY 2025 performance period/2027 MIPS payment year, we estimate the impact associated with QCDRs and qualified registries completing transition plans is 6 hours (6 transition plans × 1 hr/plan) at a cost of \$639 (6 transition plans × \$106.54/plan).

(e) Estimated Burden for Third Party Intermediary Plan Audits

In aggregate, as shown in Table 89, we assume that 89 third party intermediaries will submit plan audits for the CY 2025 performance period/2027 MIPS payment year (35 targeted audits, 28 participation plans, 20 CAPs, and 6 transition plans).

TABLE 89: Estimated Number of Respondents to Submit Plan Audits

| Burden and Respondent Descriptions | # of Respondents |
|--|------------------|
| # of Targeted Audits (a) | 35 |
| # of Participation Plans (b) | 28 |
| # of Corrective Action Plans (CAPs) (c) | 20 |
| # of Transition Plans (d) | 6 |
| Total Respondents (e) = (a) + (b) + (c) + (d) | 89 |

As shown in in Table 90, we assume that the staff involved in the submission of the plan audits during the third party intermediary self-nomination process will continue to be computer systems

analysts or their equivalent, who have an average labor rate of \$106.54/hr. For the CY 2025 performance period/2027 MIPS payment year, in aggregate, the proposed estimated annual burden for

the submission of third party intermediary plan audits will range from 297 hours to 472 hours at a cost ranging from \$31,642 and \$50,286.

TABLE 90: Estimated Burden for Third Party Intermediary Plan Audits

| Burden and Respondent Descriptions | Simplified Process | Full Process |
|--|---------------------|----------------------|
| # of Hours per Completion of Targeted Audit (a) | 5 | 10 |
| Total Annual Hours for Completion of 35 Targeted Audits (b) | 175 (5 x 35) | 350 (10 x 35) |
| # of Hours per Submission of Participation Plan (c) | 2 | 2 |
| Total Annual Hours for Submission of 28 Participation Plans (d) | 56 (2 x 28) | 56 (2 x 28) |
| # of Hours per Submission CAP (e) | 3 | 3 |
| Total Annual Hours for Submission of 20 CAPs (f) | 60 (3 x 20) | 60 (3 x 20) |
| # of Hours per Submission of Transition Plan (g) | 1 | 1 |
| Total Annual Hours for Submission of 6 Transition Plans (h) | 6 (6 x 1) | 6 (6 x 1) |
| Total Annual Hours for Submission of Plan Audits (i) = (b) + (d) + (f) + (h) | 297 | 472 |
| Cost Per Targeted Audit (Computer Systems Analyst’s Labor Rate of \$106.54/hr) (j) = (a) × \$106.54/hr | \$532.70 | \$1,065.40 |
| Cost Per Participation Plan (Computer Systems Analyst’s Labor Rate of \$106.54/hr) (k) = (c) × \$106.54/hr | \$213.08 | \$213.08 |
| Cost per CAP (Computer Systems Analyst’s Labor Rate of \$106.54/hr) (l) = (e) × \$106.54/hr | \$319.62 | \$319.62 |
| Cost per Transition Plan (Computer Systems Analyst’s Labor Rate of \$106.54/hr) (m) = (g) × \$106.54/hr | \$106.54 | \$106.54 |
| Total Cost of Targeted Audits (n) = (j) × 35 | \$18,645 | \$37,289 |
| Total Cost of Participation Plans (o) = (k) × 28 | \$5,966 | \$5,966 |
| Total Cost of CAPs (p) = (l) × 20 | \$6,392 | \$6,392 |
| Total Cost of Transition Plans (q) = (m) × 6 | \$639 | \$639 |
| Total Annual Cost (r) = (n) + (o) + (p) + (q) (simplified) and (r) = (n) + (o) + (p) + (q) (full) | \$31,642 | \$50,286 |

As shown in Table 91, for the CY 2025 performance period/2027 MIPS payment year, the change in the number of respondents for third party intermediary plan audits results in an adjustment of – 57 hours at a cost of

– \$12,303 under the simplified self-nomination process and – 27 hours at a cost of – \$2,878 under the full self-nomination process. We note for the purposes of calculating estimated change in burden in Tables 77 through

79 of this proposed rule, we use only estimated burden for the plan audits submitted under the full self-nomination process.

TABLE 91: Change in Estimated Burden for Third Party Intermediary Plan Audits

| Burden and Respondent Descriptions | Simplified Process | Full Process |
|---|--------------------|-----------------|
| Total Currently Approved Annual Hours (a) | 354 | 499 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 90, row (i)) | 297 | 472 |
| Difference in Annual Hours (c) = (b) – (a) | -57 | -27 |
| Total Currently Approved Annual Cost (d) | \$43,945 | \$53,164 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 90, row (r)) | \$31,642 | \$50,286 |
| Difference in Annual Cost (f) = (e) – (d) | -\$12,303 | -\$2,878 |

(5) Survey Vendor Requirements

The following proposed changes associated with CAHPS survey vendors to submit data for eligible clinicians will be submitted to OMB for review under control number 0938–1222 (CMS–

10450) if the policy proposal described in section IV.A.4.j. of this proposed rule is finalized in the CY 2025 PFS final rule. We would plan to make the revised files available for public review under the standard non-rule PRA process

which includes the publication of 60- and 30-day **Federal Register** notices.

We refer readers to § 414.1400(d) for the requirements for CMS-approved survey vendors that may submit data on the CAHPS for MIPS Survey.

In section IV.A.4.j.(1)(b). of this proposed rule, we are proposing under the current application submission requirement at § 414.1400(d)(2) that beginning with the CY 2026 performance period/2028 MIPS payment year, a survey vendor must include on its application the range of cost of its third party intermediary services (cost estimates would vary based on the level of services provided). With respect to a third party intermediary that is solely a CMS-approved survey vendor, the publishable costs would be limited to the cost of services related to the CAHPS for MIPS survey. If this proposal is finalized, we would update the CAHPS for MIPS Survey Vendor Participation Form. We would also update the CAHPS for MIPS Survey Minimum Business Requirements to detail the required survey vendor cost information. We refer readers to section IV.A.4.j.(1). of this proposed rule for additional detail.

We anticipate that the proposed fields for cost information would request cost information that is readily available to survey vendors. Therefore, we are not proposing any adjustments in burden because we assume the additional cost requirement would not add significant burden to the currently approved 10 hours per application first established in the CY 2018 Quality Payment Program final rule (82 FR 30216). We also assume this change would not affect survey vendor participation. We note that we proposed updates to our estimated burden under control number 0938-1222 (CMS-10450) as discussed in the CY 2024 PFS final rule (88 FR 79433 and 79434). The 60-day notice appeared in the **Federal Register** on October 17, 2023 (88 FR 71573), while the 30-day notice appeared on January 16, 2024 (89 FR 2622). The status for OMB's approval of the changes can be monitored at: <https://www.reginfo.gov/public/do/PRAOMBHistory?ombControlNumber=0938-1222>. We are not proposing any additional updates under this control number due to policies proposed in this rulemaking. We refer readers to section VII.E.17.e(2)(a) of this proposed rule for additional discussion.

The proposed change, if finalized, would result in updates to the CAHPS for MIPS Survey Vendor Participation Form and the CAHPS for MIPS Survey Minimum Business Requirements. The instrument and requirements guide are currently approved by OMB under control number 0938-1222 (CMS-10450). The CAHPS for MIPS Survey Vendor Participation Form and the CAHPS for MIPS Survey Minimum Business Requirements guide reflecting

these proposed changes will be updated if the policy proposal is finalized in the CY 2025 PFS final rule as a requirement for CAHPS for MIPS survey vendors beginning in the CY 2026 performance period/2028 MIPS payment year. We will make the updated files available for public review through a stand-alone non-rule **Federal Register** notice that is expected to appear in the **Federal Register** in CY 2025 performance period/2027 MIPS payment period.

d. ICRs Regarding Open Authorization (OAuth) Credentialing and Token Request Process

This rulemaking is not proposing any new or revised collection of information requirements or burden related to the OAuth credentialing and token request process for the CY 2025 performance period/2027 MIPS payment year. The requirements and burden for the OAuth credentialing and token request process are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes to the burden for the OAuth credentialing and token request process under that control number.

e. ICRs Regarding Quality Data Submission (§§ 414.1318, 414.1325, 414.1335, and 414.1365)

(1) Background

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77502 and 77503 and 82 FR 53908 through 53912, respectively), the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (83 FR 60000 through 60003, 84 FR 63121 through 63124, 85 FR 84970 through 84974, 86 FR 65576 through 65588, 87 FR 70145 through 70154, and 88 FR 79434 through 79442, respectively) for our previously finalized estimated burden associated with data submission for the quality performance category.

Under our current policies, two groups of clinicians submit data for the quality performance category under MIPS: those who submit data as MIPS eligible clinicians, and those who submit data voluntarily but are not subject to MIPS payment adjustments. Clinicians are ineligible for MIPS payment adjustments if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group.

(2) Changes and Adjustments to Quality Performance Category Respondents

To determine QPs that are excluded from MIPS, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2022 QP Performance period. From this data, we calculated the QP determinations as described in the Qualifying APM Participant (QP) definition at § 414.1305 for the CY 2025 performance period/2027 MIPS payment year. Due to data limitations, we could not identify specific clinicians who have not yet enrolled in Advanced APMs, but who may become QPs in the future for the CY 2025 performance period/2027 MIPS payment year (and therefore will no longer need to submit data to MIPS); hence, our model may underestimate or overestimate the number of respondents.

In this proposed rule, we use submissions data from the CY 2022 performance period/2024 MIPS payment year to estimate the number of respondents that will submit data for the CY 2025 performance period/2027 MIPS payment year. We have adjusted the estimated number of respondents that will submit data for the CY 2025 performance period/2027 MIPS payment year from the currently approved estimates, as our burden estimates for the CY 2024 PFS final rule (88 FR 79434) did not incorporate all data updates in the CY 2024 PFS final rule regulatory impact analysis model (88 FR 79503 through 79505) due to the timing of data availability. These estimates in this proposed rule reflect updated performance category submissions for the CY 2022 performance period/2024 MIPS payment year. We refer readers to sections V.B.8.e., V.B.8.g.(3), and V.B.8.h. of this proposed rule for additional details per performance category and collection type.

We assume 100 percent of ACO APM Entities will submit quality data to CMS as required under their models. While we do not believe there is additional quality reporting for ACO APM entities, consistent with assumptions used in the CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (85 FR 84972, 86 FR 65567, 87 FR 70145, and 88 FR 79434, respectively), we include all quality data voluntarily submitted by MIPS APM participants at the individual or TIN-level in our respondent estimates. As stated in section V.B.8.a.(4). of this proposed rule, we assume non-Shared Savings Program ACO APM Entities will participate through traditional MIPS or

MVPs and submit as an individual or group rather than as an entity. To estimate who will be a MIPS APM participant in the CY 2025 performance period/2027 MIPS payment year, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2022 QP performance period. We elected to use this data source because the overlap with the data submissions for the CY 2022 performance period/2024 MIPS payment year enabled the exclusion of Partial QPs that elected to not participate in MIPS and required fewer assumptions as to who is a QP or not. Based on this information, if we determine that a MIPS eligible clinician will not be scored as a MIPS APM, then their reporting assumption is based on their reporting as a group or individual for the CY 2022 performance period/2024 MIPS payment year.

Our burden estimates for the quality performance category do not include the burden for the quality data that Shared Savings Program APM Entities submit to fulfill the requirements of their APMs. The associated burden is excluded from this collection of information section but is discussed in the regulatory impact analysis section of this proposed rule because sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C. 1395jj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.⁷⁸⁸

For the CY 2025 performance period/2027 MIPS payment year, respondents would have the option to submit quality performance category data via Medicare Part B claims, direct, and log in and upload submission types. We estimate the burden for collecting data via collection type: Medicare Part B claims, QCDR and MIPS CQMs, and eCQMs. We do not estimate burden for administrative claims quality measures; similar to cost measures, we automatically calculate scores for individuals, groups, virtual groups, or APM Entities that meet requirements to be scored on individual measures due to their administrative claims reporting. Additionally, we capture the burden for clinicians who choose to submit via these collection types for the quality performance category of MVPs. We believe that, while estimating burden by

submission type may be better aligned with the way clinicians participate with the Quality Payment Program, it is more important to reduce confusion and enable greater transparency by maintaining consistency with previous rulemaking. In the CY 2019 PFS final rule (83 FR 59752), we finalized proposals to limit the Medicare Part B claims collection type to small practices beginning with the CY 2019 performance period/2021 MIPS payment year and to allow clinicians in small practices to report Medicare Part B claims as a group or as individuals.

Because MIPS eligible clinicians may submit data for multiple collection types for a single performance category, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types during the CY 2022 performance period/2024 MIPS payment year. We captured the burden of any eligible clinician that may have historically collected via multiple collection types, as we assume they will continue to collect via multiple collection types and that our MIPS scoring methodology will take the highest score where the same measure is submitted via multiple collection types.

We are not proposing changes to the quality performance category submission burden due to the proposals discussed in section IV.A. of this proposed rule. We discuss below in this section these proposed policies and our reasons for not changing the currently approved burden for the relevant ICRs.

For the quality performance category, we are proposing to adopt minimum criteria for a qualifying data submission for a MIPS performance period. Specifically, we are proposing to specify what we consider to be a data submission at § 414.1325(a)(1)(i) to state that, for the quality performance category, a data submission must include numerator and denominator data for at least one MIPS quality measure from the final list of MIPS quality measures. Additionally, we are proposing to codify our existing policies governing our treatment of multiple data submissions received for the quality performance category at § 414.1325(f)(1). We refer readers to sections IV.A.4.d.(2)(b) and IV.A.4.d.(3)(b) for details. These proposals, if finalized, would not affect the requirements for MIPS eligible clinicians and groups that submit data for the quality performance category. We assume these proposals, if finalized, would not affect the number of quality submissions, as the intent is

to eliminate certain issues with the scoring of an unintended data submission affecting payment adjustments for individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities. Therefore, we are not proposing any adjustments to our currently approved estimated burden for this ICR due to these policy proposals.

As described in the CY 2017 Quality Payment Program final rule (81 FR 77125 and 77126), to ensure that data submitted on quality measures are complete enough to accurately assess each MIPS eligible clinician's quality performance, we established a data completeness requirement. For the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years, we increased the data completeness criteria threshold from at least 70 percent to at least 75 percent (87 FR 70049 through 70052). We maintained the data completeness criteria threshold of at least 75 percent for the CY 2026 performance period/2028 MIPS payment year (88 FR 79334 through 79337). In section IV.A.4.e.(1)(c)(i) of this proposed rule, we are proposing to maintain the data completeness criteria threshold of at least 75 percent for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years. As this data completeness threshold proposal is consistent with the existing data completeness criteria, this proposal will not affect burden for the applicable interested parties. We refer readers to section IV.A.4.e.(1)(c)(i) of this proposed rule for additional information on this proposal.

In this proposed rule, we are not proposing any new or revised collection of information requirements or burden related to the submission of Medicare Part B claims data, QCDR and MIPS CQMs, and eCQMs for the quality performance category. Several factors drive the proposed changes and adjustments for the number of clinicians submitting quality data for MIPS using each collection type. First, we incorporated the updated submission data available for the CY 2022 performance period/2024 MIPS payment year as discussed in section V.B.8.e.(7)(a) of this proposed rule. Second, our updated estimates for MVP participation impact the number of estimated clinicians submitting quality data using each collection type. In section V.B.8.e.(7)(a) of this rulemaking, we propose to adjust our estimates for the number of participants in previously finalized MVPs, due to the availability of updated data. We then propose to update this estimate to account for increased MVP participation due to the

⁷⁸⁸ Our estimates do reflect the burden on MIPS APM participants of submitting Promoting Interoperability or improvement activities performance category data, which is outside the requirements of their APMs.

proposed addition of six new MVPs. With this approach, any proposed adjustments to increase the number of MVP participants will reduce the number of estimated submissions for each quality performance category collection type via traditional MIPS. Similarly, any proposed decreases to the number of MVP participants will increase the number of estimated submissions for each quality performance category collection type via traditional MIPS. We refer readers to sections V.B.8.e.(4), V.B.8.e.(5), and V.B.8.e.(6), of this proposed rule for estimated burden on each quality performance category collection type.

Table 92 uses similar methods to estimate the number of MIPS eligible clinicians that will submit data as individual clinicians via each collection type in the CY 2025 performance period/2027 MIPS payment year. For the CY 2025 performance period/2027 MIPS payment year, we estimate that approximately 13,522 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 12,056 clinicians will submit data as individuals using MIPS CQM and QCDR collection type; and approximately 23,600 clinicians will submit data as individuals using eCQMs collection type. Based on the

availability of updated data for the CY 2022 performance period/2024 MIPS payment year and updated assumptions for MVP reporting as described in section V.B.8.e.(7)(a), of this proposed rule, these are decreases of 1,216 and 1,657 respondents from the currently approved estimates of 13,413 and 22,897 for the Medicare Part B claims and eCQM collection types, respectively and an increase of 168 respondents for MIPS CQM and QCDR collection type from the currently approved estimate of 10,682.

TABLE 92: Estimated Number of Clinicians Submitting Quality Performance Category Data as Individuals by Collection Type

| Burden and Respondent Description | Medicare Part B Claims | QCDR/MIPS CQM | eCQM | Total |
|---|------------------------|---------------|---------------|---------------|
| 2025 MIPS Performance Period (Excludes QPs) (a) | 13,552 | 12,056 | 23,600 | 49,208 |
| MVP Adjustment (10%) (b) = (a) × 0.10 | -1,355 | -1,206 | -2,360 | -4,921 |
| 2025 MIPS Performance Period (Excludes QPs and Adjusted for MVP) (c) = (a) – (b) | 12,197 | 10,850 | 21,240 | 44,287 |
| Currently Approved 2024 MIPS Performance Period (Excludes QPs) (d) | 13,413 | 10,682 | 22,897 | 46,992 |
| Difference in # of Clinicians (e) = (c) – (d) | -1,216 | +168 | -1,657 | -2,705 |

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule, we established that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR collection types and submit more than the required number of measures (82 FR 53735 and 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table 92 are not mutually exclusive.

Table 93 provides our estimates for the number of groups or virtual groups

that will submit quality data on behalf of clinicians for each collection type in the CY 2025 performance periods/2027 MIPS payment year. We assume clinicians who submitted quality data as groups in the CY 2022 performance period/2024 MIPS payment year will continue to submit data for the quality performance category either as groups, or virtual groups for the same collection types for the CY 2025 performance period/2027 MIPS payment years. We used the same methodology described in the CY 2022 PFS final rule (86 FR 65577) on our assumptions related to the use of an alternate collection type for groups that submitted data via the

CMS Web Interface collection type for the CY 2022 performance period/2024 MIPS payment year.

As shown in Table 93, for the CY 2025 performance period/2027 MIPS payment year, we estimate that 6,158 groups and virtual groups will submit data for the MIPS CQM and QCDR collection type and 5,939 groups and virtual groups will submit for the eCQM collection type. These are increases of 208 and 122 respondents from the currently approved estimates of 5,950, and 5,817 for the groups and virtual groups that will submit data using MIPS CQM and QCDR, and eCQM collection types, respectively.

TABLE 93: Estimated Number of Groups and Virtual Groups Submitting Quality Performance Category Data by Collection Type

| Burden and Respondent Description | Medicare Part B Claims | QCDR/ MIPS CQM | eCQM | Total |
|--|------------------------|----------------|--------------|---------------|
| 2025 MIPS Performance Period (Excludes QPs) (a) Prior to Adjustments | 0 | 6,842 | 6,599 | 13,441 |
| Adjustment for MVPs (10%) (b) = (a) × 0.10 | 0 | -684 | -660 | -1,344 |
| 2025 MIPS Performance Period (Excludes QPs and) Adjusted for MVP. (c) = (a) – (b) | 0 | 6,158 | 5,939 | 12,097 |
| Currently Approved 2024 MIPS Performance Period (Excludes QPs) (d) | 0 | -5,950 | -5,817 | -11,767 |
| Difference in # of Groups and Virtual Groups (e) = (c) – (d) | 0 | +208 | +122 | +330 |

The burden associated with the submission of quality performance category data has some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices' workflows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician's practice and by the collection type. For example, clinicians submitting data via the Medicare Part B claims collection type need to integrate the capture of quality data codes for each encounter whereas clinicians submitting via the eCQM collection types may have quality measures automated as part of

their electronic health record (EHR) implementation.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third party intermediary. As such, we separately estimate the burden for clinicians, groups, and third party intermediaries to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we also assume that, on average, each clinician or group will submit 6 quality measures. Additionally, as finalized in the CY 2022 PFS final rule (86 FR 65394 through 65397), group tax identification numbers (TINs) could also choose to participate as subgroups for MVP reporting beginning with the CY 2023 performance period/2025 MIPS payment year. We refer readers to the CY 2022 PFS final rule for additional

details on MVP quality reporting requirements (86 FR 65411 and 65412).

In terms of the quality measures available for clinicians and groups to report for the CY 2025 performance period/2027 MIPS payment year, we are proposing a measure set of 196 quality measures. The new MIPS quality measures proposed for inclusion in MIPS for the CY 2025 performance period/2027 MIPS payment year and future years are found in Table Group A of Appendix 1; MIPS quality measures with substantive changes can be found in Table Group D of Appendix 1; and MIPS quality measures proposed for removal can be found in Table Group C of Appendix 1. These measures are stratified by collection type in Table 94, as well as counts of new, removed, and substantively changed measures. There are no changes to the remaining measures not included in Appendix 1. We refer readers to Appendix 1 of this proposed rule for additional information.

TABLE 94: Summary of Quality Measure Inventory Proposed for the CY 2025 Performance Period

| Collection Type | # Measures Proposed as New* | # Measures Proposed for Removal* | # Measures Proposed with a Substantive Change* | # Measures Proposed for CY 2025* |
|--------------------------|-----------------------------|----------------------------------|--|----------------------------------|
| Medicare Part B Claims | 0 | -2 | 10 | 25 |
| MIPS CQMs Specifications | +8 | -11 | 60 | 170 |
| eCQM Specifications | +1 | -1 | 16 | 47 |
| Survey – CSV | 0 | 0 | 0 | 1 |
| Administrative Claims | 0 | 0 | 1 | 4 |
| Total* | +9** | -11** | 66 | 196*** |

*A measure may be specified under multiple collection types but is only counted once in the total.

**Note that one new measure and one measure removal included above were finalized in the CY 2024 PFS final rule with a 1-year delay to the CY 2025 performance period/2027 MIPS payment year.

***Three of the 196 quality measures are only available in MVPs.

For the CY 2025 performance period/2027 MIPS payment year, we are proposing 196 measures, a net decrease of 2 quality measures compared to the currently approved estimate of 198 measures. Specifically, as discussed in section IV.A.4.e.(1)(d). of this rulemaking, we are proposing to add 9 new MIPS quality measures, remove 11 MIPS quality measures, and make substantive updates to 66 MIPS quality measures. We do not anticipate our provision to remove these measures will increase or decrease the reporting burden on clinicians and groups as respondents generally are still required to submit quality data for 6 measures in traditional MIPS reporting or submit quality data for 4 measures in an MVP.

(3) Quality Payment Program Identity Management Application Process

This rulemaking does not propose any new or revised collection of information requirements or burden related to the

identity management application process. We are adjusting our currently approved estimates based on updated data and assumptions. The proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

In the CY 2023 and CY 2024 PFS final rules (87 FR 70148 and 88 FR 79437), we estimated the number of eligible clinicians, groups, or third party intermediaries that register for new accounts by applying a rolling average of the number of respondents registering for new accounts. The Quality Payment Program requires users to utilize HCQIS Access Roles and Profiles (HARP), a secure identity management portal, to log into the Quality Payment Program portal. To assess the incremental change for new Quality Payment Program Identity Management application registrations, we will assess the number of unique TINs associated with new Quality Payment Program user accounts

that signed into the Quality Payment Program portal for the first time in a given year. Based on this approach and new data available from March 2022 to February 2023, we propose to adjust our estimates from 6,500 to 6,237 for the number of unique TINs accessing the Quality Payment Program portal for the first time in the CY 2025 performance period/2027 MIPS payment year. This proposed adjustment will result in a decrease of 263 registrations. We do not propose to adjust the currently approved estimated time of 1 hour per response to obtain a new account. As shown in Table 95, it will take 1 hour at \$106.54/hr for a computer systems analyst (or their equivalent) to obtain a HARP account, required to access the Quality Payment Program portal. In aggregate we estimate an annual burden of 6,237 hours (6,237 registrations × 1 hr/registration) at a cost of \$664,490 (6,237 registrations × \$106.54/registrations).

TABLE 95: Estimated Burden for Quality Payment Program Identity Management Application Process

| Burden and Respondent Descriptions | Burden Estimate |
|--|-----------------|
| # of New TINs Completing the Identity Management Application Process (a) | 6,237 |
| Total Hours Per Application (b) | 1 |
| Total Annual Hours for Completing the Identity Management Application Process (c) = (a) [x] (b) | 6,237 |
| Cost per Applicant at Computer Systems Analyst’s Labor Rate of \$106.54/hr(d) = \$106.54/hr × (b) | \$106.54 |
| Total Annual Cost (e) = (a) × (d) | \$664,490 |

In Table 96, we illustrate the proposed net change in estimated burden for the Quality Payment Program Identity Management Application Process using the currently approved burden in the CY 2023 PFS final rule

(87 FR 70148 and 70149). In aggregate, using the currently approved per response time estimate, the proposed decrease of respondents results in a total annual adjustment of – 263 hours (– 263 responses × 1 hr/response) at a

cost of – \$28,020 (– 263 responses × \$106.54/response) for the CY 2025 performance period/2027 MIPS payment year.

TABLE 96: Change in Estimated Burden for Quality Payment Program Identity Management Application Process

| Burden and Respondent Descriptions | Burden Estimate |
|--|-----------------|
| Total Currently Approved Annual Time (hr) (a) | 6,500 |
| Total Annual Time (hr) for Respondents in CY 2025 PFS Proposed Rule(b) (See Table 95, row (c)) | 6,237 |
| Difference in Annual Hours (c) = (b) – (a) | -263 |
| Total Currently Approved Annual Cost (d) | \$692,510 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 95, row (e)) | \$664,490 |
| Difference in Annual Cost (f) = (e) – (d) | -\$28,020 |

(4) Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type

The following proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621). In this section of this proposed rule, we propose updates to the estimated burden for the Quality Data Submission by Individuals and Groups Using Medicare Part B Claims-Based Collection Type that will be submitted to OMB for review under control number 0938–1314 (CMS–10621). As noted in Table 79, the proposed change in burden reflects adjustments for updated data and assumptions, and as well as the proposal for additional MVPs as outlined in section V.B.8.e.(4) of this proposed rule. In Table 95, we identify the changes in burden to this ICR due to the proposed policies.

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77501 through 77504 and 82 FR 53912, respectively), the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (83 FR 60004 and 60005, 84 FR 63124 through 63126, 85 FR 84975 and 84976, 86 FR 65582 through 65584, 87 FR 70149 through 70151, and 88 FR 79437 through 79439 respectively) for our previously finalized requirements and burden for quality data submission via the Medicare Part B claims collection type.

In this proposed rule, we are not proposing any new or revised collection

of information requirements related to the submission of Medicare Part B claims data for the quality performance category. We refer readers to section V.B.8.e.(2) of this proposed rule for the factors affecting the proposed changes and adjustments for each quality performance collection type. We refer readers to Table 92 of this section for the estimated change in associated burden for quality data submissions using Medicare Part B claims data related to MVP and subgroup reporting in CY 2025 performance period/2027 MIPS payment year.

As noted in Table 92, based on updated data available for the CY 2022 performance period/2024 MIPS payment year and updated MVP reporting assumptions, we estimate that 12,197 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type, a decrease of 1,216 from the currently approved estimate of 13,413 (88 FR 79437 and 79438).

In Table 97, consistent with our currently approved per response time figures and using the updated wage rates in Table 75 of this proposed rule, we continue to estimate the burden of quality data submission using Medicare Part B claims will range from 0.15 hours (9 minutes) at a cost of \$15.98 (0.15 hr × \$106.54) for a computer systems analyst to 7.2 hours at a cost of \$767.09 (7.2 hr × \$106.54/hr). The burden estimate also accounts for the effort to become familiar with MIPS quality measure specifications.

Consistent with our currently approved per response time estimates and using the updated wage rates in Table 75 of this proposed rule, we believe that the start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of 3 hours for a medical and health services manager at \$129.28/hr, 1 hour for a computer systems analyst at \$106.54/hr, 1 hour for a Licensed Practical Nurse (LPN) at \$58.46/hr, 1 hour for a billing and posting clerk at \$45.32/hr, and 1 hour for a physician at \$291.64/hr.

In Table 97, considering both data submission and start-up requirements for our adjusted number of clinicians, the estimated time (per clinician using the Medicare Part B claims collection type) ranges from a minimum of 7.15 hours (0.15 hr + 7 hr) to a maximum of 14.2 hours (7.2 hr + 7 hr). In aggregate, the estimated total annual time for the CY 2025 performance period/2027 MIPS payment year ranges from 87,209 hours (7.15 hr/response × 12,197 responses) to 173,197 hours (14.2 hr/response × 12,197 responses). The total annual cost for the CY 2025 performance period/2027 MIPS payment year ranges from a minimum of \$11,047,799 (12,197 responses × \$905.78/response) to a maximum of \$20,209,087 (12,197 responses × \$1,656.89/response). For purposes of calculating total burden associated with this proposed rule as shown in Tables 77 through 79, only the maximum burden is used.

BILLING CODE P

TABLE 97 : Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

| Burden and Respondent Descriptions | Minimum Burden Estimate | Median Burden Estimate | Maximum Burden Estimate |
|--|-------------------------|------------------------|-------------------------|
| # of Clinicians (a) | 12,197 | 12,197 | 12,197 |
| Hours Per Computer Systems Analyst to Submit Quality Data (b) | 0.15 | 1.05 | 7.2 |
| # of Hours Medical and Health Services Manager Review Measure Specifications (c) | 3 | 3 | 3 |
| # of Hours Computer Systems Analyst Review Measure Specifications (d) | 1 | 1 | 1 |
| # of Hours LPN Review Measure Specifications (e) | 1 | 1 | 1 |
| # of Hours Billing Clerk Review Measure Specifications (f) | 1 | 1 | 1 |
| # of Hours Physician Review Measure Specifications (g) | 1 | 1 | 1 |
| Annual Hours per Clinician (h) = (b) + (c) + (d) + (e) + (f) + (g) | 7.15 | 8.05 | 14.2 |
| Total Annual Hours (i) = (a) × (h) | 87,209 | 98,186 | 173,197 |
| Cost to Submit Quality Data (Computer Systems Analyst's Labor Rate of \$106.54/hr at varying times) (j) | \$15.98 | \$111.87 | \$767.09 |
| Cost to Review Measure Specifications (Medical and Health Services Manager's Labor Rate of \$129.28/hr for 3 hr) (k) | \$387.84 | \$387.84 | \$387.84 |
| Cost to Review Measure Specifications (Computer Systems Analyst's Labor Rate of \$106.54/hr for 1 hr) (l) | \$106.54 | \$106.54 | \$106.54 |
| Cost to Review Measure Specifications (LPN's Labor Rate of \$58.46/hr for 1 hr) (m) | \$58.46 | \$58.46 | \$58.46 |
| Cost to Review Measure Specifications (Billing Clerk's Labor Rate of \$45.32/hr) (n) | \$45.32 | \$45.32 | \$45.32 |
| Cost to Review Measure Specifications (Physician's Labor Rate of \$291.64/hr) (o) | \$291.64 | \$291.64 | \$291.64 |
| Total Annual Cost Per Clinician (p) = (j) + (k) + (l) + (m) + (n) + (o) | \$905.78 | \$1,001.67 | \$1,656.89 |
| Total Annual Cost (q) = (a) × (p) | \$11,047,799 | \$12,217,369 | \$20,209,087 |

In Table 98, we illustrate the net change in estimated burden for quality data submissions from clinicians using the Medicare Part B Claims-based collection type using the currently approved burden in the CY 2024 PFS final rule (88 FR 79438 and 79439). In

aggregate, using our currently approved per response time estimates, the decrease in number of responses from 13,413 to 12,197 (– 1,216) (Table 92) will result in a total maximum adjustment of – 17,268 hours at a cost of – \$2,014,779 for the CY 2025

performance period/2027 MIPS payment year. For purposes of calculating total burden associated with this proposed rule as shown in Tables 77 through 79, only the maximum burden is used.

TABLE 98: Change in Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

| Burden and Respondent Descriptions | Burden Estimate |
|---|---------------------|
| Total Currently Approved Annual Hours (a) | 190,465 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (see Table 97, row (i)) | 173,197 |
| Difference in Annual Hours (c) = (b) – (a) | -17,268 |
| Total Currently Approved Annual Cost (d) | \$22,223,866 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (see Table 97, row (q)) | \$20,209,087 |
| Difference in Annual Cost (f) = (d) – (e) | -\$2,014,779 |

BILLING CODE C**(5) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types**

In this section, we identify proposed updates to the estimated burden for the Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types ICR that will be submitted to OMB for review under control number 0938–1314 (CMS–10621). As noted in Table 79, the proposed change in burden reflects adjustments for updated data and assumptions, and as well as the proposal for additional MVPs as outlined in section V.B.8.e.(4) of this proposed rule. In Table 146 (section VII.E.17.e.(1).), we identify the changes in burden to this ICR due to the proposed policies.

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77504 and 77505 and 82 FR 53912 and 53914, respectively), the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (83 FR 60005 and 60006, 84 FR 63127 and 63128, 85 FR 84977 through 84979, 86 FR 65584 through 65586, and 87 FR 70151 through 70153, and 88 FR 79439 through 79441, respectively) for our previously finalized requirements and burden for quality data submission via the MIPS CQM and QCDR collection types. We refer readers to Table 105 for the estimated change in associated burden for quality data submission using MIPS CQM and QCDR collection types related to MVP and subgroup reporting in the CY 2025 performance period/2027 MIPS payment year. We refer readers to section V.B.8.e.(2) of this proposed rule for the factors affecting the proposed changes and

adjustments for each quality performance collection type.

As noted in Tables 92 and 93, based on updated data available from the CY 2022 performance period/2024 MIPS payment year and updated MVP reporting assumptions, for the CY 2025 performance period/2027 MIPS payment year, we estimate that 17,008 clinicians (10,850 individuals and 6,158 groups and virtual groups) will submit quality data as individuals or groups using MIPS CQM or QCDR collection types. This is an increase of 376 clinicians from the currently approved estimate of 16,632 clinicians provided in the CY 2024 PFS final rule (88 FR 79439 through 79441). Given the number of measures required for clinicians and groups is the same, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third party intermediary to submit the data to us on the clinician's or group's behalf. We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both collection types together. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS quality measure specifications and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe the

burden for an individual clinician or group to review measure specifications and submit quality data is a total of 9 hours at a cost of \$1,088.98 per response. This consists of 3 hours at \$106.54/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at \$129.28/hr for a medical and health services manager, 1 hour at \$106.54/hr for a computer systems analyst, 1 hour at \$58.46/hr for a LPN, 1 hour at \$45.32/hr for a billing clerk, and 1 hour at \$291.64/hr for a physician to review measure specifications. Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to us on their behalf. We estimate the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hr) at \$106.54/hr for a computer systems analyst at a cost of \$8.84 (0.083 hr × \$106.54/hr). Overall, we estimate 9.083 hr/response (3 hr + 2 hr + 1 hr + 1 hr + 1 hr + 1 hr + 0.083 hr) at a cost of \$1,088.98/response [(3 hr × \$106.54/hr) + (2 hr × \$129.28/hr) + (1 hr × \$106.54/hr) + (1 hr × \$58.46/hr) + (1 hr × \$45.32/hr) + (1 hr × \$291.64/hr) + (0.083 hr × \$106.54/hr)].

In Table 99, for the CY 2025 performance period/2027 MIPS payment year, in aggregate, we estimate a burden of 154,484 hours (9.083 hr/response × 17,008 responses) at a cost of \$18,521,372 (17,008 responses × \$1,088.98/response).

BILLING CODE P

TABLE 99: Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

| Burden and Respondent Descriptions | Burden Estimate |
|---|------------------------|
| # of Clinicians Submitting as Individuals (a) | 10,850 |

| Cost Per Respondent to Submit Quality Data (at Computer Systems Analyst's Labor Rate of \$106.54/hr) (m) = \$106.54/hr × (d) | \$319.62 |
| Cost to Review Measure Specifications (at Medical and Health Services Manager's Labor Rate of \$129.28/hr) (n) = \$129.28/hr × (e) | \$258.56 |
| Cost per Computer System's Analyst Review of Measure Specifications (at Computer Systems Analyst's Labor Rate of \$106.54/hr) (o) = \$106.54/hr × (f) | \$106.54 |
| Cost per LPN to Review Measure Specifications (at LPN's Labor Rate of \$58.46/hr) (p) = \$58.46/hr × (g) | \$58.46 |
| Cost per Billing Clerk to Review Measure Specifications at Clerk's Labor Rate of \$45.32/hr (q) = \$45.32/hr × (h) | \$45.32 |
| Cost for Physician to Review Measure Specifications (at Physician's Labor Rate of \$291.64/hr) (r) = \$291.64/hr × (i) | \$291.64 |
| Cost for Respondent to Authorize Qualified Registry/QCDR to Report on Respondent's Behalf (at Computer Systems Analyst's Labor Rate of \$106.54/hr) (s) = \$106.54/hr × (j) | \$8.84 |
| Total Annual Cost Per Respondent (t) = (m) + (n) + (o) + (p) + (q) + (r) + (s) | \$1,088.98 |
| Total Annual Cost (u) = (c) × (t) | \$18,521,372 |

In Table 100, we calculated the net change in estimated burden for quality performance category submissions using the MIPS CQM and QCDR collection type by using the currently approved

burden in the CY 2024 PFS final rule (88 FR 79439 through 79441). In aggregate, using the unchanged currently approved time per response estimate, the increase of 376

respondents from 16,632 to 17,008 for the CY 2025 performance period/2027 MIPS payment year results in an increase of 3,416 hours at a cost of +\$409,457.

TABLE 100: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

| Burden and Respondent Descriptions | Burden Estimate |
|---|-------------------|
| Total Currently Approved Annual Hours (a) | 151,068 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (see Table 99, row (l)) | 154,484 |
| Difference in Annual Hours (c) = (b) – (a) | +3,416 |
| Total Currently Approved Annual Cost (d) | \$18,111,915 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (see Table 99, row (u)) | \$18,521,372 |
| Difference in Annual Cost (f) = (e) – (d) | +\$409,457 |

BILLING CODE C

(6) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

In this section, we identify proposed updates to the estimated burden for the Quality Data Submission by Individuals and Groups Using eCQM Collection Type ICR that will be submitted to OMB for review under control number 0938–1314 (CMS–10621). As noted in Table 79, this proposed change in burden reflects adjustments for updated data and assumptions, and as well as the proposal for additional MVPs as outlined in section V.B.8.e.(4) of this proposed rule. In Table 146 (section VII.E.17.e.(1) of this proposed rule), we identify the changes in burden to this ICR due to the proposed policies.

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77505 and 77506 and 82 FR 53914 and 53915), CY 2019, CY 2020, CY 2021, the CY 2022 PFS, the CY 2023, and the CY 2024 PFS final rule (83 FR 60006 and 60007, 84 FR 63128 through 63130, 85 FR 84979 and 84980, 86 FR 65586 through 65588, 87 FR 70153 and 70154, and 88 FR 79441 through 79443 respectively) for our previously finalized requirements and burden for quality data submission via the eCQM collection types. For the change in associated burden for quality data submission related to the provisions introducing MVP and subgroup reporting beginning in the CY 2025 performance period/2027 MIPS payment year, we refer readers to Table 105. We refer readers to section V.B.8.e.(2) of this proposed rule for the

factors affecting the proposed changes and adjustments for each quality performance collection type.

As noted in Tables 92 and 93, based on updated data available from the CY 2022 performance period/2024 MIPS payment year and updated MVP reporting assumptions, we assume that 27,179 clinicians (21,240 individual clinicians and 5,939 groups and virtual groups) will submit quality data using the eCQM collection type for the CY 2025 performance period/2027 MIPS payment year. This is a decrease of 1,535 clinicians from the currently approved estimate of 28,714 clinicians in the CY 2024 PFS final rule (88 FR 78818)). We assume the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third party intermediary to derive data from their certified electronic health record technology (CEHRT) and submit it to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to a QCDR/qualified registry to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians

and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a QCDR or qualified registry to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to a QCDR/qualified registry. We note that the CY 2024 PFS final rule eliminated the category of health IT vendors for the Quality Payment Program beginning in the CY 2025 performance period/2027 MIPS payment period (88 FR 79390 and 79391).

We estimate that it will take no more than 2 hours at \$106.54/hr for a computer systems analyst or their equivalent to submit the data file. The burden will also involve becoming familiar with MIPS quality measure specifications. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at \$129.28/hr for a medical and health services manager, 1 hour at \$291.64/hr for a physician, 1 hour at \$106.54/hr for a computer systems analyst, 1 hour at \$58.46/hr for an LPN, and 1 hour at \$45.32/hr for a billing clerk. Overall, we estimate a cost of \$973.60/response [(2 hr × \$106.54/hr) + (2 hr × \$129.28/hr) + (1 hr × \$106.54/hr) + (1 hr × \$58.46/hr) + (1 hr × \$45.32/hr) + (1 hr × \$4291.64/hr)].

In Table 101, for the CY 2025 performance period/2027 MIPS payment year, in aggregate, we estimate a burden of 217,432 hours (8 hr × 27,179 responses) at a cost of \$26,461,474 (27,179 responses × \$973.60/response).

TABLE 101: Estimated Burden for Quality Performance Category: Clinicians (Submitting Individually or as Part of a Group) Using the eCQM Collection Type

| Burden and Respondent Descriptions | Burden Estimate |
|--|---------------------|
| # of Clinicians Submitting as Individuals (a) | 21,240 |
| # of Groups Submitting via EHR on Behalf of Individual Clinicians (b) | 5,939 |
| Total # of Respondents (c)=(a)+(b) | 27,179 |
| # of Hours Per Respondent to Submit MIPS Quality Data File (d) | 2 |
| # of Hours Per Medical and Health Services Manager to Review Measure Specifications (e) | 2 |
| # of Hours Per Computer Systems Analyst to Review Measure Specifications (f) | 1 |
| # of Hours Per LPN to Review Measure Specifications (g) | 1 |
| # of Hours Per Billing Clerk to Review Measure Specifications (h) | 1 |
| # of Hours Per Physician to Review Measure Specifications (i) | 1 |
| Annual Hours Per Respondent (j) = (d) + (e) + (f) + (g) + (h) + (i) | 8 |
| Total Annual Hours (k) = (c) × (j) | 217,432 |
| Cost Per Respondent to Submit Quality Data (at Computer Systems Analyst's Labor Rate of \$106.54/hr) (l) = \$106.54/hr × (d) | \$213.08 |
| Cost to Review Measure Specifications (at Medical and Health Services Manager's Labor Rate of \$129.28/hr) (m) = \$129.28/hr × (e) | \$258.56 |
| Cost to Review Measure Specifications (at Computer System's Analyst's Labor Rate of \$106.54/hr) (n) = \$106.54/hr × (f) | \$106.54 |
| Cost to Review Measure Specifications (at LPN's Labor Rate of \$58.46/hr) (o) = \$58.46/hr × (g) | \$58.46 |
| Cost to Review Measure Specifications (at Clerk's Labor Rate of \$45.32/hr) (p) = \$45.32/hr × (h) | \$45.32 |
| Cost to Review Measure Specifications (at Physician's Labor Rate of \$291.64/hr) (q) = \$291.64/hr × (i) | \$291.64 |
| Total Cost Per Respondent (r)=(l)+(m)+(n)+(o)+(p)+(q) | \$973.60 |
| Total Annual Cost (s) = (c) × (r) | \$26,461,474 |

In Table 102, we illustrate the net change in burden for submissions in the quality performance category using the eCQM collection type from the currently approved burden in the CY 2024 PFS final rule (88 FR 79441 and 79442). In

aggregate, using our currently approved time per response burden estimate, the decrease of 1,535 respondents from 28,714 to 27,179 for the CY 2025 performance period/2027 MIPS payment year results in a decrease of

12,280 hours (1,535 responses × 8 hr/response) at a cost of –\$1,494,476 (–1,535 response) at a cost of –\$1,494,476 (–1,535 responses × \$973.60/response).

TABLE 102: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the eCQM Collection Type

| Burden and Respondent Descriptions | Burden Estimate |
|--|---------------------|
| Total Currently Approved Annual Hours (a) | 229,712 |
| Total Annual Hours for respondents in CY 2025 PFS Proposed Rule (b) (see Table 101, row (k)) | 217,432 |
| Difference in Annual Hours (c) = (b) – (a) | -12,280 |
| Total Currently Approved Annual Cost (d) | \$27,955,950 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (see Table 101, row (s)) | \$26,461,474 |
| Difference in Annual Cost (f) = (e) – (d) | -\$1,494,476 |

(7) ICRs Regarding Burden for MVP Reporting

The following proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

(a) Burden for MVP Reporting Requirements

In the CY 2022 PFS final rule, we finalized an option for clinicians choosing to report MVPs to participate through subgroups beginning with the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). We refer readers to the CY 2022, CY 2023, and CY 2024 PFS final rules for our previously finalized burden assumptions and requirements for submission data for the MVP performance category, and for the estimated number of clinicians participating as subgroups in the CY 2024 performance period/2026 MIPS payment year (86 FR 65590 through 65592, 87 FR 70155, and 88 FR 79443).

As discussed in section II.G.2. of this proposed rule, we are proposing to make payment for advanced primary care management (APCM) services furnished by a physician or other qualified health care professional who is responsible for all primary care (for example, physicians and non-physician practitioners, including nurse practitioners, physician assistants, certified nurse-midwives and clinical nurse specialists), and serve as the continuing focal point for all needed health care services during a calendar month. This proposed payment would incorporate several specific, existing care management and communication technology-based services into a bundle and require reporting the Value in Primary Care MVP by clinicians billing for APCM services beginning in the CY 2025 performance period/2027 MIPS payment year. We are proposing that billing practitioners who are not MIPS eligible clinicians (as defined at § 414.1305) would not be required to report the MVP in order to furnish and bill for APCM services. Based on our approach for estimating MVP as a percentage of previous traditional MIPS quality submissions discussed in section V.B.8.e.(7)(a)(i) of this proposed rule, we are unable to determine how many additional clinicians or practices would report the Value in Primary Care MVP for the CY 2025 performance period/2027 MIPS payment year above our current MVP submission estimates. Similarly, we cannot assess what participation levels clinicians or practices who may use these APCM codes, if finalized, have reported MIPS

in the past (for example, eligibility requirements and special statuses, participation at the individual, group, virtual group, or Alternative Payment Model (APM) Entity level, or reporting via traditional MIPS, the APM Performance Pathway (APP), or MVPs), or if they will be MIPS eligible clinicians in future years. We refer readers to section II.G.2. of this proposed rule for details on this proposal, and section VII.E.17.e.(2)(f) for additional discussion on burden impacts to the Quality Payment Program.

In the CY 2024 PFS final rule (88 FR 79442), we conducted an analysis to calculate the average quality measure submission rate for each newly proposed MVP for the CY 2024 performance period/2026 MIPS payment period, using measures submissions in the CY 2021 performance period/2023 MIPS payment year for clinicians with relevant clinical specialties for each proposed MVP. The total of these average quality measure submissions for each MVP was equivalent to about 2 percent of total quality measure submissions in the CY 2021 performance period/2023 MIPS payment year. We added this incremental increase of 2 percentage points to the previously approved estimate in the CY 2023 PFS final rule that 12 percent of clinicians who participated in MIPS for the CY 2021 performance period/2023 MIPS payment year will submit data for the quality performance category through MVP reporting in the CY 2023 performance period/2025 MIPS payment year (88 FR 79443).

With updated submission data available for the CY 2022 performance period/2024 MIPS payment year as discussed in section V.B.8.e.(3) of this proposed rule and updated quality measure list revisions within the MVP inventory for the CY 2024 performance period/2026 MIPS payment year (88 FR 79978 through 80047), we conducted the analysis identified in the preceding paragraph for the 16 MVPs approved for the CY 2024 performance period/2026 MIPS payment year. The total of these average quality measure submissions for each approved MVP was equivalent to 6 percent of the total quality measure submissions in the CY 2022 performance period/2024 MIPS payment year. This is a decrease from the 14 percent estimate provided in the CY 2024 PFS final rule (88 FR 79443).

As discussed in section IV.A.4.a.(1) of this proposed rule, we are proposing modifications to the 16 MVPs approved for the CY 2024 performance period/

2026 MIPS payment year reporting with the addition and removal of measures and improvement activities based on the MVP development criteria (85 FR 84849 through 84854). We are proposing to consolidate the previously finalized Optimal Care for Patients with Episodic Neurological Conditions MVP and Supportive Care for Neurodegenerative Conditions MVP into a consolidated neurological MVP titled Quality Care for Patients with Neurological Conditions. We are also proposing to add six (6) new MVPs to the MVP inventory. These proposals would provide 21 MVPs for the CY 2025 performance period/2027 MIPS payment year.

For each newly proposed MVP, we similarly calculated the average quality measure submission rate across the measures available in each MVP for the CY 2022 performance period/2024 MIPS payment year. Using updated data available from the CY 2022 performance period/2024 MIPS payment year, we calculated that the total of these average quality measure submissions for each proposed MVP was equivalent to about 4 percent of total quality measure submissions. We assume there would not be any changes to MVP submissions due to the proposal to consolidate the measures in the Optimal Care for Patients with Episodic Neurological Conditions MVP and Supportive Care for Neurodegenerative Conditions MVP into the Quality Care for Patients with Neurological Conditions MVP. That is, we assume clinicians who would have submitted the Optimal Care for Patients with Episodic Neurological Conditions MVP or the Supportive Care for Neurodegenerative Conditions MVP would instead submit the Quality Care for Patients with Neurological Conditions MVP. Therefore, we estimate the proposed changes to the MVP inventory in this proposed rule will result in an additional 4 percent of MIPS clinicians moving from traditional MIPS to MVP reporting.

Taking together the aforementioned analyses where we assessed the MVP participation rate for the 16 established MVPs at 6 percent using updated quality measure submission data from the CY 2022 performance period/2024 MIPS payment year, and the assessment that 4 percent of MIPS clinicians may move to the six proposed MVPs due to quality measure submission trends for the CY 2022 performance period/2024 MIPS payment year, we estimate that a total of 10 percent of the clinicians will participate in MVP reporting in the CY 2025 performance period/2027 MIPS payment year. This is a decrease of 4 percentage points from the currently approved estimate of 14 percent in the

CY 2024 PFS final rule (88 FR 79443). This decrease reflects the updated analysis of MVP submissions for established MVPs (from 14 percent to 4 percent) to account for the latest available MIPS submission data, and the additional 6 percent of MIPS clinicians we believe may report the 6 newly proposed MVPs due to updated quality measure submission data.

Continuing our approach used in the CY 2022, CY 2023, and CY 2024 PFS final rules (86 FR 65589 and 65590, 87 FR 70156 and 701566, and 88 FR 79443 and 79444, respectively), we assume that the number of MVP registrations will equal our estimated MVP quality submissions. We note the MVP registration window for the 12 MVPs available for the CY 2023 performance period/2025 MIPS payment year closed on November 30, 2023. As noted in section IV.A.3.b.(2). of this proposed rule, we received over 750 MVP registrations for the CY 2023 performance period/2025 MIPS payment year. MIPS submission data for the CY2023 performance period/2025 MIPS payment year was unavailable while preparing these burden estimates. We will reassess our approach as needed in future rules when both MVP registration and submission data are available for the same performance period.

(i) Burden for MVP Registration: Individuals, Groups and APM Entities

We refer readers to the CY 2024 PFS final rule (88 FR 79443 and 79444) for our previously finalized burden relevant to MVP registration for clinicians participating as an individual and/or group for MVP reporting.

In the CY 2022 PFS final rule (86 FR 65414), we finalized at

§ 414.1365(c)(4)(ii) that an MVP Participant is scored on one population health measure in accordance with § 414.1365(d)(1). Since the MVP population health measures are administrative claims-based, they do not require data submission from clinicians and do not contribute to reporting burden. To track which population health measure an MVP Participant intends to report, we finalized in the CY 2022 PFS final rule (86 FR 65417) at § 414.1365(b)(2)(i) that MVP Participants are required to select one population health measure at the time of MVP registration.

MVP Participants currently select one population measure during registration (86 FR 65589), via a drop-down list. In section IV.A.4.b.(1)(b) of this proposed rule, we are proposing to update the registration process and scoring policies for population health measures in the quality performance category. We are proposing to revise § 414.1365(d)(3)(i)(A) to state that for the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, MVP Participants will be scored on the selected population health measure and beginning in the CY 2025 performance period/2027 MIPS payment year, we would use the highest score of all available population health measures. To apply this policy to subgroups reporting an MVP, we also propose to update § 414.1365(d)(3)(i)(A)(1) to provide that for the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, subgroups will be scored on the selected population health measure based on its affiliated group score, if available, and beginning in the CY 2025 performance period/2027 MIPS

payment year a subgroup is scored on the highest score of all available population health measures based on its affiliated group score, if available. We propose to revise § 414.1365(b)(2)(i) to provide that beginning in the CY 2025 performance period/2027 MIPS payment year, each MVP Participant must select an MVP and any outcomes-based administrative claims-based measure on which the MVP Participant intends to be scored. We refer readers to section IV.A.4.b.(1) of this rulemaking for details on this proposal and scoring implications. This proposal would remove the requirement for the MVP Participant to select a population health measure during MVP registration. We assume the associated reduction in burden per application would be minimal. Therefore, we are not adjusting the burden per MVP registration from the currently approved registration time of 15 minutes (0.25 hr) (88 FR 79443 and 79444).

As discussed, we estimate that approximately 10 percent of the clinicians that currently participate in MIPS will submit data for the measures and activities in an MVP. For the CY 2025 performance period/2027 MIPS payment year, we assume that the total number of individual clinicians, groups, subgroups and APM Entities that will complete the MVP registration process is 6,285. In Table 103, we estimate that it will take 1,571 hours (6,285 responses × 0.25 hr/response) at a cost of \$167,432 (6,285 registrations × \$26.64/registration) for individual clinicians, groups and APM Entities to register for MVP reporting in the CY 2025 performance period/2027 MIPS payment year.

TABLE 103: Estimated Burden for MVP Registration (Individuals, Groups, Subgroups, and APM Entities)

| Burden and Respondent Descriptions | Burden Estimate |
|--|------------------|
| Estimated # of Individual Clinicians, Groups, Subgroups and APM Entities Registering (a) | 6,285 |
| Estimated Time Per Registration (hr) (b) | 0.25 |
| Estimated Total Annual Time for MVP Registration (c) = (a) × (b) | 1,571 |
| Computer Systems Analyst's Labor Rate (d) | \$106.54/hr |
| Estimated Cost Per Registration (e) = (d) × (b) | \$26.64 |
| Estimated Total Annual Cost for MVP Registration ((f) = (a) × (e)) | \$167,432 |

In Table 104, we illustrate the net change in burden for MVP registration using the currently approved burden in the CY 2024 PFS final rule (88 FR 79443 and 79444). In aggregate, for the CY

2025 performance period/2027 MIPS payment year, the change in the number of respondents expected to register for MVP reporting from 9,585 to 6,285 will result in a decrease of 3,300 responses.

In aggregate, when combined with the currently approved per response time estimate, this will result in a decrease of 825 hours (– 3,300 responses × 0.25hr/

response) at a cost of –\$87,912 (–3,300 responses × \$26.64/response).

TABLE 104: Change in Estimated Burden for MVP Registration (Individuals, Groups, Subgroups, and APM Entities)

| Burden and Respondent Descriptions | Burden Estimate |
|--|------------------|
| Total Currently Approved Annual Hours (a) | 2,396 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 103, row (c)) | 1,571 |
| Difference in Annual Hours (c) = (b) – (a) | -825 |
| Total Currently Approved Annual Cost (d) | \$255,344 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 103, row (e)) | \$167,432 |
| Difference in Annual Cost (f) = (e) – (d) | -\$87,912 |

(ii) Burden for Subgroup Registration

We are not proposing any changes to our currently approved subgroup registration burden (86 FR 65590) of 10 annual hours (20 responses at 0.5hr/response). As discussed in section V.B.8.e.(7)(a) of this proposed rule, we assume the proposal to remove the selection of a population health measure at the time of registration, as detailed in section IV.A.4.b.(1)(b), of this proposed rule, will not significantly impact the currently approved burden for MVP registration. We continue this assumption to subgroup registration. Therefore, we are continuing our currently approved burden for subgroup registration time of 30 minutes (0.5 hr).

We expect clinician participation in subgroups will be relatively low for the CY 2025 performance period/2027 MIPS payment year due to the voluntary subgroup reporting option and the additional burden involved for groups to organize clinicians into subgroups. Therefore, we are not proposing any adjustments to our previously finalized estimate in the CY 2022 PFS final rule (86 FR 65590) that 20 subgroups will participate in MVP reporting.

As identified in section IV.A.3.c.(1) of this proposed rule, we finalized a mandatory subgroup reporting requirement for multispecialty groups choosing to report as an MVP Participant beginning in the CY 2026 performance period/2028 MIPS payment year (§ 414.1305; 86 FR 65394 through 65397). Section IV.A.3.d. of this proposed rule includes a Request for Information (RFI) to obtain feedback on what guidance/parameters are needed for multispecialty groups to place clinicians into subgroups for reporting an MVP relevant to the scope of care provided. Absent available submission

data on MVP reporting as discussed in section V.B.8.e.(7)(a), of this proposed rule, we are unable to estimate the effect of this established policy on reporting for the CY 2026 performance period/2028 MIPS payment. We refer readers to section VII.E.17.e.(2)(g), of this proposed rule for additional discussion on burden impacts of this established policy to the Quality Payment Program.

The burden relevant to the subgroup registration requirement is currently approved by OMB under control number 0938–1314 (CMS–10621). Since this rulemaking is not proposing any new or revised subgroup registration requirements or burden, we are not proposing any changes under that control number.

(iii) Burden for MVP Quality Performance Category Submission

In the CY 2022 PFS final rule (86 FR 65411 through 65415), we finalized the reporting requirements for the MVP quality performance category at § 414.1365(c)(1)(i).

In sections IV.A.4.d.(2)(b), and IV.A.4.d.(3)(b), of this proposed rule, we are proposing to adopt minimum criteria for a qualifying data submission for a MIPS performance period for the quality performance category and to codify our existing policies governing our treatment of multiple submissions received for the quality performance category. In accordance with our discussion of this policy proposal relevant to traditional MIPS quality reporting in section V.B.8.e.(2), of this proposed rule, these proposed policies will not introduce new requirements to submit data for the quality performance category of MVPs. Therefore, we are continuing our currently approved per response time estimates for submitting

the MVP quality performance category data due to this proposal.

As described in section V.B.8.e.(7)(a) of this proposed rule, we estimate that 10 percent of the clinicians who participated in MIPS for the CY 2022 performance period/2024 MIPS payment year will submit data for the quality performance category of MVP in the CY 2025 performance period/2027 MIPS payment year. We also estimate there will be 20 subgroup reporters in the CY 2025 performance period/2027 MIPS payment year. In Table 105, we estimate that 3,020 clinicians and 10 subgroups will submit data using eCQMs collection type at \$644.93/response (see line q for eCQMs); 1,890 clinicians and 10 subgroups will submit data using MIPS CQM and QCDR collection type at \$716.31/response (see line q for CQM and QCDRs); and 1,355 clinicians and 0 subgroups will submit data for the MVP quality performance category using the Medicare Part B claims collection type at \$1,101.24/response (see line q for claims). For the CY 2025 performance period/2027 MIPS payment year, using our currently approved per response time estimates for the clinicians and subgroups submitting data for the MVP quality performance category, we estimate a burden of 16,059 hours [5.3 hr × 3,030 (3,020 + 10) responses] at a cost of \$1,954,138 (3,030 responses × \$644.93/response) for the eCQM collection type, 11,343 hours [5.97 hr × 1,900 (1,890 + 10 responses)] at a cost of \$1,360,989 (1,900 responses × \$716.31/response) for the MIPS CQM and QCDR collection type, and 12,791 hours (9.44 hr × 1,355 clinician responses) at a cost of \$1,492,180 (1,355 responses ×

\$1,101.24/response) for the Medicare
Part B claims collection type.

BILLING CODE P

TABLE 105: Estimated Burden for MVP Quality Performance Category Submission

| Burden and Respondent Descriptions | eCQM Collection Type | CQM and QCDR Collection Type | Claims Collection Type |
|--|-----------------------------|-------------------------------------|-------------------------------|
| # of Submissions from Pre-existing collection types (a) | 3,020 | 1,890 | 1,355 |
| # of Subgroup Reporters (b) | 10 | 10 | 0 |
| Total MVP Participants (c) = (a) + (b) | 3,030 | 1,900 | 1,355 |
| Hours Per Computer Systems Analyst to Submit Quality Data (d) | 1.33 | 2 | 4.8 |
| # of Hours Medical and Health Services Manager Review Measure Specifications (e) | 1.33 | 1.33 | 2 |
| # of Hours Computer Systems Analyst Review Measure Specifications (f) | 0.66 | 0.66 | 0.66 |
| # of Hours LPN Review Measure Specifications (g) | 0.66 | 0.66 | 0.66 |

| # of Hours Physician Review Measure Specifications (i) | 0.66 | 0.66 | 0.66 |
| Annual Hours per Clinician Submitting Data for MVPs (j) = (d) + (e) + (f) + (g) + (h) + (i) | 5.3 | 5.97 | 9.44 |
| Total Annual Hours (k) = (c) × (j) | 16,059 | 11,343 | 12,791 |
| Cost to Submit Quality Data (at Computer Systems Analyst's Labor Rate of \$106.54/hr) (l) = \$106.54/hr × (d) varying times | \$141.70 | \$213.08 | \$511.39 |
| Cost to Review Measure Specifications (at Medical and Health Services Manager's Labor Rate of \$129.28/hr) (m) = \$129.28/hr × (e) varying times | \$171.94 | \$171.94 | \$258.56 |
| Cost to Review Measure Specifications (at Computer Systems Analyst's Labor Rate of \$106.54/hr) (n) = \$106.54/hr × (f) | \$70.32 | \$70.32 | \$70.32 |
| Cost to Review Measure Specifications (at LPN's Labor Rate of \$58.46/hr) (o) = \$58.46/hr × (g) | \$38.58 | \$38.58 | \$38.58 |
| Cost to Review Measure Specifications (at Billing Clerk's Labor Rate of \$45.32/hr) (p) = \$45.32/hr × (h) | \$29.91 | \$29.91 | \$29.91 |
| Cost to Review Measure Specifications (at Physician's Labor Rate of \$291.64/hr) (q) = \$291.64/hr × (i) | \$192.48 | \$192.48 | \$192.48 |
| Total Annual Cost Per Submission (r) = (l) + (m) + (n) + (o) + (p) + (q) | \$644.93 | \$716.31 | \$1,101.24 |
| Total Cost (s) = (c) × (r) | \$1,954,138 | \$1,360,989 | \$1,492,180 |

BILLING CODE C

Table 106 illustrates the changes in estimated burden for clinicians who will submit the MVP quality performance category utilizing the

eCQM, MIPS CQM and QCDR, and Medicare Part B claims collection types in the CY 2025 performance period/2027 MIPS payment year. We note we used the currently approved burden in the CY 2024 PFS final rule (88 FR 79444 through 79446) as the baseline to

determine the net change in burden. In aggregate, when combined with our currently approved per response time estimate, the decrease in 3,300 respondents who will submit data for the MVP quality performance category will result in a change of -8,766 hours

and -\$1,066,714 for the eCQM collection type, -4,877 hours and -\$585,225 for the CQM and QCDR collection type, and -7,826 hours and -\$912,928 for the Medicare Part B claims collection type.

TABLE 106: Change in Estimated Burden for MVP Quality Performance Category Submission

| Burden and Respondent Descriptions | eCQM Collection Type | CQM and QCDR Collection Type | Claims Collection Type |
|--|----------------------|------------------------------|------------------------|
| Total Currently Approved Annual Hours (a) | 24,825 | 16,220 | 20,617 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 105, row (k)) | 16,059 | 11,343 | 12,791 |
| Difference in Annual Hours (c) = (b) - (a) | -8,766 | -4,877 | -7,826 |
| Total Currently Approved Annual Cost (d) | \$3,020,852 | \$1,946,214 | \$2,405,108 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 105, row (s)) | \$1,954,138 | \$1,360,989 | \$1,492,180 |
| Difference in Annual Cost (f) = (e) - (d) | -\$1,066,714 | -\$585,225 | -\$912,928 |

(8) Beneficiary Responses to CAHPS for MIPS Survey

We are not proposing any new or revised collection of patient experience information from survey respondents during the administration of the CAHPS for MIPS Survey for the CY 2025 performance period/2027 MIPS payment year. We note that we proposed updates to our estimated burden under control number 0938-1222 (CMS-10450) as discussed in the CY 2024 PFS final rule (88 FR 79446 and 79447), which were submitted under the standard non-rule PRA package. The 60-day notice for public comment for this PRA package appeared in the **Federal Register** on October 17, 2023 (88 FR 71573), and the 30-day notice for public comment appeared in the **Federal Register** on January 16, 2024 (89 FR 2622). Since this rulemaking is not proposing any new or revised CAHPS for MIPS survey requirements or burden for this ICR, we are not proposing any changes for this ICR under that control number.

(9) Group Registration for CAHPS for MIPS Survey

We are not proposing any new or revised collection of information requirements or burden related to group registration for the CAHPS for MIPS Survey for the CY 2025 performance period/2027 MIPS payment year. We

note that we proposed updates to our estimated burden under control number 0938-1222 (CMS-10450) as discussed in the CY 2024 PFS final rule (88 FR 79447 and 79448), which were submitted under the standard non-rule PRA package. The 60-day notice for this PRA package appeared in the **Federal Register** on October 17, 2023 (88 FR 71573), while the 30-day notice appeared on January 16, 2024 (89 FR 2622). Since this rulemaking is not proposing any new or revised CAHPS for MIPS survey requirements or burden for this ICR, we are not proposing any changes for this ICR under that control number.

f. ICRs Regarding the Call for MIPS Quality Measures

In this section of this proposed rule, we identify proposed adjustments to the estimated burden for the Call for MIPS Quality Measures ICR, that will be submitted to OMB for review under control number 0938-1314 (CMS-10621). These proposed adjustments are summarized in Tables 78 and 79. We are not proposing any new or revised collection of information requirements related to the call for MIPS quality measures. However, based on quality measure submissions received for CMS' consideration during the 2023 MIPS Annual Call for Quality Measures, we are adjusting our burden estimates for

the CY 2025 performance period/2027 MIPS payment year. In the CY 2024 PFS proposed rule (88 FR 52662) and the CY 2024 PFS final rule (88 FR 79448), we inadvertently noted we that we derived our estimates of 31 responses from submissions during the 2023 MIPS Annual Call for Quality Measures; we derived these estimated response from data for the 2022 MIPS Annual Call for Quality Measures. The proposed estimates in this proposed rule reflect submission changes from the 2022 and 2023 MIPS Annual Call for Quality Measures, and do not reflect proposed policies or statute changes in this proposed rule.

In this proposed rule, we estimate that we will receive 16 quality measure submissions during the 2025 MIPS Annual Call for Quality Measures, a decrease of 15 from the currently approved number of quality measure submissions for consideration (88 FR 79448 and 79449). We are not proposing any changes to the 5.5 hour (2.4 hr for practice administrator + 3.1 hr for clinician) per response time estimate for quality measure submissions.

In Table 107, we estimate an annual burden of 88 hours (16 measure submissions × 5.5 hr/measure) at a cost of \$19,430 (16 measure submissions × \$1,214.35/submission for the CY 2025 performance period/2027 MIPS payment year).

TABLE 107: Estimated Burden for Call for Quality Measures

| Burden and Respondent Descriptions | Burden Estimate |
|---|-----------------|
| # of New Quality Measures Submitted for Consideration (a) | 16 |
| # of Hours per Practice Administrator to Identify, Propose and Link Measure (b) | 2.4 |
| # of Hours per Clinician to Identify and Link Measure (c) | 1.1 |
| # of Hours per Clinician to Complete Peer Review Article Form (d) | 2 |
| Annual Hours Per Response (e) = (b) + (c) + (d) | 5.5 |
| Total Annual Hours (f)=(a)×(e) | 88 |
| Cost to Identify and Submit Measure (at Medical and Health Services Manager’s Labor Rate of \$129.28/hr) (g) = \$129.28/hr × (b) | \$310.27 |
| Cost to Identify Quality Measure and Complete Peer Review Article Form (at Clinician’s Labor Rate of \$291.64/hr) (h) = \$291.64/hr × [(c) + (d)] | \$904.08 |
| Total Annual Cost Per Submitted Measure (i) = (g) + (h) | \$1,214.35 |
| Total Annual Cost (j)=(a)×(i) | \$19,430 |

In Table 108, we illustrate the net change in estimated burden for the call for quality measures using the currently approved burden in the CY 2024 PFS final rule (88 FR 79448 and 79449). In

aggregate, the estimated decrease in the number of quality measure submissions will result in an adjustment of – 83 hours (– 15 measure submissions × 5.5 hr/measure submission) at a cost of

– \$18,215 (– 15 measure submissions × \$1,214.35/measure submission) for the CY 2025 performance period/2027 MIPS payment year.

TABLE 108: Change in Estimated Burden for Call for Quality Measures

| Burden and Respondent Descriptions | Burden Estimate |
|--|------------------|
| Total Currently Approved Annual Hours for Respondents (a) | 171 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 107, row (f)) | 88 |
| Difference in Annual Hours (c) = (b) – (a) | -83 |
| Total Currently Approved Annual Cost for Respondents (d) | \$37,645 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 107, row (j)) | \$19,430 |
| Difference in Annual Cost (f) = (e) – (d) | -\$18,215 |

g. ICRs Regarding Promoting Interoperability Data (§§ 414.1375 and 414.1380)

(1) Background

For the CY 2025 performance period/ 2027 MIPS payment year, MIPS eligible clinicians, groups, subgroups, and APM Entities can submit Promoting Interoperability performance category data through direct log in and upload or log in and attest submission types. We note that the log in and attest submission type is only available for the Promoting Interoperability performance category and is not available for the quality performance category. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability

performance category, we anticipate that MIPS eligible individual clinicians, groups, subgroups, and APM Entities will use the same data submission type for both the quality and Promoting Interoperability performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting the quality data submission will also support the Promoting Interoperability data submission process. The following burden estimates show only incremental hours required above and beyond the time already accounted for in the quality data submission process. We note that this analysis assesses burden by performance category and submission type and emphasizes that MIPS is a consolidated program. We

analyzed data submitted by MIPS eligible clinicians, groups, subgroups and APM Entities, and assessed clinician performance based on all the four MIPS performance categories, as applicable.

(2) Reweighting Applications for MIPS Performance Categories

The following proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS– 10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77240 through 77243), CY 2018 Quality Payment Program final rule (82 FR 53918 and 53919), and the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (83 FR

60011 and 60012, 84 FR 63134 and 63135, 85 FR 84984 and 84985, 86 FR 65596 through 65598, 87 FR 70160 through 70162, and 88 FR 79449 and 97450, respectively) for our previously finalized requirements for, and our analysis of the information collection and reporting burden associated with, reweighting applications for the four MIPS performance categories.

As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians may submit an application requesting reweighting to zero percent for the Promoting Interoperability, quality, cost, and/or improvement activities performance categories under specific circumstances as set forth in § 414.1380(c)(2), including, but not limited to, extreme and uncontrollable circumstances, significant hardship, or other exceptions (81 FR 77240 through 77243, 82 FR 53680 through 53686, and 82 FR 53783 through 53785).

Respondents (MIPS eligible individual clinicians, groups, or APM Entities) who apply for reweighting of the quality, cost, and/or improvement activities performance categories have the option of applying for reweighting of the Promoting Interoperability performance category on the same online form. We assume respondents applying for a reweighting of the Promoting Interoperability performance category due to extreme and uncontrollable circumstances will also request a reweighting of at least one of the other performance categories simultaneously and not submit multiple reweighting applications.

In section IV.A.4.i.(2) of this proposed rule, we are proposing to adopt a new reweighting policy at § 414.1380(c)(2)(i)(A)(10) and (c)(2)(i)(C)(12). Specifically, we are proposing that, beginning with the CY 2024 performance period/2026 MIPS payment year, that we may reweight one or more of the performance categories (that is, quality, improvement activities, or Promoting Interoperability) where we determine, based on information submitted to us on or before November 1st of the year preceding the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the

data to their third party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third party intermediary, and the third party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines. Since MIPS eligible clinicians do not submit data separately for measures in the cost performance category and we score cost measures based solely on Medicare claims data, the proposed reweighting policy does not apply to the cost performance category. We also are proposing that, to determine whether to apply reweighting to the affected performance category(ies), we would consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third party intermediary's submission of the clinician's data for the performance category(ies); whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines. Because we believe these occurrences would be rare based on our experience with related requests for reweighting, and the extent and source of documentation provided to us for each event may vary considerably, we are not proposing any changes to our currently approved burden estimates for this proposal. We refer readers to section VII.E.17.e.(2)(e) of this proposed rule for additional discussion on these burden estimates.

Table 109 summarizes our analysis of the estimated burden, including for MIPS eligible clinicians to apply for reweighting of one or more of the MIPS performance categories to zero percent due to an extreme or controllable circumstance, significant hardship, or other exception as provided in § 414.1380(c)(2)(i).

We are updating our burden estimates relevant to this ICR based on the number of reweighting applications received for the CY 2023 performance period/2025 MIPS payment year by January 2, 2024, that do not cite the public health emergency (PHE) for COVID-19 (PHE for COVID-19) as the basis for reweighting. The Federal PHE for COVID-19 under section 319 of the

Public Health Service Act ended on May 11, 2023.⁷⁸⁹ As a result of the end of the PHE, MIPS eligible clinicians will no longer be able to submit a reweighting application citing hardships from the PHE for COVID-19; therefore, we are excluding reweighting applications citing the PHE for COVID-19 in our estimate for CY 2025 performance period/2027 MIPS payment year reweighting applications. In this proposed rule, we estimate that we will receive a total of 3,297 applications to request reweighting for any or all of the four MIPS performance categories for the CY 2025 performance period/2027 MIPS payment year. Of the 3,297, we estimate that 2,490 MIPS eligible clinicians or groups will submit a request that includes reweighting the Promoting Interoperability performance category to zero percent due to a significant hardship or other exception as provided in § 414.1380(c)(2)(i)(C), and we estimate that 802 MIPS eligible clinicians or groups will submit a request to reweight one or more of the MIPS performance categories as provided in § 414.1380(c)(2)(i). Additionally, we estimate 5 APM Entities will submit an extreme and uncontrollable circumstances exception application to reweight one or more MIPS performance category for the CY 2025 performance period/2027 MIPS payment year. This adjustment, due to both updated data and the end of the PHE for COVID-19, results in a decrease of 25,930 respondents compared to our currently approved estimate of 29,227 respondents (88 FR 79449 and 79450). We note the currently approved estimate included reweighting applications citing the PHE for COVID-19.

Consistent with our assumptions in the CY 2024 PFS final rule (88 FR 79449 and 79450), we continue to estimate it will take 0.25 hours at \$106.54/hr for a computer system analyst to complete and submit the reweighting application. In Table 109, we estimate an annual burden of 824 hours (3,297 applications × 0.25 hr/application) at a cost of \$87,832 (3,297 applications × \$26.64/application) for the CY 2025 performance period/2027 MIPS payment year.

⁷⁸⁹ <https://www.hhs.gov/coronavirus/covid-19-public-health-emergency/index.html>.

TABLE 109: Estimated Burden for Reweighting Applications for MIPS Performance Categories

| Burden and Respondent Descriptions | Burden Estimate |
|--|-----------------|
| # of Eligible Clinicians or Groups Applying Due to Significant Hardship and Other Exceptions or Extreme and Uncontrollable Circumstances (a) | 3,292 |
| # APM Entities Requesting Extreme and Uncontrollable Circumstances Exception (b) | 5 |
| Total Applications Submitted (c) | 3,297 |
| Annual Hours Per Applicant per Application Submission (d) | 0.25 |
| Total Annual Hours (e) = (c) × (d) | 824 |
| Cost to Submit a Reweighting Application at Computer Systems Analyst’s Labor Rate of \$106.54/hr (f) = (d) × \$106.54/hr (f) | \$26.64 |
| Total Annual Cost (g) = (c) × (f) | \$87,832 |

In Table 110, we illustrate the net change in estimated burden for submission of reweighting applications for MIPS performance categories using the currently approved burden in the CY 2024 PFS final rule (88 FR 79449

and 79450). The adjustment in the estimated number of respondents, from 29,227 to 3,297 respondents, results in a decrease of 25,930 respondents. In aggregate, using our currently approved per response time estimate, as shown in

Table 110, the decrease in 25,930 respondents results in an adjustment of – 6,483 hours and – \$690,775 the CY 2025 performance period/2027 MIPS payment year.

TABLE 110: Change in Estimated Burden for Reweighting Applications for MIPS Performance Categories

| Burden and Respondent Descriptions | Burden Estimate |
|--|-------------------|
| Total Currently Approved Annual Hours in CY 2024 PFS Final Rule (a) | 7,307 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 109, row (e)) | 824 |
| Difference in Annual Hours (c) = (b) – (a) | -6,483 |
| Total Currently Approved Annual Cost in CY 2024 PFS Final Rule (d) | \$778,607 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 109, row (g)) | \$87,832 |
| Difference in Annual Cost (f) = (e) – (d) | -\$690,775 |

(3) Submitting Promoting Interoperability Data

The following proposed changes relevant to the submission of Promoting Interoperability data requirements and burden will be submitted to OMB for review under OMB under control number 0938–1314 (CMS–10621).

We note that we adjusted the burden estimates from the currently approved CY 2024 PFS final rule (88 FR 79451 through 79453) to incorporate updated available MIPS submission data for the CY 2022 performance period/2024 MIPS payment year, as discussed in section V.B.8.e.(3). of this proposed rule. We are not proposing changes based on the proposals discussed in section IV.A. of this proposed rule. In the following paragraphs, we discuss these proposed policies and our rationale for maintaining the currently approved

burden for the submission of Promoting Interoperability data requirements.

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77509 through 77511, and 82 FR 53919 and 53920, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (83 FR 60013 and 60014, 84 FR 63135 through 63137, 85 FR 84985 through 84987, 86 FR 65598 through 65600, 87 FR 70162 through 70164, and 88 FR 79451 through 79453, respectively) for our previously finalized requirements and burden for submission of data for the Promoting Interoperability performance category. We refer readers to § 414.1375 for our previously established policies regarding reporting for the Promoting Interoperability performance category. We also refer readers to § 414.1305 for the definition of attestation, § 414.1325

for data submission requirements, and § 414.1380(b)(4) for Promoting Interoperability performance category scoring. We refer readers to § 414.1380(c)(2)(i)(C) for our previously finalized policies regarding scoring of data submission in the Promoting Interoperability performance category after an approved reweighting for the performance category.

In section IV.A.4.d.(2)(d) of this proposed rule, we are proposing to adopt minimum criteria for a qualifying data submission for the Promoting Interoperability performance category at § 414.1325(a)(1)(iii). Currently, an incomplete data submission would void an approved reweighting of the Promoting Interoperability performance category in accordance with § 414.1380(c)(2)(i)(C). This proposal would clarify what counts as a data submission for MIPS eligible clinicians

and it would potentially avoid partial data submissions from overriding an approved reweighting or a previously scored submission for the Promoting Interoperability performance category. Specifically, we propose that a qualifying data submission for the Promoting Interoperability performance category must include all the following elements: (1) performance data, including any claim of an applicable exclusion, for the measures in each objective, as specified by CMS; (2) required attestation statements, as specified by CMS; specified by CMS; (3) CMS EHR Certification ID (CEHRT ID) from the Certified Health IT Product List (CHPL); and (4) the start date and end date for the applicable performance period as set forth in § 414.1320. If we receive a qualifying data submission meeting the proposed minimum criteria for reporting, then we will review the data submission and score the Promoting Interoperability performance category in accordance with our applicable scoring policies. We refer readers to section IV.A.4.d.(2)(d) of this proposed rule for additional background and details on this proposal. We are not proposing any changes to the existing scoring or reweighting policies described under § 414.1380 for the MIPS performance categories in this section IV.A.4.d. Our current estimates assume that PI submissions include all requirements for scoring; therefore, we are not adjusting our established per response time estimate.

In section IV.A.4.d.(3)(c) of this proposed rule, we are also proposing to modify our policy governing our treatment of multiple data submissions received for the Promoting Interoperability performance category, which we propose to codify at § 414.1325(f)(2). Specifically, we are proposing that, in cases where CMS receives multiple submissions for the Promoting Interoperability performance category, CMS would calculate a score for each data submission received and assign the highest of the scores.

In our analysis of the information collection and reporting burden, we are not adjusting our estimated number of respondents submitting Promoting Interoperability data. These proposals intend to significantly reduce certain issues with the scoring of unintended data submissions affecting MIPS payment adjustments for individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities. These two proposals may limit the unintentional overriding of an approved reweighting or an existing scoreable submission. Our currently approved per response estimates incorporate the

required measures and attestations and other required data elements identified in sections IV.A.4.d.(2)(d) and IV.A.4.d.(3)(c) of this proposed rule.

In the CY 2022 PFS final rule, we finalized at § 414.1365(c)(4)(i) that an MVP Participant is required to meet the Promoting Interoperability reporting requirements. We also finalized at § 414.1365(c)(4)(i)(A) the requirements for a subgroup participating in MVP reporting (86 FR 65413 and 65414). Specifically, we stated that for the CY 2023 and 2024 MIPS performance periods/2025 and 2026 MIPS payment years, an MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category. The submission of the affiliated group's data will be on the subgroup's behalf. If the affiliated group chooses to report as a group for the Promoting Interoperability performance category, the group will still be required to submit its own data separately and in accordance with the reporting rules for groups. In section IV.A.4.b.(4) of this rulemaking, we are proposing to modify § 414.1365(c)(4)(i)(A) by removing the references to the specific MIPS performance periods/payment years to state that an MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category. The proposed change would allow a subgroup to submit the affiliated group's data for the MVP Promoting Interoperability performance category for the CY 2025 performance period/2027 MIPS payment year and beyond. As this proposal would not create new reporting requirements, there are no burden implications for this proposal.

The Department of Health and Human Services (HHS) final rule, 21st Century Cures Act: Establishment of Disincentives for Health Care Providers That Have Committed Information Blocking (hereafter referred to as the Disincentives final rule) was released on June 24, 2024 (<https://www.healthit.gov/topic/information-blocking#Disincentives>). Section IV.A.4.e.(4)(d) of this proposed rule summarizes several policies in the Disincentives final rule under which a MIPS eligible clinician that the Office of Inspector General determines has committed information blocking would not be a meaningful EHR user, and therefore would be unable to earn a score (instead earning a score of zero) for the Promoting Interoperability performance category. We note the Disincentives final rule described in section IV.A.4.e.(4)(d) of this proposed rule would not create any additional

reporting, recordkeeping, or third party disclosure requirements. Consequently, we are not proposing any updates in this proposed rule.

In sections IV.A.4.e (4)(e)(iii) of this proposed rule, we note that we recently released the CMS Interoperability and Prior Authorization final rule which appeared in the **Federal Register** on February 8, 2024 (89 FR 8758). In the CMS Interoperability and Prior Authorization final rule, we finalized the addition of a new measure, the "Electronic Prior Authorization" measure, under the Health Information Exchange (HIE) objective for the MIPS Promoting Interoperability performance category beginning with the CY 2027 performance period/2029 MIPS payment year (89 FR 8909 through 8927). The burden estimate for MIPS clinicians to report the "Electronic Prior Authorization measure" was provided in the CMS Interoperability and Prior Authorization final rule (89 FR 8953 through 8956). In the CMS Interoperability and Prior Authorization final rule, we identified that this measure will be included in a PRA package related to the CMS Interoperability and Prior Authorization final rule (89 FR 8946). Consequently, we are not proposing any updates in this proposed rule.

Due to the availability of updated data on the Promoting Interoperability submissions during the CY 2022 performance period/2024 MIPS payment year, we are adjusting our currently approved estimated burden for the submission of data in Promoting Interoperability performance category (88 FR 79451 and 79452). In Table 111, we estimate that a total number of 18,609 respondents, consisting of 14,500 individual MIPS eligible clinicians, 4,089 groups and virtual groups, and 20 subgroups will submit data for the Promoting Interoperability performance category in the CY 2025 performance period/2027 MIPS payment year.

As noted in section V.B.8.a.(1)(a) of this proposed rule, we have not updated our Quality Payment Program burden estimates to reflect MIPS Promoting Interoperability reporting requirements of non-MIPS eligible clinicians due to requirements for the Shared Savings Program. For MIPS eligible clinicians participating in an APM, we continue our assumption from the CY 2023 PFS final rule (87 FR 70163) and CY 2024 PFS final rule (88 FR 79451) that each MIPS eligible clinician in an APM Entity reports data for the Promoting Interoperability performance category through either their group TIN or individual reporting in the CY 2019 PFS final rule, we established that MIPS

eligible clinicians who participate in the Shared Savings Program are no longer limited to reporting for the Promoting Interoperability performance category through their ACO participant TIN (83 FR 59822 and 59823). Burden estimates for this proposed rule assume group TIN-level reporting as we believe this is

the most reasonable assumption for MIPS eligible clinicians in the Shared Savings Program, which requires that ACOs include full TINs as ACO participants. Accordingly, we assume that any Promoting Interoperability data submitted at the APM-Entity level adheres to APM or Shared Savings

Program requirements. Sections 1899 and 1115A of the Act (42 U.S.C. 1395jj and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA.

TABLE 111: Estimated Number of Respondents to Submit Promoting Interoperability Performance Data

| Burden and Respondent Descriptions | # of Respondents |
|---|------------------|
| # of Individual Clinicians to Submit Promoting Interoperability in CY 2025 Performance Period (a) | 14,500 |
| # of Groups to Submit Promoting Interoperability in CY 2025 Performance Period (b) | 4,089 |
| # of Subgroups to Submit Promoting Interoperability in MVPs during the CY 2025 Performance Period (c) | 20 |
| Total Respondents in CY 2025 Performance Period (d) = (a) + (b) + (c) | 18,609 |
| Currently Approved Respondents (2024 PFS Final Rule) (e) | 25,990 |
| Difference in # of Respondents (f) = (d) – (e) | -7,381 |

As shown in Table 112, we are continuing our currently approved estimated time of 2.70 hours per response. Therefore, we estimate that it will result in a total burden of 50,244 hours (18,609 respondents × 2.70

incremental hours for a computer analyst's time above and beyond the physician, medical and health services manager, and computer system's analyst time required to submit quality data) and \$5,353,065 (18,609 responses ×

\$287.66/response) to submit data for the Promoting Interoperability performance category in the CY 2025 performance period/2027 MIPS payment year.

TABLE 112: Estimated Burden for Promoting Interoperability Performance Category Data Submission

| Burden and Respondent Description | Burden Estimate |
|--|--------------------|
| Number of Individual Clinicians to Submit Promoting Interoperability (a) | 14,500 |
| Number of Groups to Submit Promoting Interoperability (b) | 4,089 |
| Number of Subgroups to Submit Promoting Interoperability (c) | 20 |
| Total Respondents (d) = (a) + (b) + (c) | 18,609 |
| Annual Hours Per Respondent (e) | 2.70 |
| Total Annual Hours (f) = (d) × (e) | 50,244 |
| Cost per Respondent to Submit Promoting Interoperability Data at Computer System Analyst's Labor Rate \$106.54 (g) = (e) × \$106.54/hr (g) | \$287.66 |
| Total Annual Cost (h) = (d) × (g) | \$5,353,065 |

In Table 113, we illustrate the change in burden for clinicians to submit data in the Promoting Interoperability performance category for the CY 2025

performance period/2027 MIPS payment year. In aggregate, we estimate that the decrease in the number of respondents from 25,990 to 18,609 will

result in an adjustment of – 19,929 hours (– 7,381 respondents × 2.70 hr/response) and – \$2,123,218.

TABLE 113: Change in Estimated Burden for Promoting Interoperability Performance Category Data Submission

| Burden and Respondent Description | Burden Estimate |
|--|---------------------|
| Total Currently Approved Annual Hours (a) | 70,173 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (see Table 112, row (f)) | 50,244 |
| Difference in Annual Hours (c) = (b) – (a) | -19,929 |
| Total Currently Approved Annual Cost (d) | \$7,476,283 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (see Table 112, row (h)) | \$5,353,065 |
| Difference in Annual Cost (f) = (e) – (d) | -\$2,123,218 |

h. ICRs Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

The following proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621)

We are not proposing changes due to the improvement activities proposals discussed in section IV.A. of this proposed rule. In the following paragraphs, we discuss these proposed policies and our reasons for not changing the currently approved per response burden for improvement activities submission.

In section IV.A.4.e.(3)(b)(iv) of this proposed rule, we are proposing two scoring and reporting policy changes for the improvement activities performance category effective for the CY 2025 performance period/2027 MIPS payment year and subsequent years. First, we are proposing to eliminate the weighting of improvement activities. In the CY 2017 Quality Payment Program final rule, we established a differentially weighted model for the improvement activities performance category with two categories, medium and high, to provide flexible scoring (81 FR 28210). In that rule (81 FR 77177 and 77178), we codified at § 414.1380(b)(3) that clinicians (except for non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic health professional shortage areas (HPSAs)) receive 10 points for each medium-weighted improvement activity and 20 points for each high-weighted improvement activity. Non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity.

Second, we are proposing to further simplify improvement activity reporting requirements by reducing the number of activities to which clinicians are required to attest to achieve a score in the improvement activities performance category, beginning in the CY 2025 performance period/2027 MIPS payment year. Currently, MIPS eligible clinicians are required to report two high-weighted activities, four medium-weighted activities, or one high-weighted and two medium-weighted activities while MVP participants are currently required to report one high-weighted activity or two medium-weighted activities. We are proposing that MIPS eligible clinicians who participate in traditional MIPS would be required to report two activities and MVP participants would be required to report one activity to achieve 40 points, or full credit. In addition, we are proposing that MIPS eligible clinicians who are categorized as small practice, rural, in a provider-shortage area, or non-patient facing would now be required to report one activity (for either traditional MIPS or MVPs).

We established our currently approved estimate that it will take a computer analyst 5 minutes to log in and manually attest that improvement activities were completed in the CY 2019 PFS final rule (83 FR 60016). We believe the proposed removal of weighting for improvement activities will decrease burden for MIPS eligible clinicians who previously reported medium-weighted activities. As MIPS eligible clinicians who previously only reported high-weighted activities will have the same attestation requirements under this proposal, we are not proposing a change to our currently estimated per response burden. We refer readers to section VII.E.17.e.(2)(c) of this proposed rule where we discuss our impact analysis for this proposal.

In section IV.A.4.e.(3)(b)(iii) of this rulemaking, we are also proposing changes to the improvement activities inventory for the CY 2025 performance period/2027 MIPS payment year and future years as follows: adding two new improvement activities; modifying two existing improvement activities; and removing eight previously adopted improvement activities. In the CY 2023 PFS final rule (87 FR 70211) and the 2024 PFS final rule (88 FR 79519), we anticipated that most clinicians performing improvement activities, to comply with existing MIPS policies, will continue to perform the same activities because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rulemaking (82 FR 54175). We believe this proposal will not significantly affect burden because the majority of activities are not revised. We refer readers to section VII.E.17.e.(2)(b) of this proposed rule where we discuss our impact analysis for this proposal, and section VII.E.17.e.(2)(c) where we discuss the impact analysis for modifications to improvement activities scoring and reporting policies. As discussed in section IV.A.4.d.(2)(c) in this proposed rule, we previously finalized at § 414.1360(a)(2) that MIPS eligible clinicians, groups, virtual groups, or subgroups must submit a yes response for each improvement activity that is performed for at least a continuous 90-day period during the applicable performance period to receive points in the improvement activities performance category described under § 414.1360(b)(3). We currently assign a score for any submission or attestation received in the improvement activities performance category via the submission types described under § 414.1325(a)(1) regardless of whether the submission or

attestation included a yes response or not. Several MIPS eligible clinicians have notified us that there have been instances where they unintentionally submitted non-scorable data for a MIPS performance category, which overrode an approved reweighting or a previously scorable data submission for a performance categories. In the event of a submission without yes responses, we currently assign a score of zero. In section IV.A.4.d.(2)(c). of this proposed rule, we are proposing to adopt minimum criteria for a qualifying data submission for a performance period for the improvement activities performance category. We are proposing to specify what we consider to be a data submission at § 414.1325(a)(1)(ii) to state that for the improvement activities performance category, a data submission must include a response of “yes” for at least one activity in the MIPS improvement activities inventory. We anticipate the proposed change would potentially avoid unintentional overriding of an approved reweighting or a prior data submission for the improvement activities performance category due to submissions or

attestations without a response of “yes” for any of the improvement activities. We note that we are not proposing any changes to the data submission criteria and scoring for the improvement activities performance category described under §§ 414.1360 and 414.1380(b)(3) respectively.

Additionally, we are proposing to codify our existing policies governing multiple data submissions received for the improvement activities performance category at § 414.1325(f)(1). We refer readers to section IV.A.4.d.(3)(b) of this proposed rule for details. These proposals, if finalized, would not affect the requirements for MIPS eligible clinicians and groups that submit data for the improvement activities performance category. We assume these proposals would not affect the number improvement activities submissions, as the intent is to eliminate certain issues with the scoring of an unintended data submission affecting payment adjustments for individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities. Therefore, we are not proposing any adjustments to our currently approved estimated burden due to these policy proposals.

As shown in Table 114, we are adjusting the currently approved burden estimates (88 FR 79454 and 79455) due to available updated submission data for the CY 2022 performance period/2024 MIPS payment year, as discussed in section V.B.8.e.(3). of this proposed rule. As identified in Table 79, the proposed change in burden reflects adjustments for updated data, rather than proposed requirements or statutes in this proposed rule. We estimate that a total of 38,433 respondents consisting of 29,017 individual clinicians, 9,396 groups and 20 subgroups will submit improvement activities during the CY 2025 performance period/2027 MIPS payment year. This adjustment represents a decrease of 11,856 respondents from the currently approved estimate of 50,289 respondents in the CY 2024 PFS final rule (88 FR 79454 and 79455). We did not include in our estimates clinicians who participated in an APM Entity and are determined to be QPs for the CY 2022 performance period/2024 MIPS payment year as we assume they are not required to submit improvement activities data.

TABLE 114: Estimated Number of Respondents to Submit Improvement Activities Data

| Burden and Respondent Descriptions | Count |
|--|----------------|
| # of Clinicians to Participate in Improvement Activities Data Submission as During the CY 2025 Performance Period (a) | 29,017 |
| # of Groups to Submit Improvement Activities on Behalf of During the CY 2025 Performance Period (b) | 9,396 |
| # of Subgroups to Submit Improvement Activities in MVPs During the CY 2025 Performance Period (c) | 20 |
| Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to Submit Improvement Activities Data During the CY 2025 Performance Period (d) = (a) + (b) + (c) | 38,433 |
| Total # of Currently Approved Respondents (Groups, Virtual Groups, and Individual Clinicians) to Submit Improvement Activities Data (CY 2024 PFS Final Rule) (e) | 50,289 |
| Difference in # of Respondents (f) = (d) – (e) | -11,856 |

In Table 115, we continue to estimate that the time required per response per individual or group is 5 minutes or 0.083 hours for a computer system analyst at a labor rate of \$106.54/hr to submit by logging in and manually

attesting that certain activities were performed in the form and manner specified by CMS with a set of authenticated credentials. Therefore, we estimate an annual burden of 3,190 hours (38,433 respondents × 0.083 hr/

response) at a cost of \$339,748 (38,433 respondents × \$8.84/response) for the CY 2025 performance period/2027 MIPS payment year.

TABLE 115: Estimated Burden for Improvement Activities Data Submission

| Burden and Respondent Descriptions | Burden Estimate |
|---|------------------|
| Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to Submit Improvement Activities Data on Behalf of Clinicians During the CY 2025 Performance Period (a) | 38,433 |
| Total Annual Hours Per Respondent (b) | 0.083 |
| Total Annual Hours (c) = (a) × (b) | 3,190 |
| Cost per Respondent to Submit Improvement Activities Data at Computer System Analyst's Labor Rate of \$106.54/hr (d) = (b) × \$106.54/hr | \$8.84 |
| Total Annual Cost (e) = (a) × (d) | \$339,748 |

As shown in Table 116, using our unchanged currently approved per respondent burden estimate, the

decrease in the number of respondents results in an adjustment of -984 hours and -\$104,807 for the CY 2025

performance period/2027 MIPS payment year.

TABLE 116: Change in Estimated Burden for Improvement Activities Submission

| Burden and Respondent Descriptions | Burden Estimate |
|--|-------------------|
| Total Currently Approved Annual Hours (a) | 4,174 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 115, row (c)) | 3,190 |
| Difference in Annual Hours (c) = (b) - (a) | -984 |
| Total Currently Approved Annual Cost (d) | \$444,555 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 115, row (e)) | \$339,748 |
| Difference in Annual Cost (f) = (e) - (d) | -\$104,807 |

i. ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)

In this rulemaking, we are not proposing any new or revised collection of information requirements or burden related to the Nomination of Improvement Activities for the CY 2025 performance period/2027 MIPS payment year. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes to the Nomination of Improvement Activities under that control number.

j. ICRs Regarding the Nomination of MVPs

In section IV.A.4.a.(2) of this proposed rule, we are proposing a modification to the MVP maintenance webinar process previously finalized in the CY 2022 PFS final rule (86 FR 65410) and modified in the CY 2023 PFS final rule (87 FR 70037). Specifically, we are proposing to modify

the MVP maintenance webinar process to provide us more flexibility in how we communicate submitted maintenance recommendations prior to proposing them formally in rulemaking. We believe this flexibility in communicating recommendations through alternative webinar formats or other public communication channels would offer similar opportunities for public review and feedback as a live public webinar. As this proposal would not require additional steps to the MVP nomination process described in the CY 2021 PFS final rule (85 FR 84990 and 84991), we are continuing our currently approved 12 hours per response burden estimate for the CY 2025 performance period/2027 MIPS payment year. We refer readers to section VII.E.17.e.(2)(d) of this proposed rule where we discuss our impact analysis for this proposal.

The requirements and burden for the nomination of MVPs are currently approved by OMB under control number 0938-1314 (CMS-10621). Since the proposed change does not set out

any new or revised requirements or burden outside of providing CMS with flexibility in how we communicate, we are not proposing any changes to the nomination of MVPs under that control number.

k. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938-1197; CMS-1500 and CMS-1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by CD or hardcopy. Moreover, the following proposals in section IV.A.4.e.(2) of this proposed rule would not result in the need to add or revise or delete any claims data fields: (1) add 6 new episode-based cost measures; (2) modify 2 existing episode-based measures; (3) update the operational list of care episode and

patient condition groups and codes to reflect new and modified measures we are proposing; (4) and adopt criteria to specify objective bases for the removal of any cost measures from the MIPS cost performance category. Consequently, we are not proposing any changes under the aforementioned control number. We refer readers to section IV.A.4.e.(2).for details on these proposals.

l. ICRs Regarding Partial QP Elections (§§ 414.1310(b) and 414.1430)

We are not proposing any new or revised collection of information requirements or related to the Partial QP Elections to participate in MIPS as a MIPS eligible clinician in the CY 2025 performance period/2027 MIPS payment year. In this section of this proposed rule, we identify proposed

adjustments to the estimated burden for partial QP elections that will be submitted to OMB for review under control number 0938–1314 (CMS–10621), as summarized in Tables 78 and 79. These proposed adjustments to estimated burden for the CY 2025 performance period/2027 MIPS payment year are due to the availability of updated data, rather than proposed policies or statute changes in section IV.A.4. of this proposed rule.

Based on the number of QP elections submitted for the CY 2023 performance period/2025 MIPS payment year, we estimate in this proposed rule that we will receive a total of 18 partial QP elections from 18 APM respondents (representing 333 distinct national provider identifiers (NPIs) and 363

distinct TIN/NPIs). We do not estimate any partial QP elections at the eligible clinician level, as no individual eligible clinicians elected to report as partial QPs for the CY 2023 performance period/2025 MIPS payment year. This estimate is a decrease of 269 submissions from the currently approved estimate of 287 (87 FR 70167 and 70168). We continue to estimate it will take 0.25 hours for a computer system analyst or equivalent to complete and submit the election process.

In Table 117, we estimate an annual burden of 5 hours (18 responses × 0.25 hr/response) at a cost of \$480 (18 responses × \$26.64/response) for the CY 2025 performance period/2027 MIPS payment year.

TABLE 117: Estimated Burden for Partial QP Elections

| Burden and Respondent Descriptions | Burden Estimate |
|--|-----------------|
| Total # of Respondents Making Partial QP Election (18 APM Entities, 0 Eligible Clinicians) (a) | 18 |
| Total Annual Hours per Other Payer Arrangement (b) | 0.25 |
| Total Annual Hours (c) = (a) × (b) | 5 |
| Cost per Respondent at Computer System Analyst’s Labor Rate of \$106.54/hr (d) = (b) × \$106.54/hr | \$26.64 |
| Total Annual Cost (e) = (a) × (d) | \$480 |

In Table 118, we illustrate the net change in estimated burden for the Partial QP Election Process using the currently approved burden in the CY

2023 PFS final rule (87 FR 70167 and 70168). In aggregate, the estimated change in responses will result in an adjustment of –67 hours and –\$7,166

for the CY 2025 performance period/2027 MIPS payment year.

TABLE 118: Change in Estimated Burden for Partial QP Elections

| Burden and Respondent Descriptions | Burden Estimate |
|--|-----------------|
| Total Currently Approved Annual Hours for Respondents (a) | 72 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 117, row (c)) | 5 |
| Difference in Annual Hours (c) = (b) – (a) | -67 |
| Total Currently Approved Annual Cost for Respondents (d) | \$7,646 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 117, row (e)) | \$480 |
| Difference in Annual Cost (f) = (e) – (d) | -\$7,166 |

m. ICRs Regarding Other Payer Advanced APM Determinations: Payer-Initiated Process (§ 414.1445) and Eligible Clinician-Initiated Process (§ 414.1445)

In this section, we identify proposed adjustments to the estimate burden for ICRs regarding other payer advanced APM determinations. These proposed adjustments, summarized in Tables 78 and 79, reflect the availability of updated data rather than proposed policies or statutory requirements, and will be submitted to OMB for review

under control number 0938–1314 (CMS–10621).
(1) Payer-Initiated Process (§ 414.1445)

We are not proposing any new or revised collection of information requirements related to the Payer-Initiated Process for the CY 2025 performance period/2027 MIPS payment year. Due to declining requests in recent years, we are adjusting our burden estimates for the CY 2025 performance period/2027 MIPS payment year. In this proposed rule, we estimate that we will receive 10

submissions for the Payer-Initiated Process for the CY 2025 performance period/2027 MIPS payment year, a decrease of 5 submissions from the currently approved estimate of 15 responses (86 FR 65607 and 65608). We continue to estimate it will take 10 hours for a computer system analyst per arrangement.

In Table 119, we estimate an annual burden of 100 hours (10 responses × 10 hr/response) at a cost of \$10,654 (10 responses × \$1,065.40/response) for the CY 2025 performance period/2027 MIPS payment year.

TABLE 119: Estimated Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

| Burden and Respondent Descriptions | Burden Estimate |
|--|-----------------|
| Total # of Other Payer Arrangements (2 Medicaid, 6 Medicare Advantage Organizations, 2 Remaining Other Payers) (a) | 10 |
| Total Annual Hours per Other Payer Arrangement (b) | 10 |
| Total Annual Hours (c) = (a) × (b) | 100 |
| Cost per Respondent at Computer System Analyst’s Labor Rate of \$106.54/hr (d) = (b) × \$106.54/hr | \$1,065.40 |
| Total Annual Cost (e) = (a) × (d) | \$10,654 |

In Table 120, we illustrate the net change in estimated burden for the Payer-Initiated Process using the currently approved responses in the CY

2022 PFS final rule (86 FR 65606 and 65607). In aggregate, the estimated change in the number of responses will result in an adjustment of – 50 hours

and – \$5,327 for the CY 2025 performance period/2027 MIPS payment year.

TABLE 120: Change in Estimated Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

| Burden and Respondent Descriptions | Burden Estimate |
|--|-----------------|
| Total Currently Approved Annual Hours for Respondents (a) | 150 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 119, row (c)) | 100 |
| Difference in Annual Hours (c) = (b) – (a) | -50 |
| Total Currently Approved Annual Cost for Respondents (d) | \$15,981 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 119, row (e)) | \$10,654 |
| Difference in Annual Cost (f) = (e) – (d) | -\$5,327 |

(2) Eligible Clinician-Initiated Process (§ 414.1445)

We are not proposing any new or revised collection of information requirements related to the Eligible Clinician-Initiated Process for the CY 2025 performance period/2027 MIPS payment year. Due to declining requests

in recent years, we are adjusting our burden estimates for the CY 2025 performance period/2027 MIPS payment year. In this proposed rule, we estimate that we will receive 10 submissions for the Eligible Clinician-Initiated Process for the CY 2025 performance period/2027 MIPS

payment year, a decrease of 5 submissions from the currently approved estimate of 15 (86 FR 65607 and 65608). We continue to estimate it will take 10 hours for a computer system analyst to complete and submit the payment arrangement.

In Table 121, we estimate an annual burden of 100 hours (10 responses × 10 hr/response) at a cost of \$10,654 (10 responses × \$1,065.40/response) for the CY 2025 performance period/2027 MIPS payment year.

TABLE 121: Estimated Burden for Other Payer Advanced APM Identification Determinations: Eligible Clinician-Initiated Process

| Burden and Respondent Descriptions | Burden Estimate |
|--|-----------------|
| Total # of Other Eligible Clinician-Initiated Arrangements (a) | 10 |
| Total Annual Hours per Other Payer Arrangement (b) | 10 |
| Total Annual Hours (c) = (a) × (b) | 100 |
| Cost per Respondent at Computer System Analyst’s Labor Rate of \$106.54/hr (d) = (b) × \$106.54/hr | \$1,065.40 |
| Total Annual Cost (e) = (a) × (d) | \$10,654 |

In Table 122, we illustrate the net change in estimated burden for the Eligible Clinician-Initiated Process using the currently approved responses in the CY 2022 PFS final rule (86 FR 65607 and 65608). In aggregate, the estimated change in the number of responses will result in an adjustment of – 50 hours and – \$5,327 for the CY 2025 performance period/2027 MIPS payment year.

TABLE 122: Change in Estimated Burden for Other Payer Advanced APM Identification Determinations: Clinician-Initiated Process

| Burden and Respondent Descriptions | Burden Estimate |
|--|-----------------|
| Total Currently Approved Annual Hours for Respondents (a) | 150 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 121, row (c)) | 100 |
| Difference in Annual Hours (c) = (b) – (a) | -50 |
| Total Currently Approved Annual Cost for Respondents (d) | \$15,981 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 121, row (e)) | \$10,654 |
| Difference in Annual Cost (f) = (e) – (d) | -\$5,327 |

(3) Submission of Data for QP Determinations Under the All-Payer Combination Option (§ 414.1440)

We are not proposing any new or revised collection of information requirements related to the Submission of Data for QP Determinations under the All-Payer Combination Option for the CY 2025 performance period/2027 MIPS payment year. In the past few years, we have observed a significant drop in the number of submissions from payment

arrangements from outside parties. Therefore, we are adjusting our estimates downward for the CY 2025 performance period/2027 MIPS payment year. In this proposed rule, we estimate that 10 APM Entities, 100 TINs, and 10 eligible clinicians will submit data for QP determinations under the All-Payer Combination Option in CY 2025 performance period/2027 MIPS payment year. Our aggregated estimate of 120 submissions is a decrease of 431

submissions from our currently approved estimate of 551 in the CY 2020 PFS final rule (84 FR 63113 and 63114). We continue to estimate it will take 5 hours for a medical or health systems to prepare and submit an arrangement.

In Table 123, we estimate an annual burden of 600 hours (120 responses × 5 hr/response) at a cost of \$77,568 (120 responses × \$646.40/response) for the CY 2025 performance period/2027 MIPS payment year.

TABLE 123: Estimated Burden for the Submission of Data for All-Payer QP Determinations

| Burden and Respondent Descriptions | Burden Estimate |
|---|-----------------|
| Total # of APM Entities Submitting Data for All-Payer QP Determinations (a) | 10 |
| Total # of TINs Submitting Data for All-Payer QP Determinations (b) | 100 |
| Total # of Eligible Clinicians Submitting Data for All-Payer QP Determinations (c) | 10 |
| Total # of Respondents (d) = (a) + (b) + (c) | 120 |
| Hours Per respondent QP Determinations (e) | 5 |
| Total Annual Hours (f) = (d) × (e) | 600 |
| Cost per Respondent at Medical and Health Services Manager Labor Rate of \$129.28/hr (g)
= (e) × \$129.28/hr | \$646.40 |
| Total Annual Cost (h) = (d) × (g) | \$77,568 |

In Table 124, we illustrate the net change in estimated burden for the submission of data for all-payer QP determinations using the currently

approved responses in the CY 2020 PFS final rule (84 FR 63113 and 63114). In aggregate, the estimated change in the number of responses will result in an

adjustment of – 2,155 hours and – \$278,598 for the CY 2025 performance period/2027 MIPS payment year.

TABLE 124: Change in Estimated Burden for the Submission of Data for All-Payer QP Determinations

| Burden and Respondent Descriptions | Burden Estimate |
|--|-------------------|
| Total Currently Approved Annual Hours for Respondents (a) | 2,755 |
| Total Annual Hours for Respondents in CY 2025 PFS Proposed Rule (b) (See Table 123, row (f)) | 600 |
| Difference in Annual Hours (c) = (b) – (a) | -2,155 |
| Total Currently Approved Annual Cost for Respondents (d) | \$356,166 |
| Total Annual Cost for Respondents in CY 2025 PFS Proposed Rule (e) (See Table 123, row (h)) | \$77,568 |
| Difference in Annual Cost (f) = (e) – (d) | -\$278,598 |

n. ICRs Regarding Voluntary Participants Election to Opt-Out of Performance Data Display on Compare Tools (§ 414.1395)

This rulemaking is not proposing any new or revised collection of information requirements or burden related to the election by voluntary participants to opt-out of public reporting on Compare Tools for the CY 2025 performance

period/2027 MIPS payment year. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not proposing any changes to the election of voluntary participants to opt-out of performance data display on Compare Tools under that control number.

C. Summary of Proposed Annual Burden Estimates

Table 125 sets out the burden for this rulemaking's proposed provisions that are subject to the PRA. It does not score burden adjustments that are strictly based on updated data and are unrelated to any of the proposed provisions.

TABLE 125: Annual Requirements and Burden Estimates

| Section(s) Under Title 42 of the CFR | OMB Control Number (CMS ID No.) | No. Respondents | Total Annual Responses | Time per Response (hours) | Total Annual Labor Time (hours) | Total Annual Labor Cost (\$/hr) | Total Cost (\$) |
|---|---------------------------------|---|------------------------|---------------------------|---------------------------------|---------------------------------|--------------------|
| §§ 414.1318, 414.1325, 414.1335, 414.1360, 414.1365, 414.1375, 414.1380, 414.1400, 414.1430, 414.1440, and 414.1445
Quality Payment Program | 0938-1314 (CMS-10621) | 57,247 (56,981 clinicians and groups-level TINs; 218 APMs, 10 payers, 218 third part intermediaries or entities responding to calls for nomination) | (35,357) | Varies | (78,366) | Varies | (9,000,834) |
| §§ 427.402(c)(4) and (5), 428.302(c)(4) and (5), and 428.303(c)(4) and (5)
(Regarding Rebate Reduction Requests Submitted Under Sections 11101 and 11102 of the Inflation Reduction Act) | 0938-NEW (CMS-10858) | 20 | 20 | 31 | 620 | Varies | 74,756 |
| TOTAL | | 57,267 | (35,337) | Varies | (77,746) | Varies | (8,926,078) |

D. Submission of PRA-Related Comments

We have submitted a copy of this proposed rule to OMB for its review of the rule’s information collection requirements. The requirements are not effective until they have been approved by OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections discussed previously, please visit the CMS website at <https://www.cms.gov/regulations-and-guidance/legislation/paperworkreductionactof1995/pralisting>, or call the Reports Clearance Office at 410–786–1326.

We invite public comments on these potential information collection requirements. If you wish to comment, please submit your comments electronically as specified in the **DATES** and **ADDRESSES** sections of this proposed rule and identify the rule (CMS–1807–P), the ICR’s CFR citation, and OMB control number.

VI. Response to Comments

Because of the large number of public comments, we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will

respond to the comments in the preamble to that document.

VII. Regulatory Impact Analysis

A. Statement of Need

In this proposed rule, we are proposing payment and policy changes under the Medicare PFS and changes to implement amendments made under the section 502 of the Further Continuing Appropriations and Other Extensions Act, 2024 (Pub. L. 118–22) (FCAOEA, 2024). Our proposed policies in this rulemaking specifically address: changes to the PFS; and other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, the relative value of services, and changes in the statute; updates and refinements to Medicare Shared Savings Program (Shared Savings Program) requirements; updates to the Quality Payment Program (MIPS and Advanced APMs); changes to payment policies for drugs and biologicals products paid under Medicare Part B, changes to the Clinical Laboratory Fee Schedule requirements, other changes to Medicare Part B payment policies for Rural Health Clinics and Federally Qualified Health Centers, the Medicare coverage of opioid use disorder services furnished by opioid treatment programs and coverage and payment for certain preventive services; updates to electronic prescribing for controlled

substances for a covered Part D drug under a prescription drug plan or an MA–PD plan (section 2003 of the SUPPORT Act); and proposed change to the regulations associated with the Ambulance Fee Schedule. The policies reflect CMS’ stewardship of the Medicare program and overarching policy objectives for ensuring equitable beneficiary access to appropriate and quality medical care.

1. Statutory Provisions

a. Clinical Laboratory Fee Schedule (CLFS)—Proposed Revisions Consistent With Recent Statutory Changes

In section III.F. of this proposed rule, we propose the conforming regulations text changes for CLFS data reporting requirements due to the enactment of section 502 of the Further Continuing Appropriations and Other Extensions Act, 2024 (Pub. L. 118–22) (FCAOEA, 2024). For clinical diagnostic laboratory tests (CDLTs) that are not advanced diagnostic laboratory tests (ADLTs), section 502(b) of the FCAOEA, 2024 delayed the next data reporting period by one year. Instead of taking place from January 1, 2024, through March 31, 2024, data reporting will now take place from January 1, 2025, through March 31, 2025, based on the original data collection period of January 1, 2019, through June 30, 2019. Data reporting for these tests then resumes on a 3-year cycle. Additionally, section 502(a) of the

FCAOEA, 2024 amended the statutory provisions for the phase-in of payment reductions resulting from private payor rate implementation to specify that the applicable percent for CY 2024 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2024 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2023. Section 502(a) of the FCAOEA, 2024 further amended the statutory phase-in provisions to provide that for CYs 2025 through 2027, the payment amount for a CDLT may not be reduced by more than 15 percent as compared to the payment amount for that test established in the preceding year.

b. Medicare Prescription Drug Inflation Rebate Program

Section III.I. of this proposed rule proposes regulations to implement provisions of the Inflation Reduction Act (IRA) that establish the Medicare Prescription Drug Inflation Rebate Program. Section 11101 of the IRA adds new section 1847A(i) to the Act, which establishes a requirement for manufacturers to pay Medicare Part B rebates for certain single source drugs and biological products with prices that increase faster than the rate of inflation, beginning on January 1, 2023. Section 11102 of the IRA adds new section 1860D–14B to the Act, which established a requirement for manufacturers to pay Medicare Part D rebates for certain Part D drugs and biological products with prices that increase faster than the rate of inflation, beginning on October 1, 2022.

c. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan

In section III.L. of this rulemaking, we propose a change to the electronic prescribing for controlled substances (EPCS) requirement specified in § 423.160(a)(5) (referred to as the CMS EPCS Program). The provision in section III.L. of this proposed rule proposes to revise § 423.160(a)(5) to specify that prescriptions written for a beneficiary in a long-term care (LTC) facility would not be included in determining CMS EPCS Program compliance until January 1, 2028, and that compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a LTC facility would commence on or after January 1, 2028.

d. Quality Payment Program

This proposed rule is also necessary to make changes to the Quality Payment Program to move the program forward to focus more on measurement efforts, refine how clinicians would be able to participate in a more meaningful way through the Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs), and highlight the value of participating in Advanced Alternative Payment Models (APMs). Authorized by MACRA, the Quality Payment Program is an incentive program that includes two participation tracks, MIPS and Advanced APMs. MIPS eligible clinicians are subject to a MIPS payment adjustment based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. Currently, reporting for traditional MIPS is seen as siloed across the performance categories. These policy proposals are intended to promote better quality reporting to improve patient health outcomes by coordinating reporting for MIPS across performance categories and make changes to scoring that would provide a better picture of clinicians' performance.

2. Discretionary Provisions

a. Drugs and Biological Products Paid Under Medicare Part B

In Section III.A.1. of this proposed rule, as part of our continued implementation of section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–58, November 15, 2021) (IIJA), which amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug (hereinafter, refundable drug), we are proposing a change in how we would identify certain drugs that are excluded from the definition of refundable drug for those which payment has been made under Part B for fewer than 18 months; how we identify drugs from a single-dose container; to require the JW modifier if a billing supplier is not administering a drug, but there are discarded amounts during the preparation process before supplying the drug to the patient; and we discuss an application received for increased applicable percentage.

In section III.A.2 of this proposed rule, we are proposing how payment limits would be calculated when manufacturers report negative or zero ASP data to CMS. Generally, we are proposing that negative and zero ASP data be considered “not available” under section 1847A(c)(5)(B) of the Act

and that positive ASP data be considered available. In circumstances in which negative or zero ASP data is reported for some, but not all National Drug Codes (NDCs) associated with a billing and payment code for a drug, we are proposing to calculate the payment limit using only NDCs with positive ASP data. In certain circumstances, we are proposing to carryover the most recent positive ASP data for the drug to calculate a payment limit when the manufacturer's ASP is negative or zero. For biosimilars with negative or zero ASP data for all NDCs, we are proposing to use positive ASP data from other biosimilars with the same reference product, when available, to calculate the payment limit.

In section III.A.3. of this proposed rule, we are proposing to clarify how Medicare Administrative Contractors (MACs) pay for radiopharmaceuticals that are furnished in the physician's office. We are proposing to codify in regulations at § 414.904(e)(6) that, for radiopharmaceuticals furnished in a setting other than the hospital outpatient department, MACs shall determine payment limits for radiopharmaceuticals based on any methodology used to determine payment limits for radiopharmaceuticals in place on or prior to November 2003. Such methodology may include, but is not limited to, the use of invoice-based pricing.

In section III.A.4. of this proposed rule, we are proposing policies to reduce barriers faced by beneficiaries receiving immunosuppressive drugs under the Medicare Part B immunosuppressive drug benefit. That is, we are proposing at § 410.30 to include orally and enterally administered compounded formulations with active ingredients derived only from FDA-approved drugs that have approved immunosuppressive indications or FDA-approved drugs that have been determined by a MAC to be reasonable and necessary for specific purposes in immunosuppressive treatment in the immunosuppressive drug benefit. In addition, we are proposing changes regarding supplying fees and refills for immunosuppressive drugs. These proposals include allowing payment of a supply fee for a prescription of a supply of up to 90 days and allowing prescriptions for immunosuppressive drugs to be refillable.

In section III.A.5. of this proposed rule, we are proposing to update § 410.63(b) to clarify existing CMS policy that blood clotting factors must be self-administered to be considered

clotting factors for which the furnishing fee applies. Additionally, we are proposing to clarify at § 410.63(c) that the furnishing fee is only available to entities that furnish blood clotting factors, unless the costs associated with furnishing the clotting factor are paid through another payment system, including the PFS. That is, we are proposing to clarify through revisions to § 410.63 that clotting factors (as specified in section 1861(s)(2)(I) of the Act) and those eligible to receive the clotting factor furnishing fee (as specified in section 1842(o)(5) of the Act) are the same subset of products.

b. RHCs and FQHCs

In section III.B.2. of this proposed rule, we are proposing several changes to the furnishing of care coordination services in RHCs and FQHCs. We are proposing to require RHCs and FQHCs to report the individual HCPCS codes that make up the general care management HCPCS code G0511 and to utilize the same codes as those billing under the PFS. RHCs and FQHCs would no longer be required to report the general care management HCPCS code (G0511). We are also proposing to permit billing of the add-on codes associated with these services. In addition, beginning in CY 2025, we are proposing to adopt the coding and policies regarding Advanced Primary Care Management (APCM) services, as discussed in section II.G of this proposed rule.

For all of the care coordination services, we are proposing to allow separate payment at the national non-facility PFS payment rate when the individual code is on an RHC or FQHC claim, either alone or with other payable services. Payment rates would be updated annually based on the PFS amounts for these codes. We are also seeking comment on how we can improve the transparency and predictability regarding which HCPCS codes are considered care coordination services to automate processes downstream for RHCs and FQHCs.

In section III.B.3. of this proposed rule, we are proposing the policy to continue to adopt the definition “immediate availability” as including real-time audio and visual interactive telecommunications for the direct supervision of services and supplies furnished incident to a physician’s service through December 31, 2025, for RHCs and FQHCs. We are also proposing, on a temporary basis, to allow payment for non-behavioral health visits furnished via telecommunication technology in a manner that would closely align with

the payment mechanisms mandated by statute through December 31, 2024, that is, RHCs and FQHCs would continue to bill for RHC and FQHC services furnished using telecommunication technology services by reporting HCPCS code G2025 on the claim through December 31, 2025. In addition, we are proposing to continue to delay the in-person visit requirement for mental health services furnished via communication technology by RHCs and FQHCs to beneficiaries in their homes until January 1, 2026.

In section III.B.4. of this proposed rule, we discuss the implementation of section 4124 of the CAA, 2023. Section 4124 of the CAA, 2023 established Medicare coverage for intensive outpatient program (IOP) services furnished by a hospital to its outpatients, or by a community mental health center, a RHC or a FQHC, as a distinct and organized intensive ambulatory treatment service offering less than 24-hour daily care in a location other than an individual’s home or inpatient or residential setting, effective January 1, 2024 (88 FR 81838). We are proposing to provide a payment rate for 4 or more services per day in the RHC and FQHC setting.

In section III.B.5. of this rulemaking, we are proposing to allow RHCs and FQHCs to bill for Part B preventive vaccines and the administration at the time of service. We propose that payments for these claims will be made according to Part B preventive vaccine payment rates in other settings, to be annually reconciled with the facilities’ actual vaccine costs on their cost reports. Due to the operational systems changes needed to facilitate payment through claims, we propose that RHCs and FQHCs begin billing for preventive vaccines and their administration at the time of service, for dates of service on or after July 1, 2025.

In section III.B.6. of this proposed rule, we discuss our proposal relating to RHC productivity standards. We are proposing to remove productivity standards for RHCs.

In section III.B.7. of this proposed rule, we discuss proposals relating to the FQHC market basket. We are proposing to rebase and revise the FQHC PPS market basket to reflect a 2022 base year.

In section III.B.8. of this proposed rule, we are clarifying that when RHCs and FQHCs furnish dental services that align with the inextricably linked policies and operational requirements in the physician setting, we would consider those services to be a qualifying visit and the RHC would be

paid at the RHC AIR and the FQHC would be paid under the FQHC PPS.

c. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

In section III.F.2 of this proposed rule, we are proposing telecommunication flexibilities related to periodic assessments and initiation of treatment with methadone. We are proposing to allow periodic assessments to be furnished via audio-only communications when two-way audio-video communications technology is not available to the beneficiary on a permanent basis, to the extent that this flexibility is authorized by SAMHSA and DEA at the time the service is furnished, and all other applicable requirements are met. We believe that making this current flexibility permanent is appropriate, as it would allow a beneficiary to decide with their provider the best modality for receiving care, and evidence has shown that audio-only visits produce many of the same benefits as video-based visits.⁷⁹⁰ Additionally, permanently extending the flexibility to allow periodic assessments to be furnished via audio-only communications would further contribute towards health equity, especially among Medicare beneficiaries who are from underserved populations.⁷⁹¹ We are also proposing to allow OTPs to use audio-visual telecommunications for initiation of treatment with methadone for any new patient who will be treated by the OTP with methadone if the OTP determines that an adequate evaluation of the patient can be accomplished via an audio-visual telehealth platform. We would allow the OTP intake add-on code (HCPCS code G2076) to be paid for two-way audio-video communications technology when it is billed for the initiation of treatment with methadone to the extent that the use of audio-video telecommunications technology to initiate treatment with methadone is authorized by DEA and SAMHSA at the time the service is furnished, and all other applicable requirements are met. We believe this flexibility is needed to align with new policy amendments finalized by SAMHSA for initiation of treatment with methadone at § 8.12(f)(2)(v)(A), and it would help reduce barriers for many individuals

⁷⁹⁰ <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC9446840>.

⁷⁹¹ <https://pubmed.ncbi.nlm.nih.gov/33471458/>; <https://www.kff.org/medicare/issue-brief/medicare-and-telehealth-coverage-and-use-during-the-covid-19-pandemic-and-options-for-the-future/>; <https://pubmed.ncbi.nlm.nih.gov/34534186/>.

beginning treatment with methadone who often experience at least one barrier to accessing treatment (for example, reliable transportation, work schedule conflicts, distance to treatment, etc.).⁷⁹²

In section III.F.3 of this proposed rule, we are proposing payment updates to intake activities (HCPCS code G2076) furnished by OTPs in response to recent regulatory reforms finalized by SAMHSA at 42 CFR part 8 that aim to recognize more patient-centered and evidence-based paradigms of care for OUD treatment (for example, harm reduction interventions, recovery support services, etc.). Specifically, we are proposing to update the payment for intake activities (HCPCS code G2076) to include payment for social determinants of health risk assessments (HCPCS code G0136) in order to adequately reflect additional effort for OTPs to identify a patient's unmet health-related social needs (HRSNs), or the need and interest for harm reduction interventions and recovery support services that are critical to the treatment of an OUD. These would be consistent with new revisions to standards for initial assessment service activities required by SAMHSA under § 8.12(f)(4)(i). CMS is further requesting information to understand how OTPs currently coordinate care and make referrals to community-based organizations (CBOs) that address unmet HRSNs, provide harm reduction services, and/or offer recovery support services. Altogether, we believe these proposals are necessary to help OTPs address key issues during initial assessments that may increase the risk of a patient leaving OUD treatment prematurely or that pose as barriers to treatment engagement. For example, patients with an OUD are more likely to have lower educational attainment, be food insecure, encounter financial hardship, and housing instability, and they often report financial and logistical barriers (for example, lack of access to transportation) as reasons for not receiving treatment.⁷⁹³ However, providers (including SUD treatment facilities) who coordinate care with CBOs, including peer support organizations, housing agencies, and educational and employment agencies, to address unmet HRSNs (for example, housing, transportation, etc.) identified during assessments can positively influence health outcomes and better

support a patient's engagement in SUD treatment.⁷⁹⁴

Furthermore, in section III.F.4 of this proposed rule, we are proposing to establish payment for new opioid agonist and antagonist medications that were recently approved by the FDA. We would create a new add-on code to the bundled payment to reflect take-home supplies for nalmefene hydrochloride (nalmefene) nasal spray (Opvee®), which is indicated for the emergency treatment of known or suspected opioid overdose induced by natural or synthetic opioids. The add-on code would include payment for a carton of two 2.7 mg nasal sprays of nalmefene and overdose education furnished in conjunction with distributing nalmefene. We are also proposing payment for a new extended-release injectable buprenorphine product (Brixadi®), indicated to treat moderate to severe OUD and that comes in a weekly (8 mg, 16 mg, 24 mg, 32 mg) and monthly formulation (64 mg, 96 mg, and 128 mg). We would create a new weekly bundled payment code (including both a non-drug and drug component) for weekly injectable buprenorphine to reflect the weekly formulation of Brixadi®. In addition, we are proposing to update payment for the drug component of the existing bundled payment under the Medicare OTP benefit for monthly injectable buprenorphine (HCPCS G2069) in order to reflect payment for the monthly formulation of Brixadi®. We believe these proposals are consistent with our statutory authority under sections 1861(jjj)(1)(A) and 1834(w) of the Act, which allow the Secretary to establish Medicare bundled payment for opioid agonist and antagonist treatment medications that are approved by the FDA. These proposals would expand access to new opioid agonist and antagonist medications that are important to help prevent additional opioid overdose deaths, reduce illicit opioid use, and retain more individuals with an OUD in treatment.⁷⁹⁵

Lastly, in section III.F.5 of this proposed rule, we are clarifying a billing requirement that an OUD diagnosis code is required on claims submitted under the Medicare OTP benefit for OUD treatment services. This clarification is needed to ensure payments made to OTPs are in alignment with statutory

requirements under sections 1861(s)(2)(HH), 1861(jjj)(1), and 1834(w) of the Act, which all specify that services paid to OTPs under Medicare Part B must be for the treatment of opioid use disorder.

d. Medicare Shared Savings Program

In section III.G. of this proposed rule, we are proposing modifications to the Shared Savings Program to further advance Medicare's value-based care strategy of growth, alignment, and equity, and to make changes that would allow for timely improvements to program policies and operations.

The proposed changes to the Shared Savings Program include the following:

Proposed changes to the quality performance standard and other quality reporting requirements, including to (1) require Shared Savings Program ACOs to report the APP Plus quality measure set that would incrementally grow to comprise of 11 measures, consisting of the 6 measures in the existing APP quality measure set and 5 newly proposed measures from the Adult Universal Foundation measure set that would be incrementally incorporated into the APP Plus quality measure set over performance years 2025 through 2028, (2) focus the collection types available to Shared Savings Program ACOs for reporting the APP Plus quality measure set to all payer/all patient eCQMs and Medicare CQMs, (3) require Shared Savings Program ACOs that report the APP Plus quality measure set, to report on all measures in the APP Plus quality measure set, as applicable, (4) establish a Complex Organization Adjustment for Virtual Groups and APM Entities, including Shared Savings Program ACOs, when reporting eCQMs, (5) score Medicare CQMs using flat benchmarks in their first 2 performance periods in MIPS, and (6) extend the eCQM reporting incentive in order to promote the adoption of eCQMs.

Proposed changes to establish a new "prepaid shared savings" option to assist eligible ACOs, with a history of earning shared savings, with cash flow and encourage investments that would provide additional services for beneficiaries, and proposed refinements to recently-established advance investment payment policies.

Proposed modifications to the Shared Savings Program's financial methodology including to (1) ensure the benchmarking methodology includes sufficient incentive for ACOs providing care to underserved communities to enter and remain in the program through the application of a proposed health equity benchmark adjustment, (2) specify a calculation methodology to

⁷⁹⁵ <https://www.cdc.gov/drugoverdose/pdf/pubs/2018-evidence-based-strategies.pdf>; <https://pubmed.ncbi.nlm.nih.gov/24247147/>.

account for the impact of improper payments in recalculating expenditures and payment amounts used in Shared Savings Program financial calculations, upon reopening a payment determination pursuant to § 425.315(a), (3) establish a methodology for excluding payment amounts for HCPCS and CPT codes exhibiting significant, anomalous, and highly suspect (SAHS) billing activity during CY 2024 or subsequent calendar years that warrant adjustment, and (4) technical changes for consistency and clarity in provisions of the Shared Savings Program regulations on financial calculations, to align and clarify the language we used to describe weights applied to the growth in ACO and regional risk scores for each Medicare enrollment type, as part of the calculation for capping ACO and regional risk score growth, respectively.

Proposed changes to other programmatic areas, including: a proposal in connection with the Shared Savings Program compliance requirements to permit continued participation by ACOs whose number of assigned beneficiaries falls below 5,000 during their agreement period; proposed updates to provisions of the Shared Savings Program regulations on application procedures to reflect the latest approach Antitrust Agencies use to evaluate ACOs and enforce antitrust measures; proposed updates to the beneficiary assignment methodology including to (1) revise the definition of primary care services to align with payment policy proposals and include, among other services for the purposes of beneficiary assignment, Safety Planning Interventions, Post-Discharge Telephonic Follow-up Contacts Intervention, Virtual Check-in Services, Advanced Primary Care Management Services, Cardiovascular Risk Assessment and Risk Management Services, Interprofessional Consultation Services, Direct Care Caregiver Training Services, and Individual Behavior Management/Modification Caregiver Training Services, and (2) broaden the existing exception to the program's voluntary alignment policy to allow for additional beneficiaries to be claims-based assigned to entities participating in certain disease- or condition-specific Innovation Center ACO models; and proposed modifications to the beneficiary notification requirements.

e. Medicare Part B Payment for Preventive Services

Section III.H.1 of this proposed rule outlines the implementation of policies that impact the payment amount for administration of preventive vaccines

paid under the Part B vaccine benefit, as well COVID-19 monoclonal antibodies and the in-home additional payment for Part B vaccine administration. These provisions are necessary to provide stable payment for preventive vaccine administration and related policies, and to allow predictability for providers and suppliers to rely on for building and sustaining robust vaccination programs.

Section III.H.2 of this proposed rule addresses two items related to payment for hepatitis B vaccine administration under Part B. In section III.M. of this proposed rule, we propose to expand coverage of hepatitis B vaccinations by revising existing regulations. If that coverage expansion of hepatitis B vaccines under Part B is finalized, we would clarify that a physician's order is no longer required for the administration of a hepatitis B vaccine in Part B, which will facilitate roster billing by mass immunizers for hepatitis B vaccine administration. We are also proposing that payment for hepatitis B vaccines and their administration be made at 100 percent of reasonable cost in RHCs and FQHCs, separate from the FQHC PPS or the RHC All-Inclusive Rate (AIR) methodology, to streamline payment for all Part B vaccines in those settings.

In section III.H.3. of this proposed rule, we are proposing a fee schedule for Drugs Covered as Additional Preventive Services (DCAPS), per section 1833(a)(1)(W)(ii) of the Act. We propose to determine payment limits for DCAPS drugs based on the ASP payment methodology set forth under section 1847A of the Act if possible, and we propose alternative payment mechanism for calculating payment limits for DCAPS drugs if ASP data is not available. We also propose payment limits for supplying and administration fees for DCAPS drugs that are similar to those fees for drugs paid under the ASP payment methodology set forth under section 1847A of the Act. Finally, we propose to determine payment limits for DCAPS drugs in RHCs and FQHCs, and any supply and administration fee, using this same fee schedule, and to pay for DCAPS drugs and their administration on a claim-by-claim basis.

f. Expand Colorectal Cancer Screening

In section III.K. of this rulemaking, we propose to update and expand coverage for CRC screening by (1) removing coverage for the barium enema procedure in regulations at § 410.37, (2) adding coverage for the CTC procedure in regulations at § 410.37, and (3) expanding a "complete colorectal cancer screening" in § 410.37(k) to

include a follow-on screening colonoscopy after a Medicare covered blood-based biomarker CRC screening test (described and authorized in NCD 210.3) returns a positive result. The Center for Disease Control and Prevention (CDC) describes CRC as "a disease in which cells in the colon or rectum grow out of control Sometimes abnormal growths, called polyps, form in the colon or rectum. Over time, some polyps may turn into cancer. Screening tests can find polyps so they can be removed before turning into cancer. Screening also helps find colorectal cancer at an early stage, when treatment works best."⁷⁹⁶ The National Cancer Institute reports that CRC is the fourth most common type of cancer and estimates that the United States experienced 153,020 new cases and 52,550 new deaths from CRC in 2023. In addition, the rate of new cases and new deaths from CRC is more common in men than women and significantly greater for those of African American and Non-Hispanic American Indian/Alaska Native descent compared to all races.⁷⁹⁷

g. Expand Hepatitis B Vaccine Coverage

In section III.M. of this rulemaking, we propose to expand Hepatitis B vaccine coverage by revising our regulatory definition for intermediate risk groups by adding a new paragraph to include individuals who have not previously received a completed hepatitis B vaccination series or whose vaccination history is unknown (§ 410.63(a)(2)). Hepatitis B is a vaccine-preventable liver disease caused by the hepatitis B virus.⁷⁹⁸ The vaccine consists of a series of typically 3 doses delivered at various intervals.⁷⁹⁹ Hepatitis B virus is transmitted when body fluid (blood, semen, or other) from a person infected with the virus enters the body of someone who is uninfected.⁸⁰⁰ This can happen through sexual contact; sharing needles, syringes, or other drug-injection equipment; transmission from the gestational parent to baby during pregnancy or at birth; direct contact with blood or open sores; or sharing

⁷⁹⁶ CDC website: https://www.cdc.gov/cancer/colorectal/basic_info/what-is-colorectal-cancer.htm.

contaminated items such as toothbrushes, razors or medical equipment (such as a glucose monitor) of a person who has hepatitis B.⁸⁰¹ Hepatitis B can be an acute, short-term illness and it can develop into a long-term, chronic infection. Chronic hepatitis B can lead to serious health problems, including cirrhosis, liver cancer, and death. Treatments for hepatitis B are available but no cure exists. There are currently an estimated 2.4 million individuals in the U.S. living with hepatitis B virus and an estimated 20,000 new infections every year.⁸⁰² We believe our proposal will help protect Medicare beneficiaries from acquiring hepatitis B infection, contribute to eliminating viral hepatitis as a public health threat in the United States and is in the best interest of the Medicare program and its beneficiaries.

h. Medicare Parts A and B Overpayment Provisions of the Affordable Care Act (§ 401.305(b)(1) Through (3))

Section III.O. of this proposed rule discusses existing § 401.305(b)(1), which specifies when a person who has received an overpayment must report and return an overpayment. We propose to amend this regulation to reference revised § 401.305(b)(2) and new § 401.305(b)(3). We are proposing a technical modification to the introductory language in § 401.305(b)(2) to acknowledge that this paragraph might be applicable after the suspension described in new § 401.305(b)(3) is complete. New proposed § 401.305(b)(3) would identify the circumstances under which the deadline for reporting and returning overpayments would be suspended to allow time for providers to investigate and calculate overpayments. We do not have a basis for estimating the impact associated with this amendment. We solicit comment on the analysis and conclusions provided in the RIA.

B. Overall Impact

We have examined the impacts of this proposed rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), Executive Order 14094 entitled “Modernizing Regulatory

Review” (April 6, 2023), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates reform Act of 1995 (March 22, 1995; Pub. L. 104–4), and Executive Order 13132 on Federalism (August 4, 1999).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 14094, entitled “Modernizing Regulatory Review” (hereinafter, the Modernizing E.O.), amends section 3(f)(1) of Executive Order 12866 (Regulatory Planning and Review). The amended section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action that is likely to result in a rule: (1) having an annual effect on the economy of \$200 million or more in any 1 year (adjusted every 3 years by the Administrator of the Office of Information and Regulatory Affairs (OIRA) for changes in gross domestic product), or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or tribal governments or communities; (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise legal or policy issues for which centralized review would meaningfully further the President’s priorities or the principles set forth in this Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case.

A regulatory impact analysis (RIA) must be prepared for major rules with significant regulatory action/s and/or with significant effects as per section 3(f)(1) (\$200 million or more in any 1 year). Based on our estimates, OMB’s Office of Information and Regulatory Affairs has determined this rulemaking is significant per section 3(f)(1)) as measured by the \$200 million or more in any 1 year. Accordingly, we have prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities

include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners, and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA’s website at <https://www.sba.gov/document/support-table-size-standards> (refer to the 620000 series).) Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other suppliers, and providers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this proposed rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, Medicare payment is made under the PFS for physicians’ services, which can be furnished by physicians and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this rulemaking will not have a significant

⁸⁰¹ CDC. 2024. Viral Hepatitis FAQs for the public. Retrieved from <https://www.cdc.gov/hepatitis/hbv/bfaq.htm>.

⁸⁰² Connors EE, Panagiotakopoulos L, Hofmeister MG, et al. Screening and testing for hepatitis B virus infection: CDC recommendations—United States, 2023. *MMWR Recomm Rep*. 2023;72(1):1–25. Retrieved from <https://www.cdc.gov/mmwr/volumes/72/rr/rr7201a1.htm>.

impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on State, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2024, that threshold is approximately \$183 million. This proposed rule will impose no mandates on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. Since this rulemaking does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which, together with the information provided in the rest of this proposed rule, meets all assessment requirements. The analysis explains the rationale for and purposes of this proposed rule; details the costs and benefits of this rulemaking; analyzes alternatives; and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this proposed rule, we discussed various changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services and to implement provisions of

the statute. We provide information for each policy change in the relevant sections of this proposed rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this proposed rule. The relevant sections of this rulemaking describe significant alternatives we considered, if applicable.

C. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of Medicare Part B expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2024 with payment rates for CY 2025 using CY 2023 Medicare utilization. The payment impacts described in this proposed rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and will depend on the mix of services they furnish. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare

payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical diagnostic laboratory tests that are paid under the Clinical Laboratory Fee Schedule (CLFS). The PFS update adjustment factor for CY 2025, as specified in section 1848(d)(19) of the Act, is 0.00 percent before applying other adjustments.

To calculate the estimated CY 2025 PFS conversion factor (CF), we took the CY 2024 conversion factor without the payment increase of 1.25 percent provided by the CAA, 2023 that applied to services furnished from January 1, 2024 through March 8, 2024, and the 2.93 percent payment increase provided by the CAA, 2024 that replaced the previous 1.25 percent increase and applies to services furnished from March 9, 2024 through December 31, 2024 and multiplied it by the budget neutrality adjustment required as described in the preceding paragraphs. We estimate the CY 2025 PFS CF to be 32.3562 which reflects a 0.05 percent positive budget neutrality adjustment required under section 1848(c)(2)(B)(ii)(II) of the Act, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the removal of the temporary 2.93 percent payment increase for services furnished from March 9, 2024 through December 31, 2024, as provided in the CAA, 2024. We estimate the CY 2025 anesthesia CF to be 20.3340, reflecting the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

TABLE 126: Calculation of the CY 2025 PFS Conversion Factor

| | | |
|---|-----------------------|----------------|
| CY 2024 Conversion Factor | | 33.2875 |
| Conversion Factor without the CAA, 2024 (2.93 Percent Increase for CY 2024) | | 32.3400 |
| CY 2025 Statutory Update Factor | 0.00 percent (1.0000) | |
| CY 2025 RVU Budget Neutrality Adjustment | 0.05 percent (1.0005) | |
| CY 2025 Conversion Factor | | 32.3562 |

TABLE 127: Calculation of the CY 2025 Anesthesia Conversion Factor

| | | |
|---|-----------------------|----------------|
| CY 2024 National Average Anesthesia Conversion Factor | | 20.7739 |
| Conversion Factor without the CAA, 2024 (2.93 Percent Increase for CY 2024) | | 20.1826 |
| CY 2025 Statutory Update Factor | 0.00 percent (1.0000) | |
| CY 2025 RVU Budget Neutrality Adjustment | 0.05 percent (1.0005) | |
| CY 2025 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment | 0.70 percent (1.0070) | |
| CY 2025 Conversion Factor | | 20.3340 |

Table 128 shows the impact on PFS payment for physicians' services based on the proposed policies included in this proposed rule. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 128 (CY 2025 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 128.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY

2023 utilization and CY 2024 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.

- Column C (Impact of Work RVU Changes): This column shows the estimated CY 2025 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.

- Column D (Impact of PE RVU Changes): This column shows the estimated CY 2025 impact on total allowed charges of the changes in the PE RVUs.

- Column E (Impact of MP RVU Changes): This column shows the estimated CY 2025 impact on total allowed charges of the changes in the MP RVUs.

- Column F (Combined Impact): This column shows the estimated CY 2025 combined impact on total allowed charges of all the changes in the previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

* Column F may not equal the sum of columns C, D, and E due to rounding.

In recent years, we have received requests from interested parties to provide more granular information that separates the specialty-specific impacts by site of service. These interested parties have presented us with high-level information suggesting that Medicare payment policies are directly responsible for consolidating privately owned physician practices and freestanding supplier facilities into larger health systems. Their concerns highlight a need to update the information under the PFS to account for current trends in healthcare delivery, especially concerning independent versus facility-based practices. We published an RFI in the CY 2023 PFS proposed rule to gather feedback on this issue and refer readers to the discussion in the CY 2023 PFS final rule (87 FR 69429 through 69438). As part of our

holistic review of how best to update our data and offer interested parties additional information that addresses some of the concerns raised, we have recently improved our current suite of public use files (PUFs) by including a new file that shows estimated specialty payment impacts at a more granular level, specifically by showing ranges of impact for practitioners within a specialty. This file is available on the CMS website under downloads for the CY 2025 PFS proposed rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

We provided an additional impact table for this rulemaking cycle that includes a facility/non-facility breakout of payment changes. The following is an explanation of the information represented in Table 129.

- Column A (Specialty): Identifies the specialty for which data are shown.

- Column B (Setting): Identifies the facility or nonfacility setting for which data are shown.

- Column C (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2023 utilization and CY 2024 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.

- Column D (Combined Impact): This column shows the estimated CY 2025 combined impact on total allowed charges.

BILLING CODE C

2. CY 2025 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty-level impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for some specialties, including clinical social workers and clinical psychologists, geriatrics, anesthesiology, and nurse anesthetists, psychiatry, and family practice, reflect increases relative to other specialties. These increases can largely be attributed to the Year 4 update to clinical labor pricing and/or the proposed adjustments to transfer of postoperative care for global surgical procedures. These increases are also due to increases in values for particular services after considering the recommendations from the American Medical Association’s (AMA) Relative Value Scale Update Committee (RUC) and CMS review, and increased payments resulting from supply and equipment pricing updates.

The estimated impacts for several specialties, including diagnostic testing facilities, vascular surgery, interventional radiology,

ophthalmology, and orthopedic surgery, reflect decreases in payments relative to payment to other specialties, largely resulting from the redistributive effects of the implementation of the Year 4 update to clinical labor pricing and/or the proposed adjustments to transfer of postoperative care for global surgical procedures. The services furnished by these specialties were negatively affected by the redistributive effects of increases in work RVUs for other codes, and/or rely primarily on supply/equipment items for their practice expense costs and, therefore, were affected negatively by the updated Year 4 clinical labor pricing under budget neutrality. These decreases are also due to the revaluation of individual procedures based on reviews, including consideration of AMA RUC review and recommendations, as well as decreases resulting from the continued phase-in implementation of the previously finalized supply and equipment pricing updates. The estimated impacts also reflect decreases due to the continued implementation of previously finalized code-level reductions that are being phased in over several years. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their

Medicare revenues from services that are paid under the CLFS.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 128), including comments received in response to the valuations. We remind interested parties that although the estimated impacts are displayed at the specialty level, typically, the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table 128 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages and may not necessarily represent what is happening to the particular services furnished by a single practitioner within any given specialty.

As discussed previously, we have reviewed our suite of public use files and have worked on new ways to offer interested parties additional information that addresses concerns about the lack of granularity in our impact tables. To illustrate how impacts can vary within

specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2023 utilization data, Total RVUs change between – 1 percent and 1 percent for more than 80 percent of practitioners, representing approximately 75 percent of the changes in Total RVUs for all practitioners, with variation by specialty. Specialties, such as gastroenterology, exhibit little variation in changes in total RVUs per practitioner. Table 128 (CY 2025 PFS Estimated Impact on Total Allowed Charges by Specialty) indicates an overall change of 0 percent for this specialty, and the practitioner-level distribution shows that 98 percent of these practitioners will experience a change in Total RVUs between – 1 percent and 1 percent. The specific service mix within a specialty may vary by practitioner, so individual practitioners may experience different changes in total RVUs. For example, Table 128 indicates a 1 percent increase in RVUs for the physical/occupational therapy specialty as a whole; however, 24 percent of physical/occupational therapy specialty practitioners—representing over 21 percent of Total RVUs for the specialty—will experience a 1 percent or more increase in Total RVUs. Meanwhile, 13 percent of physical/occupational therapy specialty practitioners will experience 1 percent or more decreases in Total RVUs, and these practitioners account for 14 percent of Total RVUs for this specialty. We also note the code level RVU changes are available in the Addendum B public use file that we make available with each rule (see <https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates>).

The specialty impacts displayed in Table 128 reflect changes within the pool of total RVUs. The specialty impacts table, therefore, includes any changes in spending that result from finalized policies that are subject to the statutory budget neutrality requirement at section 1848(c)(2)(B)(ii)(II) (such as the updated proposals associated with the transfer of postoperative care for global surgical procedures in CY 2025 or the clinical labor pricing update phase-in that began in CY 2022) but does not include any changes in spending which result from finalized policies that are not subject to the statutory budget neutrality adjustment, and therefore, have a neutral impact across all specialties. The 2.50 and 2.93 percent temporary payment increases for CY 2023 and CY 2024, respectively, are statutory changes that take place outside

of BN, and therefore, are not captured in the specialty impacts displayed in Table 128. Section 1848(t)(2)(C) specifies that these temporary payment increases are not to be taken into account in determining fee schedules for physicians' services furnished in years after the respective increases end. As such, these temporary increases are not subject to the PFS budget neutrality adjustment.

b. Impact

Column F of Table 128 displays the estimated CY 2025 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under “downloads” on the CY 2025 PFS proposed rule website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>. We selected these procedures for the sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>.

D. Impact of Changes Related to Telehealth Services

We are proposing to add several codes to the Medicare Telehealth Services List on a provisional basis, including HCPCS codes G0011, G0013, G0248, GCTD1–3, and GCTB1–2, and CPT Codes 97550, 97551, 97552, 96202, and 96203. We are proposing to maintain certain Telecommunications technology-related flexibilities through 2025, including that we will continue to use a definition of direct supervision that allows “immediate availability” of the supervising practitioner using real-time audio and video interactive telecommunications. We are also proposing to delay implementation of the telehealth frequency limitations for subsequent nursing facility and inpatient hospital visits for an additional year, to include two-way, real-time audio-only communication technology for any telehealth service furnished to a beneficiary in their home, and to continue to permit the distant site practitioner to use their currently enrolled practice location instead of their home address when providing telehealth services from their home. While we note that certain other Medicare telehealth flexibilities related

to the PHE for COVID–19 are expiring, including the removal of statutory geographic and location limitations for most Medicare telehealth services, the beneficiary's home continues to be a permissible originating site for certain types of services including those furnished for the diagnosis, evaluation, or treatment of a mental health disorder, including a Substance Use Disorder (SUD), and for monthly End Stage Renal Disease (ESRD) related clinical assessments described in section 1881(b)(3)(B). However, expiration of certain flexibilities for Medicare telehealth services is not expected to impact broader utilization of these services because reasonable and necessary services for the diagnosis or treatment of an illness or injury continue to be covered. Please see our request for comment in section II.E. of this proposed rule with regard to what impact, if any, the expiration of the current flexibilities would be expected to have on overall service utilization for CY 2025. Despite the fact that some services will no longer be furnished under telehealth, we expect that they will continue to be furnished in-person. We therefore anticipate that our proposed provisions will result in continued utilization of services that can be furnished as Medicare telehealth services during CY 2025 at levels comparable to observed utilization of these services during CY 2024.

E. Other Provisions of the Regulation

1. Impact of Proposals for Medicare Parts A and B Payment for Dental Services Inextricably Linked to Specific Covered Medical Services

In section II.J.2. of this proposed rule, we are proposing to add to the list in § 411.15(i)(3)(i) of clinical scenarios under which FFS Medicare payment may be made for dental services inextricably linked to covered services to now include certain dental services associated with dialysis services for beneficiaries with end-stage renal disease (ESRD). Specifically, we are proposing that Medicare Parts A and B payment may be made for dental or oral examination performed as part of a comprehensive workup prior to Medicare-covered dialysis services when used in the treatment of ESRD; and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with covered dialysis services in the treatment of ESRD. By proposing to provide payment for these dental services, we would respond to the interested parties' request that we focus on the ESRD

patient population. We are also soliciting comment on the potential connection between dental services and covered services used in the treatment of diabetes as well as covered services for individuals with sickle cell disease, hemophilia, or autoimmune diseases receiving immunosuppressive therapies. We do not anticipate any significant increase in utilization or payment impact for additional dental services given the historically low utilization of these therapies.

Based on the Renal Management Information System (REMIS) and Enrollment Data Base (EDB) gathered from the Integrated Data Repository (IDR) we estimate Fee-For-Service (FFS) Part B ESRD enrollment to have averaged roughly 240 thousand enrollees during CY 2023. Based on United States Renal Data System (USRDS) from the NIH, we estimate that roughly 40,000 of these enrollees are on the kidney transplant waitlist in any given year and that roughly 10,000 of these patients on the waitlist would typically receive a transplant. Since we already include dental services associated with kidney transplant patients in § 411.15(i)(3)(i)(A) as an example of services for which payment can be made for certain dental services, we removed these patients from the estimate, which left roughly 30,000 FFS beneficiaries.

For a variety of reasons outlined previously, we have historically observed low FFS dental utilization in instances when coverage could apply (<1 percent of potential users). FFS dental billing patterns have shown a cost per covered utilizer of about \$525 in recent years. To illustrate the potential cost of the proposed payment for dental services inextricably linked to dialysis services for beneficiaries with ESRD we applied three scenarios of utilization (0.1 percent, 1 percent, 3 percent) and cost per patient of approximately \$525 to the 30,000 patients. Under all of these scenarios the policy is projected to represent a negligible cost to the Medicare program (<\$1,000,000) in any given year.

Therefore, we do not anticipate a significant payment impact for these provisions. It is important to note that there is some uncertainty in these take-up rate assumptions, but they are consistent with the current utilization of dental services, including after the regulation changes made in the CYs 2023 and 2024 PFS final rules. Additionally, given that our proposed addition to the list of clinical scenarios under which payment may be made for dental services inextricably linked to covered services is not a change in

coverage or payment policy, the cost impact of this proposal is negligible and therefore it is not necessary to adjust the conversion factor under the PFS budget neutrality requirement.

2. Impact of Proposed Changes Related to Supervision of Outpatient Therapy Services in Private Practices

As discussed in section II.H. of this proposed rule, we are proposing to change our regulatory requirements for OTs and PTs who are enrolled as suppliers in Medicare as OTs and PTs in private practice (OTPPs and PTPPs, respectively) to allow for general supervision of their occupational therapy assistants (OTAs) and physical therapist assistants (PTAs) to the extent permitted under State law. The requirement for OTPPs and PTPPs to provide direct supervision of OTAs and PTAs, which has been in place since 2005, requires the OTPP/PTPP to be present in the office suite or in the patient's home, and immediately available to furnish assistance and direction throughout the performance of the procedure performed by the OTA/PTA (or by an OT or PT they are supervising who is not enrolled in Medicare as a supplier). In contrast, the proposal to allow for general supervision would mean that the procedure is furnished under the OTPP's/PTPP's overall direction and control, but the OTPP/PTPP need not be present in the treatment location or immediately available.

Should we finalize this proposal, we believe that the change to allow for general supervision of OTAs/PTAs by OTPPs and PTPPs will have a positive impact on patient access to outpatient therapy services; and will align with the currently required general supervision of PTAs/OTAs by PTs and OTs who work for Medicare institutional providers, such as rehabilitation agencies, outpatient hospitals, and SNFs. It would also reflect the supervision level specified in 44 State physical therapy practice acts⁸⁰³ and all but one State occupational therapy practice act.

3. Impacts of Proposed Changes Related to Advanced Primary Care Management Services

In section II.G.2 of this proposed rule, "Advanced Primary Care Management (APCM) Services," we are proposing to create three HCPCS codes to use for reporting the proposed APCM services (HCPCS codes GPCM1, GPCM2, and

GPCM3) to recognize the resources involved in furnishing services using an advanced primary care delivery model under the PFS. As described in sections II.G.2.b and II.G.2.c of this proposed rule, the proposed APCM services incorporate elements of existing services with the understanding that some patients will require more resources and some fewer based on variability in patient complexity and needs. As we ordinarily do, we are proposing to base the PFS valuation for APCM codes on the resources involved in furnishing the typical case of the service which may not necessarily reflect the actual resources involved in furnishing every individual service. To value APCM, we compared the service elements described by the proposed APCM codes to the values we have established for the specific care management services and communication technology-based services (CTBS) codes on which we modeled the proposed service elements of the APCM codes and which we built into the service descriptors for GPCM1, GPCM2, and GPCM3 (see also Table 129 and sections II.G.2.b. through II.G.2.d. of this proposed rule). Specifically, the proposed APCM services incorporate elements of chronic care management (CPT codes 99487, 99489, 99490, 99491, 99439, 99437), principal care management (CPT codes 99424, 99425, 99426, 99427)), transitional care management (CPT codes 99495 and 99496), interprofessional internet consultation furnished by treating/requesting practitioner (CPT code 99452), remote evaluation of patient videos/images (HCPCS code G2250), virtual check-ins (HCPCS code G2251 and G2252), and online digital E/M or e-visits (CPT codes 98970, 98971, 98972, 99421, 99422, 99423) into this new bundled PFS payment beginning for CY 2025.

As discussed throughout section II.G.2 of this proposed rule, we believe that the proposed elements of APCM services reflect the comprehensive approach to care management involved in care delivery using the advanced primary care model. This is a model of primary care that is being integrated into current medical practice. As such, we believe that it would be appropriate to use the current valuation and uptake of the codes on which we modeled the APCM codes to inform our valuation of APCM services. Using Medicare FFS claims data and evidence from the CMS Innovation Center's testing of a series of advanced primary care models (see discussion in section II.G.2.a.(1) of this proposed rule), we sought to understand how these different services have been

⁸⁰³ Federation of State Boards of Physical Therapy Jurisdiction Licensure Reference Guide, <https://www.fspt.net/lrg/Home/SupervisionRequirementLevelsBySetting>.

used historically and relate that information to the way we are thinking about the service elements for APCM and the valuation of the three APCM code levels. As discussed in section II.G.2.e. of this proposed rule, for Medicare beneficiaries who receive care management services during a year, the non-complex CCM base code is billed on average for five months and with three add-on codes during those five months. However, this does not account for the care management services that are provided beyond one time-based billing interval and without reaching the next; nor does it account for the resources involved in maintaining certain advanced primary care practice capabilities and readiness, including patient population monitoring and care needs assessment, to fully furnish and bill APCM services as is medically reasonable and necessary for any individual patient during any calendar month. Finally, this does not account for changes to utilization of APCM that may occur as a result of the billing and documentation requirements for APCM services when compared to the current coding and payment for care management and CTBS services.

We are estimating a utilization of approximately 300,000 claims for the proposed HCPCS code GPCM1, 1.3 million claims for the proposed HCPCS code GPCM2, and 400,000 claims for the proposed HCPCS code GPCM3, and are seeking comment on our assumptions. To estimate utilization for GPCM1, we first calculated an eligible GPCM1 population by estimating the number of Medicare beneficiaries without multiple chronic conditions who have an established relationship with a primary care provider using Welcome to Medicare and Annual Wellness Visit claims and estimating the uptake of APCM Level 1 based on average uptake of CCM/PCM/TCM in CY 2022 claims data; then, we adjusted this estimate to account for increased frequency of billing (multiplied by 12 to account for 12 months of assumed practitioner billing for the proposed APCM service). To estimate utilization for GPCM2, we first calculated estimated ratios to represent the average utilization of CCM/PCM/TCM services in the first year of policy implementation compared to CY 2022 claims; then, we applied a reduced utilization ratio to CY 2022 claims for CPT codes 99490 and 99487 (10.4 percent) and multiplied by the eligible GPCM2 population of Medicare beneficiaries with multiple chronic conditions who are non-QMB; finally, as described for GPCM1, we adjusted this estimate to account for

increased frequency of billing (increase from an average of five months of CCM claims per beneficiary to 12 months of assumed practitioner billing for the proposed APCM service, or 237.3 percent). To estimate utilization for GPCM3, we took the estimated number of GPCM2 claims for CPT codes 99490 and 99487 and multiplied by the eligible GPCM3 population of Medicare beneficiaries with multiple chronic conditions who are QMB; again, we adjusted this estimate to account for increased frequency of billing (same percentage applied to GPCM2).

We anticipate that these proposed coding and payment policies for APCM services would result in slight reductions in utilization of existing care management and CTBS services during CY 2025 when compared to observed utilization of these services during CY 2024. Specifically, we are estimating an approximate 11.4 percent reduction in utilization from CY 2024 across the 20 service codes which are incorporated into the APCM services (see previously). The estimated total net increase is approximately 700,000 claims, and we do not anticipate a significant payment impact for these provisions. We believe that the cost impact of this proposal is negligible and therefore it is not necessary to adjust the conversion factor under the PFS budget neutrality requirement.

4. Impact of Proposed Changes Related to Strategies for Improving Global Surgery Payment Accuracy

In section II.G.5 of this proposed rule, “Strategies for Improving Global Surgery Payment Accuracy,” we discuss our current policy to require the use of modifiers to help us identify and adjust payment for a global package when there is a formal transfer of care (that is, a written agreement) between the practitioner who furnishes the procedure (proceduralist) and another practitioner. The transfer of care modifiers identify and adjust the global package payment for cases where the pre-operative, operative, and post-operative portions of the global package are furnished by different practitioners. We are proposing to require the use of the appropriate transfer of care modifier (modifier –54, –55, or –56) for all 90-day global surgical packages in any case when a practitioner (or another in the same group practice) expects to furnish only a portion of a global package (including but not limited to when there is a formal, documented transfer of care as under current policy, or an informal, non-documented but expected, transfer of care. This could result in more application of, and therefore more

impact on spending from the appropriate usage of the transfer of care modifiers (modifiers –54, –55, and –56).

As noted earlier, we are proposing to require the use of the existing modifier (–54) for all 90-day global surgical packages in any case when a practitioner (or group practice) expects to furnish only the procedure portion of a global package (including when there is a formal, documented transfer of care as under current policy). Since we believe that this will result in expanded use of the transfer of care modifiers, which will have a corresponding effect on the payment for the affected services, we have reflected this in our utilization estimates accordingly (see download file for this proposed rule titled CY 2025 PFS final rule 2023 Utilization Data Crosswalked to 2025 at <https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices?DLSort=2&DLEntries=10&DLPage=1&DLSortDir=descending>) and anticipate more global surgical packages and post-op care to be billed separately using the modifiers, which could have payment consequences for a selection of high-volume global surgery codes. We assume that the same number of global surgery codes would be billed; however, we anticipate more codes would be billed using the transfer of care modifiers. We do not expect the utilization of separately billable post-operative E/M services would change. Rather than modify our utilization estimates for these codes, our utilization estimate in this proposal includes only 90-day high volume and/or high-cost procedure codes where reporting post-operative visits with CPT code 99024 (*Postoperative follow-up visit, normally included in the surgical package, to indicate that an evaluation and management service was performed during a postoperative period for a reason(s) related to the original procedure*) is required. This is a relatively small set of codes (approximately 180) versus the full range of approximately 4,000 global surgical codes; however, this subset of codes accounts for about 73 percent of total Medicare 90-day procedure volume. The full list of affected codes is available in the file titled “CY 2024 Analytic Crosswalk to CY 2025” on the CMS website under downloads for the CY 2025 PFS proposed rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

For this select list of global surgical codes, we are estimating that the transfer of care modifier, modifier –54, will be employed 20 percent of the time.

We believe that this is a conservative estimate given the frequency with which these global surgical services involve a transfer of postoperative care. RAND's research has indicated that a post-operative transfer of care is common for 90-day global surgical procedures but that these transfers of care are almost never reported with the appropriate -54 or -55 modifiers. Then, for the 20 percent of cases where we believe the transfer of care modifier will be employed, we are proposing to apply the payment reduction associated with the modifier -54 for postoperative care and apply it to the utilization estimate for the associated procedures billed using the transfer of care modifiers. These percentages can be found in the PFS Relative Value Files under the columns labeled "pre op, intra op, post op" at <https://www.cms.gov/medicare/payment/fee-schedules/physician/pfs-relative-value-files>. For example, CPT code 27447 (*Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)*) is a high-volume knee replacement procedure where the postoperative portion of the total payment is 21 percent. We are proposing that there will be a postoperative transfer of care 20 percent of the time for CPT code 27447, and in those 20 percent of cases, there will be a corresponding 21 percent decrease in payment. This is reflected in a utilization crosswalk of 0.958 for CPT code 27447 as a result of this 4.2 percent reduction (20 percent times 21 percent) to capture this estimated reduction in spending associated with our proposal to require the use of these transfer of care modifiers.

We note that for purposes of estimating the utilization of the transfer of care modifiers, our estimates include increased reporting of the transfer of care modifier for codes that are subject to the RAND data collection exercise, with the exception of cases where the modifier is already used 5% of the time or more. We recognize that this policy will apply more broadly and seek comment on this.

We note that the impact of the conversion factor on this proposed reduction in spending associated with this policy is redistributed across the PFS via an increase in the budget neutrality adjustment to the conversion factor. We are soliciting comments from interested parties on our proposed implementation of this postoperative transfer of care policy.

We are also proposing a new HCPCS code, GPOC1, to capture the additional practitioner time and resources spent in providing follow up post-operative care

by a practitioner who did not perform the surgical procedure. Additionally, we expect the proposed global surgical add-on code, HCPCS code GPOC1, will be billed during the post-operative period of 90 days following the procedure. We expect that this code will be billed once during the global period when the patient is seen for an office/outpatient (O/O) evaluation and management (E/M) visit that is related to the recent surgical procedure. We believe that this code will be billed by a physician or other practitioner (other than the proceduralist or another practitioner in the same practice) who is seeing the patient for a visit during the post-operative period and did not furnish the surgical procedure. We believe that there is additional time, resources, and complexity involved in the first O/O E/M visit following a procedure that should be captured during the post-operative period and may be billed in certain instances when a transfer of care modifier was not appended to the claim.

We are estimating a utilization of approximately 40,000 total claims in the first year for the proposed add-on code, HCPCS code GPOC1. We calculated this utilization estimate based on claims data for procedure codes with a post-operative diagnosis code and an observed to expected ratio (that is the ratio of visits that are included in the global surgical package compared to the number of visits actually furnished) of less than 25 percent. We anticipate that uptake of HCPCS code GPOC1 would be low initially, consistent with initial uptake of other new services we have finalized under the PFS. We are seeking comment on these assumptions and welcome input from the public.

5. Drugs and Biological Products Paid Under Medicare Part B

a. Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs To Provide Refunds With Respect to Discarded Amounts

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117-58, November 15, 2021) amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. The refund amount is either as noted in section 1847A(b)(1)(B) of the Act in the case of a single source drug or biological or as noted in section 1847A(b)(1)(C) of the Act in the case of a biosimilar biological product, multiplied by the amount of discarded drug that exceeds an applicable percentage, which is required to be at least 10 percent, of total charges

(subject to certain exclusions) for the drug in a given calendar quarter. In the CY 2023 and 2024 final rules, we finalized several policies to implement the provision. These policies are described in section III.A.1 of this proposed rule.

In section III.A.1 of this proposed rule, we are proposing additional policies for implementing the provision including: a change in how we would identify certain drugs that are excluded from the definition of refundable drug for those which payment has been made under Part B for fewer than 18 months; how we identify drugs from a single-dose container; to require the JW modifier if a billing supplier is not administering a drug, but there are discarded amounts during the preparation process before supplying the drug to the patient; and we discuss an application for increased applicable percentage (CMS 10835, OMB 0938-1435).

In the CY 2024 PFS final rule (88 FR 79485 through 79490), we analyzed JW modifier data from 2021 as if the data represented dates of service on or after the effective date of section 90004 of the Infrastructure Act (that is, January 1, 2023).⁸⁰⁴ Similar to our regulatory impact analysis in the CY 2023 PFS final rule (87 FR 70187 through 70188), we used the 2021 JW modifier data to estimate refund amounts as described in section 1847A(h)(3) of the Act. In this proposed rule, we performed the same analysis on the 2022 JW modifier data. First, we subtracted the percent units discarded by 10 percent (the applicable percentage for most refundable drugs), except for drugs with an increased applicable percentage as described in § 414.940(d). We note that since the data indicating which drugs will have an increased applicable percentage of 26 percent for the unique circumstances of rarely utilized orphan drugs (§ 414.940(d)(5)) will not be available until the data is analyzed for the initial report, we entered 26 percent for orphan drugs furnished to fewer than 100 beneficiaries in CY 2022 based on data on the CMS website.⁸⁰⁵ Therefore, the drugs with increased applicable percentage under § 414.940(d)(5) may change each year based on claims data; it is applied in this analysis for estimation purposes only. Then, we multiplied that percentage by the CY 2022 total allowed amount to estimate the annual refund for a given billing and

⁸⁰⁴ <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units>.

⁸⁰⁵ <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-spending-by-drug>.

payment code. The quarterly refund was estimated by dividing the annual estimate by 4. This analysis remains appropriate for this proposed rule because we are applying the finalized policies from the CY 2023 and 2024 PFS final rules to the most recent publicly available data for the JW modifier data from 2022.

Overall, according to data on the CMS website⁸⁰⁶ for Medicare Part B discarded drug units in the 2022 calendar year, Medicare paid over \$800 million for discarded amounts of drugs from a single-dose container or single-use package paid under Part B. In that year, there were 55 billing and payment codes with 10 percent or more discarded units based on JW modifier data. Of these, 10 did not meet the definition of refundable single-dose container or single-use package drug in section 1847A(h)(8) of the Act because they are not single source drugs or biologicals; 5 were excluded from the definition of refundable single-dose container or single-use package drug (as specified in section 1847A(h)(8)(B) of the Act) because they are identified as radiopharmaceuticals or imaging agents in FDA-approved labeling; and 3 are products referred to as skin substitutes, which were removed because we anticipate making changes to coding and payment policies regarding those products in future rulemaking. After these exclusions, there were 35 billing and payment codes that met the definition of refundable single-dose container or single-use package drug. Of these, 29 codes have discarded units above the relevant finalized applicable percentage, and 6 codes have discarded units that would fall below increased applicable percentages finalized in this proposed rule.

We estimated refund amounts as described in section 1847A(h)(3) of the Act were calculated based on this data by subtracting the percent units discarded by 10 percent (the applicable percentage), except for drugs with higher applicable percentages finalized in the CY 2023 or 2024 final rules. Then, we multiplied the appropriate percentage by the CY 2022 total allowed amount to estimate the annual refund for a given billing and payment code. The quarterly refund was estimated by dividing the annual estimate by 4. Based on this data, there would be approximately \$98.7 million in refunds due from manufacturers for the calendar year of 2022 (\$24.7 million each calendar quarter).

There are several limitations to this analysis that could substantially affect the total quarterly refund. Since new drugs are continually being approved, this estimate does not consider newer drugs that will meet the definition of refundable single-dose container or single-use package drug on or after the effective date of January 1, 2023. Since section 1847A(h)(8)(B)(iii) of the Act excludes drugs approved by FDA on or after November 15, 2021, and for which payment has been made under Part B for fewer than 18 months from this definition, we expect an impact on refund amounts after the 18-month exclusion has ended if the drug otherwise meets the definition. We also noted that this estimate is based on CY 2022 data for discarded drug amounts, which, for reasons discussed in the CY 2023 PFS final rule (87 FR 69716), we believe to be an underestimate due to the frequent omission of the JW modifier Claims edits for both the JW and JZ modifiers will likely increase accurate reporting of discarded drug amounts. Other substantial changes to this estimate may occur if a billing and payment code no longer meets this definition. For example, if a generic version of one of these drugs is marketed, the billing and payment code will become a multiple source drug code and will no longer meet the definition of refundable single-dose container or single-use package drug. Subsequently, the manufacturers will not be responsible for refunds under this provision. There may be changes in the percent discarded units for a given refundable single-dose container or single-use package drug if the manufacturer introduces additional vial sizes or modifies the vial size to reduce the amount discarded. Lastly, since data from the CMS website only includes billing and payment codes on the ASP drug pricing file⁸⁰⁷ and implementation of section 90004 of the Infrastructure Act is not restricted to billing and payment codes included on the file, there may be other applicable data that was not assessed as part of this estimate.

b. Impacts Related to the Payment Limit Calculation When Manufacturers Report Negative or Zero Average Sales

In section III.A.2 of this proposed rule, CMS is proposing how payment limits would be calculated when manufacturers report negative or zero ASP data to CMS. We are proposing to amend § 414.904(i) to reflect CMS' approach to setting a payment limit for

circumstances in which negative or zero ASP data is reported by a manufacturer for a single source drug.

Specifically, we are proposing to codify that in cases where negative or zero ASP data is reported for some, but not all, NDCs of a multiple source drug, we would calculate the payment limit using the positive ASP data reported for the drug, except for the existing carryover policy for multiple source drugs that we would apply when missing data results in a significant change in the ASP payment limit. We are proposing to move this carryover policy for multiple source drugs within § 414.904(i) to fit within the structure of the proposed new set of payment limit methodologies. We are also proposing to codify that in the case of a multiple source drug for which negative or zero ASP data is reported for all NDCs, we would set the payment limit using the most recent available positive ASP data from a previous quarter until at least one NDC for the drug has positive ASP data for a quarter.

We are proposing to codify that in cases where negative or zero ASP data is reported for some, but not all, NDCs of a single source drug that is not a biosimilar, we would calculate the payment limit using the positive ASP data reported for the drug. We are proposing to codify that for single source drugs that are not biosimilars with all negative or zero ASP data for a given quarter, the payment limit would be, until at least one NDC for the drug has positive manufacturer ASP data for a quarter, the lesser of 106 percent of the volume-weighted average of the most recent available positive manufacturer ASP data for at least one NDC from a previous quarter and 106 percent of the wholesale acquisition cost, and we would use 106 percent of the lowest wholesale acquisition cost per billing unit if there is more than one wholesale acquisition cost per billing unit.

We are also proposing to codify that in cases where negative or zero ASP data is reported for some, but not all, NDCs of a biosimilar, we would calculate the payment limit using the positive ASP data reported for the biosimilar. Lastly, we are proposing to codify two scenarios when the manufacturer reports negative or zero ASP for all NDCs for a biosimilar for a given quarter: (1) when positive ASP data is available for another biosimilar(s) with the same reference product for the given quarter, we are proposing to set the payment limit equal to the sum of the volume-weighted average of the positive ASP data from all other biosimilars referencing the same

⁸⁰⁶ <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units>.

⁸⁰⁷ <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice>.

reference product plus 6 percent (or 8 percent for a qualifying biosimilar biological) of the amount determined under section 1847A(b)(4) of the Act for the reference biological product for the given quarter; and (2) when either no other biosimilars have been approved for the same reference product or no other biosimilars with the same reference product report positive ASP data for the given quarter, we are proposing to set the payment limit equal to the sum of the volume-weighted average of the most recent available positive ASP data from a previous quarter plus 6 percent (or 8 percent for a qualifying biosimilar biological) of the amount determined under section 1847A(b)(4) of the Act for the reference biological product for the given quarter.

With regard to estimating changes in expenditures for CY 2025, because

drugs and biologicals that report negative or zero ASP data vary by quarter and we cannot predict those that will report such data, we used historic claims data to perform an illustrative analysis of how program spending would have changed had the proposed policies been in place in CY 2023. In the analysis, we identified single source and multiple source billing and payment codes associated with negative or zero ASP data for which we published payment limits based on other applicable pricing data (that is, the manufacturer or published wholesale acquisition cost) in the four calendar quarters of 2023. For each such billing and payment code, we used claims data to identify: (1) the number of allowed billing units in a calendar quarter (that is, the number of billing units of a drug or biological paid for by Medicare); (2)

the payment limit per billing unit we applied to that drug or biological under our current policies; and (3) the payment limit per billing unit our proposal would apply to the billing and payment code. We then subtracted the product of the allowed billing units for the payment limit under current policies by the product of the allowed billing units and the payment limit under our proposal, and the difference between the two is what the difference between what Medicare spending on the billing and payment codes would have been if our proposed payment limit methodologies were used in that calendar quarter of 2023 and what Medicare actually spent. These data and net reductions (or increases) in program spending are illustrated in Table 130.

BILLING CODE C

As illustrated in Table 131, the application of the proposed payment limit calculation approaches would have reduced program spending for all but three drugs that reported negative or zero ASP data in calendar quarters in 2023 and reduced spending by a total of \$7,241,960.21 over the year.

We separately analyzed theoretical changes in program spending for one biosimilar product (ZIEXTENZO®, Q5120) that has reported negative ASP data for all NDCs for three consecutive quarters beginning with the second calendar quarter of 2022, and calculated

the payment limit under our proposed method for biosimilars with negative or zero ASP data and changes in program spending for the three impacted quarters had our proposed payment approach been applied. We also analyzed payment limits and theoretical changes in program spending under two alternatives considered under the proposed rule. Under the first alternative, we would include the ASP data and billing units sold of the reference biological for a given quarter along with those of the other biosimilars in the volume-weighted average

calculation. Under the second alternative, we would set the payment limit for a given quarter using the biosimilar's most recent available positive ASP data and either 6 percent (or 8 percent for qualifying biosimilar biologicals) of the amount determined under section 1847A(b)(4) of the Act for the reference biological product (as defined in § 414.902) for the given quarter. The calculated payment limits under the proposal and the two alternatives, as well as the estimate reductions in program expenditures, are illustrated in Table 131.

TABLE 131: Theoretical Changes in Medicare Spending on Q5120 for 4Q 2023 through 2Q 2024

| Ziextenzo (Q5120) | Allowed Billing Units | Current Policy (WAC+6) | Payment limit: Proposal | Payment limit: First Alternative | Payment limit: Second Alternative |
|----------------------|-----------------------|------------------------|-------------------------|----------------------------------|-----------------------------------|
| 4Q2023 | 2,299 | \$346.755 | \$118.369 | \$95.267 | \$29.24 |
| 1Q2024 | 1179 | \$346.755 | \$117.313 | \$86.053 | \$27.40 |
| 2Q2024 | 132 | \$346.755 | \$149.574 | \$127.623 | \$31.86 |
| | | | Spending Δ: Proposal | Spending Δ: First Alternative | Spending Δ: Second Alternative |
| 4Q2023 | | | \$525,058.988 | \$578,171.42 | \$729,975.52 |
| 1Q2024 | | | \$270,512.618 | \$307,367.11 | \$376,513.91 |
| 2Q2024 | | | \$26,027.867 | \$28,925.38 | \$41,565.72 |
| Total Savings | | | \$821,599.473 | \$914,463.917 | \$1,148,055.145 |

We note that the spending change estimates reflect preliminary claims data. Providers and suppliers have a 12-month period to submit Medicare Part B claims, including claims for drugs payable under Part B, so a lag exists between the date of service when a drug is administered and when the claim is submitted and adjudicated. Because of

this lag in finalized claims, there may also be a lag in available JW modifier data for any given date of service quarter. An evaluation of July 2010 Medicare Part B claims in the Physician/Supplier-Carrier setting showed that 91.68, 96.84, and 98.32, and 99.13 percent of claims were final at 3, 6, 9, and 12 months, respectively,

following the date of service. At 24 and 48 months, 99.83 and 100 percent of the claims, respectively, were considered to be final. Therefore, for the allowed billing units and estimated program expenditure reduction for the first 2 calendar quarters of CY 2024 are significantly lower than we would expect after claims mature for a full

year. Over the 3 calendar quarters (4Q2023, 1Q2024, and 2Q2024), our proposed approach for calculating the payment limit for biosimilars with only negative or zero ASP and the two alternative approaches would have reduced program expenditures by at least \$821,599.473, \$914,463.917, and \$1,148,055.145, respectively.

After assessing the effect of applying the proposed alternative payment limit calculation approaches to recent Medicare FFS claims experience over 2023 and 2024, we estimate an average annual gross Part B effect of \$10 million dollars in reduced program spending for 2025 and approximately \$100 million over 2025 to 2034, as shown in Table 134. Historically we have observed that negative or zero ASP pricing data may occasionally occur for a drug when it is discontinued or substituted away for another product and assume this to occur in the future. Moreover, given the infrequency of negative or zero ASP data, we do not expect in all years that alternative pricing approaches will be necessary or to affect drugs with material levels of utilization. Therefore, for a low estimate we project the policy to have a negligible effect on program spending for the projection window. To illustrate a potential high impact estimate scenario, the affected utilization from 2023 was doubled relative to the observed data. Please note that the actual effect of the policy will be specific to the affected drugs in any given year and considerations that affect their utilization and pricing, therefore actual experience may deviate considerably from these projections.

c. Impacts Related to the Payment of Radiopharmaceuticals in the Physician Office

In section III.A.3. of this proposed rule, while we evaluate our broader policies in this space for future rulemaking, we are proposing to codify in regulations at § 414.904(e)(6) that, for radiopharmaceuticals furnished in a setting other than the hospital outpatient department, MACs shall determine payment limits for radiopharmaceuticals based on any methodology used to determine payment limits for radiopharmaceuticals in place on or prior to November 2003. Such methodology may include, but is not limited to, the use of invoice-based pricing. The proposal does not necessarily change the payment methodology in place for a MAC but rather clarifies that any payment methodology that was being used by any MAC can continue to be used by any

MAC. Therefore, we believe that this proposal will have no impact on Medicare spending.

d. Impacts Related to Immunosuppressive Therapy

In section III.A.4 of this proposed rule, we are proposing to modify regulations to include orally or enterally administered compounded formulations of FDA-approved drugs that have approved immunosuppressive indications, or that have been determined by a Medicare Administrative Contractor (MAC) to be reasonable and necessary for specific purposes in immunosuppressive treatment in the immunosuppressive drug benefit. In addition, we are proposing two changes regarding supplies of immunosuppressive drugs to align with current standards of practice and reduce barriers to medication adherence: to allow payment of a supply fee for a prescription of a supply of up to 90 days and to allow prescriptions for these immunosuppressive drugs to be refillable.

CMS has limited insight into how many patients who are currently prescribed compounded immunosuppressive drugs would have their immunosuppressive medication paid for under Part B if the proposed changes to the immunosuppressive drug benefit are finalized. Medicare Part D claims data for CY 2023 indicates there were 2,662 prescriptions filled that year for compounded immunosuppressive drugs that could have been administered through oral or enteral routes (that is, that would likely be paid under Part B if the immunosuppressive drug benefit revision is finalized as proposed). We estimate that this number of prescriptions correlates to up to 2,000 Part D enrollees that were prescribed compounded immunosuppressive drugs that would be covered if the proposal is finalized. However, we do not know how many Part B beneficiaries currently have their compounded immunosuppressive drugs paid for by means other than a Part D policy. And finally, and perhaps most importantly, compounded drugs are priced by each A/B and DME MAC and have no estimable payment limit. Thus, we are unable to estimate the cost shift from Part D and other plans to Part B that would result from a finalization of the immunosuppressive drug benefit proposed policies, including allowing payment of supply fees for prescriptions fills for supplies of up to 90 days and for immunosuppressive drugs to be refillable.

e. Impacts Related to Clotting Factors

In section III.A.5. of this proposed rule, we are proposing to update § 410.63(b) to clarify existing CMS policy that blood clotting factors must be self-administered to be considered clotting factors for which the furnishing fee applies. Additionally, we are proposing to clarify at § 410.63(c) that the furnishing fee is only available to entities that furnish blood clotting factors, unless the costs associated with furnishing the clotting factor are paid through another payment system, including the PFS. That is, we are proposing to clarify through revisions to § 410.63 that clotting factors (as specified in section 1861(s)(2)(I) of the Act) and those eligible to receive the clotting factor furnishing fee (as specified in section 1842(o)(5) of the Act) are the same subset of products. Accordingly, the clarification will not be adding a furnishing fee to any new products. Therefore, we believe that this clarification will have no impact on Medicare spending.

6. Impacts Related to Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.B.2. of this proposed rule, we are proposing to require RHCs and FQHCs to bill the individual codes that make up the general care management HCPCS code, G0511. Payment amounts for some services that comprise HCPCS code G0511 are less than the payment amount for G0511 and if an RHC or FQHC mostly furnishes these services, they could see a potential decline in payment. We are also proposing to allow RHCs and FQHCs to bill the add-on codes for additional time spent once the minimum threshold of time was met to account for a complete encounter. This could potentially offset any decrease in payments. In addition, beginning in CY 2025, we are proposing to adopt the coding and policies regarding Advanced Primary Care Management (APCM) services proposed under the PFS, as discussed in section II.G of this proposed rule. In terms of estimated impacts to the Medicare program, we believe that the proposals discussed in section III.B.2 of this proposed rule would have no impact on Medicare spending.

In section III.B.3. of this proposed rule, we are proposing the policy to continue to adopt the definition “immediate availability” as including real-time audio and visual interactive telecommunications for the direct supervision of services and supplies furnished incident to a physician’s service through December 31, 2025, for

RHCs and FQHCs. We are also proposing, on a temporary basis, to allow payment for non-behavioral health visits furnished via telecommunication technology in a manner that would closely align with the payment mechanisms mandated by statute through December 31, 2024, that is, RHCs and FQHCs would continue to bill for RHC and FQHC services furnished using telecommunication technology services by reporting HCPCS code G2025 on the claim through December 31, 2025. In addition, we are proposing to continue to delay the in-person visit requirement for mental health services furnished via communication technology by RHCs and FQHCs to beneficiaries in their homes until January 1, 2026. We believe these RHC/FQHC proposals related to telecommunication technology would have a negligible impact on Medicare spending.

In section III.B.4. of this proposed rule, we discuss the implementation of section 4124 of the CAA, 2023. Section 4124 of the CAA, 2023 established Medicare coverage for intensive outpatient (IOP) services furnished by a hospital to its outpatients, or by a community mental health center, a RHC or a FQHC, as a distinct and organized intensive ambulatory treatment service offering less than 24-hour daily care in a location other than an individual's home or inpatient or residential setting, effective January 1, 2024 (88 FR 81838). We are proposing to provide a payment rate for 4 or more services per day in the RHC and FQHC setting. In terms of impact, we believe that this proposal would have negligible impact on Medicare spending.

In section III.B.5. of this rulemaking, we are proposing to allow RHCs and FQHCs to bill for Part B preventive vaccines and the administration at the time of service. We propose that payments for these claims will initially be made according to Part B preventive vaccine payment rates in other settings, but that they will be annually reconciled with the facilities' actual vaccine costs on their cost reports, which is current practice and statutorily mandated. Therefore, we believe that this proposal would have no impact on Medicare spending.

In section III.B.6. of this proposed rule, we discuss our proposal relating to RHC productivity standards. We are proposing to remove productivity standards for RHCs and therefore believe that the proposal discussed in this section III.B.6. of this proposed rule would have no impact on Medicare spending.

In section III.B.8. of this proposed rule, we are clarifying that when RHCs and FQHCs furnish dental services that align with the inextricably linked policies and operational requirements in the physician setting, we would consider those services to be a qualifying visit and the RHC would be paid at the RHC AIR and the FQHC would be paid under the FQHC PPS. We believe this clarification related to dental services furnished in RHCs and FQHCs would have a negligible impact on Medicare spending. Even though this is a new benefit, it would only cover dental services inextricably linked to specific medical services as described in section II.J. of this proposed rule.

7. Changes in the RHC and FQHC CfCs: Provision of Services (§ 491.9(a)(2) and (c)(2)(ii) and (vi))

Provision of Services (§ 491.9)

At § 491.9(a)(2), we are proposing to explicitly state that an RHC and FQHC must provide primary care services and an RHC cannot be a rehabilitation agency or a facility that is primarily for the care and treatment of mental diseases. We believe this proposal would result in real, but difficult to estimate, long-term benefits to patients receiving services at RHCs and FQHCs, as well as economic benefits to the clinic or center. Regarding the estimated impacts on the Medicare program, the proposals discussed in section III.C.2 of this proposed rule would have no impact on Medicare spending.

This proposed change would provide RHCs with additional flexibility to provide outpatient specialty services on-site or hire additional providers with specialized expertise to meet the needs of their community, including internal medicine, pediatrics, geriatrics, obstetrics and gynecology, dermatology, cardiology, neurology, endocrinology, and ear, nose and throat. As a result, RHCs would be able to improve access to care by serving more patients in communities served by RHCs and FQHCs, including rural communities, and not requiring patients to travel longer distances to receive specialty services. Patients could have access to specialists within their own communities, improving overall access for Medicare beneficiaries. Moreover, if this policy were to be finalized, CMS would no longer determine or enforce the standard of RHCs "being primarily engaged in furnishing primary care services."⁸⁰⁸ which has been enforced

⁸⁰⁸ Centers for Medicare & Medicaid Services. (2020, February 21). State Operations Manual Appendix G—Guidance for Surveyors: Rural Health Clinics (RHCs) (pp. 63–64). <https://www.cms.gov/>

via the sub-regulatory guidance contained in the *State Operations Manual Appendix G—Guidance for Surveyors: Rural Health Clinics (RHCs)*. Resources that clinics are currently using to evaluate if they are meeting this requirement could be devoted to other administrative tasks. Therefore, we believe that there would be no burden imposed on RHCs or FQHCs related to this proposal.

We are also proposing to remove hemoglobin and hematocrit (H&H) lab tests from the list of specific tests RHCs must provide, as well as update the language regarding the primary culturing requirement to reflect current standards of practice at § 491.9(c)(2)(ii) and (vi), respectively. As discussed in section III.C.2.b of this proposed rule, RHCs report the H&H lab requirement is particularly burdensome and costly for clinics due to purchasing and maintaining the equipment, even if it is seldom or never used.

This proposed change would reduce the overall burden for RHCs by reducing the number of diagnostic tests they must provide. RHCs would no longer be required to purchase or maintain H&H lab test equipment or supplies, freeing up resources for other essential services. H&H lab tests are most often ordered as part of a larger panel of labs that is not provided at the RHC. When this is the case, patients will receive the H&H as part of that larger panel at an outside lab that offers the larger panel of labs. These patients may be inconvenienced by having to travel to another laboratory, but this limits the number of specimens they must provide for the laboratory tests, reducing the number of times a patient's veins must be accessed for blood draws. RHCs report that when laboratory tests are ordered that are not provided by the RHC, such as a comprehensive blood count (CBC), their patients are often sent to the nearest hospital that would have a full-service laboratory available to perform the test. A CBC test looks at a patient's overall health and can detect a wide range of conditions that the hemoglobin and hematocrit tests cannot. This ensures comprehensive patient care and may result in a decreased need for follow-up testing and decreased patient turnaround time.⁸⁰⁹

Currently, there are approximately 5,462 Medicare-certified RHCs. Applying the most recent data from

Regulations-and-Guidance/Guidance/Manuals/downloads/som107ap_g_rhc.pdf.

⁸⁰⁹ Mayo Foundation for Medical Education and Research. (2023, January 14). *Complete blood count (CBC)*. Mayo Clinic. <https://www.mayoclinic.org/tests-procedures/complete-blood-count/about/pac-20384919>.

2021, 66 percent (3,605) of RHCs are designated as “provider-based,” which are owned and operated as an integral part of a hospital, nursing home, or home health agency.⁸¹⁰ The remaining 34 percent (1,857) of RHCs are “independent clinics” and, though uncommon, may be owned and/or operated by a healthcare system. Therefore, we assume that at most, half of the independent clinics, for a total of 929 RHCs, would continue to provide H&H tests because it is less likely that they are a part of a healthcare system. As a result, we assume that 4,534 (3,605 provider-based RHCs + 929 independent clinics) RHCs will continue to refer patients to a fully certified laboratory rather than directly provide the H&H test. Because the regulatory requirements at § 491.9 States that RHCs must provide H&H lab tests on-site, RHCs must have and maintain the appropriate equipment to perform these tests, even if the equipment is not utilized. There are variations in the H&H testing equipment RHCs may use; however, we note that the average cost of an H&H meter or analyzer costs approximately \$1,200 for the system and is replaced on average every 3 years. The systems also have an approximate \$100 annual maintenance fee. We estimate that over the next 3 years, 4,534 RHCs will each save approximately \$1,500. This would result in a total annual savings of \$2,267,000 ((4,534 RHCs that typically refer patients to a fully certified laboratory × \$1,500)/3). After 3 years, the RHC program would save a total of \$6,801,000 (4,534 × \$1,500).

8. Clinical Laboratory Fee Schedule

In section III.D. of this proposed rule, we outline statutory revisions to the data reporting period and phase-in of payment reductions under the CLFS. In accordance with section 502 of the FCAOEA, 2024, we are proposing certain conforming changes to the data reporting and payment requirements in our regulations at 42 CFR part 414, subpart G. Specifically, for CDLTs that are not ADLTs, we are proposing to update certain definitions and revise § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017, and is required every 3 years beginning January 2025. Section 502(b) of the FCAOEA, 2024 delays the next data

reporting period under the CLFS for CDLTs that are not ADLTs by 1 year, that is, it requires the next data reporting period for these tests to take place during the period of January 1, 2025, through March 31, 2025. Subsequently, the next private payor rate-based CLFS update for these tests will be effective January 1, 2026, instead of January 1, 2025. In addition, we are proposing conforming changes to our requirements for the phase-in of payment reductions to reflect section 502(a) of the FCAOEA, 2024. Specifically, we are proposing to revise § 414.507(d) to indicate that for CY 2024, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2023, and for CYs 2025 through 2027, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

We recognize that private payor rates for CDLTs paid on the CLFS and the volumes paid at each rate for each test, which are used to determine the weighted medians of private payor rates for the CLFS payment rates, have changed since the first data collection period (January 1, 2016, through June 30, 2016) and data reporting period (January 1, 2017, through March 31, 2017). In addition, as outlined in section III.D. of this proposed rule, in the CY 2019 PFS final rule (83 FR 59671 through 59676), we amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS-1450 14x Type of Bill. As such, the FCAOEA, 2024 amendments to the data reporting period will delay using updated private payor rate data to set revised CLFS payment rates for CDLTs that are not ADLTs.

Due to unforeseen changes in private payor rates due to shifts in market-based pricing for laboratory tests and the unpredictable nature of test volumes and their impact on calculating updated CLFS payment rates based on the weighted median of private payor rates, it is uncertain whether the delay in data reporting will result in a measurable budgetary impact. In other words, to assess the impact of delayed reporting and subsequent implementation of updated CLFS rates, we will need to calculate weighted medians of private payor rates based on new data and compare the revised rates to the current rates. As such, we believe that we will only know the impact of the delay in data reporting after collecting actual updated applicable information from applicable laboratories and calculating the updated CLFS rates.

Regarding the proposed conforming changes to our requirements for the phase-in of payment reductions, we note that for CYs 2025 through 2027, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year. Based on data reported in the 2017 data collection period, we estimate 14.8 percent (191) of tests on the CLFS may be subject to the full 15 percent phase-in reduction in CY 2025.

9. Effects of Proposals Relating to the Medicare Diabetes Prevention Program Expanded Model

a. Effects on Beneficiaries

We are proposing to modify certain Medicare Diabetes Prevention Program (MDPP) expanded model policies to: (1) align MDPP terminology and definitions with the proposed 2024 Centers for Disease Control and Prevention (CDC) Diabetes Prevention Recognition Program (DPRP) Standard⁸¹¹ definitions for “in-person with a distance learning component,” “combination with an online component,” and “online”; (2) remove the MDPP bridge payment; (3) provide a more effective option for a beneficiary to self-report their weight in an MDPP distance learning session, by submitting 2 photos; (4) facilitate Medicare Administrative Contractors (MACs) in processing claims for a MDPP make-up session held on the same day as a regularly scheduled session by requiring use of an existing HCPCS modifier; and (5) align current rule language with previous rulemaking.

MDPP is a non-pharmacological behavioral intervention consisting of up to 22 sessions using a CDC approved National Diabetes Prevention Program (National DPP) curriculum.⁸¹² CDC administers a national quality assurance program recognizing eligible organizations that furnish the National DPP through its evidence based DPRP Standards, which are updated every three years. The 2024 CDC DPRP Standards replace the 2021 CDC DPRP Standards in June 2024.⁸¹³

The Calendar Year (CY) 2021 PFS final rule allowed virtual delivery of MDPP during the COVID-19 Public

University of Southern Maine, Muskie School of Public Service, Maine Rural Health Research Center. <https://digitalcommons.usm.maine.edu/cgi/viewcontent.cgi?article=1016&context=clinics>.

Health Emergency (PHE) (85 FR 84830). Improvements to MDPP in the Calendar Year 2024 final rule included a simplified payment structure to allow for fee-for-service (FFS) payments for beneficiary attendance, while retaining the performance-based payments for diabetes risk reduction (that is, weight loss) (88 FR 79241). This policy also extended certain PHE flexibilities including the option to deliver some or all MDPP sessions via distance learning, until December 31, 2027 (88 FR 79241). Another PHE flexibility extended through December 31, 2027, at 42 CFR 410.79(e)(3)(iii), is for MDPP suppliers to obtain weight measurements for beneficiaries using one of the following options: (1) via digital technology, such as scales that transmit weights securely via wireless or cellular transmission; or (2) via self-reported weight measurements from the at-home digital scale of the MDPP beneficiary.

The 2024 CDC DPRP Standards were proposed after the CY 2024 PFS was finalized. To align with 2024 CDC DPRP Standards, we are proposing to update the MDPP definition for “online” delivery to align with the proposed 2024 CDC DPRP definition. We are also proposing to add terms and definitions for CDC’s new modalities including “in-person with a distance learning component” and “combination with an online component” and to remove the existing “combination” term and definition. Lastly, we are specifying that MDPP make-up sessions must be provided in-person or via distance learning delivery, as required by the CY 2024 PFS final rule.⁴

Furthermore, the MDPP bridge payment (G9880), which is a payment made to the subsequent supplier for the first session when a beneficiary switches MDPP suppliers, is no longer necessary in MDPP’s CY 2024 FFS payment structure and may increase risk for fraud, waste, or abuse. We are proposing to remove the bridge payment from the MDPP CY 2025 Fee Schedule. In addition, we have identified a more effective option for a beneficiary to self-report their weight in an MDPP distance learning session. We have also identified the need to require suppliers to use Current Procedural Terminology (CPT) Modifier 79 to allow Medicare Administrative Contractors (MACs) to identify a claim for an MDPP make-up session held on the same day as a regularly scheduled session. Finally, we are proposing to align current rule language with previous rulemaking pertaining to MDPP terminology, requirements, and payment structure.

All the proposed changes for MDPP in CY 2025 are conforming or

administrative and expected to have a modest impact on beneficiaries’ access to MDPP services. Aligning with 2024 CDC DPRP Standards for MDPP delivery modes may help expand beneficiary access by streamlining data submission for MDPP suppliers and increasing the number of MDPP eligible organizations that enroll in Medicare as MDPP suppliers. Additionally, allowing for MDPP make-up sessions to be scheduled on the same day as regularly scheduled sessions would increase flexibility for both MDPP suppliers and beneficiaries and may help expand access for beneficiaries with transportation and other scheduling issues that prevent scheduling sessions more than one day a week or month. Increased flexibility in scheduling MDPP sessions may help to address a lack of MDPP suppliers in certain communities and challenges related to beneficiary logistics concerning course attendance.

Additionally, we are proposing to provide a more effective option to beneficiaries to self-report weight for a MDPP distance learning session, by allowing beneficiaries to submit 2 (two) photos to capture both the beneficiary weight on the digital scale and the beneficiary visible in their home. Current MDPP supplier standards at § 424.205 require beneficiary weight to be reported at each MDPP session attended. This proposed change would help to address concerns voiced by MDPP suppliers who have reported that many of their beneficiaries are unable to take a picture while standing on their home scales due to risk of injury and physical health limitations. This new flexibility may promote more consistent collection of weight for MDPP sessions.

Lastly, we do not expect removing the MDPP bridge payment to have an impact on beneficiary access. This payment for the first session attended with a new supplier when a beneficiary switches MDPP suppliers is not necessary in MDPP’s CY 2024 FFS payment structure that includes payment for every session attended and historically has been submitted by few MDPP suppliers.

Overall, these modifications address MDPP supplier and beneficiary needs based upon available monitoring and evaluation data received to date, feedback from Medicare Advantage plans and existing MDPP suppliers, and feedback from beneficiary focus groups. The changes are also in response to comments from interested parties made through public comments in response to prior rulemaking.

b. Effects on the Market

We anticipate that the conforming and administrative changes proposed in this rulemaking are likely to result in modest increases of MDPP suppliers and beneficiary access to the set of MDPP services. We anticipate that this would assist in contributing to a reduction of the incidence of diabetes among eligible Medicare beneficiaries. As of April 2024, there are approximately 810 in-person organizations nationally that are eligible to become MDPP suppliers based on their preliminary or full CDC Diabetes DPRP status. However, only 36 percent of these eligible in-person organizations are participating in MDPP.⁸¹⁴ Aligning with CDC DPRP delivery modes, particularly adding the new “in-person with a distance learning component” mode, is expected to help increase recruitment of new DPRP organization as MDPP suppliers, who currently would need to obtain both in-person and distance learning CDC DPRP recognition to deliver sessions via both modalities. Furthermore, only about one-third of MDPP suppliers have submitted MDPP-related claims.⁸¹⁵ Our proposed change to remove the MDPP bridge payment would help to further simplify the payment structure, which is expected to have a positive impact on supplier claim submissions. While requiring MDPP suppliers to add a modifier to indicate that a claim is for a MDPP same day make-up session does add complexity because we have proposed to use an existing CPT modifier in use and recognized by the MACs, we expect this addition to require minimal changes in claim processing systems. Additionally, this modifier is only to be used for same day make-up sessions, which are only allowed once per week, and, while an important tool to increase access for beneficiaries with barriers to participation in MDPP, are not expected to be used for most session attendance claims. In summary, we believe that having more flexibility in how the set of MDPP services are delivered would make MDPP more accessible to beneficiaries, particularly those who live in rural areas or in communities with gaps in MDPP supplier locations.

c. Payment for MDPP Services

Regulations at § 414.84 specify that MDPP suppliers may be eligible to receive payments for furnishing MDPP services and meeting performance

⁸¹⁴ Centers for Disease Control and Prevention. Diabetes Prevention Recognition Program Application. Registry of All Recognized Organizations. <https://dppr.cdc.gov/Registry>.

⁸¹⁵ Unpublished MDPP monitoring data. 2023.

targets related to beneficiary weight loss and attendance. We anticipate that the proposed change to the MDPP payment structure would have minimal impact on total payment for MDPP services. A smaller proportion of MDPP suppliers, only 9.8 percent since the start of the program through April 2024, have submitted claims for the MDPP bridge payment, with an even smaller proportion of 2.7 percent having received payment for a bridge payment claim. According to CDC DPRP data, less than 1 percent of MDPP sessions are same day make-up sessions.⁸¹⁶ The total maximum payment per beneficiary for MDPP of \$768 would remain unchanged by our proposals.

d. Effects on the Medicare Program

(a) Estimated 10-Year Impact of MDPP

The changes proposed this year for implementation in the CY PFS 2025 are expected to have no impact on Medicare spending.

10. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As outlined in section III.F.2 of this proposed rule, we are proposing to permanently allow periodic assessments to be furnished via audio-only communication when two-way audio-video communications technology is not available to the beneficiary, to the extent that it is authorized by SAMHSA and DEA at the time the service is furnished and all other applicable requirements are met. We are also proposing to allow the OTP intake add-on code to be furnished via two-way audio-video communications technology when billed for the initiation of treatment with methadone to the extent that the use of audio-video telecommunications technology to initiate treatment with methadone is authorized by DEA and SAMHSA at the time the service is furnished, an OTP determines that an adequate evaluation of the patient can be accomplished via a via an audio-visual telehealth platform, and all other applicable requirements are met. We believe the Part B cost impact of these flexibilities for the use of telecommunications will be minimal because we do not expect that these flexibilities will significantly increase the frequency with which medically necessary intake activities and periodic assessments are furnished, and since the payment rate for these services will be the same regardless of if an OTP

furnishes these services via telecommunications or in-person.

In section III.F.3 of this proposed rule, CMS is proposing to update the payment rate for intake activities (HCPCS code G2076) by adding in the value of the non-facility rate for SDOH risk assessments described by HCPCS code G0136 (*Administration of a standardized, evidence-based Social Determinants of Health Risk Assessment, 5–15 minutes, not more often than every 6 months*). We believe updating the payment amount for intake activities with an addition of HCPCS code G0136 would serve as a reasonable proxy to reflect the value and resources required by new SAMHSA standards for initial assessment service activities at § 8.12(f)(4)(i) that OTPs are required to provide, including an assessment to identify a patient's unmet HRSNs or the need for harm reduction intervention and recovery support services that are critical to the treatment of an OUD. Currently, the CY 2024 payment rate for the intake add-on code (G0276) is \$201.73 and adding the value of a crosswalk to the CY 2024 non-facility rate of \$18.66 would result in a payment rate of approximately \$220.39. The payment rate would also continue to be updated annually by the percentage increase in the Medicare Economic Index (MEI) and the Geographic Adjustment Factor (GAF) as codified in § 410.67(d)(4)(ii) through (iii). According to historical claims data for intake activities (HCPCS code G2076) furnished by OTPs from the beginning of CY 2020 through the end of CY 2023, the number of claims for intake activities is low. Due to low utilization of the intake activities add-on code (HCPCS code G2076), CMS estimates that an increase in the add-on payment amount to HCPCS code G2076 by \$18.66 per claim would still result in a negligible cost to the Medicare program. Lastly, in section III.F.4 of this proposed rule, we are proposing to establish payment for new opioid agonist and antagonist medications that were recently approved by the FDA. We proposed to include a new add-on code to the bundled payment for a new opioid overdose reversal product, nalmefene hydrochloride nasal spray product (Opvee®), which includes one carton of two, 2.7 mg nasal sprays of nalmefene. We proposed to price the drug component of this add-on code for nalmefene according to the ASP payment methodology set forth in section 1847A, except that the payment amount shall be ASP + 0. The non-drug component of this add-on code would also include overdose education

furnished in conjunction with nalmefene, and it would be updated annually by the percentage increase in the MEI and GAFs consistent with other opioid antagonist medications in § 410.67(d)(4)(ii) through (iii). We are limiting Medicare payment to OTPs for nalmefene to one add-on code every 30 days, however, we will allow exceptions to this limit in the case where the beneficiary overdoses and uses the initial supply of nalmefene dispensed by the OTP, to the extent that it is medically reasonable and necessary to furnish additional doses of nalmefene. We are also proposing payment for the weekly formulation of the new extended-release injectable buprenorphine product Brixadi®, via a new weekly bundled payment code that includes a drug and non-drug component. We proposed to price the drug component consistent with our payment methodology for implantable and injectable medications codified § 410.67(d)(2)(i)(A), and we proposed to limit the payment amount to 100-percent of ASP and to use a crosswalk to the weekly Brixadi® formulation described by HCPCS code J0577 (*Injection, buprenorphine extended release (brixadi), less than or equal to 7 days of therapy*). The non-drug component (individual and group therapy, SUD counseling, toxicology testing) would also include administration of an injection based on CPT code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*); updated annually by the percentage increase in MEI and GAFs. CMS is further proposing to update the drug-component of the existing HCPCS code (G2069) for monthly injectable buprenorphine to include the monthly formulation of Brixadi® based on a crosswalk to HCPCS code J0578 (*Injection, buprenorphine extended release (brixadi), greater than 7 days and up to 28 days of therapy*). We proposed to continue to use the existing payment methodology for both the drug and non-drug component of G2069 after averaging in payment for the monthly formulation of Brixadi®. Since the proposed payment methodology for the new add-on code for Opvee® (GOTP1), the weekly bundled payment for weekly Brixadi® (GOTP2), and the update to the monthly bundled payment for injectable buprenorphine (HCPCS code G2069) is based on comparable and existing drugs billed under the Medicare OTP benefit, and assuming an OTP may provide these new drugs to a Medicare beneficiary in lieu of the comparable

⁸¹⁶ Diabetes Prevention Recognition Program. Unpublished data. April 2024.

and existing drugs under the Medicare OTP benefit (e.g., Opvee® instead of Narcan® or Kloxxado®, or the weekly or monthly formulation of Brixadi® instead of Sublocade®), then CMS estimates the financial impacts of these new drugs would be negligible.

11. Medicare Shared Savings Program

a. General Impacts

As of January 1, 2024, 10.8 million Medicare beneficiaries receive care from a health care provider in one of the 480 ACOs participating in the Shared Savings Program, one of the largest value-based care programs in the country. The Shared Savings Program proposed policies in this proposed rule would advance Medicare's value-based care strategy of growth, alignment, and equity, with many proposals supporting more than one of these goals. The proposed policies in this proposed rule are designed, in part, to further improve the quality of care furnished by ACOs by revising the quality performance standard and reporting requirements, broaden program participation particularly in underserved communities, and promote the continued integrity and fairness of Shared Savings Program financial calculations.

As described in section III.G.7.b of this proposed rule, under the benchmarking methodology for agreement periods beginning on January 1, 2024, and in subsequent years, CMS calculates two adjustments in establishing the historical benchmark, a regional adjustment (refer to § 425.656) and a prior savings adjustment (refer to § 425.658). We determine which adjustment is applied to the benchmark, either the regional adjustment, prior savings adjustment, or no adjustment (refer to § 425.652(a)(8) and (c)). One of the changes to the Shared Savings Program financial methodology finalized with the CY 2024 PFS final rule (see 88 FR 79185 through 79195, see also 88 FR 79494 and 79495) was to mitigate the impact of the negative regional adjustment on the benchmark for ACOs in agreement periods beginning on January 1, 2024, and in subsequent years. We explained our belief that this change would further encourage continued participation among high-cost ACOs that serve medically complex beneficiaries by eliminating the potential of a lower benchmark due to an overall negative regional adjustment, and may also encourage ACOs serving such populations that may have otherwise been discouraged from participating in

the Shared Savings Program by the prospect of a lower benchmark to join (see 88 FR 79188, see also 88 FR 79494 and 79495). Under this approach, an ACO with an overall negative regional adjustment that was not eligible for a prior savings adjustment would ultimately receive no adjustment, upward or downward, to its benchmark (see § 425.652(a)(8)(iii) and see also 88 FR 79190). The proposed Health Equity Benchmark Adjustment (HEBA) described in section III.G.7.b of this proposed rule would add a third avenue for ACOs to receive a positive adjustment to their historical benchmark, and would be most impactful for new ACOs serving medically complex, high-cost populations in underserved communities.

We combined an analysis of the impact of the HEBA on currently participating ACOs with the projected impact of HEBA on new ACOs not yet participating in the Shared Savings Program, to generate an overall impact estimate of the HEBA. The HEBA would likely have a limited impact on currently participating ACOs. Only about 20 percent of the 456 ACOs participating in performance year 2023 were estimated to have a proportion of assigned beneficiaries who were enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid equal to or greater than 20 percent. That 20 percent threshold would have to be met for an ACO to be eligible for the HEBA under the HEBA proposal (as discussed in section III.G.7.b. of this proposed rule, and specified in proposed § 425.662(b)(3)). Of that 20 percent of ACOs participating in performance year 2023 that were estimated to have a proportion of assigned beneficiaries who were enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid equal to or greater than 20 percent, only about one quarter of such ACOs were estimated to not already be eligible for a higher benchmark adjustment from either a positive regional adjustment or a prior savings adjustment. That is, about 5 percent of ACOs participating in performance year 2023 were estimated to benefit from the proposed HEBA policy at rebasing (median effect about 1 percent increase to the benchmark), because an ACO would receive the proposed HEBA only if the HEBA adjustment were higher than the existing “higher of” adjustment method (see discussion in section III.G.7.b of this proposed rule, and proposed §§ 425.652(a)(8)(ii)(B)(1) and

425.662(c)). The proposed HEBA is projected to increase program spending for existing ACOs by about \$140 million over 10 years.

The number of ACOs that would be incentivized to participate in the Shared Savings Program by the HEBA is uncertain. Changes to the Shared Savings Program finalized in the CY 2023 CY 2024 PFS final rules were already projected to increase program participation among ACOs with higher spending and provide more opportunities for improving care and reducing spending (see 87 FR 70191 through 70196, and 88 FR 79494 and 79495). Therefore, we can reasonably estimate that at least some new ACOs may join and succeed in the Shared Savings Program regardless of the benefit afforded to them by the proposed HEBA (if finalized). Savings to the Shared Savings Program are expected to grow to the extent that the HEBA were to cause new, high-spending ACOs to participate—that is, ACOs serving populations with risk-adjusted spending that is significantly higher than corresponding regional benchmark spending at baseline. We project in the 2034 performance year, the proposed HEBA would likely increase program participation by 25 additional ACOs (but our estimates of increased program participation range from 0 to 100 additional ACOs), as compared to program participation today, and on net increase Federal Medicare program savings by \$460 million over the 2025–2034 period because of this new participation.

The estimated impact of the proposed HEBA, accounting for both its impact on currently participating ACOs that are assumed to renew their participation in the Shared Savings Program over the next 5 years and new ACOs that are expected to participate in the program for the first time over the next 10 years, is shown in Table 132. Mean Shared Savings Program spending is expected to be reduced by \$320 million over the next ten years as a result of the HEBA, if finalized. However, uncertainty regarding the number of high spending ACOs that would participate in response to a HEBA, combined with uncertainty regarding high spending ACOs' savings potential, results in a wide range of potential impacts in total over that 10 year period, from \$2.3 billion in net savings at the 10th percentile (that is, only 10 percent of stochastic trials reduced Federal spending by a greater magnitude than \$2.3 billion) to \$1.2 billion in net spending at the 90th percentile.

TABLE 132: Projected Impact of Proposed Health Equity Benchmark Adjustment (\$ Millions; Negative Values Represent Savings to the Program)

| | 2025 | 2026 | 2027 | 2028 | 2029 | 2030 | 2031 | 2032 | 2033 | 2034 | Total |
|---|------|------|------|------|------|------|------|------|------|------|--------|
| Impact Estimate | 20 | 20 | 30 | 20 | 10 | -20 | -60 | -100 | -120 | -120 | -320 |
| Estimate Range: | | | | | | | | | | | |
| Low Estimate (10 th Percentile) | 0 | -20 | -40 | -90 | -140 | -240 | -340 | -420 | -490 | -540 | -2,320 |
| High Estimate (90 th Percentile) | 50 | 70 | 90 | 110 | 130 | 140 | 140 | 140 | 150 | 180 | 1,200 |

For the proposed calculation methodology to account for the impact of improper payments in recalculating expenditures and payment amounts used in Shared Savings Program financial calculations, upon reopening a payment determination pursuant to § 425.315(a) (described in section III.G.7.c of this proposed rule), some ACOs would selectively elect to request reopening for a prior performance year. As a result, we project at least some degree of higher program spending for increased shared savings payments (or

reduced loss recoupments) in cases for which CMS decides to reopen the payment determination and issue a revised initial determination to account for the impact of improper payments. However, because reopening would not be limited to adjusting performance year and benchmark year expenditures for ACO assigned beneficiaries but would also impact other potentially offsetting calculations including regional and national expenditure trends used to update ACO benchmarks, and because, in addition to the reopening, CMS

would also adjust the historical benchmark calculated for a potential subsequent agreement period, the frequency of requests, and the net impact of any given request, are likely to be limited. The proposed reopening policy is projected to increase program spending by \$60 million in total over the 2025 to 2034 period, ranging from \$30 million at the 10th percentile to \$90 million at the 90th percentile, as shown in Table 133.

TABLE 133: Projected Impact for Modifications to Specify the Calculation Methodology to Account for Improper Payments in Recalculating Expenditures and Payment Amounts used in Financial Calculations, Upon Reopening a Payment Determination (\$ Millions; Negative Values Represent Savings to the Program)

| | 2025 | 2026 | 2027 | 2028 | 2029 | 2030 | 2031 | 2032 | 2033 | 2034 | Total |
|---|------|------|------|------|------|------|------|------|------|------|-------|
| Impact Estimate | 10 | 0 | 0 | 0 | 0 | 10 | 10 | 10 | 10 | 10 | 60 |
| Estimate Range: | | | | | | | | | | | |
| Low Estimate (10 th Percentile) | | | | | | | | | | | 30 |
| High Estimate (90 th Percentile) | | | | | | | | | | | 90 |

Note: Projections at the 10th and 90th percentile are shown in aggregate but not at the annual level because scenarios contributing to the high estimate projection generally involve elevated spending in a limited number of years rather than consistently higher spending across the projection period.

The proposed methodology for excluding payment amounts for HCPCS and CPT codes exhibiting SAHS billing activity, as described in section III.G.7.d

of this proposed rule, is anticipated to be utilized only in rare and extreme cases where a number of criteria are satisfied, including that the level of

billing represents a significant claims increase representing a deviation from historical utilization trends that is unexpected and not clearly attributable

to reasonably explained changes in policy or the supply or demand for covered items or services during a limited time period. Even in cases where CMS may apply the adjustment to Shared Savings Program calculations for SAHS billing activity (if finalized), for CY 2024 or subsequent calendar years, there is no expectation that it would necessarily increase or decrease overall shared savings or shared losses because the policy would be applied systematically across all ACOs in the Shared Savings Program in a method that adjusts both performance year and benchmark year expenditures for ACO assigned beneficiaries and regional and national expenditures used in benchmark calculations. However, this policy would have the benefit of reducing potential costs generated by selective reopening requests under the reopening proposal, because it would prevent extreme cases of SAHS billing activity from injecting variation in the distribution of ACO shared savings and loss calculations which could lead to an elevated number of selective reopening requests from ACOs predicting that reopening would improve their financial outcome. For this reason, without the proposal to adjust Shared Savings Program calculations for SAHS

billing activity during CY 2024 or subsequent calendar years, the estimated impact shown in Table 133 would have included between \$100 to \$300 million in additional projected spending from selective reopening requests.

We estimate that there would be no additional program expenditures stemming from the implementation of the prepaid shared savings payment option, which we proposed to provide eligible ACOs with additional cash flow to encourage their investment in activities that could potentially reduce costs for the Medicare program and beneficiaries and improve the quality of care furnished to their assigned beneficiaries. Any risk of higher program spending as a result of finalization of our prepaid shared savings proposal would be fully mitigated by the fact that eligibility would be limited to ACOs that CMS estimates are most likely to earn shared savings, and any prepaid shared savings payments an ACO receives would have to be repaid to CMS. CMS would be protected by the ACOs' repayment mechanisms in the event that an ACO does not earn shared savings or cannot otherwise repay the amount owed to CMS. On the other hand, there is a high degree of uncertainty regarding whether

(a) a meaningful number of ACOs would choose this option given the requirements for how prepayments must be spent, and (b) the potential impact (if any) that participation in this option would have on the cost of care.

As to this uncertainty, our analysis assumed that up to 30 ACOs would opt to receive prepaid shared savings per year (with the probability distribution skewed toward zero participants), with a 33 percent chance that ACOs receiving prepaid shared savings would respond by reducing spending for assigned beneficiaries by between 0 to 2 percentage points (with the probability distribution skewed toward zero impact) as compared to their current spending on assigned beneficiaries.⁸¹⁷ This projection accounts for annual prepaid shared savings (offset by eventual recoupments and/or repayments) of roughly \$2 million per ACO participating in the payment option. The associated impact on ACO spending was projected to be nominal. Both at the mean and at the 90th percentile the projected net impacts on Medicare spending round to zero. At the 10th percentile (the optimistic end of the range), we project small net savings of \$20 million in total to the Medicare Program over 10 years.

TABLE 134: Projected Impact for the Prepaid Shared Savings Option (\$ Millions; Negative Values Represent Savings to the Program)

| | 2025 | 2026 | 2027 | 2028 | 2029 | 2030 | 2031 | 2032 | 2033 | 2034 | Total |
|---|------|------|------|------|------|------|------|------|------|------|-------|
| Impact Estimate | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Estimate Range: | | | | | | | | | | | |
| Low Estimate (10 th Percentile) | | | | | | | | | | | -20 |
| High Estimate (90 th Percentile) | | | | | | | | | | | 0 |

Note: Projections at the 10th and 90th percentiles are shown in aggregate but not at the annual level because scenarios contributing to the \$20 million savings at the 10th percentile are too small to round above zero in any given year.

The remaining proposed changes to the Shared Savings Program regulations are not estimated to have an impact on program spending at the aggregate level. These proposed changes include

requiring Shared Savings Program ACOs to report the APP Plus quality measure set beginning in performance year 2025, that would incrementally grow to comprise of 11 measures, consisting of

the 6 measures in the existing APP quality measure set and 5 newly proposed measures from the Adult Universal Foundation measure set that would be incrementally incorporated

⁸¹⁷ The assumptions allow for a limited possibility that performance by ACOs receiving prepaid shared savings could generate shared savings comparable to the savings generated by

certain ACOs in the ACO Investment Model. Abt Associates, Evaluation of the Accountable Care Organization Investment Model, Final Report (September 2020), available at <https://>

www.cms.gov/priorities/innovation/data-and-reports/2020/aim-final-anrpt.

into the APP Plus quality measure set over performance years 2025 through 2028; focusing the collection types available to Shared Savings Program ACOs for reporting the APP Plus quality measure set to all payer/all patient eCQMs and Medicare CQMs; requiring Shared Savings Program ACOs that report the APP Plus quality measure set to report on all measures in the APP Plus quality measure set, as applicable; establishing a Complex Organization Adjustment for Virtual Groups and APM Entities, including Shared Savings Program ACOs, when reporting eCQMs;

scoring Medicare CQMs using flat benchmarks in their first 2 performance periods in MIPS; and promoting the adoption of eCQMs by extending the eCQM reporting incentive. Additional proposed changes include permitting continued participation by ACOs whose number of assigned beneficiaries falls below 5,000 during their agreement period; ensuring clarity of provisions on application procedures; revisions to the definition of primary care services under § 425.400(c) for purposes of beneficiary assignment; refining advance investment payment policies;

providing clarity and consistency in provisions of the Shared Savings Program regulations on calculation of the ACO risk score growth cap in risk adjusting the benchmark each performance year and the regional risk score growth cap in calculating the regional component of the three-way blended benchmark update factor; and modifying beneficiary notification requirements.

The combined impacts for all Shared Savings Program proposals are shown in Table 135.

TABLE 135: Projected Impact of Medicare Shared Savings Program Proposals (Individually Shown in Tables 132, 133 and 134) (\$ Millions; Negative Values Represent Savings to the Program)

| | 2025 | 2026 | 2027 | 2028 | 2029 | 2030 | 2031 | 2032 | 2033 | 2034 | Total |
|---|------|------|------|------|------|------|------|------|------|------|--------|
| Impact Estimate | 30 | 20 | 30 | 20 | 10 | -10 | -50 | -90 | -110 | -110 | -260 |
| Estimate Range: | | | | | | | | | | | |
| Low Estimate (10 th Percentile) | 10 | -20 | -40 | -90 | -140 | -230 | -330 | -410 | -480 | -530 | -2,260 |
| High Estimate (90 th Percentile) | 60 | 70 | 90 | 110 | 130 | 150 | 150 | 150 | 160 | 190 | 1,260 |

b. Compliance With Requirements of Section 1899(i)(3) of the Act

Certain policies, including both existing policies and the proposed new policies described in this proposed rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following proposals require the use of our authority under section 1899(i) of the Act: the proposal to allow ACOs to receive prepaid shared savings as described in section III.G.5 of this proposed rule; the proposal to use a calculation methodology to account for the impact of improper payments in recalculating expenditures and payment amounts for certain Shared Savings Program financial calculations, upon reopening an ACO’s payment determination and issuing a revised initial determination pursuant to § 425.315(a) as described in section

III.G.7.c of this proposed rule; the proposal to use a methodology for certain Shared Savings Program calculations to mitigate the impact of SAHS billing activity occurring in CY 2024 or subsequent calendar years, as described in section III.G.7.d of this proposed rule; and the proposed technical changes to the provision describing how we calculate the weights applied when capping growth in regional risk scores as part of the regional component of the three-way blended benchmark update factor, as described in section III.G.7.f of this proposed rule. When considered together these proposed changes to the Shared Savings Program’s payment methodology are expected to improve the quality and efficiency of items and services furnished under the Medicare program by improving the ability for ACOs to sustain effective participation particularly in serving medically complex, high-cost populations in underserved communities, and promoting integrity and fairness and ensuring the accuracy of Shared Savings Program financial calculations. These proposed changes are not expected to

result in a situation in which the payment methodology under the Shared Savings Program, including all policies proposed to be adopted under the authority of section 1899(i) of the Act, results in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act.

In the CY 2023 PFS final rule, we estimated that the projected impact of the payment methodology that incorporates all policies finalized by that final rule would result in \$4.9 billion in greater program savings compared to a hypothetical baseline payment methodology that excluded the policies that required section 1899(i)(3) of the Act authority (see 87 FR 70195 and 70196). The marginal impact of the proposed changes in the CY 2024 PFS final rule were estimated to lower net spending by \$330 million over the subsequent ten-year period for all new policies combined, including the cap an ACO’s regional service area risk score growth, the addition of a new third step to the beneficiary assignment methodology, and the revised approach

to identify the assignable beneficiary population (88 FR 79496). The marginal impact of the proposed changes in this proposed rule are estimated to lower net spending by an additional \$260 million in total through 2034. Although the provisions in this proposed rule that require section 1899(i) of the Act authority are estimated to increase spending by only \$60 million over 10 years, the cumulative impact of all policies (including those in this proposed rule) are estimated to result in more than \$4.9 billion in greater program savings compared to a hypothetical baseline payment methodology that excludes the policies that require section 1899(i)(3) of the Act authority. Therefore, we estimate that the implementation of the proposals made in this proposed rule would not be greater than those that would result under the statutory payment model, consistent with the requirements of section 1899(i)(3)(B) of the Act.

We will continue to reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. Additional Shared Savings Program data beginning to accumulate after the end of the COVID-19 public health emergency, along with emerging information on the characteristics of new entrants in the Shared Savings Program for agreement periods beginning on January 1, 2024 and January 1, 2025, are anticipated to gradually improve our ability to reevaluate program impacts in a comprehensive fashion. In the event that we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

12. Medicare Part B Payment for Preventive Services

In section III.H.2. of this proposed rule, based on the proposals in section III.M of this proposed rule, we propose to clarify that a physician's order is no longer required for the administration of a hepatitis B vaccine in Part B, which would facilitate roster billing by mass immunizers for hepatitis B vaccine administration. We also propose that payment for hepatitis B vaccines and their administration be made at 100 of reasonable cost in RHCs and FQHCs, separate from the FQHC PPS or the RHC

All-Inclusive Rate (AIR) methodology, in order to streamline payment for all Part B vaccines in those settings. We believe that Medicare spending impacts from both of these proposals will be negligible, as hepatitis B vaccines are already available to all Medicare enrollees under either Part B or Part D. While we believe that there will be an uptake of hepatitis B vaccines under Part B as shifted from Part D, we believe that this impact on the Part B program will be negligible for several reasons, including the fact that a portion of current beneficiaries have already received the hepatitis B vaccine through either Part B or Part D, and since a significant number of individuals will likely receive this vaccine by the time they are Medicare age due to current CDC recommendations (please see section III.M of this proposed rule for more information).

In section III.H.3. of this proposed rule, we propose a fee schedule for Drugs Covered as Additional Preventive Services (DCAPS), per section 1833(a)(1)(W)(ii) of the Act. We also propose payment limits for supply and administration fees for DCAPS drugs that are similar to those fees for drugs paid under the ASP payment methodology set forth in section 1847A of the Act, and we propose payment limits for DCAPS drugs and any supply and administration fees in RHCs and FQHCs according to this same fee schedule. We believe impacts from these proposed policies will be minimal as well. While no drugs are currently covered as DCAPS, DCAPS drugs are likely to be covered under Part D before coverage under the Part B additional preventive services benefit would commence.

13. Impact of Provisions for Medicare Prescription Drug Inflation Rebate Program

We are proposing regulations in section III.I. to codify existing policies established in program guidance as well as revised and new policies to implement the Medicare Part B Drug Inflation Rebate Program, including the requirement for manufacturers to pay rebates for certain single source drugs and biological products with prices that increase faster than the rate of inflation; criteria for the identification of Part B rebatable drugs; computation of the beneficiary coinsurance adjustment for Part B rebatable drugs; determination of the rebate amount for Part B rebatable drugs; reduction of the rebate amount for Part B rebatable drugs in shortage and when there is a severe supply chain disruption; provision of reports to each manufacturer of a Part B rebatable drug;

and establishment of enforcement provisions via civil money penalties.

Additionally, we are proposing regulations in section III.I. to codify existing policies established in program guidance as well as revised and new policies to implement the Medicare Part D Drug Inflation Rebate Program, including the requirement for manufacturers to pay rebates for certain Part D drugs and biological products; criteria for the identification of Part D rebatable drugs; determination of the rebate amount for Part D rebatable drugs; reduction of the rebate amount for shortages and when there is a severe supply chain disruption or likely shortage; provision of reports to each manufacturer of a Part D rebatable drug; and establishment of enforcement provisions via civil money penalties.

We do not expect these proposals to have a material impact on inflation rebates. The majority of proposals codify existing guidance. Proposed new policies or changes to existing policies in guidance are technical provisions that we do not expect to have a material impact on the calculation of total rebates in aggregate.

As discussed in section III.I. of this proposed rule, for Part D drug inflation rebates, we are proposing to implement section 1860D-14B (b)(1)(B) of the Act which requires the Secretary to exclude 340B units from the total number of units used to calculate the total rebate amount owed by a manufacturer, beginning on January 1, 2026. For the first three quarters of 2026, we are proposing use an estimation policy that would remove a percentage of units from the total number of units used to calculate the total rebate amount to remove 340B units from Part D drug inflation rebate calculations. That percentage would be equal to the total number of units purchased under the 340B Drug Pricing Program for an NDC-9, divided by the number of total units sold of that NDC-9.

CMS does not currently have data on 340B claims for the Part D program or at the drug level in general, which prevents CMS from quantifying the impact of this provision. While we expect that the exclusion of 340B units from Part D inflation rebates will reduce the amount of rebates collected through this program, the magnitude of this reduction is unknown due to the lack of data on 340B claims for the Part D program. The use of a temporary estimation policy will allow CMS to implement the exclusion of 340B units from Part D inflation rebates by January 2026. It also alleviates the burden from interested parties to modify existing

processes to provide 340B claims information.

14. Expand Colorectal Cancer Screening

In section III.K. of this rulemaking we propose to update and expand coverage for CRC screening by (1) removing coverage for the barium enema procedure in regulations at § 410.37, (2) adding coverage for the CT colonography procedure in regulations at § 410.37, and (3) expanding a “complete colorectal cancer screening” in § 410.37(k) to include a follow-on screening colonoscopy after a Medicare covered blood-based biomarker CRC screening test (described and authorized in NCD 210.3) returns a positive result.

We do not anticipate our proposal to remove coverage for the barium enema procedure to result in a significant financial impact on the Medicare program. An internal claims analysis found that Medicare Fee for Service only paid 62 claims for the screening barium enema procedure in calendar year 2021 and only 72 claims for the screening barium enema procedure in calendar year 2022.

We do not anticipate our proposal to add coverage for the CTC procedure for CRC screening to result in a significant financial impact on the Medicare program. CTC could be an appropriate option for patients and clinicians who seek a direct visualization procedure as a first step in CRC screening that is less invasive and less burdensome on the patient (including those who are medically fragile or have complex or usual anatomy) compared to Screening Colonoscopy. We expect that patients will most often choose CTC as an alternative to colonoscopy for CRC screening and that future increased utilization of CTC will be balanced, in part, by avoided screening colonoscopies. Our goal is that the patient and their clinician make the most appropriate choice in CRC screening, which includes considerations of the risks, burdens and tradeoffs for each covered test or procedure. We expect that utilization of CTC for CRC screening will be modest, especially considering that CTC requires bowel preparation and travel to an outpatient clinical services site (similar to a colonoscopy) and also considering the availability of non-invasive stool-based tests that can be administered at home and mailed to a lab. A 2015 study titled “Medicare cost of colorectal cancer screening: CT colonography vs. optical colonoscopy” concluded that CTC is 29 percent less expensive than colonoscopy (accounting for related procedures) for the Medicare population in the base scenario. Although the CTC

cost advantage is increased or reduced under alternative scenarios, it is always positive.⁸¹⁸

We do not anticipate our proposal for expanding a “complete colorectal cancer screening” in § 410.37(k) to include a follow-on screening colonoscopy after a Medicare covered blood-based biomarker CRC screening test returns a positive result to produce a significant financial impact on the Medicare program. We expect that patients will choose either a stool-based test or a blood-based biomarker test for a non-invasive first option in CRC screening and that patients who choose a blood-based biomarker test within the context of a complete colorectal cancer screening under our proposal will be offset, in part, by the avoided utilization of a stool-based test.

In conclusion, we anticipate that our proposal to update and expand coverage for CRC screening will result in some additional utilization, but that additional utilization will be balanced, in part or in whole, by avoided utilization of alternative types of tests as well as benefits and savings resulting from increased prevention and early detection (allowing for less invasive and more effective treatment).

15. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan

In section III.L of this proposed rule, we propose one update to the CMS EPCS Program. We are proposing that prescriptions written for a beneficiary in a LTC facility would not be included in determining compliance under the CMS EPCS Program until January 1, 2028, and that compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a LTC facility would commence on or after January 1, 2028. Without this provision, if we keep the existing date of January 1, 2025, as in the current regulatory text at § 423.160(a)(5) for the CMS EPCS Program, we estimate at least 6,800 prescribers would become non-compliant due to CMS including prescriptions written for beneficiaries in LTC in the CMS EPCS Program compliance threshold calculation. This estimate is based on data from calendar year 2022 and is prior to considering emergency and disaster exceptions and waivers, which could reduce these

⁸¹⁸ Pyenson, B., Pickhardt, P.J., Sawhney, T.G. et al. Medicare cost of colorectal cancer screening: CT colonography vs. optical colonoscopy. *Abdom Imaging* 40, 2966–2976 (2015). <https://doi.org/10.1007/s00261-015-0538-1>.

numbers. This proposal, should we finalize it, would allow prescribers additional time to adopt the new e-prescribing standard, NCPDP SCRIPT standard version 2023011, and utilize EPCS. Additionally, this proposal would prevent an increased number of prescribers from potentially applying for a waiver for circumstances beyond their control due to difficulty of reliably conducting EPCS for beneficiaries in LTC facilities by the current deadline of January 1, 2025.

We do not believe this proposal would cause additional costs as we are only extending the deadline by which we would include prescriptions written for patients in LTC facilities in the CMS EPCS Program compliance threshold calculation and not modifying the requirement to become compliant. We also note that beneficiaries in LTC facilities may not receive the full benefits of EPCS, which we describe in the CY 2022 PFS final (86 FR 65362), until a later date, but we believe the delay is necessary due to the logistical challenges of prescribers electronically prescribing controlled substances prescriptions for beneficiaries in LTC facilities.

We seek public comments on our impact assumptions.

16. Expand Hepatitis B Vaccine Coverage

In section III.M. of this rulemaking, we propose to expand Hepatitis B vaccine coverage by revising our regulatory definition for intermediate risk groups by adding a new paragraph to include individuals who have not previously received a completed hepatitis B vaccination series or whose vaccination history is unknown (§ 410.63(a)(2)).

Hepatitis B vaccine is currently covered under Medicare Part B for enrollees who are at intermediate or high risk of contracting hepatitis B virus, and, for Part D enrollees who do not fall into those categories the vaccine may be covered under Medicare Part D.⁸¹⁹ In 2021, about 51 million of 65 million Medicare beneficiaries were enrolled in Part D and 21,629 received the vaccine. In 2019, Part B covered 300,000 doses of hepatitis B vaccine for beneficiaries who were at high or

Inflation Reduction Act Research Series: Medicare Part D Enrollee Savings from Elimination of Vaccine Cost-Sharing. (Issue Brief No. HP–2023–05). Office of the Assistant Secretary for Planning and Evaluation, U.S. Department of Health and Human Services. September 2023. Retrieved from <https://aspe.hhs.gov/sites/default/files/documents/407d41b6534e7af6702eb280b3945d00/aspe-ira-vaccine-part-d.pdf>.

intermediate risk for the disease.⁸²⁰ Since the vaccine has been available for several decades, we are not able to determine how many Medicare beneficiaries have already received the vaccine.

Overall vaccination rates among adults, including older adults, are generally low.⁸²¹ A Centers for Disease Control and Prevention (CDC) analysis of data from the National Health Interview Survey found that fewer than half of all adults (less than 45 percent) received age-appropriate recommended vaccinations in 2019.⁸²³ An estimated 20 percent of adults aged ≥60 years have been vaccinated against hepatitis B; and approximately 34 percent of adults aged ≥19 years have been vaccinated against hepatitis B.⁸²⁴ We do not anticipate our proposal to result in significant economic impact on the Medicare program.

As of January 1, 2023, the Inflation Reduction Act (IRA) eliminated out-of-pocket costs for vaccines covered under Medicare Part D that are recommended by the Advisory Committee on Immunization Practices (ACIP).⁸²⁵ Before the Inflation Reduction Act (IRA), beneficiaries incurred out of pocket costs for Part D vaccines. While we would expect that after the IRA, more beneficiaries would receive covered vaccines because of eliminating

out of pocket costs, existing research shows that cost-sharing is only one factor among other determinants. Trust in vaccines, access to health care, health literacy, perceived risk, socio-demographic factors and awareness of vaccine recommendations, all shape whether individuals obtain a recommended vaccine.⁸²⁶ If the number of people receiving the hepatitis B vaccine under Part D is any indication, we assume that even by increasing access, there will not be immediate or significant change in the number of covered hepatitis B vaccines paid under Medicare Part B. For these reasons, we do not anticipate that expanding the definition of intermediate risk for hepatitis B vaccine will result in a significant financial impact to the Medicare Program.

17. Low Titer O+ Whole Blood Transfusion Therapy During Ground Ambulance Transport

As discussed in section III.N of this proposed rule, we propose to modify the definition of ALS2 at § 414.605 by adding the administration of low titer O+ whole blood transfusion therapy (WBT) to the list of ALS2 procedures as a new number 8. We would also reflect this change in the Medicare Benefit Policy Manual, Chapter 10, Ambulance Services, section 30.1.1, Definition of Ground Ambulance Services. Under this proposal, a ground ambulance transport that provides WBT would itself constitute an ALS2-level transport.

We believe that many ground ambulance transports providing WBT already qualify for ALS2 payment, given that patients requiring such transfusions are generally critically injured or ill and often suffering from cardio-respiratory failure and/or shock and are therefore likely to receive one or more procedures currently listed as ALS procedures in the definition of ALS2, such as endotracheal intubation, central venous line, chest decompression, and placement of an intraosseous line. For impact analysis, for ground ambulance transports that provide WBT only and currently do not qualify for ALS2 payment, we are assuming that these transports are reported as ALS1 (advanced life support, level 1) emergencies.

In order to help identify the number of ground ambulance transports that could potentially be affected by this proposal, we analyzed inpatient hospital claims related to multiple-trauma that started with an ALS1 emergency ambulance transport and

also included a blood transfusion done in the hospital. The inpatient admissions were identified by DRG code “813” and diagnosis code of “24,” the ambulance transport is identified by HCPCS “A0427,” and the blood transfusion administered to these patients in the hospital setting is identified by the presence of covered charges, patient liability amounts, and replacement units for blood.

Since payments vary for urban, rural, and super-rural ground ambulance transports, we calculated the average Medicare payment amount for ALS2 (HCPCS A0433) and ALS1 (HCPCS A0427) over the last several years. The average payment differential over calendar years 2019 and 2023 is estimated to be roughly \$162 per transport. It is difficult to make an assumption for the number of transports that will be impacted by this proposal, but the potential number over the last several years, based on an analysis of actual experience, is very few. Even if all of these ALS1 emergency transports shifted to being ALS2 transports, which is very unlikely, the impact would be negligible.

18. Updates to the Quality Payment Program

In this section of this proposed rule, we estimated the overall and incremental impacts of the Quality Payment Program policies. We estimated participation, final scores, and payment adjustment for eligible clinicians participating through traditional MIPS, MVPs, and the Advanced APMs. We also presented the incremental impacts to the number of expected Qualified Participants (QPs) and associated APM Incentive Payments that result from our policies relative to a baseline model that reflects the status quo in the absence of any modifications to the previously finalized policies.

A. Overall MIPS Modeling Approach and Data Assessment

(1) MIPS Modeling Approach

For this proposed rule, we used a similar modeling approach as the CY 2024 PFS final rule (88 FR 79504 through 79506). We created two MIPS RIA models: a baseline and proposed policy model. Our baseline model includes previously finalized policies that will be in effect for the CY 2024 performance period/2026 MIPS payment year in the absence of any of the newly proposed policies in this proposed rule. Examples of previously finalized policies included in the baseline model include: updated QP

⁸²⁶ Sayed, BA, et al. 2023. Inflation Reduction Act Research Series.

and partial QP thresholds, and the previously finalized list of MVPs.

The proposed policies model builds off the baseline model and incorporates the MIPS policies for the CY 2025 performance period/2027 MIPS payment year included in this proposed rule. By comparing the baseline model to the proposed policies model, we are able to estimate the incremental impact of the specific policies in this proposed rule.

Our modeling approach utilizes the same scoring engine that is used to determine MIPS payment adjustments. This modeling approach enables our model to align as much as possible with actual MIPS scoring and minimizes differences between our projections and policy implementation. These limitations of our model are discussed later in this RIA.

(2) Data Used To Estimate Future MIPS Performance

In the CY 2024 PFS final rule (88 FR 79504), we explained our decision to use CY 2022 performance period submissions data. We noted that using CY 2022 performance data presents the most current data and aligns our participation, final scoring, and payment adjustment analysis around the same common data set. CY 2022 performance data were the most recently available data in time for us to construct our simulation model for this proposed rule and for the same reasons discussed in the CY 2024 PFS final rule (88 FR 79504), we are considering it to construct the baseline and proposed policies model in this proposed rule. As more data becomes available, we will assess the feasibility and validity of that data for use in RIA simulations.

b. APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

For payment years from 2019 through 2025, through the Medicare Option, eligible clinicians who have a sufficient percentage of their Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs will be QPs for the applicable QP Performance Period for a year and the corresponding payment year. In payment years 2019 through 2024 these QPs will receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate paid amounts for covered professional services furnished during the calendar year immediately preceding the payment year. In payment year 2025, QPs will receive a lump-sum APM Incentive Payment equal to 3.5 percent payment of their estimated aggregate

paid amounts for covered professional services furnished during CY 2024. Beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option allows eligible clinicians to become QPs by meeting the QP payment amount or patient count threshold through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs. Eligible clinicians who become QPs for a year are not subject to MIPS reporting requirements and payment adjustments. Eligible clinicians who do not become QPs but meet a lower threshold to become Partial QPs for the year may elect to report to MIPS and, if they elect to report, will then be scored under MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status, and is not excluded from MIPS on another basis, the eligible clinician will be subject to the MIPS reporting requirements and will receive the corresponding MIPS payment adjustment.

Beginning in payment year 2026, there are two separate PFS CFs—one for eligible clinicians who are QPs for the year (the qualifying APM CF), and the other for all non-QP eligible clinicians and other suppliers paid under the PFS (the non-qualifying APM CF). The update to the qualifying APM CF for a year is 0.75 percent, while the update to the non-qualifying APM CF for a year is 0.25 percent.

In addition, the thresholds to achieve QP status beginning in the 2025 QP Performance Period will increase to 75 percent for the payment amount method, and 50 percent for the patient count method. Overall, we estimated that for the 2025 QP Performance Period between 339,561 and 436,579 eligible clinicians will become QPs, and therefore be excluded from MIPS reporting requirements and payment adjustments.

In section IV.A.4.k.(2) of this proposed rule, we propose to modify the definition of “attribution-eligible beneficiary” to include any beneficiary who has received a covered professional service furnished by the eligible clinician (NPI) for whom we are making the QP determination. By no longer specifying evaluation and management (E/M) services as the default attribution basis, we also would eliminate the need to develop customized attribution bases

for Advanced APMs that do not use E/M services as the basis for attribution. Therefore, our proposal would standardize the attribution methodology for QP determinations by making covered professional services the basis for attribution across all Advanced APMs.

We projected the number of eligible clinicians who will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2025 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2025 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that will attain QP status through the All-Payer Combination Option. The following APMs are expected to be Advanced APMs for the 2025 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- ACO REACH Model (formerly Global and Professional Direct Contracting) Model;
- Kidney Care Choices Model (Comprehensive Kidney Care Contracting Options, Professional Option and Global Option);
- Maryland Total Cost of Care Model (Care Redesign Program; Maryland Primary Care Program);
- Medicare Shared Savings Program (Level E of the BASIC Track and the ENHANCED Track); and
- Enhancing Oncology Model (EOM); and
- Primary Care First (PCF) Model.

We used the Participation Lists and Affiliated Practitioner Lists, as applicable, (see § 414.1425(a) for information on the APM Participant Lists and QP determinations) for the 2023 QP performance period third snapshot QP determination date to estimate the number of QPs, total Part B paid amounts for covered professional services, and the aggregate total of APM Incentive Payments for the 2025 QP Performance Period. We examined the extent to which Advanced APM participants will meet the QP Thresholds of having at least 75 percent of their Part B covered professional services or at least 50 percent of their Medicare beneficiaries furnished Part B covered professional services through the APM Entity.

c. Estimated Number of MIPS Eligible Clinicians in the CY 2025 Performance Period/2027 MIPS Payment Year

(1) Initial Population of Clinicians Included in the RIA Baseline and Proposed Policies Models

For this proposed rule, we applied the same assumptions as in the CY 2024 PFS final rule (88 FR 79505) to estimate our initial population of clinicians based on CY 2022 performance period/2024 MIPS payment year data.

We used the same CY 2022 final reconciled eligibility determination file described in the CY 2024 PFS final rule (88 FR 79505). This file reconciles eligibility from two determination periods and aligns with the CY 2022 performance period submissions data on which we based this model. Our analysis included 1,820,899 clinicians with PFS claims in this initial population. This initial population of clinicians was used to determine eligibility using the methodology described in the following sections.

(2) Estimated Number of MIPS Eligible Clinicians After Applying Eligibility Assumptions

(a) Methods and Assumptions Used To Estimate Eligibility

After identifying the clinician population with PFS claims we applied the same eligibility assumptions and determination process described in the CY 2024 PFS final rule (88 FR 79505). We are not proposing any modifications to MIPS eligibility requirements and the same eligibility assumptions apply to both the baseline and final policies model.

For our RIA model, we established the “required eligibility” category, which means the clinician exceeds the low-volume threshold in all 3 criteria and is subject to a MIPS payment adjustment. We base this estimate on the CY 2022

performance period data described in this section of this proposed rule, which includes the three low volume criteria. Within this category we divide clinicians into two groups- clinicians who report data and clinicians who do not report data.

Our next two eligibility assumptions concern clinicians and groups who may participate in MIPS but are not required to participate. First, we estimate group eligibility. These are the clinicians who have a group submission and their group exceeds the low-volume threshold in all 3 criteria. Next, we apply our opt-in eligibility assumptions. Individuals or groups who exceed the low-volume threshold in 1 criterion but not all 3 may elect to opt-in. Based on the CY 2022 data we determine which individuals opted-in to MIPS and for the purposes of our model estimate that these clinicians will continue to opt-in to MIPS.

After applying the process outlined in this section of this proposed rule, we next estimate the number of “Potentially MIPS Eligible” clinicians. These clinicians are not included in our total number of MIPS eligible clinicians. These are clinicians who are not MIPS eligible individually but who may either opt-in because they exceed the low volume threshold in at least one criterion but not all three or who could report as part of a group which exceeds all three low volume criteria.

Finally, we estimate the number of clinicians who are neither MIPS eligible nor potentially MIPS eligible. First, we estimate the number of MIPS eligible clinicians who are below all three low-volume criteria (both as an individual and as a group) again using the CY 2022 performance period data as described in this section of this proposed rule.

Next, we estimate the number of QPs (not MIPS eligible). In section VII.E.17.b. of this proposed rule, we

estimated a range of QPs. For the purposes of our RIA population, we estimate a specific number of QPs. This is because it is necessary to establish a specific population of clinicians to use to simulate the impacts of our final policies on participation, final scores, and payment adjustments. Finally, we estimate the number of clinicians who are excluded for other reasons including that they are a non-eligible clinician type or newly enrolled in Medicare.

After applying these assumptions to our initial population, we estimate 686,645 MIPS eligible clinicians with \$5.5 billion in allowed charges. However, this number may be as high as 1,270,806 MIPS eligible clinicians and \$7 billion allowed charges if *all potentially* MIPS eligible⁸²⁷ clinicians either opt-in or report as a group. This is an unlikely scenario but it establishes the full range of possible MIPS eligible clinicians in our initial population.

(b) MIPS Eligibility Estimates

Eligibility among many clinicians is contingent on submission to MIPS as a group or election to opt-in: therefore, we would not know the number of MIPS eligible clinicians who submit until the submission period for the CY 2023 performance period is closed. For the remaining analysis, we use the estimated population of 686,645 MIPS eligible clinicians described in previously in this section of this proposed rule. Table 136 summarizes our eligibility estimates for the proposed policies model after applying our assumptions discussed in this section of this proposed rule.

⁸²⁷ We define potentially MIPS eligible clinicians as those clinicians who are not required to participate in MIPS but *may* either opt-in or join a group that exceeds the low-volume threshold in all three criteria.

TABLE 136: Description of MIPS Eligibility Status for CY 2025 Performance Period/2027 MIPS Payment Year Using the CY 2025 PFS Proposed Rule Assumptions**

| Eligibility Status | Predicted Participation Status in MIPS Among Clinicians * | Number of Clinicians | PFS allowed charges (\$ in mil)** |
|---|---|----------------------|-----------------------------------|
| MIPS Eligible Clinicians | | | |
| MIPS eligible
(always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria) | Reported to MIPS | 105,843 | \$29,530 |
| MIPS eligible | Did not Report to MIPS | 40,813 | \$11,951 |
| Group eligibility
(only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria) | Had a group submission | 533,473 | \$13,108 |
| Opt-In eligibility assumptions
(only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS) | Opted-in To MIPS | 6,516 | \$350 |
| Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges | | 686,645 | \$54,564 |
| Not MIPS Eligible Clinicians | | | |
| Potentially MIPS Eligible
(not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria) | Opt-in Eligible; Do not opt-in | 178,216 | \$5,517 |
| Potentially MIPS Eligible | Group Eligible; Did not Report | 405,945 | \$9,502 |
| Below the low-volume threshold
(never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria) | Not applicable | 129,806 | \$795 |
| Excluded for other reasons
(Non-eligible clinician type, newly enrolled) | Not applicable | 60,471 | \$501 |
| Qualified Participant (QP)*** | Not applicable | 359,816 | \$17,602 |
| Total Number of Clinicians Not MIPS Eligible | | 1,134,254 | \$33,916 |
| Total Number of Clinicians (MIPS and Not MIPS Eligible) | | 1,820,899 | \$88,481 |

* Participation excludes facility-based clinicians who do not have scores in the 2022 MIPS submission data.

** Allowed charges estimated in 2022 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

*** Our QP estimate differs from that reported in section VII.E.17.b of this proposed rule because, for purposes of establishing the population used in our modeling, we estimate an absolute number of QPs rather than a range.

d. Modeling Approach and Methods for MIPS Value Pathways (MVPs) and Traditional MIPS

(1) Summary of Approach

In this proposed rule, we present several proposals which impact the measures and activities, the

performance category scores, final score calculation, and the MIPS payment adjustment of MIPS eligible clinicians. We outline these changes in more detail in section VII.E.17.d.(3). Of this proposed rule as we describe our methodology to estimate MIPS payment adjustments for the CY 2025

performance period/2027 MIPS payment year. We then present the impact of the proposed policies in the CY 2025 performance period/2027 MIPS payment year and compare select metrics to the baseline model. By comparing the baseline model to the policies model, we are able to estimate

the incremental impact of the policies for the CY 2025 performance period/2027 MIPS payment year.

MIPS eligible clinician's final scores are calculated based on the clinician's performance on measures and activities under the four MIPS performance categories: quality, cost, improvement activities, and Promoting Interoperability. MIPS eligible clinicians can participate in the four MIPS performance categories as an individual, group, virtual group, APM Entity, clinicians participating in MIPS through the APM Performance Pathway (APP), or through an MVP. MIPS APM participants can participate in the APP as an individual, group, virtual group, APM Entity and are only scored on three MIPS performance categories: quality, improvement activities, and Promoting Interoperability. Our simulation applies the proposed and previously finalized policies to the existing MIPS scoring engine.

In the CY 2022 PFS final rule (86 FR 65394 through 65397), we finalized policies at § 414.1365 for implementing MIPS Value Pathways beginning in the CY 2023 performance period/2025 MIPS payment year. We incorporate MVP participation and scoring rules in this RIA where applicable as described in the following section.

(2) Methodology To Assess Impact for MIPS Value Pathways

(a) MVP Participant Assumptions

At § 414.1365(b), we require MVP Participants (which can be a group, individual, subgroup, or APM entity) to register prior to submitting an MVP. We assessed whether to use CY 2024 MVP registration data to estimate MVP participation but elected to again use the approach described in the CY 2024 PFS final rule (88 FR 79507) for two reasons. First, we do not presently have MVP scoring data, thus do not know the information of MVP registrants that may submit MVP data to MIPS. Secondly, our model is based on CY 2022 performance data. This data does not contain MVP scores and reconciliation between multiple years introduces uncertainty and complexity into our model. As MVP scoring data becomes available in the future, we will reassess our methodology for estimating MVP participation and final scores.

We assume for purposes of this model, that MVP Participants are MIPS eligible individual clinicians or groups that submit the required MVP measures. For the baseline model, we used the measures from the 16 MVPs finalized in the CY 2024 PFS final rule Appendix 3 (88 FR 79978 through 80047).

In section IV.A.4.a. and Appendix 3 of this proposed rule, we propose modifications to 7 existing MVPs and proposed 6 new MVPs. The 6 new proposed MVPs are:

- Complete Ophthalmologic Care
- Dermatological Care
- Gastroenterology Care
- Optimal Care for Patients with Urologic Conditions
- Pulmonology Care
- Surgical Care

For the proposed policies model, we incorporated the measure revisions for the existing MVPs described in Appendix 3 of this proposed rule. Due to data availability, we are unable to simulate scores for the following measures: 487, 488, 489, 490, 492, 493, 496, 497, 502, 503, 504, 505, ABG44, PIMSH13, UREQA10, 485, 486, 487, 488, 489, 490, 492, 493, 495, 496, 497, 499, 500, 501, 502, 503, 504, 505, AAD16, AAD17, AAD18, ABG44, GIQC26, IA_PM_XX, IRIS61, MSK6, MSK7, MSK8, MSK9, MUC2023–141, MUC2023–161, MUC2023–162, MUC2023–190, MUC2023–211, PIMSH13, UREQA10.

For these MVP Participants, we calculate both an MVP and a traditional MIPS score and take the highest score consistent with the existing scoring hierarchy which was finalized in the CY 2023 PFS final rule (86 FR 65537).

Our MVP Participant assumptions have limitations: the measure list used to simulate MVP participation does not align completely with what is proposed in section IV.A.4.a. of this proposed rule, we are not incorporating subgroups due to a lack of data, not all of the assumed participants may elect to register for an MVP, and we may have additional clinicians or groups register for an MVP. However, we believe this is a reasonable approach to simulate the impact of MVPs and we sought comment on this assumption but did not receive any feedback.

(b) MVP Scoring Methods and Assumptions

We simulate an MVP score using the same data sources as we did for traditional MIPS. We scored according to § 414.1365(d) and (e) using the MVP reporting requirements listed in § 414.1365(c) with one exception. We did not restrict the improvement activities to the activities listed in the MVP inventory. We believed this would lower our estimated MVP score as clinicians and groups were not required to select from a limited inventory in the CY 2022 performance period (upon which our model is based). Therefore, we scored any improvement activities

the MVP Participants submitted in 2022 as if those improvement activities are in the MVP inventory. Additionally, in section IV.A.4.b.(1)(b) of this proposed rule, we proposed to score all available population health measures for a clinician participating in an MVP and select the highest scoring of those measures for use in determining their category score. We incorporated this proposal into our simulation.

(3) Methodology To Assess Impact for Traditional MIPS

To estimate the impact of the policies on MIPS eligible clinicians, we generally used the CY 2022 performance period's data, including data submitted or calculated for the quality, cost, improvement activities, and Promoting Interoperability performance categories.

We supplemented this information with the most recent data available for CAHPS for MIPS and CAHPS for ACOs, administrative claims data for the new quality performance category measures, and other data sets. We calculated a hypothetical final score for the CY 2025 performance period/2027 MIPS payment year for the baseline and policies scoring models for each MIPS eligible clinician using score estimates for quality, cost, Promoting Interoperability, and improvement activities performance categories, and the application of our final scoring policies.

(a) Methodology To Estimate the Quality Performance Category Score

We used the CY 2024 PFS final rule final policies model as the starting point of our baseline model. Since there are no previously finalized policies impacting the quality performance category that were not already included in the CY 2024 PFS final rule policies model, we did not make any modifications to the quality performance category and the baseline model is identical to the CY 2024 PFS final rules policies model with respect to the quality category.

Our proposed policies model incorporates the following proposals from this proposed rule as outlined in section IV.A.4.e.(1) of this proposed rule:

In section IV.A.4.f.(1)(b)(i) of this proposed rule, to facilitate fairer scoring, we propose to remove the scoring cap and change the benchmarking approach for certain topped out measures applicable to clinicians facing both limited measure choice and limited scoring opportunities. We did not simulate the addition of quality measures described in section IV.A.4.e.(1)(d)(i) since we use

existing quality measure data from the CY 2022 performance period which does not include new measures. We do not simulate the removal of quality measures described in section IV.A.4.e.(1)(d)(ii) since we cannot predict how clinician behavior and measure selection would change in response.

(b) Methodology To Estimate the Cost Performance Category Score

We estimated the cost performance category score using a methodology similar to the methodology described in the CY 2024 PFS final rule (88 FR 79508) for the baseline and the proposed policies RIA models with the modifications described below.

For this proposed rule, the baseline policies RIA model used the same methodology as the final policies RIA model in the CY 2024 PFS final rule (88 FR 79508). The proposed policies RIA model incorporated and implemented the following changes:

- In section IV.A.4.e.(2)(a) of this proposed rule, we are proposing to adopt 6 new episode-based cost measures and modify 2 existing episode-based cost measures. We incorporated measure test data with the specifications for the new and modified measures.

- In section IV.A.4.f.(1)(d) of this proposed rule, we are proposing to modify our cost scoring methodology. The median cost for a measure would be assigned achievement points equal to 10 percent of the performance threshold (7.5 in the CY 2024 performance period/ CY 2026 payment year). The cut-offs for benchmark ranges would be calculated as standard deviations from the median. This proposal is incorporated into our model based on the specifications explained in section IV.A.4.f.(1)(d)(ii)(B) of this proposed rule.

(c) Methodology To Estimate the Promoting Interoperability Performance Category Score

We estimated Promoting Interoperability performance category score by using the same methodology that we used in the CY 2024 PFS final rule (88 FR 79508). We did not incorporate any changes to this category in our model. In section IV.A.4.e.(4)(f) of this proposed rule, we are proposing minimum criteria for a qualifying data submission for the Promoting Interoperability performance category. We conducted an analysis of this proposal and determined that the impact on final scores and payment adjustments was negligible and therefore did not incorporate it into our model.

(d) Methodology To Estimate the Improvement Activities Performance Category Score

For the baseline and policies model we used the same method to estimate the improvement activities performance category score as described in the CY 2024 PFS final rule (88 FR 79508) including alignment with the clarification provided regarding IA automatic weighting for APM participants (88 FR 79366).

In section IV.A.4.e.(3)(b)(IV) of this proposed rule, we proposed to remove weighting of improvement activities. We conducted an analysis of this proposal and determined that the impact on final scores and payment adjustments was negligible and therefore did not incorporate it into our model.

(e) Methodology To Estimate the Complex Patient Bonus Points

For the baseline and policies RIA model, we used the previously established method to calculate the complex patient bonus as described in the CY 2022 PFS final rule (86 FR 64996).

(f) Methodology To Estimate the Final Score

We are not proposing any changes for how we calculated the MIPS final score. Our baseline and policies RIA models assigned a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For both models, after adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points to equal 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to § 414.1380(c).

For the purposes of this model, if a MIPS eligible clinician was approved for reweighting of one or more performance category to zero percent of their final score, and the category's weight redistributed to other performance category(ies), for the CY 2022 performance period/2024 MIPS payment year (which was the data source used in our model) in accordance with our reweighting policies under § 414.1380(c)(2), then we continue to apply that reweighting in our model by assigning them a neutral score equal to the performance threshold if all categories were reweighted or assigning

the applicable weights to the categories which were reweighted. Although it is unlikely (but possible) that the exact same clinicians would apply for and receive reweighting in both the CY 2022 performance period/2024 MIPS payment year (which our data is based on) and the CY 2025 performance period/2027 MIPS payment year (which we are simulating), we believe that this assumption accurately reflects future clinician behavior for two reasons. First, while the exact same clinicians may not receive reweighting 2 years in a row, we believe that this assumption allows us to quantify the impact of the reweighting on a population level. In other words, even if the same clinicians do not apply for and receive reweighting 2 years in a row, the absolute number of reweighting and the characteristic of practices who receive reweighting is likely to remain similar. Secondly, if we were to not assign reweighting to those clinicians, many of them would receive a very low final score because they did not submit data for one or more performance categories during the year in which they received reweighting. We do not believe that it is realistic to assume that, in the absence of reweighting, those clinicians would continue to not submit data. For these reasons, clinicians who received reweighting in the CY 2022 performance period/2024 MIPS payment year also are approved for reweighting in the CY 2025 performance period/2027 MIPS payment year. These clinicians are assigned a score of the performance threshold (75) in our model because this corresponds with a neutral (0 percent) payment adjustment.

(g) Methodology To Estimate the MIPS Payment Adjustment

For the baseline and proposed policies RIA models, we applied the hierarchy as finalized in the CY 2022 PFS final rule (86 FR 65536 through 65537) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, and minimum and maximum adjustment percentages.

For the baseline model, we applied the performance threshold of 75 points finalized in the CY 2024 PFS final rule (88 FR 79373). In section IV.A.4.g.(2)(c) of this proposed rule, we are proposing to again set the performance threshold at 75. Therefore, for both the baseline and final policies models we used a

performance threshold of 75 to calculate the exchange function used for MIPS payment adjustments. We note that the results of this exchange are not identical between the baseline and final policies model. This is because the scaling factor used to determine positive adjustments is dependent on the total dollar amount of negative payment adjustments and those adjustments differ as final scores are not identical between both models. For both the baseline and policies models, we used these resulting parameters to estimate the positive or

negative MIPS payment adjustment based on the estimated final score and the allowed charges for covered professional services furnished by the MIPS eligible clinician.

(4) Simulation Results and Projected Impact to MIPS Eligible Clinicians

Based on the methodology described in the preceding sections we created a baseline and proposed policies simulation. Using this simulation, we estimate the impact of the policies proposed.

(a) Impact to Clinician Eligibility

In section VII.E.17.c.(2) of this proposed rule, we noted that we are not proposing any modification to clinician eligibility and therefore there is no difference in the total number of MIPS eligible clinicians between our models.

(b) Impact to Clinician’s Final Scores

Table 137 shows the median final score by practice size and the percentage of MIPS eligible clinicians of each practice size with a positive or neutral or negative adjustment.

TABLE 137: CY 2025 Final Score Estimates by Practice Size

| Practice Size* | Total Number of MIPS Eligible Clinicians | Median Final Score Estimate** | Percent Eligible Clinicians with Positive Payment Adjustment | Percent Eligible Clinicians with Neutral Payment Adjustment | Percent Eligible Clinicians with Negative Payment Adjustment |
|--------------------------|--|-------------------------------|--|---|--|
| Baseline | | | | | |
| 1) Solo | 18,867 | 75.00 | 31.05% | 22.00% | 46.95% |
| 2) 2-15 | 71,908 | 81.79 | 60.47% | 14.97% | 24.56% |
| 3) 16-99 | 150,377 | 81.76 | 64.79% | 10.32% | 24.89% |
| 4) 100+ | 445,493 | 82.80 | 74.84% | 4.32% | 20.84% |
| Overall | 686,645 | 82.20 | 69.93% | 7.23% | 22.84% |
| Proposed Policies | | | | | |
| 1) Solo | 18,867 | 75.00 | 32.41% | 21.94% | 45.65% |
| 2) 2-15 | 71,908 | 86.02 | 64.29% | 14.78% | 20.93% |
| 3) 16-99 | 150,377 | 85.87 | 72.41% | 9.98% | 17.61% |
| 4) 100+ | 445,493 | 87.19 | 83.28% | 4.13% | 12.59% |
| Overall | 686,545 | 86.42 | 77.51% | 7.02% | 15.47% |

*Practice size is defined as the number of NPIs in a TIN

** The median final score includes clinicians who receive reweighting for all MIPS performance categories our policies at § 414.1380(c)(2). These clinicians who have all performance categories reweighted are assigned a score of 75 (neutral payment adjustment) in our model.

The median final score is 82.20 in our baseline model and 86.42 in our proposed policies model. There is an increase in the number of clinicians receiving a positive payment adjustment for all practice sizes and an increase in the median final score for all practice sizes except for solo practitioners.⁸²⁸ We project that 69.93 percent of MIPS eligible clinicians will receive a positive

adjustment in our baseline model and 77.51 percent of MIPS eligible clinicians will receive a positive adjustment in our proposed policies model. This increase is largely due to our proposed change to the cost scoring methodology discussed in section IV.A.4.f.(1)(d)(ii)(B) of this proposed rule. Table 138 shows the median cost score for MIPS eligible clinicians who are scored on the cost

performance category for our baseline and final policies model. There is a substantial difference in median cost scores between our two models. This is true across all practice sizes. The median cost category score is 59.16 in our baseline model and 73.85 in our proposed policies model.

⁸²⁸ See section VII.E.17.d.(b)(i) of this proposed rule for a discussion of the performance of solo practitioners specifically.

TABLE 138: CY 2025 Cost Score Estimates by Practice Size

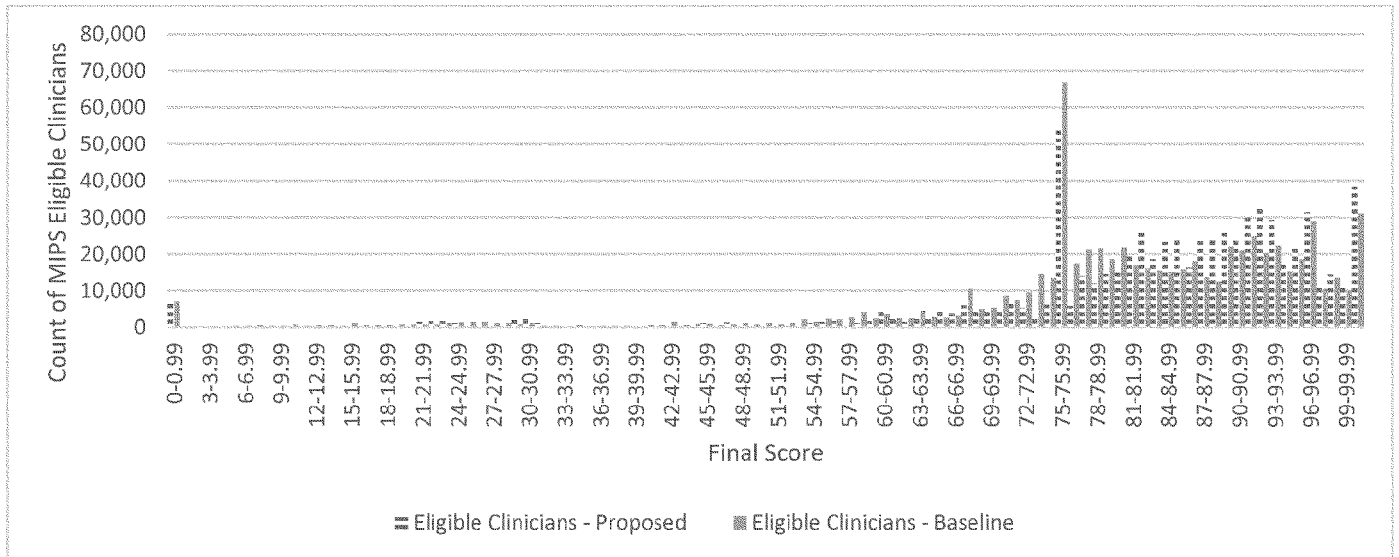

| Practice Size | MIPS Eligible Clinicians Receiving Cost Score | Total Number of MIPS Eligible Clinicians | Proportion of MIPS Eligible Clinicians Receiving Cost Score | Median Cost Score Estimate |
|----------------|---|--|---|----------------------------|
| | | Baseline | | |
| 1) Solo | 7,380 | 18,867 | 39.12% | 62.15 |
| 2) 2-15 | 32,476 | 71,908 | 45.16% | 59.89 |
| 3) 16-99 | 65,428 | 150,377 | 43.51% | 60.30 |
| 4) 100+ | 226,035 | 445,493 | 50.74% | 59.02 |
| Overall | 331,319 | 686,645 | 48.25% | 59.16 |
| | | Proposed Policies | | |
| 1) Solo | 7,636 | 18,867 | 40.47% | 75.24 |
| 2) 2-15 | 33,242 | 71,908 | 46.23% | 74.34 |
| 3) 16-99 | 66,311 | 150,377 | 44.10% | 74.35 |
| 4) 100+ | 227,601 | 445,493 | 51.09% | 73.78 |
| Overall | 334,790 | 686,545 | 48.76% | 73.85 |

Figure 6 shows the distribution of final scores for all MIPS eligible clinicians. Note that there are a relatively large number of MIPS eligible clinicians with a final score of 75. As stated in section VII.E.17.d.(3)(f) of this proposed rule MIPS eligible clinicians whom we approved for reweighting of all MIPS performance categories in

accordance with our reweighting policies at § 414.1380(c)(2) are assigned a final score of exactly the performance threshold (75). Overall, the distribution is skewed to the right indicating that clinicians tend to receive final scores on the higher end of the distribution with many final scores clustered near the performance threshold of 75. Our

proposed policies have the effect of shifting final scores to the right. Many clinicians with final scores just below the performance threshold in the baseline model see their scores increased to a value just above the performance threshold in the proposed policies model.

FIGURE 6: Count of MIPS Eligibles Clinicians by Final Score

(i) Impact to Small and Solo Practices
18,867 MIPS eligible clinicians or 2.7 percent of all MIPS eligible clinicians are solo practitioners in both the baseline and final policies models. The median final score for solo practitioners

is exactly equal to the performance threshold in both the baseline and final policies model although the portion of solo practitioners receiving a positive adjustment is higher in the proposed policies model than in the baseline model. As stated in section

VII.E.17.d.(3)(f) of this proposed rule, clinicians receiving reweighting under our policies at § 414.1380(c)(2) are assigned a final score exactly equal to the performance threshold if we approved for reweighting of all MIPS performance categories.

Section VII.E.17.d.(3)(f) of this proposed rule, clinicians receiving reweighting under our policies at § 414.1380(c)(2) are assigned a final score exactly equal to the performance threshold if we approved for reweighting of all MIPS performance categories.

These practitioners have a lower median final score than other practice sizes. This is largely due to the fact that many of these solo practitioners do not submit data to MIPS despite being MIPS eligible clinicians. Our analysis indicates that 49.45 percent of solo practitioners submit data to MIPS compared to 93.68 percent of all clinicians. The median final score in our baseline and proposed policies model is 75.00 for all solo practitioners, but for

solo practitioners who submit data the median final score is 84.35 in the baseline and 87.03 in the proposed policies model. These findings indicate that the lower final scores among solo practitioners is likely due to not reporting data to MIPS. Figure 7 shows the distribution of final scores for solo practitioners as a box plot. While the median final score is 75 in both models, the bottom quartile increases from 17.52 to 22.33 between the baseline and proposed policies model. Figure 8 shows the final score distribution for all practice sizes. The first quartile of final scores is 75 in the baseline model and 77.45 in the proposed policies model. The range between Q1 and Q3 is significantly narrower for all practice

sizes than it is for solo practitioners. Figure 9 shows the distribution of final scores for solo practitioners who submit data to MIPS. This distribution is much closer to the distribution of final scores in the overall population with the first quartile at 73.45 in the baseline and 75.00 in the proposed policies model. This is similar to the median final score for all practice sizes which is 86.42. This indicates that, while many solo practitioners do not submit data to MIPS, those who do submit data perform similarly or better than the overall population of MIPS eligible clinicians. This is further evidence that the main factor causing low final scores among solo practitioners is the high proportion who do not submit data.

FIGURE 7: Distribution of Final Scores for Solo Practitioners

FIGURE 8: Distribution of Final Scores for All Practice Sizes

FIGURE 9: Distribution of Final Scores for Solo Practitioners who Submit Data

Small practices, defined as groups with a range between 2 and 15 clinicians, have a median final score of 81.79 in the baseline and 86.02 in the proposed policies model. This is similar but slightly lower than the median final score for all practice sizes of 86.42. Among small practices who submit data the median final score is 89.81 in the proposed policies model (and 86.83 in the baseline). This is significantly higher than the median final score for all clinicians who submit data which is 87.53. This indicates that small practices perform similarly to other practice sizes although a slightly larger proportion of small practices do not submit data. Table 141 shows the

percentage of clinicians by practice size who either do or do not submit data to MIPS and the corresponding median final score. Note that the median final score for clinicians who do not submit data is 75 for all practice sizes except for solo practitioners. This indicates that many clinicians belonging to small, medium, or large practices (but not solo practitioners) who do not submit data to MIPS have been approved for reweighting of all of their MIPS performance categories under our policies at § 414.1380(c)(2). In contrast, many solo practitioners who do not submit data do so despite not being eligible for application of our

reweighting policies or not applying for reweighting under those policies.

A large majority of all practice sizes except solo practitioners submit data to MIPS. It is possible that the small percentage of MIPS eligible clinicians in those practice sizes who do not submit data to MIPS are primarily MIPS eligible clinicians who have received reweighting under our policies at § 414.1380(c)(2). It should be noted that median final scores increase for solo and small practitioners between our baseline and proposed policies model indicating that the net effect of our proposed policies is an increase in their final scores.

TABLE 139: Percentage of MIPS Eligible Clinicians who Submit Data and Median Final Score

| | Percentage of MIPS Eligible Clinicians who Submit Data (by practice size) | Median Final Score of MIPS Eligible Clinicians who Submit Data | Median Final Score of MIPS Eligible Clinicians who Do not submit data. |
|-------------------|---|--|--|
| | | Baseline | |
| 1) Solo | 49.39% | 84.35 | 19.35 |
| 2) Small (2-15) | 79.32% | 86.83 | 75 |
| 3) Medium (16-99) | 91.69% | 83.42 | 75 |
| 4) Large(100+) | 98.23% | 83.15 | 75 |
| Overall | 93.47% | 83.46 | 75 |
| | | Proposed Policies | |
| 1) Solo | 49.45% | 87.03 | 22.89 |
| 2) Small (2-15) | 79.46% | 89.81 | 75 |
| 3) Medium (16-99) | 92.03% | 87.27 | 75 |
| 4) Large(100+) | 98.41% | 87.31 | 75 |
| Overall | 93.68% | 87.53 | 75 |

(ii) Impact to Rural Providers

In our data we assign rural practitioners a special status. Analysis

of this group of clinicians indicates that their final scores are similar to the overall population of MIPS Eligible Clinicians across all practice sizes.

Table 140 shows the median final score and the percentage of eligible clinicians with a positive or neutral or negative adjustment by practice size.

TABLE 140: CY 2025 Final Score Estimates by Practice Size for Rural Practitioners Only

| Practice Size | Total Number of MIPS Eligible Clinicians | Median Final Score Estimate | Percent Eligible Clinicians with Positive Payment Adjustment | Percent Eligible Clinicians with Neutral Payment Adjustment | Percent Eligible Clinicians with Negative Payment Adjustment |
|----------------|--|-----------------------------|--|---|--|
| | | | Baseline | | |
| 1) Solo | 2,694 | 75.00 | 34.89% | 17.37% | 47.74% |
| 2) 2-15 | 11,760 | 83.89 | 65.94% | 10.48% | 23.58% |
| 3) 16-99 | 30,444 | 85.05 | 71.38% | 6.80% | 21.82% |
| 4) 100+ | 43,286 | 80.43 | 69.02% | 5.08% | 25.90% |
| Overall | 88,184 | 81.29 | 68.38% | 6.77% | 24.85% |
| | | | Proposed Policies | | |
| 1) Solo | 2,694 | 75.00 | 36.53% | 17.33% | 46.14% |
| 2) 2-15 | 11,762 | 87.34 | 69.82% | 10.42% | 19.76% |
| 3) 16-99 | 30,409 | 87.53 | 76.90% | 6.37% | 16.73% |
| 4) 100+ | 43,281 | 84.27 | 81.78% | 4.94% | 13.28% |
| Overall | 88,146 | 85.41 | 77.12% | 6.54% | 16.34% |

The median final score for all rural practitioners is 81.29 in our baseline model and 85.41 in our proposed policies model. This is slightly lower than the median final score for all practitioners which is 82.20 in our baseline model and 86.42 in our proposed policies model. However, the median final score is identical for solo practitioners and higher for small and

medium practices. Large rural providers have a slightly lower median final score compared to large practices generally. The lower overall median final scores for rural practitioners are driven by large rural practices who perform slightly worse than other practice sizes and when compared to large practices generally. It should be noted that median final scores increase for rural

providers of all practice sizes between our baseline and proposed policies model indicating that the net effect of our proposed policies is an increase in their final scores.

(iii) Impact to Safety Net Providers
 (a) Updated Definition of Safety Net Providers

In the CY 2023 PFS final rule (87 FR 70094), we finalized our complex patient bonus methodology. This bonus is composed of two distinct calculations which are added together: Medical Complexity and Social Risk. Medical Complexity is determined based on a MIPS eligible clinicians Hierarchical Conditions Categories risk score and social risk is determined based on the proportion of a MIPS eligible clinicians Medicare patient population who are dually eligible for both Medicare and Medicaid.

In the CY 2024 PFS final rule (88 FR 79513), we compared the performance of clinicians who received the complex patient bonus with our overall

population. As we further developed our model, we decided to adopt a more precise definition of safety net providers. We believe that by narrowing our definition of safety net providers to the top 20 percent (80th percentile) of social risk we can identify the providers who are caring for the largest proportion of low-income or otherwise socially vulnerable individuals.

Table 143 shows the final score estimates for safety net providers under this new definition. Safety net providers have higher median final scores than the overall population of MIPS eligible clinicians across all practice sizes with the exception of small and solo practitioners. When our analysis is restricted to providers who submit data to MIPS this discrepancy disappears and small and solo safety net providers

who submit data have higher median final scores than the overall population of small and solo MIPS eligible clinicians who submit data. However, only 43.65 percent of solo and 72.90 percent of small safety net providers submit data compared to 49.45 percent and 79.46 percent of the overall population of solo and small MIPS eligible clinicians respectively. These results are shown in Table 141. This indicates that the lower scores among small and solo safety net practitioners is likely due to a larger number of these practitioners not submitting data. It should be noted that median final scores increase for solo and small safety net providers between our baseline and proposed policies model indicating that the net effect of our proposed policies is an increase in their final scores.

TABLE 141: CY 2025 Final Score Estimates by Practice Size for Safety Net Practitioners Only

| Practice Size | Total Number of MIPS Eligible Clinicians | Median Final Score Estimate | Percent Eligible Clinicians with Positive Payment Adjustment | Percent Eligible Clinicians with Neutral Payment Adjustment | Percent Eligible Clinicians with Negative Payment Adjustment |
|----------------|--|-----------------------------|--|---|--|
| | | | Baseline | | |
| 1) Solo | 5,347 | 62.31 | 26.95% | 20.07% | 52.98% |
| 2) 2-15 | 14,202 | 80.84 | 55.01% | 15.56% | 29.43% |
| 3) 16-99 | 37,246 | 85.12 | 66.77% | 12.97% | 20.26% |

| 4) 100+ | 98.58% | 89.31 | 88.35% | 4.45% | 7.20% |
| Overall | 92.08% | 89.57 | 83.99% | 5.83% | 10.18% |

(c) Impact to MIPS Eligible Clinicians' Payment Adjustments

We are not proposing an increase in the performance threshold in this proposed rule. However, payment adjustments differ between the baseline and final policies model. This is because our proposed policies increase final scores of MIPS eligible

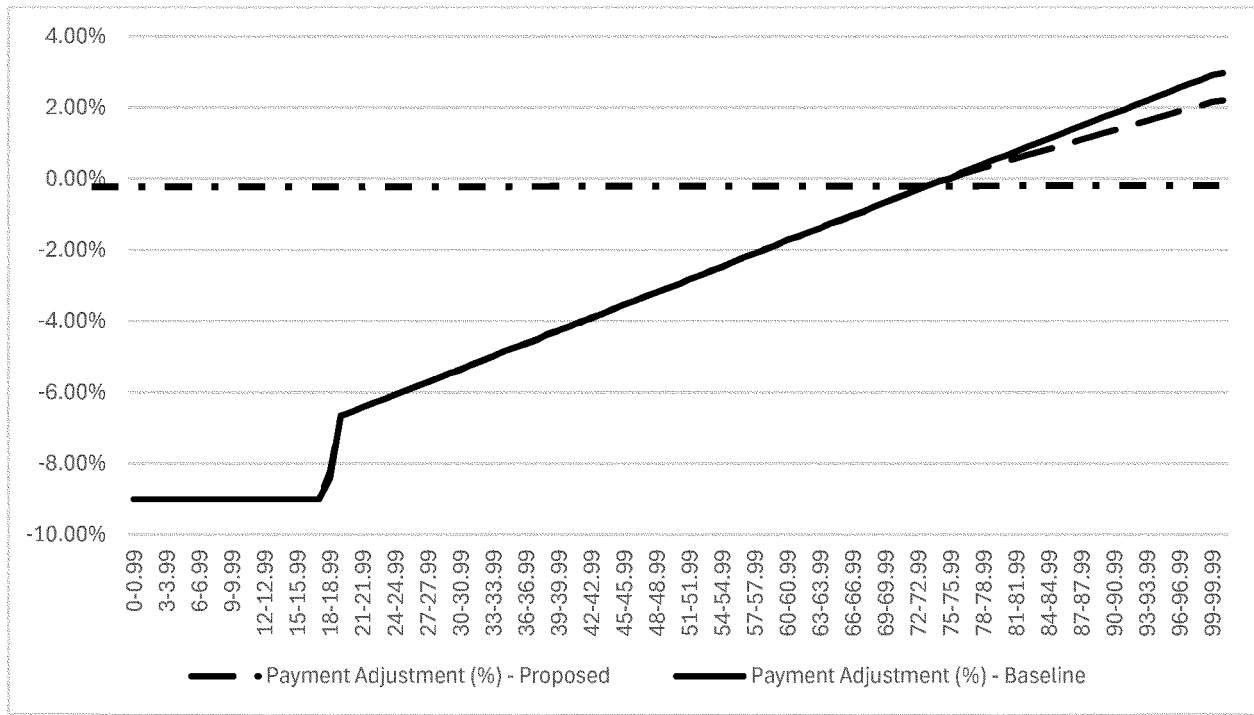

clinicians⁸²⁹ and therefore a larger proportion of MIPS eligible clinicians receive a final score greater than the performance threshold and thus a positive payment adjustment. The parameters of the exchange function used to determine payment adjustments depends on the final score distribution of MIPS eligible clinicians. As the proportion of MIPS eligible clinicians

receiving a negative payment adjustment decreases the budget neutral funds available for redistribution also decrease. In the baseline model we project redistributing \$517 million and in the proposed policies model we project redistributing \$458 million. This decrease means that the scaling factor for positive adjustments is reduced.

⁸²⁹ This increase is largely due to the change in our cost performance category scoring policies

discussed in section IV.A.4.f.(1)(d)(ii)(B) of this proposed rule.

FIGURE 10: Payment Adjustment Function

We also report the median positive and negative payment adjustments by practice size in Table 143.

TABLE 143: CY 2025 Median Positive and Negative Payment Adjustment Estimates By Practice Size

| Practice Size | Median Positive Payment Adjustment* | Median Negative Payment Adjustment* |
|--------------------------------|-------------------------------------|-------------------------------------|
| Baseline | | |
| Solo (1) | 2.06% | -9.00% |
| Small (2-15) | 1.82% | -4.69% |
| Medium (16-99) | 1.65% | -1.25% |
| Large (>99) | 1.59% | -0.88% |
| Overall | 1.65% | -1.10% |
| Proposed Policies Model | | |
| Solo (1) | 1.55% | -6.42% |
| Small (2-15) | 1.46% | -5.88% |
| Medium (16-99) | 1.35% | -1.44% |
| Large (>99) | 1.28% | -1.08% |
| Overall | 1.31% | -1.48% |

*The median positive payment adjustment is defined as the medium payment adjustment among clinicians with a final score above the performance threshold. The median negative adjustment is defined as the medium payment adjustment among clinicians with a final score below the performance threshold. Neither median includes clinicians with a final score equal the performance threshold.

For all practices sizes except for solo practitioners the median negative

payment adjustment increases in magnitude. This is because many MIPS

eligible clinician's final scores are clustered near the performance

threshold. An increase in median final scores will cause many of those clinicians who have a minor negative adjustment to meet or exceed the performance threshold and therefore be removed from the population of clinicians with a negative adjustment. The remaining population of MIPS eligible clinicians with negative adjustments are more likely to have negative payment adjustments higher in magnitude. In contrast to other practice

sizes, fewer solo practitioners with negative payment adjustments have a final score near the performance threshold and an increase in the final score of these MIPS eligible clinicians will reduce the size of their negative payment adjustment but is less likely to shift their final scores above the performance threshold in the manner described earlier. As discussed in section VII.E.17.d.(4)(b)(i) of this proposed rule, this is largely because

many of these solo practitioners do not submit data to MIPS despite being MIPS eligible clinicians. Our analysis indicates that 49.45 percent of solo practitioners submit data to MIPS in our proposed policies model compared to 93.70 percent of all MIPS eligible clinicians. In Table 144, we report the proportion of MIPS eligible clinicians who either did or did not submit data with the maximum negative adjustment (-9 percent).

TABLE 144: CY 2024 CY 2024 Clinicians With The Maximum Negative Adjustment

| Practice Size | Percent of Clinicians who Did NOT Submit Data with Maximum Negative Adjustment | Percent of Clinicians Who Submit Data With Maximum Negative Adjustment |
|--------------------------------------|--|--|
| Baseline (-9%) | | |
| Solo (1) | 48.94% | 2.90% |
| Small (2-15) | 35.75% | 0.84% |
| Medium (16-99) | 17.88% | 0.37% |
| Large (>99) | 11.71% | 0.12% |
| Overall | 29.35% | 0.28% |
| Proposed Policies Model (-9%) | | |
| Solo (1) | 35.57% | 2.26% |
| Small (2-15) | 25.23% | 0.72% |
| Medium (16-99) | 12.52% | 0.35% |
| Large (>99) | 5.50% | 0.10% |
| Overall | 20.77% | 0.24% |

Across all practice sizes the proportion of clinicians who do not submit data who receive the max negative payment adjustment decreased between the baseline and proposed policies model. A larger proportion of solo practitioners (2.26 percent) who submit data receive the maximum negative adjustment.

The median positive adjustment for solo practitioners is 1.55 percent which is higher than the median positive adjustment for all practice sizes overall. This indicates that, while many solo

practitioners do not submit data to MIPS, those solo practitioners who do report data to MIPS and receive a positive adjustment receive a similar median adjustment to other practice sizes.

e. Additional Impacts From Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting payment adjustments, we are proposing several policies that have an impact on burden in the CY 2025 performance

period/2027 MIPS payment year. In section V.B.8. of this proposed rule, we outline estimates of the costs of data collection that include both the effect of proposed policy updates and adjustments due to the use of updated data sources. For each proposed provision included in this proposed rule that impacts our estimate of collection burden, we summarize the incremental burden in Table 145. We also provide proposed additional burden discussions that we are not able to quantify.

TABLE 145: Incremental Estimated Burden from Associated Proposed Policies
(Asterisks refer to paragraph directly following table)

| Burden Description and Associated Proposed Provisions | Burden Hours | Burden Dollars |
|--|--------------|----------------|
| Total burden associated with the provision to continue the policies and ICRs set forth in the CY 2024 PFS final rule into the CY 2025 performance period/2027 MIPS payment year with updated data and assumptions (as outlined in section V.B.8. of this proposed rule). | 657,110 | \$77,779,594 |
| Burden change for MVP registration ICR due to the provision of additional MVPs (as outlined in section V.B.8.e.(7)(a)(i). of this proposed rule). * | +626 | +\$66,759 |
| Burden change for Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (as outlined in section V.B.8.e.(4). of this proposed rule). * | -7,697 | -\$898,035 |
| Burden change for Quality Data Submission by Clinicians: CQM/QCDR Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (as outlined in section V.B.8.e.(5). of this proposed rule). * | -6,866 | -\$823,269 |
| Burden change for Quality Data Submission by Clinicians: eCQM Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (as outlined in section V.B.8.e.(6). of this proposed rule). * | -9,664 | -\$1,176,109 |
| Burden change for MVP Quality Submission ICR submissions due to the provision of additional MVPs (as outlined in section V.B.8.e.(7)(a)(iii). of this proposed rule). * | +16,031 | +\$1,917,478 |
| Total change in burden due to policy for CY 2025 | -7,570 | -\$913,176 |
| Total burden set forth in the CY 2025 PFS proposed rule | 649,540 | \$76,866,418 |

* The total change in burden due to this proposed provision includes an increase in burden due to an anticipated increase in the number of respondents that will participate in MVP reporting based on the proposed addition of 6 new MVPs. Therefore, there will be a decrease in burden in the “Quality Data Submission: MIPS CQM and QCDR collection type,” “Quality Data Submission: eCQM collection type,” and “Quality Data Submission: Claims collection type” ICRs due to respondents who previously submitted MIPS through those collection types submitting data with reduced Quality submission requirements as a MVP participant. Total change in burden also includes the increase in submission burden due to the increase in the number of respondents for “MVP registration.” See section V.B.8.e.(2).of this proposed rule.

(2) Additional Impacts to Clinicians
(a) Impact on Third Party Intermediaries

In section IV.A.4.j.(1)(b). of this rulemaking, we are proposing that as part of the Consumer Assessment of Healthcare Providers & Systems (CAHPS) vendor registration process, in addition to the previously established registration requirements, CAHPS vendors would provide information on the range of costs for their services beginning with the CY 2026 performance period/2028 MIPS payment year. We recognize that there may be additional minimal burden associated with the proposed cost information requirement for the CAHPS vendor registration. However, we assume that this information is brief and readily available to vendors completing the registration process. We are unable to quantify the additional impact for the proposed CAHPS vendor cost requirement.

(b) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.4.e.(3)(b)(iii). of this proposed rule, we are proposing changes to the improvement activities inventory for the CY 2025 performance period/2027 MIPS payment year and future years as follows: adding two new improvement activities; modifying two existing improvement activity; and removing eight previously adopted improvement activities. We refer readers to Appendix 2 of this proposed rule for further details. We do not expect these changes to the improvement activities inventory to affect our currently approved information collection burden for the number of estimated respondents. Most of the improvement activities in the Inventory remain unchanged for the CY 2025 performance period/2027 MIPS payment year. We refer readers to section IV.A.4.e.(3)(b)(iii). of this proposed rule for additional information

on changes to the improvement activities Inventory.

(c) Modifications to Improvement Activities Scoring and Reporting Policies

As discussed in section IV.A.4.e.(3)(b)(iv)., we are proposing two scoring and reporting policy changes for the improvement activities performance category effective for the CY 2025 performance period/2027 MIPS payment year and subsequent years. As noted in section V.B.8.h., we established our currently approved estimate that it will take a computer analyst 5 minutes to log in and manually attest that improvement activities were completed in the CY 2019 PFS final rule (83 FR 60016). In the CY 2024 PFS final rule (88 FR 79454 and 79455), this estimate included scenarios where participants might submit 1, 2, 3, or 4 activities for the improvement activities category, based on medium- or high-weighted

activities and any additional weighting scenarios such as for MIPS Value Pathways (MVP) Participants. We believe this proposal would decrease burden for MIPS participants who previously reported medium-weighted activities. As MIPS participants who previously only reported high weighted activities would have the same attestation requirements under this proposal, we propose to continue our currently approved estimates of 5 minutes to log in and attest that improvement activities are completed. We expect reduced reporting burden for clinicians who previously reported at least one medium-weighted activity; however, we are unable to estimate the aggregated impact of this proposal given the current weighting and scoring rules that affect the number of activities each clinician submits to receive full credit for the improvement activities performance category.

(d) MVP Maintenance Process

In section VII.E.17.e.(2)(d) of this proposed rule, we are proposing a modification to the MVP maintenance webinar process previously finalized in the CY 2022 PFS final rule (86 FR 65410) and modified in the CY 2023 PFS final rule (87 FR 70037). We communicated that if we identified any potentially feasible and appropriate submitted maintenance recommendations, we would host a public facing webinar open to interested parties and the general public through which they could offer their feedback on the potential maintenance updates we have identified.

Due to the low volume of submitted maintenance recommendations in past years, we are proposing to provide us more flexibility in how we communicate maintenance recommendations prior to proposing them in rulemaking. Allowing flexibility in communicating recommendations through alternative webinar formats or other public communication channels would offer similar opportunities for public review and feedback as a live public webinar. For example, in lieu of a live webinar, we could choose to communicate submitted maintenance recommendations via a pre-recorded webinar, which will encourage interested parties to submit their feedback on the submitted recommendations in writing by email before maintenance updates are formally proposed in rulemaking.

As with the CY 2023 PFS final rule (87 FR 70210 through 70211), we acknowledge that there is administrative burden associated with the monitoring and review of the candidate MVPs. We

are uncertain on the number of interested parties and members of the general public that will submit their recommendations for potential revisions to established MVPs for an applicable performance period. We are also uncertain if CMS will host a public webinar, webinar alternative, or other communications based on the review of the recommendations. In summary, we are unable to quantify the impact associated with the proposed changes to the MVP development and maintenance process.

(e) Reweighting Performance Categories When Data Is Not Submitted Due to Reasons Outside the Clinician's Control

In section IV.A.4.i.(2) of this rulemaking, we are proposing to adopt a new reweighting policy at 42 CFR 414.1380(c)(2)(i)(A)(10) and (c)(2)(i)(C)(12). Specifically, we are proposing that, beginning with the CY 2024 performance period/2026 MIPS payment year, we may reweight one or more of the performance categories (specifically, quality, improvement activities, or Promoting Interoperability), where we determine, based on information submitted to us on or before November 1st of the year preceding the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third party intermediary, and the third party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines. We also are proposing that, to determine whether to apply reweighting to the affected performance category(ies), we will consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third party intermediary's submission of the clinician's data for the performance category(ies); whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines. More details on this proposed reweighting policy are provided in section V.B.8.g.(2) of this proposed rule.

Because this is a new policy and we believe these occurrences would be rare based on our experience, we are unable

to estimate the number of clinicians, groups, or third party intermediaries that may apply for reweighting based on this policy. Similarly, the extent and source of documentation provided to us for each event may vary considerably. Therefore, we are not proposing any changes to our currently approved burden estimates as a result of this proposal.

(f) Advanced Primary Care Management

As discussed in section II.G.2. of this proposed rule, we are proposing to adopt specific coding and payment policies for advanced primary care management (APCM) services for use by practitioners who are providing services under this specific model of "advanced primary care," beginning January 1, 2025. These services would be furnished under the direction of a physician or other qualified health care professional who is responsible for all primary care (e.g., physicians and non-physician practitioner, including nurse practitioner, physician assistant, certified nurse midwife and clinical nurse specialist), and serve as the continuing focal point for all needed health care services, during a calendar month. We are proposing three new APCM codes that would recognize the resources involved in furnishing ongoing, beneficiary-centered care management services under the broad model of advanced primary care without paying for each activity separately while allowing for flexibility in addressing patient needs. APCM payment would incorporate several specific, existing care management and communication technology-based services into a bundle and require reporting the Value in Primary Care MVP beginning in the CY 2025 performance period/2027 MIPS payment year. Billing practitioners who are not MIPS eligible clinicians (as defined at 42 CFR 414.1305) would not be required to report the MVP in order to furnish and bill for APCM services. As discussed in section V.B.8.e.(7)(a) of this proposed rule, we are unable to estimate the effect of this proposal on MVP submissions and registrations for the CY 2025 performance period/2027 MIPS payment year as the codes are newly proposed. Specifically, we are unable to determine how many additional clinicians or practices would submit the Value in Primary Care MVP measures for the CY 2025 performance period/2027 MIPS payment year above our current estimates. Similarly, we cannot assess what participation levels clinicians or practices who might use these APCM codes, if finalized, have reported MIPS in the past (for example,

eligibility requirements and special statuses, participation at the individual, group, virtual group, or Alternative Payment Model (APM) Entity level, or reporting via traditional MIPS, the APM Performance Pathway (APP), or MVPs), or if they will be MIPS eligible clinicians in future years. For MIPS eligible clinicians who move from reporting traditional MIPS to MVPs, we expect a decrease in overall program burden due to the reduced number of measures required for reporting the quality performance category. We will update these assumptions for MVP quality performance category reporting and MVP registration as more information is available.

(g) Mandatory Subgroup Registration

As summarized in section IV.A.3.c.(1), we established a voluntary subgroup participation option for clinicians choosing to report an MVP beginning in the CY 2023 performance period/2025 MIPS payment year. We finalized a mandatory subgroup reporting requirement for multispecialty groups choosing to report as an MVP Participant beginning in the CY 2026 performance period/2028 MIPS payment year (§ 414.1305; 86 FR 65394 through 65397). Beginning with the CY 2026 performance period/2028 MIPS payment year, a single specialty group may continue to submit data for an MVP at the group level, and a multispecialty group must form subgroups to report an MVP. Under the existing subgroup reporting policies, a group could place clinicians providing similar scope of care into one or more subgroups for reporting a relevant MVP. Each clinician may participate in one subgroup per tax identification number (TIN). The remaining clinicians under the group TIN not part of a subgroup could participate as individuals to report an MVP or traditional MIPS. The entire group TIN (including the clinicians that are part of the subgroup) could also submit data as a group in traditional MIPS. We note section IV.A.3.d. includes a Request for Information (RFI) to obtain feedback on what guidance/parameters are needed for multispecialty groups to place clinicians into subgroups for reporting an MVP relevant to the scope of care provided. Absent available submission data on MVP and subgroup reporting as discussed in section V.B.8.e.(7)(a)(ii), we are unable to estimate the effect of this established policy on reporting for the CY 2026 performance period/2028 MIPS payment year.

(h) APM Performance Pathway Plus Quality Measure Set

In section IV.A.4.c.(2), of this proposed rule, we are proposing to establish the APP Plus quality measure set beginning in the CY 2025 performance period/2027 MIPS payment year. As described in section V.B.8.a.(4), clinicians reporting the proposed APP Plus quality measure set would report via one of the available collection types per measure: eight measures for the CY 2025 performance period/2027 MIPS payment year; nine measures for the CY 2026 and 2027 performance periods/2028 and 2029 MIPS payment years; and eleven measures for the CY 2028 performance period/2030 MIPS payment period. For the available collection types per measure, please see Tables 55, 56, and 57 in section IV.A.4.c.(3)(f).

In section V.B.8.a.(4), of this proposed rule, we compare the quality performance category burden for MIPS eligible clinicians who elect to report the proposed APP Plus quality measure set compared to the current APP quality measure set, traditional MIPS, and MVPs. We focus these analyses on quality measures required for MIPS eligible clinicians under the eCQM, CQM/QCQR, and Medicare Part B claims collection types. We note, these assumptions for actively submitting to assess clinician burden may differ from MIPS scoring policy. In that comparison, we assume MIPS eligible clinicians incur no burden for reporting the two administrative claims quality measures currently required under the APP quality measure set. Additionally, burden estimates for the CAHPS for MIPS registration and patient reporting are provided in the CAHPS for MIPS PRA package under OMB control number 0938-1222 (CMS-10450); we do not assume that MIPS eligible clinicians incur additional reporting burden for reporting the CAHPS for MIPS quality measure under the current APP quality measure set. Therefore, MIPS eligible, clinicians reporting the proposed APP Plus quality measure set beginning in the CY 2025 performance period/2027 MIPS payment year would need to actively submit performance data for more quality measures than clinicians reporting via MVPs or the APP. Compared to clinicians reporting via traditional MIPS, clinicians reporting the proposed APP Plus quality measure set would actively submit performance data for fewer quality measures for the CY 2025 performance period/2027 MIPS payment year; the same number of quality measures for the CY 2026 and 2027 performance periods/2028 and

2029 MIPS payment years, and more measures for the CY 2028 performance period/2030 MIPS payment year.

As noted in the CY 2021 PFS final rule, one goal of the APP quality measure set was to reduce the burden of reporting quality measures twice; once to MIPS and once to their APMs; therefore, clinicians reporting the APP and APP Plus who are required by their APMs to submit the same measure sets incur limited additional burden (88 FR 84862). We assume that all Shared Savings Program ACOs will report the APP via the APP Plus measure set for the CY 2025 performance period/2027 MIPS payment year. Per section 1899(e) of the Act, submissions received from eligible clinicians in ACOs are not included in burden estimates for this proposed rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA. As the APP Plus is a new and optional quality measure set for non-Shared Savings Program ACOs with greater reporting burden than the current APP quality measure set and APM specific requirements may vary, we are unable to estimate how many individual MIPS eligible clinicians, groups, or APM Entities would submit quality measures via the APP Plus at this time. Our burden estimates currently assume MIPS eligible clinicians in non-Shared Savings ACO APM Entities will participate through traditional MIPS or MVPs, submitting as an individual or group rather than as an APM Entity. We will update these estimates and assumptions as additional data are available.

i. Assumptions & Limitations

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in for the CY 2022 Quality Payment Program and submitted data will continue to elect to opt-in for the CY 2025 performance period/2027 MIPS payment year.

As discussed in section V.B.8. of this proposed rule, we are unable to predict which specific MIPS eligible clinicians would receive reweighting for one or more performance categories under policies at § 414.1380(c)(2) in the CY 2025 performance period/2027 MIPS payment year. On this basis, we assume that those MIPS eligible clinicians for whom we approved reweighting of one or more performance categories under our policies are representative of the number and attributes of MIPS eligible clinicians who will receive reweighting under these policies in the future.

In addition to the limitations described throughout the methodology

sections, to the extent that there are year-to-year changes in the data submission, volume, and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 137.

F. Alternatives Considered

This proposed rule contains a range of policies, including some proposals related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when we exercise agency discretion, presents rationale for our policies, and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this proposed rule, we present above the estimated impact on total allowed charges by specialty.

1. Alternatives Considered Related to Strategies for Improving Global Surgery Payment Accuracy

As discussed previously and in section II.G. of this proposed rule, beginning for services furnished in 2025, we are proposing to broaden the applicability of the transfer of care modifiers for the 90-day global packages. We are proposing to require the use of the appropriate transfer of care modifier (modifier -54, -55, or -56) for all 90-day global surgical packages in any case when a practitioner (or another within the same group practice) expects to furnish only a portion of a global package (including but not limited to when there is a formal, documented transfer of care as under current policy or an informal, non-documented but expected, transfer of care). Practitioners billing for a global package procedure code with modifier -54 and other practitioners in the same group practice as that practitioner would still be able to bill during the global period for any separately identifiable E/M services they furnish to the patient that are unrelated to the global package procedure.

Additionally, we are proposing a global surgical add-on code, HCPCS code GPOC1, which we expect will be billed during the postoperative period of 90 days following the procedure. We expect that this code will be billed once during that timeframe when the patient is seen for an office/outpatient (O/O) evaluation and management (E/M) visit that is related to the recent surgical procedure. We believe that this code will be billed by a physician or practitioner who is seeing the patient for a visit during the post-operative period

and did not furnish the surgical procedure.

As we were developing this proposal, we analyzed a few different policy options to best achieve our goal of improving the payment accuracy of the global packages. We considered whether to propose to revalue the 10 and 90-day global packages on the PFS utilizing our findings and data under the MACRA requirement to improve payment accuracy on the fee schedule, however we are precluded from doing so under MACRA. We also considered revaluing services specifically included in the RAND study,⁸³⁰ which looked at claims for which reporting of follow up visits was requested. We also considered proposing requiring separate billing, which would result in separate payments for the procedures and post operative visits in global packages, based on our current research and analysis of how practitioners may be furnishing care described by global packages. We considered this alternative policy as an initial step towards more accurately paying for global packages, specifically for services including high utilization global packages discussed in the RAND study. We also considered proposing revisions to all global surgical packages in a phased approach starting with the subset of packages described above and gradually revising other global packages over time, to manage payment predictability and stability within the PFS, rec.

2. Alternatives Considered Related to the Supervision of Outpatient Therapy Services in Private Practices

As discussed in section II.H of this proposed rule, we are proposing to allow for the general supervision of occupational therapy assistants (OTAs) and physical therapist assistants (PTAs), by OT's and PT's in private practice (OTPPs and PTPPs, respectively) who are enrolled as suppliers in Medicare. Currently, and since 2005, OTPPs and PTPPs are required to provide direct supervision of their OTAs and PTAs which requires the OTPP/PTPP to be immediately available to furnish assistance and direction throughout the performance of the procedure in the office suite or in the patient's home when Medicare patients are treated in order to bill for therapy services furnished by their supervised OTAs and PTAs.

In developing our proposal to allow for general supervision in these private

practice settings, we considered the possibility of allowing for virtual direct supervision by the OTPP/PTPP instead, as we have included OTPPs/PTPPs as "supervising practitioners" in the application of our virtual direct supervision policy since October 6, 2021, which is now extended through CY 2024. Due to the private practice direct supervision regulatory requirement, when using virtual direct supervision, this means (per our clarification in the CY 2021 PFS final rule (85 FR 84539)) that the OTPP or PTPP could meet the virtual direct supervision requirement by being immediately available to engage via audio/video technology (excluding audio-only), and would not require real-time presence or observation of the service via interactive audio and video technology throughout the performance of the service.

However, if this alternative policy were selected, it would leave the direct supervision requirement in place for OTPPs and PTPPs and they'd still have to be immediately available to engage via audio/video technology and ensure their availability to do so. On the other hand, with general supervision, the OTPP's/PTPP's physical or virtual presence is not required when the OTA/PTA furnishes services, although the services continue to be furnished under their overall direction and control allowing the OTPP/PTPP, for example, to provide an evaluative service in the office while the OTA/PTA is off-site furnishing therapy services in a patient's home.

3. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold as a critical factor affecting the distribution of payment adjustments. In section IV.A.4.g.(2)(c) of this proposed rule, we proposed to set the performance threshold to 75 points for the CY 2025 MIPS performance period/CY 2027 MIPS payment year. Eighty-six (86) is a possible alternative value (mean of the CY 2019 performance period/2021 MIPS payment year) which we did not propose. To assess this alternative value, we ran a separate RIA model with a performance threshold of 86. This model has the same mean and median final score as our proposed policies RIA model since the alternative performance threshold which we are assessing in this model does not change the final score. In our analysis of the alternative performance threshold of 86, which we considered but did not propose, 55.98 percent of MIPS eligible clinicians who

⁸³⁰ Using Claims-Based Estimates of Post-Operative Visits to Revalue Procedures with 10- and 90-Day Global Periods; Updated Results Using Calendar Year 2019 Data.

submitted data would receive a negative payment adjustment in the baseline and 45.08 percent of MIPS eligible clinicians who submit data would receive a negative adjustment in the proposed policies model.

We also reported the findings for the baseline RIA model which describes the impact for the CY 2025 performance period/2027 MIPS payment year if this proposal is not finalized. The baseline RIA model has a median final score of 82.20. We estimated that \$517 million would be redistributed based on the budget neutrality requirement in the baseline model. The baseline includes a maximum payment adjustment of 2.98 percent and 22.84 percent of MIPS eligible clinicians would receive a negative payment adjustment.

G. Impact on Beneficiaries

1. Medicare Shared Savings Program Provisions

As noted previously in this proposed rule, the proposed HEBA would mainly provide upwards adjustments to benchmarks for—and likely draw increased participation from—new ACOs with particular focus on coordinating care for beneficiaries in underserved communities. New ACOs of this type are therefore projected to ultimately increase assignment to the Shared Savings Program by roughly 500,000 beneficiaries per year, ranging from 50,000 to 1.0 million at the low and high ends of this projection range.

ACOs have been found to perform better on certain patient-experience and performance measures than physician groups participating in the MIPS. In performance year 2022, ACOs had a higher average performance on quality measures they are required to report in order to share in savings compared to other similarly sized clinician groups not in the Shared Savings Program.⁸³¹ This includes statistically significant higher performance for quality measures related to diabetes and blood pressure control; breast cancer and colorectal cancer screening; tobacco screening and smoking cessation; and depression screening and follow-up.⁸³² We anticipate that ACOs will continue to improve the quality of care for their Medicare fee-for-service beneficiaries through the reporting of Medicare CQMs, and that ACOs will continue to

improve the quality of care for their all payer/all patient population through the reporting of eCQMs.

Increased participation in the Shared Savings Program will extend ACO care coordination and quality improvement to segments of the beneficiary population that potentially have more to benefit from care management.

2. Quality Payment Program

There are several changes in this proposed rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup provisions, if finalized, will lead to meaningful feedback to beneficiaries on the type and scope of care provided by clinicians. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we anticipate the policies in this proposed rule would improve the quality and value of care provided to Medicare beneficiaries. For example, several of the new quality measures include patient-reported outcome-based measures, which could be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient's health status from the patient's point of view and could also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which would not otherwise be available through routine clinical data collection. Patient-reported outcome-based measures are factors frequently of interest to patients when making decisions about treatment.

H. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rulemaking, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assumed that the total number of unique commenters on this year's proposed rule will be the number of reviewers of last

year's proposed rule. We acknowledged that this assumption may understate or overstate the costs of reviewing this rulemaking. It is possible that not all commenters will review this year's proposed rule in detail, and it is also possible that some reviewers will choose not to comment on the proposed rule. For these reasons we believe that the number of commenters will be a fair estimate of the number of reviewers of this year's proposed rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of this proposed rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rulemaking.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing this rulemaking is \$123.06, including overhead and fringe benefits https://www.bls.gov/oes/current/oes_nat.htm. Assuming an average reading speed, we estimate that it would take approximately 8.0 hours for the staff to review half of this proposed rule. For each facility that reviews the rule, the estimated cost is \$984.48 (8.0 hours × \$123.06). Therefore, we estimated that the total cost of reviewing this regulation is 21,677,265 (\$984.48 × 22,019 reviewers on this year's proposed rule).

As for the Medicare Diabetes Prevention Program, given that we tried to align this rulemaking as much as possible with the CDC DPRP Standards, there should be minimal regulatory familiarization costs. This rulemaking impacts only enrolled MDPP suppliers and eligible beneficiaries who have started the MDPP program or are interested in enrolling in MDPP.

I. Accounting Statement

As required by OMB Circular A–4 (available at https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf), in Tables 146 through 148 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2024 to CY 2025 based on the FY 2025 President's Budget baseline.

⁸³¹ CMS, Press Release, “Medicare Shared Savings Program Saves Medicare More Than \$1.8 Billion in 2022 and Continues to Deliver High-

quality Care” (August 24, 2023). Available at <https://www.cms.gov/newsroom/press-releases/>

[medicare-shared-savings-program-saves-medicare-more-18-billion-2022-and-continues-deliver-high-](https://www.cms.gov/newsroom/press-releases/medicare-shared-savings-program-saves-medicare-more-18-billion-2022-and-continues-deliver-high-)

⁸³² *Id.*

TABLE 146: Accounting Statement: Classification of Estimated Expenditures

| CATEGORY | TRANSFERS |
|--|---|
| CY 2025 Annualized Monetized Transfers | Estimated decrease in expenditures of \$1.8 billion for PFS CF update. |
| From Whom To Whom? | Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare. |

TABLE 147: Accounting Statement: Classification of Estimated Costs, Transfer, and Savings

| CATEGORY | TRANSFER |
|---|--------------------------------------|
| CY 2025 Annualized Monetized Transfers of beneficiary cost coinsurance. | -\$0.4 billion |
| From Whom to Whom? | Beneficiaries to Federal Government. |

TABLE 148: Accounting Statement for Provisions for Medicare Shared Savings Program (CYs 2025-2034) (\$ Millions)

| Category | Primary Estimate | Minimum Estimate | Maximum Estimate | Source Citation |
|--|------------------|------------------|------------------|--|
| BENEFITS | | | | |
| Annualized monetized:
Discount rate: 2% | -\$12.6 million | -\$148.9 million | \$92.6 million | Tables 132 through 134; summarized in total in Table 135 |

Notes: Negative values reflect reduction in Federal net cost resulting from care management by ACOs. Estimates may be a combination of benefits and transfers. To the extent that the incentives created by Medicare payments change the amount of resources society uses in providing medical care, the more accurate categorization of effects would be as costs (positive values) or benefits/cost savings (negative values), rather than as transfers.

J. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on June 25, 2024.

List of Subjects

42 CFR Part 401

Claims, Freedom of information, Health facilities, Medicare, Privacy.

42 CFR Part 405

Administrative practice and procedure, Diseases, Health facilities, Health professions, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, and X-rays.

42 CFR Part 410

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 411

Diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 414

Administrative practice and procedure, Biologics, Diseases, Drugs, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 423

Administrative practice and procedure, Emergency medical services, Health facilities, Health maintenance organizations (HMO), Health professionals, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare,

Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 427

Administrative practice and procedure, Biologics, Inflation rebates, Medicare, Prescription drugs.

42 CFR Part 428

Administrative practice and procedure, Biologics, Inflation rebates, Medicare, Prescription drugs.

42 CFR Part 491

Grant programs—health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements, Rural areas.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 401—GENERAL ADMINISTRATIVE REQUIREMENTS

■ 1. The authority citation for part 401 is revised to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, 1395w-5, and 1395kk-2.

■ 2. Section 401.305 is amended by revising paragraphs (b)(1) introductory text and (b)(2) introductory text and adding paragraph (b)(3) to read as follows:

§ 401.305 Requirements for reporting and returning of overpayments.

* * * * *

(b) * * *

(1) Except as provided in paragraphs (b)(2) and (3) of this section, a person who has received an overpayment must report and return the overpayment by the later of either of the following:

* * * * *

(2) The deadline for returning overpayments will be suspended (or will continue to be suspended following the completion of a timely, good faith investigation in accordance with paragraph (b)(3) of this section) when any of the following occurs:

* * * * *

(3)(i) The deadline for reporting and returning overpayments will be suspended when both of the following occurs:

(A) A person has identified an overpayment but has not yet completed a good-faith investigation to determine the existence of related overpayments that may arise from the same or similar cause or reason as the initially identified overpayment; and

(B) The person conducts a timely, good-faith investigation to determine whether related overpayments exist.

(ii) If the conditions of paragraph (b)(3)(i) of this section are satisfied, the deadline for reporting and returning the initially identified overpayment and related overpayments that arise from the same or similar cause or reason as the initially identified overpayment will remain suspended until the earlier of:

(A) The date that the investigation of related overpayments has concluded and the aggregate amount of the initially identified overpayments and related overpayments is calculated; or

(B) The date that is 180 days after the date on which the initial identified overpayment was identified.

* * * * *

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 3. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b-12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 4. Section 405.2410 is amended by revising paragraphs (c)(1) and (2) to read as follows:

§ 405.2410 Application of Part B deductible and coinsurance.

* * * * *

(c) * * *

(1) For RHCs, the coinsurance amount is determined as described in paragraph (b)(1) of this section; or

(2) For FQHCs, the coinsurance amount is 20 percent of the lesser of—
(i) The FQHC’s actual charge; or
(ii) The payment determined under § 405.2462(j)(2).

■ 5. Section 405.2462 is amended by—

■ a. In paragraphs (f) heading, (f)(1) introductory text, (f)(2), and (g)(1)(ii), removing “grandfathered” and adding in its place “historically excepted”; and
■ b. Revising and republishing paragraph (j).

The revisions and republications read as follows:

§ 405.2462 Payment for RHC and FQHC services.

* * * * *

(j) *Payment amount for intensive outpatient services.* (1) An RHC is paid the payment rate determined under § 419.21(a) of this chapter for services described under § 410.44 of this chapter. There are no adjustments to this rate.

(i) If the deductible has been fully met by the beneficiary prior to the RHC service, Medicare pays eighty (80) percent of the payment amount determined under this paragraph (j)(1).

(ii) If the deductible has not been fully met by the beneficiary prior to the RHC service, Medicare pays eighty (80) percent of the difference between the remaining deductible and the payment amount determined under this paragraph (j)(1); or

(iii) If the deductible has not been fully met by the beneficiary prior to the RHC service, no payment is made to the RHC if the deductible is equal to or exceeds the payment amount determined under this paragraph (j)(1).

(2) FQHCs are paid the payment rate determined under § 419.21(a) of this chapter for services described under § 410.44 of this chapter. There are no adjustments to this rate, except that historically excepted tribal FQHCs are paid pursuant to paragraph (j)(2)(ii) of this section.

(i) Medicare pays eighty (80) percent of the lesser of the FQHC’s actual charge or the payment rate determined under paragraph (j)(1)(ii) of this section; or

(ii) Medicare pays eighty (80) percent of the lesser of a historically excepted

tribal FQHC’s actual charge or the amount described under paragraphs (f)(2) and (3) of this section.

(iii) No deductible is applicable to FQHC services.

■ 6. Section 405.2463 is amended by—

■ a. Revising paragraph (b)(3) introductory text;

■ b. In paragraph (c)(4) introductory text, removing “grandfathered” and adding in its place “historically excepted”.

The revision reads as follows:

§ 405.2463 What constitutes a visit.

* * * * *

(b) * * *

(3) *Visit-Mental health.* A mental health visit is a face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology for the purposes of diagnosis, evaluation or treatment of a mental health disorder, including an in-person mental health service, beginning January 1, 2026, furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient’s medical record, between an RHC or FQHC patient and one of the following:

* * * * *

■ 7. Section 405.2464 is amended by revising paragraphs (c) and (d) and adding paragraphs (g) and (h) to read as follows:

§ 405.2464 Payment rate.

* * * * *

(c) *Payment for care coordination services.* RHCs and FQHCs are paid for the non-face-to-face care management work involved in coordinating care.

(1) For Chronic Care Management (CCM) services furnished between January 1, 2016, and December 31, 2017, payment to RHCs and FQHCs is based on the physician fee schedule national non-facility payment rate.

(2) For psychiatric collaborative care model (CoCM) services furnished on or

after January 1, 2018, payment is based on the average of the national non-facility PFS payment rate set for each psychiatric CoCM service and updated annually based on the PFS amounts.

(3) For CCM and general Behavioral Health Integration (BHI) services furnished between January 1, 2018, and December 31, 2020, payment is based on the average of the national non-facility PFS payment rate set for each CCM and general BHI service and updated annually based on the PFS amounts.

(4) For CCM, general BHI, and Principal Care Management (PCM) services furnished between January 1, 2021, and December 31, 2022, payment is based on the average of the national non-facility PFS payment rate set for each CCM, general BHI, and PCM service and updated annually based on the PFS amounts.

(5) For CCM, general BHI, PCM, Chronic Pain Management (CPM) services furnished between January 1, 2023, and December 31, 2023, payment is based on the average of the national non-facility PFS payment rate set for each CCM, general BHI, PCM and CPM service and updated annually based on the PFS amounts.

(6) For CCM, general BHI, PCM, CPM, Remote Physiologic Monitoring (RPM), Remote Therapeutic Monitoring (RTM), Community Health Integration (CHI), Principal Illness Navigation (PIN), and PIN—Peer Support services furnished between January 1, 2024, and December 31, 2024, the payment amount is based on a weighted average of each CCM, general BHI, PCM, CPM, RPM, RTM, CHI, PIN, and PIN—Peer Support service using the most recently available PFS utilization data.

(7) For CCM, general BHI, PCM, CPM, RPM, RTM, CHI, PIN, PIN—Peer Support, and Advance Primary Care Management services furnished on or after January 1, 2025, payment is based on the PFS national non-facility payment rate.

(d) *Payment for FQHCs that are authorized to bill as historically excepted tribal FQHCs.* Historically excepted tribal FQHCs are paid at the outpatient per visit rate for Medicare as set annually by the Indian Health Service for each beneficiary visit for covered services. There are no adjustments to this rate.
* * * * *

(g) *Payment for non-behavioral health telecommunication technology services.* For an encounter furnished using interactive, real-time, audio and video telecommunications technology or for certain audio-only interactions in cases where the patient is not capable of, or

does not consent to, the use of video technology services that are not described in § 405.2463(b)(3), payment to RHCs and FQHCs are subject to the national average payment rates for comparable services under the physician fee schedule (PFS) and costs associated with these services shall not be used in determining payments under the RHC all-inclusive rate or the FQHC prospective payment system.

(h) *Payment for drugs covered as additional preventive services (DCAPS).* For drugs covered as additional preventive services, as defined at § 410.64 of this subchapter, and for the administration and supplying fees for those drugs, payment to RHCs or FQHCs is 100 percent of the Medicare payment amount per § 405.2410(b) and § 410.152(l)(11) of this chapter, subject to the payment limitations described at § 410.152(o) of this chapter.

■ 8. Section 405.2466 is amended by revising paragraph (b)(1)(iv) to read as follows:

§ 405.2466 Annual reconciliation.

* * * * *

(b) * * *

(1) * * *

(iv) For RHCs and FQHCs, payment for pneumococcal, influenza, hepatitis B and COVID–19 vaccine and their administration is 100 percent of Medicare reasonable cost.
* * * * *

§ 405.2469 [Amended]

■ 9. Section 405.2469 is amended in paragraph (a)(2) by removing “grandfathered” and adding in its place “historically excepted”.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 10. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 11. Section 410.26 is amended by revising paragraph (a)(2) to read as follows:

§ 410.26 Services and supplies incident to a physician’s professional services: Conditions.

(a) * * *

(2) *Direct supervision* means, except as provided in paragraphs (a)(2)(i) and (ii) of this section, the level of supervision by the physician (or other practitioner) of auxiliary personnel as defined in § 410.32(b)(3)(ii). For the following services furnished after December 31, 2025, the presence of the physician (or other practitioner)

required for direct supervision shall include virtual presence through audio/video real-time communications technology (excluding audio-only):

(i) Services furnished incident to a physician of other practitioner’s service provided by auxiliary personnel employed by the billing practitioner and working under their direct supervision and for which the underlying Healthcare Common Procedure Coding System (HCPCS) code has been assigned a PC/TC indicator of ‘5’.

(ii) Office or other outpatient visits for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care practitioner.
* * * * *

■ 12. Section 410.30 is amended by revising paragraph (a) to read as follows:

§ 410.30 Prescription drugs used in immunosuppressive therapy.

(a) *Scope.* Payment may be made for prescription drugs used in immunosuppressive therapy that meet one of the following conditions:

(1) The drug has been approved for marketing by the FDA and—

(i) The approved labeling includes an indication for preventing or treating the rejection of a transplanted organ or tissue; or

(ii) The approved labeling includes the indication for use in conjunction with immunosuppressive drugs to prevent or treat rejection of a transplanted organ or tissue.

(2) The drug has been approved for marketing by FDA and determined by a Medicare Administrative Contractor (MAC) (in accordance with part 421, subpart C, of this chapter), in processing a Medicare claim, to be reasonable and necessary for the specific purpose of preventing or treating the rejection of a patient’s transplanted organ or tissue, or for use in conjunction with immunosuppressive drugs for the purpose of preventing or treating the rejection of a patient’s transplanted organ or tissue. (In making these determinations, the MACs may consider factors such as authoritative drug compendia, current medical literature, recognized standards of medical practice, and professional medical publications.)

(3) The drug is a compounded formulation with active ingredients derived only from a drug described in paragraph (a)(1) or (2) of this section and is orally or externally administered.
* * * * *

■ 13. Section 410.32 is amended by revising paragraph (b)(3)(ii) to read as follows:

§ 410.32 Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests: Conditions.

* * * * *

(b) * * *

(3) * * *

(ii) Direct supervision in the office setting means that the physician (or other supervising practitioner) must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the service. It does not mean that the physician (or other supervising practitioner) must be present in the room when the service is performed. Through December 31, 2025, the presence of the physician (or other practitioner) includes virtual presence through audio/video real-time communications technology (excluding audio-only).

* * * * *

- 14. Section 410.37 is amended by—
■ a. In paragraph (a)(1)(iv), removing the text “barium enemas” and adding in its place “computed tomography colonography”;
■ b. Revising paragraph (a)(4);
■ c. In paragraph (e)(2), removing the text “barium enema” and adding in its place “computed tomography colonography”;
■ d. In paragraph (g)(2), removing the text “barium enema” and adding in its place “computed tomography colonography”;
■ e. Revising paragraphs (h), (i), and (k).
The revisions read as follows:

§ 410.37 Colorectal cancer screening tests: Conditions for and limitations on coverage.

* * * * *

(a) * * *

(4) Screening computed tomography colonography means a test that uses X-rays and computers to produce images of the entire colon (including image processing and a physician’s interpretation of the results of the procedure).

* * * * *

(h) Conditions for coverage of screening computed tomography colonography. Medicare Part B pays for a screening computed tomography colonography if it is ordered in writing by the beneficiary’s attending physician who is a doctor of medicine or osteopathy (as defined in section 1861(r)(1) of the Act); or by a physician assistant, nurse practitioner, or clinical nurse specialist (as defined in section 1861(aa)(5) of the Act).

(i) Limitations on coverage of screening computed tomography colonography. (1) In the case of an individual age 45 or over who is not at

high risk of colorectal cancer, payment may be made for a screening computed tomography colonography performed after at least 59 months have passed following the month in which the last screening computed tomography colonography or 47 months have passed following the month in which the last screening flexible sigmoidoscopy or screening colonoscopy was performed.

(2) In the case of an individual who is at high risk for colorectal cancer, payment may be made for a screening computed tomography colonography performed after at least 23 months have passed following the month in which the last screening computed tomography colonography or the last screening colonoscopy was performed.

* * * * *

(k) A complete colorectal cancer screening. Effective January 1, 2025, colorectal cancer screening tests include a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based colorectal cancer screening test or blood-based biomarker colorectal cancer screening test returns a positive result. The instance of the follow-on screening colonoscopy in the context of a complete colorectal cancer screening must not apply to the frequency limitations for colorectal cancer screening.

- 15. Section 410.59 is amended by revising paragraphs (a)(3)(ii) and (c)(2) to read as follows:

§ 410.59 Outpatient occupational therapy services: Conditions.

(a) * * *

(3) * * *

(ii) By, or under the general supervision (or as specified otherwise) of, an occupational therapist in private practice as described in paragraph (c) of this section; or

* * * * *

(c) * * *

(2) Supervision of occupational therapy services. Except as otherwise provided in this paragraph (c)(2), occupational therapy services are performed by, or under the general supervision of, an occupational therapist in private practice. All services not performed personally by the therapist must be performed by employees of the practice, generally supervised by the therapist, and included in the fee for the therapist’s services. Occupational therapy services may be performed by an occupational therapy assistant under the general supervision of the occupational therapist in private practice; services performed by an unenrolled occupational therapist must be under

the direct supervision of the occupational therapist.

* * * * *

- 16. Section 410.60 is amended by revising paragraphs (a)(3)(ii) and (c)(2) to read as follows:

§ 410.60 Outpatient physical therapy services: Conditions.

(a) * * *

(3) * * *

(ii) By, or under the general supervision (or as specified otherwise) of, a physical therapist in private practice as described in paragraph (c) of this section; or

* * * * *

(c) * * *

(2) Supervision of physical therapy services. Except as otherwise provided in this paragraph (c)(2), physical therapy services are performed by, or under the general supervision of, a physical therapist in private practice. All services not performed personally by the therapist must be performed by employees of the practice, generally supervised by the therapist, and included in the fee for the therapist’s services. Physical therapy services may be performed by a physical therapist assistant under the general supervision of the physical therapist in private practice; services performed by an unenrolled physical therapist must be under the direct supervision of the physical therapist.

* * * * *

- 17. Section 410.63 is amended by—

- a. Revising paragraph (a) introductory text;
■ b. Removing the word “and” at the end of paragraph (a)(2)(ii);
■ c. Removing the period at the end of paragraph (a)(2)(iii) and adding in its place “; and”;
■ d. Adding paragraph (a)(2)(iv); and
■ e. Revising paragraphs (b) and (c)(1).

The revisions and addition read as follows:

§ 410.63 Hepatitis B vaccine and blood clotting factors: Conditions.

* * * * *

(a) Hepatitis B vaccine: Conditions. Effective January 1, 2025, hepatitis B vaccinations are reasonable and necessary for the prevention of illness for those individuals who are at high or intermediate risk of contracting hepatitis B as listed in paragraphs (a)(1) through (3) of this section:

* * * * *

(2) * * *

(iv) Individuals who have not previously received a completed hepatitis B vaccination series or whose

previous vaccination history is unknown.

* * * * *

(b) *Blood clotting factors: Conditions.* Effective July 18, 1984, blood clotting factors that are self-administered and control bleeding for hemophilia patients competent to use these factors without medical or other supervision, and items related to the administration of those factors. The amount of clotting factors covered under this provision is determined by the carrier based on the historical utilization pattern or profile developed by the carrier for each patient, and based on consideration of the need for a reasonable reserve supply to be kept in the home in the event of emergency or unforeseen circumstance.

(c) * * *

(1) Effective January 1, 2005, a furnishing fee of \$0.14 per unit of clotting factor is paid to entities that furnish blood clotting factors, as described in paragraph (b) of this section, unless the costs associated with furnishing the clotting factor are paid through another payment system, for example, hospitals that furnish clotting factor to patients during a Part A covered inpatient hospital stay, or practitioners that furnish clotting factor to patients in an outpatient setting and are paid for under the Physician Fee Schedule.

* * * * *

■ 18. Section 410.67 is amended in paragraph (b), in the definition of “Opioid use disorder treatment service,” by revising paragraphs (vi) and (vii) to read as follows:

§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs.

* * * * *

(b) * * *

Opioid use disorder treatment service

(vi) Intake activities, including initial medical examination services required under § 8.12(f)(2) of this title and initial assessment services required under § 8.12(f)(4) of this title.

(A) For intake activities furnished via communications technology, the following flexibilities apply:

(1) Services to initiate treatment with buprenorphine may be furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. In cases where audio-video communications technology is not available to the beneficiary, services to initiate treatment with buprenorphine may be furnished using audio-only telephone

calls if all other applicable requirements are met.

(2) Services to initiate treatment with methadone may be furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements, if an OTP determines that an adequate evaluation of the patient can be accomplished through audio-video communication technology.

(B) [Reserved]

(vii) Periodic assessment services required under § 8.12(f)(4) of this title, that are furnished during a face-to-face encounter, including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. In cases where a beneficiary does not have access to two-way audio-video communications technology, periodic assessments can be furnished using audio-only telephone calls if all other applicable requirements are met.

* * * * *

■ 19. Section 410.78 is amended by revising paragraph (a)(3) read as follows:

§ 410.78 Telehealth services.

(a) * * *

(3) *Interactive telecommunications system* means, except as otherwise provided in this paragraph (a)(3), multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner. Interactive telecommunications system may also include two-way, real-time audio-only communication technology for any telehealth service furnished to a patient in their home if the distant site physician or practitioner is technically capable of using an interactive telecommunications system as defined in the previous sentence, but the patient is not capable of, or does not consent to, the use of video technology. The following modifiers must be appended to a claim for telehealth services furnished using two-way, real-time audio-only communication technology to verify that the conditions set forth in the prior sentence have been met:

(i) Current Procedural Terminology (CPT) modifier “93”; and

(ii) For rural health clinics (RHCs) and federally qualified health centers (FQHCs), Medicare modifier “FQ”.

* * * * *

■ 20. Section 410.79 is amended by—

■ a. In paragraph (b):

■ i. Removing the definition of “Combination delivery”;

■ ii. Adding the definitions of “Combination with an online component,” “In-person with a distance learning component,” and “Online” in alphabetical order;

■ iii. Removing the definition of “Online delivery”; and

■ iv. Revising the definition of “Set of MDPP services”; and

■ b. Revising paragraphs (d)(1) introductory text, (e)(3)(iii)(C), (e)(3)(iv)(F)(3), and (e)(3)(v)(F)(2).

The additions and revisions read as follows:

§ 410.79 Medicare Diabetes Prevention Program expanded model: Conditions of coverage.

* * * * *

(b) * * *

Combination with an online component refers to sessions that are delivered as a combination of online (non-live) with in-person or distance learning.

* * * * *

In-person with a distance learning component refers to DPP sessions that are delivered in person by trained Coaches where participants have the option of attending sessions via MDPP distance learning.

* * * * *

Online means sessions that are delivered 100 percent through the internet via phone, tablet, or laptop in an asynchronous (non-live) classroom where participants are experiencing the content on their own time without a live (including non-artificial intelligence (AI)) Coach teaching the content. These sessions must be furnished in a manner consistent with the DPRP Standards for online sessions. Live Coach interaction must be offered to each participant during weeks when the participant has engaged with content. Emails and text messages can count toward the requirement for live Coach interaction if there is bi-directional communication between the Coach and participant. Chat bots and AI forums do not count as live Coach interaction.

* * * * *

Set of MDPP services means the series of MDPP sessions, composed of core sessions and core maintenance sessions, and subject to paragraph (c)(3) of this section offered over the course of the MDPP services period.

* * * * *

(d) * * *

(1) An MDPP supplier may offer a make-up session to an MDPP beneficiary who missed a regularly scheduled session. MDPP make-up sessions may only use in-person or distance learning delivery. If an MDPP

supplier offers one or more make-up sessions to an MDPP beneficiary, each such session must be furnished in accordance with the following requirements:

* * * * *

- (e) * * *
(3) * * *
(iii) * * *

(C) Self-reported weight measurements from the at-home digital scale of the MDPP beneficiary. Self-reported weights must be obtained during live, synchronous online video technology, such as video chatting or video conferencing, wherein the MDPP Coach observes the beneficiary weighing themselves and views the weight indicated on the at-home digital scale, or the MDPP supplier receives 2 (two) date-stamped photos or a video recording of the beneficiary’s weight, with the beneficiary visible on the scale, submitted by the MDPP beneficiary to the MDPP supplier. Photo or video must clearly document the weight of the MDPP beneficiary as it appears on their digital scale on the date associated with the billable MDPP session. If choosing to submit 2 photos, one photo must show the beneficiary’s weight on the digital scale, the second photo must show the beneficiary visible in their home, and both photos must be date-stamped.

* * * * *

- (iv) * * *
(F) * * *

(3) No more than 12 virtual sessions offered monthly during the ongoing maintenance session intervals, months 13 through 24 for beneficiaries enrolled before January 1, 2022.

* * * * *

- (v) * * *
(F) * * *

(2) For an MDPP beneficiary who began receiving the Set of MDPP services on or after January 1, 2021, has suspended services during an applicable 1135 waiver event, the MDPP supplier must use the baseline weight recorded at the beneficiary’s first core session.

* * * * *

■ 21. Section 410.152 is amended by adding paragraph (o) to read as follows:

§ 410.152 Amounts of payment.

* * * * *

(o) Amount of payment: Drugs covered as additional preventive services (DCAPS). For a drug covered as an additional preventive service, as defined at § 410.64, payment must be made as follows:

(1) Payment for a drug covered as an additional preventive service, per section 1861(a)(1)(W)(ii) of the Act and

paragraphs (I)(11) of this section and § 410.160(b)(13), is 100 percent of the lesser of—

(i) The actual charge on the claim for program benefits; or
(ii) The amount determined under the fee schedule as described in paragraph (o)(3) of this section.

(2) Payment for the supplying or administration of a drug covered as an additional preventive service per section 1861(a)(1)(W)(ii) of the Act and paragraphs (I)(11) of this section and § 410.160(b)(13), is 100 percent of the lesser of—

(i) The actual charge on the claim for program benefits; or
(ii) The amount determined under the fee schedule as described in paragraph (o)(4) of this section.

(3) The payment limit for a drug covered as an additional preventive service, as defined at § 410.64, appears on the DCAPS fee schedule and is determined as follows:

(i) If Average Sales Price (ASP) data is available for the drug, consistent with part 414, subpart J, of this chapter, then the payment limit is determined using the methodology set forth in section 1847A of the Act and according to the provisions in part 414, subpart K, of this chapter.

(ii) If ASP data is not available, then the payment limit is determined according to an average of the most recently published National Average Drug Acquisition Cost (NADAC) prices for the drug.

(iii) If ASP data and NADAC prices are not available, then the payment limit is determined according to an average of the most recently published pharmaceutical pricing data for the drug as included in the Federal Supply Schedule (FSS), as managed by the Department of Veterans Affairs per 48 CFR part 38.

(iv) If ASP data, NADAC prices, and FSS pharmaceutical prices are not available, then the payment limit is the invoice price determined by the MAC.

(4) The payment limits for supplying and administering a drug covered as an additional preventive service, as defined at § 410.64, appear on the DCAPS fee schedule and are determined as follows:

(i) For a drug that is supplied by a pharmacy, the payment limit for a supplying fee is as follows:

(A) For the first prescription that the pharmacy provides to a beneficiary in a 30-day period for a drug covered as an additional preventive service, \$24.

(B) For all subsequent prescriptions that the pharmacy provides to a beneficiary in a 30-day period for a drug covered as an additional preventive service, \$16.

(ii) For a drug that is administered by a physician or a non-physician practitioner, the payment limit for administration is set in accordance with part 414, subpart B, of this chapter. This fee is not subject to the Part B deductible, per § 410.160(b)(13). This fee is equal to 100 percent of the Medicare payment amount established under the applicable payment methodology, per paragraph (I)(11) of this section.

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

■ 22. The authority citation for part 411 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395w–101 through 1395w–152, 1395hh, and 1395nn.

■ 23. Section 411.15 is amended by revising paragraph (i)(3)(i)(A) to read as follows:

§ 411.15 Particular services excluded from coverage.

* * * * *

- (i) * * *
(3) * * *
(i) * * *

(A) Dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, the following Medicare-covered services: organ transplant, hematopoietic stem cell transplant, bone marrow transplant, cardiac valve replacement, valvuloplasty procedures, chemotherapy when used in the treatment of cancer, chimeric antigen receptor (CAR) T-cell therapy when used in the treatment of cancer, administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer, and dialysis services in the treatment of end stage renal disease.

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 24. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr(b)(1).

■ 25. Section 414.84 is amended by—

- a. In paragraph (a), removing the definition of “Bridge payment”;
b. Revising paragraphs (b)(1) introductory text and (b)(2) introductory text;
c. Adding paragraph (c)(4);
d. Removing paragraph (d);

- e. Redesignating paragraph (e) as paragraph (d); and
- f. Revising newly redesignated paragraph (d).

The revisions and addition read as follows:

§ 414.84 Payment for MDPP services.

* * * * *

(b) * * *

(1) Performance Goal 1: Achieves the required minimum 5-percent weight loss. CMS makes a performance payment to an MDPP supplier for an MDPP beneficiary who achieves the required minimum weight loss as measured in-person or during a distance learning session during a core session or core maintenance session furnished by that supplier. The amount of this performance payment is determined as follows:

* * * * *

(2) Performance Goal 2: Achieves 9-percent weight loss. CMS makes a performance payment to an MDPP supplier for an MDPP beneficiary who achieves at least a 9-percent weight loss as measured in-person or in a distance learning session during a core session or core maintenance session furnished by that supplier. The amount of this performance payment is determined as follows:

* * * * *

(c) * * *

(4) Current Procedural Terminology (CPT) Modifier 79 (repeat services by same physician) must be appended to any claim for G9886 or G9887 to identify a MDPP make-up session that was held on the same day as a regularly scheduled MDPP session.

(d) Updating performance payments and attendance payments. The performance payments and attendance payments will be adjusted each calendar year by the percent change in the Consumer Price Index for All Urban Consumers (CPI-U) (U.S. city average) for the 12-month period ending June 30th of the year preceding the update year. The percent change update will be calculated based on the level of precision of the index as published by the Bureau of Labor Statistics (BLS) and applied based on one decimal place of precision. The annual MDPP services payment update will be published by CMS transmittal.

■ 26. Section 414.502 is amended by revising the definitions of "Data collection period" and "Data reporting period" to read as follows:

§ 414.502 Definitions.

* * * * *

Data collection period is the 6 months from January 1 through June 30, during

which applicable information is collected and that precedes the data reporting period, except that for the data reporting period of January 1, 2025, through March 31, 2025, the data collection period is January 1, 2019, through June 30, 2019.

Data reporting period is the 3-month period, January 1 through March 31, during which a reporting entity reports applicable information to CMS and that follows the preceding data collection period, except that for the data collection period of January 1, 2019, through June 30, 2019, the data reporting period is January 1, 2025, through March 31, 2025.

* * * * *

§ 414.504 [Amended]

■ 27. Section 414.504 is amended in paragraph (a)(1) by removing the reference "January 1, 2024" and adding in its place the reference "January 1, 2025".

■ 28. Section 414.507 is amended by revising paragraphs (d) introductory text and (d)(7) and adding paragraph (d)(10) to read as follows:

§ 414.507 Payment for clinical diagnostic laboratory tests.

* * * * *

(d) Phase-in of payment reductions. For years 2018 through 2027, the payment rates established under this section for each CDLT that is not a new ADLT or new CDLT, may not be reduced by more than the following amounts for—

* * * * *

(7) 2024—0.0 percent of the payment rate established in 2023.

* * * * *

(10) 2027—15 percent of the payment rate established in 2026.

* * * * *

■ 29. Section 414.605 is amended in the definition of "Advanced life support, level 2 (ALS2)" by adding paragraph (8) to read as follows:

§ 414.605 Definitions.

* * * * *

Advanced life support, level 2 (ALS2)

(8) Administration of low titer O+ whole blood transfusion.

* * * * *

■ 30. Section 414.902 is amended by revising the definition "Refundable single-dose container or single-use package drug" to read as follows:

§ 414.902 Definitions.

* * * * *

Refundable single-dose container or single-use package drug, as used in this subpart:

(1) Means a single source drug or biological or a biosimilar biological product for which payment is made under this part and is—

(i) Furnished from a single-dose container or single-use package based on Food and Drug Administration (FDA)-approved labeling or product information; or

(ii) Furnished from an ampule for which product labeling does not have discard statement or language indicating if the container is single-dose container, single-use package, multiple-dose container, or single-patient-use container; or

(iii) Furnished from a container with a total labeled volume of 2 mL or less for which product labeling does not have language indicating if the container is single-dose container, single-use package, multiple-dose container, or single-patient-use container.

(2) And excludes—

(i) A drug that is a therapeutic radiopharmaceutical, a diagnostic radiopharmaceutical, or an imaging agent as identified in the drug's FDA-approved labeling.

(ii) A drug for which the FDA-approved labeling for any National Drug Code assigned to a billing and payment code of such drug requires filtration during the drug preparation process, prior to dilution and administration and that any unused portion of such drug after the filtration process be discarded after the completion of such filtration process.

(iii) A drug approved or licensed by the FDA on or after November 15, 2021, until the last day of the sixth full quarter for which the drug has been marketed (as reported to CMS) for the first National Drug Code assigned to the billing and payment code of such drug.

(iv) A drug approved or licensed by FDA on or after November 15, 2021 and for which the date of first sale as reported to CMS does not adequately approximate the date of first payment under Part B due to an applicable national coverage determination, until the last day of the sixth full quarter for which the drug has been covered and paid under Medicare Part B for the first National Drug Code assigned to the billing and payment code of such drug.

* * * * *

■ 31. Section 414.904 is amended by adding paragraph (e)(6) and revising paragraph (i) to read as follows:

§ 414.904 Average sales price as the basis for payment.

* * * * *

(e) * * *

(6) Radiopharmaceuticals furnished in settings other than the hospital outpatient department. Medicare administrative contractors must determine payment limits for radiopharmaceuticals based on any methodology used to determine payment limits for radiopharmaceuticals in place on or prior to November 2003. Such methodology may include, but is not limited to, the use of invoice-based pricing.

* * * * *

(i) Manufacturer's average sales price (ASP) data not available prior to the publication deadline for quarterly payment limits. For circumstances in which manufacturer's ASP data is not available prior to the publication deadline for quarterly payment limits as described in this section, payment limit must be determined as follows:

(1) For a multiple source drug (as defined in § 414.902)—

(i) In circumstances in which negative or zero manufacturer's ASP data is reported for one or more, but not all, National Drug Codes (NDCs) associated with a billing and payment code for that drug for a given quarter, the payment limit for the given quarter is calculated using only NDCs for that drug with positive manufacturer's ASP data, except in circumstances described in paragraph (i)(1)(iii) of this section.

(ii) In circumstances in which negative or zero manufacturer's ASP data is reported for all NDCs associated with a billing and payment code for that drug for a given quarter, the payment limit for the given quarter is calculated by carrying over all positive manufacturer's ASP data from the most recently available previous quarter with positive manufacturer's ASP data for at least one NDC until at least one NDC for the drug has positive manufacturer's ASP data for a quarter.

(iii) In circumstances in which manufacturer's ASP data is not available and the unavailability of the manufacturer's ASP data results in a significant change in the ASP payment limit compared to the previous quarter, the payment limit is calculated by carrying over the most recent available ASP data for the individual NDC(s), adjusted by the weighted average of the change in the manufacturer's ASP data for the NDCs that were reported for both the most recently available previous quarter and the current quarter.

(2) For a single source drug, excluding biosimilar biological products (both as defined in § 414.902)—

(i) In circumstances in which negative or zero manufacturer's ASP data is

reported for one or more, but not all, NDCs associated with a billing and payment code for that drug for a given quarter, the payment limit for the given quarter is calculated using only NDCs for that drug with positive manufacturer's ASP data.

(ii) In circumstances in which negative or zero manufacturer's ASP data is reported for all NDCs associated with a billing and payment code for that drug for a given quarter, the payment limit for the given quarter is the lesser of the following until at least one NDC for the drug has positive manufacturer's ASP data for a quarter:

(A) 106 percent of the volume-weighted average of the most recent available positive manufacturer's ASP data from a previous quarter in which at least one NDC for the drug has positive manufacturer's ASP data for the quarter. If the payment limit from such quarter was based on 106 percent of the wholesale acquisition cost because of the application of paragraph (d)(1) of this section, that payment limit is carried over; or

(B) 106 percent of the wholesale acquisition cost. If there is more than one WAC per billing unit for the drug, the payment limit is set using the lowest WAC per billing unit.

(3) For a biosimilar biological product (as defined in § 414.902)—

(i) In circumstances in which negative or zero manufacturer's ASP data is reported for one or more, but not all, NDCs for a given quarter, the payment limit for the given quarter is calculated using only NDCs with positive manufacturer's ASP data.

(ii) In circumstances in which negative or zero manufacturer's ASP data is reported for all NDCs for a given quarter, and other biosimilars referencing the same reference product report positive ASP data for the given quarter, the payment limit for the given quarter is the sum of the following until at least one NDC for the drug has positive manufacturer's ASP data for a quarter:

(A) the volume-weighted average of the ASP data from all other biosimilars of the same reference product; and

(B) Either:

(1) If the biosimilar is not a qualifying biosimilar (as both are defined at § 414.902), 6 percent of the amount determined under section 1847A(b)(4) of the Act for the reference biological product (as defined in § 414.902) for the given quarter; or

(2) If the biosimilar is a qualifying biosimilar (as both are defined at § 414.902), 8 percent of the amount determined under section 1847A(b)(4) of the Act for the reference biological

product (as defined in § 414.902) for the given quarter.

(iii) In circumstances in which negative or zero manufacturer's ASP data is reported for all NDCs for a given quarter and either no other biosimilars have been approved for the same reference product or no other biosimilars of the same reference product report positive manufacturer's ASP data for the given quarter, the payment limit for the given quarter is the sum of the following until at least one NDC for the drug has positive manufacturer's ASP data for a quarter:

(A) The volume-weighted average of the most recent available positive manufacturer's ASP data from a previous quarter; and

(B) Either:

(1) If the biosimilar is not a qualifying biosimilar (as both are defined at § 414.902), 6 percent of the amount determined under section 1847A(b)(4) of the Act for the reference biological product (as defined in § 414.902) for the given quarter; or

(2) If the biosimilar is a qualifying biosimilar (as both are defined at § 414.902), 8 percent of the amount determined under section 1847A(b)(4) of the Act for the reference biological product (as defined in § 414.902) for the given quarter.

* * * * *

■ 32. Section 414.1001 is amended by—

- a. Revising paragraph (a);
- b. Removing paragraph (b);
- c. Redesignating paragraphs (c) and (d) as paragraphs (b) and (c), respectively;
- d. In newly redesignated paragraph (b)(2), removing “(c)(1)” and adding in its place “(b)(1)”.

The revision reads as follows:

§ 414.1001 Basis of payment.

(a) Supplying fees. Beginning in CY 2006—

(1) A supplying fee of \$24 is paid to a pharmacy (no more often than once every 30 days) for the first prescription of drugs and biologicals described in sections 1861(s)(2)(J), 1861(s)(2)(Q), and 1861(s)(2)(T) of the Act, that the pharmacy provided to a beneficiary, except as provided in paragraph (a)(2) of this section.

(2) A supplying fee of \$50 is paid to pharmacy for the initial supplied prescription of drugs and biologicals described in section 1861(s)(2)(J) of the Act, that the pharmacy provided to a patient during the first 30-day period following a transplant.

(3) A supplying fee of \$16 is paid to a pharmacy (no more often than once every 30 days) for each prescription following the first prescription (as

specified in paragraphs (a)(1) and (2) of this section) of drugs and biologicals described in sections 1861(s)(2)(J), 1861(s)(2)(Q), and 1861(s)(2)(T) of the Act, that the pharmacy provided to a beneficiary.

(4) A separate supplying fee is paid to a pharmacy for each prescription of drugs and biologicals described in sections 1861(s)(2)(J), 1861(s)(2)(Q), and 1861(s)(2)(T) of the Act.

* * * * *

■ 33. Section 414.1305 is amended in the definition of “Attribution-eligible beneficiary” by revising paragraph (6) to read as follows:

§ 414.1305 Definitions.

* * * * *

Attribution-eligible beneficiary * * *

(6) Has a minimum of one claim for any covered professional service furnished by an eligible clinician who is on the Participation List for an Advanced APM Entity at any determination date during the QP Performance Period.

* * * * *

■ 34. Section 414.1325 is amended by adding paragraphs (a)(1)(i) through (iii) and (f) to read as follows:

§ 414.1325 Data submission requirements.

(a) * * *

(1) * * *

(i) For the quality performance category, a data submission must include numerator and denominator data for at least one MIPS quality measure from the final list of MIPS quality measures.

(ii) For the improvement activities performance category, a data submission must include a response of “yes” for at least one activity in the MIPS improvement activities inventory.

(iii) For the Promoting Interoperability performance category, a data submission must include all of the following elements:

(A) Performance data, including any claim of an applicable exclusion, for the measures in each objective, as specified by CMS;

(B) Required attestation statements, as specified by CMS;

(C) CMS EHR Certification ID (CEHRT ID) from the Certified Health IT Product List (CHPL); and

(D) The start date and end date for the applicable performance period as set forth in § 414.1320.

* * * * *

(f) *Treatment of multiple data submissions.* (1) For multiple data submissions received in the quality and improvement activities performance categories in accordance with

paragraphs (a)(1)(i) and (ii) of this section for an individual MIPS eligible clinician, group, subgroup, or virtual group from submitters in multiple organizations (for example, qualified registry, practice administrator, or EHR vendor), CMS will calculate and score each submission received and assign the highest of the scores. For multiple data submissions received for an individual MIPS eligible clinician, group, subgroup, or virtual group from one or multiple submitters in the same organization, CMS will score the most recent submission.

(2) For multiple data submissions received for the Promoting Interoperability performance category, CMS will calculate a score for each data submission received and assign the highest of the scores.

■ 35. Section 414.1330 is amended by adding paragraph (c) to read as follows.

§ 414.1330 Quality performance category.

* * * * *

(c)(1) CMS uses the following criteria to determine the removal of a quality measure:

(i) If the Secretary determines that the quality measure is no longer meaningful, such as measures that are topped out.

(ii) If a measure steward is no longer able to maintain the quality measure.

(iii) If the quality measure reached extremely topped out status.

(iv) If the quality measure does not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods.

(v) If the quality measure is duplicative.

(vi) If the quality measure is not updated to reflect current clinical guidelines, which are not reflective of a clinician’s scope of practice.

(vii) If the quality measure is a process measure.

(viii) If the quality measure addresses a measurement gap.

(ix) If the quality measure is a patient-reported outcome.

(x) If the quality measure is not available for MIPS quality reporting by or on behalf of all MIPS eligible clinicians.

(xi) The robustness of the quality measure.

(xii) Consideration of the quality measure in developing MIPS Value Pathways (MVPs).

(2) A quality measure that otherwise meets the criteria for removal in paragraph (c)(1) of this section may nonetheless be retained based on the following considerations:

(i) Whether the removal of the process measure impacts the number of

measures available for a specific specialty.

(ii) Whether the quality measure addresses a priority area.

(iii) Whether the quality measure promotes positive outcomes in patients.

(iv) Whether the quality measure is designated as high priority or not.

(v) Whether the quality measure has reached extremely topped out status.

(vi) Evaluation of the quality measure’s performance data.

■ 36. Section 414.1335 is amended by revising paragraph (a) introductory text and adding paragraph (b) to read as follows.

§ 414.1335 Data submission criteria for the quality performance category.

(a) *Criteria.* Except as provided in paragraph (b) of this section, a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity must submit data on MIPS quality measures in one of the following manners, as applicable:

* * * * *

(b) *Special rule for the APM Performance Pathway (APP) Plus measure set.* A MIPS eligible clinician, group, or APM Entity that reports the APP Plus measure set via the APP must report on all measures included in the APP Plus measure set, except for administrative claims-based quality measures as provided in § 414.1325(a)(2)(i).

■ 37. Section 414.1340 is amended by revising paragraphs (a)(4), (b)(4), (d) introductory text, and (d)(1) to read as follows:

§ 414.1340 Data completeness criteria for the quality performance category.

(a) * * *

(4) At least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, and APM Entity’s patients that meet the measure’s denominator criteria, regardless of payer for MIPS payment years 2026, 2027, 2028, 2029, and 2030.

(b) * * *

(4) At least 75 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment years 2026, 2027, 2028, 2029, and 2030.

* * * * *

(d) APM Entities, specifically Medicare Shared Savings Program Accountable Care Organizations that meet reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on:

(1) At least 75 percent of the applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20 of this chapter, who meet the measure’s

denominator criteria for MIPS payment years 2026, 2027, 2028, 2029, and 2030.

* * * * *

■ 38. Section 414.1350 is amended by adding paragraph (e) to read as follows:

§ 414.1350 Cost performance category.

* * * * *

(e) Cost measure removal criteria. CMS may remove a cost measure from MIPS based on one or more of the following factors, provided however CMS may retain a cost measure that meets one or more of the following factors if CMS determines the benefit of retaining the measure outweighs the benefit of removing it.

(1) It is not feasible to implement the measure specifications.

(2) A measure steward is no longer able to maintain the cost measure.

(3) The implementation costs or negative unintended consequences associated with a cost measure outweigh the benefit of its continued use in the MIPS cost performance category.

(4) The measure specifications do not reflect current clinical practice or guidelines.

(5) The availability of a more applicable measure, including a measure that applies across settings, applies across populations, or is more proximal in time to desired patient outcomes for the particular topic.

■ 39. Section 414.1355 is amended by adding paragraph (d) to read as follows:

§ 414.1355 Improvement activities performance category.

* * * * *

(d) CMS may remove an improvement activity from MIPS based on one or more of the following factors, provided however CMS may retain an improvement activity that meets one or more of the following factors if CMS determines the benefit of retaining the activity outweighs the benefit of removing it:

(1) Factor 1: Activity is duplicative of another activity.

(2) Factor 2: There is an alternative activity with a stronger relationship to quality care or improvements in clinical practice.

(3) Factor 3: Activity does not align with current clinical guidelines or practice.

(4) Factor 4: Activity does not align with at least one meaningful measures area.

(5) Factor 5: Activity does not align with the quality, cost, or Promoting Interoperability performance categories.

(6) Factor 6: There have been no attestations of the activity for 3 consecutive years.

(7) Factor 7: Activity is obsolete.

■ 40. Section 414.1365 is amended by revising paragraphs (b)(2)(i), (c)(3)(i) and (ii), (c)(4)(i)(A), (d)(3)(i)(A) introductory text, (d)(3)(i)(A)(1), (d)(3)(ii) introductory text, (d)(3)(ii)(A), and (d)(3)(iii) to read as follows:

§ 414.1365 MIPS Value Pathways.

* * * * *

(b) * * *

(2) * * *

(i) For the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, each MVP Participant must select an MVP, one population health measure included in the MVP, and any outcomes-based administrative claims measure on which the MVP Participant intends to be scored. Beginning in the CY 2025 performance period/2027 MIPS payment year, each MVP Participant must select an MVP and any outcomes-based administrative claims measure on which the MVP Participant intends to be scored.

* * * * *

(c) * * *

(3) * * *

(i) For the CY 2023 and 2024 performance periods/2025 through 2026 MIPS payment years:

(A) Two medium-weighted improvement activities.

(B) One high-weighted improvement activity.

(C) Participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

(ii) Beginning in the CY 2025 performance period/2027 MIPS payment year:

(A) One improvement activity.

(B) Participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

* * * * *

(4) * * *

(i) * * *

(A) An MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category.

* * * * *

(d) * * *

(3) * * *

(i) * * *

(A) Population health measures. Except as provided in paragraph (d)(3)(i)(A)(1) of this section, for the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, each selected population health measure that does not have a

benchmark or meet the case minimum requirement is excluded from the MVP participant's total measure achievement points and total available measure achievement points. Beginning in the CY 2025 performance period/2027 MIPS payment year, except as provided in paragraph (d)(3)(i)(A)(1), the highest score of all applicable and available population health measures will be used. If no population health measure has a benchmark or meet the case minimum requirement, each such measure is excluded from the MVP participant's total measure achievement points and total available measure achievement points.

(1) For the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, a subgroup is scored on each selected population health measure based on its affiliated group score, if available. Beginning in the CY 2025 performance period/2027 MIPS payment year, a subgroup is scored on the highest scoring of all available population health measures based on its affiliated group score, if available. If the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points.

* * * * *

(ii) Cost performance category. The cost performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(2) and the cost measures included in the MVP that they select and report.

(A) A subgroup is scored on each cost measure included in the MVP that it selects and reports based on its affiliated group score for each such measure, if available. If the subgroup's affiliated group score is not available for a measure, the measure is excluded from the subgroup's total measure achievement points and total available measure achievement points, as described under § 414.1380(b)(2).

* * * * *

(iii) Improvement activities performance category. In the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, the improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. MVP Participants will receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a

certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii). Beginning in the CY 2025 performance period/2027 MIPS payment year, MVP Participants will receive 40 points for each improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized PCMH or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

* * * * *
■ 41. Section 414.1367 is amended by revising paragraph (c)(1) introductory text and adding paragraph (c)(1)(iii) to read as follows:

§ 414.1367 APM performance pathway.

* * * * *
(c) * * *
(1) Quality. Except as provided in paragraphs (c)(1)(i) and (ii) of this section, the quality performance category score is calculated for a MIPS eligible clinician, group, or APM Entity group in accordance with § 414.1380(b)(1) based on the quality measure set applicable to the MIPS eligible clinician, group, or APM Entity group under paragraph (c)(1)(iii) of this section and established by CMS through rulemaking for a MIPS payment year.

* * * * *
(iii)(A) For performance periods beginning prior to CY 2025 and MIPS payment years beginning prior to 2027, a MIPS eligible clinician, group, or APM Entity group must report the APM Performance Pathway quality measure set.

(B) Beginning with the CY 2025 performance period/2027 MIPS payment year, a MIPS eligible clinician, group, or APM Entity group may choose to report either the APM Performance Pathway quality measure set or the APP Plus quality measure set.

* * * * *
■ 42. Section 414.1380 is amended by

- a. Revising paragraph (b)(1)(ii) introductory text;
■ b. Adding paragraphs (b)(1)(ii)(E) and (F);
■ c. Revising paragraph (b)(1)(iv)(B);
■ d. Adding paragraph (b)(1)(iv)(C);
■ e. Revising paragraph (b)(1)(vii) introductory text;
■ f. Adding paragraph (b)(1)(vii)(C);
■ g. Revising paragraph (b)(2) introductory text;
■ h. Adding paragraphs (b)(2)(i)(A) and (B) and (b)(2)(v)(B);
■ i. Revising paragraph (b)(3) introductory text; and
■ j. Adding paragraphs (c)(2)(i)(A)(10) and (c)(2)(i)(C)(12).

The revisions and additions read as follows:

§ 414.1380 Scoring.

* * * * *
(b) * * *
(1) * * *
(ii) Benchmarks. Except as provided in paragraphs (b)(1)(ii)(B) through (F) of this section, benchmarks will be based on performance by collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

(E) Beginning with the CY 2025 performance period/2027 MIPS payment year, CMS will publish a list in the Federal Register of topped out measures determined to be impacted by limited measure choice. Measures included on the list are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate in the 97th percentile corresponds to 7.5 measure achievement points.

(F) Beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQM collection type use flat benchmarks for their first two performance periods in MIPS.

(iv) * * *
(B) Beginning with the 2021 MIPS payment year, except as provided for in paragraph (b)(1)(iv)(C) of this section, each measure (except for measures in the CMS Web Interface) for which the benchmark for the applicable collection type is identified as topped out for 2 or more consecutive years receives no more than 7 measure achievement points in the second consecutive year it is identified as topped out, and beyond.

(C) Beginning with the CY 2025 performance period/2027 MIPS payment year, measures impacted by limited measure choice as specified in paragraph (b)(1)(ii)(E) of this section are not subject to the 7 measure achievement point cap specified in paragraph (b)(1)(iv)(B) of this section.

(vii) Quality performance category score. A MIPS eligible clinician's quality performance category score is the sum of all the measure achievement points assigned for the measures required for the quality performance category criteria plus the measure bonus points in paragraph (b)(1)(v) of this section and Complex Organization Adjustment in paragraph (b)(1)(vii)(C) of

this section. The sum is divided by the sum of total available measure achievement points. The improvement percent score in paragraph (b)(1)(vi) of this section is added to that result. The quality performance category score cannot exceed 100 percentage points.

(C) Beginning in the CY 2025 performance period/2027 MIPS payment year, a Virtual Group and an APM Entity receives one measure achievement point for each eCQM submitted that meets the case minimum requirement at paragraph (b)(1)(iii) of this section and the data completeness requirement at § 414.1340. Each measure may not exceed 10 measure achievement points. The total adjustment to the Virtual Group or APM Entity's quality performance category score under this paragraph (b)(1)(vii)(C) may not exceed 10 percent of the total available measure achievement points.

(2) Cost performance category. For each cost measure attributed to a MIPS eligible clinician, the clinician receives one to ten achievement points based on the clinician's performance on the measure during the performance period compared to the measure's benchmark. Achievement points are awarded based on which benchmark range the MIPS eligible clinician's performance on the measure is in. CMS assigns partial points based on where the MIPS eligible clinician's performance falls between the top and bottom of the benchmark ranges.

(i) * * *
(A) For the 2019 through 2025 MIPS payment years, CMS determines cost measure benchmark ranges based on linear percentile distributions.

(B) Beginning with the 2026 MIPS payment year, for each cost measure, CMS determines 10 benchmark ranges based on the median cost of all MIPS eligible clinicians attributed the measure, plus or minus standard deviations. CMS awards achievement points based on which benchmark range a MIPS eligible clinician's average cost for a cost measure corresponds. Additionally, CMS awards achievement points equivalent to 10 percent of the performance threshold for a MIPS eligible clinician whose average cost attributed under a cost measure is equal to the median cost for all MIPS eligible clinicians attributed the measure.

(v) * * *
(B) Beginning with the 2027 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes or errors affecting the performance period, such that

calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the MIPS eligible clinician’s or group’s cost performance category score. For purposes of this paragraph (b)(2)(v)(B), “significant changes or errors” are changes or errors external to the care provided, and that CMS determines may lead to misleading or inaccurate results that negatively impact the measure’s ability to reliably assess performance. Significant changes or errors include, but are not limited to, rapid or unprecedented changes to service utilization, the inadvertent omission of codes or inclusion of codes, or changes to clinical guidelines or measure specifications. CMS will empirically assess the affected cost measure to determine the extent to which the changes or errors impact the calculation of a cost measure score such that calculating the cost measure score would lead to misleading or inaccurate results that negatively impact the measure’s ability to reliably assess performance.

(3) *Improvement activities performance category.* Subject to paragraphs (b)(3)(i) and (ii) of this section, the improvement activities performance category score equals the total points for all submitted improvement activities divided by 40 points, multiplied by 100 percent. In the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, MIPS eligible clinicians (except for non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs) receive 10 points for each medium-weighted improvement activity and 20 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325. Non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325. Beginning in the CY 2025 performance period/2027 MIPS payment year, MIPS eligible clinicians (except for non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs) receive 20 points for each improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325. Non-patient facing MIPS

eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs receive 40 points for each improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325.

- * * * * *
- (c) * * *
- (2) * * *
- (i) * * *
- (A) * * *

(10) Beginning with the 2026 MIPS payment year, for the quality and improvement activities performance categories, CMS determines, based on documentation provided to the agency on or before November 1st of the year preceding the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third party intermediary, and the third party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines. To determine whether to apply reweighting to the affected performance category(ies), CMS will consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third party intermediary’s submission of the clinician’s data for the performance category(ies); whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines.

- * * * * *
- (C) * * *

(12) Beginning with the 2026 MIPS payment year, CMS determines, based on documentation provided to the agency on or before November 1st of the year preceding the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third party intermediary, and the third party intermediary did not submit the data for the performance category on

behalf of the MIPS eligible clinician in accordance with applicable deadlines. To determine whether to apply reweighting to the Promoting Interoperability performance category, CMS will consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third party intermediary’s submission of the clinician’s data for the performance category; whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third party intermediary caused no data to be submitted for the performance category in accordance with applicable deadlines.

- * * * * *

■ 43. Section 414.1405 is amended by adding paragraph (b)(10) and revising paragraph (g) to read as follows:

§ 414.1405 Payment.

- * * * * *

(b) * * *
 (10) Pursuant to the methodology established at paragraph (g)(2) of this section:

(i) The performance threshold for the 2027 MIPS payment year is 75 points. The prior period used to determine the performance threshold is the 2019 MIPS payment year.

(ii) [Reserved]

- * * * * *

(g) *Performance threshold methodology.* (1) For each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under paragraph (b)(9) of this section.

(2) For each of the 2027, 2028, and 2029 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under paragraph (b)(10) of this section.

■ 44. Section 414.1430 is amended by—

- a. Revising paragraph (a)(1)(v);
- b. Adding paragraph (a)(1)(vi);
- c. Revising paragraph (a)(2)(v);
- d. Adding paragraph (a)(2)(vi);
- e. Revising paragraph (a)(3)(v);
- f. Adding paragraph (a)(3)(vi);
- g. Revising paragraph (a)(4)(v);
- h. Adding paragraph (a)(4)(vi); and
- i. Revising paragraphs (b)(1)(i)(A) and (B), (b)(2)(i)(A) and (B), (b)(3)(i)(A) and (B), and (b)(4)(i)(A) and (B).

The revisions and additions read as follows:

§ 414.1430 Qualifying APM participant determination: QP and partial QP thresholds.

- (a) * * *

(1) * * *
(v) 2026: 50 percent.
(vi) 2027 and later: 75 percent.

(2) * * *
(v) 2026: 40 percent.
(vi) 2027 and later: 50 percent.

(3) * * *
(v) 2026: 35 percent.
(vi) 2027 and later: 50 percent.

(4) * * *
(v) 2026: 25 percent.
(vi) 2027 and later: 35 percent.

(b) * * *
(1) * * *
(i) * * *

(A) 2021 through 2026: 50 percent.
(B) 2027 and later: 75 percent.

* * * * *

(2) * * *
(i) * * *

(A) 2021 through 2026: 40 percent.
(B) 2027 and later: 50 percent.

* * * * *

(3) * * *
(i) * * *

(A) 2021 through 2026: 35 percent.
(B) 2027 and later: 50 percent.

* * * * *

(4) * * *
(i) * * *

(A) 2021 through 2026: 25 percent.
(B) 2027 and later: 35 percent.

* * * * *

■ 45. Section 414.1450 is amended by revising paragraph (a)(1)(i) and the first sentence of paragraph (b)(1) to read as follows:

§ 414.1450 APM incentive payment.

(a) * * *
(1) * * *

(i) For payment years 2019 through 2026, CMS makes a lump sum payment to QPs in the amount described in paragraph (b) of this section in the manner described in paragraphs (d) and (e) of this section.

* * * * *

(b) * * *

(1) For payment years 2019 through 2024, the amount of the APM Incentive Payment is equal to 5 percent, with respect to payment year 2025, 3.5 percent, or with respect to payment year 2026, 1.88 percent of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3)(A) of the Act furnished during the calendar year immediately preceding the payment year.

* * * * *

PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT

■ 46. The authority citation for part 423 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w–101 through 1395w–152, and 1395hh.

■ 47. Section 423.160 is amended by revising paragraph (a)(5) introductory text to read as follows:

§ 423.160 Standards for electronic prescribing.

(a) * * *

(5) Beginning on January 1, 2021, prescribers must, except in the circumstances described in paragraphs (a)(5)(i) through (iii) of this section, conduct prescribing for at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically using the applicable standards in paragraph (b) of this section, subject to the exemption in paragraph (a)(3)(iii) of this section.

Prescriptions written for a beneficiary in a long-term care facility will not be included in determining compliance until January 1, 2028. Compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a long-term care facility will commence on or after January 1, 2028. Compliance actions against prescribers who do not meet the compliance threshold based on other prescriptions will commence on or after January 1, 2023. Prescribers will be exempt from this requirement in the following situations:

* * * * *

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 48. The authority citation for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 49. Section 424.24 is amended by revising paragraphs (c) heading, (c)(1)(i), and (c)(3)(ii) and adding paragraph (c)(5) to read as follows:

§ 424.24 Requirements for medical and other health services furnished by providers under Medicare Part B.

* * * * *

(c) *Outpatient physical therapy, occupational therapy, and speech-language pathology services—*

(1) * * *

(i) The individual needs, or needed, physical therapy, occupational therapy, or speech-language pathology services.

* * * * *

(3) * * *

(ii) If the plan of treatment is established by a physical therapist, occupational therapist, or speech-language pathologist, the certification must be signed by a physician or by a nurse practitioner, clinical nurse specialist, or physician assistant who has knowledge of the case, except as

specified in paragraph (c)(5) of this section.

* * * * *

(5) *Treatment plan.* If the plan of treatment is established by a physical therapist, occupational therapist, or speech-language pathologist, and there is a written order or referral from the individual’s physician, nurse practitioner (NP), physician assistant (PA), or clinical nurse specialist (CNS) in the patient’s record and the therapist has documented evidence that the plan of care has been delivered to the physician, NP, PA, or CNS within 30 days of completion of the initial evaluation, the certification does not need to be signed by a physician, NP, CNS, or PA who has knowledge of the case. If there is no written order or referral from the individual’s physician, NP, CNS, or PA, in the patient’s record, the therapist must obtain the signature of the physician, NP, PA, or CNS on the plan of treatment in accordance with paragraph (c)(3) of this section. No references to an order or referral in this subsection shall be construed to require an order or referral for outpatient physical therapy, occupational therapy, or speech-language pathology services.

* * * * *

■ 50. Section 424.205 is amended by revising paragraphs (c)(10), (f)(1)(ii), (f)(2)(i), and (f)(5) to read as follows:

§ 424.205 Requirements for Medicare Diabetes Prevention Program suppliers.

* * * * *

(c) * * *

(10) Except as allowed under paragraph (d)(8) of this section, the MDPP supplier must offer an MDPP beneficiary no fewer than all of the following:

(i) 16 in-person or distance learning core sessions no more frequently than weekly for the first 6 months of the MDPP services period, which begins on the date of attendance at the first such core session.

(ii) 1 in-person or distance learning core maintenance session each month during months 7 through 12 (6 months total) of the MDPP services period.

* * * * *

(f) * * *

(1) * * *

(ii) Basic beneficiary information for each MDPP beneficiary in attendance, including but not limited to beneficiary name, Medicare Beneficiary Identifier (MBI), and age.

* * * * *

(2) * * *

(i) Documentation of the type of session (in-person or distance learning).

* * * * *

(5) The MDPP supplier's records must include an attestation from the MDPP supplier that, as applicable, the MDPP beneficiary for which it is submitting a claim—

(i) Has achieved the required minimum 5-percent weight loss as measured in accordance with § 410.79(e)(3)(iii) of this chapter during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(1) of this chapter.

(ii) Has achieved the required minimum 5-percent weight loss as measured in-person during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(1) of this chapter.

(iii) Has achieved at least a 9-percent weight loss percentage as measured in accordance with § 410.79(e)(3)(iii) of this chapter during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(2) of this chapter.

(iv) Has achieved at least a 9-percent weight loss percentage as measured in-person during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(2) of this chapter.

* * * * *

PART 425—MEDICARE SHARED SAVINGS PROGRAM

■ 51. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

■ 52. Section 425.100 is amended by adding paragraph (e) to read as follows:

§ 425.100 General.

* * * * *

(e) An ACO is eligible to receive prepaid shared savings if it meets the criteria under § 425.640(b).

■ 53. Section 425.110 is amended by revising paragraph (b)(2) to read as follows:

§ 425.110 Number of ACO professionals and beneficiaries.

* * * * *

(b) * * *

(2) For performance years starting before January 1, 2025, if the ACO's assigned population is not at least 5,000 by the end of the performance year specified by CMS in its request for a corrective action plan (CAP), CMS terminates the participation agreement

and the ACO is not eligible to share in savings for that performance year.

* * * * *

■ 54. Section 425.202 is amended by revising paragraph (a)(3) to read as follows:

§ 425.202 Application procedures.

(a) * * *

(3) An ACO that seeks to participate in the Shared Savings Program must agree that CMS can share a copy of their application with the Antitrust Agencies.

* * * * *

■ 55. Section 425.204 is amended by—

■ a. Revising paragraphs (f)(1) and (f)(3) introductory text;

■ b. In paragraphs (f)(3)(iv), (f)(4)(iv)(A), and (f)(6)(ii) introductory text, removing the phrase “any shared losses incurred” and adding in its place the phrase “any shared losses incurred and prepaid shared savings determined to be owed”;

■ c. In paragraphs (f)(5) and (f)(6)(iv)(A), removing the phrase “shared losses owed” and adding in its place the phrase “shared losses owed or prepaid shared savings determined to be owed”;

■ d. In paragraph (f)(6)(iii), removing the phrase “shared losses” and adding in its place the phrase “shared losses or prepaid shared savings determined to be owed”; and

■ e. In paragraph (f)(6)(iv)(C), removing the phrase “owe any shared losses” and adding in its place the phrase “owe any shared losses or prepaid shared savings”.

The revisions read as follows:

§ 425.204 Content of the application.

* * * * *

(f) * * *

(1) An ACO must have the ability to repay all shared losses for which it may be liable under a two-sided model and any prepaid shared savings determined to be owed.

* * * * *

(3) An ACO that will participate under a two-sided model of the Shared Savings Program must submit for CMS approval documentation that it is capable of repaying shared losses that it may incur during its agreement period, including details supporting the adequacy of the repayment mechanism. If the ACO will receive prepaid shared savings, the repayment mechanism must also support repayment of prepaid shared savings in accordance with § 425.640.

* * * * *

■ 56. Section 425.224 is amended by revising paragraph (a)(3) to read as follows:

§ 425.224 Application procedures for renewing ACOs and re-entering ACOs.

(a) * * *

(3) An ACO that seeks to enter a new participation agreement under the Shared Savings Program must agree that CMS can share a copy of its application with the Antitrust Agencies.

* * * * *

■ 57. Section 425.304 is amended by adding paragraph (d) to read as follows:

§ 425.304 Beneficiary incentives.

* * * * *

(d) *Application of the CMS-sponsored model patient incentives safe harbor.* CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model patient incentives (§ 1001.952(ii)(2) of this title) is available to protect remuneration furnished in the prepaid shared savings option of the Shared Savings Program in the form of direct beneficiary services that meets all safe harbor requirements set forth in § 1001.952(ii) of this title.

■ 58. Section 425.308 is amended by adding paragraph (b)(10) to read as follows:

§ 425.308 Public reporting and transparency.

* * * * *

(b) * * *

(10) Information updated annually about the ACO's use of prepaid shared savings under § 425.640, for each performance year, including the following:

(i) Total amount of any prepaid shared savings received from CMS.

(ii) The ACO's spend plan.

(iii) An itemization of how prepaid shared savings were spent during the year, including expenditure categories, the dollar amounts spent on the various categories, information about which groups of beneficiaries received direct beneficiary services that were purchased with prepaid shared savings and investments that were made in the ACO with prepaid shared savings, how these direct beneficiary services were provided to beneficiaries and how the direct beneficiary services and investments supported the care of beneficiaries, any changes to the spend plan as submitted under § 425.640(d)(2) (if applicable), and such other information as may be specified by CMS.

* * * * *

■ 59. Section 425.312 is amended by revising paragraphs (a)(2)(iii) and (a)(2)(v)(A) to read as follows:

§ 425.312 Beneficiary notifications.

(a) * * *

(2) * * *

(iii) In the case of an ACO that has selected preliminary prospective reconciliation with retrospective reconciliation, by the ACO or ACO participant providing each beneficiary who received at least one primary care service during the assignment window or applicable expanded window for assignment (as defined in § 425.20) from a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in § 425.402(c), a FQHC or RHC that is part of the ACO, or an ACO professional in the ACO whom the beneficiary designated as responsible for coordinating their overall care under § 425.402(e) with a standardized written notice at least once during an agreement period in the form and manner specified by CMS. The standardized written notice must be furnished to all of these beneficiaries prior to or at the first primary care service visit during the first performance year in which the beneficiary receives a primary care service from an ACO participant.

* * * * *

(v) * * *

(A) The follow-up communication must occur no later than 180 days from the date the standardized written notice was provided.

* * * * *

■ 60. Section 425.315 is amended by revising paragraph (a)(4) and adding paragraph (b) to read as follows:

§ 425.315 Reopening determinations of ACO shared savings or shared losses to correct financial reconciliation calculations.

(a) * * *

(4) CMS has the sole discretion to determine whether to reopen a payment determination under this section.

(b) *Reopening requests.* An ACO may request a reopening in a form and manner specified by CMS and consistent with the timeframes for a reopening specified in paragraphs (a)(1)(i) and (ii) of this section.

■ 61. Section 425.316 is amended by adding paragraph (f) to read as follows:

§ 425.316 Monitoring of ACOs.

* * * * *

(f) *Monitoring ACO eligibility for and use of prepaid shared savings.* (1) CMS monitors an ACO that receives prepaid shared savings pursuant to § 425.640 to ensure ACO compliance with § 425.640(e) and to determine whether it would be appropriate to withhold or terminate an ACO's prepaid shared savings under § 425.640(h).

(2) If CMS determines that an ACO receiving prepaid shared savings is

using the funds for a prohibited use under § 425.640(e)(2), fails to spend the funding in accordance with § 425.640(e)(1)(i) and (ii), or spends more than 50 percent of the estimated annual payment amount on staffing and healthcare infrastructure CMS:

(i) Will require the ACO to reallocate the funding as permitted by § 425.640(e) and submit an updated spend plan demonstrating the reallocation by a deadline specified by CMS.

(ii) May take compliance action as specified in §§ 425.216, 425.218, and 425.640(h)(1).

(3) If an ACO fails to reallocate prepaid shared savings it received as described in paragraph (f)(2)(i) of this section by a deadline specified by CMS, the ACO must repay all prepaid shared savings it received and may be subject to compliance action as specified in §§ 425.216 and 425.218. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

■ 62. Section 425.400 is amended by revising paragraph (c)(1)(viii) introductory text and adding paragraph (c)(1)(ix) to read as follows:

§ 425.400 General.

* * * * *

(c) * * *

(1) * * *

(viii) For the performance year starting on January 1, 2024, as follows:

* * * * *

(ix) For the performance year starting on January 1, 2025, and subsequent performance years as follows:

(A) CPT codes:

(1) 96160 and 96161 (codes for administration of health risk assessment).

(2) 96202 and 96203 (codes for caregiver behavior management training).

(3) 97550, 97551, and 97552 (codes for caregiver training services).

(4) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(5) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a skilled nursing facility (SNF)).

(6) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(7) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home).

(8) 99354 and 99355 (add-on codes, for prolonged evaluation and

management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(ix)).

(9) 99406 and 99407 (codes for smoking and tobacco-use cessation counseling services).

(10) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(11) 99424, 99425, 99426, and 99427 (codes for principal care management services).

(12) 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(13) 99439 (code for non-complex chronic care management).

(14) 99446, 99447, 99448, 99449, 99451, 99452 (codes for interprofessional consultation services).

(15) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(16) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(17) 99495 and 99496 (codes for transitional care management services).

(18) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(19) 9X091 (code for virtual check-in).

(B) HCPCS codes:

(1) G0019 and G0022 (codes for community health integration services).

(2) G0023 and G0024 (codes for principal illness navigation services).

(3) G0101 (code for cervical or vaginal cancer screening).

(4) G0136 (code for social determinants of health risk assessment services).

(5) G0317, G0318, and G2212 (codes for prolonged office or other outpatient visit for the evaluation and management of a patient).

(6) G0402 (code for the Welcome to Medicare visit).

(7) G0438 and G0439 (codes for the annual wellness visits).

(8) G0442 (code for alcohol misuse screening service).

(9) G0443 (code for alcohol misuse counseling service).

(10) G0444 (code for annual depression screening service).

(11) G0463 (code for services furnished in electing teaching amendment (ETA) hospitals).

(12) G0506 (code for chronic care management).

(13) G2010 (code for the remote evaluation of patient video/images).

(14) G2012 and G2252 (codes for virtual check-in).

(15) G2058 (code for non-complex chronic care management).

(16) G2064 and G2065 (codes for principal care management services).
(17) G2086, G2087, and G2088 (codes for office-based opioid use disorder services).

(18) G2211 (code for visit complexity inherent to evaluation and management services add-on).

(19) G2214 (code for psychiatric collaborative care model).

(20) G3002 and G3003 (codes for chronic pain management).

(21) GCDRA and GCDRM (codes for cardiovascular risk assessment and risk management services).

(22) GCTB1 and GCTB2 (codes for individual behavior management/modification caregiver training services).

(23) GCTD1, GCTD2, and GCTD3 (codes for direct care caregiver training services).

(24) GFCI1 (code for post-discharge telephonic follow-up contacts intervention).

(25) GPCM1, GPCM2, and GPCM3 (codes for advanced primary care management services).

(26) GSPI1 (code for safety planning interventions when the base code is also a primary care service code under this paragraph (c)(1)(ix)).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(ix)(A) of this section or a HCPCS code specified in paragraph (c)(1)(ix)(B) of this section, when the assignment window or expanded window for assignment (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

* * * * *

■ 63. Section 425.402 is amended by revising paragraph (e)(2)(ii) introductory text and adding paragraph (e)(2)(iii) to read as follows:

§ 425.402 Basic assignment methodology.

* * * * *

(e) * * *

(2) * * *

(ii) For performance years starting on January 1, 2019, through 2024:

* * * * *

(iii) For performance year 2025 and subsequent performance years:

(A) The beneficiary meets the eligibility criteria established at § 425.401(a) and must not be excluded by the criteria at § 425.401(b). The exclusion criteria at § 425.401(b) apply for purposes of determining beneficiary eligibility for alignment to an ACO based on the beneficiary’s designation of

an ACO professional as responsible for coordinating their overall care under paragraph (e) of this section, regardless of the ACO’s assignment methodology selection under § 425.226(a)(1).

(B) The beneficiary must have designated an ACO professional as responsible for coordinating their overall care.

(C) If a beneficiary has designated a provider or supplier outside the ACO as responsible for coordinating their overall care, the beneficiary is not added under the assignment methodology in paragraph (b) of this section to the ACO’s list of assigned beneficiaries for a 12-month performance year.

(D) The beneficiary is not assigned to an entity participating in a model tested or expanded under section 1115A of the Act under which claims-based assignment is based solely on:

- (1) Claims for primary care and/or other services related to treatment of one or more specific diseases or conditions targeted by the model; or
- (2) Claims for services other than primary care services, and for which there has been a determination by the Secretary that waiver of the requirement in section 1899(c)(2)(B) of the Act is necessary solely for purposes of testing the model.

* * * * *

■ 64. Section 425.508 is amended by revising paragraph (b) and adding paragraph (c) to read as follows:

§ 425.508 Incorporating quality reporting requirements related to the Quality Payment Program.

* * * * *

(b) For performance years beginning in 2021–2024. ACOs must submit the quality data via the APM Performance Pathway (APP) established under § 414.1367 of this chapter to satisfactorily report on behalf of the eligible clinicians who bill under the TIN of an ACO participant for purposes of the MIPS Quality performance category of the Quality Payment Program.

(c) For performance years beginning on or after January 1, 2025. ACOs must submit the quality data via the APM Performance Pathway (APP) on the quality measures contained in the APP Plus quality measure set established under § 414.1367 of this chapter to satisfactorily report on behalf of the eligible clinicians who bill under the TIN of an ACO participant for purposes of the MIPS Quality performance category of the Quality Payment Program.

■ 65. Section 425.510 is amended by revising the section heading and paragraph (b) to read as follows:

§ 425.510 Application of the APM Performance Pathway (APP) quality measure set or the APP Plus quality measure set (as applicable) to Shared Savings Program ACOs for performance years beginning on or after January 1, 2021.

* * * * *

(b) *Quality reporting.* (1) For performance years beginning in 2021–2024, ACOs must report quality data on the APP quality measure set established under § 414.1367 of this chapter, according to the method of submission established by CMS.

(2) For performance years beginning on or after January 1, 2025, ACOs must report quality data on the APP Plus quality measure set established under § 414.1367 of this chapter, according to the method of submission established by CMS.

* * * * *

■ 66. Section 425.512 is amended by—

■ a. Revising paragraphs (a)(2)(iii), (a)(5)(i) introductory text, (a)(5)(i)(A) introductory text, (a)(5)(i)(B), (a)(5)(ii), (a)(5)(iii)(B), and (a)(7);

■ b. Revising and republishing paragraph (b);

■ c. In paragraph (c)(3) introductory text, removing the phrase “via the APP” and adding in its place the phrase “on the APP quality measure set or the APP Plus quality measure set (as applicable)”;

■ d. In paragraph (c)(3)(iii), removing the phrase “and subsequent performance years” after “For performance year 2024”;

■ e. Adding paragraph (c)(3)(iv).

The revisions, republication, and addition read as follows:

§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

(a) * * *

(2) * * *

(iii) For performance year 2025 and subsequent performance years, if the ACO reports the APP Plus quality measure set and meets the data completeness requirement at § 414.1340 of this subchapter on all eCQMs/Medicare CQMs, and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, for the applicable performance year.

* * * * *

(5) * * *

(i) Except as specified in paragraphs (a)(2) and (7) of this section, CMS designates the quality performance standard as:

(A) For performance year 2024, the ACO reporting quality data on the APP

quality measure set established under § 414.1367 of this subchapter, according to the method of submission established by CMS and—

* * * * *

(B) For performance year 2025 and subsequent performance years, the ACO reporting quality data on the APP Plus quality measure set established under § 414.1367 of this subchapter, according to the method of submission established by CMS and—

(1) Achieving a health equity adjusted quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring; or

(2) If the ACO reports all of the eCQMs in the APP Plus quality measure set applicable for a performance year, meeting the data completeness requirement at § 414.1340 of this subchapter for all eCQMs, and achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP Plus quality measure set and a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining measures in the APP Plus quality measure set.

(ii) CMS designates an alternative quality performance standard for an ACO that does not meet the criteria described in paragraph (a)(2) or (a)(5)(i) of this section as the following:

(A) For performance year 2024, the ACO reports quality data on the APP quality measure set established under § 414.1367 of this subchapter according to the method of submission established by CMS and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP quality measure set.

(B) For performance year 2025 and subsequent performance years, the ACO reports quality data on the APP Plus quality measure set established under § 414.1367 of this subchapter according to the method of submission established by CMS and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP Plus quality measure set.

(iii) * * *

(B) For performance year 2025 and subsequent performance years, the ACO does not report any of the eCQMs/Medicare CQMs in the APP Plus quality

measure set and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter).

* * * * *

(7) *Facility-based scoring.* CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year when—

(i) For performance year 2024, if an ACO reports all of the required measures, meeting the data completeness requirement at § 414.1340 of this subchapter for each measure in the APP quality measure set and receiving a MIPS Quality performance category score as described at § 414.1380(b)(1) of this subchapter and the ACO meets either of the following:

(A) The ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score are reduced under § 414.1380(b)(1)(vii)(A) of this subchapter.

(B) At least one of the eCQMs/MIPS CQMs/Medicare CQMs does not have a benchmark as described at § 414.1380(b)(1)(i)(A) of this subchapter.

(ii) For performance year 2025 and subsequent performance years, if an ACO reports all of the required measures in the APP Plus quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for each measure in the APP Plus quality measure set, and receiving a MIPS Quality performance category score as described at § 414.1380(b)(1) of this subchapter, for the relevant performance year, and the ACO meets either of the following:

(A) The ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score are reduced under § 414.1380(b)(1)(vii)(A) of this subchapter.

(B) At least one of the eCQMs/Medicare CQMs does not have a benchmark as described at § 414.1380(b)(1)(i)(A) of this subchapter.

(b) *Calculation of ACO's health equity adjusted quality performance score for performance year 2023 and subsequent performance years—*(1) *For performance year 2023.* For an ACO that reports the three eCQMs/MIPS CQMs in the APP quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs, and administers the

CAHPS for MIPS survey, CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP quality measure set and the ACO's health equity adjustment bonus points calculated in accordance with paragraph (b)(4) of this section. The sum of these values may not exceed 100 percent.

(2) *For performance year 2024.* For an ACO that reports the three eCQMs/MIPS CQMs/Medicare CQMs in the APP quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs/Medicare CQMs, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP quality measure set and the ACO's health equity adjustment bonus points calculated in accordance with paragraph (b)(4) of this section. The sum of these values may not exceed 100 percent.

(3) *For performance year 2025 and subsequent performance years.* For an ACO that reports all of the eCQMs/Medicare CQMs in the APP Plus quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all of the eCQMs/Medicare CQMs, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP Plus quality measure set and the ACO's health equity adjustment bonus points calculated in accordance with paragraph (b)(4) of this section. The sum of these values may not exceed 100 percent.

(4) *Calculation of ACO's health equity adjustment bonus points.* CMS calculates the ACO's health equity adjustment bonus points as follows:

(i) For each measure in the APP quality measure set, CMS groups an ACO's performance into the top, middle, or bottom third of ACO measure performers by reporting mechanism.

(ii) CMS assigns values to the ACO for its performance on each measure as follows:

(A) Values of four, two, or zero for each measure for which the ACO's performance places it in the top, middle, or bottom third of ACO measure performers, respectively.

(B) Values of zero for each measure that CMS does not evaluate because the measure is unscored or the ACO does not meet the case minimum or the minimum sample size for the measure.

(iii) CMS sums the values assigned to the ACO according to paragraph (b)(4)(ii) of this section, to calculate the ACO's measure performance scaler.

(iv) CMS calculates an underserved multiplier for the ACO.

(A)(1) CMS determines the proportion ranging from zero to one of the ACO's assigned beneficiary population for the performance year that is considered underserved based on the highest of either of the following:

(i) The proportion of the ACO's assigned beneficiaries residing in a census block group with an Area Deprivation Index (ADI) national percentile rank of at least 85. An ACO's assigned beneficiaries without an available numeric ADI national percentile rank are excluded from the calculation of the proportion of the ACO's assigned beneficiaries residing in a census block group with an ADI national percentile rank of at least 85.

(ii) The proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D low-income subsidy (LIS); or are dually eligible for Medicare and Medicaid.

(2) CMS calculates the proportions specified in paragraph (b)(4)(iv)(A)(1)(ii) of this section as follows:

(i) For performance year 2023, the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or are dually eligible for Medicare and Medicaid divided by the total number of the ACO's assigned beneficiaries' person years.

(ii) For performance year 2024 and subsequent performance years, the proportion of the ACO's assigned beneficiaries with any months enrolled in LIS or dually eligible for Medicare and Medicaid divided by the total number of the ACO's assigned beneficiaries.

(B) If the proportion determined in accordance with paragraph (b)(4)(iv)(A) of this section is lower than 20 percent, the ACO is ineligible for health equity adjustment bonus points.

(v) Except as specified in paragraph (b)(4)(iv)(B) of this section, CMS calculates the ACO's health equity adjustment bonus points as the product of the measure performance scaler determined under paragraph (b)(4)(iii) of this section and the underserved multiplier determined under paragraph (b)(4)(iv) of this section. If the product of these values is greater than 10, the value of the ACO's health equity

adjustment bonus points is set equal to 10.

(5) Use of ACO's health equity adjusted quality performance score. The ACO's health equity adjusted quality performance score, determined in accordance with paragraphs (b)(1) through (4) of this section, is used as follows:

(i) In determining whether the ACO meets the quality performance standard as specified under paragraphs (a)(4)(i)(A), (a)(5)(i)(A)(1), (a)(5)(i)(B), and (a)(7) of this section.

(ii) In determining the final sharing rate for calculating shared savings payments under the BASIC track in accordance with § 425.605(d), and under the ENHANCED track in accordance with § 425.610(d), for an ACO that meets the alternative quality performance standard by meeting the criteria specified in paragraph (a)(4)(ii) or (a)(5)(ii) of this section.

(iii) In determining the shared loss rate for calculating shared losses under the ENHANCED track in accordance with § 425.610(f), for an ACO that meets the quality performance standard established in paragraphs (a)(2), (a)(4)(i), and (a)(5)(i) of this section or the alternative quality performance standard established in paragraph (a)(4)(ii) or (a)(5)(ii) of this section.

(iv) In determining the quality performance score for an ACO affected by extreme and uncontrollable circumstances as described in paragraphs (c)(3)(ii) through (iv) of this section.

(c) * * *

(3) * * *

(iv) For performance year 2025 and subsequent performance years, if the ACO reports the APP Plus quality measure set and meets the data completeness requirement at § 414.1340 of this subchapter and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

* * * * *

■ 67. Section 425.601 is amended by revising paragraph (a)(9) introductory text and adding paragraphs (a)(9)(iii) and (iv) to read as follows:

§ 425.601 Establishing, adjusting, and updating the benchmark for agreement periods beginning on or after July 1, 2019, and before January 1, 2024.

(a) * * *

(9) For the second and each subsequent performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: For the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), for a change to the beneficiary assignment methodology specified in subpart E of this part, for changes in values used in benchmark calculations as a result of issuance of a revised initial determination under § 425.315, and for changes in values used in benchmark calculations as a result of the performance year being affected by significant, anomalous, and highly suspect billing under § 425.672. To adjust the benchmark, CMS does the following:

* * * * *

(iii) Recalculates benchmark year expenditures to account for the impact of improper payments, for the benchmark year corresponding to a performance year for which CMS issued a revised initial determination under § 425.315. In recalculating expenditures for the benchmark year, CMS applies the calculation methodology applied in recalculating expenditures for the corresponding performance year in accordance with § 425.674.

(iv) Recalculates expenditures used in Shared Savings Program benchmark calculations under this section, to exclude the same HCPCS or CPT codes identified as displaying significant, anomalous, and highly suspect billing patterns in calculation of performance year expenditures, in accordance with § 425.672.

* * * * *

■ 68. Section 425.605 is amended by revising paragraph (a)(1)(ii)(C) to read as follows:

§ 425.605 Calculation of shared savings and losses under the BASIC track.

(a) * * *

(1) * * *

(ii) * * *

(C) The aggregate growth in demographic risk scores for purposes of paragraph (a)(1)(ii)(A) of this section and the aggregate growth in prospective hierarchical condition category (HCC) risk scores for purposes of paragraph (a)(1)(ii)(B) of this section is calculated by taking a weighted average of the growth in demographic risk scores or

prospective HCC risk scores, as applicable, across the populations described in paragraph (a)(2) of this section. When calculating the weighted average growth in demographic risk scores or prospective HCC risk scores, as applicable, the weight applied to the growth in risk scores (expressed as a ratio of the ACO's performance year risk score to the ACO's BY3 risk score) for each Medicare enrollment type is equal to the product of the ACO's historical benchmark expenditures, adjusted in accordance with § 425.652(a)(8), for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type.

* * * * *

■ 69. Section 425.610 is amended by revising paragraph (a)(2)(ii)(C) to read as follows:

§ 425.610 Calculation of shared savings and losses under the ENHANCED track.

- (a) * * *
(2) * * *
(ii) * * *

(C) The aggregate growth in demographic risk scores for purposes of paragraph (a)(2)(ii)(A) of this section and the aggregate growth in prospective HCC risk scores for purposes of paragraph (a)(2)(ii)(B) of this section is calculated by taking a weighted average of the growth in demographic risk scores or prospective HCC risk scores, as applicable, across the populations described in paragraph (a)(3) of this section. When calculating the weighted average growth in demographic risk scores or prospective HCC risk scores, as applicable, the weight applied to the growth in risk scores (expressed as a ratio of the ACO's performance year risk score to the ACO's BY3 risk score) for each Medicare enrollment type is equal to the product of the ACO's historical benchmark expenditures, adjusted in accordance with § 425.652(a)(8), for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type.

- * * * * *
- 70. Section 425.630 is amended by—
- a. In paragraph (g)(3), removing the phrase “paragraphs (g)(4) of this section” and adding in its place the phrase “paragraphs (g)(4) through (6) of this section”;
 - b. Redesignating paragraph (g)(5) as paragraph (g)(7);
 - c. Adding new paragraph (g)(5) and paragraph (g)(6);
 - d. In paragraph (h)(1)(ii), removing “or” at the end of the paragraph;
 - e. In paragraph (h)(1)(iii), removing the period at the end of paragraph and adding “; or” in its place; and
 - f. Adding paragraph (h)(1)(iv).

The additions read as follows:

§ 425.630 Option to receive advance investment payments.

* * * * *

(g) * * *

(5) If an ACO notifies CMS that it no longer wants to participate in the advance investment payment option but does want to continue its participation in the Shared Savings Program, the ACO must repay all outstanding advance investment payments it received. CMS will provide written notice to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

(6) If CMS terminates the participation agreement of an ACO that has an outstanding balance of advance investment payments owed to CMS, the ACO must repay any outstanding advance investment payments it received. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

* * * * *

(h) * * *

(1) * * *

(iv) Voluntarily terminates payments of advance investment payments but continues its participation in the Shared Savings Program.

* * * * *

■ 71. Section 425.640 is added to read as follows:

§ 425.640 Option to receive prepaid shared savings.

(a) *Purpose.* Prepaid shared savings provide an additional cash flow option to ACOs with a history of earning shared savings that will encourage their investment in activities that reduce costs for the Medicare program and beneficiaries and improve the quality of care provided to their assigned beneficiaries.

(b) *Eligibility.* An ACO is eligible to receive prepaid shared savings in an agreement period as specified in this section if CMS determines that all of the following criteria are met:

(1) The ACO is a renewing ACO as defined under § 425.20 entering an agreement period beginning on January 1, 2026, or in subsequent years.

(2) The ACO must have received a shared savings payment for the most recent performance year that:

- (i) Occurred prior to the agreement period for which the ACO has applied to receive prepaid shared savings; and
- (ii) CMS has conducted financial reconciliation.

(3) The ACO must have a positive prior savings adjustment for the

agreement period for which the ACO has applied to receive prepaid shared savings as calculated pursuant to § 425.658.

(4) The ACO does not have any outstanding shared losses or advance investment payments that have not yet been repaid to CMS after reconciliation for the most recent performance year for which CMS completed financial reconciliation.

(5) If the ACO received prepaid shared savings in the current agreement period or a prior agreement period, the ACO must have fully repaid the amount of prepaid shared savings received through the most recent performance year for which CMS has completed financial reconciliation.

(6) The ACO is participating in Levels C through E of the BASIC track or the ENHANCED track during the agreement period in which it would receive prepaid shared savings.

(7) The ACO has in place an adequate repayment mechanism in accordance with § 425.204(f) that can be used to recoup outstanding prepaid shared savings.

(8) During the agreement period immediately preceding the agreement period in which the ACO would receive prepaid shared savings, the ACO:

(i) Met the quality performance standard as specified under § 425.512; and

(ii) Has not been determined by CMS to have avoided at-risk beneficiaries as specified under § 425.316(b)(2).

(c) *Application procedure.* To obtain a determination regarding whether an ACO may receive prepaid shared savings, the ACO must submit to CMS a complete supplemental application with its application to renew for a new agreement period in the Shared Savings Program (submitted pursuant to § 425.202) in the form and manner and by a deadline specified by CMS.

(d) *Application contents and review—*
(1) *General.* An ACO must submit to CMS supplemental application information sufficient for CMS to determine whether the ACO is eligible to receive prepaid shared savings. In addition, the ACO must submit a proposed spend plan as part of the supplemental application information.

(2) *Spend plan.* The ACO's spend plan must:

(i) Describe how an ACO receiving prepaid shared savings will spend the payments during the first performance year in which it will receive prepaid shared savings. The spend plan must be updated annually for each performance year of the agreement period during which the ACO receives prepaid shared savings.

(ii) Identify the categories of items and services that will be purchased and investments that will be made in the ACO with prepaid shared savings (consistent with the allowable uses under paragraph (e) of this section), the dollar amounts to be spent on such categories, information about which groups of beneficiaries the ACO expects to receive direct beneficiary services that will be purchased with prepaid shared savings, how direct beneficiary services will be distributed to beneficiaries and how such services support the care of beneficiaries, descriptions of the investments that will be made in the ACO with prepaid shared savings, and such other information as may be specified by CMS.

(iii) Include an attestation that the ACO will not discriminate on the basis of race, color, religion, sex, national origin, disability, or age with respect to their use of prepaid shared savings.

(iv) Include the ACO's communication strategy for notifying CMS and any impacted beneficiaries if an ACO will no longer be providing any direct beneficiary services that had previously been provided by the ACO using prepaid shared savings.

(3) *CMS review.* CMS will review the supplemental application information to determine whether an ACO meets the eligibility criteria and other requirements necessary to receive prepaid shared savings and will approve or deny the ACO's prepaid shared savings application accordingly. CMS may review an ACO's spend plan at any time and require the ACO to modify its spend plan to comply with the requirements of this paragraph (d) and paragraph (e) of this section.

(e) *Use and management of prepaid shared savings—(1) Allowable uses.* An ACO must use prepaid shared savings to improve the quality and efficiency of items and services furnished to beneficiaries by investing in staffing, healthcare infrastructure, and direct beneficiary services. Expenditures of prepaid shared savings must comply with paragraph (e)(2) of this section, the beneficiary incentive provision at § 425.304(a), (b), and (d), and all other applicable laws and regulations.

(i) An ACO may spend up to 50 percent of its estimated annual prepaid shared savings on staffing and healthcare infrastructure in each performance year.

(ii) An ACO may spend up to 100 percent, but not less than 50 percent, of its estimated annual prepaid shared savings on direct beneficiary services in each performance year.

(2) *Prohibited uses.* An ACO may not use prepaid shared savings for any expense other than those allowed under paragraph (e)(1) of this section. Prohibited uses include the following—

- (i) Management company or parent company profit;
- (ii) Performance bonuses;
- (iii) Provision of medical services covered by Medicare;
- (iv) Cash or cash equivalent payments to patients;
- (v) Items or activities unrelated to ACO operations or care of beneficiaries; and

(vi) In the case of an ACO participating in Levels C through E of the BASIC track or the ENHANCED track, the repayment of any shared losses incurred as specified in a written notice in accordance with § 425.605(e)(2) or § 425.610(h)(2), respectively.

(3) *Duration for spending payments.* An ACO must spend all prepaid shared savings in the agreement period in which they are received. An ACO must repay to CMS any unspent funds remaining at the end of each agreement period. Any unspent funds received for a performance year must be reallocated in the spend plan for the ACO's next performance year. When reallocated in the spend plan for the next performance year, the total unspent funds in each category must be reallocated within their originally indicated category specified in accordance with paragraph (d)(2) of this section. If an ACO fails to spend a majority of the prepaid shared savings they receive in a performance year, CMS may withhold future quarterly payments until the ACO spends the funding they have already received and reports this spending to CMS through an updated spend plan.

(f) *Payment & payment methodology.* An ACO determined eligible pursuant to paragraph (b) of this section receives quarterly prepaid shared savings payments equal to the maximum quarterly payment amount calculated pursuant to the methodology specified in paragraphs (f)(2) through (4) of this section unless the ACO elects to receive a lesser amount pursuant to paragraph (f)(6) of this section. CMS notifies in writing each ACO of its determination of the amount of prepaid shared savings and the notice will inform the ACO of its right to request reconsideration review in accordance with the procedures specified in subpart I of this part. If CMS does not make any prepaid shared savings payment, the notice will specify the reason(s) why and inform the ACO of its right to request reconsideration review in accordance

with the procedures specified in subpart I.

(1) *Frequency of payments.* An ACO will receive quarterly prepaid shared savings payments for the entirety of the ACO's agreement period unless the payment is withheld or terminated pursuant to paragraph (h) of this section. If an ACO's quarterly payment is withheld or terminated pursuant to paragraph (h), the ACO will not receive additional or catch-up payments if quarterly prepaid shared savings payments are later resumed.

(2) *Calculating the prepaid shared savings multiplier.* (i) Calculate total per capita savings or losses for each performance year that constitutes BY1 and BY2 of the agreement period in which the ACO receives prepaid shared savings. Per capita savings or losses will be set to zero for a performance year if the ACO was not reconciled for the performance year.

(ii) Take the simple average of the per capita savings or losses calculated in paragraph (f)(2)(i) of this section, including values of zero, if applicable.

(iii) Apply a proration factor to account for any upward growth in the ACO's assigned population in BY1 and BY2 of the agreement period in which the ACO receives prepaid shared savings as compared to the size of the assigned population when the ACO was reconciled for the corresponding performance years in its prior agreement period.

(iv) Adjust the pro-rated average per capita amount computed in paragraph (f)(2)(iii) of this section by multiplying by 50 percent.

(v) The prepaid shared savings multiplier is the lesser of the following:

(A) Two-thirds of the pro-rated, adjusted average per capita amount computed in paragraph (f)(2)(iv) of this section.

(B) 5 percent of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY2 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY2 using data from the CMS Office of the Actuary and expressed as a single value by taking a person-year weighted average of the Medicare enrollment type-specific values.

(3) *Recalculation of the prepaid shared savings multiplier during an agreement period.* For the first performance year during the term of the agreement period in which the ACO receives prepaid shared savings, the ACO's prepaid shared savings multiplier is recalculated for changes in per capita shared savings or losses for the performance years used in the

calculation of the prepaid shared savings multiplier as a result of issuance of a revised initial determination under § 425.315. For the second and each subsequent performance year during the term of the agreement period in which the ACO receives prepaid shared savings, the ACO's prepaid shared savings multiplier is recalculated for the following, as applicable: For the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), for a change to the beneficiary assignment methodology specified in subpart E of this part, and for changes in per capita shared savings or losses for the performance years used in the calculation of the prepaid shared savings multiplier as a result of issuance of a revised initial determination under § 425.315. To recalculate the prepaid shared savings multiplier, CMS does the following:

(i) Takes into account changes to the ACO's savings or losses for a performance year for either of the 2 years that constitute BY1 and BY2 of the agreement period for which the ACO receives prepaid shared savings under paragraph (f)(2)(i) of this section, including values of zero, if applicable, as a result of issuance of a revised initial determination under § 425.315, when calculating the simple average of the per capita savings or losses calculated in paragraph (f)(2)(ii) of this section.

(ii) Redetermines the proration factor used in calculating the prepaid shared savings multiplier under paragraph (f)(2)(iii) of this section to account for changes in the ACO's assigned beneficiary population in the benchmark years of the ACO's agreement period in which the ACO receives prepaid shared savings due to the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), or changes to the beneficiary assignment methodology under subpart E of this part.

(4) *Calculating the maximum quarterly payment amount.* For each quarter for each performance year, the maximum quarterly prepaid shared savings amount is equal to the product of one-fourth of the prepaid shared savings multiplier calculated in paragraph (f)(2)(v) of this section or recalculated according to paragraph (f)(3) of this section and the ACO's performance year assigned beneficiary person years calculated from the ACO's most recent assignment list.

(5) *Estimated annual payment amount calculation methodology.* For the purposes of determining the amount of prepaid shared savings permitted to be allocated to the uses specified in paragraph (e) of this section during each performance year, the estimated annual prepaid shared savings amount can be calculated by multiplying the first quarterly payment amount the ACO receives in each performance year by four. If an ACO's maximum quarterly payments decrease over the performance year, the ACO will not be subject to compliance action solely because it spent more than 50 percent of the actual annual amount of prepaid shared savings it received during that PY on staffing and healthcare infrastructure, as long as it did not spend more than 50 percent of the originally estimated annual maximum prepaid shared savings amount on staffing and healthcare infrastructure.

(6) *ACO selection of quarterly payment amount.* An ACO may request a smaller quarterly payment amount from CMS in a form and manner and by a deadline specified by CMS.

(g) *Recoupment and recovery of prepaid shared savings; notice of bankruptcy.* (1) CMS will recoup prepaid shared savings made to an ACO from any shared savings the ACO earns until CMS has recouped in full the amount of prepaid shared savings made to the ACO. CMS will carry forward any remaining balance owed to subsequent performance year(s) in which the ACO achieves shared savings.

(2) If the amount of shared savings earned by the ACO is revised upward by CMS for any reason, CMS will reduce the redetermined amount of shared savings by the amount of prepaid shared savings made to the ACO as of the date of the redetermination. If the amount of shared savings earned by the ACO is revised downward by CMS for any reason, the ACO will not receive a refund of any portion of the prepaid shared savings previously recouped or otherwise repaid, and any prepaid shared savings that are now outstanding due to the revision in earned shared savings must be repaid to CMS upon request.

(3) If an ACO has an outstanding balance of prepaid shared savings after the calculation of shared savings or losses for the final performance year of an agreement period in which an ACO receives prepaid shared savings, the ACO must repay any outstanding amount of prepaid shared savings it received in full upon request from CMS. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later

than 90 days after the receipt of notification. If the ACO fails to repay any outstanding amount of prepaid shared savings within 90 days of that written notification, CMS will recoup any outstanding balance of prepaid shared savings from the ACO's repayment mechanism established under § 425.204(f). CMS may also recover any outstanding amount of prepaid shared savings owed by recouping from any future shared savings the ACO may be eligible to receive in a subsequent agreement period.

(4) Except as provided in paragraph (g)(4)(ii) of this section, if an ACO or CMS terminates the ACO's participation agreement during the agreement period in which it received prepaid shared savings, the ACO must repay all outstanding prepaid shared savings it received in full upon request from CMS.

(i) CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of notification. If the ACO fails to repay within 90 days, CMS will recoup any outstanding balance from the ACO's repayment mechanism established under § 425.204(f).

(ii) If the ACO terminates its current participation agreement under § 425.220 and immediately enters a new agreement period to continue its participation in the program, CMS may recover the amount owed by recouping from any future shared savings the ACO may be eligible to receive in subsequent agreement periods.

(5)(i) If an ACO has filed a bankruptcy petition, whether voluntary or involuntary, the ACO must provide written notice of the bankruptcy to CMS and to the U.S. Attorney's Office in the district where the bankruptcy was filed, unless final payment for the agreement period has been made by either CMS or the ACO and all administrative or judicial review proceedings relating to any payments under the Shared Savings Program have been fully and finally resolved.

(ii) The notice of bankruptcy must be sent by certified mail no later than 5 days after the petition has been filed and must contain a copy of the filed bankruptcy petition (including its docket number). The notice to CMS must be addressed to the CMS Office of Financial Management at 7500 Security Boulevard, Mailstop C3-01-24, Baltimore, MD 21244 or such other address as may be specified on the CMS website for purposes of receiving such notices.

(h) *Withholding or termination of prepaid shared savings—(1) General.*

Except as provided in paragraph (h)(2) of this section, CMS may withhold or terminate an ACO's prepaid shared savings during an agreement period if—

- (i) The ACO fails to comply with the requirements of this section;
- (ii) The ACO meets any of the grounds for ACO termination set forth in § 425.218(b);
- (iii) The ACO fails to earn sufficient shared savings in a performance year to repay the prepaid shared savings they received during that performance year;
- (iv) CMS determines that the ACO is not expected to earn shared savings in a performance year during the agreement period in which the ACO received prepaid shared savings based on a rolling 12-month window of beneficiary claims data or year to date beneficiary claims data;
- (v) The ACO falls below 5,000 assigned beneficiaries;
- (vi) The ACO fails to spend the majority of prepaid shared savings they receive in a performance year; or
- (vii) The ACO requests that CMS withhold a future quarterly prepaid shared savings payment.

(2) *Eligibility sanction.* CMS must terminate an ACO's prepaid shared savings if—

- (i) The ACO fails to maintain an adequate repayment mechanism in accordance with § 425.204(f); or
- (ii) The ACO fails to meet the quality performance standard as specified under § 425.512 or is subject to a pre-termination action after CMS determined the ACO avoided at-risk beneficiaries as specified under § 425.316(b)(2).

(3) *No additional payments.* If CMS withholds or terminates a quarterly payment pursuant to this paragraph (h), the ACO will not receive additional or catch-up payments if quarterly payments of prepaid shared savings are later resumed.

(4) *No pre-termination actions.* CMS may immediately terminate an ACO's prepaid shared savings under paragraphs (h)(1) and (2) of this section without taking any of the pre-termination actions set forth in § 425.216.

(i) *Reporting information on prepaid shared savings.* The ACO must report information on its receipt of and use of prepaid shared savings, as follows:

(1) The ACO must publicly report information about the ACO's use of prepaid shared savings for each performance year, in accordance with § 425.308(b)(10).

(2) In a form and manner and by a deadline specified by CMS, the ACO must report to CMS the same

information it is required to publicly report under § 425.308(b)(10).

§ 425.650 [Amended]

■ 72. Section 425.650 is amended in paragraph (a) by removing the reference “425.660” and adding in its place the reference “425.662”.

■ 73. Section 425.652 is amended by—

- a. Revising paragraph (a)(8) and paragraph (a)(9) introductory text;
- b. Redesignating paragraphs (a)(9)(v) and (vi) as paragraphs (a)(9)(vi) and (vii), respectively;
- c. Adding new paragraph (a)(9)(v);
- d. Revising newly redesignated paragraph (a)(9)(vi); and
- e. Adding paragraphs (a)(9)(viii) and (ix).

The revisions and additions read as follows:

§ 425.652 Establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years.

(a) * * *

(8) Adjusts the historical benchmark, if applicable:

(i) For agreement periods beginning on January 1, 2024, except as provided in paragraph (a)(8)(i)(C) of this section, CMS adjusts the historical benchmark based on the ACO's regional service area expenditures (as specified under § 425.656), or for savings generated by the ACO, if any, in the 3 most recent years prior to the start of the agreement period (as specified under § 425.658). CMS does all of the following to determine the adjustment, if any, applied to the historical benchmark:

(A) Computes the regional adjustment in accordance with § 425.656 and the prior savings adjustment in accordance with § 425.658.

(B) If an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i), and the regional adjustment, expressed as a single value as described in § 425.656(d), is positive, the ACO will receive an adjustment to its benchmark equal to the positive regional adjustment amount. The adjustment will be calculated as described in § 425.656(c) and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(C) If an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i), and the regional adjustment, expressed as a single value as described in § 425.656(d), is negative or zero, the ACO will not receive an adjustment to its benchmark.

(D) If an ACO is eligible to receive a prior savings adjustment and the regional adjustment, expressed as a single value as described in § 425.656(d), is positive, the ACO will receive an adjustment to its benchmark equal to the higher of the following:

(1) The positive regional adjustment amount. The adjustment will be calculated as described in § 425.656(c) and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) The prior savings adjustment. The adjustment will be calculated as described in § 425.658(c) and applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(E) If an ACO is eligible to receive a prior savings adjustment and the regional adjustment, expressed as a single value as described in § 425.656(d), is negative or zero, the ACO will receive an adjustment to its benchmark equal to the prior savings adjustment. The adjustment will be calculated as described in § 425.658(c) and applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(ii) For agreement periods beginning on January 1, 2025, and in subsequent years, except as provided in paragraph (a)(8)(ii)(B)(2) of this section, CMS adjusts the historical benchmark based on the ACO's regional service area expenditures (as specified under § 425.656), for savings generated by the ACO, if any, in the 3 most recent years prior to the start of the agreement period (as specified under § 425.658), or to account for the ACO serving higher proportions of underserved beneficiaries (as specified in § 425.662). CMS does all of the following to determine the adjustment, if any, applied to the historical benchmark:

(A) Computes the regional adjustment in accordance with § 425.656, the prior savings adjustment in accordance with § 425.658, and the health equity benchmark adjustment (HEBA) in accordance with § 425.662.

(B) Compares the regional adjustment, expressed as a single value as described in § 425.656(d), the per capita prior savings adjustment determined in § 425.658(c), if any, and the HEBA

determined in § 425.662(b), if any, to determine the adjustment applied to the historical benchmark.

(1) The ACO will receive the highest of the positive adjustments for which it is eligible. The adjustment will be calculated as described in § 425.656(c), § 425.658(c), or § 425.662(b), respectively, and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) If an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i) or the HEBA under § 425.662(b)(3), and the regional adjustment, expressed as a single value as described in § 425.656(d), is negative or zero, the ACO will not receive an adjustment to its benchmark.

(9) For the first performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: For changes in values used in benchmark calculations in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315, and for changes in values used in benchmark calculations as a result of the performance year being affected by significant, anomalous, and highly suspect billing under § 425.672. For the second and each subsequent performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: For the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), for a change to the beneficiary assignment methodology specified in subpart E of this part, for a change in the CMS-HCC risk adjustment methodology used to calculate prospective HCC risk scores under § 425.659, for changes in values used in benchmark calculations in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315, and for changes in values used in benchmark calculations as a result of the performance year being affected by significant, anomalous, and highly suspect billing under § 425.672. To adjust the benchmark, CMS does the following:

* * * * *

(v) Redetermines the HEBA scaler used in calculating the HEBA under § 425.662(b)(2) to account for changes in the ACO's regional adjustment or prior savings adjustment in accordance with paragraphs (a)(9)(ii) through (iv) of this section.

(vi) In accordance with paragraph (a)(8) of this section, CMS redetermines the adjustment to the historical benchmark based on the redetermined regional adjustment (as specified under § 425.656), the prior savings adjustment (as specified under § 425.658), or the HEBA (as specified under § 425.662) if applicable.

* * * * *

(viii) Recalculates benchmark year expenditures to account for the impact of improper payments, for the benchmark year corresponding to a performance year for which CMS issued a revised initial determination under § 425.315. In recalculating expenditures for the benchmark year, CMS applies the calculation methodology applied in recalculating expenditures for the corresponding performance year in accordance with § 425.674.

(ix) Recalculates expenditures used in Shared Savings Program benchmark calculations under this section, and as applicable under §§ 425.654 through 425.662, to exclude the same HCPCS or CPT codes identified as displaying significant, anomalous, and highly suspect billing patterns in calculation of performance year expenditures, in accordance with § 425.672.

* * * * *

■ 74. Section 425.655 is amended by revising paragraph (d)(2) to read as follows:

§ 425.655 Calculating the regional risk score growth cap adjustment factor.

* * * * *

(d) * * *

(2) Determines the aggregate growth in regional risk scores by calculating a weighted average of the growth in regional prospective HCC risk scores or demographic risk scores, as applicable, across the populations described in paragraph (d)(1) of this section. When calculating the weighted average growth in prospective HCC risk scores or demographic risk scores, as applicable, the weight applied to the growth in risk scores for each Medicare enrollment type is equal to the product of the ACO's historical benchmark expenditures, adjusted in accordance with § 425.652(a)(8), for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type.

* * * * *

■ 75. Section 425.658 by revising paragraph (d) to read as follows:

§ 425.658 Calculating the prior savings adjustment to the historical benchmark.

* * * * *

(d) *Applicability of the prior savings adjustment.* CMS compares the per capita prior savings adjustment determined in paragraph (c)(1) of this section with the regional adjustment, expressed as a single value as described in § 425.656(d), and the HEBA as determined in § 425.662(b), if any, to determine the adjustment, if any, that will be applied to the ACO's benchmark in accordance with § 425.652(a)(8).

* * * * *

■ 76. Section 425.662 is added to read as follows:

§ 425.662 Calculating the health equity adjustment to the historical benchmark.

(a) *General.* For agreement periods beginning on January 1, 2025, and in subsequent years, CMS calculates a health equity adjustment to the historical benchmark (HEBA) to account for ACOs serving higher proportions of underserved beneficiaries.

(b) *Calculation of the health equity benchmark adjustment.* To calculate the adjustment described in paragraph (a) of this section, CMS does all of the following:

(1) Calculates the weighted average of the ACO's third benchmark year (BY3) national per capita expenditure amounts across the following populations of beneficiaries, where the weights are the ACO's BY3 proportion of assigned beneficiaries for that enrollment type:

- (i) ESRD.
- (ii) Disabled.
- (iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Calculates the HEBA scaler as the difference between 5 percent of the national per capita expenditure amount, expressed as single value as calculated in paragraph (b)(1) of this section, and the higher of: the regional adjustment, expressed as a single value as described in § 425.656(d); the per capita prior savings adjustment determined in § 425.658(c); or no adjustment, in the case where the regional adjustment is negative and the ACO is not eligible for the prior savings adjustment under § 425.658(b)(3)(i).

(3) Determines the ACO's eligibility for the HEBA based on the proportion of the ACO's assigned beneficiaries for the performance year who are enrolled in the Medicare Part D low-income subsidy (LIS) or dually eligible for Medicare and Medicaid. An ACO is

only eligible for the HEBA if this proportion is greater than or equal to 20 percent. An ACO with a proportion less than 20 percent is ineligible to receive a HEBA.

(4) Calculates the HEBA. If the ACO is eligible for the HEBA as determined in paragraph (b)(3) of this section, the HEBA is equal to the product of the HEBA scaler calculated in paragraph (b)(2) of this section and the proportion of the ACO's assigned beneficiaries for the performance year who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid.

(c) *Applicability of the HEBA.* CMS compares the HEBA determined in paragraph (b)(4) of this section with the regional adjustment, expressed as a single value as described in § 425.656(d), and the per capita prior savings adjustment determined in § 425.658(c), if any, to determine the adjustment, if any, that will be applied to the ACO's benchmark in accordance with § 425.652(a)(8)(ii).

§§ 425.664 through 425.669 [Added and Reserved]

■ 77. Sections 425.664 through 425.669 are added and reserved.

■ 78. Section 425.672 is added to read as follows:

§ 425.672 Adjustments to mitigate the impact of significant, anomalous, and highly suspect billing activity on Shared Savings Program financial calculations involving calendar year 2024 or subsequent calendar years.

(a) *General.* This section describes adjustments CMS may make to Shared Savings Program calculations to mitigate the impact of significant, anomalous, and highly suspect billing activity occurring in calendar year 2024 or subsequent calendar years.

(b) *Significant, anomalous, and highly suspect billing activity for a HCPCS or CPT code impacting Shared Savings Program calculations.* CMS, at its sole discretion, may determine that the billing of one or more specified HCPCS or CPT codes represents significant, anomalous, and highly suspect billing activity for a calendar year that warrants adjustment to calculations made under this part.

(c) *Applicability of adjustments to performance year and benchmark year calculations.* Notwithstanding any other provision in this part, CMS adjusts the following Shared Savings Program calculations, as applicable, to exclude all Medicare Parts A and B fee-for-service payment amounts on claims for the specified claim types associated with a HCPCS or CPT code identified pursuant to paragraph (b) of this section

for the periods identified in paragraph (d) of this section:

(1) Calculation of Medicare Parts A and B fee-for-service expenditures for an ACO's assigned beneficiaries for all purposes including the following: Establishing, adjusting, updating, and resetting the ACO's historical benchmark and determining performance year expenditures.

(2) Calculation of fee-for-service expenditures for assignable beneficiaries as used in determining county-level fee-for-service expenditures and national Medicare fee-for-service expenditures, including the following calculations:

(i) Determining average county fee-for-service expenditures based on expenditures for the assignable population of beneficiaries in each county in the ACO's regional service area according to §§ 425.601(c) and 425.654(a) for purposes of calculating the ACO's regional fee-for-service expenditures.

(ii) Determining the 99th percentile of national Medicare fee-for-service expenditures for assignable beneficiaries for purposes of the following:

(A) Truncating assigned beneficiary expenditures used in calculating benchmark expenditures under §§ 425.601(a)(4) and 425.652(a)(4), and performance year expenditures under §§ 425.605(a)(3) and 425.610(a)(4).

(B) Truncating expenditures for assignable beneficiaries in each county for purposes of determining county fee-for-service expenditures according to §§ 425.601(c)(3) and 425.654(a)(3).

(C) Truncating expenditures for assignable beneficiaries for purposes of determining truncated national per capita fee-for-service expenditures for purposes of calculating the ACPT according to § 425.660(b)(3).

(iii) Determining truncated national per capita fee-for-service Medicare expenditures for assignable beneficiaries for purposes of calculating the ACPT according to § 425.660(b)(3).

(iv) Determining national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program for assignable beneficiaries for purposes of capping the regional adjustment to the ACO's historical benchmark according to §§ 425.601(a)(8)(ii)(C) and 425.656(c)(3), capping the prior savings adjustment according to § 425.658(c)(1)(ii), capping the prepaid shared savings multiplier according to § 425.640(f)(2)(v), and calculating the HEBA scaler according to § 425.662(b)(2).

(v) Determining national growth rates that are used as part of the blended growth rates used to trend forward BY1 and BY2 expenditures to BY3 according

to §§ 425.601(a)(5)(ii) and 425.652(a)(5)(ii) and as part of the blended growth rates used to update the benchmark according to §§ 425.601(b)(2) and 425.652(b)(2)(i).

(3) Calculation of Medicare Parts A and B fee-for-service revenue of ACO participants for purposes of calculating the ACO's loss recoupment limit under the BASIC track as specified in § 425.605(d).

(4) Calculation of total Medicare Parts A and B fee-for-service revenue of ACO participants and total Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries for purposes of identifying whether an ACO is a high revenue ACO or low revenue ACO, as defined under § 425.20, determining an ACO's eligibility to receive advance investment payments according to § 425.630, and determining whether an ACO qualifies for a shared savings payment under § 425.605(h).

(5) Calculation or recalculation of the amount of the ACO's repayment mechanism arrangement according to § 425.204(f)(4).

(d) *Periods of adjustment.* CMS adjusts the Shared Savings Program calculations identified in paragraph (c) of this section for significant, anomalous, and highly suspect billing activity identified for calendar year 2024 or subsequent calendar years as follows:

(1) The calendar year for which the significant, anomalous, and highly suspect billing activity was identified pursuant to paragraph (b) of this section, when it is either a performance year or a benchmark year.

(2) The 3 most recent years prior to the start of the ACO's agreement period used in establishing the historical benchmark, when such a benchmark is used to reconcile the ACO for a performance year adjusted in accordance with paragraph (d)(1) of this section.

(e) *Adjustments for growth rates used in calculating the ACPT.* In addition to adjustments described in paragraph (c) of this section, CMS makes adjustments for payments associated with a HCPCS or CPT code identified pursuant to paragraph (b) of this section for any calendar year corresponding to BY3 in projecting per capita growth in Parts A and B fee-for-service expenditures, according to § 425.660(b)(1), for purposes of calculating the ACPT for agreement periods beginning on January 1, 2024, and in subsequent years.

■ 79. Section 425.674 is added to read as follows:

§ 425.674 Accounting for the impact of improper payments on Shared Savings Program financial calculations.

(a) *General rule.* Upon the reopening of an initial determination pursuant to § 425.315(a)(4), CMS will use the methodology specified in this section to account for the impact of improper payments when:

(1) Determining savings or losses for the relevant performance year in accordance with § 425.315 in order to issue a revised initial determination.

(2) Adjusting the benchmark by recalculating benchmark year expenditures under §§ 425.601(a)(9)(iii) and 425.652(a)(9)(viii) in the event that CMS recalculates a payment determination and issues a revised initial determination for the corresponding performance year in a prior agreement period, in accordance with paragraph (a)(1) of this section.

(b) *Improper payment.* For the purpose of this section, improper payment includes:

(1) An amount associated with a demanded overpayment determination.

(2) An amount identified in a settlement agreement or judgment, pursuant to conduct by individuals or entities performing functions or services related to an ACO's activities, less any penalties or damages.

(c) *Accounting for improper payments.* To adjust Medicare Parts A and B fee-for-service expenditures for improper payments CMS does the following:

(1) Identify each Shared Savings Program expenditure calculation for a performance year or benchmark year, as calculated according to the standard methodology described in this subpart and expressed as a per capita dollar amount, that will be adjusted for the impact of improper payments.

(2) Determine each specific population of Medicare fee-for-service beneficiaries used to calculate the expenditure amount identified in paragraph (c)(1) of this section. The populations relevant for a specific expenditure calculation may include:

(i) The population of beneficiaries assigned to the ACO for calculating the ACO's performance year or benchmark year expenditures.

(ii) The population of assignable beneficiaries in each county in the ACO's regional service area for calculating county-level expenditures.

(iii) The national population of assignable beneficiaries for calculating national assignable expenditures.

(iv) The national population of Medicare fee-for-service beneficiaries for calculating national expenditures.

(3) Determine the per capita amount of improper payments for the performance year or benchmark year included in the per capita Medicare Parts A and B fee-for-service expenditure amount for a population identified in paragraph (c)(2) of this section in accordance with paragraph (d) of this section for all providers or suppliers with identified improper payments.

(4) Subtract the per capita amount determined in paragraph (c)(3) of this section from the expenditure calculation identified in paragraph (c)(1) of this section for the population identified in paragraph (c)(2) of this section for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(5) If applicable, CMS will do the following to adjust regional expenditures for improper payments:

(i) Adjust county-level fee-for-service expenditures determined under paragraph (c)(4) of this section, for each county in the ACO's regional service area, for severity and case mix of assignable beneficiaries in the county using prospective HCC risk scores. This calculation is made for each of the populations of beneficiaries identified in paragraphs (c)(4)(i) through (iv) of this section.

(ii) Weight the risk adjusted county-level fee-for-service expenditures determined under paragraph (c)(5)(i) of this section according to the ACO's proportion of assigned beneficiaries in the county, determined in accordance with § 425.601(d)(1), § 425.603(f)(1), or § 425.654(b)(1), as applicable, for each of the populations of beneficiaries identified in paragraphs (c)(4)(i) through (iv) of this section.

(iii) Aggregate the values determined in paragraph (c)(5)(ii) of this section for each of the populations of beneficiaries identified in paragraphs (c)(4)(i) through (iv) of this section across all counties within the ACO's regional service area.

(d) *Determining the per capita amount of improper payments.* CMS may use one or more of the following approaches to determine the per capita amount that will be used to adjust expenditure calculations identified in paragraph (c)(1) of this section:

(1) Calculate aggregate improper payments attributable to a population identified in paragraph (c)(2) of this section for each provider or supplier that had improper payments.

(i) For improper payments associated with specific claims, CMS will do the following:

(A) For improper payments to a provider or supplier that correspond to payment amounts on claims or line items that were used in a Shared Savings Program calculation identified in paragraph (c)(1) of this section, and subsequently adjusted after the 3-month claims run out period, CMS will sum the improper payment amounts across all such claims or line items with dates of service during the period used to calculate performance year or benchmark year expenditures for the population identified in paragraph (c)(2) of this section.

(B) In the event CMS determines it is necessary to account for the impact of improper payments on Shared Savings Program financial calculations by adjusting the payment amounts for a specific HCPCS or CPT code billed by the provider or supplier for the population identified in paragraph (c)(2) of this section, CMS will do the following—

(1) Identify the applicable claims or line items with dates of service during the period used to calculate performance year or benchmark year expenditures processed before the end of the applicable 3-month claims run out period;

(2) Sum the claim or line item payment amounts, on the claims or line items identified in paragraph (d)(1)(i)(B)(1) of this section; and

(3) If applicable, multiply the sum calculated in paragraph (d)(1)(i)(B)(2) of this section by a scaling factor to compute the payment differential between the HCPCS or CPT code that was improperly billed and a CMS-identified alternate code.

(ii) For aggregate improper payment amounts that are not linked to specific claims or line items, CMS will calculate the amount attributable to the population identified in paragraph (c)(2) of this section by applying a proration factor to the aggregate improper payment amount identified for that provider or supplier. CMS calculates the proration factor as follows:

(A) The denominator of the proration factor is total Medicare Parts A and B claim or line item payment amounts to the provider or supplier for all fee-for-service beneficiaries on claims of specified claim types for the time period associated with the aggregate improper payment amount identified for the provider or supplier that were made before the end of the applicable 3-month claims run out period.

(B) The numerator of the proration factor is the portion of the total from the

denominator, in paragraph (d)(1)(ii)(A) of this section, that CMS determines is attributable to the population identified in paragraph (c)(2) of this section with dates of service during the period used to calculate expenditures for the applicable performance year or benchmark year.

(2) Sum the amounts calculated pursuant to paragraph (d)(1) of this section attributable to a population identified in paragraph (c)(2) of this section across all providers or suppliers that had identified improper payments.

(3) Take the lesser of the following two values—

(i) The sum from paragraph (d)(2) of this section; or

(ii) Total Medicare Parts A and B claim or line item payment amounts to all providers or suppliers that had improper payments for the population identified in paragraph (c)(2) of this section on claims of specified claim types with dates of service within the performance year or benchmark year made before the end of the applicable 3-month claims run out period.

(4) Express the lesser-of amount from paragraph (d)(3) of this section as a per capita value by dividing by the total beneficiary person years in the population identified in paragraph (c)(2) of this section for the applicable performance year or the benchmark year.

■ 80. Part 427 is added to read as follows:

PART 427—MEDICARE PART B DRUG INFLATION REBATE PROGRAM

Subpart A—General Provisions

Sec.

427.10 Basis and scope.

427.20 Definitions.

Subpart B—Determination of Part B Rebatable Drugs

427.100 Definitions.

427.101 Identification of Part B rebatable drugs.

Subpart C—Coinsurance Adjustment and Adjusted Medicare Payment for Part B Rebatable Drugs With Price Increases Faster Than Inflation

427.200 Definitions.

427.201 Computation of beneficiary coinsurance and adjusted Medicare Payment for Part B rebatable drugs with price increases faster than inflation.

Subpart D—Determination of the Rebate Amount for Part B Rebatable Drugs

427.300 Definitions.

427.301 Calculation of the total Part B rebate amount to be paid by manufacturers.

427.302 Calculation of the per unit Part B drug rebate amount.

427.303 Determination of total number of billing units.

427.304 Adjustments for changes to billing and payment codes.

Subpart E—Reducing the Rebate Amount for Part B Rebatable Drugs in Shortage and When There Is a Severe Supply Chain Disruption

427.400 Definitions.

427.401 Reducing the rebate amount for Part B rebatable drugs currently in shortage.

427.402 Reducing the rebate amount for certain Part B rebatable drugs when there is a severe supply chain disruption.

Subpart F—Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments

427.500 Definitions.

427.501 Rebate Reports and reconciliation.

427.502 Rebate Reports for applicable calendar quarters in calendar years 2023 and 2024.

427.503 Suggestion of Error.

427.504 Manufacturer access to Rebate Reports.

427.505 Deadline and process for payment of rebate amount.

Subpart G—Enforcement of Manufacturer Payment of Rebate Amounts

427.600 Civil money penalty notice and appeals procedures.

Authority: 42 U.S.C. 1395w–3a(i), 1302, and 1395hh.

Subpart A—General Provisions

§ 427.10 Basis and scope.

(a) *Basis.* This part implements section 1847A(i) of the Social Security Act (“the Act”).

(b) *Scope.* This part sets forth the requirements of the Medicare Part B Drug Inflation Rebate Program, which requires, for each calendar quarter, manufacturers to pay rebates for certain single source drugs and biological products with prices that increase faster than the rate of inflation.

(c) *Severability.* Were any provision of this part to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions would be severable from this part and the invalidity or unenforceability would not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances.

§ 427.20 Definitions.

As used in this part, the following definitions apply:

Allowed charges means the amount that is inclusive of the beneficiary coinsurance and Medicare payment for the covered Part B item or service.

Applicable calendar quarter means a calendar quarter (January 1 to March 31, April 1 to June 30, July 1 to September

30, or October 1 to December 31) in which an inflation rebate is applied, starting with January 1, 2023.

Applicable threshold means the amount calculated in accordance with § 427.101(c)(2).

Average sales price (ASP) means the manufacturer’s price for a quarter for a drug represented by a particular 11-digit National Drug Code (NDC–11) calculated in accordance with § 414.804 of this chapter.

Benchmark period Consumer Price Index for All Urban Consumers (CPI–U) means the CPI–U identified in § 427.302(e).

Billing and payment code means the specific code used to classify and report a drug or biological for purposes of Medicare Part B payment. A Healthcare Common Procedure Coding System (HCPCS) code, as established by CMS, is an example of a billing and payment code used to describe a drug or biological and for which CMS publishes a payment amount.

Billing unit means the identifiable quantity of a drug or biological product associated with a billing and payment code (for example, a HCPCS code), as established by CMS.

Biosimilar biological product has the meaning set forth in section 1847A(c)(6)(H) of the Act.

CPI–U means the monthly Consumer Price Index for All Urban Consumers (United States city average) index level for all items from the Bureau of Labor Statistics.

Food and Drug Administration (FDA) application means, for the purposes of calculating the Part B rebate amount, a New Drug Application (NDA) or Biologics License Application (BLA) approved by the FDA.

Final action claim means a non-rejected claim for which a Medicare payment has been made, and for which all disputes and adjustments have been resolved.

First marketed date means the earliest date of first sale of any NDC–11 within a billing and payment code among all products and package sizes under the same FDA application. The first marketed date will be identified using ASP data reported by NDC–11 to CMS by a manufacturer as required under sections 1927(b)(3)(A)(iii)(I) and 1847A(f)(2) of the Act, if available.

Grouped billing and payment code, for the purposes of Part B rebate calculations, means a billing and payment code, such as a HCPCS code, other than a Not Otherwise Classified (NOC) code, that typically contains multiple drug products approved under multiple NDAs or BLAs and may be

inclusive of, but are not limited to, multiple source billing codes.

Inflation-adjusted payment amount means the amount calculated in § 427.302(g).

Manufacturer has the meaning set forth in section 1847A(c)(6)(A) of the Act.

National Drug Code (NDC) means the unique identifying prescription drug product number that is listed with FDA identifying the product and package size and type.

Not Otherwise Classified (NOC) code means a billing and payment code, including an unclassified, unspecified, or unlisted code, for drugs and biological products for which no specific billing and payment code is assigned.

Part B rebatable drug means, subject to the exclusions described in § 427.101(b), a single source drug or biological product, including a biosimilar biological product but excluding a qualifying biosimilar biological product, for which payment is made under Part B.

Payment amount benchmark quarter means the calendar quarter identified in § 427.302(c).

Payment amount in the payment amount benchmark quarter means the amount identified in § 427.302(d).

Rebate period CPI-U means the CPI-U identified in § 427.302(f).

Single source drug or biological product has the meaning set forth in section 1847A(c)(6)(D) of the Act.

Specified amount refers to the amount identified in § 427.302(b).

Subsequently approved drug means a drug first approved or licensed by the FDA after December 1, 2020.

Unit means, with respect to a Part B rebatable drug, with respect to each National Drug Code (including package size) associated with a drug or biological, the lowest identifiable quantity (such as a capsule or tablet, milligram of molecules, or grams) of the drug or biological that is dispensed, exclusive of any diluent without reference to volume measures pertaining to liquids as reported under section 1847A(b)(2)(B) of the Act.

Subpart B—Determination of Part B Rebatable Drugs

§ 427.100 Definitions.

As used in this subpart, the following definitions apply:

EUA Declaration refers to the March 27, 2020, Emergency Use Authorization (EUA) Declaration for Drugs and Biological Products under section 564 of the Food, Drug, and Cosmetic (FD&C) Act.

Individual who uses such a drug or biological means a unique Medicare Part B beneficiary who was furnished the Part B drug or biological that was covered under Part B during the applicable calendar quarter, identified using final action claims data with dates of service during the calendar year described in § 427.101(b)(6) and with allowed charges greater than zero.

§ 427.101 Identification of Part B rebatable drugs.

(a) *Determination of Part B rebatable drugs.* (1) For each applicable calendar quarter, CMS will:

(i) Identify single source drugs or biological products, including biosimilar biological products, covered under Part B; and

(ii) Identify the applicable billing and payment code for each drug or biological product identified in paragraph (a)(1)(i) of this section.

(2) For a drug or biological product identified under paragraph (a)(1) of this section, CMS will determine whether the drug or biological product meets the exclusion criteria described in paragraph (b) or (c) of this section as of the first day of the applicable calendar quarter.

(3) To determine whether a drug or biological product is a Part B rebatable drug under this section, CMS will use the most recent available data submitted to CMS by manufacturers pursuant to section 1927(b)(3)(A)(iii) of the Act or section 1847A(f)(2), as applicable, and other available data, including but not limited to information available at FDA.gov and information in drug pricing compendia, as applicable.

(b) *Excluded product categories.* The following categories of products are not considered Part B rebatable drugs:

(1) *Qualifying biosimilar biological products.* Biological products as defined under section 1847A(b)(8)(B)(iii) of the Act.

(2) *Products with historically excepted grouped billing and payment codes.*

Single source drugs or biological products that were within the same billing and payment code as of October 1, 2003, and which, as required under section 1847A(c)(6)(C)(ii) of the Act, are treated as multiple source drugs.

(3) *Products billed under a NOC code.* A drug or biological product billed under a NOC code.

(4) *Radiopharmaceutical drugs and biological products.* A separately payable radiopharmaceutical drug or biological product not paid under section 1847A of the Act.

(5) *Skin substitutes.* A product included within the suite of cellular-

and tissue-based products that aid wound healing.

(6) *Drugs with average total allowed charges under the applicable threshold.* Drugs and biological products for which the Medicare Part B average total allowed charges for a year per individual that uses such drug or biological are below the applicable threshold, as described in paragraph (c) of this section.

(7) *Certain vaccines and other products.* The following products:

(i) The vaccines described in section 1861(s)(10) of the Act, which includes the influenza, pneumococcal, hepatitis B, and COVID-19 vaccines.

(ii) Monoclonal antibodies used for treatment or post-exposure prophylaxis of COVID-19 that are covered and paid for under section 1861(s)(10) of the Act. This exclusion will apply to applicable quarters until the end of the calendar year in which the EUA Declaration ends.

(iii) Monoclonal antibodies that are used for pre-exposure prophylaxis of COVID-19 that are covered and paid for under section 1861(s)(10) of the Act. This exclusion will apply to applicable calendar quarters even after the year in which the EUA Declaration ends, as long as after the EUA Declaration is terminated, these products have an FDA-approved application or license.

(8) *Generic drugs.* Part B drugs approved under an Abbreviated New Drug Application (ANDA) submitted under section 505(j) of the Federal Food, Drug, and Cosmetic Act (FD&C Act).

(c) *Drugs and biological products with average total allowed charges below the applicable threshold.* For each applicable calendar quarter, CMS will identify drugs and biological products with Part B average total allowed charges for a year per individual that uses such a drug or biological product that are below the applicable threshold in accordance with the calculations described in this section. Such drugs and biological products are not considered Part B rebatable drugs and will be excluded from the identification of Part B rebatable drugs in paragraph (a) of this section.

(1) *Average total allowed charges for a year per individual.* For each drug or biological that is identified in accordance with paragraph (a) of this section, CMS will calculate average total allowed charges for a year per individual as follows:

(i) For single source drugs and biological products assigned to only one billing and payment code, CMS will sum the allowed charges from final action claims greater than \$0 and divide the summed amount by the number of

individuals who use such a drug or biological with allowed charges for this billing and payment code.

(ii) For single source drugs and biological products assigned to more than one billing and payment code, CMS will sum the allowed charges from final action claims greater than \$0 for all billing and payment codes and divide the summed amount by the number of individuals who use such a drug or biological with allowed charges for these billing and payment codes.

(iii) For single source drugs and biological products previously crosswalked to a grouped billing and payment code:

(A) If crosswalked to a grouped billing and payment code during the full year, CMS will calculate the average total allowed charges per individual per year for the drug using allowed charges and the number of individuals who used the drug or biological product based on claims for the previously grouped billing and payment code during the year.

(B) If crosswalked to a grouped billing and payment code and later assigned to a unique billing and payment code for part of the year, CMS will calculate average total allowed charges per individual per year by:

(1) Summing the total allowed charges billed under the unique billing and payment code for the drug with dates of service on or after the Medicare effective date for this unique billing and payment code and identifying the individuals on those claims.

(2) Summing the total allowed charges on claims billed under the previously grouped billing and payment code and identifying individuals with claims prior to the unique billing and payment code's effective date.

(3) Summing the total allowed charges as determined in paragraphs (c)(1)(iii)(B)(1) and (2) of this section and dividing by the total number of individuals, de-duplicated for individuals identified under paragraphs (c)(1)(iii)(B)(1) and (2).

(2) *Applicable threshold.* CMS will calculate the applicable threshold for an applicable calendar quarter as follows:

(i) For applicable calendar quarters in 2023, the applicable threshold is equal to \$100.

(ii) For applicable calendar quarters in 2024, the applicable threshold is equal to \$100 increased by the percentage increase in the CPI-U for the 12-month period ending with June of 2023.

(iii) For applicable calendar quarters in each subsequent calendar year, the applicable threshold is equal to the unrounded applicable threshold calculated for the prior calendar year

increased by the percentage increase in the CPI-U for the 12-month period ending with June of the previous year.

(iv) If the resulting amount under paragraphs (c)(2)(i) through (iii) of this section is not a multiple of \$10, CMS will round that amount to the nearest multiple of \$10.

(3) *Application of the applicable threshold at the billing and payment code level.* For each applicable calendar quarter, CMS will apply the exclusion of drugs and biological products identified in paragraph (c)(1) of this section, with average total allowed charges for a year per individual less than the applicable threshold described in paragraph (c)(2) of this section, to applicable billing and payment codes as follows:

(i) For single source drugs or biological products assigned to a unique billing and payment code, CMS will exclude the assigned billing and payment code for an applicable calendar quarter if the average total allowed charges for a year per individual are less than the applicable threshold.

(ii) For a single source drug or biological product that is assigned to more than one billing and payment code during a year, CMS will exclude all such assigned billing and payment codes for an applicable calendar quarter.

(4) *Definition of year.* For purposes of the calculations described in this section, a year is defined as the 4 consecutive calendar quarters beginning 6 calendar quarters before the applicable calendar quarter. CMS will use final action claims from the Medicare fee-for-service claims repository where separate payment was allowed for the applicable billing and payment code for dates of service within a year to calculate Part B average total allowed charges for that year.

Subpart C—Coinsurance Adjustment and Adjusted Medicare Payment for Part B Rebatable Drugs With Price Increases Faster Than Inflation

§ 427.200 Definitions.

As used in this subpart, *inflation-adjusted beneficiary coinsurance* means the coinsurance adjustment as calculated in accordance with this subpart.

§ 427.201 Computation of beneficiary coinsurance and adjusted Medicare payment for Part B rebatable drugs with price increases faster than inflation.

(a) *Methodology.* CMS must use the methodology set forth in this section to calculate the inflation-adjusted beneficiary coinsurance and associated adjusted Medicare payment percentage for Part B rebatable drugs as set forth in

§§ 410.152(m), 419.41(e), and 489.30(b)(6) of this chapter.

(b) *Calculation of inflation-adjusted beneficiary coinsurance.* To calculate the inflation-adjusted beneficiary coinsurance for Part B rebatable drugs with respect to a calendar quarter, CMS compares the payment amount, as described in paragraph (b)(3) of this section, to the inflation-adjusted payment amount for the applicable calendar quarter.

(1) If the payment amount exceeds the inflation-adjusted payment amount, the inflation-adjusted beneficiary coinsurance is calculated by multiplying the inflation-adjusted payment amount by 0.20.

(2) If the inflation-adjusted payment amount does not exceed the payment amount, the adjustment to the beneficiary coinsurance described in paragraph (b)(1) of this section is not applied.

(3) CMS will use the published payment amount in quarterly pricing files published by CMS as the payment amount in this determination.

(c) *Exclusions.* Any drug that is excluded from Part B rebatable drugs in accordance with § 427.101(b) is not subject to inflation-adjusted beneficiary coinsurance.

Subpart D—Determination of the Rebate Amount for Part B Rebatable Drugs

§ 427.300 Definitions.

As used in this subpart, the following definitions apply:

340B Program is the program under section 340B of the Public Health Service (PHS) Act.

Refundable single-dose container or single-use package drug has the meaning set forth in § 414.902 of this chapter.

§ 427.301 Calculation of the total Part B rebate amount to be paid by manufacturers.

(a) *Total rebate.* Subject to paragraph (b) of this section, the total rebate amount to be paid for a Part B rebatable drug, as identified under § 427.101, for an applicable calendar quarter is equal to the product of the per unit Part B rebate amount of such drug, as determined under § 427.302, and the billing units of the Part B rebatable drug furnished during the applicable calendar quarter, as identified in accordance with § 427.303. The rebate amount may be reduced in accordance with subpart E of this part or adjusted in accordance with subpart F of this part.

(b) *Apportionment of the Part B rebate amount.* CMS will identify billing and

payment codes for which multiple manufacturers report ASP, in accordance with sections 1927(b)(3) and 1847A(f) of the Act, for NDCs assigned to the billing and payment code. CMS will calculate the rebate amount owed by each manufacturer by:

(1) Determining the total billing units sold for each NDC assigned to the billing and payment code, by multiplying the number of units reported by a manufacturer in ASP data submissions at the NDC-11 package level by the number of billing units per NDC-11 reporting unit.

(2) Summing the individual manufacturer's total billing units sold during the applicable calendar quarter (for all NDCs of the manufacturer assigned to the billing and payment code).

(3) Summing all manufacturers' total billing units sold during the applicable calendar quarter for all NDCs of the Part B rebatable drug assigned to the billing and payment code.

(4) Dividing the resulting amount from paragraph (b)(2) of this section by the resulting amount from paragraph (b)(3) of this section.

(5) Multiplying the resulting amount from paragraph (b)(4) of this section by the total rebate amount as determined under paragraph (a) of this section.

§ 427.302 Calculation of the per unit Part B drug rebate amount.

(a) *Formula for calculating the per unit Part B rebate amount.* CMS will calculate the per unit Part B rebate amount for a Part B rebatable drug and applicable calendar quarter by determining the amount by which the specified amount, as calculated in accordance with paragraph (b) of this section, exceeds the inflation-adjusted payment amount, as calculated in accordance with paragraph (g) of this section.

(b) *Identification of the specified amount for the applicable calendar quarter.* For each applicable calendar quarter, subject to paragraph (b)(2) of this section, the specified amount is equal to the amount determined in accordance with section 1847A(i)(3)(A)(ii)(I)(aa) or (bb) of the Act, as applicable, for the calendar quarter.

(1) The first applicable calendar quarter for a Part B rebatable drug will be the earliest applicable calendar quarter that follows the payment amount benchmark quarter identified in paragraphs (c)(1) through (5) of this section.

(2) If all NDCs in the billing and payment code have neither manufacturer-reported ASP nor

Wholesale Acquisition Cost (WAC) price data available for the applicable calendar quarter, CMS will use WAC price data from other public sources, if available, to calculate 106 percent of WAC, which will serve as the specified amount.

(c) *Identification of the payment amount benchmark quarter.* For each Part B rebatable drug, CMS will identify the applicable payment amount benchmark quarter using the earliest first marketed date of any NDC ever marketed under any FDA application under which any NDCs that have ever been assigned to the billing and payment code as of the applicable calendar quarter have been marketed, as set forth in paragraphs (c)(1) through (3) of this section, as applicable, subject to paragraphs (c)(4) and (5) of this section:

(1) For a Part B rebatable drug first approved or licensed by the FDA on or before December 1, 2020, and with a first marketed date on or before December 1, 2020, the payment amount benchmark quarter is the calendar quarter beginning July 1, 2021.

(2) For a Part B rebatable drug first approved or licensed by the FDA after December 1, 2020, the payment amount benchmark quarter is the third full calendar quarter after a drug's first marketed date.

(3) For a Part B rebatable drug first approved or licensed by the FDA on or before December 1, 2020, but with a first marketed date after December 1, 2020, the payment amount benchmark quarter is the third full calendar quarter after a drug's first marketed date.

(4) Notwithstanding paragraph (c)(3) of this section, for a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug's first marketed date, whichever is later, the payment amount benchmark quarter is the third full calendar quarter after the Part B rebatable drug is assigned a billing and payment code other than a NOC code.

(5) For a Part B rebatable drug that is a selected drug (as defined in section 1192(c) of the Act) with respect to a price applicability period (as defined in section 1191(b)(2) of the Act), in the case such Part B rebatable drug is no longer considered to be a selected drug, for each applicable quarter beginning after the price applicability period with respect to such drug, the payment amount benchmark quarter is the calendar quarter beginning January 1 of the last year during such price applicability period with respect to such selected drug.

(d) *Identification of the payment amount in the payment amount*

benchmark quarter. CMS will identify the payment amount in the payment amount benchmark quarter using the published payment limit for the billing and payment code for the applicable payment amount benchmark quarter identified in accordance with paragraph (c) of this section.

(1) For a Part B rebatable drug, subject to paragraphs (d)(1)(i) and (ii) of this section and except as provided in paragraph (d)(2) of this section, CMS will identify the payment amount in the payment amount benchmark quarter using the published payment limit for the billing and payment code for the applicable payment amount benchmark quarter determined in accordance with section 1847A of the Act.

(i) If a published payment limit is not available for the applicable payment amount benchmark quarter, CMS will use the lower of 106 percent of manufacturer-reported ASP or 106 percent of manufacturer-reported WAC.

(ii) If neither a published payment limit nor manufacturer-reported ASP or WAC data are available, CMS will use WAC data from other public sources to calculate 106 percent of WAC, which, solely for the purposes of this section, CMS will consider to be the payment amount for the payment amount benchmark quarter.

(2) For a Part B rebatable drug previously billed under a grouped billing and payment code during the payment amount benchmark quarter and later billed under a unique billing and payment code, CMS will use the grouped billing and payment code payment limit as the payment amount in the payment amount benchmark quarter.

(e) *Identification of the benchmark period CPI-U.* For each Part B rebatable drug, CMS will identify the applicable benchmark period CPI-U at the billing and payment code level as set forth in paragraphs (e)(1) and (2) of this section, subject to paragraphs (e)(3) through (5) of this section:

(1) For a Part B rebatable drug first approved or licensed by the FDA on or before December 1, 2020, and with a first marketed date on or before December 1, 2020, the benchmark period CPI-U is the CPI-U for January 2021.

(2) For a Part B rebatable drug first approved or licensed by the FDA after December 1, 2020, the benchmark period CPI-U is the CPI-U for the first month of the first full calendar quarter after a drug's first marketed date.

(3) Notwithstanding paragraph (e)(2) of this section, for a Part B rebatable drug first approved or licensed by FDA on or before December 1, 2020, and with

a first marketed date after December 1, 2020, the benchmark period CPI-U is the CPI-U for the first month of the third full calendar quarter after a drug's first marketed date.

(4) Notwithstanding paragraph (e)(3) of this section, for a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug's first marketed date, whichever is later, the benchmark period CPI-U is the CPI-U for the first month of the third full calendar quarter after the Part B rebatable drug is assigned a billing and payment code other than a NOC code.

(5) Notwithstanding paragraph (e)(4) of this section, for a Part B rebatable drug that is a selected drug (as defined in section 1192(c) of the Act) with respect to a price applicability period (as defined in section 1191(b)(2) of the Act), in the case such Part B rebatable drug is no longer considered to be a selected drug, the benchmark period CPI-U is the CPI-U for the July of the year preceding the last year during such price applicability period.

(f) *Identification of the rebate period CPI-U.* For each Part B rebatable drug by billing and payment code, CMS will identify and use the greater of the benchmark period CPI-U index level or the CPI-U index level for the first month of the calendar quarter that is two calendar quarters before the applicable calendar quarter in which the Part B rebatable drug is furnished.

(g) *Determination of inflation-adjusted payment amount.* For each applicable calendar quarter and for each Part B rebatable drug by billing and payment code, CMS will calculate the inflation-adjusted payment amount by dividing the rebate period CPI-U by the benchmark period CPI-U and then multiplying the quotient by the payment amount in the payment amount benchmark quarter, determined in accordance with paragraph (d) of this section.

§ 427.303 Determination of total number of billing units.

(a) *General.* For each Part B rebatable drug, CMS will determine the total number of billing units of the billing and payment code subject to a rebate in the applicable calendar quarter using final action Medicare fee-for-service claims for which Medicare payment was allowed and greater than zero.

(b) *Total billing units.* Using final action claims in the Medicare fee-for-service claims repository, at least 3 months after the end of the applicable calendar quarter, CMS will determine the total number of billing units for a

Part B rebatable drug in an applicable calendar quarter by identifying separately payable claim lines for such billing and payment code for dates of service in that applicable calendar quarter and excluding the following billing units in claim lines as applicable:

(1) *Billing units of drugs acquired through the 340B Program.* CMS will exclude billing units acquired under the 340B Program as identified through—

(i) Separately payable billing units in claim lines for professional claims with dates of service during 2023 and 2024 from suppliers that are associated with covered entities listed by the Health Resources and Services Administration (HRSA) 340B Office of Pharmacy Affairs Information System as participating in the 340B Program. CMS will use National Provider Identifiers and/or Medicare Provider Numbers to identify these suppliers and the claims submitted with such identifiers;

(ii) Separately payable billing units in claim lines for institutional claims that are billed with the “JG” or “TB” modifiers for claims with dates of service through December 31, 2024; and

(iii) Separately payable billing units in claim lines billed with the “TB” modifier for claims with dates of service on or after January 1, 2025.

(2) *Billing units with a rebate under section 1927 of the Social Security Act.* Subject to paragraph (b)(2)(i) of this section, CMS will exclude billing units from claims with dates of service during a month within an applicable calendar quarter if the units are furnished to a dually eligible Medicare beneficiary who has Medicaid coverage that may provide cost-sharing assistance.

(i) CMS will not exclude billing units from claims when the Medicare beneficiary has Medicaid coverage that does not include cost-sharing assistance, including Specified Low-Income Medicare Beneficiaries (SLMB), Qualified Disabled and Working Individuals (QDWI), and Qualifying Individuals (QI) beneficiaries.

(ii) [Reserved]

(3) *Billing units that are packaged into the payment amount for an item or service and are not separately payable.* CMS will exclude billing units that are packaged into the payment amount for an item or service and are not separately payable.

(4) *Billing units when a drug is no longer a Part B rebatable drug.* In situations where a Part B rebatable drug that is a single source drug becomes a multiple source drug during an applicable calendar quarter, CMS will:

(i) Determine if such drug has become a multiple source drug by reviewing

FDA's most recent publication of “Approved Drug Products with Therapeutic Equivalence Evaluations” (commonly known as the Orange Book) for a drug that is that is rated as therapeutically equivalent to such drug; and,

(ii) If a therapeutically equivalent drug is identified in accordance with paragraph (b)(4)(i) of this section, determine if the therapeutically equivalent drug was sold or marketed during the applicable calendar quarter; and

(iii) Exclude billing units of such drug furnished on and after the first day of the calendar month in which the therapeutically equivalent drug was first sold or marketed during the applicable calendar quarter.

(5) *Billing units subject to discarded drug refunds.* CMS will exclude billing units of discarded refundable single-dose container or single-use package drugs for which a refund has been paid in accordance with § 414.940 of this chapter from the calculation of rebate amounts. For applicable calendar quarters beginning on or after January 1, 2024, these billing units will be excluded as part of the reconciliation process described at § 427.501(d).

§ 427.304 Adjustments for changes to billing and payment codes.

(a) *Changes in billing unit dose description.* If there has been a change to the dose description for a Part B rebatable drug (causing a new billing and payment code to be assigned), CMS will calculate a conversion factor based on the ratio of the billing unit dose description for the current billing and payment code to the billing unit dose description for the prior billing and payment code. CMS will apply the conversion factor to the payment amount in the payment amount benchmark quarter, as described in § 427.302(d), before applying the percentage by which the rebate period CPI-U for the calendar quarter exceeds the benchmark period CPI-U.

(b) *Instances when a new billing and payment code is assigned.* If a new billing and payment code is assigned for a Part B rebatable drug, CMS will use the payment amount in the payment amount benchmark quarter, the payment amount benchmark quarter, and the benchmark quarter CPI-U of the prior billing and payment code to calculate the per unit Part B rebate amount under § 427.302.

(c) *Documentation.* CMS will maintain a crosswalk reflecting the changes in billing and payment codes and dose descriptions as applicable.

Subpart E—Reducing the Rebate Amount for Part B Rebatable Drugs in Shortage and When There Is a Severe Supply Chain Disruption

§ 427.400 Definitions.

As used in this subpart, the following definitions apply:

Currently in shortage means that at least one NDC–10 assigned to the billing and payment code of a Part B rebatable drug with the status “currently in shortage” is on a shortage list maintained by the FDA under section 506E of the FD&C Act.

Drug shortage or shortage means a period of time when the demand or projected demand for the drug within the United States exceeds the supply of the drug (see section 506C(h)(2) of the FD&C Act).

Natural disaster means any natural catastrophe, including, but not limited to any of the following: hurricane, tornado, storm, high water, wind-driven water, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, or drought, or regardless of cause, any fire, flood, or explosion.

Other unique or unexpected event means any exogenous, unpredictable event outside of a manufacturer’s control, including, but not limited to, a geopolitical disruption, pandemic, or act of terror.

Plasma-derived product means a licensed biological product that is derived from human whole blood or plasma, as indicated on the approved product labeling.

Severe supply chain disruption means a change in production or distribution that is reasonably likely to lead to a significant reduction in the U.S. supply of a Part B rebatable biosimilar biological product by a manufacturer and significantly affects the ability of the manufacturer of the biosimilar biological product to fill orders or meet expected demand for its product in the United States for at least 90 days. This definition does not include interruptions in manufacturing due to matters such as routine maintenance, manufacturing quality issues, or insignificant changes made in the manufacturing process for the drug.

§ 427.401 Reducing the rebate amount for Part B rebatable drugs currently in shortage.

(a) *General.* As required under section 1847A(i)(3)(G)(i) of the Act, CMS will reduce the total rebate amount calculated under § 427.301(a), if any is owed, for a Part B rebatable drug that is currently in shortage, as defined in § 427.400, at any point during the applicable calendar quarter.

(b) *Calculation of the reduced rebate amount.* (1) For each applicable calendar quarter beginning on or after January 1, 2023, the reduced total rebate amount for a Part B rebatable drug currently in shortage will be calculated using the following formula:

Equation 1 to Paragraph (b)(1)

Reduced Total Rebate Amount = the total rebate amount multiplied by (1 minus applicable percent reduction) multiplied by (percentage of time drug was currently in shortage during the applicable calendar quarter) added to the total rebate amount multiplied by (1 minus percentage of time drug was currently in shortage during the applicable calendar quarter)

(2) For purposes of paragraph (b)(1) of this section, the applicable percent reduction is:

(i) For a Part B rebatable drug that is a plasma-derived product:

(A) 75 percent for the first 4 consecutive applicable calendar quarters such drug is currently in shortage.

(B) 50 percent for the second 4 consecutive applicable calendar quarters such drug is currently in shortage.

(C) 25 percent for each subsequent applicable calendar quarter such drug is currently in shortage.

(ii) For a Part B rebatable drug that is not a plasma-derived product:

(A) 25 percent for the first 4 consecutive applicable calendar quarters such drug is currently in shortage.

(B) 10 percent for the second 4 consecutive applicable calendar quarters such drug is currently in shortage.

(C) 2 percent for each subsequent applicable calendar quarter such drug is currently in shortage.

(3) For purposes of paragraph (b)(1) of this section, the percentage of time the drug is currently in shortage during the applicable calendar quarter is equal to the number of days such drug is currently in shortage in an applicable calendar quarter, divided by the total number of days in the applicable calendar quarter.

(c) *Application of reduction.* CMS will apply a reduction of the rebate amount as determined under paragraph (b) of this section to all the NDCs under the relevant billing and payment code.

§ 427.402 Reducing the rebate amount for certain Part B rebatable drugs when there is a severe supply chain disruption.

(a) *General.* As required under section 1847A(i)(3)(G)(ii) of the Act, CMS will

reduce the total rebate amount calculated under § 427.301(a), if any is owed, for a Part B rebatable biosimilar biological product when CMS determines there is a severe supply chain disruption during the applicable calendar quarter such as that caused by a natural disaster or other unique or unexpected event.

(b) *Calculation of the reduced rebate amount—(1) Initial reduction.* If CMS determines the criteria described in paragraph (c)(4) of this section are met, then CMS will reduce the total rebate amount owed by the manufacturer for a Part B rebatable biosimilar biological product by 75 percent for the quarter in which the event occurred and the 3 subsequent applicable calendar quarters.

(2) *Extension of reduction.* If CMS determines a severe supply chain disruption continues into a fifth applicable calendar quarter as described in paragraph (c)(5) of this section, then CMS will reduce the total rebate amount owed by the manufacturer for a Part B rebatable biosimilar biological product by 75 percent for that fifth quarter and an additional 3 consecutive applicable calendar quarters.

(3) *Application of reduction.* If CMS determines there is a severe supply chain disruption for an NDC–11 assigned to a billing and payment code, CMS will apply any reduction of the rebate amount as described in paragraphs (b)(1) and (2) of this section to all the NDCs under the relevant billing and payment code.

(4) *Limitation on rebate reductions.* CMS will not apply multiple rebate reductions for the same Part B rebatable drug and applicable calendar quarter.

(i) If a manufacturer believes there are multiple events causing severe supply chain disruptions during the same 4 applicable calendar quarters for the same Part B rebatable biosimilar biological product and submits multiple rebate reduction requests for the same product, CMS will grant no more than 1 rebate reduction under paragraph (b)(1) or (2) of this section for that product for those consecutive applicable calendar quarters.

(ii) If CMS grants a rebate reduction request under this section, and the Part B rebatable biosimilar biological product subject to the reduction is currently in shortage during the same four applicable calendar quarters as the ones for which the severe supply chain disruption reduction request was granted, CMS will reduce the rebate amount as described in paragraph (b)(1) of this section and will not grant a reduction under § 427.401 during those applicable calendar quarters.

(iii) If a Part B rebatable biosimilar biological product that is currently in shortage experiences a severe supply chain disruption, CMS will reduce the rebate amount as described in paragraph (b)(1) of this section and will not grant a reduction under § 427.401 during those applicable calendar quarters.

(c) *Eligibility for a rebate reduction—*
(1) *Eligible drug.* Subject to paragraph (b)(3) of this section, eligibility for a rebate reduction under this section is limited to Part B rebatable biosimilar biological products for which a manufacturer submits a rebate reduction request under this section.

(2) *Timing.* For a natural disaster or other unique or unexpected event occurring on or after August 2, 2024, that the manufacturer believes caused a severe supply chain disruption, the manufacturer must submit the rebate reduction request within 60 calendar days from the first day that the natural disaster or other unique or unexpected event occurred or began in order to receive consideration for a reduction in the rebate amount owed in accordance with paragraph (b)(1) of this section.

(3) *Required elements of a rebate reduction request.* To receive consideration for a reduction in the rebate amount owed in accordance with paragraph (b)(1) of this section, the manufacturer must submit to CMS information and supporting documentation to substantiate the evaluation criteria described in paragraph (c)(4) of this section. Such information and supporting documentation include the following:

(i) Evidence that the severe supply chain disruption directly affects the manufacturer itself, a supplier of an ingredient or packaging, a contract manufacturer, or a method of shipping or distribution that the manufacturer uses to make or distribute the Part B rebatable biosimilar biological product(s), such as a change in the production or distribution of the Part B rebatable biosimilar biological product(s) that is reasonably likely to lead to a significant reduction in the U.S. supply of product and significantly affects the manufacturer's ability to fill orders or meet expected demand for the Part B rebatable biosimilar biological product(s) for at least 90 days;

(ii) Information about when the manufacturer expects supply of the Part B rebatable biosimilar biological product(s) to meet expected demand;

(iii) Evidence that the natural disaster or other unique or unexpected event caused the severe supply chain disruption, including when the natural disaster or other unique or unexpected event occurred or began occurring, and

the expected or actual duration of the severe supply chain disruption; and

(iv) Evidence of the manufacturer's physical presence related to manufacturing the Part B rebatable biosimilar biological product(s) in a geographic area where a natural disaster or other unique or unexpected event occurred. If the manufacturer is not physically present in a geographic area where a natural disaster or other unique or unexpected event occurred, but believes there is a severe supply chain disruption caused by a natural disaster or other unique or unexpected event that affects the manufacturer's Part B rebatable biosimilar biological product(s), the information and supporting documentation may include evidence of the impact of the natural disaster or other unique or unexpected event on the supply chain of the Part B rebatable drug or biosimilar, on a supplier of an ingredient or packaging, or method of shipping or distribution that the manufacturer uses.

(4) *Evaluation criteria.* In accordance with paragraph (b)(1) of this section, CMS will grant a reduction in the rebate amount owed if a manufacturer submits to CMS a request in writing for an eligible drug, in accordance with the timing specified in paragraph (c)(2) of this section, demonstrating that:

(i) A severe supply chain disruption has occurred during the applicable calendar quarter;

(ii) The severe supply chain disruption directly affects the manufacturer itself, a contract manufacturer, a supplier of an ingredient or packaging, or a method of shipping or distribution that the manufacturer uses in a significant capacity to make or distribute the Part B rebatable biosimilar biological product; and

(iii) The severe supply chain disruption was caused by a natural disaster or other unique or unexpected event.
