

and a broad array of communication channels. The Initiative will help NSF learn which science and engineering questions resonate most with the public.

Promoting interactions between scientists and non-scientists about what scientists and engineers do and how this affects people's everyday lives will increase public understanding of and interest in science. This will enhance interest in STEM education, workforce development and careers in STEM, and support for science and engineering research, all of which enhance NSF's ability to fulfill its mission to promote the progress of science. This Initiative supports a core value of NSF, promoting inclusion. It is focused on reaching a broad cross-section of the U.S. population, including people and places who have historically been underrepresented in STEM. This Initiative also supports NSF's FY25 budget priorities of inspiring the missing millions and creating opportunities everywhere.

Additionally, several Executive orders (E.O.s) underscore the importance of diversity and inclusion in science and engineering. E.O.s 13583 and 14035 highlight the need for equity in the federal workforce, while E.O. 13985 promotes racial equity across government programs. By aligning with these policies, this initiative aims to ensure diverse representation in STEM fields and incorporate the perspectives of all Americans. Furthermore, the Evidence Act further emphasizes the use of data-driven decision-making and evidence-based practices in federal programs. Data collected from this public engagement initiative can inform NSF's strategies and actions, ensuring they are responsive to the U.S. public needs and perspectives. The Public Engagement with Science Initiative not only advances NSF's mission but also supports the broader federal agenda for equity, inclusion, and representation in science and engineering.
