Abstract of Information Available

A total of one object of cultural patrimony has been requested for repatriation. The single Pomo basket is listed in museum records as a "gift type" and was acquired by the Redding Museum and Art Center (predecessor of TBEP) in 1981 as part of a donation from James "Jim" Dotta. Mr. Dotta was a local instructor at Shasta Community College in Redding, CA, an archaeologist, and heavily involved in the RMAC. He was also an avid collector of books, historical objects, artworks, and Indigenous Belongings. A handwritten note in the accession record states the basket was purchased from Mildred's Antiques for \$25.00 in 1959, but no further provenance information is provided and it's not clear in which city, state, or country Mildred's Antiques operated.

Conservation records from April 1992 indicate dermestid damage was discovered on baskets stored near this Pomo basket. Therefore, treatment was conducted on this basket and others. In addition to freezer treatment, the basket was placed in an acid-free box with paradichlorobenzene suspended from the lid. Paradichlorobenzene is a fumigant insecticide used in mothballs and a deodorant in cleaners, sanitizers, and deodorizers. There is no documentation as to when the treatment was complete, but no chemical treatments have been used in Turtle Bay Collections since 2000.
